### Acknowledgement of Assistance

All manuscripts utilizing data made available through the Consortium should acknowledge that fact as well as identify the original collector of the data. The ICPSR Council urges all users of the ICPSR Data facilities to follow some adaptation of this statement with the parentheses indicating items to be filled in appropriately or deleted by the individual user.

The data (and tabulations) utilized in this (publication) were made available (in part) by the Inter-university Consortium for Political and Social Research. The data for CITY POLICE EXPENDITURES: 1946-1985 were originally collected by Ruth Triplett, et al. Neither the collector of the original data nor the Consortium bear any responsibility for the analyses or interpretations presented here.

In order to provide funding agencies with essential information about the use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, each user of the ICPSR data facilities is expected to send two copies of each completed manuscript or thesis abstract to the Consortium. Please indicate in the cover letter which data were used.

CITY POLICE EXPENDITURES: 1946-1985 (ICPSR 8706)

SUMMARY: This study examines police expenditures for selected cities for an extended period of time. The data set contains one variable per year for each of the following items: total general expenditures, expenditure for police protection, deflated general expenditures adjusted for inflation, deflated police expenditures adjusted for inflation, residential population, land area, patterns of population change during the study period, government identification, and implicit price deflators of goods and services. CLASS IV

UNIVERSE: Cities in the United States.

SAMPLING: All cities that had 50,000 or more residents in 1940 or entered that size class during the study period. All towns and townships in Connecticut, Massachusetts, New Jersey and Pennsylvania were included.

EXTENT OF COLLECTION: 1 data file

DATA FORMAT: Logical Record Length

FILE STRUCTURE: rectangular

CASES: 6944

VARIABLES: 216

RECORD LENGTH: 80

1 Introduction

This data set consists of annual observations (1946 to 1985) on cities with residential populations of at least 50,000 and--for the states of Connecticut, Massachusetts, New Jersey and Pennsylvania--towns and townships with populations of at least 50,000 residents.[1] A total of 496 cities, towns and townships is included in the data set.

The data set contains one variable per year for each of the following items:

1. total general expenditures (in thousand dollars);
2. expenditures for police protection (in thousand dollars);
3. deflated general expenditures adjusted for inflation;
4. deflated police expenditures adjusted for inflation;
5. residential population (intercensal years estimated);
6. land area for 1940, 1950, 1960, 1970, 1975, 1980;
7. a typology of patterns of population change (increase, decline, etc.) during the study period;
8. a variable indicating whether the unit is a city or town/township; and
9. annual implicit price deflators for state and local government purchases of goods and services.

Complete definitions of all the variables are in Appendix A.

-----

1. See subsection on Case Definition for explanation of inclusion of towns and townships.

## 2 Case Definition

The sample was defined as cities that had 50,000 or more residents in 1940 or entered that size-class during the study period (1946-1985). The 50,000 threshold for inclusion in the sample was used because the Census of Governments most consistently reported information for these cities. The starting year 1946 was chosen in order to avoid the disturbing influences of World War II. The last year for which data were available was 1985.

Because some cities crossed the size threshold during the study period, data may be unavailable for the years when the city was outside of the "50,000 or more" size-class. However, on some occasions there are expenditure data available for a city which has not yet reached the "50,000 or more" size-class.

Towns and townships from the states of Connecticut, Massachusetts, New Jersey and Pennsylvania were included because the Census of Governments considers them "city-like" and includes them in their collection of municipal government data. There are other states that define town and township in a similar manner, but none of these towns met the population size criterion for inclusion. The variable "Government Identification" (GOVID) distinguishes cities from towns and townships.

## 3 Data Sources

Much of the data was taken from public-use tapes supplied by the Inter-university Consortium for Political and Social Research (ICPSR). This included land, population and police and general expenditure data. However, some of the data were entered manually.

Specific sources are listed below for each of the major variables.

### 3.1 Data Sources: Land Area

Land area for 1940, 1950, 1960, 1970, and 1975, came from the County and City Data Book Consolidated File: 1944-1977 (ICPSR, 1978a).

When not available on tape, the sources were:

for 1940: Areas of the United States: 1940 (Bureau of the Census, 1942).

for 1950 Geographic Reports (Bureau of the Census, 1953).

for 1960, 1970 and 1980: (Bureau of the Census, 1964, 1972, 1981).

### 3.2 Data Sources: Population

Population for 1940, 1950, 1960, 1970 and 1975 were taken from:

County and City Data Book Consolidated File: 1944-1977  
(ICPSR, 1978a).

Population data for some inter-census years were estimated by the Census Bureau and were taken from four ICPSR tapes. These were:

1969-1975 Population and Per Capita Income Estimates (ICPSR, 1978b)

1976 General Revenue Sharing, 1976 Population Estimates  
(ICPSR, 1981a)

1978 General Revenue Sharing, 1978 Population Estimates  
(ICPSR, 1981b)

1982 General Revenue Sharing, 1982 Population Estimates  
(ICPSR, 1984)

See p. 4, below, for inter-censal estimates of population not available from the Census Bureau.

### 3.3 Data Sources: Expenditures

Police expenditures for 1948, 1950, 1955, 1960, 1965, and total general expenditures for 1948, 1950, 1955, 1960, 1965, 1970, and 1975 were taken from the County and City Data Book Consolidated File: 1944-1977 (ICPSR, 1978a). The only other expenditure data taken from a tape were the 1977 total general and police protection expenditures. These were taken from the Census of Government, 1977: Finance Summary Statistics tape (ICPSR, 1979).

Because of technical problems encountered with the tapes, all other expenditure data were entered manually from City

Government Finances (Bureau of the Census) annual volumes.

#### 4 Missing Data and Estimation

Where data for population or expenditures were missing and there was a reasonable basis for estimating missing observations, we did so. This subsection of the codebook describes what was missing and how the missing data were estimated.

##### 4.1 Missing Data: Population

Most of the population values for intercensal years were estimated. In some cases the Census Bureau published estimates which we used (see above, p. 3); in other cases we calculated our own. The years 1941-1949, 1951-1959, 1961-1969, 1971-1972, 1974, 1977, 1979, 1981-1982, 1984-1985 are our estimates. The procedure used to estimate these years of population data is described in Appendix B.

Appendix C indicates the cities, years and reasons for a residual set of missing population values which were not estimated. Mostly these were places that came into existence during the study period and therefore were not enumerated separately in earlier censuses.

##### 4.2 Missing Data: Expenditure

Of the total 496 cities, there are 238 with complete expenditure data. Of the remaining, 60 cases are missing 1-10 years of expenditure data; 57 cases are missing 11-20 years of expenditure data; and 144 cases are missing over 21 years of expenditure data. In general, missing police and general expenditure data followed the same pattern.[2]

-----

2. For single years where data were missing the Census Bureau often reported the previous years' totals. In most cases we followed the Census Bureau's practice, but there were some cases where the context suggested this would be misleading. For the following cases we interpolated and replaced the value reported by the Census Bureau. The expenditure values listed below are the ones that we believe to be erroneous.

McKeesport, PA police expenditures for 1951- \$31,000  
Laredo, TX police expenditures for 1955- \$1,188,000

See Appendix D for the cities and years for which values were estimated.

The missing data fall into two patterns. The first is random, isolated missing data which we interpolated. The second pattern is systematic and was caused by cities growing into the size class (increasing population), cities falling out of the size class (decreasing population), and cities coming into existence during the period under study. For cities that fit one of these patterns, see Appendix D.

Appendix E discusses cities which did not consistently grow or decrease. The most prominent pattern in this category is one of growth until 1980.

#### 5 Historical Comparability: Cases

During the study period annexation of territory and changes in government organization altered the boundaries of many cities in the sample. Such changes may have an immediate impact on expenditures, but because the population data came primarily from the decennial census, there may be a lag of several years before the change is reflected in population estimates. An extreme example is the 1964 consolidation of the Nashville city and Davidson County, Tennessee governments. Between 1963 and 1964 the land area increased by a factor of 17.5 and general expenditures by a factor of 2.0. However, because the population estimates were based on a linear interpolation between 1960 and 1970, the population increase is allocated across the whole decade.

Nashville is atypical because of the magnitude of the change, but more moderate changes occurred in many cities during the study period. Users should be aware of possible distortions caused by changes in the political boundaries. Since the area of cities for 1940, 1950, 1960, 1970 and 1980 are included in the data file, changes in land area can be measured for each decade. Additional sources would be necessary to identify annual changes.

-----  
Albany, GA police expenditures for 1967- \$21,000  
Bay City, MI police expenditures for 1967- \$83,000  
Eugene, OR police expenditures for 1969- \$72,000

## 6 Historical Comparability: Variables

There were some changes over time in the data collection procedures utilized by the Bureau of the Census for measuring total general expenditures and expenditures for police protection that should be noted:

(1) Prior to 1964, financial data for cities and municipalities were collected for fiscal years which closed in the calendar year (Dec. 31). Beginning in 1964, the data were collected for fiscal years ending on June 30. The Bureau notes the revised procedure did not change the previous reporting basis applied for the cities, but it did change the time reference for cities whose fiscal years end in the latter half of the calendar year.

(2) the definition of "general expenditure" varied slightly over time. Prior to 1951 there were two categories of general expenditure: (a) general expenditure by character and (b) general expenditure by operation. Neither matches the definition of general expenditure used after 1950. The pre-1951 category that was used in this data set was general expenditure by operation. It includes only operation expenditures. It excludes capital outlay, extragovernmental expenditure for city agencies (except utilities) classified as enterprises, operating expenditures for auxiliary activities, interest and aid paid to other governments all of which are in the post-1950 category.[3]

The post-1950 definition is:

"all city expenditures other than the specifically enumerated kinds of expenditure classified as utilities expenditures, liquor stores expenditures, and employee-retirement or other insurance trusts expenditures." (Bureau of the Census, GF series, 1978-1979 p. 108)

-----

3. The other category, general expenditure by character, included provision for debt retirement, contributions to trust funds (retirement and other) and contributions to enterprises. It excluded extragovernmental expenditures of public trust funds, expenditures of city agencies, except utilities, formerly classified as enterprises, and gross operating expenditures for auxiliary activities.

See Table 1 (see p. 8) for a summary of the changes in definition.

In summary then the category, general expenditure, prior to 1951 is not equivalent to the category after 1950 because of the exclusion of categories of expenditures (capital outlay, extragovernmental expenditure for city agencies classified as enterprises, operating expenditures for auxiliary activities, interest and aid paid to other governments) which are in the post-1950 category. In graphing per capita deflated general expenditures (see figure 1) over time it was noted that between 1950 and 1951 there is an apparently large jump in expenditures. The effect of the change in definition is also seen in the decrease between 1950 and 1951 in the proportion of police expenditures from general expenditures (see figure 2). Comparability of the general total expenditure categories before and after 1951 should be done with caution unless analysis shows that excluding the categories makes little difference.

7 List of Variables

The variables in this data set are as follows. The source for each variable is noted. For specific definitions of terms used below, consult Appendix A.

VARIABLE	DESCRIPTION
1. FIP.STPL	Two digit FIPS state code followed by a four digit FIPS place code.
2. NAME	Alphabetic variable containing the name of the city and the state abbreviation.
3. GOVID	One digit code which identifies the cases as city, town or township. 1 = city 0 = town/township
4. GRWPTN	One digit code which identifies the pattern of population growth for each city. 1 = decreasing population 2 = unstable population growth 3 = increasing population 4 = missing population data
5. POP.40	Population as of April 1, 1940. Source: Bureau of the Census, 1978
6. LAND.40	Land area in square miles in 1940. Source: Bureau of the Census, 1978
7. POP.41	Population in 1941. (University of Maryland estimate. See Appendix B)
8. POP.42	Population in 1942. (University of Maryland estimate. See Appendix B)
9. POP.43	Population in 1943. (University of Maryland estimate. See Appendix B)
10. POP.44	Population in 1944. (University of Maryland estimate. See Appendix B)
11. POP.45	Population in 1945. (University of Maryland estimate. See Appendix B)

12. POP.46            Population in 1946. (University of Maryland estimate. See Appendix B)
13. GENEXP.46        Total general expenditure in 1946. Source: Bureau of the Census, 1946 no. 2
14. POLEXP.46        Expenditures for police protection in 1946. Source: Bureau of the Census, 1946 no. 2
15. POP.47            Population in 1947. (University of Maryland estimate. See Appendix B)
16. GENEXP.47        General expenditure in 1947. Source: Bureau of the Census, 1947 no. 2
17. POLEXP.47        Expenditures for police protection in 1947. Source: Bureau of the Census, 1947 no. 2.
18. POP.48            Population in 1948. (University of Maryland estimate. See Appendix B)
19. GENEXP.48        Total general expenditure in 1948. Source: Bureau of the Census, 1947 no. 2.
20. POLEXP.48        Expenditures for police protection in 1948. Source: Bureau of the Census, 1948 no.2.
21. POP.49            Population in 1949. (University of Maryland estimate. See Appendix B)
22. GENEXP.49        Total general expenditure in 1949. Source: Bureau of the Census, 1949 no. 2.
23. POLEXP.49        Expenditures for police protection in 1949. Source: Bureau of the Census, 1949 no. 2.
24. POP.50            Population as of April 1, 1950. Source: Bureau of the Census, 1978
25. GENEXP.50        Total general expenditure in 1950. Source: Bureau of the Census, 1950 no. 2.
26. POLEXP.50        Expenditures for police protection in 1950. Source: Bureau of the Census, no. 2.
27. LAND.50           Land area in square miles in 1950. Source: Bureau of the Census, 1978
28. POP.51            Population in 1951. (University of Maryland estimate. See Appendix B)

estimated expenditure data for 1981.  
(Same as V177)
- 213. ESTDT.82      Variable expressing estimated/not  
estimated expenditure data for 1982.  
(Same as V177)
- 214. ESTDT.83      Variable expressing estimated/not  
estimated expenditure data for 1983.  
(Same as V177)
- 215. ESTDT.84      Variable expressing estimated/not  
estimated expenditure data for 1984.  
(Same as V177)
- 216. SIZE            Variable expressing the size of the city in  
terms of 1980 population (See V118)  
1 = 500,000 or more  
2 = 250,000-499,999  
3 = 100,000-249,999  
4 = 75,000- 99,999  
5 = 50,000- 74,999  
6 = less than 49,999

Notes:

A "." in the data indicates that data were unavailable for that variable.

A "-1" in the population data indicates that the city was not an incorporated place of 10,000 or more population at the time.

9 Appendix A: Definitions Of Variables and Related Concepts

ESTDT (ESTDT) - This variable indicates, for each city, whether or not a particular year's expenditure data were estimated. A code of "0" means that the value was not estimated. A code of "1" means that this is an estimated value in a run of nine or fewer estimated values. A code of "2" means then this is an estimated value in a run of ten or more estimated values. This code was not used for values estimated by the Census Bureau or for those instances where we substituted an estimated value for what we thought were errors in the Census Bureau values (see footnote 2 above).

EXPENDITURES - "All amounts of money paid out by government--net of recoveries and other correcting transactions--other than for retirement of debt, investment in securities, extension of credit, or as agency transactions. Note the expenditure includes only external transactions of a government and excludes non-cash transactions such as the provision of prerequisites or other payments in kind." (Bureau of the Census, 1979 p. 108)

FIPS CODES (FIP.STPL) - These are the codes which the Bureau of the Census uses to identify states and places. The first two digits of the six digit code identify the state. The last four identify the place. The codes were taken from the County and City Data Book Consolidated File: 1944-1977 (ICPSR, 1978a).

GENERAL EXPENDITURE (GENEXP) - "All city expenditures other than the specifically enumerated kinds of expenditure classified as utilities expenditures, liquor stores expenditure, and employee-retirement or other insurance trust expenditures." (Bureau of the Census, 1979 p. 108) General expenditures were reported in thousand of dollars. As noted in Historical Comparability: Variables, this definition is the one in use after 1950.

GOVERNMENT IDENTIFICATION (GOVID) - This variable distinguishes legally designated "cities" from "towns" and "townships". A code of one for this variable indicates a city and a code of zero indicates a town. There are 464 legally defined cities and 32 towns and townships.

GROWTH PATTERN (GRWPTN) - This variable was created in order to identify the general patterns in population change for each city. Using the population for each census year (there are five in the study period) we identified three general trends in population change. A code of "1" means that the city's population decreased for each census year. A code of "2" means that there was no consistent decrease or increase in the population for each census year. This pattern we call "unstable". A code of "3" means that the city's population increased each census year. A code of "4" means that there was census year population data missing. There are 41 cities for which there are missing population data.

IMPLICIT PRICE DEFLATORS (IPD) - This number is "...the ratio of a current-dollar estimate to the corresponding constant-dollar estimate, and represents a weighted average of component price indexes used to obtain the constant-dollar estimate where the weights are proportional to the composition of the constant-dollar product in a period." (Bureau of Economic Analysis, 1981 p. xiii). The implicit price deflator included in this data set is the one indexing the cost of state and local government purchases of goods and services. This deflator is based on 1982 as 100. This variable is constant across cities within each year.

LAND AREA (LAND) - Dry land and land temporarily or partially covered by water, such as marshland, swamps and river floodplains. In addition, it generally includes streams, sloughs, estuaries, and canals less than one-eighth of a statute mile in width, and lakes, reservoirs and ponds less than 40 acres in area; for Alaska, the corresponding values are one-half mile and 640 acres. Land area is reported in square miles.

POLICE PROTECTION EXPENDITURES (POLEXP) - "[T]he preservation of law and order and traffic safety. Includes police patrols and communications, crime prevention activities, detention and inspection, and the like." (Bureau of the Census, 1979 p. 109) The variable "police protection expenditure" includes salaries and wages, and current operation. It does not include capital outlay, employee retirement or assistance subsidies. Police protection expenditures were reported in thousands of dollars.

POPULATION (POP) - The Bureau of the Census definition is:

"Each person enumerated in the ... census was counted as an inhabitant of his usual place of residence, generally construed as the place where he [/she] lives and sleeps most of the time. It is not necessarily the same as his [/her] legal residence, voting residence, or domicile. In the vast majority of cases, however, the use of these different bases of classification would produce substantially the same statistics, although there might be appreciable differences for a few areas.

Persons who were in the Armed Forces and quartered on military installations were enumerated as residents of the states and counties in which their installations were located. Members of their families were enumerated where they actually resided. College students were considered residents of the communities in which they were residing while attending college. The crews of vessels of the U.S. Navy and U.S. Merchant Marines in harbors of the U.S. were counted as part of the population of the ports in which their vessels were berthed on April 1, 19[70]. Inmates of institutions, who ordinarily live in the institutions for long periods of time, were counted as inhabitants of the place in which the institution was located. Patients in general hospitals, who ordinarily remain in the hospital for short periods of time, were counted at their homes. Persons without a usual place of residence were counted where they were enumerated.

Americans who were over seas for an extended period...are not included in the population of any States or of the District of Columbia. Persons temporarily abroad on vacation, business trips, and the like, were enumerated at their usual place of residences..." (Bureau of the Census, 1970:p. xxviii-xxix)

SIZE (Size) - This variable expresses the size of the city according to its population in 1980. A "1" means the city's population was greater than or equal to 500,000. A "2" means the population was between 250,000 and 499,999. A code of "3" means the population in 1980 was between 100,000 and 249,999. A "4" means that the city's population was between 75,000 and 999,999. There is also a code of "5" for cities with populations between 50,000 and 74,999. Finally "6" means that the city's population was less than 49,999 in 1980.

Code	Pop. Size	# cities
1	>500,000	22
2	250,000-499,999	34
3	100,000-249,999	115
4	75,000-99,999	90
5	50,000-74,999	185
6	<49,999	50

10 Appendix B: Estimation ProceduresCensus Estimates for Population Data

Descriptions of the procedures used by the Census Bureau to estimate city populations in 1973, 1975, 1976, 1978 and 1982 can be found in the following sources:

For 1973, 1975, 1976, 1978 and 1982:

U.S. Bureau of the Census. (various, see below). Current Population Reports: Population Estimates and Projections. Series P-25. Washington, DC: U.S. Government Printing Office.

1973 No. 533

1975 No. 642

1976 No. 740

1978 No. 800

1982 No. 949

For 1975:

U.S. Bureau of the Census. (1977). County and City Data Book, 1977. Washington, DC: U.S. Government Printing Office.

Interpolated Estimates for Population and Expenditure Data

Where Census Bureau estimates were not available, and sufficient information was, we estimated population values by linear interpolation. Specifically, the estimation procedure was as follows:

$$Y = POP1 + [(POP2 - POP1)/N]$$

where,

Y = Estimated population

POP1 = Earlier census estimate

POP2 = Most recent census estimate

N = number of years between two censuses

The same procedure was used in the interpolation of expenditure data, both police and general. Interpolation was done only for cases where twenty or fewer years were missing (see Appendix D).

11 Appendix C: Cities Not in A Decennial Census

Some of the missing population data was not estimated because the city does not appear in one or more of the decennial census' taken during the study period. The following identifies the cities, the missing years, the reason for the omission, and the source of information on the omission. In most cases the cities do not appear in the census because they did not exist as independent places at the time of the census.

<u>City</u>	<u>Years Missing</u>	<u>Reasons and Sources</u>
Scottsdale, AZ	1940, 1950	Incorporated from Tempe (Bureau of the Census, 1960); incorp. 1961 (Grolier, 1981)
Oldwin Park, CA	1940, 1950	Incorp. 1956 (Bureau of the Census, 1960; Grolier, 1981)
Fullflower, CA	1940, 1950	Name changed from Dairy Valley after 1960; incorp. 1957 (Bureau of the Census, 1960; Grolier, 1981)
Sienna Park, CA	1940, 1950	Incorp. 1953 (Bureau of the Census, 1960; Grolier, 1981)

## City Police Expenditures

Codebook

<u>City</u>	<u>No. Missing</u>	<u>Years Missing</u>
Fayetteville, NC	9	1961-1969
Fargo, ND	9	1961-1969
Elyria, OH	9	1961-1969
Enid, OK	18	1960-1977
Lawton, OK	1	1951
Norman, OK	9	1961-1969
Salem, OR	9	1961-1969
East Providence, RI	20	1960-1979
Sioux Falls, SD	1	1951
Arlington, TX	9	1961-1969
Brownsville, TX	9	1961-1969
Garland, TX	9	1961-1969
Irving, TX	9	1961-1969
Mesquite, TX	9	1961-1969
Provo, UT	9	1961-1969
Everett, WA	9	1961-1969
Appleton, WI	9	1961-1969
Eau Claire, WI	20	1960-1979

For those in the missing category:

Bellflower, CA	9	1961-1969
Buena Park, CA	9	1961-1969
Costa Mesa, CA	9	1961-1969
Fremont, CA	9	1961-1969
Pico Rivera, CA	9	1961-1969
Westminster, CA	9	1961-1969
Southfield, MI	9	1961-1969
Wyoming, MI	9	1961-1969
Midwest, OK	4	1980-1983

Those in the decreasing category:

Cambridge, MA	2	1951-1952
York, PA	2	1970-1971
Wheeling, WV	1,1	1955, 1960 (Gen. exp. 1960)

13 Appendix E: Patterns of Growth for Cities with Unstable Population Growth

Because of concern over the effects of different growth patterns on estimation of population data, an analysis of growth patterns was done. This analysis led us to the creation of a variable (GRWPTN) which indicated each cities pattern of population growth for the period: increasing, decreasing, unstable and missing (See Appendix A for a complete definition of GRWPTN).

The population estimation procedure probably is appropriate for the increasing and decreasing cities, but there was a lingering concern about cities with unstable patterns of population change. Therefore, we further divided these cities into more refined categories.

By far the most prominent pattern of population growth among the cities having an unstable growth pattern is that of increasing population in 1950, 1960, and 1970 and decreasing in 1980. Of the 67 cities in the unstable category, 50 are of this type. They are:

Pine Bluff, AR  
Palo Alto, CA  
Redondo Beach, CA  
Redwood, CA  
San Leandro, CA  
San Mateo, CA  
Torrance, CA  
Ventura, CA  
Whittier, CA  
West Hartford Town, CT  
East Hartford Town, CT  
Fairfield Town, CT  
Greenwich Town, CT  
Champaign, IL  
Des Plaines, IL  
Elmhurst, IL  
Skokie, IL  
Anderson, IN  
Lafayette, IN  
Baton Rouge, LA  
Lake Charles, LA  
Arlington Town, MA

Quincy, MA  
Watertown Town, MA  
Livonia, MI  
Roseville, MI  
ST Clair Shores, MI  
Warren, MI  
Florissant, MO  
Bloomfield, NJ  
North Bergen Township, NJ  
Parsippany-Troy Hills Township, NJ  
Teaneck Township, NJ  
Union Township, NJ  
Woodbridge Township, NJ  
Rome, NY  
Euclid, OH  
Kettering, OH  
Lima, OH  
Mansfield, OH  
Parma, OH  
Warren, OH  
Abington Township, PA  
Bristol Township, PA  
Haverford Township, PA  
Lower Merion Township, PA  
Penn Hills Township, PA  
Upper Darby Township, PA  
La Crosse, WI  
Oshkosh, WI

Another pattern is increasing in 1950 and 1960 and decreasing in 1970 and 1980. There are eight cities in this category. They are:

Gadsden, AL  
Berwyn, IL  
Rock Island, IL  
Belmont Town, MA  
Bay City, MI  
Lincoln Park, MI  
University City, MO  
White Plains, NY

The next most prominent pattern is increasing in 1950, decreasing in 1960, increasing in 1970 and decreasing in 1980. There are five cities in this category. They are:

Richmond, CA  
Macon, GA  
Brookline, MA  
Maple Wood Township, NJ  
Wilmington, NC

The next pattern has three cities in it. Here the population increases for 1950 and 1960, decreases for 1970 and increases again for 1980. These cities are:

Kokomo, IN  
Midland, TX  
Odessa, TX

The final pattern is decreasing in 1950, increasing in 1960, and decreasing again in 1970 and 1980. There is one city in this category. It is:

East Chicago, IN
