CRIME IN THE CITY OF MILWAUKEE
1986

FORWARD

In 1968, Mayor Henry W. Maier named the Fire and Police Commission as the city agency responsible for the planning and administration of local criminal justice, including monies awarded to city agencies through the federal Law Enforcement Assistance Administration (LEAA) program. As local administrator of these matters, one of the Commission's functions was the preparation and submission of local data for annual State Criminal Justice Improvement Plans. These improvement plans identified crime and criminal justice problem areas locally and throughout the State, prioritized these problem areas, and allocated resources for the development of programs addressing the prioritized problem areas.

After the demise of the LEAA program in 1983, the Commission continued to receive requests for local crime data analysis from local officials who found the data helpful in responding to specific constituent requests, in

preparing for community meetings, and in the investigation of public safety issues. To effectively meet this continued local data need, the document "Crime in the City of Milwaukee" was developed.

Public response to its initial release in 1982 was overwhelming, and it quickly became apparent to us that the need for a source book of local crime data extended beyond the local government sector and into the general community. Therefore, the Commission determined that publication of this crime data would be annual, with broad distribution.

Release of the 1986 version of the Board's annual Crime in the City of Milwaukee report was delayed due to factors related to the way in which crime data is now collected and processed. Future editions will be back on schedule, and it is anticipated that completion of the 1987 report will occur by the end of June.

Individuals familiar with previous reports will notice a difference in both the crime data included in this report and the way in which it is presented. First, the Police Department converted its method of reporting geographical units to conform to 1980 census tract boundaries. As a result, more definitive geographic reporting is possible. Second, census level data for arson, the eighth index crime, became available for the first time for this report. Finally, certain aggregate level data on index crime characteristics also became available and has been included in this report.

New technologies, in the form of a microcomputer graphics program, have altered the way in which data is presented. We hope that the addition of charts and graphs will enhance reader understanding of local crime data.

CRIME IN THE CITY OF MILWAUKEE -- 1986

INTRODUCTION

The purpose of this report is to examine the volume, rate, and distribution of major crimes reported in the City of Milwaukee in 1986. Data for this report was gathered from crime summary reports generated by the Milwaukee Police Department on a monthly basis. It should be noted that these monthly reports are preliminary data. They reflect only crimes known to the police and may include reports which, upon investigation, proved to be unfounded. Conversely, some crimes are missed because they were not reported until after the monthly cut-off period.

This crime report contains some significant differences from previous publications:

1. The Milwaukee Police Department converted its method of reporting geographical units to conform to 1980 census tract boundaries. As a result, more definitive reporting by geographical boundaries is possible.
2. Population data from the 1985 special census became available and has been used for this report.
3. Census level information for the crime of arson, the eighth index crime, became available for this report.
4. Certain aggregate level data on index crime characteristics has become available and has been included in this publication.

CRIME IN THE CITY OF MILWAUKEE - 1986

As a result of the changes in geographical boundary definitions, changes in population, and the addition of a new index crime, we recommend against comparison with data found in previous books. Data from 1985 appearing in this book has been updated to reflect both the 1985 population base and updated census tract boundaries.

Although Appendix I contains a summary of crime reported in 13 categories in each of the city's 218 census tracts, the focus of this report is on eight categories of crime. The eight crimes included in this analysis are the eight crimes referred to in the Federal Bureau of Investigation's (FBI) annual Uniform Crime Report (UCR) as Index, or Part I crime. The crime index is the most widely used measure of the extent, fluctuation and distribution of crime within the United States. These particular crimes were chosen by the FBI because of their seriousness, frequency of occurrence, likelihood of being reported to the police, and because they are crimes that can be uniformly defined.

The index crimes to be discussed are the four personal crimes of homicide, forcible rape, robbery and aggravated assault; and the four property crimes of burglary, theft, auto theft and arson. Each criminal event is recorded only once, according to a hierarchy of seriousness. Therefore, in an event such as robbery where the victim is killed, only the homicide is recorded. A glossary of UCR definitions is appended to

CRIME IN THE CITY OF MILWAUKEE - 1986

this report as Appendix II. Additionally, each section of this report covering a specific index crime will begin with the UCR definition.

This analysis has been divided into two major sections. The first section is an overview of the Index Total and an analysis of city-wide crime trends. The second section will look at the occurrence of each individual index crime. Both city-wide and neighborhood level trends are discussed for each category of crime.

The source for the 24 neighborhood designations is the Department of City Development (DCD). These neighborhood designations have been adopted by many public and private organizations and are, therefore, a widely recognized and stable unit of analysis. In comparing crime trends across time or between geographic areas, a crime rate rather than a crime volume is frequently used. A crime rate is simply a means of "leveling" or equalizing the crime data. It is the custom, when comparing large geographic units such as cities or states, to use a 100,000 population base. In this report, where the geographic units to be compared are neighborhoods, crime rates have been based on a per 10,000 population base. It is felt that using this smaller base for neighborhood analysis presents an intrinsically more understandable sense of the impact crime has on a neighborhood, as the crime data is less inflated by the smaller base. The Fire and Police Commission has used 1985 census figures to compute all rates cited in this book.

CRIME IN THE CITY OF MILWAUKEE - 1986

To assist the reader, Appendix III is a census tract/neighborhood designation map for the City of Milwaukee. The census tract boundaries are consistent with the 1980 Census.

CRIME IN THE CITY OF MILWAUKEE - 1986

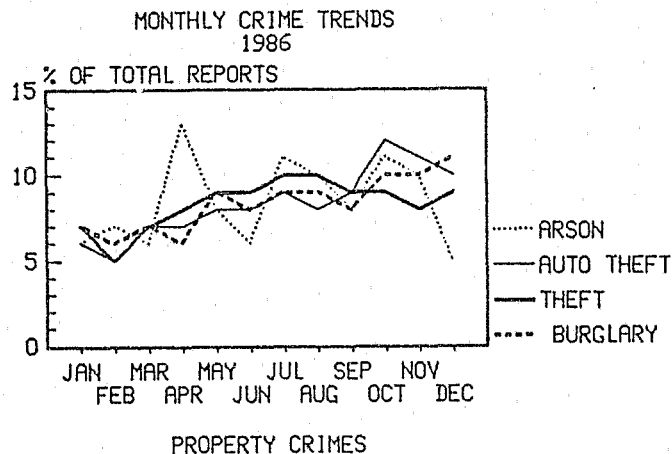

OVERVIEW

City-Wide Trends 1986

Table 1

The 49,802 index crimes reported in 1986 is the greatest number of index crimes reported within the past ten years of observation. Index reports increased 13.6% over 1985 reports. This was the largest percent increase in reports since 1979, when index crimes increased 13.4% over the previous year. Aggravated assaults increased by 1,931, a percent increase of more than 127% over 1985 reports. This was both the largest volume and largest percent increase among the eight index crimes. No index crime experienced a decrease from its 1985 level (Table 1).

Property crimes continue to be reported at a far greater volume than crimes of violence. In 1986, property crime accounted for 87% of all index reports. Theft, the most frequently reported crime in the city, accounted for 57% of all index reports and 65% of all reports of property crime. In contrast, aggravated assault, the most frequently reported crime of violence in 1986, accounted for 53% of all violent crime reports and just 7% of the yearly index total.

CRIME IN THE CITY OF MILWAUKEE - 1986

An average of 4,150 crimes were reported each month in 1986. For the third year in a row, October was the month with the heaviest volume of reports, accounting for almost 10% of the yearly total. Property crimes, as a group, differed from violent crimes, as a group, in monthly reporting trends. Graph 1 shows the monthly reporting trend for property crimes and Graph 2 shows the monthly reporting trend for violent crimes. As a group, property crimes were most frequently reported in October, which accounted for 10.1% of the yearly total of property crimes. Crimes of violence were most frequently reported in September, which accounted for almost 11% of all violent crime reports. The graphs also show that violent crimes tend to peak in the summer months, while property crimes are more prevalent in the last quarter of the year.

CRIME IN THE CITY OF MILWAUKEE - 1986

According to the Milwaukee Police Department, the estimated dollar loss due to crime in 1986 was in excess of \$39 million dollars. The dollar loss from motor vehicle theft alone amounted to \$20,228,533, 52% of the city's total dollar loss. Note that robbery, the only violent crime involving property loss, is included in this graph of "property" crimes. Dollar loss was smallest in the category of robbery. In contrast to motor vehicle thefts, robbery dollar loss accounted for less than 2% of the 1986 total dollar loss (Graph 3).

CRIME IN THE CITY OF MILWAUKEE - 1986

More than 98% of all crimes of violence involved the use of a weapon this year (Graph 4). A firearm was used in more than 37% of all incidents, a knife or other cutting instrument was used in 24% of all violent crimes, bodily force was used in 21% of all incidents, and miscellaneous weapons (furniture, clubs, rocks, etc.) were used in 16% of all events.

CRIME IN THE CITY OF MILWAUKEE - 1986
Table 1

NOTE: Percentage change based upon previous year.
Arson statistics not available prior to 1980.

Neighborhood Crime Trends

Table 2

Among the 24 city neighborhoods, the greatest volume of index crime was once again reported in the Midtown, Sherman Park, and Merrill Park areas. This year Midtown reported 5,327 index crimes, Sherman Park reported 4,013, and Merrill Park reported 3,667. Together, these three areas accounted for 26% of the city's index reports. The three areas with the lowest volume of index crime, the Valley (432), Johnson's Woods (540), and Tippecanoe (639) accounted for 3.2% of the city's 1986 index total.

The Downtown and Valley areas had the city's greatest neighborhood index rates--reporting 4,230.43 and 3,600.00 crimes per 10,000 residents respectively. As must be pointed out each year, the high rate of crime in these two areas illustrates the major problem in using a crime rate to compare city neighborhoods. Crime rate is based only upon resident population. It does not take into account factors such as population type or land use, nor is it sensitive to transient traffic. While both the Downtown and Valley neighborhoods have extremely small resident populations, they both also have extremely large transient populations as they incorporate a large amount of the city's festival, convention, business, and manufacturing areas.

This year, only three neighborhoods (Johnson's Woods, Wauwatosa Avenue, and Tippecanoe) experienced a decrease in crime rate. All three of these neighborhoods also experienced a rate decrease in 1985. Two

CRIME IN THE CITY OF MILWAUKEE - 1986

other areas, Jackson Park and the Valley, experienced no rate change from 1985.

More than half of the neighborhoods showing an index increase in 1986 had increases in excess of 10% over 1985 reports. Rate increases ranged from a low of .3% Downtown to a high of 41% in Muskego Avenue. The greatest volume increases were observed in Midtown, up 884 reports, and Lincoln Park, up 722 reports over 1985.

Appendix IV contains the total number of index crimes reported in each of the city's 24 neighborhoods in 1985 and 1986. Data from this appendix was used to prepare all neighborhood level graphs and tables used in this report.

CRIME IN THE CITY OF MILWAUKEE - 1986

ANALYSIS OF INDEX CRIME

Homicide

Table 3

The FBI classification of homicide includes all lethal killings without due process. The classification of an offense as a homicide is based on police investigation as opposed to any decision of a court, coroner, jury, or other judicial body. Deaths caused by gross negligence are not included in this category. Attempts or assaults to kill are classified as aggravated assaults and not as homicides.

In Milwaukee, homicide is the least frequently occurring index crime, accounting for less than 1% of the yearly index total. The 85 homicides reported in 1986 represents a 16.4% increase over 1985 reports and was the greatest number of homicides ever reported in the City of Milwaukee.

More homicides were reported in October (11) than in any other month of the year. The last quarter of the year (October, November, December) had the greatest volume of homicide, accounting for 33% of all 1986 reports.

The greatest number of homicides (14) were reported in the Midtown area, which accounted for 16.5% of homicides reported city-wide. The Valley, which had two (2) homicides reported in 1986, had the greatest homicide rate, 16.67 per 10,000 population. Seven (7) of 24 neighborhoods did not record a single homicide in 1986.

CRIME IN THE CITY OF MILWAUKEE - 1986

WEAPONS USED IN HOMICIDES
1986

More than half of all homicides (52%) occurring in 1986 involved the use of a firearm. A knife or other type of cutting instrument was used in 27% of all homicides (Graph 5).

VICTIM-OFFENDER RELATIONSHIPS
HOMICIDE 1986

According to Milwaukee Police Department reports, in the vast majority of homicides (63.5%), the offender was known to the victim. In 18% of all homicides, the victim and offender were found to have shared a romantic or familial relationship; in 29% of all cases, the victim and offender were acquainted; and in 16.5% of all cases, they were friends. Only 36.5% of all 1986 homicides were classified as unknown offender and/or stranger (Graph 6).

Forcible Rape

Table 4

The Uniform Crime Report definition of forcible rape does not correspond to the Wisconsin State Statutes' definition of sexual assault. Roughly speaking, the sexual assaults included in the category of forcible rape are similar to first and second degree sexual assault under Wisconsin Statutes, where force is an element of the definition. Attempts to commit forcible rape are included under this definition, but not sexual assaults where a weapon or threat of bodily injury is not involved.

A total of 520 forcible rapes were reported in 1986, 22% more than were reported in 1985. This marked the fourth consecutive year that reports of forcible rape increased over reports of the previous year.

This year, the greatest number of forcible rapes (56) were reported in August. As was the case in 1985, the third quarter of the year (July, August, September) experienced the greatest volume of reports, accounting for 29% of this year's total. In contrast, the first quarter of the year (January, February, March) accounted for just 17.5% of the yearly total.

Midtown, with 105 reports, had the greatest volume of reported rape, accounting for 20% of the city-wide forcible rape total. The Valley area, which had five reported incidents of forcible rape, had the greatest volume of rape--almost 42 per 10,000 population.

CRIME IN THE CITY OF MILWAUKEE - 1986

Although there was no area in the city this year that did not report a single rape, three areas (Bayview, Jackson Park, and Lake) had a rate of rape below one (1) per 10,000 population. The greatest rate increase was observed in the Tippecanoe and Wauwatosa Avenue areas. In the Tippecanoe area where the number of rapes increased, from one (1) in 1985 to six (6) in 1986, the rate of rape increased 500%. Similarly, while the volume increase in Wauwatosa Avenue was seven (7), the rate increased 350%. The greatest decrease in rate was found in Lake, where the rate of rape dropped from 2.63 per 10,000 in 1985 to below one (1) per 10,000 in 1986.

WEAPONS USED IN FORCIBLE RAPE
1986

In contrast to homicide, where firearms were found to be the most frequently used weapon, only 8.11% of all forcible rapes this year involved the use of a firearm. Bodily force was the weapon used in 54% of all forcible rapes (Graph 7).

CRIME IN THE CITY OF MILWAUKEE -- 1986

VICTIM-OFFENDER RELATIONSHIPS
FORCIBLE RAPE 1986

In 54% of all forcible rapes reported this year, the offender was known to the victim. In 11% of all cases, the relationship was a current romantic or family relationship; in 5% of all cases, the assault was committed by someone with whom the victim had had a prior romantic relationship. In 46% of cases reported this year, the offender was a stranger (Graph 8).

CRIME IN THE CITY OF MILWAUKEE - 1986

Robbery

Table 5

Robbery takes place in the presence of the victim to obtain property or a thing of value from a person by use of force or threat of force. Assaults to rob and attempts to rob are also included. Both armed robbery, where any weapon, actual or pretended, is used and strong armed robberies, where no weapon other than personal force is employed, are included in this category.

The 2,427 events of robbery reported in 1986 represent an increase of 6.9% over reports of 1985. This year, robbery was most frequently reported in November. The 268 robberies reported in that month accounted for 11% of the yearly total. In contrast, February and April, the months with the fewest robberies (161), each accounted for 6.6% of the yearly total. The crime of robbery appears to be the most seasonally consistent among index crimes, with a variation of less than 8% between the most active quarter (4th) and the least active quarter of the year (1st).

As was the case in 1985, the greatest number of robberies in 1986 were again reported in the Midtown (415), Sherman Park (275), and Merrill Park (267) areas. The greatest robbery rates were found in Halyard Park (116.77), Midtown (113.39), and Merrill Park (103.49).

The fewest number of robberies were reported in the Bayview (8) and Valley (11) areas. The lowest rate of robbery was enjoyed by the Bayview

CRIME IN THE CITY OF MILWAUKEE - 1986

area, which had a robbery rate of less than four (4) per 10,000 population.

Although Bayview also had the greatest rate decrease, down 38.5% from 1985, Riverwest, which had 28 fewer robberies this year than it had in 1985, had the greatest volume decrease. Jackson Park, which had a volume increase of eight (8) reports, had the greatest rate increase, up 80% over 1985.

Bodily force (41.5%) and firearms (39%) were the two weapons most commonly used in robberies in 1986. Knives or other cutting instruments (14%) and miscellaneous weapons (5.5%) were used far less frequently (Graph 9).

CRIME IN THE CITY OF MILWAUKEE - 1986

Almost two-thirds (66.3%) of all robberies committed in 1986 occurred on the streets and were classified as "Highway" robbery. The next largest category of robbery, commercial (including banks), accounted for 13.6% of all robbery reports. Convenience stores (6.2%) and gas stations (5.4%) accounted for 11.6% of all reports, and robberies occurring in residences accounted for 8.3% of all reports (Graph 10).

ROBBERY DOLLAR LOSS
1986

Table 6

HIGHWAY	\$323,587
COMMERCIAL	74,327
GAS STATION	20,125
CONVENIENCE STORE	27,391
RESIDENCE	69,813
BANKS	91,365
MISCELLANEOUS	1,912
	<hr/>
TOTAL:	\$608,520

Dollar losses due to robbery amounted to more than half a million dollars in 1986. Highway robbery dollar loss was \$323,587 this past year, and accounted for 53.2% of all robbery loss. Although the number of banks victimized by robbery in 1986 was relatively small (27), the bank dollar loss of \$91,365 accounted for 15% of all robbery losses this year (Table 6).

Aggravated Assault

Table 7

Aggravated assault is defined as an unlawful attack by one person upon another with intent to inflict great bodily injury, usually accompanied by the use of a weapon or other means likely to produce death or serious bodily harm. Attempts are included, since it is not necessary that an injury result when a gun, knife, or other non-personal weapon is used which could and probably would result in serious injury if the crime would be completed. Attacks with personal weapons must result in actual serious personal injury to be classified as an aggravated assault. Attempted murders are included in this category.

Aggravated assault was the most frequently reported crime of violence in 1986, accounting for 53% of all violent crime reports and almost 7% of all index crime reports this year. The 3,450 assaults reported represent a 127% reporting increase over the previous year. This was both the greatest percent of increase and greatest numeric increase among the eight (8) index crimes.

Aggravated assaults were most frequently reported in July (408) and least frequently reported in February (141). This year the third quarter of the year (July, August, September) saw the greatest volume of assault reports, accounting for 33% of the yearly total. In contrast, the first quarter of the year (January, February, March) accounted for just 17% of the yearly assault total.

CRIME IN THE CITY OF MILWAUKEE - 1986

Midtown had the greatest number of aggravated assaults--its 746 reports accounted for almost 22% of aggravated assaults reported in the City of Milwaukee. Three (3) of the four (4) census tracts with the greatest number of aggravated assault reports are located within the Midtown area. They are tract 97 (92 events), tract 99 (88 events), and tract 88 (80 events reported in 1986). The area of Halyard Park had the greatest rate of aggravated assault, 232.3 per 10,000 population.

Jackson Park had the fewest number of aggravated assaults (10), as well as the lowest assault rate, 2.53 events per 10,000 population. It was also the only area to report a decrease in volume from 1985 reports.

Twenty-two (22) neighborhood areas experienced rate increases. Rate increases ranged from a low of 33.3% in the Valley to a high of 271.4% in the Johnson's Woods neighborhood. Some volume increases were quite substantial. Midtown had 445 more reports and Garfield Park had 350 more reports than were reported a year ago.

WEAPONS USED IN AGGRAVATED ASSAULT
1986

CRIME IN THE CITY OF MILWAUKEE - 1986

In keeping with the UCR definition of this crime, it is not surprising to find the vast majority of aggravated assaults involved the use of a weapon. Less than 2% of all aggravated assaults involved bodily force. In contrast, firearms were involved in 40.6% of all assaults, a knife or other cutting instrument was used in 32% of all assaults, and other weapons (bats, bricks, furniture, etc.) were used in 25.5% of reported assaults (Graph 11).

CRIME IN THE CITY OF MILWAUKEE - 1986

Burglary

Table 8

The crime of burglary includes any unlawful entry of a structure to commit a felony or theft. It is not necessary that force be used to gain or attempt to gain entrance in order to be classified as burglary. Moreover, a loss does not have to occur in the case of an illegal entry for it to be counted. Attempted burglaries are included.

Burglary continues to be the second most frequently reported index crime in the City of Milwaukee. In 1986, 8,449 burglaries were reported, accounting for 17% of the yearly index total and 19.5% of all property crime. The 8.6% increase in burglary reports marked the first time in five years that burglary reports increased over the previous year.

Burglary reports were seen to gradually increase in frequency throughout the year, climbing from a low of 496 in February to a high of 961 in December. As has been seen over the past several years, the last quarter of the year (October, November, December) continues to experience the greatest volume in burglary reports, this year accounting for 32% of the yearly total.

Midtown (925) and Sherman Park (811) continue to report the greatest number of burglaries. This year Midtown reports accounted for 11% of burglaries reported city-wide, and Sherman Park accounted for 10% of reports. The greatest rate of burglary was observed in the Valley--558.33 per 10,000. Six (6) neighborhoods had rates in excess of 200 per 10,000.

CRIME IN THE CITY OF MILWAUKEE - 1986

They include Garfield Park (213.84), Halyard Park (229.81), Lincoln Park (224.92), Midtown (252.73), Riverwest (256.76), and Walker's Point (226.63).

The fewest number of burglaries were reported in the Valley (67) and Johnson's Woods (94). Johnson's Woods had the lowest rate of burglary reports—59.31 per 10,000 population. Despite the city-wide increase in burglary, nine (9) of 24 neighborhoods experienced burglary decreases in 1986. The greatest percent in rate decrease was found in Johnson's Woods, where the burglary rate dropped from 75.71 per 10,000 in 1985 to 53.11 in 1986, a 29.85% rate decrease. Volume decreases were relatively small; the greatest volume decreases were observed in Johnson's Woods, which had 40 fewer burglaries, and in Garfield Park, which had 30 fewer.

More than 75% of all burglaries reported in 1986 were residential. In both residential and commercial burglary, victims found it difficult to identify the time frame in which the event occurred. While 21.4% of all burglaries were identified as daytime burglaries (6AM - 6PM), and 28.6% of all burglaries were identified as night burglaries (6PM - 6AM), in a full

CRIME IN THE CITY OF MILWAUKEE - 1986

51.5% of burglaries the time period was not ascertained. When time was ascertained, residences were more likely than businesses to be victimized during daylight hours (Graph 12).

BURGLARY ENTRY TYPE
1986

Most burglaries in Milwaukee involved forced entry (95.5%). In only 3.7% of 1987 reports was the perpetrator able to gain entry through an unlocked door or window. The pie chart graphically illustrates that the vast majority of burglaries reported in 1986 were actual events, not attempts (Graph 13).

The estimated dollar loss attributed to burglary was \$7,583,699 in 1986. Of that amount, 75% (over 5 million dollars) was the result of residential burglary (Graph 14).

Theft

Table 9

Theft is the unlawful taking or stealing of property or articles of value without the use of force, violence or fraud. It includes crime such as shoplifting, pocket picking, purse snatching, thefts of motor vehicle parts and accessories, bicycle thefts, and so forth. Thefts from automobiles, temporary residences and recreational-type dwellings (as camping tents, trailers, houseboats and similar recreational vehicles, trailers, or dwellings) are included in this category.

Theft is the city's most frequently reported crime. This year the 28,183 theft events accounted for 57% of all index crime reports. The 3.8% increase in thefts from 1985 was the smallest percent of increase among the eight index crimes.

As was the case a year ago, July was again the month with the greatest number of thefts (2,768), accounting for almost 10% of the yearly total. In contrast, theft reports from February, the month with the fewest reports (1,519), accounted for just over 5% of the yearly theft total.

The greatest number of thefts were reported in the Midtown (2,393), Downtown (2,311), and Merrill Park (2,138) areas. The fewest thefts were recorded in the Valley (248), Johnson's Woods (363), and Tippecanoe (395) areas. The greatest theft rates were found in the two city areas of greatest commercial use--Downtown (3,349.28) and the Valley (2,066.67). The abutting census tracts of 152 and 153, which form part of the boundary

CRIME IN THE CITY OF MILWAUKEE - 1986

between the Downtown and Valley neighborhoods, were the two tracts with the greatest number of theft reports. Between them they accounted for just over 4% of thefts reported city-wide.

Six (6) of 24 neighborhoods experienced a decrease in theft reports this year. The most substantial decreases were observed in Downtown, where a 157 event decrease in thefts resulted in a rate decrease of 6.36%, and Wauwatosa Avenue, which had 127 fewer thefts for a rate decrease of 19.66%. The most substantial increase was seen in Muskego Avenue, where a 292 increase in reports resulted in a 37.87% rate increase. Only three (3) other neighborhoods in addition to Muskego Avenue had rate increases of greater than 10%. They are Garfield Park (+10.35%), Lakeside (+17.47%), and Lincoln Park (+20.97%).

Thefts from a building constituted the largest category of thefts in 1986, accounting for 29% of the yearly total. This was followed in frequency by theft of vehicle parts (27%) and thefts from automobiles (15.6%) (Graph 15).

CRIME IN THE CITY OF MILWAUKEE - 1986

THEFT DOLLAR LOSS
1986

TOTAL LOSS = \$7,963,274

Local theft losses were estimated at almost eight (8) million dollars in 1986 (\$7,963,274). Losses from building theft alone were more than three (3) million dollars. Thefts from motor vehicles and thefts of motor vehicle parts and accessories accounted for almost 42% of the dollar loss attributed to theft. Although personal theft accounted for 6.4% of all thefts, dollar loss from these events accounted for less than 3% of the theft loss total (Graph 16).

Motor Vehicle Theft

Table 10

Motor vehicle theft is defined as the stealing of a motor vehicle or driving a vehicle away without the owner's consent. "Joy rides" are included. Attempted motor vehicle theft is also included. Specifically excluded is temporary use when the vehicle is actually returned by the user, and lawful access to the vehicle is granted and can be assumed. This category includes theft of motor driven vehicles such as automobiles, trucks, buses, motor scooters, motorcycles, and snowmobiles.

The 6,387 incidents of motor vehicle theft reported in 1986 represents a 38.4% increase over 1985 reports, and is the greatest number of auto thefts reported within the past ten (10) years.

More autos were reported stolen in October than in any other month. The 763 vehicles stolen in that month accounted for 12% of the year's total. Motor vehicle theft appears to show more seasonal variation than most other index crimes. A 15% difference in reports may be observed between the first quarter of the year (January, February, March), which had the lightest volume of reports (17.93% of the yearly total), and the last quarter of the year (October, November, December), when almost 33% of all motor vehicle thefts were recorded.

Lincoln Creek continues to report the greatest number of motor vehicle thefts. The 730 vehicles reported stolen from that neighborhood accounted for 11.4% of 1986 citywide reports. Midtown (651) and Sherman Park (616)

CRIME IN THE CITY OF MILWAUKEE - 1986

also reported high volumes of motor vehicle theft. The three (3) areas with the lowest volume of motor vehicle theft were Johnson's Woods (32), Jackson Park (34) and Bayview (35).

The highest rate of motor vehicle theft was found in the Valley (616.67) and in Downtown (536.23). The three (3) areas with the lowest volume of motor vehicle theft also had the lowest rate of motor vehicle theft. The motor vehicle theft rate was 8.61 per 10,000 in Jackson Park, 16.75 per 10,000 in Bayview, and 18.08 per 10,000 in Johnson's Woods.

Only three (3) neighborhoods experienced a decrease in motor vehicle thefts this year. They are Jackson Park (-19%), Johnson's Woods (-33.3%), and Lake (-7.8%). Rate increases grew from a low of 8.82% in Kosciuszko Park to a high of 90.72% in Downtown.

MOTOR VEHICLE THEFT
CATEGORIES
1986

AUTOS 92.1%

5.0% OTHER VEH.
3.0% TRUCK/BUS

The Milwaukee Police Department estimated the dollar value of stolen motor vehicles in excess of 20 million dollars (\$20,338,533) in 1986, representing the greatest dollar loss among property crimes. Referring to

CRIME IN THE CITY OF MILWAUKEE -- 1986

the above pie chart, it may be seen that automobiles form far and away the largest group within this crime category, accounting for 92.1% of all reported motor vehicle thefts (Graph 17).

CRIME IN THE CITY OF MILWAUKEE - 1986

Arson

Table 11

Arson is defined by the Uniform Crime Reporting Program as any willful or malicious burning or attempt to burn (with or without intent to defraud) a dwelling, public house, public building, motor vehicle or aircraft, personal property of another, etc. Only fires determined through investigation to have been willfully or maliciously set are classified as arsons. Fires of suspicious or unknown origins are excluded.

There were 301 arsons reported in 1986, 28.6% more than were reported in 1985. This is the greatest number of arsons reported since 1980, the first year that this crime was included as an index offense.

The greatest number of arsons (34) were reported in July, accounting for 11.3% of the yearly total. December was the month with the fewest arson reports. In December, 16 arsons were reported, or 5.3% of the yearly total.

Midtown had the greatest number of arsons (78), accounting for almost 26% of the city's arson total this year. It had an arson rate of 21.31 per 10,000. The Valley, with five (5) recorded arsons, produced an arson rate of 41.67 per 10,000, the highest among the 24 neighborhoods. Only two (2) neighborhoods, Downtown and Lakeside, did not report a single arson in 1986.

Because most neighborhoods have a relatively small arson volume, the percent of rate increases and decreases tend to look pretty dramatic. The

CRIME IN THE CITY OF MILWAUKEE - 1986

Lake neighborhood, as an example, had a volume increase of seven (7) events, but a rate increase of 700%. Similarly, Lakeside went from two (2) reports of arson in 1985 to 0 reports in 1986, for a rate decrease of 100%.

DAMAGE LOSS = \$2,539,674

Arson in Milwaukee appears to be primarily residential in character. Residences accounted for 51.5% of all arson reported in 1986. Motor vehicles and other mobile property (motor homes, etc.) accounted for almost 22% of all arson reports. According to the Milwaukee Police Department, the damage loss from arson was \$2,539,674 in 1986 (Graph 17).

UNIFORM CRIME REPORTS

GLOSSARY OF TERMS

The classifications and terminology used by the Milwaukee Police Department in crime reporting is based upon a uniform definition and terminology established by the Federal Bureau of Investigation for Uniform Crime Reports. The establishment of uniform definitions of crime makes it possible to measure criminal activity nation-wide and helps eliminate paper crime waves caused by legislative redefinition of crime. It should be noted that the classification of offenses is based solely upon police investigation as opposed to determination of a court medical examiner, coroner, judge, jury, or other judicial body.

Part I Offenses. This is the first of two major groups of crimes established for uniform crime reporting purposes. Offenses included are homicide, forcible rape, robbery, aggravated assault, burglary, theft, motor vehicle theft, and arson. These crimes are referred to as index crimes. Their sum is referred to as the crime index. The crime index is used as a basic measurement of the extent, fluctuation, distribution, and nature of crime in the community. The rationale behind the use of an index is that 1) It reflects the true occurrence of crime better than any other data; 2) It includes serious offenses that are most accurately reported and of most concern; 3) It only includes those crimes that can be uniformly defined; and 4) It includes offenses that occur frequently without regard to geography, but do not have an unmeaningfully low or unmanageable high rate of incidence.

Glossary

Part II Offenses. The second of two major groups of crimes as established for uniform crime reporting purposes. In general, Part II crimes are those that are less severe, committed less frequently, and are less likely to come to the attention of the police.

Part I Offenses

Homicide. The FBI classification of homicide includes all lethal killings without due process. The classification of an offense as a homicide is based on police investigation as opposed to any decision of a court, coroner, jury, or other judicial body. Deaths caused by gross negligence are not included in this category. Attempts or assaults to kill are classified as aggravated assaults and not as homicides.

Forcible Rape. The Uniform Crime Report definition of forcible rape does not correspond to the Wisconsin State Statutes' definition of sexual assault. Roughly speaking, the sexual assaults included in the category of forcible rape are similar to first and second degree sexual assault under Wisconsin Statutes, where force is an element of the definition. Attempts to commit forcible rape are included under this definition, but not sexual assaults where a weapon or threat of bodily injury is not involved.

Glossary

Robbery. Robbery takes place in the presence of the victim to obtain property or a thing of value from a person by use of force or threat of force. Assaults to rob and attempts to rob are also included. Both armed robbery, where any weapon, actual or pretended, is used and strong armed robberies, where no weapon other than personal force is employed, are included in this category.

Aggravated Assault. Aggravated assault is defined as an unlawful attack by one person upon another with intent to inflict great bodily injury, usually accompanied by the use of a weapon or other means likely to produce death or serious bodily harm. Attempts are included, since it is not necessary that an injury result when a gun, knife, or other non-personal weapon is used which could and probably would result in serious injury if the crime would be completed. Attacks with personal weapons must result in actual serious personal injury to be classified as an aggravated assault. Attempted murders are included in this category.

Burglary. The crime of burglary includes any unlawful entry of a structure to commit a felony or theft. It is not necessary that force be used to gain or attempt to gain entrance in order to be classified as burglary. Moreover, a loss does not have to occur in the case of an illegal entry for it to be counted. Attempted burglaries are included.

Glossary

Theft. Theft is the unlawful taking or stealing of property or articles of value without the use of force, violence or fraud. It includes crime such as shoplifting, pocket picking, purse snatching, thefts of motor vehicle parts and accessories, bicycle thefts, and so forth. Thefts from automobiles, temporary residences and recreational-type dwellings (as camping tents, trailers, houseboats and similar recreational vehicles, trailers, or dwellings) are included in this category. Beginning in 1973, thefts of under \$50 were recorded as Part I theft. Prior to 1973, these thefts were recorded under Part II offenses.

Motor Vehicle Theft. Motor vehicle theft is defined as the stealing of a motor vehicle or driving a vehicle away without the owner's consent. "Joy rides" are included. Attempted motor vehicle theft is also included. Specifically excluded is temporary use when the vehicle is actually returned by the user, and lawful access to the vehicle is granted and can be assumed. This category includes theft of motor driven vehicles such as automobiles, trucks, buses, motor scooters, motorcycles, and snowmobiles.

Arson. Arson is defined by the Uniform Crime Reporting Program as any willful or malicious burning or attempt to burn (with or without intent to defraud) a dwelling, public house, public building, motor vehicle or aircraft, personal property of another, etc. Only fires determined through investigation to have been willfully or maliciously set are classified as arsons. Fires of suspicious or unknown origins are excluded.

Part II Offenses

Other Battery. Physical attacks under this category are those where a personal weapon, such as a fist, is used by one person against another with the intent to cause bodily harm. Attacks with personal weapons that result in actual serious bodily injury are classified as aggravated assaults.

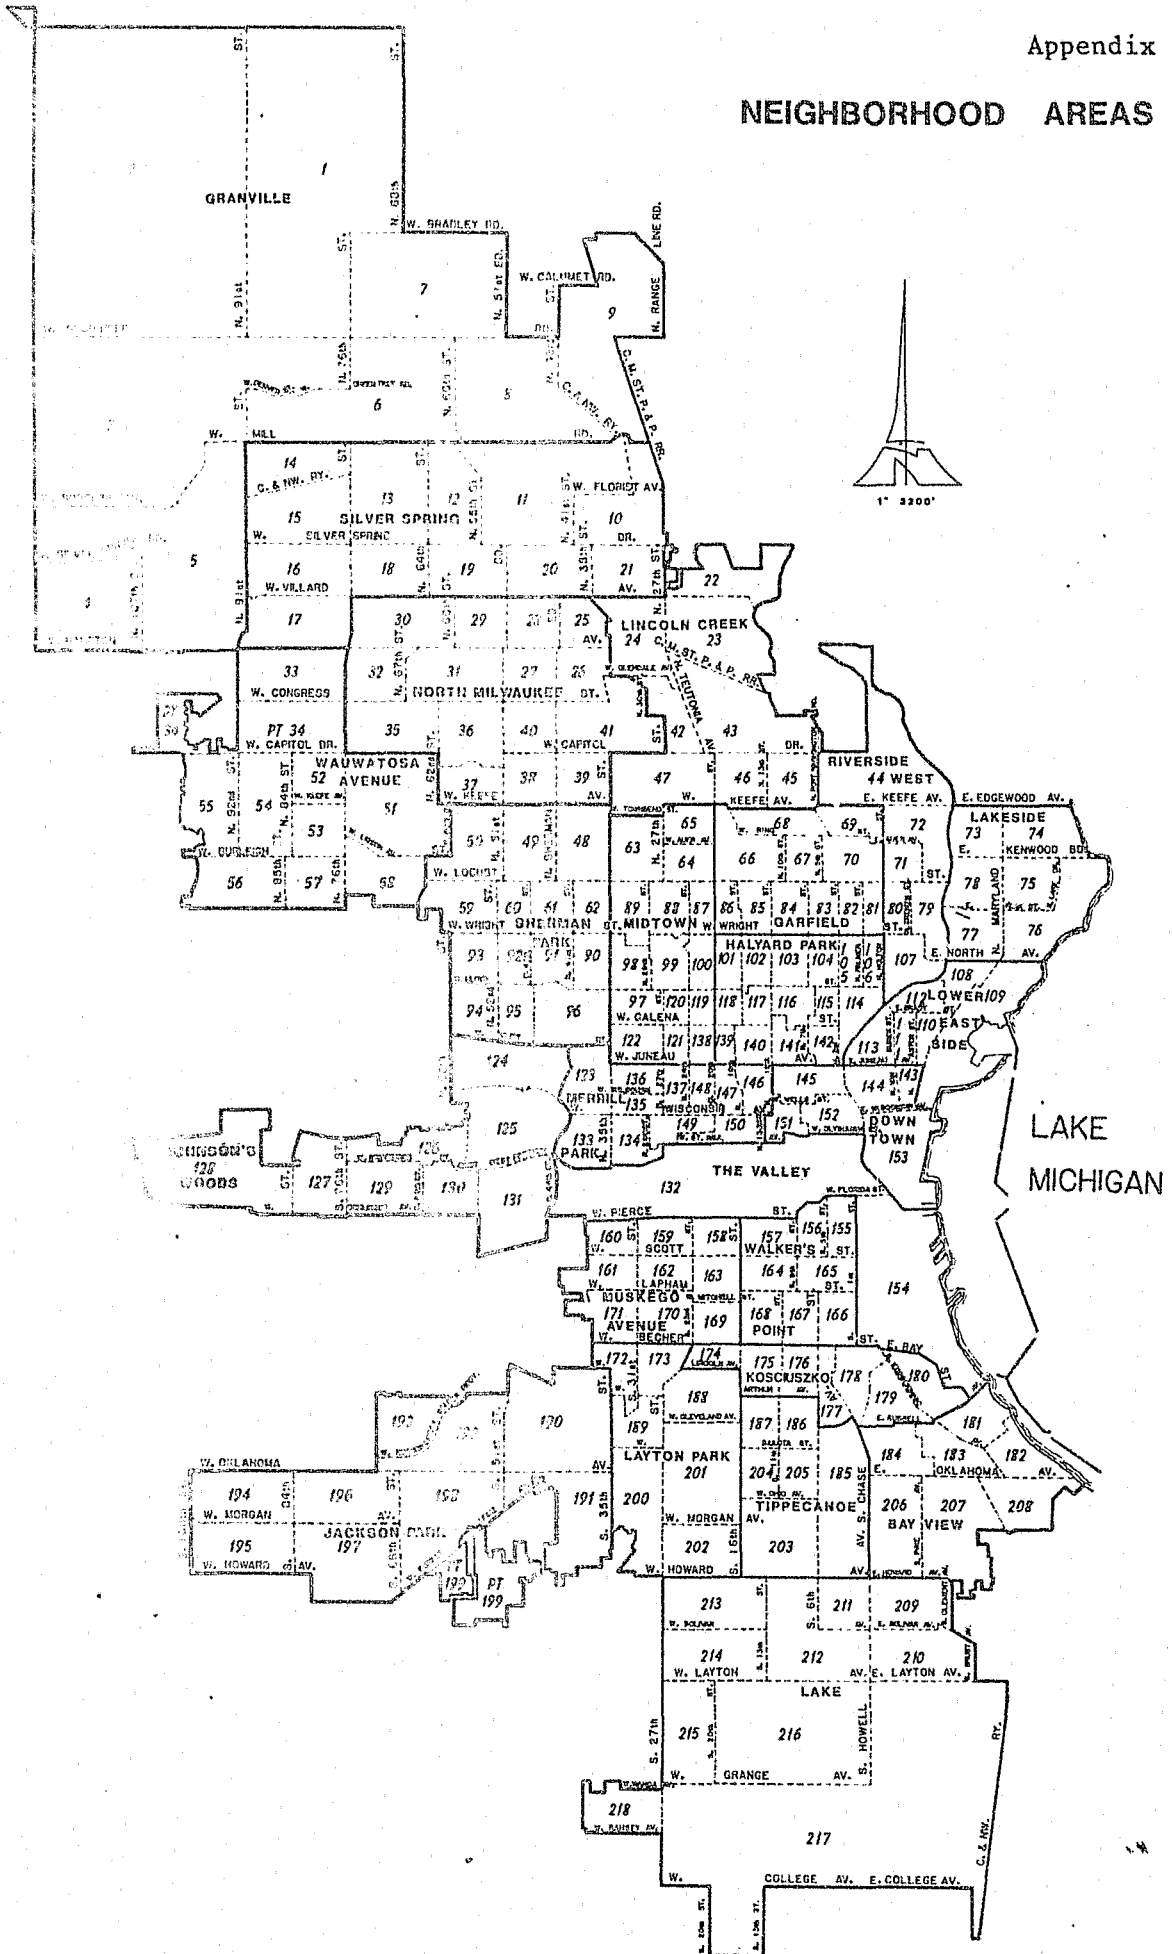

Sex Offenses. The category of sex offenses includes all sexual assaults not involving force or the use of a weapon, statutory rape, incest, bigamy and offenses against chastity, common decency, morals and the like, including attempts.

Criminal Damage. Criminal damage consists of the willful or malicious destruction, injury, disfigurement, or defacement of any public or private property, real or personal, without consent of the owner or person having custody or control by cutting, tearing, breaking, marking, painting, drawing, covering with filth, or any other such means as may be specified by local ordinance. This offense covers a wide range of malicious behavior directed at property and includes attempts.

Vice. Crimes of vice include all controlled substance offenses as well as commercialized gambling and prostitution.

All Other. This category covers a wide variety of criminal offenses ranging from embezzlement to receiving stolen property and illegal weapons offenses.
