FIVE YEAR CHANGES IN THE HISPANIC UNDERCUSTODY POPULATION

This study reports changes in the Hispanic undercustody population over the five year period from the close of 1986 to the end of 1991. It presents data for various population segments identified by place of birth and sex. These population segments are examined as possible sources of Hispanic population increases.

DIVISION OF PROGRAM PLANNING, RESEARCH AND EVALUATION

1993

EXECUTIVE SUMMARY

1. Between 1986 and 1991, the total undercustody population increased by 49.7 percent, with males increasing by 46.1 percent and females by 150.6 percent. Thus, the female population grew at three times the rate of the male population increase.
2. Over the same period, the total Hispanic population increased by 62.8 percent, or 26.4 percent faster than the total population. The number of Hispanic males increased by 57.3 percent and Hispanic females by 229.7 percent. Thus, the Hispanic female population increased four times faster than their male counterparts.
3. In both 1990 and 1991, the total undercustody Hispanic population grew slower than the total undercustody population.
4. The native born Hispanic population increased by 56.4 percent, or 13.5 percent faster than the total population. Native born Hispanic males increased by 50.2 percent and their female counterparts by 249.5 percent.
5. Among native born Hispanics, those born in New York State increased by 88.4 percent over the study period. As in 1990, Hispanics born in New York were the largest population segment in 1991. This occurred for both males and females.
6. Foreign born Hispanics increased by 87.2 percent, or 75.5 percent faster than the total population. In the foreign born Hispanic population, males increased by 84.4 percent and females by 162.5 percent.
7. The major source of growth for the undercustody foreign born population was the increase in inmates born in the Dominican Republic and Colombia.

INTRODUCTION

This report presents and examines data about the Hispanic undercustody population during the five year period from the close of 1986 to the end of 1991. The data analyzed in this report are for the complete five year period. Appendix Tables have been included which present the year to year data.

Hispanic members of the population are distinguished by two techniques. Upon commitment to departmental custody, inmates are asked whether they identify themselves as being of Hispanic ethnicity. Those who do are designated Hispanic. Inmates are asked their place of birth and their parents place of birth. If the inmate or at least one parent was born in a Spanish-speaking country or territorial possession, the inmate is designated Hispanic. In the data presented here, parents place of birth was not used as a criterion since it was not available as a separate data element before 1989. By being unable to use parents place of birth to designate Hispanics, at the close of 1991 the data reported here undercounted all Hispanics by 3.3 percent, male Hispanics by 3.1 percent and female Hispanics by 5.3 percent. Thus, the undercount bias appears negligible.

The purpose of this study is to identify the principal sources of Hispanic population growth during the study period. Of critical concern in New York's Hispanic population is place of birth and Puerto Rican ethnicity. The population was divided into native and foreign born segments. Then it was subdivided by place of birth and Puerto Rican heritage. The distribution of the 1986 close of the year undercustody population was compared with that of 1991 to examine the direction and amount of the observed change which was associated with each segment. This analysis is presented for the total Hispanic undercustody population and its male and female subcomponents.

TOTAL POPULATION CHANGE

Table 1 presents data about Hispanics in the undercustody population. These data permit examination of the contribution Hispanics made to the Department's population growth between 1986 and 1991. During this five year period, the total undercustody population increased by 19,215 inmates, growing from 38,647 at the close of 1986 to 57,862 at the end of 1991. This was a five year increase of 49.7 percent. Likewise, total Hispanics increased. Their numbers incremented by 6,929 inmates from 11,036 in 1986 to 17,965 in 1991. As such, they accounted for 36.1 percent of the observed increase in the total population. They experienced a growth rate of 62.8 percent. Therefore, the rate of growth among Hispanics was 26.4 percent greater than the rate of growth for the entire population. By the close of 1991, Hispanics had increased their proportion in the total population by 2.4 percentage points, from 28.6 percent at the close of 1986 to 31.0 percent at the end of 1991 (see Appendix Table A). Although Hispanics accounted for 36.1 percent of the observed five year increase, their share of the year to year increase showed some evidence of declining by 1988 (see Appendix Table B). As in 1990, their year to year increase was less than that observed for the total population in 1991 (See Appendix Table C).

The data in Table 1 demonstrate that Hispanics have been a major source of increase for the growth in the undercustody population over the last five years. However, different components in the Hispanic population evidenced different impacts upon that growth.

Comparing native and foreign born Hispanics, Table 1 shows native Hispanics grew more in number over the study period, while the foreign born increased at a faster rate. Between 1986 and 1991, native born Hispanics increased by 4,931 inmates.

Foreign born Hispanics increased by 1,998 inmates over the five year period. They accounted for 10.4 percent of the total population's observed increase. Foreign born Hispanics grew at a rate of 87.2 percent - a rate 54.6 percent faster than that observed for the native born Hispanics.

TABLE 1. UNDERCUSTODY POPULATION ON DECEMBER 31st, SHOWING FIVE YEAR CHANGE AND GROWTH RATES FOR THE TOTAL AND SELECTED SEGMENTS OF THE HISPANIC POPULATION*

Total and Selected Segments of the Hispanic Population	Population		Five Year Change		Hispanic Population Increase (Percent)	Five Year Growth Rate (Percent)
	1986	1991	Total Population Increase (Number)	Total Population Increase (Percent)		
Total Population	38,647	57,862	19,215	100.0	-----	49.7

Other Countries	16	30	14	0.1	0.2	n.a.

*See Appendix Tables A, B and C for detailed year-to-year data.

Among the native born, those Hispanics born in New York State increased by 3,427 inmates. This increment accounted for 17.8 percent of the increase in the total undercustody population. It represented a growth rate of 88.4 percent. Inmates born in U.S. Possessions increased by 1,265. They constituted 6.6 percent of the total population's increase and grew at the rather slow rate of only 26.9 percent over the five year period. The New York born outnumbered the Hispanics born in Puerto Rico.

Hispanics born in Puerto Rico or of Puerto Rican parentage increased by 3,527 inmates. These accounted for 18.4 percent of the total population's increase. Inmates of Puerto Rican heritage grew 42.0 percent over the 1986-1991 period. Other native born Hispanics not of recent Puerto Rican heritage (neither born in Puerto Rico nor of Puerto Rican parentage) increased by 1,404 inmates from 339 in 1986 to 1,743 in 1991. They accounted for 7.3 percent of the total population's increase. Their five year growth rate was 414.2 percent - the highest observed for any Hispanic population segment. They are becoming an important source of increase for the Hispanic population. Their consistent year to year increases over the five year study period indicate they are likely to continue to be important in Hispanic population change (see Appendix Table C).

Most of the growth happening among the foreign born occurred for those originating in the Caribbean. The foreign born from the Dominican Republic increased by 1,241 inmates to 2,060 in 1991. Those from Colombia grew by 304 inmates to 735 in 1991. Together they accounted for 77.3 percent of the foreign born population increase and 8.1 percent of the total population growth. While some other countries evidenced dramatic growth rates, none of them contributed even 1.0 percent to the total five year population increase (see Appendix Tables B and C).

Inmates born in Cuba exhibited the smallest growth rate among all Hispanic population segments. While the 643 Cuban born inmates represent the third largest group of foreign born Hispanics, their 15.6 growth for five years is less than one quarter the growth rate for all Hispanics in DOCS custody.

MALE POPULATION CHANGE

Table 2 exhibits data about male Hispanics in the under-custody population. These data present information about the male Hispanic's contribution to Department's male population growth from the close of 1986 to the end of 1991. During this period, the total male under custody population increased by 17,191 inmates. This increase represents a five year growth rate of 46.1 percent. During this same period, male Hispanics increased by 6,118 inmates. Thus, Hispanics accounted for 35.6 percent of the total male population increase over the five year study period. They evidenced a growth rate of 57.3 percent which was approximately 38.4 percent faster than males in general. By the close of 1991, Hispanic males had increased their proportion among all males under custody by 2.2 percentage points, from 28.6 percent in 1986 to 30.8 percent in 1991 (see Appendix Table D).

The same year to year pattern of change was observed among males as was found in the total population. The year to year increases among Hispanic males tended to evidence decline by 1988 (see Appendix Table E). Again in 1991, male Hispanics were increasing at a slower rate than were all males in the under custody population (see Appendix Table F). Thus, Hispanic male population growth shows some evidence of having peaked relative to male population growth in general. Nevertheless, over the five year period Hispanic males have been a major contributor to male population growth.

Different components in the Hispanic male population had different impacts upon the male population growth. Native born Hispanic males grew in larger numbers than foreign born Hispanic males, but the foreign born grew at a faster rate. The native born male Hispanics increased by 4,250 inmates. They accounted for 24.7 percent of the total male population's increase. In contrast, foreign born male Hispanics increased by 1,868. They accounted for 10.9 percent of the total male population increment.

Male Hispanics born in New York State increased by 2,958 inmates over the five year period. They contributed 17.2 percent of the total male population growth during the period. Their five year growth rate was 78.5 percent. Male Hispanics born in U.S. Possessions increased by 1,075 inmates. This increase accounted for 6.2 percent of the total male population increase and represented a five year growth rate of 23.7 percent. Again as in 1990, the New York State born inmates were the largest Hispanic population aggregate.

TABLE 2. MALE UNDERCUSTODY POPULATION ON DECEMBER 31st, SHOWING FIVE YEAR CHANGE AND GROWTH RATES FOR THE TOTAL AND SELECTED SEGMENTS OF THE HISPANIC POPULATION*

Total and Selected Segments of the Hispanic Population	Population		Five Year Change		Hispanic Population Increase (Percent)	Five Year Growth Rate (Percent)
	1986	1991	Total Population Increase (Number)	Total Population Increase (Percent)		
Total Population	37,303	54,494	17,191	100.0	---	46.1

Other Countries	13	27	14	0.1	0.3	n.a.

*See Appendix Tables D, E and F for detailed year-to-year data.

Male Hispanics born in Puerto Rico or of Puerto Rican parentage increased by 2,952 inmates. These inmates of Puerto Rican heritage accounted for 17.2 percent of the increase of the total male population and grew at a rate of 36.1 percent over the five year period. This slower growth rate was the result of a slow down in the male Puerto Rican born population's rate of increase. Other native born male Hispanics (neither born in Puerto Rico nor of Puerto Rican parentage) increased by 1,298 inmates. They accounted for 7.5 percent of the total male population increase and grew at a five year rate of 444.5 percent - the fastest growing segment of the male Hispanic population. In the male Hispanic population this segment is becoming an important contributor to growth.

The greatest increase in the number of foreign born male Hispanics occurred among those from the Caribbean. Two countries again predominated the increase. Males from the Dominican Republic increased by 1,191 inmates, and those from Colombia increased by 257 inmates. Thus, these two countries contributed 77.5 percent of the total increase in foreign born male Hispanics over the five year period. No other single country contributed even 1.0 percent to the total male population increase.

FEMALE POPULATION CHANGE

Table 3 displays data about female Hispanics in the undercustody population. These data reveal the impact which female Hispanics had upon the growth of the female population between the close of 1986 and the end of 1991. Over this five year period, the total female population increased by 2,024 inmates. This increase represents a growth rate of 150.6 percent. Over this same period, female Hispanics increased by 811 inmates. Therefore, Hispanics accounted for 40.1 percent of the total female population increase over the five year period. Their five year growth rate was 229.7 percent, which was 52.5 percent faster than females increased in general. Hispanics accounted for 34.6 percent of all females under custody by the close of 1991, having grown from 26.3 percent at the close of 1986. Thus, they had increased their proportional representation by 8.3 percentage points in the undercustody female population (see Appendix Table G).

Comparing native with foreign born female Hispanics reveals differences in their impacts upon the growth of the total female under custody population. The native born increased the most numerically. Their rate of growth was greater than that observed for the foreign born. Between 1986 and 1991, the native born increased by 681 inmates. They accounted for 33.7 percent of the total female population increase and grew at a rate of 249.5 percent. This is a growth rate of 65.7 percent faster than was observed for females in general over the five year period.

In contrast, foreign born female Hispanics grew by 130 inmates, from 80 in 1986 to 210 in 1991. Their increase accounted for 6.4 percent of the total female population increment. While accounting for 16.0 percent of the female Hispanic population expansion, their five year growth rate (162.5 percent) was less than that observed for the native born.

Female Hispanic native New Yorkers increased by 469 inmates. Thus, female Hispanics born in New York State accounted for 23.2 percent of the total female population increment. They had a five year growth rate of 442.5 percent. Female Hispanics born in U.S. Possessions increased by 190 inmates. All but six of these was born in Puerto Rico. These Hispanics accounted for 9.4 percent of the total female population increase. Yet they grew at a slightly lower rate than did all females.

TABLE 3. FEMALE UNDERCUSTODY POPULATION ON DECEMBER 31st, SHOWING FIVE YEAR CHANGE AND GROWTH RATES FOR THE TOTAL AND SELECTED SEGMENTS OF THE HISPANIC POPULATION*

Total and Selected Segments of the Hispanic Population	Population		Five Year Change		Hispanic Population Increase (Percent)	Five Year Growth Rate (Percent)

Other Countries	3	3	0	0.0	0.0	n.a.

*See Appendix Tables G, H and I for detailed year-to-year data.

Female Puerto Ricans by birth or parentage increased by 590. They accounted for 29.2 percent of the total female population increase. Their rate of growth was 254.3 percent over the five year period.

The data on native born female Hispanics are similar to those already observed for male Hispanics. Hispanics born in New York State evidenced higher growth rates and accounted for more of the Hispanic population increase than Hispanics born in U.S. Possessions. The slower growth rate of Hispanics born in U.S. Possessions is the result of the relatively lower presence of those born in Puerto Rico. However, female Hispanics of Puerto Rican birth or parentage accounted for the largest part of the female Hispanic population expansion.

The relatively small numbers of foreign born female Hispanics do not permit analysis of the various regions or countries of birth from which they originate. However, again two countries account for the majority of the foreign born female Hispanics. Females born in the Dominican Republic (50) and Colombia (47) together account for 74.6 percent of the observed 130 increase in foreign born female Hispanics.
