ACKNOWLEDGMENTS

Effects of Local Sanctions on Serious Criminal Offending has been deposited at the Data Resources Program of the National Institute of Justice, Sociometrics Corporation, for public distribution by Robert Sampson of the Department of Sociology, University of Illinois at Urbana-Champaign. Data collection was funded by the National Institute of Justice under Award No. 86-IJ-CX-0060. Funding for the work done by the Data Resources Program to prepare the data for public use was provided by the U. S. Office of Justice Programs under Contract No. OJP-89-C-008 to Sociometrics Corporation.

Users of the data are strongly urged to inform the Data Resources Program of any errors or discrepancies. They are further urged to bring to the attention of the Data Resources Program all problems and difficulties encountered, particularly those that may prevent effective and convenient use of the data.

All manuscripts based on data made available through the Data Resources Program should acknowledge that fact as well as cite the data set (see suggested citation format, inside front cover). Users of these data are urged to follow some adaptation of the following statement.

The data used in this publication were made available by the Data Resources Program of the National Institute of Justice, Sociometrics Corporation, 170 State Street, Suite 260, Los Altos, CA 94022-2812. The study entitled *Effects of Local Sanctions on Serious Criminal Offending* was conducted by Robert J. Sampson, Department of Sociology, University of Illinois at Urbana-Champaign, 702 S. Wright Street, Urbana, IL 61801. Data collection was funded by the National Institute of Justice (Award No. 86-IJ-CX-0060). Funding support for preparing the revised documentation for public distribution was provided by a contract (OJP-89-C-008) between the U. S. Office of Justice Programs and Sociometrics Corporation. The original investigators, funding agency, and the Data Resources Program are not responsible for the analyses or interpretations presented here.

In order to provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about Data Resources Program participants' research activities, each user of these resources is requested to send a copy of each completed manuscript, thesis abstract, or reprint to the Data Resources Program of the National Institute of Justice, Sociometrics Corporation, 170 State Street, Suite 260, Los Altos, CA 94022-2812.

SUMMARY

This project examined local policies for dealing with crime and the effects such policies had on the arrest rates for serious crimes. Local policies were measured by such indicators as arrest rates for public order offenses (e.g., disorderly conduct and driving under the influence), county jail populations, and numbers of new prison admissions. The serious crimes examined included homicide, rape, robbery, aggravated assault, larceny, and arson. All cities in the United States with populations over 100,000 in 1980 were selected for the study. Aggregate demographic information such as age, race, and sex of offenders was collected, as well as information on family structure, daily jail populations, offense rates for various types of crimes, and numbers of police officers and arrest rates.

The data set can be divided into seven parts based on the source of the information. Parts 1 and 2 contain information from the *National Jail Census*, 1978 and 1983, on jail facilities and the inmates in them. The variables are aggregate county-level statistics for the predominant county associated with each city. Parts 3 and 4 contain information from the *Juvenile Detention and Correctional Facility Census*, 1979 and 1982, on juvenile facilities and the detainees in them. Variables also are aggregate county-level statistics for the predominant county associated with each city. Information in Parts 5 and 6 is from the *Census of Population and Housing*, 1980, and includes variables such as race, age, marital status, household type, military personnel, and income. Variables in Part 5 are measured at the county level and in Part 6 are measured at the city level. Part 7 contains information gathered from unpublished F.B.I. reports on crime rates for males and females by age and race, measured at the city level. The unit of analysis is the city and there are a total of 931 variables.

GENERAL STUDY OVERVIEW

Study Identification

Effects of Local Sanctions on Serious Criminal Offending

Robert J. Sampson

Department of Sociology, University of Illinois at Urbana-Champaign, Urbana, Illinois

Award No. 86-IJ-CX-0060

Key Words

Police aggressiveness, jail incarceration, state prison incarceration, family structure, arrest rates, adult and juvenile criminal offenses, robbery, homicide, economic stratification, family disruption.

Purpose of the Study

This project examined arrest rates for public order offenses, size of county jail populations, and numbers of new prison admissions as they relate to arrest rates for more serious crimes. Researchers asked what kind of and how great are the effects of the risk of local jail incarceration and of police aggressiveness in patrol style (as indicated by arrest rates for public order offenses) on rates of violent offending. Specific hypotheses designed to be tested with the data include:

1. A high risk of jail incarceration has a negative effect on robbery rates.
2. Proactive policing (where police have higher arrest rates for public order offenses) has a negative effect on robbery rates.
3. A high risk of imprisonment statewide has a negative effect on the rate of juvenile robbery offending.
4. A high percentage of married-couple families has a negative effect on juvenile offending rates.
5. A high divorce rate has a positive effect on adult offending rates.
6. Economic variables such as high racial income inequality, and poverty, are related to high rates of robbery and homicide.

Methods

Study Design

This is a cross-sectional study of the largest cities in the United States as of 1980. The study draws on a variety of published sources of social, demographic, and criminal justice data that characterize the cities and their counties in the period of years just before and after 1980. All data in this study are aggregate data that refer to population characteristics and arrest and incarceration rates of cities and counties.

Sources of Information

This research used official government records for 171 cities in the United States with 1980 populations greater than 100,000. Records included Bureau of Justice Statistics from the *Juvenile Detention and Correctional Facility Census, 1979*,¹ the *Juvenile Detention and Correctional Facility Census, 1982*,² the *National Jail Census, 1978*,³ the *National Jail Census, 1983*,⁴ and the *Census of Population and Housing, 1980, (U.S.), Summary Tape Files 1 and 3*.⁵ Unpublished F.B.I. records from 1980 to 1982 on crime rates were also used.

Sample

Data were collected from seven individual data sources on characteristics of the 171 largest cities in the United States having populations over 100,000. Variables from the *Juvenile Detention and Correctional Facility Census* and the *National Jail Census* were aggregated by the investigator to the county level. Each city was assigned county-level data corresponding to the county in which it is located. For example, information on jails was aggregated to the county level from the jails located within that county. Data from only one county were assigned to each city. In some cases two or more cities were assigned the same county data. There is one exception to this method—New York City. The county measures for the five counties that comprise New York City were aggregated to one “county” measure.

Variables from the *Census of Population and Housing* were already measured at the county or census place (city) level and did not need to be aggregated.

Because researchers were concerned about possible annual variations in the reporting and recording of offense data gathered from F.B.I. records, variables were constructed from accounts for 1980 to 1982. Three year average arrest rates per 100,000 were computed from these data.

Response Rates

Because the city is the unit of analysis and because at least some data were available for each of the 171 cities in the study, the response rate is 100%. However, for many variables, data were available for only a small number of cities. (See the section: Data Completeness and Consistency Report, p. 9.)

⁴ *National Jail Census, 1983*, (ICPSR 8203), U.S. Department of Justice, Bureau of Justice Statistics, First ICPSR Edition, Winter 1984.

⁵ *Census of Population and Housing, 1980 (United States): Summary Tape File 1*, (ICPSR 8091) U.S. Department of Commerce, Bureau of the Census, First ICPSR Printing, 1982 and *Census of Population and Housing, 1980 (United States): Summary Tape File 3*, (ICPSR 8038) U.S. Department of Commerce, Bureau of the Census, First ICPSR Edition, 1982.

Dates of Data Collection

The data were collected from January 6, 1987, to July 6, 1988, from records covering the period from 1978 to 1983.

Summary of Contents

Description of Variables

Data were collected from seven sources for each case. *The Census of Population and Housing, File 1*, provided county-level data on numbers of persons by race, age, age by race; numbers of persons in households, and types of household within each county. *The Census of Population and Housing, File 3*, measured at the city level provided data on total population, race, age, marital status by sex, persons in household, numbers of households, housing, children and families above and below the poverty level by race, employment by race, and income by race within each city.

The F.B.I. 1980 data provided variables on total offenses and offense rates per 100,000 persons for homicides, rapes, robbery, aggravated assault, burglary, larceny, motor vehicle offenses, and arson. The F.B.I. 1980-1982 data, averaged, per 100,000, provided variables for the above offenses by sex, age, and race, and Uniform Crime Report arrest rates for index (serious) crimes within each city.

The *National Jail Census* for 1978 and 1973, aggregated to the county level, provided variables on jail capacity; numbers of inmates being held by sex, race, and status of inmate's case (awaiting trial, awaiting sentence, serving sentence, and technical violations); average daily jail populations; numbers of staff by full time and part time; numbers of volunteers; and numbers of correctional officers.

The Juvenile Detention and Correctional Facility Census for 1979 and 1982, aggregated to the county level, provided data on numbers of adults and juveniles held in juvenile institutions by sex and race; average length of stay by sex; numbers being held by type of crime and sex; age of juvenile offenders by sex; average daily prison population; and payroll and other expenditures for the institutions.

Presence of Common Scales

None.

Unit of Analysis

The unit of analysis is the city with a 1980 population greater than 100,000 people.

Geographic Coverage

Data were collected on all of the 171 largest cities in the United States in 1980. The data themselves pertain to various years ranging from 1978 to 1983.

Evaluation

Data Quality

Checks for out-of-range values were not conducted. All values with the exception of the city/state code (variable CITCODE), had a possible range from zero through the total population of the county. There were only two variables (T92#1 and T92#2) with a value exceeding that range. Additional consistency checks

indicate that there are very few problems in this data set and that those problems are specific to the data source.

Data Limitations

The data file contains blanks, or system-missing values, to indicate missing information as well as questions which do not apply to a case. This is especially the case for variables drawn from the Juvenile Detention and National Jail Censuses. Therefore, for many variables it is not possible to distinguish between truly missing and inapplicable responses without cross-tabulating these variables with related indicator variables. The original investigator points out that to make the distinction between "missing" and "not applicable" requires the application of rules driven by the user's own substantive and analytic questions. Therefore, he strongly urges users "to consult original sources to make meaningful interpretations of the raw data." (See Footnotes 1-5 on p. 3 for a complete list of references.) The large number of variables with a large number of cases with system-missing values should be noted: 372 variables with over 5% missing values.

SPECIFICATIONS FOR MACHINE-READABLE FILES

Available Formats

Machine-readable Archive files are available in both mainframe and microcomputer formats. Unless otherwise requested, files formatted for a mainframe computer are provided on a 9-track tape at a density of 6250 bpi, in EBCDIC recording mode with IBM Standard Labels. Files formatted for a microcomputer are provided in ASCII format on low- or high-density, 5½" or 3½" diskettes, at the user's request.

File Structure

Data File (1): JU.30
Unit: Cities in the United States with populations over 100,000.
Variables: 931
Cases: 171

Mainframe Orders

	Contents	LRECL	BLKSIZE	Feet of tape at 6250 bpi
File 1	ASCII Data File	80	32720	13.7

Microcomputer Orders

Low-Density 5½" Diskettes

	Contents	Diskette	File Name	Bytes
File 1	ASCII Data File, Compressed	1	JU30L501.EXE	217,938
		2	JU30L502.EXE	217,495

The data file is compressed; when uncompressed the data file requires 872,613 bytes of memory. While the file is compressed, it is too large to fit on a single diskette, and so has been split into 2 parts. Before you concatenate the parts of the file, you must "explode" them. To explode the partial files, copy them to your hard disk and then type the file name of each partial file without typing the extension, ".EXE". File JU30L501.EXE explodes to JU30L501.DAT, and JU30L502.EXE explodes to JU30L502.DAT. When the files have been exploded, erase the compressed files by typing:

DEL *.EXE

To concatenate the 2 parts of the data file into one file on your hard disk, type:

COPY JU30L501.DAT + JU30L502.DAT JU30W.DAT

When you concatenate the "exploded" files you need twice the memory because both the concatenated file and its component parts will remain on the hard disk. *You must therefore have 1,745,226 bytes of memory available to concatenate the data file.*

To delete the partial files, type:

DEL JU30L50?.DAT

All Other Microcomputer Media (High-Density 5½" Diskettes, Low- or High-Density 3½" Diskettes)

	Contents	Diskette	File Name	Bytes
File 1	ASCII Data File, Compressed	1	JU30W.EXE	418,912

The data file is compressed; when uncompressed the data file requires 872,613 bytes of memory. To explode the file, copy it to your hard disk and then type the file name of without typing the extension, ".EXE". File JU30W.EXE explodes to JU30W.DAT. When the file has been exploded, erase the compressed file by typing:

DEL *.EXE

DATA COMPLETENESS AND CONSISTENCY REPORT

This section presents information regarding the quality of the data in this Data Set. Tables 1 and 2 summarize the incidence of missing data. Table 3 provides information regarding the adherence to the skip pattern of the questionnaire and consistency of the data as reflected in the logical relations between particular items. The checks in Table 3 are meant to be illustrative, and are not necessarily exhaustive. Tables for out-of-range values are not included. With one exception, all values had a possible range from zero through the total population of the county. Two variables (T92#1 and T92#2) exceeded that range and were determined by the original investigator to be in error. Therefore, these two variables should be ignored.

Number of Cases: 171
 Number of Variables: 931

Table 1. Distribution of Variables by Percentage of Missing Values

Percentage of Cases With Missing Values	Corresponding Number of Cases	Number of Variables	Percentage of Variables
0%	0	308	33.1%
> 0% to 1%	1	0	0.0%
> 1% to 3%	2 to 5	201	21.6%
> 3% to 5%	6 to 8	50	5.4%
> 5% to 10%	9 to 17	51	5.5%
> 10% to 20%	18 to 34	24	2.6%
> 20% to 40%	35 to 68	61	6.6%
> 40% to 100%	69 to 171	236	25.3%
Total		931	100.0%

Note: The large number of variables with missing values is due in large part to variables where "not applicable" and "missing" were given the same code and could not be differentiated by a rule independent of substantive or analytic questions. For the purposes of Tables 1 and 2, these codes are considered as designating missing data. (See the section, Data Limitations, p. 5, for a more complete discussion of this problem.)

Table 2. List of Variables With Over 5% Missing Values (9 Missing Values or More)

Variables with over 5% missing values (372 variables) are too numerous to list. (See the *Note*, above.) Of those variables, 68% were gathered from the *Juvenile Detention and Correctional Facility Census*, 24% were gathered from the *National Jail Census*, and 8% were gathered from unpublished F.B.I. data.

Table 3. Report on Consistency Checks

Comparisons Examined	Number of Cases Passing Consistency Check	Number of Cases Failing Consistency Check	Number of Cases Not Applicable
Relational Edit Checks			
1. T14#1 "Total persons of Spanish origin" <i>compared with</i> The sum of T14#2, T14#3, T14#4, and T14#5	171	0	0
<i>Note.</i> To pass this consistency check, the number of persons of Spanish origin reported (T14#1) should equal the sum of persons of Spanish origin within the racial categories: White (T14#2), Black (T14#3), American Indian, Eskimo (T14#4), and other (T14#5).			
2. The sum of persons by age ST12#1, ST12#2, ST12#3, and ST12#4 <i>compared with</i> The sum of persons by race ST7#1, ST7#2, ST7#3, ST7#4, ST7#5, ST7#6, ST7#7, ST7#8, ST7#9, ST7#10, ST7#11, ST7#12, ST7#13, ST7#14, and ST7#15	171	0	0
<i>Note.</i> To pass this consistency check, the sum of the number of persons under age 5 (ST12#1), ages 5-17 (ST12#2), ages 18-64 (ST12#3) and age 65+ (ST12#4) should equal the sum of persons within the racial categories: White (ST7#1), Black (ST7#2), American Indian (ST7#3), Eskimo (ST7#4), Aleut (ST7#5), Japanese (ST7#6), Chinese (ST7#7), Filipino (ST7#8), Korean (ST7#9), Asian Indian (ST7#10), Vietnamese (St7#11), Hawaiian (ST7#12), Guamanian ST7#13), Samoan (ST7#14), and other (ST7#15).			
3. STOADP83 "Average daily population for 1983" <i>compared with</i> The sum of SAMADP83, SAFADP83, SJMADP83, and SJFADP83	22	0	149
<i>Note.</i> To pass this consistency check, the average daily jail population for 1983 (STOADP83) should equal the sum of average daily populations for: adult males (SAMADP83), adult females (SSAFADP83), juvenile males (SJMADP83), and juvenile females (SJFADP83).			
9			

Comparisons Examined	Number of Cases Passing Consistency Check	Number of Cases Failing Consistency Check	Number of Cases Not Applicable
4. STOVIO78 "Total technical violators" <i>compared with</i> The sum of SAMVIO78 and SAFVIO78	45	0	126
5. M1C1AVG "Average murder rate for males ages 15-17" <i>compared with</i> The mean of A2C1MA, A3C1MA, and A4C1MA	140	26	5

Note. To pass this consistency check, the number of technical violators (STOVIO78) should equal the sum of technical violators by sex: males (SAMVIO78) and females (SAFVIO78).

5. M1C1AVG "Average murder rate for males ages 15-17"
compared with
The mean of A2C1MA, A3C1MA, and A4C1MA

Note. The "average murder rate for males ages 15-17" (M1C1AVG) was compared with the average of the three murder rate categories: average 15 year old murder rate (A2C1MA), average 16 year old murder rate (A3C1MA), and average 17 year old murder rate (A4C1MA) was calculated. These two averages should be close, although not necessarily equal (due to variations in the sizes of the populations ages 15, 16, and 17). To pass this consistency check, the percentages being compared should not differ by more than 5%.

OVERVIEW

The following dataset, hereafter referred to as the "171 City File", contains variables generated from seven individual datasets including measures extracted from F.B.I. data for the 171 cities in the United States with 1980 populations greater than 100,000. These datasets include: 1) National Jail Census, 1978; 2) National Jail Census, 1983; 3) Juvenile Detention and Correctional Facility Census, 1979; 4) Juvenile Detention and Correctional Facility Census, 1982; 5) County and City Data Book, 1983; 6) Census of Population and Housing, 1980 (U.S.), Summary Tape File 1C; and, 7) Census of Population and Housing, 1980 (U.S.), Summary Tape File 3C.

The unit of analysis for the "171 City File" is the city - the largest 171 cities in the United States (see attached Appendix for a complete listing of cities). From each of the above datasets, variables were either originally measured at the county (or census place) level (datasets 5, 6, and 7), or were aggregated to the county level (datasets 1 through 4). These county level variables were then spread to the 171 cities. With the exception of New York City, each city has corresponding county-level data for only one county. Where city boundaries include more than one county, the predominant geographic county was chosen. For New York City, which includes five counties, it was necessary to aggregate the county census measures. Each case (i.e., city) then, has corresponding county-level census measures (from datasets 5 and 6), census place-level measures (from dataset 7), and aggregated county-level correctional facility measures (from datasets 1 through 4).

The following documentation is organized according to the original source dataset. Each unlabelled variable in the "171 City File" is presented below along with a brief description and details about the source variable and related aggregate functions where applicable. Users are directed to the original codebooks for additional details about source variables.

Labelled variables are described in the data dictionary (included in the SPSSX systems file) and were taken from F.B.I. data. The following variables are from the 1980 UCR reported offense data; murder, rape, robbery, aggass, burglary, larceny, mvthef, arson, homrate, raperate, robrate, agassrat, burgrate, larcrate, mvrate, and arsonrat. Variables mlclavg through spc16a are 1980-1982 average arrest rates per 100,000. These latter variables are constructed from FBI arrest counts for 1980 to 1982 and 1980 census data by city. Note that these are raw rates and have not been adjusted for city-level variations in arrest probability and age distribution of elderly and young children.

The variables in the section below were aggregated to the county level. Source variables were taken from the 1979 Juvenile Detention and Correctional Facility Census, 1979. For additional information, see Juvenile Detention and Correctional Facility Census, 1979, (ICPSR 7846), Bureau of Justice Statistics, Third ICPSR Edition, 1984.

 [Note: The variables in this section marked with an asterisk are not available on the
 archived data file.]
 The variables in the section below are derived from the 1980 Census of
 Population and Housing, Summary Tape File 1C. Variables are measured
 at the county-level (SUMRYLVL=11). For more details see Census of
Population and Housing, 1980 (United States): Summary Tape File 1,
 (ICPSR 8091) U.S. Department of Commerce, Bureau of the Census, First
 ICPSR Printing, 1982.
