- New York City Planning Commission

STATISTICAL NOTES;

1. The majority of the tables presented in this report are based on a total homicide count of 1459 for New York City in 1984. However, in several instances, to insure comparability with Nationwide U.C.R. statistics, "INDEX HOMICIDES", as tabulated by the F.B.I. uniform crime reporting system, is the statistic chosen for comparison. Since 1978 the F.B.I. has excluded non-negligent homicides committed by intoxicated drivers from the U.C.R. statistics. N.Y.C. recorded nine (9) of these cases in 1983 giving a U.C.R. homicide count of 1450. These cases are classified as homicides under the N.Y.S. Penal Law. Tables using "INDEX HOMICIDES" therefore, present a total of 1450 cases and other tables present the N.Y.S. Penal Law homicides with a total of 1459.

2. In addition to the information sources previously noted, data for the 1984 homicide analysis were gathered during interviews with each detective squad commander regarding the homicides within his precinct. This more rigorous data collection method, which had first been used for the 1980 homicide analysis, has been continued for the 1984 cases given the increased accuracy and thoroughness of the data supplied through this method.

3. It should be noted that an "UNKNOWN" characterization is a mix of investigative and administrative unknowns.

4. Homicide cases are tabulated by victim rather than by incident (e.g. one incident involving three victims results in three separate homicide cases in this analysis). The analysis of perpetrator data may therefore involve the same perpetrator several times.

Additionally, statistics comparing perpetrator and other case characteristics involve only the first perpetrator on that case. Tabulations of perpetrators only data, present data on all perpetrators.

5. Perpetrator data is not limited to those perpetrators who were arrested, but rather represents all instances of suspect characteristics known to the police at the time of this analysis.

6. Arrest data is tabulated by location. However, the precinct of arrest is not necessarily the precinct of commission. Thus, it would be possible to have precincts with more than 100 arrests per 100 complaints (Map 3).

7. Since the number of cases where information is unavailable varies between 1984 and 1983 and between different case characteristics within each year, some tables in this report deal with tabulations of only those cases where information is available. Any tables with a total case count less than 1459 for 1984 or 1628 for 1983 have excluded cases with unavailable information.

8. An examination of the number of times victims of homicides had been arrested is not limited to those of a serious nature, i.e. robbery, assault. Included are any arrest, even of a 'minor' nature i.e. disorderly conduct, harrassment.

NUMBER OF MISSING OBSERVATIONS = (121)

Total number
of homicides
in which
both victim
race and
circumstance
is known

The number of cases in which
either victim race and/or
circumstance was unknown.

121 + 1507 = 1628 (Total homicides
in 1983).

1. Reading down each cell; the first figure is the number of cases, the second is the row percentage (are totaled across table), the third is the column percentage (are totaled reading down the table) and the last is the percentage relative to all the cases in the matrix.

GENERAL COMMENTS

1. There were 1,459 homicides in New York City in 1984. This is -10.4% less than the 1983 total of 1,628. (Table 1).
2. Of the ten largest cities, New York ranked 6th in the rate of homicides per 100,000 population. New York City had 22.8 homicides per 100,000 population. (Table 103).
3. Brooklyn had the greatest number of homicides (474) followed by Manhattan with 403. The Bronx was the borough with the highest rate per 100,000 residents (33.6). (Table 1.)
4. The Bronx had the largest increase in homicides (+52) and the borough of Manhattan had the largest decrease (-110) comparing 1984 and 1983. (Table 1).
5. The 34th Precinct recorded the most homicides for 1984 (76). The 44th Precinct accounted for the most homicide arrests (49). (Tables 3 and 4).
6. There were 1,190 homicide arrests in 1984, a decrease of 8.1% when compared to 1983. 71.0% of these arrests were made by precinct detective unit personnel. (Table 5)
7. The month of December recorded the greatest number of homicides (157). October had the lowest count (97). (Table 6).
8. Homicides occurred most often on Saturday and the least frequent on Tuesday. (Table 7).
9. Disputes continue to be the most frequent homicide circumstance, (40.0%) in 1984. Drug related homicides accounted for 17.7%. (Table 8).
10. Handguns continue to be the most frequently used homicide weapon. Handguns were used in 56.3% of the 1984 homicide cases recorded. (Table 10).
11. Most homicides occurred in a residence (40.8%) or in open areas (40.2%). (Table 12).

HOMICIDE VICTIMS AND PERPETRATORS

12. Homicides continue to be committed by someone known to the victim (81.1%). The category, Friends - Acquaintance, comprised 63.1% of all homicide cases in which a relationship could be determined. (Table 16).
13. Perpetrators of homicides in 1984 were primarily male (92.8%) and primarily either Black (51.9%) or Hispanic (35.6%). (Tables 18 and 19).
14. Victims of homicides in 1984 were primarily male (82.4%) and primarily either Black (44.8%) or Hispanic (38.0%). (Tables 22 and 23).
15. Almost half (44.6%) of the homicide perpetrators (where an age was known) were between the ages of 16 and 25. (Table 26).
16. More than one-third (38.0%) of the homicide victims were between the ages of 21 and 30. (Table 28).
17. A male Black between the ages of 21 and 25 was the most frequent homicide victim. (Table 30).
18. A male Black between the ages of 16 and 20 was the most frequent homicide perpetrator. (Table 34).
19. The average number of arrests recorded for those victims who had a prior record of arrest (737 of 1459; 50.5%) was four (4). (Table 40).
20. Blacks were victimized by Blacks in 88.3% of the cases involving Black victims. Hispanics were victimized by Hispanics in 75.1% of the cases involving Hispanic victims and Whites were victimized by Whites in 55.3% of the cases involving White victims. (Table 42).
21. Proportionately, Asiatics were more often killed by strangers (44.4%) than were Whites, Blacks or Hispanics. Numerically however, both Black and Hispanic victims were involved in more stranger homicides. A victim of any race was most likely to have been killed by a friend or acquaintance. (Table 44).
22. A cutting instrument was the most frequently used weapon in boyfriend/girlfriend homicides and physical force in other intra-family homicides. A handgun was the weapon most often used in all other victim/perpetrator relationships. (Table 52).
23. A victim with prior arrest would most often (74.7%) be a homicide victim of a friend or acquaintance. (Table 54)

CIRCUMSTANCES OF HOMICIDES

24. Elderly homicide victims (60 to 90) were murdered most often during robbery. (Table 56).
25. Blacks, Whites and Hispanics were most often murdered in disputes. A victim of a drug related homicide would most often be Black or Hispanic. (Table 58).
26. Males were more likely than females to be murdered in robbery, drug related incidents, or disputes. Females were more likely to be murdered in sex crimes incidents. (Table 60).
27. Friends and acquaintances were most often murdered during disputes and drug related transactions. (Table 62).
28. A handgun was the weapon most often used in all homicide categories other than burglary and sex crimes. Cutting instruments, followed by physical force, were most often utilized in burglaries. Physical force was the weapon most often used in sex crimes. (Table 64).
29. Disputes and drug related homicides occurred most often in open areas. Burglary, robbery and sex crime homicides occurred most often in a residence. (Table 66).
30. A victim of a homicide with a prior history of arrests was most often murdered during a dispute or drug related transaction. (Table 90).

HOMICIDE-MEANS EMPLOYED

31. Blacks and Hispanics were more likely than Whites to be murdered with a handgun. (Table 92).
32. Handguns were the means most often used in all victim age categories. (Table 96).

HOMICIDE HISTORICAL DATA

33. New York City continued to evidence a decrease in homicides, at a rate greater than nationwide. (Figure 1 - Table 100)
34. The most significant trend over the last 20 years, in terms of the means employed in homicides, has been the increase in handguns. This is evident in the percentage of the total cases recorded. (Figure 3 - Table 102).

1984	1450	-172	-10.6		18692	-616	-3.2

To insure comparability with Nationwide figures, N.Y.C. Homicides included in this table are "Index Homicides". Since 1978, as per UCR definition, Non-Negligent Manslaughter caused by Intoxicated drivers are not included in the number of "Index Homicides". Thus the number of "Index Homicides" will be slightly lower than the N.Y.S. Penal Law Homicides.

Notes: (1) Boyfriend/Girlfriend Homicide not broken out in 60/61 they are included in disputes.

(2) Only breakout for 62-65 is Robbery and a few other categories see note for list of Other Circumstances.

(3) No breakdown for Family/Common Law/Boyfriend-Girlfriend available- statistics shown are from Detective Log.

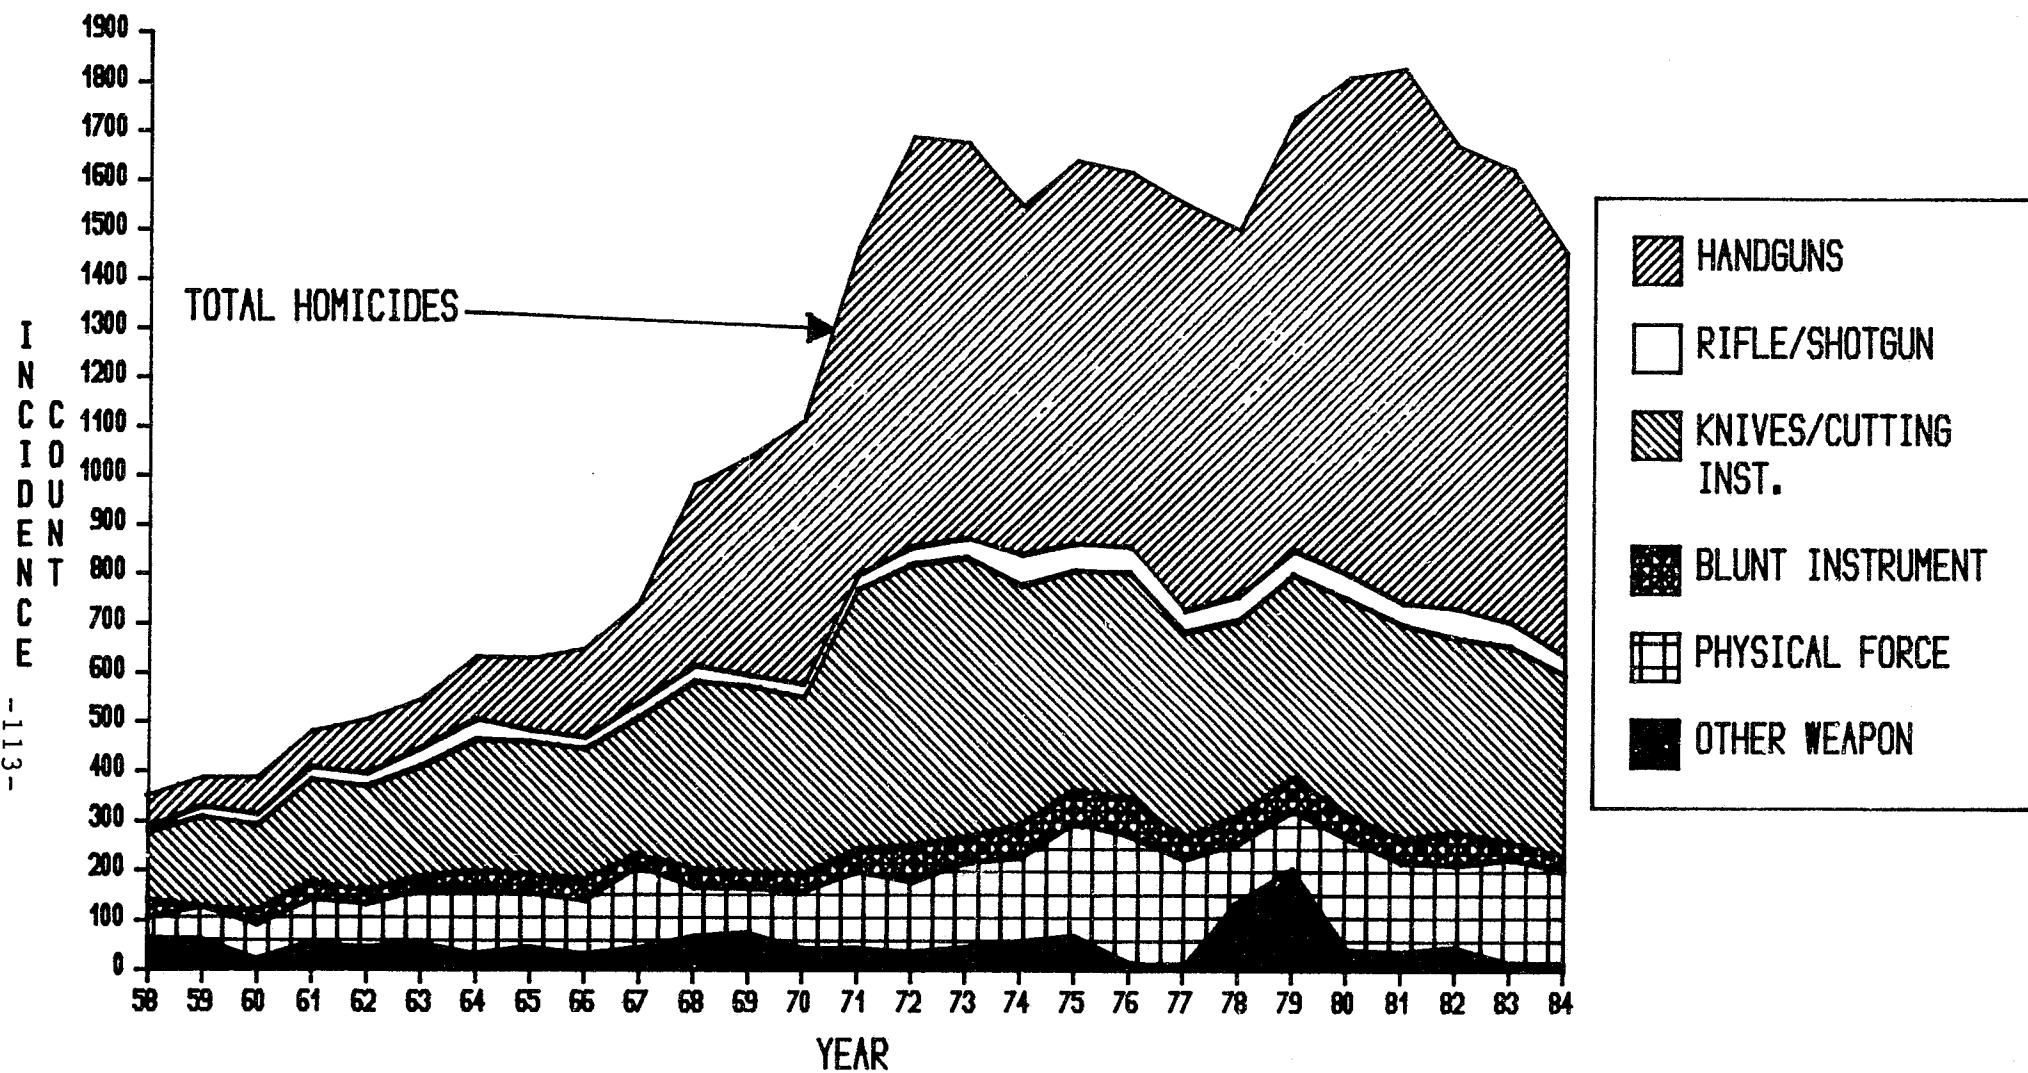

(4) Statistics for 1960-1977, 80, 81 from NYPD Homicide Analysis Report 1978/79 Detective Bureau Homicide Log.

(5) Other Circumstances= Burglary Sex Related, Narcotics Related, Arson Asslt. on P.O., Youth Gangs, Org. Crime. Unknown/Not Researched is a combination of cases with unknown circumstances plus cases which had not been fully researched at time of publication of Homicide Annual Report.

(6) The decline in "Robbery" Homicides and the increase in "Other" Homicides is, at least, partially due to classification changes (See the statistical notes section for a more detailed explanation).

Source: New York City Police Department Homicide Analysis Report 1958-77, 80, 83; 1978 and 1979 statistics from NYPD Weapons Report.

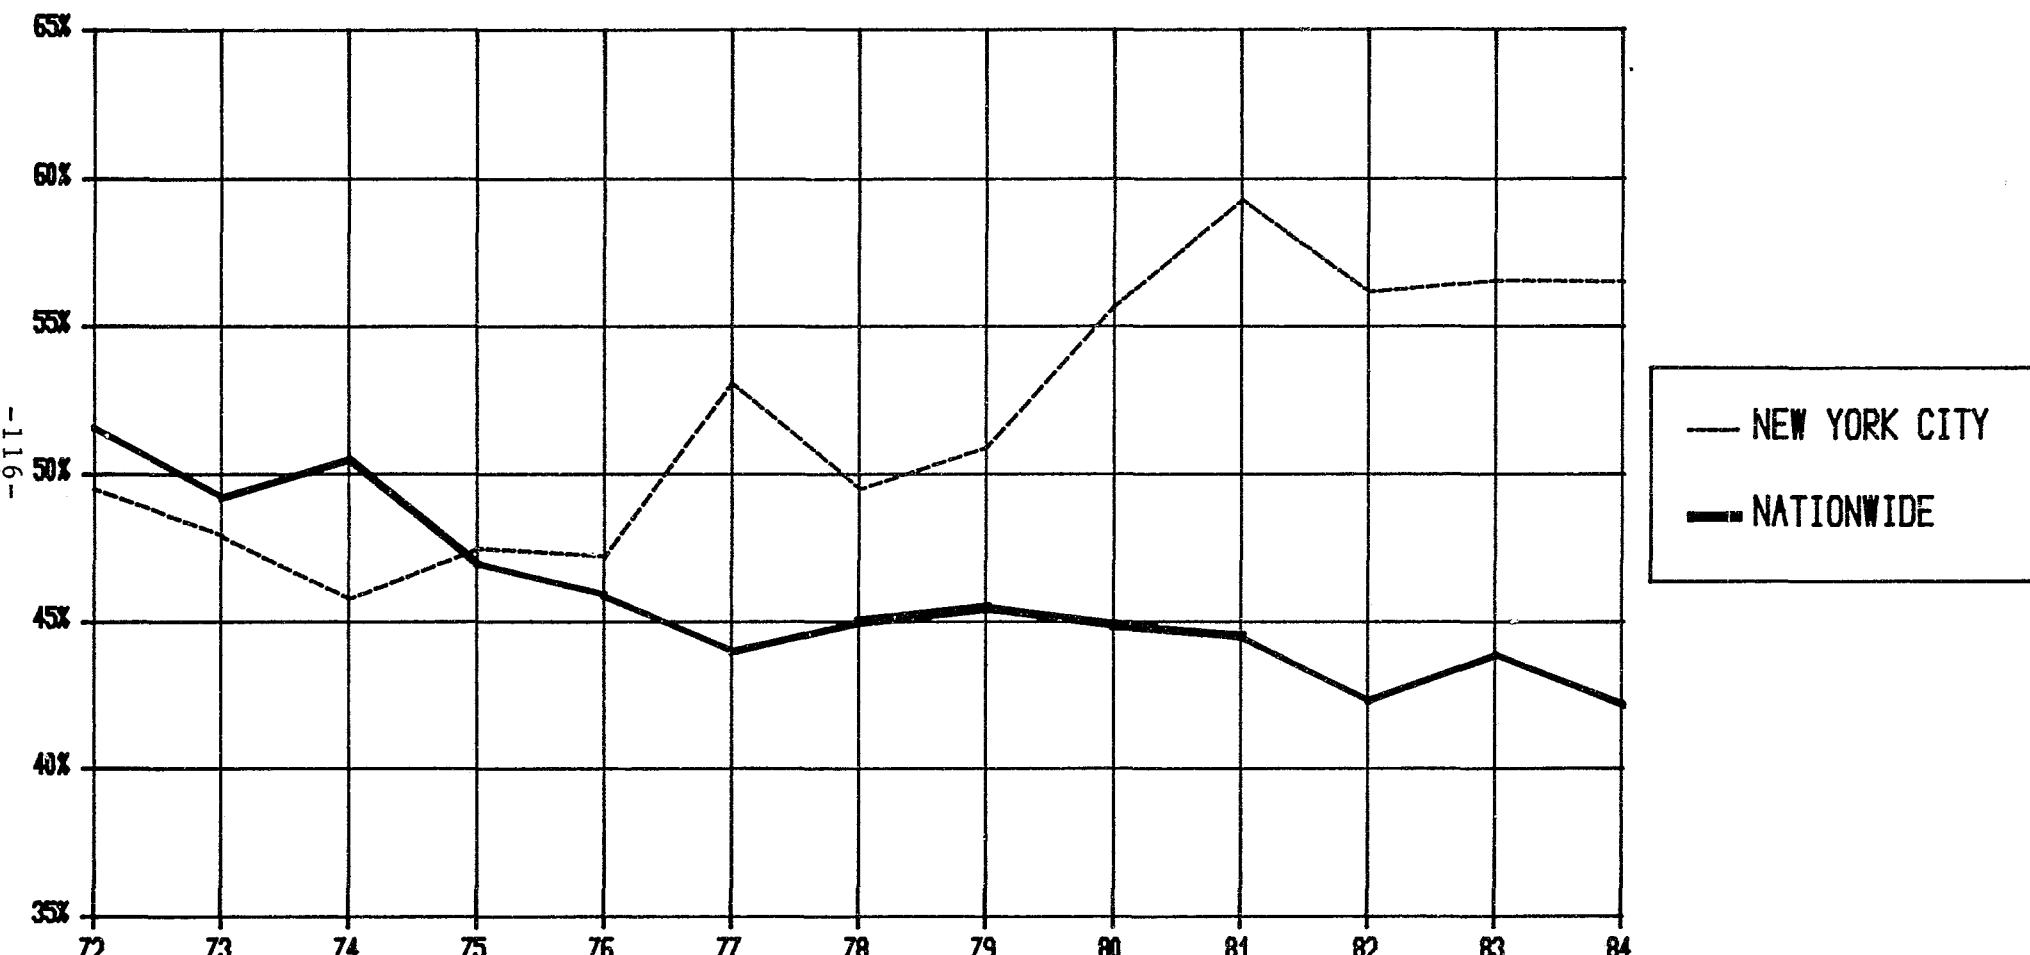

NOTES: (1) Blunt Instrument breakdown contained in Other category for 1959.

(2) Other includes, explosives, arson, poison, auto, etc. as well as cases undetermined at time statistics were compiled. Statistics for 78 and 79 are higher since data taken from automated weapons report which relies on original complaint report for classification of weapon used. The initial complaint report is prepared before the Medical Examiner's report specifying exact cause of death. If initial circumstances are unclear weapon is unspecified on Complaint Report.

(3) Percentages may total more or less than 100% due to rounding.

in the United States.

HOMICIDE - DRUG RELATEDNESS

STATISTICAL NOTE

The prevalence of drug abuse in American society has reached alarming proportions. Consequently, the nature of the relationship between the drug macrocosm and violent behavior has become the focus of current investigation.

In a joint effort to produce the report "Drug Related Crime Analysis - Homicide" to the National Institute of Justice, under grant number 85-FJ-CX-0052, investigators from the New York State Division of Criminal Justice Services, the New York State Division of Substance Abuse Services, and Narcotic and Drug Research, Inc., requested drug related homicide data from the Department. The best estimate of drug relatedness data could be secured by utilizing ALL precinct detective squad commanders' debriefings regarding each homicide. The following Drug Related Homicide data is presented.

GENERAL COMMENTS

1. There were 347 (23.8%) homicides in 1984 where the circumstance was identified as drug related. (Table 104).
2. Manhattan had the greatest number of drug related homicides (128). The 34 precinct in Manhattan had the largest number of drug related homicides (34) followed by the 46 precinct in The Bronx with 33. (Table 105).
3. 300 homicides (20.6% of all homicides) were found to have occurred in a drug related location. (Table 106). 90% of these locations were deemed sales locations. (Table 107).
4. A dispute was the most frequent motive, 224 (64.6%), for drug related homicides. Premeditated disputes accounted for 147 (65.6%) of drug related disputes. (Table 108).
5. A handgun was the weapon predominantly used to commit a drug related homicide 279 (80.4%). (Table 109).
6. There were two locations where most of the homicides were found to be committed. The "open area" was the leading location with 144 (41.5%) cases, followed closely by the "residence" location in 141 (40.6%) cases. (Table 110).

DRUG HOMICIDE - VICTIMS

1. The relationship between the victim and the perpetrator was identified in 297 cases. Of those cases, "friends and acquaintances" was the identified relationship most commonly reported 271 (91.5%). (Table 111).

2. The vast majority 311 (89.6%) of drug related homicide victims were males. Whereas, females represented 36 (10.4%) of the 347 drug related homicide victims. (Table 112).

3. Hispanics 170 (49.0%) were the racial group most represented as drug related homicide victims. They were followed by Blacks who showed 146 (42.1%) of the total. Asiatics however, showed no representation in the drug related homicide category. (Table 113).

4. The highest number of drug homicide victims 93 (26.9%) were reported in the age category of 21-25. Closely following, the 26-30 year category contains 73 (21.2%) homicides. The youngest age category 1-7 years indicates that 4 persons were victims in drug related homicides. (Table 114).

5. The victim of a drug related homicide was found to be a drug dealer in 234 instances, more than two-thirds (67.4%) of all the cases. Victims who were drug users accounted for an additional 59 (17.0%) of all cases. (Table 118).

6. Drugs were found on or near a victim in 97 (6.6%) homicides. (Table 119). Paraphenalia was found on or near a victim in 87 (6.3%) of those homicides where information was known. (Table 120).

7. A victim of a homicide was identified as a trafficker in 276 (22.2%) of known cases. (Table 121). Of the 276 victims, 231 (83.7%) were low level traffickers and the balance were high level. (Table 122).

DRUG HOMICIDE - PERPETRATORS

1. Of the 1268 cases where the sex of the perpetrator could be determined, 293 cases were identified as drug related homicides. Table 115 indicates that the vast majority 290 (99.0%) were males and the remainder 3 (0.1%) females.

2. Table 116 indicates the race of the perpetrator as the controlling factor. Of the 293 cases identified as drug related incident homicides, Blacks were shown to represent the highest number of persons arrested (147, 50.2%) followed by Hispanics (119, 40.6%). Asiatics however, showed no representation as perpetrators during a drug related incident homicide.

3. There were 1687 perpetrators arrested for homicide in 1984. Of that number, 1188 cases where the age of the perpetrator could be determined, 264 (22.2%) were involved in drug related incidents at the time of the crime. Of these cases, the age category which showed the highest number of arrests 63 (23.9%) was in the 26-30 year range. Following closely, is the 21-25 year category with 61 (23.1%) persons indicated. Also indicated, is 1 (0.4%) person each in the under 16, the 56-59, and the 60 -80 year category. (Table 117).

4. Table 123 indicates whether or not the "perpetrator was a drug user." Of the 947 known cases, 258 (27.3%) responded affirmatively as being drug users and 687 (72.7%) responded that they were not drug users.

5. In Table 124, the controlling factor is whether or not the perpetrator was a "drug trafficker." Of the 1040 known cases, 219 (21.1%) cases indicated that the perpetrator was in fact a drug trafficker and in 821 (78.9%) cases, the perpetrator was not a trafficker.

6. Table 125 indicates the findings of whether the perpetrator was a "high or low level trafficker." Of the 219 positively identified drug traffickers, 56 (25.6%) were shown to be high level traffickers and 163 (74.4%) were considered low level traffickers.
