INTRODUCTION

This report provides statistical information on criminal offences which occurred in NSW in the years 1991, 1992 and 1993. The offences included are all those which were reported to police and which had been recorded on the NSW Police Service computer system by March 1994.

As with earlier recorded crime statistics reports, the production of this report was greatly assisted by officers within the NSW Police Service. Particular thanks are due to officers of the Information Technology Branch and officers of the Statistical Services Section, Quality and Review Branch.

Many officers within the Bureau also played an important part in the production of the report. In particular, these include Theo Groenestein (programming and table production) and Les Kery (desktop publishing).

DEFINITIONS AND EXPLANATORY NOTES

The statistics in this report were prepared from data supplied by the NSW Police Service. The data were extracted from the NSW Police Service Crime Information and Intelligence System (CIIS) in March 1994.

COUNTING UNITS

NUMBER OF OFFENCES RECORDED

The number of offences recorded *as having occurred in the counting period* is the primary counting unit. Where more than one offence was recorded from a single criminal incident, each offence is counted separately. For example, if in the course of robbing a bank a person also assaults a bank customer, two separate offences are counted, one of robbery and one of assault.

In this report a recorded offence is defined as an offence which is:

- (1) detected by or reported to the police, and
- (2) recorded on the CIIS.

The recorded offence statistics in this report include breaches against the following Acts:

- Bail Act
- Crimes Act
- Firearms Act
- Gaming and Betting Act
- Liquor Act
- Summary Offences Act
- Drug Misuse and Trafficking Act.

Note, however, that the classification of offences used by the police does not correspond exactly with offences defined in legislation. It is the police classification which is followed in this report.

Number of offences cleared

A cleared offence is one which has, in the view of police, been satisfactorily cleared by charge or otherwise.

An offence is cleared by charge when police have laid a charge or an information against at least one person. The information may have been laid with a view to the issuing of a warrant, summons or other process for the purpose of bringing an offender before the court.

An offence is cleared other than by charge when, under normal circumstances, a charge or information would have been laid against at least one person, but, for a variety of reasons, police have been unable to make an arrest, despite knowing the identity of the offender and having sufficient evidence to support a charge. Examples of situations in which an offence may be cleared other than by charge include the following:

- (1) the offender is a juvenile and is cautioned;
- (2) the offender has died before a charge is made or information laid;

- (3) the offender has been committed to a psychiatric institution and is unlikely to be released;
- (4) there is an obstacle to charging e.g. diplomatic immunity;
- (5) the complainant or essential witness is dead and proceedings would be aborted;
- (6) the offender is serving a sentence and no useful purpose would be served by prosecution.

Cleared offences are counted in the report if the offence was cleared within the counting period. An offence which has been cleared within the counting period may not have been recorded as an offence within the same counting period. Because it may take some time for the police to identify and charge an individual for an offence, it is possible for an offence which was cleared in the counting period to have occurred prior to the counting period. For this reason, cleared offences have been separated into two categories as follows:

- (1) number of offences cleared in the counting period that occurred in the counting period,
- (2) number of offences cleared in the counting period that occurred prior to the counting period.

The separation of these measures allows comparison of the speed with which police are able to clear different types of offence.

Single year clear-up percentage

The single year clear-up percentage relates to a particular counting period. It indicates the number of offences which both occurred and were cleared in the counting period as a percentage of the total number of offences which occurred in the counting period. This provides a measure of police response for different types of offence.

In previous reports published by the NSW Police Service, clear-up rates were calculated by taking the number of offences cleared in the counting period (regardless of when they occurred) as a percentage of the number of offences that occurred in the counting period.

COUNTING PERIOD

A counting period is a full calendar year. This report includes information for three counting periods: 1991, 1992 and 1993. To be counted, an offence must have occurred within the counting period, i.e. the date of commencement of the offence must be on or prior to the last day of the counting period. All offences include both a date of commencement and a date of completion. This is because some offences, such as incest, may occur over an extended period of time. The date of commencement of the offence is used to determine the relevant counting period for an offence. Note, however, that in a large number of cases, the date of commencement of the offence is missing in the data provided from the CIIS. In these cases, the following dates are used to determine whether the offence is to be counted in a particular counting period:

- (1) the date of the end of the offence;
- (2) the date on which the offence was reported;
- (3) the date on which the offence was cleared;
- (4) the date on which the offence was entered as a computer record to the CIIS;
- (5) the date on which the computer record was updated on the CIIS.

The first date which exists for the offence according to the priority order shown above is used to determine the counting period in which the offence is counted.

This procedure ensures that all offences are counted. However, using this procedure, it is possible that a small number of offences may be assigned to an incorrect counting period (i.e. an offence may be assigned to a period other than the one in which the offence occurred).

REGIONAL STATISTICS

Statistics are provided on the number of offences recorded in each of the Statistical Divisions of NSW as defined by the Australian Bureau of Statistics. Within the Sydney Statistical Division, statistics are provided for Statistical Subdivisions. Appendix 1 provides maps indicating the location of each Statistical Division and Sydney Statistical Subdivision. Appendix 2 lists the Local Government Areas within each of the Statistical Divisions and Statistical Subdivisions. An offence is counted within a particular region when the location of the offence falls within that region.

Rates of recorded offences per 100,000 population are provided for each of the regions, and for NSW. For the rate calculations, population data were obtained from the Australian Bureau of Statistics publication, *Estimated Resident Population of Statistical Local Areas New South Wales, At 30 June, 1991 Final and 1992 Preliminary* (Catalogue No. 3210.1) for 1991 and 1992. (This publication gives estimates based on the 1991 census. Some regional population estimates, notably for the Far West Statistical Division, have changed substantially from estimates used last year.) As no population estimates were available for 1993, the 1992 population data were used for calculating 1993 recorded offence rates.

OFFENCE CLASSIFICATIONS

Appendix 3 provides a list of offences which appear within each major offence category. Comparison with a similar list contained in previous reports allows the changes in classification to be identified.

UPDATED STATISTICS

Offences are recorded on the CIIS according to the date on which they occurred. Offences which occur within a specified counting period, but which are reported to police in a subsequent period, are entered to the CIIS after the close of the counting period. For this reason, data extracted from the CIIS immediately after a counting period has ended underestimate the total number of recorded offences for that counting period. The level of recorded crime for a specified period will vary over time as more offences are added to the totals. Offence clear-ups are even more subject to this updating effect as the police may take some time to find and charge an offender.

For the majority of the major offence groups, over 98% of all recorded offences relevant to a specified counting period have been entered to the CIIS by the end of the following quarter. With the exception of fraud, as noted below, over 90% of all recorded offences have been entered within three months of the end of the counting period.

As a result, with the exception of fraud, data extracted from the CIIS three months after the end of the relevant counting period are minimally affected by delays in reporting and recording. Hence data for this report were extracted in March 1994, three months after the end of the 1993 counting period.

Fraud

There are long delays in the recording of fraud offences. Only 65% of the recorded fraud offences which occur in a counting period have been entered on the CIIS three months after the end of the counting period. Six months after the end of the counting period this percentage has risen to almost 85%. However, this means that even after six months, there are still over 15% of offences relevant to the counting period which have not been recorded on the CIIS.

Data for fraud offences in 1993, as extracted from the NSW Police Service computer in March 1994, have been included in this report. However, it should be noted that the recorded fraud offences for 1993, reported here, underestimate the total number of recorded offences for 1993.

For this reason, fraud data for 1993 are not directly comparable with the data for 1991 and 1992. A note has been included on every table to warn the reader that the final year's data for fraud are not reliable.

ORGANISATION OF THE REPORT

The report is organised into five main sections as follows. First there is an overview of major trends in recorded offences over the three year period from January 1991 to December 1993. Figures showing trends in selected offences are provided as well as an analysis indicating which trends are statistically significant.

The second section presents the monthly trends in recorded offences for 1991, 1992 and 1993, for selected major offence categories. The tables in this section provide the data on which the figures in the first section are based.

The next section provides the numbers of cleared offences in each offence classification for 1991, 1992 and 1993, for the State as a whole. Cleared offences are split into two groups: those that occurred in the same year and those that occurred earlier. The tables also present a single year clear-up percentage. This percentage is the number of offences, which both occurred and were cleared in the specified year, as a percentage of the total number of offences that occurred in that year.

In the fourth section there are 19 tables, one for each major offence category. Each table gives the numbers of recorded offences in 1991, 1992 and 1993 for each of the NSW Statistical Divisions and for each Statistical Subdivision in Sydney. Rates per 100,000 population for each region and for the State as a whole are also shown.

The last section of the report has 27 tables, each table being for a specific region of NSW. The tables provide numbers and rates of recorded offences for 1991, 1992 and for 1993, for all offence classifications.

OVERVIEW OF MAJOR TRENDS

OVERVIEW OF MAJOR TRENDS

TRENDS IN RECORDED CRIME

However they are presented, the interpretation of trends in recorded crime is a difficult task. For example, the results from crime victim surveys conducted in NSW in 1983 and 1990 clearly illustrate the extent to which trends in recorded rates of various offences are affected by public willingness to report crime to police.¹ The surveys revealed that the true level of assault remained essentially unchanged between 1983 and 1990, despite the fact that the number of assaults recorded by police over this period rose from a little over 8,000 to nearly 30,000.² We now know that this increase was in a large measure due to increased public willingness to report assault to the police.³ Public willingness to report crime, however, is just one of the extraneous factors which can affect trends in recorded offences. Shifts in policing policy, to take another example, can have a very marked effect on the number of recorded drug offences or the number of cases of offensive behaviour.

The interpretation of trends in official reports of crime can be considerably more difficult than the interpretation of trends in unemployment or inflation statistics. The ease with which recorded crime statistics can be misunderstood creates a temptation to offer an authoritative explanation for each and every major crime trend. Unfortunately in many instances it is simply impossible to state with any assurance why a particular trend has appeared. This report therefore confines itself to identifying trends in recorded offences rather than explaining them. Where the relationship between the actual occurrence of some offence and the recorded occurrence of the offence is unproblematic this is indicated. Where previous research indicates that a trend in recorded offences is probably influenced by factors other than the crime rate this is also highlighted.

The trends examined in this overview cover a three year period. For the offences of robbery, breaking and entering, and stealing, the trends have been examined for some subcategories of the offence. Trends in robbery offences have been separately examined for robbery with a firearm, robbery with a weapon other than a firearm, and robbery without a weapon. Trends in breaking and entering offences have been separately examined for dwellings and non-dwellings. Similarly, trends have been separately examined for two subcategories of stealing offences: stealing from the person and stealing from a shop or business.

For all offences except fraud⁴ a statistical test for trend was applied to the monthly numbers of recorded offences in each major offence category, over the 36 month period from January 1991 to December 1993.⁵ For those offences where a statistically significant trend was found, the percentage change between 1991 and 1993, in the annual total of recorded offences, is used as an indicator of the extent of the trend.

SIGNIFICANT DOWNWARD TRENDS

In the following discussion the bracketed figures denote the percentage change in the annual number of recorded offences between 1991 and 1993, except for fraud.

There were statistically significant downward trends across the State for the following offence categories:

- robbery with a firearm (down by 30.7%)
- fraud (down by 31.7% in 1992/93 compared with 1991)

- motor vehicle theft (down by 19.3%)
- arson (down by 18.5%)
- offensive behaviour (down by 16.4%).

Robbery

Figure 1 shows the numbers of recorded robbery offences for each month from January 1991 to December 1993. There was no statistically significant upward or downward trend over the three year period to December 1993. However, there was a statistically significant downward trend in robbery with a firearm. This trend is shown in Figure 2, together with the trends in robbery with a weapon not a firearm, and robbery without a weapon. Of the three, robbery with a firearm is the only significant trend. Between 1991 and 1993 there was a 30.7% decrease in the numbers of recorded offences for robbery with a firearm. This is likely to reflect a real decrease in robbery with a firearm as recorded offence trends provide a reasonably good guide to actual trends for this offence.

The Australian Bureau of Statistics estimated that 1.3% of the NSW population aged 15 and over were victims of robbery in the twelve month period ending April 1993.⁶

Table 3.4 reveals that recorded rates of robbery offences in 1993 remained highest in the Inner Sydney Subdivision (722.1 per 100,000 population), more than seven times higher than the State rate (99.5 per 100,000 population), and more than four times higher than rates in any

other Statistical Division or Subdivision. Other areas of the State with high recorded robbery rates include the Sydney Subdivisions of Central Western Sydney (168.2 per 100,000 population), Inner Western Sydney (165.3 per 100,000 population) and Fairfield – Liverpool (164.4 per 100,000 population).

Fraud

Fraud is an offence for which the recorded rate is strongly influenced by variations in both police ability to detect and public willingness to report fraud offences. As noted in the Explanatory Notes, there is often a considerable delay in recording fraud offences. It is estimated that the number of recorded fraud offences for 1993, as reported in this report, constitutes only about 65% of all fraud offences which will eventually be recorded for 1993. For this reason it is not appropriate to examine the trend in all fraud offences over the three year time period from January 1991 to December 1993. The test for trend included only the period from January 1991 to June 1993.

Figure 3 shows recorded fraud offences for each month from January 1991 to December 1993. There is a significant downward trend in these offences over the period January 1991 to June 1993. Between 1991 and the twelve months ending June 1993, there was a 31.7% decrease in recorded fraud offences. Even though data for the last six months (July 1993 to December 1993) were not included in the trend test (due to the reporting lag for this offence) we cannot discount the possibility that the downward trend results from the reporting lag.

Inspection of Table 3.6 reveals that in each of the three years of the time period examined, recorded fraud offences in the Sydney Statistical Division accounted for around three-quarters or more of all recorded fraud offences in NSW. The Inner Sydney Subdivision has the highest recorded fraud rate. In 1993 the recorded rate of fraud offences was five and a half times higher in the Inner Sydney Subdivision than it was for the State as a whole. Other areas with high recorded offence rates include the Eastern Suburbs and Lower Northern Sydney Subdivisions.

Figure 3: Fraud**Motor vehicle theft**

Because 96% of motor vehicle thefts are reported to police,⁷ recorded rates of motor vehicle theft are generally good indices of the actual incidence of the offence. Figure 4 shows the numbers of motor vehicle theft offences for each of the 36 months from January 1991 to

Figure 4: Motor vehicle theft

December 1993. There is a significant downward trend over this period. Recorded offences in 1993 decreased by 19.3% compared with 1991.

As can be seen in Table 3.8, between 1991 and 1993 there were decreases in the numbers of recorded motor vehicle theft offences in all regions of the State except the Richmond – Tweed and North Western Statistical Divisions. Within the Sydney Statistical Division the largest decreases between 1991 and 1993 occurred in the Statistical Subdivisions of Northern Beaches (down by 41.5%) and Blacktown – Baulkham Hills (down by 32.3%). Outside Sydney the largest decreases were in the Murray (down by 45.1%) and South Eastern (down by 26.9%) Statistical Divisions.

Arson

Figure 5 shows the numbers of recorded arson offences for each of the 36 months from January 1991 to December 1993. There is a significant downward trend over this period. Recorded arson offences in 1993 decreased by 18.5% compared with 1991. Table 3.10 shows that there were decreases in most regions although recorded arson offences increased in six regions, notably Central Western Sydney and Lower Northern Sydney which increased by 28.2% and 28.0% respectively. The biggest decrease occurred in Outer Western Sydney where recorded arson offences in 1993 were 43.3% lower than in 1991. There was also a 40.0% decrease in Northern Beaches. Blacktown – Baulkham Hills (77.9 per 100,000 population) and Outer Western Sydney (72.5 per 100,000 population) had the highest rates for recorded arson offences in 1993.

Offensive behaviour

Figure 6 shows the downward trend in the numbers of recorded offensive behaviour offences. This trend may reflect a change in the exercise of police discretion, rather than a real change in the level of offensive behaviour in the community.

Table 3.19 shows that between 1991 and 1993 the largest decrease in the annual number of recorded offences, outside Sydney, occurred in the Hunter Statistical Division (down by 31.7%). The Far West Statistical Division had the highest recorded offence rate in 1993 with 792.2 offences per 100,000 population, more than four times the overall State rate of 184.1 offences per 100,000 population.

Recorded offences decreased in most regions between the period 1991 and 1993. There were increases in five regions of which two were notable: an increase of 38.4% in the Inner Western Sydney Statistical Subdivision and an increase of 18.0% in the Central West Statistical Division.

OFFENCES WHERE THERE WAS NO UPWARD OR DOWNWARD TREND

There was no statistically significant generally upward or downward trend in any of the following offence categories:

- murder
- sexual assault
- breaking and entering
- receiving, goods in custody
- possession and/or use of cocaine
- possession and/or use of narcotics
- possession and/or use of cannabis
- dealing, trafficking in cocaine
- dealing, trafficking in narcotics
- dealing, trafficking in cannabis
- cultivating cannabis.

The numbers of offences recorded for each month from January 1991 to December 1993 are shown in Figures 7 to 18. There are several observations, however, which are pertinent to an understanding of these offences.

Murder

Figure 7 shows recorded murder offences for each month from January 1991 to December 1993. It is clear that, with such small numbers of offences, the month to month variation is extremely marked. For this reason it is difficult to detect trends over a period as short as three years. Past research by the Bureau, however, suggests that the incidence of this offence in NSW has been stable for at least two decades.

Table 3.1 shows the regional distribution of the offences. Because of the small numbers, it is not sensible to make regional comparisons. A Bureau report published in 1992 examined the regional distribution of domestic and other types of homicide using data aggregated over a number of years.⁸

Sexual assault

Recorded sexual assault offences over the three year period from January 1991 to December 1993 are shown in Figure 8.

Inspection of Table 3.3 reveals that, in 1993, the Outer South Western Sydney Subdivision had the highest rate of recorded sexual assault offences (192.0 per 100,000 population), more than double the overall rate of 75.7 for the State.

The Australian Bureau of Statistics estimated that 0.8% of the NSW population of women aged 18 and over were victims of sexual assault in the twelve month period ending April 1993.⁹

Figure 8: Sexual assault

Breaking and entering

Breaking and entering is one of the most frequently occurring serious offences. In the twelve months to April 1993, 3.7% of NSW households were victims of this offence and a further 2.6% of NSW households were victims of an attempted breaking and entering.¹⁰ Breaking and entering is also an offence where the trends in recorded offences provide a reasonably good guide to the actual trends in the offence.

Figure 9: Breaking and entering

Figure 9 shows the numbers of recorded breaking and entering offences for each month from January 1991 to December 1993. Figure 10 shows, separately, over the same period, recorded offences for breaking and entering – dwelling, and breaking and entering – non-dwelling. There were no statistically significant upward or downward trends in either of these sub-groups of breaking and entering.

Table 3.5 shows that the recorded rate of breaking and entering in 1993 was more than one and a half times as high in the Inner Sydney Statistical Subdivision (3445.8 per 100,000 population) as it was in the region with the next highest rate, the Inner Western Sydney Subdivision (2014.4 per 100,000 population). Recorded offence rates were also high in the Sydney Subdivisions of Lower Northern Sydney (1918.5 per 100,000 population), Eastern Suburbs (1914.5 per 100,000 population) and Central Western Sydney (1912.5 per 100,000 population), and in the Far West Statistical Division (1886.3 per 100,000 population).

Receiving, goods in custody

Receiving and goods in custody are offences typically discovered by police rather than reported to them. The absence of a trend in the recorded numbers of offences may therefore

reflect either stability in policing policy or stability in the level of offending or both. Figure 11 shows the monthly numbers of recorded offences over the three year period from January 1991 to December 1993.

Regional variations may also be indicative of variations either in offending or in policing policy or both. Table 3.7 shows that the Inner Sydney Subdivision consistently had the highest recorded offence rate for receiving, goods in custody offences, more than four times the State rate in the last two years. Other areas with high recorded offence rates in 1993 included the Fairfield – Liverpool Statistical Subdivision (189.9 per 100,000 population), Far West and Murray Statistical Divisions (156.3 and 155.1, respectively, per 100,000 population).

Possession and/or use of cocaine

Trends in recorded drug offences are difficult to interpret because drug offences are usually only recorded when an arrest is made. For this reason, trends in drug offences may reflect changes in policing policies and procedures, as well as changes in actual offending rates.

Figure 12 shows recorded offences for possession and/or use of cocaine for each month from January 1991 to December 1993. As can be seen in Table 3.12 the numbers of recorded offences for this offence are very small. It can also be seen that most of the recorded offences occurred in the Inner Sydney and Eastern Suburbs Statistical Subdivisions of Sydney. In 1993, 67.7% of all recorded offences of this type occurred in these two regions.

Possession and/or use of narcotics

As noted above, trends in recorded drug offences are difficult to interpret. It is not possible to determine the extent to which recorded offences are a measure of drug law enforcement

activity, rather than a measure of the actual incidence of the offence. Recorded offences for possession and/or use of narcotics for each month from January 1991 to December 1993 are shown in Figure 13.

Regional variations in recorded rates of this offence, though marked, must be treated with caution, due to the very small number of cases sometimes involved. Moreover, as with the temporal trends for drug offences, variations in recorded rates of drug offences across different regions may reflect variations in law enforcement emphasis as well as variations in the rate of occurrence of the offence itself. It is nevertheless interesting to note in Table 3.13 that the area with the highest recorded offence rate in 1993 was the Fairfield – Liverpool Statistical Subdivision with 171.1 recorded offences per 100,000 population. The Inner Sydney Subdivision, which had the highest recorded offence rate in 1991 (150.0 per 100,000 population), also had high rates in 1992 and 1993 (131.8 and 108.9, respectively, per 100,000 population). In 1993, the rates for both Fairfield – Liverpool and Inner Sydney were nearly eight times and five times, respectively, the rate for the State as a whole.

Possession and/or use of cannabis

The cautionary remarks made above about trends in recorded drug offences apply with equal force to possession and/or use of cannabis.

As can be seen in Figure 14, the trend in recorded offences for possession and/or use of cannabis would appear to have a seasonal component to it. Table 3.14 shows that the recorded offence rates for this offence tend to be much higher in rural areas than in urban areas. Five regions have consistently had high offence rates per 100,000 population over the three year period examined. They are the South Eastern, Richmond – Tweed, Mid-North Coast, Far West, and Hunter Statistical Divisions. Over the same period the lowest recorded rate was for Canterbury – Bankstown Subdivision.

Figure 14: Possession and/or use of cannabis**Dealing, trafficking in cocaine**

The numbers of recorded offences for this offence are very small and vary considerably from month to month as can be seen in Figure 15.

Figure 15: Dealing, trafficking in cocaine

As with the offence of possession and/or use of cocaine, recorded offences for dealing, trafficking in cocaine are confined mainly to two areas, the Inner Sydney and Eastern Suburbs

Statistical Subdivisions. Indeed, as can be seen in Table 3.15, in 1993 all but three of the recorded offences occurred in the Sydney Statistical Division.

Dealing, trafficking in narcotics

As noted elsewhere, trends in drug offences may reflect changes in drug law enforcement practices as well as changes in the actual rate of occurrence of the offence. Table 3.16 shows that the Fairfield – Liverpool Statistical Subdivision had the highest recorded offence rate for this offence in 1993. The high number of recorded offences in this region (nearly half the State total) is probably due to special drug law enforcement operations conducted in Cabramatta.

Dealing, trafficking in cannabis

Figure 17 shows the monthly numbers of recorded offences for dealing, trafficking in cannabis from January 1991 to December 1993. There is a very notable peak in February 1992. This peak is due to a special covert police operation conducted in the Blacktown – Baulkham Hills Statistical Subdivision of Sydney. Over a two to three week period police videotaped a number of cannabis transactions in a local hotel. Each of the transactions resulted in a recorded offence. This special operation is the explanation for the high number of recorded offences for 1992 in the Blacktown – Baulkham Hills Subdivision seen in Table 3.17. This particular special operation provides a good illustration of the effect of police law enforcement activities on recorded drug offences.

Cultivating cannabis

As with other drug offences, the numbers of recorded offences for cultivating cannabis are strongly influenced by law enforcement policy. Hence trends in the extent of offending for this offence cannot reliably be inferred from recorded rates of offending. Figure 18 shows there is a strong seasonal effect influencing recorded numbers of offences for cultivating cannabis. The seasonality probably reflects the growing and harvesting cycle of the cannabis plant.

Table 3.18 shows that there are marked regional variations in the recorded offence rates for cultivating cannabis, although once again this fact is not necessarily indicative of the true variation in rates of offending. In each of the three years, 1991, 1992, and 1993, the highest recorded offence rates per 100,000 population were in the Richmond - Tweed and Mid-North Coast Statistical Divisions.

SIGNIFICANT UPWARD TRENDS

Over the period from January 1991 to December 1993, there were statistically significant upward trends in the monthly numbers of recorded offences in the following categories:

- assault (up by 16.3%)
- stealing (up by 8.6%)
- malicious damage to property (up by 16.8%).

The trends are shown in Figures 19 to 22. Note once again that the bracketed figures denote the percentage change in the annual recorded numbers of offences between 1991 and 1993.

Assault

Figure 19 shows the trend in recorded assault offences over the three year period from January 1991 to December 1993. Assault is an offence the recorded rate of which can be strongly influenced by both the exercise of police discretion and public willingness to report assaults to police. Therefore the increasing trend observed in the number of recorded offences may not necessarily indicate an increasing trend in the actual frequency of the offence.

Table 3.2 shows that, except for the Murrumbidgee and Murray Statistical Divisions, there were increases in recorded assault offences between 1991 and 1993 in all regions. The biggest increases occurred in the Outer South Western Sydney (up by 47.3%), Outer Western Sydney (up by 38.9%) and Blacktown – Baulkham Hills (up by 36.4%) Statistical Subdivisions. Outside Sydney the biggest increase occurred in the Richmond – Tweed Statistical Division (up by 31.4%).

Stealing

Stealing (not including breaking and entering or motor vehicle theft) is easily the most frequently recorded kind of offence in NSW. Counting all types of stealing offences together, Figure 20 shows the trend in recorded offences over the three year period from January 1991 to December 1993. There is a significant upward trend for all stealing offences during this period. Between 1991 and 1993 recorded stealing offences in NSW increased by 8.6%.

Table 3.9 show that Inner Sydney has the highest rate of recorded stealing offences, more than three times the rate for the State as a whole in each of the years 1991, 1992 and 1993. Between 1991 and 1993 the biggest increases in recorded stealing offences occurred in the Murrumbidgee Statistical Division (up by 27.6%), the Northern Statistical Division (up by 26.4%) and the Fairfield – Liverpool Statistical Subdivision (up by 26.1%).

The two major subcategories of stealing which generate most public concern, namely stealing from the person and stealing from shops/businesses, also show statistically significant upward trends. Trends for both these subcategories of stealing are shown in Figure 21.

The increasing trend in stealing from shops/businesses is a continuation of the upward trend noted in the last two years' reports. Between 1991 and 1993 there was a 10.2% increase in the annual number of recorded offences for stealing from shops/businesses. During the same period, the number of recorded offences for stealing from the person increased by 11.6%.

Malicious damage to property

Figure 22 shows the numbers of recorded offences for malicious damage to property (other than arson) for each month from January 1991 to December 1993. The figure shows that the increasing trend observed in the last two years' reports continued during 1993.

Inspection of Table 3.11 indicates that there were increases in recorded offences, between 1991 and 1993, in all regions except the Outer South Western Sydney Statistical Subdivision and the Far West Statistical Division. The largest increase in recorded offences between 1991 and 1993 occurred in the Outer Western Sydney Statistical Subdivision (up by 47.4%). Outside Sydney, the region with the biggest increase in recorded offences was the Northern Statistical Division (up by 36.8%).

TRENDS IN CLEAR-UP RATES

Clear-up rates are not necessarily a good measure of police performance. While for some offences (for example, homicide) the ability to 'solve' a crime is undoubtedly a distinctive police skill, for other offences (for example, offensive behaviour, selling illegal drugs, soliciting for prostitution) detection of the offence and the offender generally occur simultaneously. In such circumstances the clear-up rate (that is, the percentage of reported offences cleared), may be 100% but this provides no reliable indication of police effectiveness in 'solving' the offence in question.

Even in circumstances where 'solving' crime is a meaningful possibility, the clear-up rate may not provide the most satisfactory overall measure of police performance. For example, a high profile police initiative may at the same time reduce crime (due to greater perceived risk of apprehension among offenders) and reduce the clear-up rate (by encouraging reporting of offences to police with the result that recorded offences increase to a greater extent than do the number of offences cleared).

The influence on crime clear-up rates, of public willingness to report crime, makes the interpretation of differences in clear-up rate across different categories of offence quite hazardous. Some offences (for example, car theft) are much more likely to be reported to the police than others (for example, assault). For this reason from the standpoint of police effectiveness it is often more productive to examine trends over time in clear-up rates *within* particular categories of offence than between them. Unfortunately, since it takes some time to 'solve' offences, trends in the raw percentage of reported offences cleared always tend to trend downwards the more recent the crime figures being examined.

Tables 2.1, 2.2 and 2.3 give the numbers of offences cleared in each of the years, 1991, 1992 and 1993, respectively. The cleared offences are split into two groups: those which occurred in the same year and those which occurred in an earlier year. The clear-up measure used is the single year clear-up percentage. For a specified calendar year, this percentage is the number of offences which both occurred and were cleared during the year, as a percentage of the total number of offences recorded for the year. Comparisons across the tables show that, generally, within a specific offence category, the single year clear-up percentage is fairly similar from year to year.

- 3 Bonney, R. and Kery, L. A. 1991, *Police Reports of Non-Aggravated Assault in New South Wales*, NSW Bureau of Crime Statistics and Research, Sydney.
- 4 The trend test for fraud excluded data for the last six months of the reporting period because of the delay in reporting this offence (see Explanatory Notes).
- 5 The trend test used was Kendall's rank-order correlation test (see, for example, Conover, W.J. 1971, *Practical Non-Parametric Statistics*, 2nd edn, John Wiley and Sons, pp. 256-260). A two-tailed test was used to determine whether there had been an increasing or decreasing trend in the recorded numbers of offences over the 36 month period covered in the report. Some month to month variations in the numbers of recorded offences suggest seasonal factors may be at work. The test for trend is not sensitive to seasonal variations; it is sensitive only to a generally increasing or generally decreasing trend over the time period examined.
