SPRING 1994 MARYLAND HOUSEHOLD OPINION POLL

Since 1990, the Center for Substance Abuse Research (CESAR) has arranged for the University of Maryland Survey Research Center to include questions on drug-related issues in its annual telephone poll of Maryland residents. This report presents the responses to the Spring 1994 Maryland Household Opinion Poll. The report summarizes Maryland residents' views on the following topics:

- Drug use trends in Maryland (pages 5 & 14).
- Drug sales in one's neighborhood (pages 6 & 15).
- Decriminalization of marijuana (pages 7 & 16).
- Needle exchange programs (pages 8 & 17).
- Jail vs treatment for first-time drug offenses (page 9).
- How resources should be allocated in the fight against drugs (page 10).
- Whether policymakers should study and debate eliminating criminal penalties for possession of small amounts of drugs (page 11).
- Whether physicians should be allowed to prescribe marijuana. (page 12).
- Variables broken down by demographic characteristics and region (Appendix).

METHODOLOGY

- Telephone survey conducted for CESAR by the University of Maryland Survey Research Center at College Park between April and May 1994.
- Random sample of adults aged 18 or older and residing in households in Maryland with a telephone.
- 1,018 or 75% of targeted households completed the interview; 16% refused; 6% were noncontacts; and 3% involved miscellaneous problems.
- Results have been weighted to correct for differences in sample eligibility and for (1) an underrepresentation of individuals aged 18-24 and an overrepresentation of individuals aged 35-54; (2) an underrepresentation of individuals with less than a high school education and overrepresentation of individuals with a college degree; and (3) an underrepresentation of whites.
- Estimated error of survey results is ± 3 percentage points.

SPRING 1994 MARYLAND HOUSEHOLD OPINION POLL HIGHLIGHTS

- More than half of Maryland residents think that cocaine/crack (66%) and heroin (51%) use is increasing in Maryland, yet less than half of Maryland residents think that cocaine/crack (39%) and heroin (21%) are being sold in their neighborhood. (See Figure 1 and Figure 2.)
- Nearly one-quarter of Maryland residents (22%) think that adults 21 or older should be able to possess small amounts of marijuana for personal use without legal penalty. (See Figure 3.)
- More than half of Maryland residents (55%) favor setting up needle exchange programs to reduce the spread of HIV/AIDS. (See Figure 4.)
- Fifty-nine percent of Maryland residents think that a person with a first-time conviction for possession of illegal drugs for personal use should be placed in a treatment program. An additional 30% think that the offender should be sent to both a treatment program and jail. (See Figure 5.)
- Thirty-nine percent of Maryland residents (the largest proportion of respondents polled) think that education and prevention should receive the most money and effort in the fight against drugs. (See Figure 6.)
- Maryland residents are nearly evenly split on whether policymakers should study and debate eliminating criminal penalties for possession of small amounts of drugs (47% oppose and 44% favor). (See Figure 7.)
- The majority of Maryland residents (84%) think physicians should be allowed to prescribe marijuana if it is proven to be effective in treating some health conditions. (See Figure 8.)

MARYLAND HOUSEHOLD OPINION POLL, 1990, 1992, and 1994

This section compares responses to questions asked in the 1990, 1992, and 1994 surveys. Highlights of the comparisons are presented below.

- An increasing proportion of Maryland residents think marijuana and heroin use is increasing in Maryland. (See Figure 9.)
- Since Spring 1992, there have been no dramatic changes in the percentage of Maryland residents who think drugs are being sold in their neighborhood. (See Figure 10.)
- Although approximately three-quarters of Maryland residents do not support decriminalization of marijuana, the minority of Maryland residents who do is increasing. (See Figure 11.)
- An increasing number of Maryland residents favor the set up of needle exchange programs to decrease the spread of HIV/AIDS--55% in Spring 1994 compared with 49% in Fall, 1992. (See Figure 12.)

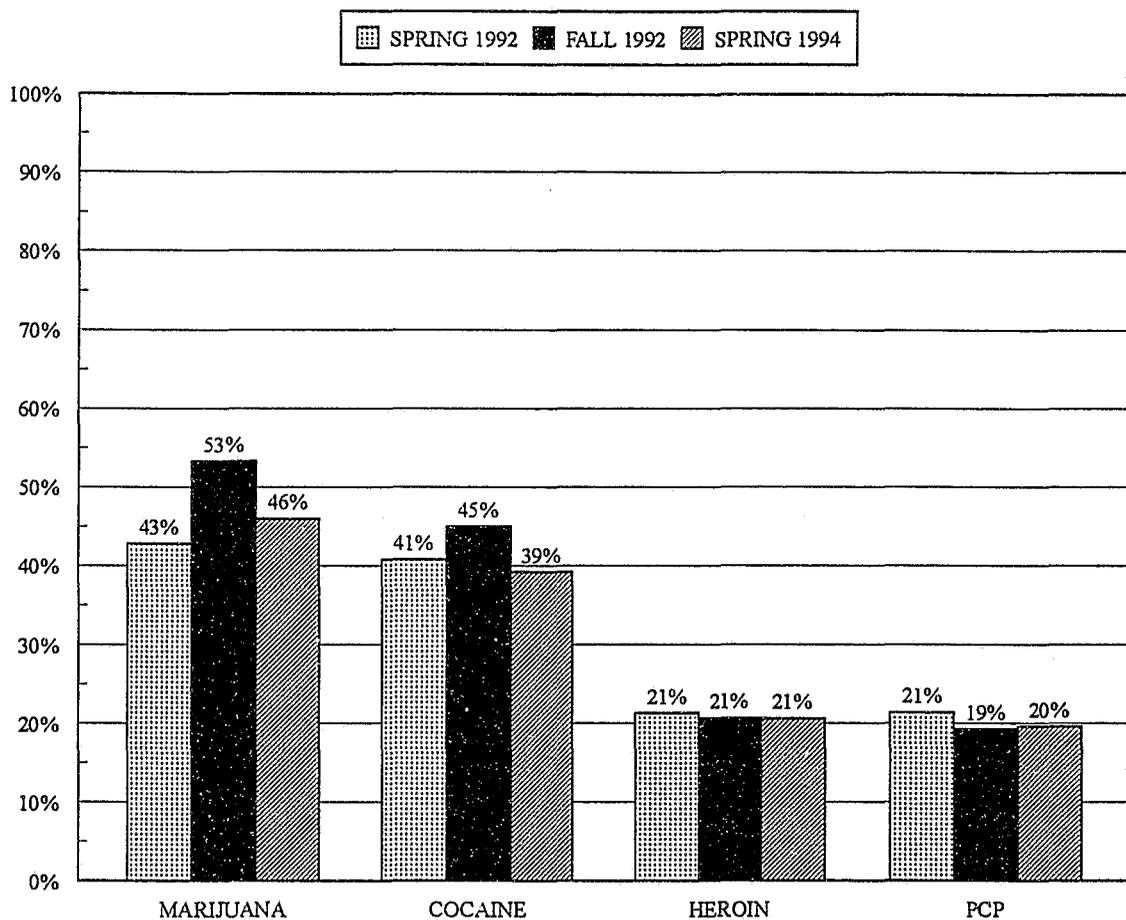

Figure 9
RESPONSE TRENDS:
PERCENTAGE OF SAMPLE WHO THINK MARIJUANA, COCAINE, HEROIN, AND
PCP USE IS INCREASING IN MARYLAND, 1992 AND 1994

NOTES: Spring Poll 1992 (N=1,001 respondents surveyed March-April, 1992).
 Fall Poll 1992 (N=1,001 respondents surveyed November-December, 1992).
 Spring Poll 1994 (N=1,018 respondents surveyed April-May, 1994).
 Cocaine use includes crack.
