JUVENILE COURT STATISTICS

1956

I. RICHARD PERLMAN

Chief, Juvenile Delinquency Statistics Section
Program Analysis Branch
Division of Research

U. S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
Social Security Administration Children's Bureau 1958

Statistics of the number of children's cases handled by juvenile courts are affected by several factors. Ages of children and types of cases (e.g. traffic violations) over which courts have jurisdiction are established by State law and often differ for courts in different States and sometimes for courts within the same State. This affects the number of cases reported and, consequently, the comparability of the reports from the various courts.

The number of children's cases reported by different courts is greatly influenced also by variations in the organization and scope of the services of other agencies. Many communities have established agencies such as a juvenile division of the police department that adjust many cases or refer them to other community agencies rather than to the juvenile courts. In some communities the juvenile court is the only agency providing services to children. In others, programs of social services for children are well established; in these, the juvenile court is only one of the many agencies dealing with children and is frequently used only when its authority as a judicial agency is needed.

Furthermore, whether a child comes to the attention of the court is influenced by community and parental attitudes toward a child's behavior, and these attitudes vary from place to place.

Because of these and other limitations (many of which are not statistically assessable), juvenile court statistics, when taken by themselves, cannot measure the full extent of either delinquency, dependency, or neglect. They may be particularly misleading when used to make comparisons between one community and another. They do, however, indicate how frequently one important community resource, the juvenile court, is utilized for dealing with such cases.

HIGHLIGHTS

Delinquency cases

- Trend..... In 1956, for the eighth consecutive year, delinquency cases increased over the previous year. The increase was 21 percent while the child population increased by only 3 percent.
- From 1948-1956, delinquency cases more than doubled while the child population increased only 19 percent.
- Extent..... About 450,000 different children or 2.2 percent of all children aged 10 through 17 were involved in delinquency cases in 1956. The number of such cases, which comprise about four-fifths of all juvenile court cases, was somewhat larger (520,000) since a child may have appeared in more than one case during the year.
- Sex ratio..... Delinquency cases in court are primarily a boys' problem. The boys outnumber girls 5 to 1.
- Differential rates.. Rates of delinquency cases in predominantly urban areas were 3 1/2 times higher than in predominantly rural areas.
- Manner of handling.. Over half of delinquency cases are disposed of unofficially--without the filing of a petition for formal hearing in court.

Other cases

Dependency and neglect cases comprised 16 percent of the court cases in 1956. Such cases decreased by 1 percent between 1955 and 1956.

The remaining 5 percent of the court cases were those involving adoption, custody, consent to marry and other "special proceedings."

JUVENILE COURT STATISTICS, 1956

The measurement of juvenile delinquency is an important item in assessing the success or failure of our modern society. Yet complete measurement would require precise definition and uniform procedures that do not exist. 1/

Only part of the problem of juvenile delinquency comes to the notice of juvenile courts, but for that part, two conditions of accurate measurement are fulfilled: the child or youth is alleged to have committed an act regarded as delinquent and his case must receive attention from personnel of the court. A count, therefore, can be made.

JUVENILE DELINQUENCY CASES

The Children's Bureau has been collecting and publishing reports from courts about numbers of juvenile delinquency cases for many years. Not until 1956, however, was it possible to say with any degree of confidence that the numbers reported were representative of the country as a whole. During 1954 and 1955 the Children's Bureau with the technical assistance of the Bureau of the Census designed a national sample of courts based on the Current Population Survey sample and collected the first data. For 1956, sufficient data were reported to permit national estimates from this sample.

In 1956, as estimated from the national sample, about 450,000 children were involved in delinquency cases in the courts throughout the country. This amounts to about 2.2 percent of all children of juvenile court age (generally 10 through 17). 2/

A child is counted each time he is referred to a juvenile court in a new delinquency case during the year. Since some children are referred more than once, about one-half million (520,000) delinquency cases were handled in the United States in 1956.

1/ For further discussion of the problems of definition and measurement see I. Richard Perlman: "Reporting Juvenile Delinquency," National Probation and Parole Association Journal, 1957, 3, 242-249 (July).

2/ Children in the age group 10 through 17 are used as a base for computing the rate, although the estimate of children in juvenile delinquency cases includes a small number under 10 and over 17 years of age.

Juvenile delinquency as defined in the statutes of most States is the violation of a law or municipal ordinance by children or youth of juvenile court age, or conduct so seriously antisocial as to interfere with the rights of others or to menace the welfare of the delinquent himself or of the community. This broad definition of delinquency includes conduct such as ungovernable behavior and running away, conduct labeled "delinquency" but not usually considered a violation of law when committed by an adult. Also included are traffic violations wherever the juvenile court has jurisdiction in such cases. Consequently, acts that result in bringing a child before the court vary widely in seriousness although not as widely as the popular concept of delinquency.

The figures reported to the Children's Bureau are numbers of cases of juvenile delinquency, alleged as well as adjudged, handled by the courts. Not included are many children who may have presented similar problems of conduct, who either were not apprehended or were dealt with by the police, by social agencies, by schools, or by youth-serving agencies without referral to court.

About two-thirds (65 percent) of the delinquency cases in 1956 were handled in courts that serve a predominantly urban population, that is, 70 percent or more of the population served by the court live in urban areas as classified by the Bureau of the Census; an additional one-quarter (24 percent), as shown in Table A, were handled in semi-urban courts, and the remaining 11 percent in predominantly rural areas.

Table A: Delinquency Cases Disposed of by Juvenile Courts, By Type of Court, United States, 1956

Type of court ^{a/}	Delinquency cases disposed of					
	Total		Boys		Girls	
	Number	Percent	Number	Percent	Number	Percent
Total.....	<u>520,000</u>	<u>100</u>	<u>438,000</u>	<u>100</u>	<u>82,000</u>	<u>100</u>
Urban.....	336,000	65	281,000	64	55,000	67
Semi-urban.....	125,000	24	106,000	24	19,000	23
Rural.....	59,000	11	51,000	12	8,000	10

^{a/} Courts are classified according to the percentage of the population they serve that live in urban areas (as classified by the Bureau of the Census): for "urban courts," 70 percent or more; for semi-urban courts, 30-69 percent; for rural courts, under 30 percent.

Boys versus girls

Boys' delinquency cases outnumber girls' cases in the ratio of about 5 to 1 for the country as a whole. This same ratio has prevailed for at least five years. One reason for the greater number of boys' cases may be that boys are permitted greater freedom and as a result are more likely to become involved in infractions of the law. Boys are outwardly more aggressive than girls and this aggressiveness sometimes results in overt delinquent acts. Also, boys may have more of a tendency to associate in groups and delinquent behavior may stem from misdirected group activities.

In the semi-urban and predominantly rural courts, the ratio of boys' to girls' cases was even higher (6 to 1). The smaller proportion of girls' cases in the more rural courts may result from several factors. These courts generally serve smaller communities (see Table D, page 10) where individuals and their activities become well known; in these communities public attitudes may be more effective in controlling the kinds of activities for which girls in larger communities are generally referred to court, -- such as ungovernable behavior, running away and sex offenses. In smaller communities, too, girls may receive greater "protection" from court referral by having their problems resolved in other ways.

Official versus unofficial handling

Over half (52 percent) of all delinquency cases were handled unofficially. "Unofficial cases" are those in which no petition or legal paper is filed and in which the case is adjusted by the judge, referee, probation officer, or other officer of the court, after conference at the point of intake, or after social study and investigation. As indicated below, the proportion of cases handled officially by predominantly rural courts was strikingly higher than in other types of courts:

Type of court	Percentage of cases disposed of:	
	<u>Officially</u>	<u>Unofficially</u>
Urban.....	47	53
Semi-urban.....	44	56
Rural.....	59	41

The relatively high proportion of delinquency cases handled officially in the rural courts probably results from two conditions that may be interrelated: First, the staff of a rural court is likely to be small, often with no specialized intake or probation staff to carry on the usual conferences or investigations that are necessary in unofficial cases. Second, lack of probation staff and other community facilities for treatment often makes it necessary for a rural court to commit delinquent children to institutions to a greater extent than is done by the

courts in larger communities. Such commitment is required by law to be handled officially through the filing of a petition.

While the smallness of rural courts and the attendant lack of staff and facilities seems to account for a generally higher proportion of cases handled officially, a high degree of variability exists among particular courts. This variability, which results from individual court practices and the philosophy of the judge, is found among courts in various regions, various States or even among courts in the same State. ^{3/} For example, in California, all courts combined disposed of 30 percent of their delinquency cases officially; in Missouri, 42 percent; in Utah, 71 percent. Within California itself, however, one court (Los Angeles County) handled 91 percent of its delinquency cases officially while another court (Alameda County) handled only 20 percent in this manner.

Differential rates

Although urban courts handle 65 percent of the delinquency cases in the country and rural courts 11 percent, these courts include in their jurisdictions 44 and 28 percent of the child population respectively. These disproportions are reflected in a higher case rate for urban courts in relation to population. As shown below the urban case rate is about 3 1/2 times larger than the rural rate:

Type of court	Rate per 1,000 child population
	<u>10-17 years of age</u>
Urban.....	43.8
Semi-urban.....	25.7
Rural.....	12.5

One of the many factors affecting the number of delinquency cases referred to juvenile courts is the age group over which the courts have jurisdiction. If a court has jurisdiction over children under 18 years of age, obviously more children will be referred to it than to one where jurisdiction goes only up to 16 years of age. Table B shows rates of delinquency cases calculated on the basis of the child population at risk, that is, from the age of 10 to the upper age limit of the court's original jurisdiction.

^{3/} For a discussion of policy consideration in the unofficial disposition of cases, see Standards for Specialized Courts Dealing with Children, Children's Bureau Pub. No. 346, Washington, D.C. Superintendent of Documents, U.S. Government Printing Office, 1954 (p. 43-45).

Table B: Rates of Delinquency Cases per 1,000 Child Population
Disposed of by Urban and Rural Courts according to the
Age Jurisdiction of the Courts, United States, 1956

Type of court	Age group over which court has original jurisdiction		
	Under 16	Under 17	Under 18 ^{a/}
Urban.....	29.2	41.8	58.8
Semi-urban.....	10.0	24.0	31.9
Rural.....	3.7	4.1	18.1

^{a/} A small number of courts having jurisdiction under 21 years of age are included here. The number of cases involved do not seriously affect the rates of the courts in this column.

When the rates are adjusted in this way to the child population at risk, courts having jurisdiction for older children still have much higher rates. This probably means that proportionately more children get into trouble as they get older or that more older children are brought to court.

Changes in delinquency cases, 1955-1956

The total number of delinquency cases disposed of by juvenile courts in the United States increased by 21 percent between 1955 and 1956. During that period, the child population 10 through 17 years of age increased by an estimated 3 percent. This is the largest single annual increase during the past decade. The comparison is based on data from courts which reported both years; these courts constitute more than four-fifths of those in the national sample.

As indicated in Table C, the increase in delinquency cases was substantially greater in rural courts than in urban or semi-urban courts.

Table C: Percent Change in Delinquency Cases, by Type of Court,
1955-1956

Type of court	Percent change in delinquency cases, 1955-1956				
	Total	Boys	Girls	Official cases	Unofficial cases
Total.....	+21	+22	+18	+24	+18
Urban.....	+19	+20	+16	+23	+16
Semi-urban.....	+20	+21	+16	+21	+19
Rural.....	+33	+33	+35	+35	+31

For the country as a whole, boys' cases increased somewhat more than did girls' cases, although in rural courts the increase in girls' cases was slightly higher.

Official cases increased more than unofficial cases. In the rural courts, the increase in both official and unofficial cases was greater than for all courts in the country, reflecting the higher increase in general in these courts.

These changes between 1955 and 1956 represent the over-all findings for the country as a whole and for urban, semi-urban, and rural courts. Particular courts vary widely from the over-all findings.

Trends in delinquency cases, 1940-1956

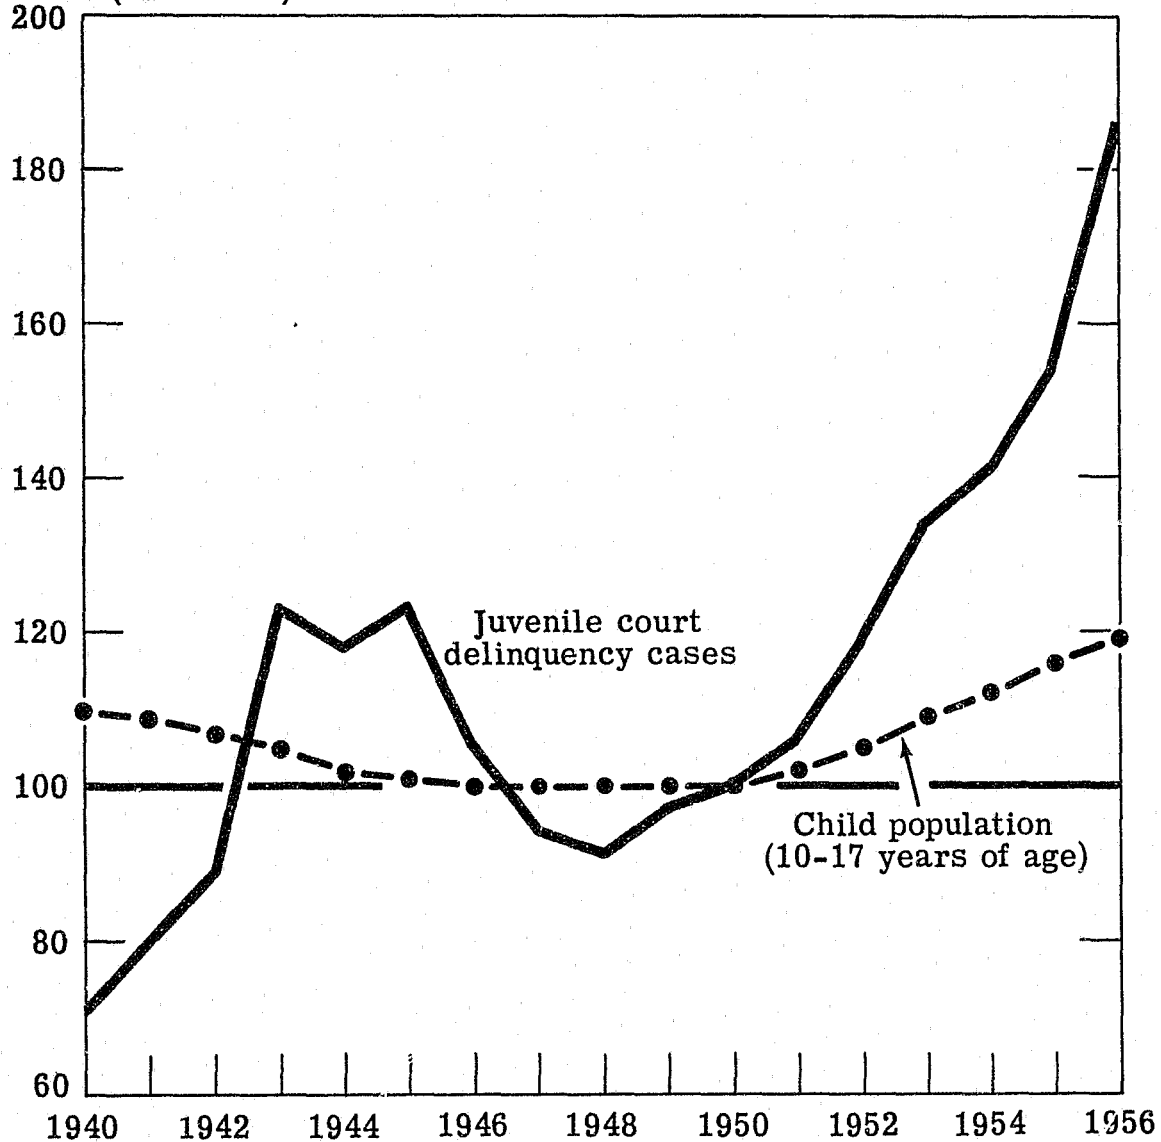

The general trend in delinquency cases after 1940 was upward during World War II to a peak in 1945, then downward for three years after the war. Beginning in 1949, however, the downward trend was reversed and has continued upward each year through 1956. For eight consecutive years delinquency cases have increased. This rising trend resulted in 1953 in figures exceeding the peak of World War II and by 1956 in figures at the highest level ever. (See chart)

Changes in delinquency cases from 1955 to 1956 are based on data from the national sample of juvenile courts. (See discussion of sample courts on page 10). Trend data prior to 1955 are based on reports previously collected by the Children's Bureau from a comparable group of courts. While the latter courts were not selected as statistically representative of all courts in the country, their reports were the best available to indicate trends during that period. They are probably good indicators of the true direction and of the approximate degree of change in delinquency cases in the country, although it was not certain that they represented the extent of the problem. Their usefulness for trend data is indicated by the fact that the group of courts reporting prior to 1955 showed a percentage change (19 percent) between 1955 and 1956, not very different from the sample group of courts (21 percent).

The recent rise in delinquency cases has far outstripped the growth in the child population. While delinquency cases more than doubled between 1948 and 1956, the child population 10 through 17 years of age in the country increased during that same period by only 19 percent.

TREND IN JUVENILE COURT DELINQUENCY CASES AND CHILD POPULATION 10-17 YEARS OF AGE, 1940-56

Index (1950 = 100)

DEPENDENCY AND NEGLECT CASES ^{4/}

Most juvenile courts by statute have jurisdiction over court actions involving dependent and neglected children as well as those involving delinquent children. Such jurisdiction is based on the principle that the State has a responsibility for the protection of these children.

Unlike the delinquent child who is brought to the attention of the court because of his antisocial behavior, the dependent or neglected child is usually referred to the court because of some form of neglect or inadequate care on the part of his parents or guardian (i.e., lack of adequate care or support resulting from the death, absence, or physical or mental incapacity of the parents, abandonment or desertion, abuse or cruel treatment, improper or inadequate conditions in the home).

Dependency and neglect cases, 1956

About 105,000 dependency and neglect cases were handled by the juvenile courts in the United States during 1956. This was about 16 percent of all types of cases handled by the courts. Two-thirds of the dependency and neglect cases were handled by official action; the remainder, unofficially. The larger proportion of dependency and neglect cases handled officially as compared with delinquency cases may result from the fact that courts more frequently consider that these cases require a change in the legal relationship between the parent and the child, which necessitates official action.

^{4/} Estimates in this section of the report are not based on the national sample of juvenile courts since data on dependency and neglect cases were not available for a sizeable number of courts in the national sample. Instead they are based on all courts reporting on such cases. In 1956, 1,740 courts reported on dependency and neglect cases. (See table 1). These courts included 72 percent of the child population under 18 years of age in their jurisdiction.

Rates of dependency and neglect cases like rates of delinquency cases, are higher in urban areas than in rural areas. This difference is as follows:

Type of court	Rate of dependency and neglect cases per 1,000 children under 18 years of age
Urban.....	3.2
Semi-urban.....	2.0
Rural.....	0.9

Changes in dependency and neglect cases 1955-1956

The total number of dependency and neglect cases disposed of decreased by one percent between 1955 and 1956. While only a slight decrease, it was the first one noted since 1950.

Just as the predominantly rural courts showed the greatest percentage increase in delinquency cases between 1955 and 1956, rural courts showed the greatest percentage decrease in dependency and neglect cases between those years. This is indicated in the following tabulation:

Type of court	Percent change in dependency and neglect cases, 1955-1956
Total.....	-1
Urban.....	-2
Semi-urban.....	+1
Rural.....	-7

SPECIAL PROCEEDINGS

In addition to delinquency and dependency or neglect, children are referred to juvenile courts for other reasons, which are generally termed "special proceedings." Special proceedings include adoption, commitment of mentally defective children, material witnesses, application for consent to marry or enlist in the armed forces, determination of custody or guardianship of a child, and permission to hospitals for the performance of an operation on children.

Of all the children's cases reported by the courts in 1956, only 5 percent, were special proceedings. Special proceedings cases increased by 12 percent, from 1955 to 1956.

Recent improvement in juvenile court statistics

As has been pointed out, the data on juvenile delinquency cases discussed in this report are based on data received from a national sample of courts chosen to be statistically representative of the United States. This new measure overcomes one of the very serious limitations in former collection of data.

The new national sample, designed with technical assistance from the Bureau of the Census and based on its Current Population Survey Sample, is representative of the country as a whole. For this sample the United States was first divided into about 2,000 primary sampling units, each consisting of a county or a number of contiguous counties, such as those in a standard metropolitan area. The 2,000 primary sampling units were then grouped into 230 strata, each consisting of a set of units as much alike as possible in such characteristics as regional location, population density, rate of growth, percent of non-white population, principal industry, type of agriculture, etc. From each stratum a single primary sample unit was selected at random. This resulted in 230 sampling units in which there were 502 courts. ^{5/}

As shown in Table D, the majority of the urban courts serve large areas of 100,000 or more population; the majority of semi-urban courts, serve medium-sized areas; and the majority of rural courts, small areas of under 20,000.

Table D: Population Size of Areas Served by Courts in National Sample by Type of Court

Type of court	Number of courts serving populations of					
	All Courts	100,000 or over	50,000-99,999	20,000-49,999	10,000-19,999	Under 10,000
Total.....	502	155	81	143	68	55
Urban.....	177	122	25	24	3	3
Semi-urban....	175	33	48	59	18	17
Rural.....	150	-	8	60	47	35

^{5/} For a more detailed discussion of the Current Population Survey Sample on which juvenile court sample was based, see Current Population Reports, Series P-23, No. 2, Bureau of the Census or American Statistician, May 1954.

a/ NOTE WELL: The data in this table should not be used to make comparisons between communities regarding the extent of delinquency. Questions concerning changes in an individual court's data from one year to another should be directed to that individual court.

b/ Courts serving areas with population of 100,000 or more are listed separately, showing the chief city located in each area. Courts serving areas with less than 100,000 population are combined for each State and are presented as "small courts."

c/ The age under which court has original jurisdiction is different for boys and girls. The age for boys appears first.

d/ No report on dependency and neglect cases.
