SELECTING CAREER CRIMINALS FOR PRIORITY PROSECUTION, 1984-1986:
LOS ANGELES COUNTY, CALIFORNIA AND MIDDLESEX COUNTY, MASSACHUSETTS
(ICPSR 8980)

SUMMARY: Collection of these data was undertaken in order to develop offender classification criteria that could be used to identify career criminals for priority prosecution. In addition to the crime records obtained from official sources and defendants' self-reports, information about prosecutors' discretionary judgments on sampled cases was obtained from interviews of prosecutors and case review forms completed by attorneys. Respondent and nonrespondent files, taken from official court records, contain information on current and past records of offenses committed, arrests, dispositions, sentences, parole and probation histories, substance abuse records, juvenile court appearances, criminal justice practitioners' assessments, and demographic characteristics. The prosecutor interview files contain variables relating to prosecutors' opinions on the seriousness of the defendant's case, subjective criteria used to decide suitability for prosecution, and case status at intake stage. Information obtained from prosecutors' case review forms include defendants' prior records and situational variables related to the charged offenses. The self-report files contain data on the defendants' employment histories, substance abuse and criminal records, sentence and confinement histories, and basic socioeconomic characteristics. CLASS IV

UNIVERSE: All males prosecuted in Los Angeles County and Middlesex County for burglary, homicide, and robbery between 1984 and 1986.

SAMPLING: The sample was a random subset of male priority prosecuted defendants not prosecuted as career criminals but originally charged with such crimes as homicide, burglary, and robbery.

NOTE: In the self-report surveys of defendants, multiple indicators were included to assess reliability of responses. Data on nonrespondents were also collected to examine the possible response bias.

ABSTRACT

Title: Selecting Career Criminals for Priority Prosecution
Investigator: Marcia R. Chaiken
Producer: National Institute for Sentencing Alternatives
Brandeis University, Massachusetts
Date of award: 1984
NIJ number: 84-IJ-CX-0055

Purpose of the Study

The purpose of the study conducted in Los Angeles County, California and Middlesex County, Massachusetts was to develop offender classification criteria that can be used to select career criminals for priority prosecution.

Methodology

Source of Information:

Data sources are (1) official records from the Los Angeles County Superior Court and the Office of the Middlesex County District Attorney, (2) interview data with prosecutors in Los Angeles, (3) case review forms completed by priority prosecution attorneys in Middlesex County and (4) survey data from defendants' self-reports.

Sample:

Potential respondents were selected from (1) priority prosecuted defendants and (2) a random subset of male defendants not prosecuted as career criminals but originally charged with the same type of crime as priority prosecuted defendants such as homicide, robbery and burglary. These potential respondents were asked to fill out the self-report questionnaires. The self-report surveys resulted in a sample of 298 respondents in Los Angeles and 202 respondents in Middlesex County.

(* The original investigator used fewer number of cases than the actual ones, because nonreliable cases were excluded based on the assessment of multiple indicators.)

Dates of Data Collection:

1984-1986

Summary of Contents

Special Characteristics of the Study:

In addition to the crime records obtained from official sources and defendants' self-reports, information about prosecutors' discretionary judgments on sampled cases were obtained from interviews of prosecutors and case review forms completed by attorneys. In the self report surveys of defendants, multiple indicators were included to assess reliability of responses. Data on nonrespondents were also collected to examine the possible response bias.

Description of Variables:

The official record file contains information on respondents' and nonrespondents' current and past records of offenses committed, arrests, dispositions, sentences, parole and probation histories, substance use records, juvenile court appearances, criminal justice practitioners' assessment and demographic characteristics.

The prosecutor interview file contains variables relating to their opinions about the seriousness rating of the defendant, subjective criteria used to decide suitability for prosecution and case status at intake stage.

In the file obtained from prosecutors' case review forms, information include judgements of LA and MA prosecutors on the MA anonymous cases, reasons for priority prosecution stated by prosecutors, selection decisions for priority prosecution and defendants' prior records and situational variables related to current offense.

In the self-report file, information include inmates' demographic characteristics, employment history, substance use and criminal records, sentencing and confinement history, age of onset of criminal activity, and frequencies of committing specific types of crimes such as burglary, robbery, assault and thefts etc.

Each file is rectangularly structured, character-numeric (BCD) with fixed length formats. The 1st and 2nd data files contain 53 records per case. In the 3rd through 5th data files, each includes 51 records per case. The 6th file has one record for each case and the 7th file has 6 records per case. Both the 8th and 9th files contain 10 records for each case.

GENERAL NOTES ON DATA

All records in every file begin with three variables

ARCHID columns 1 - 4 A randomly assigned identification number that can be used to link official records and self-report data

CARDnn columns 5 - 6 The "card" number in the file; sequential beginning with CARD01

ZASITE columns 7 - 8 The study site:
CA California
MA Massachusetts

The data from official records were used in analyses and have been "cleaned".

The only self-report data that have been "cleaned" are the self-report crime commission variables in sections CA through CK. All other data are raw and should be used with caution.

Several cases were coded in both the Los Angeles Own Recognizance Division and the Los Angeles Office of the County Clerk. Therefore several of the same identification codes will be found in these files.

Details of sample selection, data collection, and numbers of cases can be found in the forthcoming final report:

Selecting "Career Criminals" for Priority Prosecution; Chaiken and Chaiken, 1987.

VALUES FOR SELF-REPORT VARIABLES

The codes for self-report variables are identical to the codes used in the 1978 Rand Survey. See: Ebener, Patricia; Codebook for Self-Report Data from the 1978 Rand Survey of Prison and Jail Inmates; The Rand Corporation, Santa Monica, California; June, 1983

The survey audit codes are as follows:

- 1 Respondent entered an X or a check mark in a space where a numerical response was requested
- T Respondent gave multiple answers where only one response was requested
- I Illegible response
- Y Sub-section was blank but should have included a response based on screen question
- X The entire section of the questionnaire was left blank
- M The entire question was left blank.

For variables CA1, CB1, CC1, ..., CI1, the code 6 is used in addition to codes 1, 2, 3, and 4 documented by Ebener. Code 6 means the respondent answered "No" (he stated he did not commit the crime), but then he filled in data for the number of crimes committed.

PART I

PART A

The first questions are about your background. Some of the questions ask you to think back about your life and to remember things that happened. Please really think about the questions and give the most accurate answers you can.

NOTES

These questions were designed to help the respondent identify and think about the period of time (measurement period) to be referred to in the rest of Part C.

This section was very difficult for respondents to follow. Most of them required assistance from the session administrators who helped as many respondents as asked, and also checked calendars whenever possible.

During PKE, editors had detailed specifications for checking the street months data in the survey and on the calendar.

was coded using the alpha character equivalent to the number, (i.e., 1.5 = A; 2.5 = B; 3.5 = C; etc. up to 26.5 = Z). If the midpoint was greater than 26.5 the coder used special rules for coding the exact range in spare columns available after Question E6. First, the coder entered "RR" in the card/column fields where the range appeared. Then after Question E6 he used card 10, columns 39-40 (Variable XA1) for card number and columns 41-42 (Variable XB1) to enter the column numbers where the range occurred. On card 10, columns 43-45 (Variable XC1) the coder entered the low number of the range, and in columns 46-48 (Variable XD1) entered the high number of the range. This procedure could be repeated using remaining columns in card 10 (variables XA2-XD4) to record up to a maximum of 4 different ranges per Section CA-CJ.

(CA4C)

If a range was given at "how many days a week usually," the exact midpoint was coded (e.g., "4-6" = 5). If the exact midpoint was 2 digits (e.g., "5-6" = 5.5), the midpoint was coded by using the alpha character equivalent to the number, i.e., 1.5 = A; 2.5 = B; 3.5 = C; 4.5 = D; 5.5 = E; 6.5 = F.

When respondent recorded a range as his answer the editor calculated the exact midpoint of the range, or, the range itself was recorded if the midpoint could not be recorded where the range appeared. If the exact midpoint was 2 digits (e.g., "5-6" = 5.5), the midpoint was coded using the alpha character equivalent to the number, (i.e., 1.5 = A; 2.5 = B; 3.5 = C; etc. up to 26.5 = Z). If the midpoint was greater than 26.5 the coder used special rules for coding the exact range in spare columns available after Question E6. First, the coder entered "RR" in the card/column fields
