HISTORICAL TRENDS
CALIFORNIA DEPARTMENT OF CORRECTIONS
1970 - 1990

This report presents some basic information about the California Department of Corrections' (CDC) prison and parole system. Historical trend information covering the past twenty years is presented in graphic and tabular form for various offender demographic characteristics and institutional design bed capacity.

Institution Population

Figure/Table 1 show the number of offenders incarcerated in a California state prison, conservation camp, community based facility, or Department of Mental Health hospital. The institution population grew from 25,033 inmates in 1970 to 97,309 inmates in 1990. The inmate population remained under 30,000 inmates from 1970 to 1981. After 1981 the population increased from under 29,000 to over 97,000 inmates in 1990.

Racial/Ethnic Composition

Figure/Table 2 present information on the racial/ethnic composition of the institution population during the 1970 to 1990 time period. White male inmates dropped from 52 percent of the male institution population in 1970 to 29 percent in 1990. Most of this shift in racial composition was related to the large increase in the percentage of Hispanic (Mexican) (16 percent to 30 percent). There were also smaller percentage increases in the Black and Other racial/ethnic groups.

Institution Population by Offense Category

Figure/Table 3 show the change in the percentage of felon inmates incarcerated for violent, property, drug and other offenses. The percentage of inmates incarcerated for violent crimes during 1970 through 1990 decreased from 54 percent to 43 percent for male felons and from 34 percent to 24 percent for female felons. For drug offenses, the percentages increased from 15 percent to 24 percent for male felons and 26 percent to 38 percent for female felons. The percentage of both male and female felons showed little change in admissions for property or other offenses.

New Admissions by Offense Category

Figure/Table 4 show the per capita rate of felon new admissions by offense category. From 1970 to 1990 the per capita rate of felon new admissions increased from 23.4 to 131.0 per 100,000 California population. For male drug offenses the per capita rate increased steadily from 1979, but began to climb sharply each year since 1983. The 1990 male drug offense per capita rate is unique in that the rate is almost level with 1989, yet the five previous years had the highest rate increases ever. The male violent offense per capita rate was fairly constant (at an average of 28.4) from 1985 through 1989, but increased to 32.6 in 1990.

Parole Violators Returned to Prison

Figure/Table 5 present information on the number of parole violators (PV) returned to prison. The number of PVs returned to prison increased from 2,563 to 54,379 during the 1970 to 1990 time period. From 1970 through 1981, the number of PVs remained under 4,000, but increased rapidly to 54,379 during the 1982 to 1990 time period.

Admission/Return Status

Figure/Table 6 indicate the percentage composition of the felon institution population with respect to admission/return status. New admissions, Parole Violators-Returned to Custody (PV-RTCs) and Parole Violators-With New Terms (PV-WNTs) are shown as a percentage of the overall felon population. From 1975 to 1984, male felon new admissions exceeded 75 percent, while the percentage of male PV-RTCs decreased to less than 5 percent during the 1975 to 1982 time period. However, as the new admission percentage decreased to 63 percent in 1990, the PV-RTC percentage increased and reached 14 percent by 1990.

Felon Parole and Civil Narcotic Population

Figure/Table 7 show the growth in the felon parole and civil narcotic addict (CNA) outpatient population from 18,928 in 1970 to 69,771 in 1990. From 1970 through 1982, the population fluctuated from year-to-year. Beginning in 1983, the parole/outpatient population significantly increased and continued to increase. In 1990 alone, the parole/outpatient population increased by almost 11,000 offenders.

Releases to Parole

Figure/Table 8 present information on the total number of felons annually released to parole. Since 1970 the number of annual releases to parole has increased from 8,516 to 82,419 in 1990.

Average Time Served in CDC Institutions

Figure/Table 9 show the change in the average (median) months of time served in CDC institutions by felons first released to parole. For male felons the time served decreased from 36 months to 12 months and for female felons from 18 months to 10 months during the 1970 to 1990 time period. Time served in jail prior to commitment to prison is not included in these calculations.

Design Bed Capacity and Overcrowding

Figure/Table 10 show the change in the design bed capacity of CDC facilities and the institution population from June 30, 1970 to June 30, 1990. From 1970 to 1990, design bed capacity increased from 27,768 to 51,013 while the institution population increased from 27,282 to 91,892. Overcrowding of design beds began in 1981 and continued through 1990. Note: Institution population on this table differs from Figure/Table 1. Fiscal year data were used for Figure/Table 10 because calendar year data (as used in Figure/Table 1) were not available for all years covered in this report.

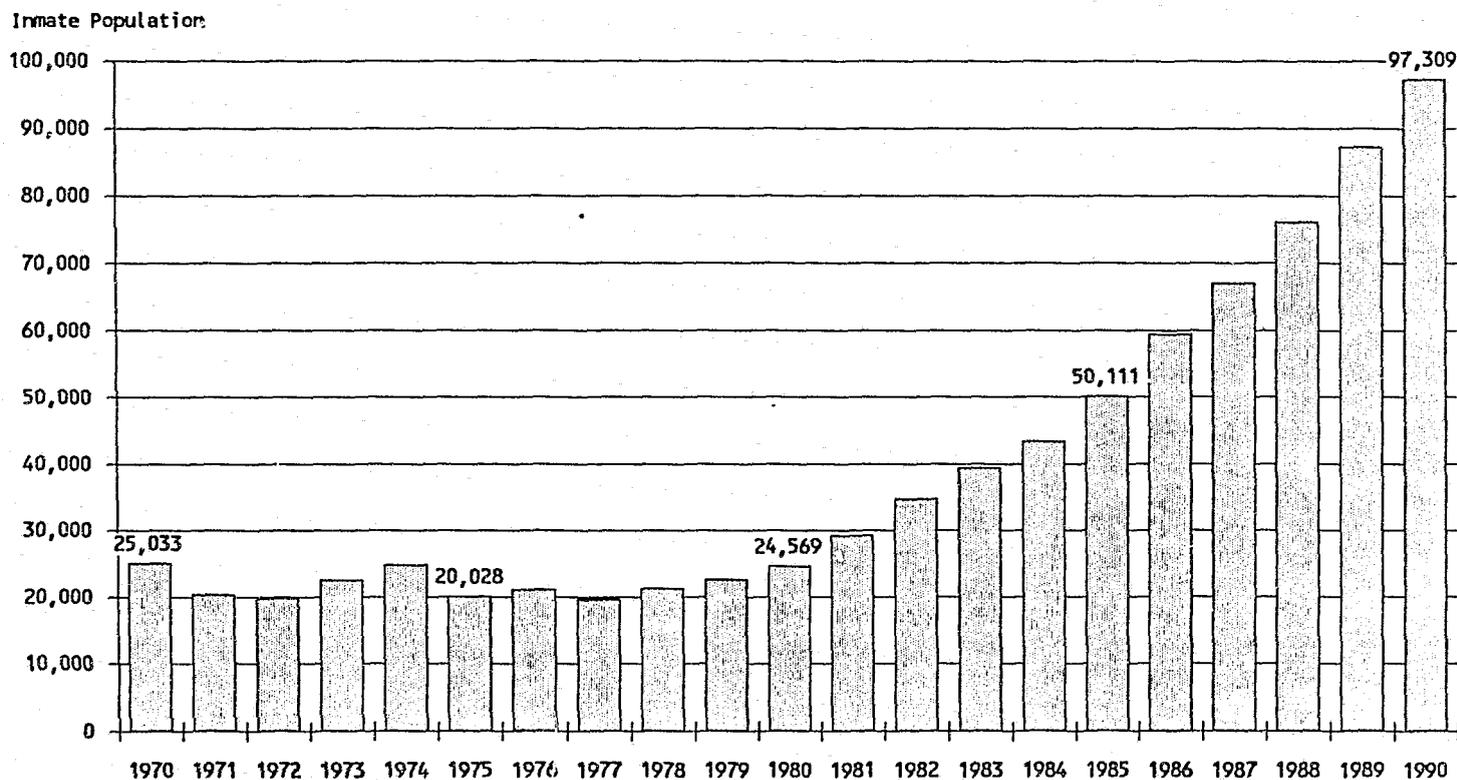

Most of the information for this historical trend report was compiled from California Prisoners and Parolees publications from 1970 to 1989. The 1990 data are based upon recently published or soon-to-be published reports. In summarizing the data, efforts were made to maintain a reasonable consistency between years as various definitions of data elements changed. Some of the information, such as the percentage of PV-RTC and PV-WNT in Table 7 for the years 1970 through 1985, was derived from old computer files. Numbers used in the report may not add due to rounding. The author would like to thank Paula Burbach, Data Analysis Unit, for the previously unpublished data she developed on the new admission offense groups for 1985, and Richard Bass, Data Analysis Unit, for the information and help he provided in determining which tables to develop and in locating other reports which contained additional data.

Any questions about this report should be directed to: Arthur Chung, Research Analyst, Data Analysis Unit, Offender Information Services Branch, P.O. Box 942883, Sacramento, CA 94283-0001; telephone: (916) 324-8805, ATSS 454-8805.
