Explosives Container Requirements

Project Description:

NIJ funded JAYCOR, Inc., to develop an affordable, portable explosives container. Independent testing indicated that the prototype container did not meet performance specifications. The technical solution to address this failure would result in a significantly more expensive container. Before making a decision to implement this solution, NIJ determined to assess practitioner performance requirements for bomb containers. This assessment was conducted by NIJ's National Law Enforcement and Corrections Technology Center-Rocky Mountain Region.

Status:

This project was initiated in 2002. The preliminary assessment was completed on May 15, 2003. If you would like a copy of this report please notify Jim Keller, at 303-871-2829 or email jkeller@du.edu.
