April 30, 1988

The passage of determinate sentencing and Class X legislation in 1978, in addition to subsequent sentencing changes, has had a profound impact on the Illinois criminal justice system. Since 1978, the Illinois prison system has experienced continued and unprecedented growth. At the end of 1977, the population was 10,982. The December 31, 1987 population was 19,850, an 81 percent increase over the past ten years.

The prison population is directly affected by both the number of offenders sentenced to prison and the length of time they spend in prison. Both are governed by the sentencing laws passed and enacted by the state. The trend of the last ten years has been to increase sentence lengths for criminal acts. These legislative acts have directly increased the state's prison population and the Department of Corrections' need for state resources.

Major legislation which became effective on January 1, 1986 has recently begun to impact the prison population. Increased sanctions for Controlled Substance Act and Cannabis Control Act violations have resulted in more prison admissions and higher sentences. Moreover, as a result of laws which became effective February 5, 1987, the amount of cocaine required for a Class 1 felony charge has been reduced, and a mandatory prison term has been imposed for manufacture or delivery of more than five grams of cocaine. The prison system is seeing more admissions for Class X, 1, and 2 drug offenses, and an increase in the average sentence for these offenses because offenders are being sentenced under higher classes of crime.

In addition to these concerns, there is a wide degree of sentence disparity. For example, although the number and length of drug offense sentences are increasing, many of the sentences are less than the minimum directed by statute. Also, sentence lengths vary across the state. For example, the average sentence for Class X manufacture/delivery of a controlled substance was 6.0 years in Cook County and 8.1 years in the Northern Judicial District. Class 1 violations range from 4.2 to 7.0 years. Such matters are being evaluated by the House Subcommittee on Uniform Sentencing. Some of the data are presented in this report.

It is essential to understand that every sentence enhancement has a resultant cost not only in dollars but also in prison crowding. I present the 1987 Statistical Presentation requesting that the information be used to focus on the underlying issues of the increasing prison population in Illinois.

Michael P. Lane Director

FOREWORD

The 1987 Statistical Presentation, prepared by the Illinois Department of Corrections, is published in compliance with the Unified Code of Corrections (Illinois Criminal Law and Procedure for 1982, Chapter 38, Section 1005-5-4.3). This report is intended to provide timely, reliable, and comprehensive information to trial and appellate court judges, their staff, and to other interested parties. The data are for use in imposing and/or reviewing sentences under the Unified Code of Corrections and length of stay with the Department of Corrections.

In accordance with statute, this document reports data in terms of time served and sentences imposed by offense and offense class for the years 1978 through 1987. Data are reported by frequency, average (mean and median), range, and distribution. Time served represents stay with the Department of Corrections as well as total length of stay, which includes additional time spent in jail and other holding facilities. Comparisons of inmates sentenced under determinate sentencing can be made to those incarcerated under the previous indeterminate sentencing structure. Life, death, and Sexually Dangerous Person sentence imposed data are also reported. Also, sentences less than the minimum or more than the maximum, as outlined in determinate sentencing statutes, are reported.

For the 1987 report, several tables were added in response to the changing pattern of inmates sentenced to the Illinois Department of Corrections. Sentence imposed and length of stay data are made available specifically for Class X and Class 2 Manufacture or Delivery of a Controlled Substance, Class 4 Possession of a Controlled Substance, and Class 2 Auto Theft. Sentencing data for Unlawful Use of Weapon and Voluntary Manslaughter have been removed from the sentence by offense tables. Also, a table listing the types of consecutive sentences imposed in 1987 has been added. Indeterminate sentence data are reported by year only due to the minimal number of such sentences imposed since 1978. Because of concerns presented to the Illinois House Subcommittee on Uniform Sentencing, all major Class X and Class 1 offense sentences have been broken into judicial circuits and districts. This, along with the tables listing types of offenses in which shortened and extended sentences are imposed, should address some of the recent questions on sentencing patterns in Illinois.

All sentence and length of stay data are audited each month. All unusual cases are manually reviewed. Any errors are corrected before data are reported. All data reported in this document fully conform to all state and federal laws and resolutions concerning the security, privacy, and confidentiality of the materials.

ACKNOWLEDGEMENTS

This report was prepared by Robert J. Jones of the Planning and Budget Section. Nola M. Joyce, Manager, Planning and Budget Section and Karl R. Becker, Deputy Director, Bureau of Administration and Planning provided direction and assistance.

The preparation of this report was accomplished with the assistance of the Data Processing Section who maintain the computerized offender records for the Illinois Department of Corrections. Lynn Kennedy provided her expertise in the process of accessing and rectifying data residing in the Correctional Institution Management Information System (CIMIS).

Appreciation is also extended to those persons responsible for the production of this document. Francis B. Nelson, Jr. and Belinda S. Smith, of the Data Support Unit, were extremely helpful in the preparation of the tables and text for this report.

INTRODUCTION

This document is divided into three sections which outline the key components of incarceration in the Illinois Department of Corrections. Data from 1978 to 1987 are reported by offense, offense class, and sentence type, as well as judicial circuit, district, and region.

Part I, Impact on Population, addresses the important factors behind the increasing prison population in Illinois and why this trend is expected to continue. Increases in the Murder and Class X and 1 populations resulting from determinate sentencing can be noted. The impact of life, death, and Sexually Dangerous Person sentences on the population can also be seen.

Part II, Length of Stay, notes the time inmates are serving in prison. In addition, the slow pace of releasing inmates sentenced under indeterminate sentencing can be seen. The impact of the abolition of the forced release and misdemeanor admission policies are also shown.

Part III, Sentences Imposed, provides the data for sentencing patterns since 1978. Data for determinate and indeterminate, as well as life, death and Sexually Dangerous Person, sentences are provided. The number of extended and shortened sentences are also reported by offense. Median sentences for the major offenses, including major Class X and 1 crimes, are provided by judicial circuit, district, and region in this section.

Part

Impact
on
Population

PART I IMPACT ON POPULATION

Definitions and Data Interpretation Guidelines

For Table 1, aggregate numbers and percentages represent the prison population as of December 31, 1977 and 1987. For Tables 2 to 4, time served data are for the adult population as of December 31, 1983 through 1987. A case is a record of time in years an offender served in prison. Where an offender served time for more than one offense, time served is for the holding offense. The holding offense is the offense which holds the inmate in Illinois Department of Corrections' custody for the longest period of time. Average time served represents the arithmetic mean; standard deviations are also included in Table 4.

For Table 1, prison population numbers and percentages include all inmates incarcerated in December 1977 and 1987. For Table 2, only cases admitted from court, as opposed to inmates returned for a technical violation of MSR, are included. Only cases with a determinate sentence and cases originally sentenced with an indeterminate sentence which opted for a set release date are included. Life, death, and Sexually Dangerous Person (SDP) cases are excluded from Table 2.

The data in Table 3 represent cases sentenced with an indeterminate or indeterminate day-for-day sentence. Indeterminate cases which were received from court are included; cases returned as a technical violator of parole are excluded. Cases given an indeterminate life sentence before February 1978 or were on bond on December 31, 1987 are not counted as cases in this table. Time projected to be served and time left to serve are calculated using the maximum discharge date. This is the last date an indeterminate inmate must be released and is calculated using maximum sentence imposed less statutory good time and parole time. The maximum date was used because an earlier release can only be set by the Prisoner Review Board, and that date cannot be predetermined.

For Table 4, the cases represent inmates incarcerated with a life, death, or SDP sentence on December 31, 1983 through 1987. Sentences imposed both before and after determinate sentencing are included. The number of each will not total the previous year total plus admissions for that year because of vacated sentences, remanded sentences, deaths, or releases. Projected time to be served could not be calculated because some cases will never be released (death and life without parole sentences) or release dates are unknown (SDP and life with parole).

Summary and Conclusions

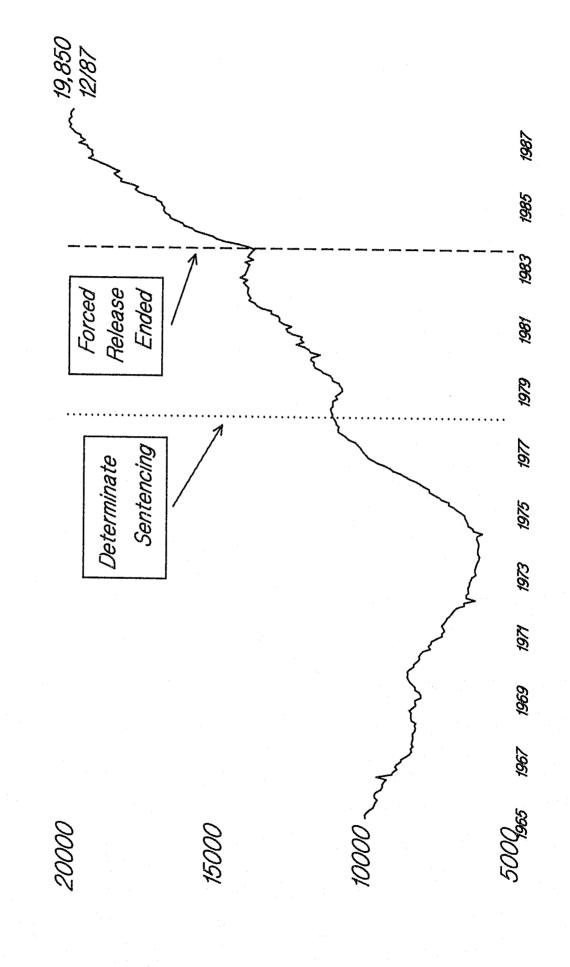

- This section demonstrates how determinate sentencing and Class X legislation contribute to the continuing increases in the prison population. At the end of 1977, the population was 10,982. It exceeded 20,000 during 1987. The December 31, 1987 population was 19,850, an 81 percent increase over the past 10 years.
- ° Figure 1 shows the rise in the adult prison population since 1965. Increases beginning in 1974 are attributed to the end of social reform and the Vietnam War.

"The explosion of prison populations was the result of two related processes: more convicted felons were being sent to prison by judges than in earlier periods, and sentences. Crime control for longer | through incapacitation of greater numbers of criminals has been the guiding principle of social policies in the 1970s and 1980s. Increased use of incarceration has been joined with efforts to raise the punitive force of lesser penalties handed out to less dangerous offenders. In short, punishment has been the order of the day" ("The Limits of Punishment as Social Policy", by Don C. Gibbons, National Council on Crime and Delinquency, 1988, page 16.)

- o Increasing populations continued after determinate sentencing was implemented, and began to slow in the early 1980's when the forced release policy was in effect. The sharpest rise began once forced release was stopped (Figure 1).
- Determinate and Class X sentencing has not only resulted in increases in the number of inmates, but also the rate of movement through prison. Table 1 shows that the number of inmates incarcerated for Murder, Class X, or Class 1 increased by 9,566 since prior to determinate sentencing in 1977. This is a 245 percent increase (Figure 2).
- o In 1977, these most serious offenders comprised 36.5 percent of the population. By 1987, they made up 68 percent (Table 1).
- These serious offenders are also serving more time in prison. Since 1978, the average length of stay for an inmate convicted of Murder rose three years. Class X inmates sentenced in 1987 are expected to serve 5.6 years in prison, 1.5 years longer than those released in 1978 (Table 1).

- Inmates currently in prison, excluding community supervision violators whose length of stay for the violation is relatively short, have an average of six years left to serve (Table 2). Murderers without a life or death sentence will be in prison for 16 more years before their projected release date. This indicates that 2,212 inmates will use one prison bed each for the next 16 years. For Class X offenders, 5,676 will use one bed each for the next 7.3 years. In addition, more of these serious, long-term offenders will be added to the population each year, with relatively few releases. Thus, there has been, and will continue to be, a "stockpiling" of these inmates in the prison population (Figure 3).
- On the other hand, Class 2, 3, and 4 offenders are serving less time in prison than in 1978. This group also represents a lower percentage in the population. In 1978, these inmates made up 44 percent of the population, and served an average of 2.7 years (Table 1). By 1987, they comprised 32 percent of the population, and should average 1.9 years.
- Therefore, while Murder, Class X, and Class 1 inmates will continue to increase in the population, Class 2, 3, and 4 inmates will comprise a relatively small proportion of the population due to relatively shorter time to serve.
- Moreover, there are 841 inmates remaining in prison who are serving an indeterminate sentence, with most having a long period of time before release (Table 3). They can only be released with permission of the Prisoner Review Board or the governor, or until the end of their sentence (averaging 62 years from now). Relatively few have been released in the last five years, 46 in 1987 with one admission (Table 10). The number to be released in the future will be minimal. With fewer releases occurring each year, the most serious offenders should remain in prison for many years.
- There is also a growing number of inmates who will never be released. The number of inmates with a life or death sentence continues to rise (up 107 percent since 1983), along with the number of Sexually Dangerous Persons, who can only be released by court-order (Table 4 and Figure 4). With young offenders admitted each year, the average age for these inmates increased by only 1.1 years since 1983.
- The number of inmates sentenced under the habitual offender statute with a life sentence also increased since 1983 (Figure 5). The number of these inmates will rise as offenders with three or more Class X offenses are prosecuted and sentenced as a habitual offender.

			Death		
1983	62	2.5	1.8	33.2	8.2
1984	71	2.9	1.9	33.4	8.0
1985	85	3.3	2.4	33.4	7.5
1986	107	3.5	2.7	32.7	7.5
1987	110	4.0	2.9	33.3	7.7
			SDP		
1983	24	3.9	3.8	37.8	14.8
1984	30	3.6	3.4	38.5	16.4
1985	34	3.8	2.8	37.1	15.6
1986	40	3.4	2.6	36.6	14.4
1987	44	3,5	2.8	38.3	14.3
			Total		
1983	236	3.2	5.2	33.7	10,5
1984	285	3.6	5.1	34.4	10.9
1985	356	3.7	4.9	34.0	10.4
1986	433	3.9	4.6	34.0	10.3
1987	494	4.0	4.2	34.8	10.2

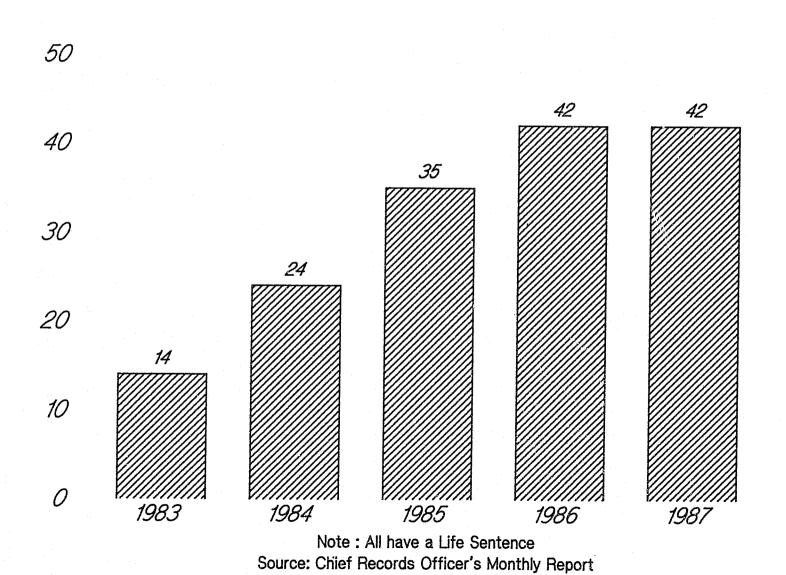

^{*}The standard deviation is a measure of variability and is expressed in the same unit as the average time served and age (years). Adding one standard deviation to the average and subtracting one standard deviation from the average yields a range which includes approximately 68 percent of the cases. A larger standard deviation indicates a wider range of time served and age.

Part

Length

of

Stay

PART II LENGTH OF STAY

Definitions and Data Interpretation Guidelines

In the length of stay tables that follow, a case is a record of the time an offender spent in prison, jail, or other holding facilities. In situations where an offender served time for more than one offense, the length of stay data are for the holding offense. The holding offense is the offense which holds the inmate in Illinois Department of Corrections custody for the longest period. All types of exits from prison, including release to parole or Mandatory Supervised Release (MSR), expiration of sentence discharge, death, court-ordered discharge, reversal, and reversal and remanded sentence, are reported. Release of Sexually Dangerous Persons are also included.

Each offense presented is followed by a reference to the class of offense as categorized in the Illinois Criminal Sentencing Code. All offenses have been converted to the new offense categories enacted with determinate sentencing legislation as of February 1, 1978. Voluntary Manslaughter was upgraded from a Class 2 to a Class 1 offense in 1982; data beginning in 1983 report it as a Class 1 offense. Data for Residential Burglary were added when it became a mandatory prison sentence. Length of stay for Class X and 2 Manufacture / Delivery of a Controlled Substance, Aggravated Criminal Sexual Assault, Class 2 Auto Theft, and Class 4 Possession of a Controlled Substance determinate sentence cases were added to Table 9 in 1987.

Length of stay data are for two time periods. "Time Served" is comprised of time spent in jail, mental health custody, juvenile facility, on probation etc. for which the offender receives credit on the sentence, plus time in prison. "Prison Stay" refers just to the time spent in IDOC adult facilities. The data are broken out by three categories: all cases of adult felons, determinate cases, and indeterminate cases. Because pre-1983 data files are unavailable, data for determinate cases are not available by offense for all years. For offenders released to parole or MSR who are revoked and returned to prison, the additional time spent completing the original sentence is not included in the length of stay computation.

Some unusual minimum and maximum lengths of stay may be noted in Tables 5 to 11. These cases were identified and their files were examined to find the causes. For example, some extremely short minimum and long maximum lengths of stay were results of inmates who died in the institution. Extremely short minimum prison stays occurred for cases which served a large percentage of their sentence in jail due to such circumstances as continuances and illness. Others obtained credit for time served on probation, in a mental health center, juvenile facility, TASC or other community drug program, or prison in another state. Some extreme minimum and maximum lengths of stay also resulted from inmates who were released on bond or writ and were not cleared until the year of exit. All of these situations were rare and legitimate, and were included to be consistent with previous years.

In addition to the arithmetic mean, the median was added as a measure of average length of stay for 1983 to 1987 data. The mean is defined as the arithmetic average of the raw data. It is calculated by summing the lengths of stay for all cases and dividing by the total number of cases. The median is the measurement where exactly 50 percent of the scores lie below that length and 50 percent are above it. The mean is affected by extremely low or high stays. A large percentage of low stays will produce a mean greater than the median. This is true for most length of stay comparisons. Conversely, a large percentage of high lengths of stay produces a mean less than the median. When the mean and median are equal, the distribution of sentences is symmetrical, i.e., sentences both greater than and less than the average are distributed evenly. The few extreme minimum and maximum length of stay cases discussed above have little effect on the mean and no effect on the median.

The increase in the average length of stay for Class 2, 3, and 4 offenses after a drop in 1983 reflects the impact of eliminating the forced release policy. With the discontinuation of forced release, average stays for the less serious offenses are returning to pre-1983 averages.

Summary and Conclusions

- The number of exits increased in 1987. However, the mean length of stay in prison for all adult felons released in 1987, as well as the total time served, remained at their 1985 and 1986 levels (Table 5). The median lengths of stay decreased slightly.
- Nearly 71 percent of the reported exits in 1987 were for Class 2, 3, and 4 offenders (Table 6). The total average length of stay (2.1 years) is driven by the higher proportion of lower classes exiting prison.
- The number of exits from each offense class increased in 1987. Average length of stay increased for Class X and Class 1 offenses, and decreased for Murder, Class 2 and Class 4 (Table 6).
- Largest increases in time served were for Attempted Murder, Rape, and Voluntary Manslaughter. Average length of stay fell by .1 year for Burglary, Other Class 2 offenses, Aggravated Battery, and Class 4 offenses (Table 7).
- The rise in the number of Class 4 inmates exiting since 1983, the year the Department stopped admitting misdemeanants, is attributed to the increase in holding offenses such as Retail Theft (up 475 percent by 1987), Theft (a 400 percent increase), and Possession of a Controlled Substance (up 125 percent in five years) (Table 7).
- The number of exits from determinate sentences continued to increase, by nearly 900 in 1987 (over 12 percent since 1986). Most determinate sentences for the higher offense classes showed increases in the average time served and average prison stay from 1983 through 1987. Lengths of stay for Class 3 and 4 offenses have remained stable over the past five years (Tables 8 and 9).
- Fewer indeterminate cases were released by the Prisoner Review Board in 1987 (Table 10). This is because those indeterminates remaining in the prison system continued to be serious offenders determined to be a risk to public safety.
- The majority of inmates which remain in prison with an indeterminate sentence are incarcerated for Murder and Class X offenses (Table 3). Compare Tables 9 and 11 to note various lengths of stay by offense for determinate vs. indeterminate sentences.

	1987	1,104	0.8	0.5	0.7	0.5	0.5	0.4

Note: The standard deviation is a measure of variability and is expressed in the same unit as the average time served or average prison stay (years). Adding one standard deviation to the average and subtracting one standard deviation from the average yields a range which includes approximately 68 percent of the cases.

Voluntary Manslaughter was upgraded to a Class 1 offense in 1982. Residential Burglary was also introduced as a Class 1 offense in 1982. Thus, 1983 through 1987 data are reported. The sharp decrease in the number of Class 2 Voluntary Manslaughter cases was due to this change in the statute.

²From 1978 to 1982, all Class I offenses were included. Beginning in 1983, with the introduction of Voluntary Manslaughter and Residential Burglary, the category is entitled, "Other Class I".

^{*}There may be some maximum lengths of stay which would have them admitted to prison before determinate sentencing took effect in 1978. These cases were originally sentenced under an indeterminate sentence, but opted for a set release date.

There may be some maximum lengths of stay which would have them admitted to prison before determinate sentencing took effect in 1978. These cases were originally sentenced under an indeterminate sentence, but opted for a set release date.

Data from 1980 to 1982 were provided for selected offenses from previous reports. Beginning in 1983, data for all other relevant offense categories can be reported.

Sentences
Imposed

PART III SENTENCES IMPOSED

Definitions and Data Interpretation Guidelines

In Section III of this report, a sentence represents any case in which a sentence is imposed for an offense. Thus, the number of sentences imposed, not the number of offenders, is being reported. The cases categorized by year are based on the dates offenders are sentenced to the Department of Corrections, not necessarily the date they are received by the Department.

Each offense presented is followed by a reference to the class of offense as categorized in the Illinois Criminal Sentencing Code. All offenses were converted to the new offense categories enacted with determinate sentencing legislation as of February 1, 1978. Voluntary Manslaughter was upgraded from a Class 2 to a Class 1 offense in 1982. 1983 through 1987 data report it as a Class 1 offense. Data for Residential Burglary were added beginning in 1983. On July 1, 1984, the Illinois Criminal Sexual Assault Act took effect, replacing Rape statutes.

For Tables 12 through 17, the average sentence represents reported cases within that offense category for that year excluding life, death, and Sexually Dangerous Person (SDP) sentences. For Tables 16 and 17, the averages represent the mean sentence length. For Tables 12, 14 and 15, in addition to the mean, the median is reported as a measure of average sentence for 1983 to 1987 data. The mean is defined as the arithmetic average of the raw data. It is calculated by summing the sentences for all cases and dividing by the total number of cases. The median is the measurement where exactly 50 percent of the scores lie below that length and 50 percent are above it. The mean is affected by extremely low or high sentences. A large percentage of low sentences will produce a mean greater than the median. This is true for most sentence comparisons. Conversely, a large percentage of high sentences produces a mean less than the median. When the mean and median are equal, the distribution of sentences is symmetrical, i.e., sentences both greater than and less than the average are distributed evenly.

Data reported in the top of Table 12 and Tables 14 and 15 do not reflect sentences which fall outside of the range specified for each class (Illinois Criminal Law and Procedure, 1987 Edition; Chapter 38, Section 1005-8-1). Judges may impose a sentence up to twice the maximum range (Section 1005-8-2) for cases which reflect factors in aggravation (Section 1005-5-3.2) or may minimize a sentence of imprisonment for cases with mitigating circumstances (Section Compare the top and bottom of Table 12 to note the difference in 1005-5-3.1). overall sentence lengths when shortened and extended sentences are calculated. Table 18 summarizes all sentences imposed from 1978 to 1987 by offense class, including those which fall into the range, extended sentences, and those less than the minimum. Tables 19 and 20 report the specific offenses for both sentences imposed and admissions for 1987 which were less than the minimum and greater than the maximum. A case is counted as an admission only if the listed offense was the holding offense. For a definition of a holding offense, refer to page 19.

Court admissions for which the holding offense was a consecutive sentence are reported in Table 21. They are listed by offense class for the years 1984 to 1987.

In Tables 23 and 24 and Figures 8 and 10, median determinate sentences for major Class X and Class 1 offenses imposed in 1987 are reported by judicial circuit and district. All sentences both within and outside of the ranges established by determinate sentencing legislation are reported. The purpose of these tables is to note differences among sentences imposed across circuits and districts for Class X and 1 offenses, and to note different sentences imposed by offense within each circuit and district. These tables and charts were incorporated into the report in response to concerns in sentencing disparity across the state by the House Subcommittee on Uniform Sentencing.

In Tables 25 to 43, median determinate sentences imposed in 1987 are reported by judicial circuit, district, and region. Only those sentences which fall into the range established by statute are reported. The purpose of these tables is to aid judges and other court administrators to discern sentencing patterns within their jurisdiction. These tables should be interpreted as comparisons among circuits and districts of median sentence lengths and the number imposed in relation to other jurisdictions within Illinois. 1986 rankings (lowest to highest) are included to compare sentencing patterns across the state for the past two years. Attention should also be given to the number of sentences imposed when making comparisons. A list (Table 23) and maps (Figures 6 and 7) of circuits and districts by county precede the tables.

As of July 1, 1983, misdemeanants could no longer be sentenced to the Department of Corrections as the holding (longest sentence) offense. Misdemeanor sentence tables are excluded from this section of the report.

The number of cases reported after 1983 is considerably greater than in previous years. The primary reason for this improvement is that in 1983 the Planning and Research Unit, in cooperation with the Data Processing Section, began developing audited monthly admission and exit data files. This approach decreased the probability of missing cases and increased the reliability.

Summary and Conclusions

- In 1987, the number of determinate sentences imposed continued to rise. The average overall length has decreased slightly the last two years (Table 12). This decrease is attributed to a smaller percentage of sentences over 20 years (Table 13) and a larger number of Class 2 sentences (Table 14). The percentage of sentences over 20 years fell 17 percent and the number of Class 2 sentences rose by over 37 percent since 1985.
- Sentences within the ranges of determinate sentencing averaged 5.2 years in 1987. When including shortened and extended sentence lengths, the average rises to 5.8 years (Table 12).
- There was an increase in the percentage of 4 to 10 year sentences in 1987 (Table 13).
- The number of determinate sentences rose in 1987 for Class X, 1, 2, and 4 offenses. The only class where the mean sentence length increased, however, was for Class 2 offenses (Table 14).
- By offense, the number of sentences increased for all major crimes except Murder, Voluntary Manslaughter, Forgery, and Theft (Table 15).
- ° The average sentence imposed for Murder fell 1.5 years in 1987.
- Sentence length increased for Armed Robbery, Attempted Murder, Residential Burglary, and Burglary.
- The number of sentences imposed for Aggravated Criminal Sexual Assault, the offense which replaced rape in 1984, continued to rise. Its average sentence fell slightly in 1987.
- For the offenses introduced in the 1987 report, i.e., Class X, 2, and 4 Controlled Substance Act violations and Class 2 Auto Theft, the number of sentences rose sharply in 1987. In addition, the average sentence increased for both Manufacture or Delivery of a Controlled Substance offenses (Table 15).
- ° Tables 16 and 17 show the rapid decline in indeterminate sentencing. All recent sentences are for crimes committed before 1978.
- There were 46 extended sentences for Murder, representing over 15 percent of all Murder sentences imposed in 1987 (Table 18). Such sentences are imposed for crimes with heinous or aggravating circumstances.

- There were shortened and extended sentences imposed for all classes of crime, particularly Class 2 and 3 offenses (refer to Table 18 for the specific number of such sentences for each class).
- By offense, most sentences which were less than the minimum were for drug and property offenses. Only 55 percent turned out to be serious enough that they were the holding offense. The others were associated with another offense(s) which would be the holding sentence at admission (Table 19).
- Most extended sentences were for crimes against a person, including Armed Violence, Aggravated Criminal Sexual Assault, Home Invasion, Aggravated Battery, and Unlawful Restraint. Some were imposed for property and drug offenses (Table 20).
- The number of admissions with a holding offense consecutive to other offense(s) rose 107 percent in 1987. They increased for all offense classes except Murder (Table 21).
- When separating Class X sentence lengths by judicial circuits and districts (Table 23), Cook County generally imposed sentences less than the remainder of the state. The Northern District had higher sentences for Controlled Substance, Home Invasion and Armed Violence, but overall had lower Class X sentences than other districts (Figure 8). Sentences for Home Invasion and Attempted/Solicitation of Murder were generally higher across the state than other Class X offenses (Figure 9).
- For Class 1 offenses (Table 24), sentences were again lower in Cook County. They were highest in the Southern District (Figure 10). There was a wide range of Class 1 sentences among the circuits and districts. Highest were for Aggravated Kidnapping and lowest were for drug-related crimes (Figure 11).
- Overall, Cook County imposed over 75 percent of the Murder and Class X sentences in 1987. Sentences were lower in Cook County for the Class X offenses, but were three years higher than the remaining counties for Murder (Tables 25 to 30).
- Residential Burglary accounted for 63 percent of all Class 1 sentences in 1987. For the fourth year in a row, sentences were highest in the 8th Circuit, comprised of Adams County and seven counties to its west and south. Cook County ranked with the other Districts at a 5.0 year median. Only the Southern District had a higher average at 5.8 years (Tables 31 and 32).
- Cook County imposed 73 percent of the Class 2 offenses. The new Auto Theft offense has been used almost exclusively in Cook, Will, and DuPage Counties. Sentences for Class 2 offenses have been generally lower in Cook County and higher in the Northern and Southern Districts (Tables 33 to 37).

- Cook County imposed only 56 percent of the Class 3 sentences. However, their average sentences were higher than the rest of the state (Tables 38 to 41).
- Nearly 59 percent of the Class 4 sentences were imposed outside of Cook County. Relatively little disparity is seen among the judicial districts for Class 4 offense sentences (Tables 42 and 43).

		Felony	Misdemeanor*

Notes: ¹Table 14 data do not reflect sentences that fall outside the range specified for each class. Extended terms and shortened sentences are reported in Table 18.

Voluntary Manslaughter was upgraded to a Class 1 offense in 1982. Residential Burglary was also introduced as a Class 1 offense in 1982. Thus, the sharp increase in the number of Class 1 cases was due to this change in the statute.

Notes: Table 15 data do not reflect sentences that fall outside the range specified for each class. Extended terms and shortened sentences are reported in Table 18.

²Voluntary Manslaughter was upgraded to a Class 1 offense in 1982. Residential Burglary was also introduced as a Class 1 offense in 1982. Thus, only 1983 through 1987 data are reported. The sharp decrease in the number of Class 2 Voluntary Manslaughter cases was due to this change in the statute.

21st	35.0	1	20	7	Statewide	26.8	249		

Note: Over two-thirds of the Murder sentences were imposed in Cook County, averaging three years higher than the downstate median. Lowest sentences were imposed in the Northern Judicial District, which ranked highest in 1986. Sentences in the Central District ranked highest in 1987. Among the Judicial Circuits, except for the 3rd (Bond and Madison Counties) and 20th (St. Clair and surrounding counties), no circuit imposed more than nine Murder sentences in 1987; 12 imposed two or less.

Table 26

Median Sentence Imposed in Years For Armed Robbery
By Judicial Circuit, District, and Region - 1987

		Number					Number		
		Of	1987	1986			Of	1987	1986

6th	12.5	14	19	2	Cook	9.8	813	2	2
4th	18.0	3	20	12					
13th	18.3	2	21	9	Statewide	9.9	982		

Note: Cook County, with 83 Percent of the Armed Robbery sentences, averaged nearly one year higher than the downstate counties. The North Central District, particularly the 12th (Will County) and 10th (Peoria and surrounding counties) Circuits, had the lowest sentences after ranking high in 1986. Conversely, the Central District, especially the 6th Circuit (Champaign and nearby counties), had the highest sentences for Armed Robbery after ranking lowest one year earlier. Sentences were lowest in the 7th (Sangamon County area) and 2nd (southeastern counties) Circuits; they ranked highest in 1986. Sentences were highest in the 4th and 13th Circuits during 1987.

1011	20.0	3	17	10	pracemine	10.1	209		

Note: As in 1986, sentences for Attempted Murder were lowest in the Central District (four cases). With nearly 80 percent of the sentences, Cook County averaged lower than most circuits. Except for Cook County and the 17th Judicial Circuit (Boone and Winnebago Counties), no circuit imposed more than six Attempted Murder sentences in 1987. As in 1986, the 12th (Will County) and 5th (east central counties) ranked lowest in 1987.

						· •			

Note: Sentences for Aggravated Criminal Sexual Assault ranged from 6.0 years (15th Circuit) to 19.0 years (8th and 14th Circuits). Cook County ranked sixth lowest for the second year in a row, imposing two-thirds of these sentences across the state. Among the judicial districts, the Northern District ranked lowest. The North Central District ranked highest after being lowest in 1986.

15th	15.0	1	16	-	Statewide	6.0	315		

Note: Most (79 percent) of the Class X Manufacture or Delivery of a Controlled Substance (usually 15 grams or more of heroin or cocaine) sentences were imposed in Cook County. Cook shared the lowest average (6.0 years, the lowest sentence length within the range outlined in statute) with four other circuits. Except for the 18th and 19th Circuits (DuPage, Lake, and McHenry Counties), no other circuits, or the Southern and Central Districts, imposed more than nine such sentences in 1987. Highest sentences were handed down in the Northern Judicial District.

17th	25.0	1	21	7	Statewide	9.9	395		

Note: Cook County imposed 66 percent of the sentences for other Class X offenses.

Overall, the Chicago-area county imposed over 75 percent of the Murder and Class X sentences in 1987. For these offenses, including Home Invasion, Armed Violence, Aggravated Arson, and other violent crimes, sentences ranged from a low of 6.5 years (13th Circuit) to highs of 17 years (Lake and McHenry Counties in the 19th Circuit) and 25 years for one case in the 17th Circuit. Among the judicial districts, Cook had the lowest average while the Northern District averaged highest with a median of 13.8 years.

Table 31

19th	7.9	33	21	8					
8th	9.8	14	22	21	Statewide	5.0	1,247		

Note: Residential Burglary accounted for 63 percent of all Class 1 sentences in 1987. They ranged from 4.2 years in Will County to 9.8 in the 8th Circuit. For the fourth year in a row, sentences were highest in the 8th Circuit, comprised of Adams County and seven counties to its west and south. Cook County ranked with the other Districts at a 5.0 year median. Only the Southern District had a higher average at 5.8 years.

Note: Because of the various types of offenses in the Other Class 1 category, including Voluntary Manslaughter, Attempted Armed Robbery, Indecent Liberties with a Child, Aggravated Kidnapping, and a wide range of drug and sex-related offenses, sentences varied widely across the state. Sentences were lowest in the 10th (Peoria and other nearby counties) and 21st (Will County), and highest in the 5th and 6th (Champaign and other east central counties) Judicial Circuits. The Central District had the highest median sentence after averaging lowest in 1986. Cook County imposed two-thirds of the sentences with an overall average of six years.

Note: There were more sentences imposed for Burglary than any other offense; these sentences comprised 15 percent of all handed down in 1987. Sentences averaged 3.5 years across the state. They were generally lower in the north and higher in the central and southern counties. Cook County, which ranked lowest in 1986, equalled the statewide average and ranked ninth lowest in 1987. The 17th Circuit (Boone and Winnebago Counties) ranked highest after being second lowest one year earlier.

Note: There was a wide range of Robbery sentences in 1987. Medians were as low as 3.0 years in the 15th Circuit (northwestern counties) and exceeded five years in the 12th (Will County) and 2nd (extreme southwestern counties) Judicial Circuits. Overall, however, Robbery sentences were lowest in the Southern District. They were highest in the North Central District, after ranking lowest in 1986. Cook County, imposing 80 percent of these sentences, averaged equal to the other counties as a whole.

Note: This offense became effective on January 1, 1985 and states it is a Class 2 felony to receive, possess, conceal, sell, dispose, or transfer a vehicle or part of one, or remove, alter, deface, destroy, or falsify a vehicle's identification number. It is used almost exclusively in Cook, Will, and DuPage Counties. These three judicial circuits imposed over 95 percent of the 1987 sentences. Cook County averaged lowest as it did in 1986. The Northern District ranked highest with a 4.0 year median.

Note: A Class 2 felony would usually involve the manufacturing or delivery of small amounts of heroin (less than 10 grams) or cocaine (less than one gram). Sentences ranged from 3.0 years to 6.0 years. Cook County again had the lowest average among the districts. With 73 percent of the sentences, it averaged 3.1 years. The Northern District, particularly the 15th and 19th Circuits, had the highest average for the second year in a row.

Note: These Class 2 offenses are mainly drug and sexual abuse crimes. Cook County continued to have the lowest median sentence at 3.5 years, imposing nearly 80 percent of the sentences. Average sentences ranged from lows of 3.4 years (7th, 10th, and 12th Circuits) to a high of 5.5 years in the 1st Circuit in extreme southern Illinois. There were few consistencies in rankings among the circuits from 1986 to 1987, most likely due to the wide range of offenses.

Note: With more disparity in 1987, Aggravated Battery sentences ranged from 2.0 years in the 13th Circuit to 4.0 years in the 1st and 12th Circuits. Cook County ranked highest among the districts with a 3.2 year median. The Southern District, especially in the 2nd and 3rd Circuits, ranked lowest with an average of 2.6 years. It had also ranked lowest in 1986. The 16th, 17th, and 18th Circuits, all in the Northern District, shared the same average for the second year in a row.

2762	,	*** **				-,-	505		

Note: Across the state Forgery sentences averaged 3.0 years. In the Southern District, however, sentences were nearly a year lower. Sentences were lowest in that district's 4th and 3rd Judicial Circuits. The 19th Circuit, consisting of Lake and McHenry Counties, had an extremely high average for the second year in a row; in 1987 it averaged 4.8 year sentences. Cook County imposed only 39 percent of Forgery sentences in the state.

Note: Class 3 offenses include Retail Theft, Unlawful Use of Weapon, Attempted Burglary, Attempted Robbery, and various Cannabis and Controlled Substance Act violations. Sentences ranged widely among both the circuits and districts. Cook County ranked highly with a 3.0 year average. Sentences were lowest in the Northern and North Central Districts. Highest sentences were seen in the 17th Judicial Circuit in northern Illinois.

21st	2.5	2	20	13	Statewide	2.0	475		

Note: Class 4 Possession of a Controlled Substance sentences have been rising for the past five years. With the 475 sentences imposed in 1987, the number has increased by over 85 percent since 1983. Sentences ranged from a low of 1.0 years in the 8th Circuit (one sentence) to 2.5 years in the 1st, 7th, and 21st Circuits. Sentences in the 14th Circuit in northwestern Illinois were second lowest in 1987 after being highest in 1986. These Class 4 sentences averaged 2.0 years in all districts.

3rd	2.0	27	13	8					
8th	2.0	31	13	8			Number		
9th	2.0	34	13	8			Of	1987	1986
14th	2.0	40	13	8	Region	Median	Cases	Rank	Rank
19th	2.0	71	13	8					
Cook	2.0	534	13	8	Cook	2.0	534	1	1
7th	2.1	68	20	8	Other	2 0	1,041	1	1
5th	2.2	26	21	4					
lst	2.3	46	22	8	Statewide	2.0	1,575		

Note: Class 4 offenses are mainly property and drug-related crimes. Relatively few were imposed in Cook County, with an average consistent with the rest of the state. Sentences were lower in the North Central and Central Districts, particularly the 13th, 16th, 21st, 10th, 12th, and 17th Circuits. Highest were in the 1st Circuit in extreme southern Illinois.
