Introduction

The objective of this publication is to supplement Crime in the United States statistics by providing Uniform Crime Reporting (UCR) data users with arrest statistics related to the age and race of arrestees. Age-specific arrest rate statistics of this publication complement the earlier report "Age-Specific Arrest Rates, 1965-1984" released January 1986. The crimes of arson and drug abuse violations are included in that publication and need not be repeated here. Age-specific arrest rates and the average age of arrestees are tabulated for selected Part II offenses (forgery and counterfeiting, fraud, embezzlement, stolen property, weapons, sex offenses, and gambling) for each of the 20 years during the period 1965-1984.

An age-specific arrest rate refers to the number of arrests made per 100,000 inhabitants belonging to a prescribed age group. Technical Note A describes the computational procedures used to derive age-specific arrest rates. Since the average age of arrestees generally reflects the age composition of the U.S. population, any shift in the age structures of arrestees should be examined in terms of how age-specific arrest data are affected.

Race-specific arrest rates are tabulated for the eight Index crimes (murder, forcible rape, robbery, aggravated assault, burglary, larceny-theft, motor vehicle theft, and arson) and the selected Part II offenses stated above including drug abuse violations.

A race-specific arrest rate refers to the number of arrests made per 100,000 inhabitants belonging to a prescribed race. Race-specific data used in this publication have been updated and, therefore, should not be compared to the national average as earlier released in Crime in the United States. The rates represent that portion of the population that contributed race statistics relating to the given offenses. The population coverage for race statistics is lower than that for age statistics.

Methodological Issues

Arrest data presented in this report were obtained from the Uniform Crime Reporting (UCR) Program and cover the 20-year period, 1965-1984. UCR arrest data as they relate to age-specific arrest rates and race-specific arrest rates have undergone the following historical changes:

1. With respect to the classification of age, the categories "10 and under" and "11 and 12" were used through 1979. Starting in 1980, these categories were replaced by the age groups "under 10" and "10 through 12."
2. In 1980, the "age not know" category was dropped. The impact of this action was negligible as the category constituted only a fraction of one percent of total arrests.
3. UCR arrest data were gathered annually until 1973. In 1974, monthly reporting of arrest data was implemented.
4. In 1980, the race categories were revised. The classification White, Negro, Indian, Chinese, Japanese, and "all others" were used through 1979. In 1980, these categories were changed to White, Black, American Indian or Alaskan Native, and Asian or Pacific Islander.

In order to make the classification of age prior to 1974 comparable with the data published in succeeding years, the two categories involving individuals up to the age of 12 were combined into a "12 and under" category. With respect to 1965-1973 age-specific arrest rates and race-specific arrest rates, only the arrest data and the population of agencies having submitted complete annual arrest statistics were used. For the period 1974-1984, only arrest data from agencies

having submitted complete 12-month reports and corresponding populations were utilized. The number of agencies represented in this report and their respective populations are listed below:

The size of the population pertaining to a prescribed age group was computed, for each year, by distributing the UCR contributors population through the use of age distributions derived from U.S. Census publications. A similar procedure was used for race classifications - distributing the UCR contributors population through the use of race distributions. Race classifications were divided into white and nonwhite. The nonwhite category includes all races other than white.

The source of population data used is the Current Population Reports series as listed below:

Technical Note B

A Method for Computing the Average Age of Arrestees from UCR Data

UCR arrest data can be broken down into age groups; some are single-age categories (e.g., 20-year-old category) while others are multiple-age categories (e.g., 20-24-year-old category). This type of classification scheme is not a convenient basis for computing the average age of arrestees. A simple method of overcoming this difficulty is suggested below.

Let $[x', x'')$ denote the age interval $\{x | x' \leq x < x''\}$. For example, the UCR age group "25 through 29" is expressed as $[25, 30)$. Let $[x_0, x_1)$, $[x_1, x_2)$, $[x_2, x_3)$ be consecutive age intervals, and $f(x)$ be a quadratic function of the form $f(x) = 3ax^2 + 2bx + c$. It is required that the function $f(x)$ satisfies the following conditions:

$$(1). \quad \int_{x_0}^{x_1} f(x) dx = D, \quad \int_{x_1}^{x_2} f(x) dx = E, \quad \text{and} \quad \int_{x_2}^{x_3} f(x) dx = F,$$

where D , E , and F represent the number of UCR arrests for the consecutive age intervals $[x_0, x_1)$, $[x_1, x_2)$, and $[x_2, x_3)$.

The system of equations (1) can be solved for the unknowns a , b , and c .

Using the notation

$$G = \begin{vmatrix} 3 & 3 & 2 & 2 \\ x_1 - x_0 & x_1 - x_0 & x_1 - x_0 & x_1 - x_0 \\ 3 & 3 & 2 & 2 \\ x_2 - x_1 & x_2 - x_1 & x_2 - x_1 & x_2 - x_1 \\ 3 & 3 & 2 & 2 \\ x_3 - x_2 & x_3 - x_2 & x_3 - x_2 & x_3 - x_2 \end{vmatrix}, \quad H = \begin{vmatrix} D & 2 & 2 \\ x_1 - x_0 & x_1 - x_0 & x_1 - x_0 \\ E & 2 & 2 \\ x_2 - x_1 & x_2 - x_1 & x_2 - x_1 \\ F & 2 & 2 \\ x_3 - x_2 & x_3 - x_2 & x_3 - x_2 \end{vmatrix},$$

$$I = \begin{vmatrix} 3 & 3 \\ x_1 - x_0 & D \\ 3 & 3 \\ x_2 - x_1 & E \\ 3 & 3 \\ x_3 - x_2 & F \end{vmatrix} \quad \text{and} \quad J = \begin{vmatrix} 3 & 3 & 2 & 2 \\ x_1 - x_0 & x_1 - x_0 & D \\ 3 & 3 & 2 & 2 \\ x_2 - x_1 & x_2 - x_1 & E \\ 3 & 3 & 2 & 2 \\ x_3 - x_2 & x_3 - x_2 & F \end{vmatrix},$$

the solution for (1) is expressed as

$$(2). \quad a = H/G, \quad b = I/G, \quad \text{and} \quad c = J/G.$$

The distribution $f(x)/E$, $x_1 \leq x < x_2$, is then applied to obtain the average age of the arrestees on the interval $[x_1, x_2)$:

$$(3). \quad \int_{x_1}^{x_2} x \cdot f(x)/E dx = [9(x_2 - x_1)^4 H + 8(x_2 - x_1)^3 I + 6(x_2 - x_1)^2 J] / 12EG$$

Therefore, the average age is represented by the weighted sum over all age intervals.

The result of this model is presented on page 58.
