HISTORICAL TRENDS  
CALIFORNIA DEPARTMENT OF CORRECTIONS  
1971 - 1991

This report presents some basic information about the California Department of Corrections' (CDC) prison and parole system. Historical trend information covering the past twenty years is presented in graphic and tabular form for various offender demographic characteristics and the institutional design bed capacity.

Institution Population

Figure/Table 1 shows the number of CDC offenders incarcerated in a California state prison, conservation camp, community based facility, or Department of Mental Health hospital. The institution population grew from 20,294 inmates in 1971 to 101,808 inmates in 1991. The inmate population reached a low of 19,623 on December 31, 1977. Since then it has steadily increased each year reaching 101,808 on December 31, 1991. The increase recently dropped to 4,499 for 1991 after increases of about 10,000 a year in the three previous years.

Racial/Ethnic Composition

Figure/Table 2 presents information on the racial/ethnic composition of the institution population during the 1971 to 1991 time period. White male inmates dropped from 51 percent of the male institution population in 1971 to 29 percent in 1991. Most of this shift in racial composition was related to an increase in the percentage of Hispanic (Mexican) inmates which went from 17 percent to 32 percent. There were also smaller percentage increases in the Black and Other racial/ethnic groups.

Institution Population by Offense Category

Figure/Table 3 shows the change in the percentage of felon inmates incarcerated for violent, property, drug and other offenses. The percentage of inmates incarcerated for violent crimes decreased from 56 percent in 1971 to 44 percent in 1991 for male felons and from 31 percent to 25 percent for female felons. For drug offenses the percentages increased from 16 percent to 23 percent for male felons, and 30 percent to 37 percent for female felons. The percentage of both male and female felons showed little change for property or other offenses.

New Admissions by Offense Category

Figure/Table 4 shows the rate of felon new admissions by offense category. From 1971 to 1991 the rate of felon new admissions increased from 23.5 to 124.8 per 100,000 California population. For male drug offenders the rate began to climb sharply each year after 1982. After increasing from 5.1 in 1982 to 40.2 in 1990, the rate of male felon new admissions for drug offenses dropped to 35.5 in 1991.

Parole Violators Returned to Prison

Figure/Table 5 presents information on the number of parole violators returned to prison. The number of parole violators returned to prison increased from 2,396 in 1971 to 57,344 in 1991. From 1971 through 1980, the number of parole violators returned to prison each year remained under 3,000. They then began to increase rapidly each year.

### Admission/Return Status

Figure/Table 6 indicates the percentage of the felon institution population with respect to admission/return status. New admissions, Parole Violators-Returned to Custody (PV-RTCs) and Parole Violators-With New Terms (PV-WNTs) are shown as a percentage of the overall felon population. From 1975 to 1983, new admissions accounted for over 75 percent of the male felon institution population. Parole Violators Returned to Custody (PV-RTC) accounted for less than 5 percent. Since then the percentage of new admissions in the institution population has decreased falling to 62 percent in 1991. In contrast, the percentage of PV-RTC and pending revocation inmates increased to a high of 16 percent in 1988. The percentage then dropped to 12 at the end of 1991. The percentage of PV-WNTs began to steadily increase in the 1980's going from 5 percent in 1980 to 19 percent at the end of 1991.

### Felon Parole and Civil Narcotic Population

Figure/Table 7 shows the growth in the felon parole and civil narcotic addict (CNA) outpatient population from 21,159 in 1971 to 82,164 in 1991. From 1971 through 1982, the population fluctuated from year-to-year. In 1983 the parole/outpatient population began to increase significantly each year. In 1991 alone it increased by over 12,000.

### Releases to Parole

Figure/Table 8 presents information on the total number of felons annually released to parole. The number of annual releases to parole increased from 10,014 in 1971 to 89,119 in 1991. The growth in the number of releases to parole has been slowing down in recent years. After an increase of 13,038 in 1987, the annual increase dropped to 6,700 in 1991.

### Average Time Served in CDC Institutions

Figure/Table 9 shows the change in the average (median) months of time served in CDC institutions by felons first released to parole. For male felons the time served decreased from 36 months to 12 months and for female felons from 16 months to 10 months during the 1971 to 1991 time period. Time served in jail prior to entering prison is not included in these calculations.

### Design Bed Capacity and Overcrowding

Figure/Table 10 shows the change in the design bed capacity of CDC facilities and the institution population from June 30, 1971 to June 30, 1991. From 1971 to 1991, design bed capacity increased from 24,819 to 54,042 while the institution population increased from 22,680 to 101,995. The percent occupied went from 99.9 in 1980 to 188.7 in 1991.

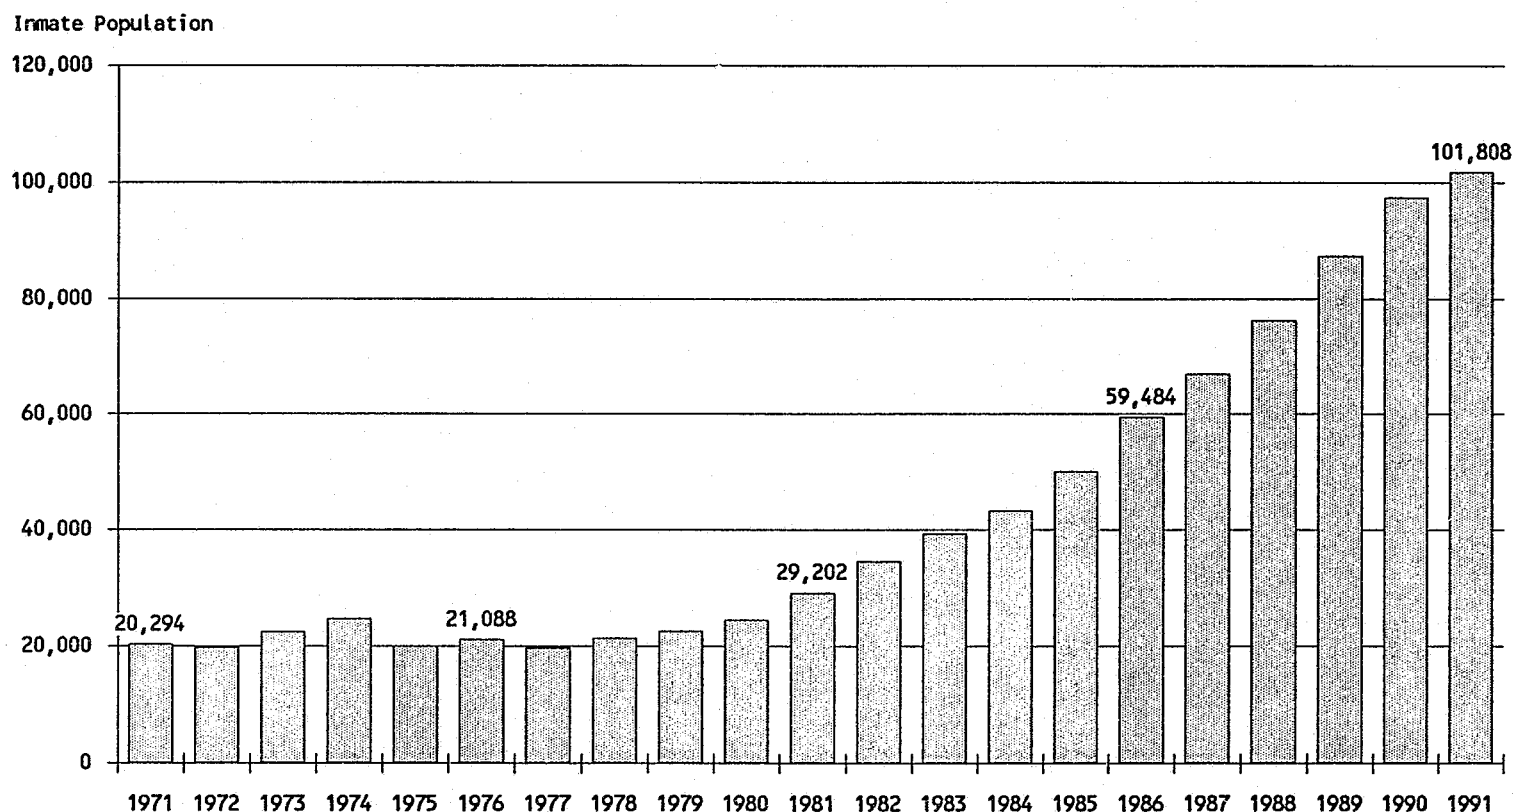

*Most of the information for this historical trend report was compiled from California Prisoners and Parolees publications from 1971 to 1990. The 1991 data are based upon recently published or soon-to-be published reports. In summarizing the data, efforts were made to maintain a reasonable consistency between years as various definitions of data elements changed. Some of the information, such as the percentage of PV-RTC and PV-WNT in Table 7 for the years 1971 through 1985, was derived from old computer files. Numbers used in the report may not add due to rounding.*
