The year the experiment started was coded here (instead of the publication date) because many of the experiments began over five years before results concerning them were published. If the report did not state when the experiment started, the date of publication minus the presumed length of the study was coded for this variable.

#### <u>V3</u>

"Region" refers to the geographic location of the experiment(s).

<u>V4</u>

"Geographic Scope" is an variable taken from M.L. Dennis (1988), <u>Implementing Randomized Field Experiments</u>: <u>An</u> <u>Analysis of Criminal and Civil Justice Research</u>. Unpublished doctoral dissertation. Northwestern University. It refers to the jurisdictional spread of the experiment. For example, the California Special Intensive Parole Experiments involved the entire state parole system and, therefore, were assigned "3" ("state") for this variable.

V5

"Relation of Investigator to Research" records the position of the principal investigators at the time of the experiment.

<u>V6</u>

The place where the data used in this analysis were found.

<u>V2</u>

### V2. Year Experiment Started YEAR

### V3. Region where the Experiment Took Place REGION

. . .

- 1. California
- 2. Utah
- 3. England
- 4. Colorado
- 5. Florida
- 6. Washington State
- 7. Tennessee
- 8. New York
- 9. Not Given
- 10. Minnesota
- 11. Canada
- 12. Michigan

- 13. Denmark
- 14. Kentucky
- 15. New Jersey
- 16. Illinois 17. North Carolina
- 18. Idaho
- 19. Washington, D.C. 20. Georgia
- 21. Oklahoma
- 22. Ohio
- 23. Connecticut

### V4. <u>Geographic Scope of the Experiment</u> SCOPE

- 1. Country
- State 2.
- 3. County
- 4. City
- Institution 5.

#### V5. Relation of Investigator to Research RELATION

- 1. Internal government
- 2. Outside academic
- Outside private research 3.
- Collaborative effort between practitioners 4. and researchers

#### V6. Where were Data Found? JOURNAL

- Academic journal or book 1.
- Government publication 2.
- 3. Both academic journal and government publication
- 4. Unpublished manuscript
- Non-government research evaluation report 5.

"Type of Experiment" groups the experiments in terms of the disparity between the sanction conditions imposed in each experiment. The groupings are:

"A" - Experiments that compare a sanction with no sanction or a more severe sanction with a less severe sanction;

"B" - Experiments that measure the effects of various sanctions which are difficult to order in terms of severity; and

"C" - Experiments that measure the effects of coercive "treatments" which are added onto traditional sanctions.

#### <u>v8</u>

"Eligibility Restrictions - Exclusion Criteria" are the criteria which exclude otherwise eligible subjects from participation in the experiment - taken exactly as written in the principal investigators' reports.

<u>V7</u>

1. A

2. B

3. C

### V8. Eligibility Restrictions - Exclusion Criteria RESTRCT

- 1. Narcotics users, psychopaths, out-of-staters, non-English speaking, physically incapacitated
- 2. Psychopaths, out-of-staters, non-English speaking, physically incapacitated
- 3. Mentally disturbed, psychotics
- 4. Parole opposed by local law enforcement
- 5. Serious offenses
- Age > 17, previous offense, no admittance of guilt, no family cooperation, complainant refusal to drop prosecution
- 7. Psychotics, mentally retarded, addicts, serious sex offenders
- 8. 1st degree murderers, special cases, out-ofstaters
- 9. Severe escape risks, heavy drug use, uncontrollable physical violence
- 10. Offenders < 17, fewer than 2 previous convictions or probation orders
- 11. Non-residents, servicemen, serious health problems, prior DWI conviction
- 12. Drug-alcohol involvement, lack of court or attorney approval
- 13. 2 or more prior store arrests, no ID, suspect victimized other store chain, caused physical violence, in possession of contraband
- 14. Age > 14, not living with own family, less than two prior police occurrence reports
- 15. Already on supervision order, sibling in sample
- 16. Hard drug use, age < 17 or > 30
- 17. IQ < 59, age < 13 or > 26, over-aggressives
- 18. IQ in lower 30 % of population, sex or violent offenders, criminally experienced
- 19. IQ < 90, mentally ill, destructive aggressives, inability to form meaningful relationships

<u>v9</u>

This variable records whether there were any comparisons made between the groups on demographic factors (age, sex, race, prior offense, etc.).

#### <u>V10</u>

If there were any "pre-experimental" differences reported for the groups and coded in V9, they are set out specifically here. "E" signifies subjects who were in the experimental group while "C" signifies those in the control group.

- 20. Assignment to outside work or psychiatric unit
- Boys < 15 or > 17, out-of-staters 21.
- Severe reading difficulty, out-of-staters, non-22. English speaking, gross mental defect, psychotic, commitment < 6 months, juvenile court case
- 23. Age > 65, special prison cases
- Age < 21, prisoners serving < 2 month or > 12 24. month sentence
- 25. Females, status offenders, no legal guardian
- Transfers between wards or prisons 26.
- 27. Out-of-staters, parole opposed by local law enforcement, recent violent offense
- 28. Arson, rape, severe emotional disturbance, no family home, consistently assaultive Transfers, not enough time committed before
- 29. experiment is to end, serious offenders, potentially dangerous, already on violation status, out-of-staters, no file available
- Severe mental or physical cases, release to 30. Southeastern U.S., militant or notorious criminals, age > 35
- 31. Those in pretrial detention
- Those not meeting emotional disturbance criteria, 32. and, later, older wards
- 33. Those with extensive prior criminal histories, alcoholics, and those already on probation
- Assurance by the administration that the subject 34. would remain at the institution for the duration of the experiment
- Sexual, violent, or drug offenders 35.
- 999. No restrictions stated
- Pre-Experimental Group Comparisons Reported? PREGROUP V9.
  - 1. Yes
  - 2. No
- Any Significant Differences Found Between the Groups in V10. their Demographic Characteristics Before the Experiment? GROUPDIF
  - 1. No
  - Yes, more first parolees in E group 2.
  - 3.
  - Yes, C group > X age than E group Yes, E group fewer prior incarceration or probation 4. sentences
  - 5. E group with more subjects having 3 or more police occurrence reports and from high crime area of city; C group had more subjects who committed serious offenses
  - Differences found for E and C groups in both 6. prisons in study
  - E group more prison experience 7.
  - E > age than C8.

#### <u>V11 - V14</u>

These variables allow the coder to record up to four different sanctioning conditions for each experiment. Rather than accept the designation of "experimental" and "control" used by the principal investigators in their reports, a hierarchical system based upon the <u>harshness</u> of the sanction was set up.

As a general rule, the condition with the strongest deprivation of liberty or the most contact with the criminal justice system is coded as the harshest sanction (V11). The least harsh sanction is coded as the control condition (V14).

This coding scheme can be applied without modification to those experiments designated as "A" experiments, because they, by definition, involve comparisons between sanction and no sanction conditions or sanctions of clearly distinguishable degrees of severity. For example, the following rank-order classification was used for the Juvenile Diversion and Labeling Paradigm Experiment: harshest sanction (V11) = criminal justice system; second sanction (V12) = diversion to services; third sanction (V13) = diversion with a subsidy to cover costs; and control condition (V14) = counsel and release.

"B" experiments present the most difficult coding dilemma for these variables since there is no clear ordering of sanction conditions. To solve for this, the control condition (V14) is a "sanction of similar severity" rather than a true control.

For "C" experiments, the control condition (V14) is the deprivation of treatment condition, the least harsh sanction. With the treatment experiments, all the subjects received the traditional sanction. Although the state's decision to add a "positive treatment" to the incarceration might be considered helpful, if it cannot be refused, it is considered to be a harsher sanction for the purposes of this analysis.

Values for these variables were added as the coding was done. The intention was to specify clearly the sanctions involved. Categories can be combined later for analysis.

#### V11 - V14 ("a" variables only)

Exposure period is given in days. If the exposure period was the hour it took for the arrest to be made, it was coded here as 1 day.

#### V11 - V14 ("b" variables only)

The "N of Cases" is the number of subjects in the final analysis of the recidivism (or outcome) variables.

2

- 9. E had more females and lower mean age than C
- 10. "Fine" group had more lawyer representation
- 11. E had more blacks than C
- 12. C had more blacks than E
- 998. Not applicable
- V11. What was the Harshest Sanction (in "A Experiments), the <u>Positive Treatment (in "C" Experiments) or Treatment 1</u> <u>Condition (in "B" Experiments)?</u> **SNCTION1** 
  - 1. Police caution and supervision
  - 2. Intensive parole supervision
  - 3. Community residential day center
  - 4. Institutionalization or institutionalization followed by regular parole
  - 5. "Unofficial" probation
  - 6. Handled by "criminal justice system"
  - 7. Positive treatment added onto traditional sanction
  - 8. Intensive probation
  - 9. Regular probation or regular probation and treatment services
  - 10. Arrest
  - 11. Adjournment
  - 12. Authoritarian ward
  - 13. Therapeutic community
  - 14. Casework regime
  - 15. I-Level classification and treatment
  - 16. Institution with transactional analysis emphasis
  - 17. "Scared straight" prison tour
  - 18. Regular parole supervision
  - 19. Probation and restitution or probation and restitution with mediation or counseling
  - 20. I-Level classification and treatment on probation
  - 21. Intensive supervision (pretrial)
  - 22. Probation and incarceration on weekends
  - 23. Regular custodial care
- 11a. Exposure Period (in Days) EXPOSE1
- 11b. <u>N of Cases</u> N1
- V12. What was the Secondary Sanction (or Treatment 2) Condition? SNCTION2
  - 1. Police caution and supervision
  - 2. Intensive parole supervision
  - 3. Community residential day center
  - 4. Institutionalization followed by regular parole
  - 5. "Unofficial" probation
  - 6. Handled by "criminal justice system"
  - 7. Positive treatment added onto traditional sanction
  - 8. Community based parole emphasizing Guided Group Interaction techniques
  - 9. Diversion services

- 10. Regular probation or social services supervision
- 11. Separation of suspect and victim for 8 hours
- 12. Group counseling regime
- 13. Regular classification and treatment
- 14. Institution with behavior modification emphasis
- 15. Probation and restitution
- 16. Probation and treatment
- 17. Moderate pretrial supervision

### 12a. Exposure Period (in Days) EXPOSE2

12b. <u>N of Cases</u> N2

### V13. What was the Third Sanction Condition? SNCTION3

- 1. Police caution and supervision
- 2. Intensive parole supervision
- 3. Community residential day center
- 4. Institutionalization followed by regular parole
- 5. "Unofficial" probation
- 6. Handled by "criminal justice system"
- 7. Positive treatment added onto traditional sanction
- 8. Diversion services with subsidy
- 9. Education classes for DWI
- 10. Fine
- 11. Regular probation
- 13a. Exposure Period (in Days) EXPOSE3
- 13b. <u>N of Cases</u> N3

### V14. Control Group Received CONTROL

- 1. Withholding of positive treatment
- 2. Diversion from criminal justice system to receive services
- 3. Counsel or caution and release, release, or discharge
- 4. Intensive parole supervision
- 5. Parole supervision utilizing Guided Group Interaction
- 6. Regular probation or social service supervision
- 7. Regular parole supervision
- 8. Community residential day center
- 9. Work release during institutionalization
- 10. Self-governing ward
- 11. Regular custodial care
- 12. Little or no coercive parole supervision
- 13. Less coercive internal prison environment
- 14. Probation with restitution
- 15. Restitution
- 16. 20-bed dormitory
- 17. Institutionalization followed by regular parole
- 18. Regular classification and treatment

<u>V15</u>

"Total N" is the total number of subjects in the final analysis from all of the groups combined.

#### <u>V16</u>

Often the principal investigators were interested in the effect of some type of intervention (e.g., diversion) which is considered as a less severe sanction condition in this analysis. This variable allows the coder to specify the condition which appears to have been the intervention or experimental condition in the principal investigators' analysis.

#### <u>V17</u>

If the program, policy, or intervention had an effect which was reported - regardless of how that condition was ranked in severity for this analysis - that is noted here.

#### V18

"Timing of Randomization" refers to the stage of processing through the criminal justice system when the subjects were randomly assigned to one of the sanction conditions.

<u>V19</u>

The random assignment method was generally explained very briefly in these reports. The values for this variable were taken from the actual wording in the reports about how randomization was accomplished.

- 19. Institution with behavior modification emphasis
  - 20. Passive pretrial supervision
  - 21. Fine
- 14a. <u>Control Group Exposure Period (in Days)</u> **EXPOSEC** 14b. <u>Control N of Cases</u> **NC**
- V15. <u>Total N</u> TOTALN

## V16. What Condition was the Investigator's Experimental Group? PIGROUP

- 1. Harshest sanction
- 2. Secondary sanction
- 3. Third sanction
- 4. Control
- 5. Treatment 1 in "B" experiment
- 6. Positive treatment(s) in "C" experiment
- 997. No particular group specified

(ar )

X

å

- V17. <u>Was there a Program Effect Noted by the Investigators?</u> **PROGEFF** 
  - 1. Yes
  - 2. No
- V18. Timing of Randomization RTIMING
  - 1. At time of parole
  - 2. At sentencing
  - 3. At time of police or security intervention
  - 4. During institutionalization
  - 5. At the charging or juvenile adjudication
  - 6. After court-referral or sentencing, upon intake into the probation unit
  - 7. After referral from school, family or police, upon intake into the unit (pre-adjudication)
  - 8. After referral from probation, upon intake into the institution
  - 9. After arrest, prior to adjudication
  - 999. Unstated

### V19. How was randomization done? RHOW

- 1. Coin toss
- 2. Random time quota
- 3. Random numbers table
- 4. Toss of die
- 5. Random slips of paper
- 6. Stratified random procedure (not further specified)

<u>V20</u>

This variable will frequently be coded as "missing" since the experimental reports did not usually provide many details about the randomization process.

#### <u>V21</u>

If the principal investigators stated anywhere that the randomization process broke down, this variable was coded "1" (yes). Because researchers may have been hesitant to report completely about randomization failure, this variable may undercount the extent of such failure within this group of experiments.

#### <u>V22</u>

This is another variable taken from Dennis (1988). Were overrides of the random assignment process permitted by the principal investigators? An override occurs if a subject who would have been assigned to one condition is placed in another condition. For example, in the Minneapolis Domestic Violence Experiment, police could override the random assignment scheme in special circumstances. Again, the reports used here may undercount the extent to which overrides were permitted. Dennis gathered this information more directly - by calling the principal investigators.

### <u>V23</u>

This variable records whether the overrides which did occur were documented.

#### <u>V24 & V24b</u>

These variables note whether the raw number (or the percentage) of overrides to the randomization process was reported; and if it was, whether the source of this information was a principal investigator or a reviewer.

- 7. Random days, alternating monthly
- 8. First two subjects assigned to E, every 3rd person to C group
- 9. Computer-generated randomized disposition log
- 10. Lottery
- 11. Alternate assignment, not further specified
- 12. Odd and even assignment
- 13. Alternating months
- 14. Matching, then randomization
- 999. Unstated

## V20. Who Controlled the Randomization? RWHO

- 1. Practitioners
- 2, Researchers
- 999. Unstated

### V21. Did the Investigator Note Randomization Failure? RFAIL

- 1. Yes
- 2. No

### V22. <u>Were Overrides Permitted?</u> OVERRIDE

- 1. Yes
- 2. No
- 999. Unstated

#### V23. <u>Were Overrides Documented by Investigator?</u> ODOC

- 1. Yes
- 2. No
- 998. Not applicable

### V24. <u>Was the Percentage of Cases where Randomization was</u> <u>Overridden Reported by Investigators or Reviewers?</u> OREPORT

- 1. Yes
- 2. No
- 998. Not applicable
- 24a. <u>Investigator States</u> OPI
- 24b. <u>Reviews State</u> OREVIEW

#### <u>V25</u>

The definition of sanction used in this analysis demands at least one involuntary condition. However, in some experiments, the less severe sanction condition could be refused. When that was possible, it is noted here.

## <u>V26</u>

If the informed consent of the subject - or subject's guardian - was needed before involvement with the study, it is recorded here.

#### <u>V27</u>

This variable applies primarily to those experiments (such as the positive prison treatment or "C" experiments) where the treatment sessions might not have been well attended by the subjects, even though the sanctioning condition was not a voluntary one. If the investigator or the staff had no way to insure compliance and it was mentioned in the report, it is noted here.

#### <u>V28</u>

Observation, as it is used here, does not mean actual participant observation. Rather, it merely seeks to record whether the investigators followed the harshest condition after subjects were assigned to it. For instance, the investigators may have tried to assess whether the condition was imposed or delivered in the manner or to the degree intended - e.g., the intensive supervision experiments usually recorded the number of contacts between subjects and supervisors for both the experimental and the control groups.

#### <u>V29 & V29a</u>

If the harshest sanction condition failed (i.e., subjects assigned to a particular condition did not get what they were supposed to get), then that is recorded here. For V29a, the reason given in the report for that failure is noted.

### V25. What Conditions were Voluntary? VOLUNTRY

- 0. None
- 1. Harshest sanction
- 2. Secondary sanction
- 3. Third sanction
- 4. Control
- 5. Secondary sanction and control

### V26. <u>Was it Reported that Informed Consent of Subjects (or</u> <u>Subjects' Guardians) had been Obtained?</u> **CONSENT**

- 1. Yes
- 2. No

### V27. If Harshest Sanction Condition was Involuntary, were Coercive Controls Lacking? COERCIVE

- 1. Yes
- 2. No
- 3. "B" experiment not applicable

### V28. <u>Was Harshest Sanction or Positive Treatment Condition</u> <u>Observed?</u> OBSERVED

- 1. Yes
- 2. No
- 3. "B" experiment not applicable

### V29. <u>Was there Documented Failure in Harshest Sanction</u> or Positive Treatment Condition? **TFAIL**

- 1. Yes
- 2. No
- 3. "B" experiment not applicable
- 998. Not applicable

<u>V29a</u> See note for V29 & V29a.

#### V30 & V31

Caseflow problems occur frequently in experiments (i.e., number of actual cases is far below the number anticipated and programmatic problems follow), and that is recorded here if the principal investigators made note of it. V31 refers to the type of adjustment which was made for an inadequate caseflow.

<u>V32</u>

Were subjects all juveniles (under 18), all adults, or did the experiment include both juveniles and adults (e.g., Police Foundation Shoplifting Experiment)?

<u>V33</u>

This variable records the mean or median age of all the subjects included in the experiment.

### 29a. Investigators or Reviewers State TWHY

- 1. Originally designed conditions not disparate enough
- 2. Harshest sanction or positive treatment condition not delivered as planned
- 3. One condition began to simulate another condition
- 4. High rate of runaways and in-program failures
- 5. Some subjects in E received same or less harsh treatment as subjects in C
- 6. Absenteeism
- 998. Not applicable
- V30. Were Caseflow Problems Noted? CASEFLOW
  - 1. Yes
  - 2. No

### V31. How did PIs adjust? ADJUST

- 1. Deviated from original randomization plan and sent everyone into experimental group
- 2. Stopped the experiment
- 3. Accepted lower N of cases than originally planned
- 4. Abandoned another simultaneous experiment and set up quasi-experimental comparison study
- 5. Abandoned randomization and changed caseflow requirements
- 6. Relaxed eligibility criteria
- 7. Accepted lower N of cases and deviated from randomization
- 8. Extended the experiment
- 9. Increased proportion of assignments to E
- 10. Extended experiment, abandoned randomization, modified selection criteria
- 11. Deviated from randomization and sent all subjects to C
- 12. Eligibility relaxed, proportion of assignments to E continuously adjusted
- 13. Randomization relaxed, proportions fluctuated
- 998. Not applicable

### V32. Subjects Were SUBJECTS

- 1. Adults
- 2. Juveniles
- 3. Experiment included adults and juveniles
- V33. Mean or Median Age for Subjects AGE

<u>V34</u> The categories in this variable use the descriptive statements about the subjects which appeared in the principal investigators' reports.

#### V34. Classification Best Describes the Nature of the Offense or the Type of Offender Sanctioned in the Experiment OFFENDER

- First-time property, incorrigibility 1.
- Non-serious property, vagrants 2.
- 3. Serious person and property
- 4. Habitual person and property
- 5. First-time minor
- 6. Repetitive property, status
- 7. Robbery, theft, narcotics, forgery
- 8. Status
- 9. Narcotics, property
- 10. Theft, burglary, forgery
- 11. Delinquents, those in need of supervision or problem kids referred from agencies
- 12. First-time DWI
- 13. First-time felonious property
- 14. Minor domestic violence
- 15. First-time shoplifting

16. Person, property, status

- 17. Truancy
- 18. First-time and repetitive felonious property
- 19. Misdemeanants
- 20. Chronic public drunkenness
- 21. Repetitive property
- 22. Assault, theft, burglary
- 23. Non-serious person, property, status
- 24. Mixed felony and misdemeanor
- 25. 100% felony
- 26. Minor delinquent offenders, status
- 27. Repetitive felony
- 28. Typical offenses were auto theft and breaking and entering, average # of offenses = 4, average total time incarcerated = 11 months
- 29. Emotionally disturbed, serious
- Pretrial defendants, first offending felons 30.
- 31. Repetitive misdemeanor
- 32. Predominantly misdemeanor, traffic offenses
- 33. Delinguents
- 999. Unstated

"Percent Male" refers to the percentage of subjects in the experiment who were male. If this figure was not given or could not be calculated from information provided in the report, then this value is "999" (missing).

#### <u>V36</u>

"Percent White" refers to the percentage of subjects in the experiment who were white. If this figure was not given or could not be calculated from information provided in the report, then this value is "999" (missing).

#### <u>V37 & 37a</u>

Attrition - as used here - refers to the loss of subjects at some point during the experiment. This attrition can occur from one of the groups (due to drop-outs) or from inadequate follow-up data (lost cases). If attrition rates are given - or can be easily calculated - the overall rate is recorded here.

#### <u>V38 & V38a</u>

"Differential attrition" - the loss of more subjects from one group than from another - is a seldom-noted problem in experimental reports. If differential attrition was noted by the principal investigators, then it is recorded here. If attempts to analyze why subjects left particular groups were made, then this is noted in V38a.

#### <u>V35</u>

V35. Percent Male MALE

### V36. Percent White WHITE

### V37. Was Attrition Noted By the Investigators? ATTRIT

- 1. Yes
- 2. No
- 37a. Percentage Given ATTPERC

#### V38. Was Differential Attrition Noted by Investigators? DATTRIT

- 1. Yes
- 2. No
- 38a. <u>Was there any Attempt to Analyze the Reasons Subjects</u> <u>Left?</u> WHYDATT
  - 1. Yes
  - 2. No
  - 998. Not applicable

### <u>V39 & V43 & V47</u>

The coding scheme allows for three separate types of outcome measures to be recorded. The outcome measures were coded in detail, as stated by the principal investigators, and can be grouped into various categories for later analysis. (Only outcome measures indicating recidivism were recorded.)

#### V39. First Outcome Measure OUTCOMEA

```
1. % violating parole
```

- 2. % rearrested
- 3. % major arrests
- 4. Mean arrests during program only
- 5. Mean arrests program graduates only
- 6. % incarcerated
- 7. % failing parole
- 8. % receiving re-referrals
- 9. Mean days to referral
- 10. # of petitions filed
- 11. % rebooked (all offenses)
- 12. % rebooked (criminal offenses only)
- 13. % arrested, during program only
- 14 % arrested, post-program only
- 15. % convicted
- 16. % recidivating as defined by investigators
- 17. % with police contacts from caution & beginning of the supervision period
- 18. % with police contacts from the end of supervision
   & six months after caution
- 19. % with police contacts from the end of supervision & the end of caution
- 20. % receiving jail or probation revocation
- 21. % DWI rearrested
- 22. % domestic violence arrests
- 23. % shoplifting arrests
- 24. % police occurrence or contact reports
- 25. Mean days truant
- 26. % charged and convicted
- 27. % charged
- 28. % of time group spent locked up
- 29. % of group receiving petitions
- 30. Mean misconduct reports
- 31. % driving violation
- 32. # driving violation points
- 33. Months to first arrest
- 34. Time to first arrest
- 35. Months to first conviction
- 36. % convicted program graduates only
  - 37. Mean number of offenses
  - 38. % with other than shoplifting arrests
- 39. Mean number arrests from day assigned to program
- 40. % with other than DWI arrests
- 41. % rearrested program graduates only
- 42. Time to first parole violation
- 43. Mean proportion of time incarcerated
- 44. % failing to appear
- 45. % with a felony commitment
- 46. # reinstitutionalized

#### <u>V40 & V44 & V48</u>

Each of these variables records the first follow-up period in months for each of the corresponding outcome measures. V44 and V48 are coded "998" (not applicable) if there is no corresponding outcome measure recorded.

#### <u>V40a & V44a & V48a</u>

Each of these variables records the difference between groups for the first follow-up period, where this figure was reported as a percentage difference. If it was reported as a mean difference, these variables are coded "998" (not applicable). V44a and V48a are coded "998" (not applicable) if there is no corresponding outcome measure recorded.

#### V40b & V44b & V48b

Each of these variables records the difference between groups for the first follow-up period, where this figure was reported as a mean difference. If it was reported as a percentage difference, these variables are coded "998" (not applicable). V44b and V48b are coded "998" (not applicable) if there is no corresponding outcome measure recorded.

### V40c & V44c & V48c

Each of these variables records whether the principal investigators reported that the difference between the harshest sanction and the control sanction (under this analysis) was significant. V44c and V48c are coded "998" (not applicable) if there is no corresponding outcome measure recorded.

#### V40d & V44d & V48d

When the raw effect size differences were reported, the experimental findings were reanalyzed, using a difference of means or a difference of proportions test. The results of that reanalysis are reported here. Bornstein and Cohen's (1989) <u>Statistical Power Analysis</u> software was also used to reanalyze some of these findings, using a two-tailed test with p < .05.

V40. First Follow-Up Period (in Months) FOLLWA1

40a. <u>Raw Effect Size - % Difference</u> EFFCTA1

# 40b. Raw Effect Size - X (Mean) Difference MEANA1

### 40c. <u>Is this Difference between Harshest Sanction Condition and</u> <u>the Control Condition Significant (as Reported by the</u> <u>Investigator)?</u> **SIGA1**

- 1. Yes
- 2. No
- 999. Unstated

### 40d. Does our Reanalysis Change these Findings? REANA1

- 1. Yes
- 2. No

#### <u>V41 & V45 & V49</u>

These variables for the second follow-up period are coded in the same manner as V40, V44 and V48 above. If there was no second follow-up period for the corresponding outcome measure, they are coded "998" (not applicable).

#### V41a & V45a & V49a

These variables for the second follow-up period are coded in the same manner as V40a, V44a and V48a above. If there was no second follow-up period for the corresponding outcome measure, they are coded "998" (not applicable).

### V41b & V45b & V49b

These variables for the second follow-up period are coded in the same manner as V40b, V44b and V48b above. If there was no second follow-up period for the corresponding outcome measure, they are coded "998" (not applicable).

#### V41c & V45c & V49c

These variables for the second follow-up period are coded in the same manner as V40c, V44c and V48c above. If there was no second follow-up period for the corresponding outcome measure, they are coded "998" (not applicable).

#### <u>V41d & V45d & V49d</u>

These variables for the second follow-up period are coded in the same manner as V40d, V44d and V48d above. If there was no second follow-up period for the corresponding outcome measure, they are coded "998" (not applicable). V41. Second Follow-Up Period (in Months) FOLLWA2

### 41a. <u>Raw Effect Size - % Difference</u> EFFCTA2

# 41b. Raw Effect Size - X (Mean) Difference MEANA2

### 41c. <u>Is this Difference between Harshest Sanction Condition and</u> <u>the Control Condition Significant (as Reported by the</u> <u>Investigator)?</u> **SIGA2**

- 1. Yes
- 2. No
- 999. Unstated

### 41d. Does our Reanalysis Change these Findings? REANA2

- 1. Yes
- 2. No

#### <u>V42 & V46 & V50</u>

These variables for the third follow-up period are coded in the same manner as V40, V44 and V48 above. If there was no third follow-up period for the corresponding outcome measure, they are coded "998" (not applicable).

#### <u>V42a & V46a & V50a</u>

These variables for the third follow-up period are coded in the same manner as V40a, V44a and V48a above. If there was no third follow-up period for the corresponding outcome measure, they are coded "998" (not applicable).

### V42b & V46b & V50b

These variables for the third follow-up period are coded in the same manner as V40b, V44b and V48b above. If there was no third follow-up period for the corresponding outcome measure, they are coded "998" (not applicable).

#### V42c & V46c & V50c

These variables for the third follow-up period are coded in the same manner as V40c, V44c and V48c above. If there was no third follow-up period for the corresponding outcome measure, they are coded "998" (not applicable).

#### <u>V42d & V46d & V50d</u>

These variables for the third follow-up period are coded in the same manner as V40d, V44d and V48d above. If there was no third follow-up period for the corresponding outcome measure, they are coded "998" (not applicable). V42. Third Follow-Up Period (in Months) FOLLWA3

### 42a. <u>Raw Effect Size - % Difference</u> EFFCTA3

# 42b. Raw Effect Size - X (Mean) Difference MEANA3

### 42c. <u>Is this Difference between Harshest Sanction Condition and</u> <u>the Control Condition Significant (as Reported by the</u> <u>Investigator)?</u> **SIGA3**
