FOREWORD

Basic to any decision-making or planning is the need for statistical information. The 1968 edition of "Juvenile Court Statistics" is presented in the hope that the information it provides will be of value to professionals striving to help the Nation's young people.

Due to a Departmental reorganization of the Children's Bureau which, in the past, had issued this publication, the Office of Juvenile Delinquency and Youth Development has assumed the publication task for this year. This, regretfully, accounts for the delay in furnishing the 1968 statistical information.

ROBERT J. GEMIGNANI

JUVENILE COURT STATISTICS - 1968

SUMMARY

Delinquency Cases

EXTENT (Table 1) About 900,000 juvenile delinquency cases (excluding traffic offenses) were handled by juvenile courts in the United States in 1968. The estimated number of children involved in these cases (774,000) was lower, however, since in some instances the same child was referred more than once during the year. These children represent 2.5 percent of all children aged 10 through 17 in the country.

TREND (Tables 5, 6, 7, 8, and chart) In 1968, there was again an increase in the number of juvenile court delinquency cases over the previous year. The increase for 1968 was 10.7 percent as compared to an increase in the child population aged 10 through 17 of only 2.3 percent. Thus, the upward trend in the number of delinquency cases, noted every year since 1949, with the exception of 1961, continues. And again, as in most previous years in the past decade, the increase exceeded the increase in the child population. Between 1960 and 1968, the number of juvenile court cases increased by 76.4 percent as compared to a 24.5 percent increase in the number of children aged 10 through 17. The increase in delinquency cases in 1968 (10.7 percent) was higher than the increase of 8.9 percent noted in 1967.

While the overall national increase in 1968 was 10.7 percent, urban courts experienced an 11.5 percent increase, semi-urban courts an 8.9 percent increase, and rural courts an 8.8 percent increase.

Nationally, there was a 10.4 percent increase in boys' cases and an 11.6 percent increase in girls' cases. Among the different types of courts, however, there was no consistent pattern: in urban and rural courts, girls' cases increased more than boys', but, in semi-urban courts the reverse was true.

Juvenile court delinquency statistics cited here mainly show how frequently the juvenile court is utilized in dealing with juvenile delinquency. But do juvenile court cases adequately reflect trends in the extent of juvenile delinquency? Would not police arrests of juveniles be a better indicator, since arrest data do not have some of the limitations of juvenile court data? We have found that both series of data -- police arrests of juveniles reported by the Federal Bureau of Investigation, and juvenile court delinquency cases reported here -- show a remarkable similarity in their trends over a long period of time despite their differences in definitions, units of count, extent of coverage, etc. Both figures surged upward during World War II, fell off sharply in the immediate

postwar years, and then began to climb again. Their trends have been steadily upward since 1949, with the exception of the slight decrease in court cases in 1961. In 1968, the increases were similar -- 10.7 percent in delinquency court cases and 9.7 percent in police arrests of juveniles.

In juvenile court delinquency data, each offense has an equal weight. Since juvenile delinquency cases cover a wide variety of offenses -- from relatively trivial to very serious -- and, since the offenses are not weighted, might the upward trend merely reflect an increase in the occurrence of minor offenses? To examine this, one needs to rely upon the data on police arrests of juveniles reported by the Federal Bureau of Investigation which, unlike the juvenile court data, include information on the types of offenses committed. In the 1968 edition of the Uniform Crime Reports, the Federal Bureau of Investigation reported that arrests of juveniles under 18 years of age, for all types of offenses, doubled between 1960 and 1968. For a group of serious offenses selected as being most reliably reported (criminal homicide, forcible rape, burglary, robbery, aggravated assault, larceny, and auto theft), the combined increase between 1960 and 1968 was 78.5 percent. When offenses against the person (homicide, forcible rape, aggravated assault, and robbery), generally accepted as being the most serious crimes, are selected from the reliably reported group, the increase between 1960 and 1968 was 124.1 percent. It cannot be assumed, therefore, that the upward trend in juvenile delinquency as determined from police arrest data is due primarily to an increase in minor offenses. All groups of offenses seem to be increasing, with the most serious ones showing substantially greater increases.¹

SEX RATIO (Table 1) - Delinquency remains primarily a boys' problem. Boys are referred to the juvenile court almost four times as often as girls.

MANNER OF HANDLING (Table 2) - More than half of the delinquency cases referred to juvenile courts in 1968 were handled nonjudicially (i.e., without the filing of a petition). The proportion of cases handled nonjudicially was higher in semi-urban and urban courts than in rural courts, owing perhaps to the availability of specialized intake or probation staff in the larger courts.

RATES IN URBAN AND RURAL AREAS (Table 3) - The rate of delinquency cases (the number of cases per 1,000 child population aged 10 through 17) was 28.7 in 1968 as compared to 26.4 in 1967. Between 1960 and 1968, the rate increased from 20.1 to 28.7. In 1968, the rate of delinquency cases was almost three times higher in predominantly urban areas than in rural areas. Of all the juvenile court delinquency cases in the country, 65 percent were handled by courts in urban areas, 29 percent by courts in semi-urban areas, and 6 percent by courts in rural areas.

¹ Even as of 1968, however, less than 10 percent of all crimes committed by juveniles were classified as crimes against the person, and less than half of all juvenile crimes fell into the "serious" crime category.

Traffic Cases

EXTENT (Table 9) - About 554,000 traffic cases were disposed of by juvenile courts in 1968 in addition to the 900,000 delinquency cases. These traffic cases involved approximately 477,100 different children or 1.5 percent of the total child population aged 10 through 17.

CHANGES FROM PREVIOUS YEAR (Table 10) - Juvenile court traffic cases increased one percent in 1968 over the 1967 figure. Only rural courts experienced a decrease--6 percent.

Other Cases

DEPENDENCY AND NEGLECT (Tables 11, 12, 13) - Most juvenile courts have jurisdiction over court actions involving dependent and neglected children as well as delinquent children. Dependency and neglect cases in the United States totaled 141,000 in 1968, a decline of 8 percent from the 1967 figure. This continues the decline first noted in 1967 in the number of dependency and neglect cases being handled by the juvenile courts.

SPECIAL PROCEEDINGS - A small portion of cases involve adoption, custody of children, consent to marry, or other "special proceedings." Not all juvenile courts handle such cases.

SOURCES AND LIMITATIONS OF DATA

Data on the number of juvenile delinquency cases are based on a national sample of juvenile courts which, drawn from the Current Population Survey sample of the Bureau of the Census, is intended to be representative of the country as a whole. For this sample, the United States was first divided into about 2,000 primary sampling units, each consisting of a county or a number of contiguous counties, such as those in a standard metropolitan statistical area. The 2,000 primary sampling units were then divided into 230 groups, each consisting of a set of sampling units as much alike as possible as to regional location, population density, percent of nonwhite population, rate of growth, etc. From each group, a single primary sampling unit was selected at random, resulting in 230 sampling units in which 491 courts are located.

As shown below, the majority of urban courts in the sample serve large areas of 100,000 or more population; semi-urban courts serve medium-sized areas; and rural courts, small areas of under 20,000.

Type of courts	All courts	Number of courts serving populations of				
		100,000 or over	50,000-99,999	20,000-49,999	10,000-19,999	Under 10,000
Total.....	491	187	71	122	58	53
Urban.....	202	151	22	25	1	3
Semi-urban.....	162	36	43	55	12	16
Rural.....	127	--	6	42	45	34

In 1968, 426 courts, or 87 percent of the sample courts, reported. Of those courts not reporting, 27 were semi-urban, 13 urban, and 25 rural.

Data on dependency and neglect cases are based on 1,795 courts reporting on such cases to the Children's Bureau. These courts include in their jurisdiction approximately two-thirds of the child population under 18 years of age. The national sample was not used here, since data on these cases were not available for a sizeable number of courts in the sample.

The statistics in this publication represent the volume of children's cases disposed of by juvenile courts. These statistics are affected by several factors that must be considered in interpreting the data. The ages of children and the types of cases over which courts have jurisdiction are established by State law and often vary from State to State. These differences affect the number of cases reported and, consequently, the comparability of the reports. Also, the number of children's cases reported by courts is influenced by the organization and scope of other agencies in the community. Agencies in one community may adjust cases and send them to agencies other than the juvenile courts; in another community, the juvenile court may be one of the few agencies providing social services to children. Where social services for children are not well established, the juvenile court may be used frequently, when no judicial authority is needed. Finally, whether or not a child ever comes to the attention of the court is often decided by varying community and parental attitudes toward a child's behavior.

Because of these and other limitations, juvenile court statistics, when taken by themselves, cannot measure the full extent of delinquency or dependency and neglect, and they can be particularly misleading when used to compare one community with another. They do indicate, however, how frequently the juvenile court is utilized in dealing with such problems.

DEFINITIONS OF TERMS

JUVENILE DELINQUENCY CASES are those referred for acts defined in the statutes of the State as the violation of a State law or municipal ordinance by children or youth of juvenile court age, or for conduct so seriously antisocial as to interfere with the rights of others or to menace the welfare of the delinquent himself, or of the community. This broad definition of delinquency includes conduct which violates the law only when committed by children; e.g., truancy, ungovernable behavior, and running away. Also included, but reported separately, are traffic violations whenever a juvenile court has jurisdiction in such cases.

DEPENDENCY AND NEGLECT CASES cover neglect or inadequate care on the part of parents or guardians; e.g., lack of adequate care or support resulting from death, absence, or physical or mental incapacity of the parents, abandonment or desertion, abuse or cruel treatment, and improper or inadequate conditions in the home.

SPECIAL PROCEEDINGS cover cases involving children in court for other than delinquency, traffic offenses, or dependency and neglect; e.g., adoption, institutional commitments for special purposes, application for consent to marry or to enlist in the armed forces, determination of custody or guardianship of a child, and permission (to hospitals) for an operation on a child.

THE UNIT OF COUNT is a case actually disposed of by a court. Such a case is counted each time a child is referred to court during the year on a new referral in delinquency, dependency, neglect, or in special proceedings. Referrals for alleged or adjudged delinquency cases are included.

TYPE OF COURT is determined by the percentage of the population it serves that live in urban areas (as classified by the Bureau of the Census); for "urban courts," 70 percent or more; for "semi-urban courts," 30-69 percent; for "rural courts," under 30 percent. Since 1960, data from the 1960 decennial census have been used to determine the type of court.

METHOD OF HANDLING CASES is classified into judicial and nonjudicial, sometimes referred to as official and unofficial. "Judicial cases" are those where the court has acted on the basis of a petition or motion; "nonjudicial cases," consequently, are those cases which have been adjusted by the judge, referee, probation officer, or officer of the court without the invocation of the court's jurisdiction through petition or motion.

TREND IN JUVENILE COURT DELINQUENCY
CASES AND CHILD POPULATION 10 - 17 YEARS
OF AGE, 1940 - 1968 (semi-logarithmic scale)

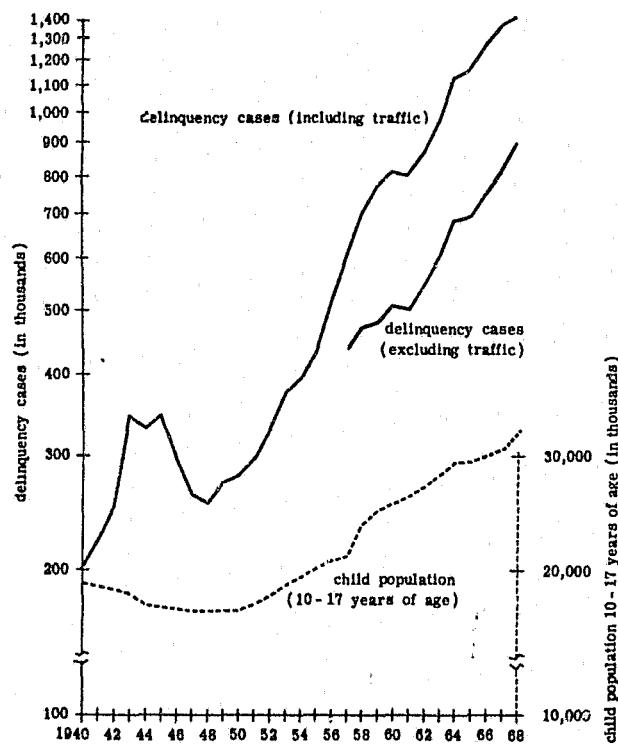

Table 1.--NUMBER OF DELINQUENCY CASES (EXCLUDING TRAFFIC) DISPOSED OF BY JUVENILE COURT, UNITED STATES, 1968

Type of Court	Total		Boys		Girls	
	Number	Percent	Number	Percent	Number	Percent
Total.....	899,800	100	708,200	100	191,600	100

^a Data for 1955-1967 estimated from courts serving about two-thirds of the child population under 18 years of age in the United States. Data prior to 1955 estimated by the Children's Bureau, based on reports from a smaller but comparable group of courts. Inclusion of estimates from Alaska and Hawaii beginning in 1960 does not materially affect trend.

^b Based on U.S. child population under 18 years of age.

(*) NOTE WELL: This table is not limited to the sample group of courts but rather include all courts that transmitted reports to the Children's Bureau. The data in this table should not be used to make comparisons between communities regarding the extent of delinquency. Questions concerning changes in an individual court's data from one year to another should be directed to that individual court.

(b) Courts serving areas with population of 100,000 or more are listed separately, showing the chief city located in each area. Courts serving areas with less than 100,000 are combined for each State and are presented as "small courts."

(c) Where the age under which the court has original jurisdiction is different for boys and girls, the age for boys appears first. In California the jurisdiction of the adult court rather than the juvenile court is usually invoked for those 18 years of age or over. In Illinois, the age jurisdiction is 18 for both boys and girls in dependency and neglect cases. In South Carolina, dependency and neglect "child" means under 21 years of age. In Vermont, neglect or unmanageable to age 18. In New York the age limit for neglect cases is 16 for boys and 18 for girls.

(d) Inapplicable - Juvenile court does not have jurisdiction over juvenile traffic cases.

(e) Data on traffic cases included under "Delinquency - except traffic."
