COLONEL JUSTIN J. DINTINO  
Superintendent

Dear Reader:

In 1991, the state of New Jersey showed a reduction of 11% in fatalities as compared to 1990. We believe the major factors contributing to this achievement are the continuing alcohol awareness programs, the mobile D.W.I. patrols, the sobriety checkpoints, the safety belt use law, and the 55 M.P.H. speed enforcement programs.

This report constitutes a detailed review of the causes and results of fatal accidents throughout the state during 1991. Hopefully, the continued efforts and cooperation of the public, federal, state, and local agencies will help us maintain our traffic safety record in the years ahead.

It is essential that the law enforcement community be firmly committed to the 55 M.P.H. speed enforcement programs. We are convinced that this will save lives.

On the following pages you will find statistics of the fatal traffic accident records compiled by the Fatal Accident Unit of the Division of State Police for 1991.

Sincerely,

Colonel Justin J. Dintino  
Superintendent

## EVALUATION:

- Analysis of deceased drivers in the above .10% BAC category revealed a significant decrease over the five-year period. During the five-year period from 1987 to 1991, the number of deceased drivers above .10% dropped 27%.
- A similar decrease was also noted for deceased drivers in the below .10% category. During the same five-year period this number decreased by 27%.
- A review of surviving drivers also revealed a downtrend. In the above .10% BAC category, a decrease of 21% was noted. In the below .10% category, a decrease of 55% was recorded.
- A review of times revealed that the 8:01 a.m. to 4:00 p.m. area was the lowest for alcohol involved. Conversely, areas of heaviest alcohol involvement in all categories was closely divided between the 12:01 a.m. to 8:00 a.m. time frame and the 4:00 p.m. to 12:00 a.m. time frame.
