Executive Summary

Delinquency Intake is a statewide, state-operated program within the Department of Juvenile Justice. In the intake program, delinquency case managers, receive all delinquency cases from law enforcement, make assessments and recommend judicial or non-judicial handling to the state attorney. At intake, the case managers prepare pre-disposition reports and recommendations of sanctions or services; carry out preliminary screenings for alcohol, drug abuse or mental health problems; conduct suicide risk assessments; and perform detention screenings.

The Delinquency Intake System received 156,286 cases on 93,141 individual youth in FY 1993-94. This represents a 10.6 percent increase in the number of cases received from the previous fiscal year.

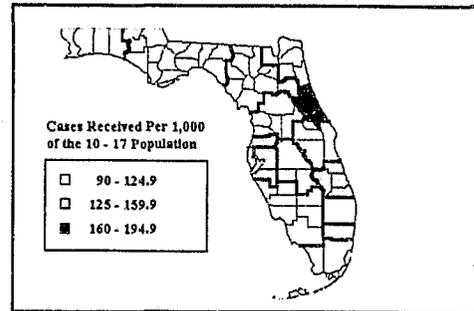

Demographic trends indicate that the number of delinquency cases received and the number of youth referred for delinquency during FY 1993-94 were 29.0 percent and 23.5 percent higher, respectively, than during FY 1989-90. Also of note is that in FY 1989-90, 48.9 percent of the youth referred for delinquency were white males, 28.5 percent were black males, 14.1 percent were white females, and 8.5 percent were black females. In FY 1993-94, 45.0 percent were white males, 29.1 percent were black males, 15.1 percent were white females, and 10.8 percent were black females.

Offense trends show that the most common, most serious offenses committed by youth referred for delinquency continue to be misdemeanors. Shoplifting continues to be the most common misdemeanor reason for referral. Shoplifting comprises 14.2 percent of all delinquency cases received and 29.0 percent of the delinquency cases received that had misdemeanor offenses as their most serious offense committed. Of note is the trend over the past five years toward a decrease in the percent of felony cases overall; for example, in FY 1989-90 of the delinquency cases received, 42.7 percent were for felony charges, and by 1993-94 that had declined to 40.4 percent. Despite this trend, burglary continues to be the most common felony offense committed by youth referred for delinquency, comprising 13.6 percent of the total and 33.6 percent of the felony cases referred.

Slightly over 58 percent of cases disposed were handled judicially, with 37.8 percent handled non-judicially and the remaining 4.1 percent being sent to adult court. When examining intake's recommendations verses state attorney and court action, the largest discrepancy was in youth being sent to adult court. Intake recommended such action for 0.8 percent of youth, while state attorneys recommended 5.4 percent. The number of delinquency cases received continues to grow in Florida, and although the number recommended for non-judicial handling continues to rise, so does the number being sent to adult court. The intake process is part of the Case Management program and all costs and outcomes for intake should be understood as a part of this service.

Program Description

Under Chapter 39, Florida Statutes, Juvenile Justice has the responsibility for receiving all delinquency complaints for youth under age 18. Delinquency case managers (DCMs) receive and assess each case to make recommendations to the state attorney for non-judicial handling or judicial handling (court action). Often, when the case manager recommends non-judicial handling, a structured diversionary program such as the Juvenile Alternative Services Program (JASP) is used to provide services to the client and the family.

If the case is handled judicially and the court adjudicates the youth or withholds adjudication, the case manager completes a predisposition report which recommends, to the court, sanctions and services for the youth and family. When cases are handled judicially, the case manager also completes a preliminary screening for alcohol, drug abuse and mental health problems to determine which cases should be referred for further assessment by alcohol, drug abuse and mental health (ADM) providers.

Case managers also have a responsibility in the detention screening process. Each juvenile presented for detention requires screening by a case manager, at intake, to determine if the youth meets the criteria for placement in detention. This assessment of risk factors is completed prior to case management making a decision to detain the youth. If the youth meets criteria but the case manager wants the youth released, the state attorney makes the final decision to release or place the youth in detention. A suicide risk assessment is also begun at detention screening, with referrals to mental health providers as needed.

In 1988, the legislature revised Chapter 39, F.S. by adding a statement of legislative intent, judicial detention criteria, risk assessment procedures and authorizing direct placement in home detention by intake. The Legislature created a committee of representatives from the Florida Prosecuting Attorneys Association, the Conference of Circuit Court Judges, the Public Defenders Association and the Department. The result of this committee's work was the Risk Assessment Instrument (RAI) and the procedures associated with the use of the RAI. This instrument was implemented in late 1990. In the past four years, there have been a variety of provisions to the instrument in order to meet statutory requirements.

During FY 1991-92, the new Delinquency Case Management System was implemented statewide. This system combined the services of Delinquency Intake, Community Control and Furlough. The funding sources were also combined. This system provides a more complete service base as the same counselors may perform both intake and supervisory duties.

The cost data presented in this chapter covers not only the intake activities described here, but Community Control and Furlough expenditures as well. This will be cross-referenced in the chapter on Community Control.

Population Profile

The Delinquency Intake system received 156,286 cases on 93,141 individual youths in FY 1993-94. This represents a 10.6 percent increase over the 141,340 cases received in FY 1992-93. District 11 (Dade) received the largest proportion of cases, with 14.5 percent, followed by District 7, with 12.2 percent. District 15 received the lowest percentage, with 2.5 percent of cases. When the number of cases received is looked at in terms of cases per 1,000 of the population aged 10-17, District 12 has the highest rate (184.5 per 1,000) and District 1 the lowest (92.8 per 1,000). Table 1 and its accompanying charts show district rates in comparison to the state average. Cases rather than individual youth are described for some intake components because they more directly reflect workload and intake decision processes. The number of cases received is counted by unduplicating the number of referrals received on CIS by client identifier and the date the referral was received. The most serious offense for that particular case is selected as the reason for referral. If the same juvenile is referred for several offenses on the same date, these would be counted together as one case. If that juvenile is referred for one or more offenses on another date during the year, it would be counted as another case. Where more appropriate, individual youth counts were used to present demographic information at intake.

Source: CIS (delinquency referral records received during FY 1993-94; extract date - February 1995)

Note: The number of cases received is counted by unduplicating the number of referrals reported received on CIS by client identifier and date. If the same juvenile is referred for several offenses on the same date, these would be counted together as one case. If that juvenile is referred for one or more offenses on another date, it would be counted as another case. The number of youth is counted by unduplicating the number of referrals reported by client identifier choosing the last referral date in the fiscal year. If the same juvenile is referred for several offenses in the same fiscal year, these would be counted together as one youth.

STATEWIDE BY DELINQUENCY INTAKE FROM FY 1989-90 TO FY 1993-94**

Source: Profile of Delinquency Cases and Youths Referred at Each Stage of the Juvenile Justice System 1989-90 Through 1993-94.

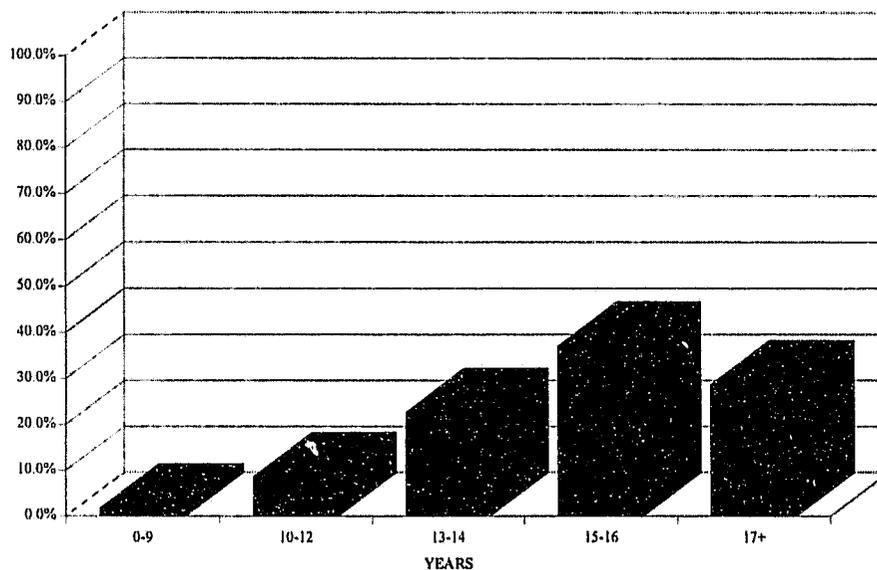

Demographic data were based on the 93,141 individual youth who had referrals received during the year. Youth from 15 to 16 years comprised 38.1 percent of the total youth who had cases received, with the 13-14 age group representing 22.7 percent and the 17+ age group representing 28.7 percent. Males represented 73.6 percent of the referral population. Tables 3 through 6, and their accompanying charts, summarize the age, race and gender of the youth whose cases were received during FY 1993-94 at intake. Whites represented 59.4 percent of the total, blacks represented 39.3 percent and other races represented 0.5 percent.

Program Data

According to the Client Information System, 22.4 percent of all delinquency cases were for felony offenses against property and 26.3 percent of all the cases were for misdemeanors against property. Another 10.0 percent of all referrals were for felony offenses against persons and 11.3 percent were for misdemeanors against persons. These figures are all within one percentage point of the breakdowns for FY 1992-93. See Table 8.

Source: CIS (delinquency referral records received during FY 1993-94; extract date - February 1995)

Table 9 and Chart 9 indicate the number of felony cases received, statewide, as the most serious offense committed. Table 10 and Chart 10 indicate the number of misdemeanor cases received, statewide, as the most serious offense committed. There was a 22 percent increase in the number of felony cases and a 29 percent increase in the number of misdemeanor cases. The higher percent increase in misdemeanor cases reverses the trend of the previous decade, in which the growth of felonies outpaced that of misdemeanor offenses.

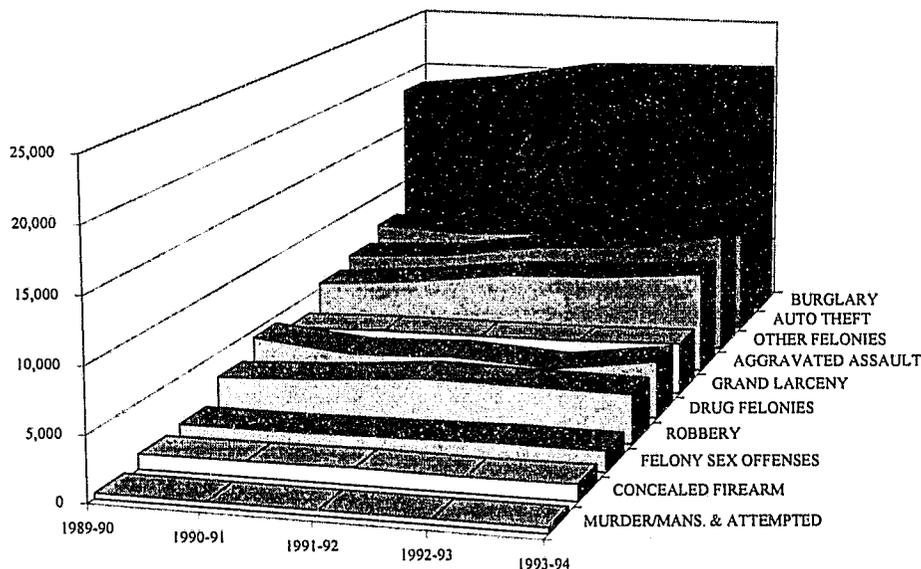

Burglary remains by far the most common felony reason for referral, accounting for a third of the total number of felony cases received and increasing by 15 percent since FY 1989-90, though the increase since FY 1991-92 has been only 1 percent.

In order to assess the system as a whole, it is important to determine to what extent the case manager attempts to handle referrals non-judicially. Table 11 and Chart 11 compare the percentages of cases recommended for non-judicial handling by intake with those cases in which non-judicial action was taken by the state attorney, including a breakdown by district. An average of 42.2 percent of cases statewide were recommended for non-judicial handling by intake and 38.1 percent had non-judicial action taken by the state attorney. In District 5, intake recommended 38.8 percent and only 19.2 percent were handled non-judicially. In Districts 3, 4, 8, 10 and 13 a slightly larger portion of cases was handled non-judicially than was recommended by intake. During the previous year (FY 1992-93), 44.1 percent were recommended for non-judicial handling and 39.6 percent were actually handled non-judicially. In FY 90-91, 45.7 percent were recommended for non-judicial handling and 41.6 percent actually handled non-judicially. The figures for FY 1989-90 were 42.0 percent recommended and 38.6 percent handled non-judicially.

CHART 11

A COMPARISON OF INTAKE RECOMMENDATIONS FOR NON-JUDICIAL HANDLING WITH STATE ATTORNEY ACTIONS BY DISTRICT FOR DELINQUENCY CASES DISPOSED IN FY 1993-94

Source: CIS (delinquency referral records disposed during FY 1993-94; extract date - February 1995)

Data on FY 1993-94 cases disposed indicates that 56.1 percent of cases were recommended by intake staff to be handled judicially, by petition (a court ordered action of adjudication of delinquency), and 43.1 percent to be handled non-judicially (no petition). The state attorney's offices filed petitions on 55.7 percent of the cases (Table 12 and Chart 12) and allowed for non-judicial handling for 38.9 percent of cases. The major difference was not in the numbers recommended for judicial handling but in the numbers recommended by intake for adult court (0.8 percent) and the numbers actually sent to adult court by the state attorney (5.4 percent). In the end, 4.1 percent were actually handled in adult court.

**TABLE 12:
DELINQUENCY INTAKE
INTAKE RECOMMENDATION AND STATE ATTORNEY ACTIONS
FOR NON-JUDICIAL, JUDICIAL AND ADULT COURT HANDLING
FOR CASES DISPOSED STATEWIDE FOR FY 1993-94**

	Intake Recommendation		State Attorney Action		Court Handling	
	Cases	% of all Recommendations	Cases	% of all Actions	Cases	% of State Attorney's Cases
Judicial (Petition)	77,606	56.1%	80,351	55.7%	86,695	58.2%
Adult Court	1,172	0.8%	7,856	5.4%	6,140	4.1%
Non-Judicial	59,613	43.1%	56,058	38.9%	56,159	37.7%*
Statewide	138,391		144,265		148,994

* Non-judicial cases are not applicable.

Note: There were 9,615 cases disposed where Intake did not make a recommendation because recommendations were not applicable and 8,280 cases disposed where Intake made no recommendation represent 6.2 percent and 5.3 percent respectively of the 156,286 cases disposed in FY 1993-94.

CHART 12

INTAKE RECOMMENDATIONS, STATE ATTORNEY ACTIONS AND COURT HANDLING FOR NON-JUDICIAL, JUDICIAL AND ADULT COURT HANDLING FOR CASES DISPOSED STATEWIDE FOR FY 1993-94

Source: CIS (delinquency referral records received during FY 1993-94; extract date - February 1995)

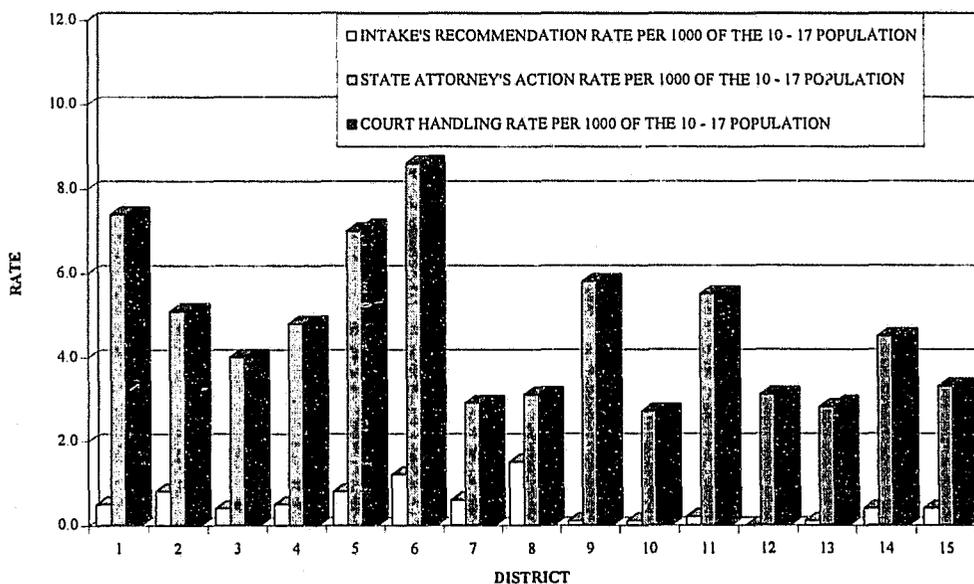

Table 13 and Chart 13 breaks down the dispositions to adult court by district and includes a number per 1,000 of the population at risk (ages 10-17) to provide a standard for comparing districts. The numbers of cases per 1,000 of the population 10-17 are higher in Districts 1, 5 and 6 than elsewhere in the state.

Program Cost

Total expenditures reported for the Delinquency Intake system in FY 1993-94 are included in a combination of the funding for Intake, Community Control, Furlough and Delinquency Case Management. The total amount was \$50,638,632 (See Table 14). This does not include diagnosis and evaluation funds administered by the Alcohol, Drug Abuse and Mental Health Program Office of the Department of Health and Rehabilitative Services.

Source: SAMAS, FY 1993-94

- * Separate cost figures for Community Control, Delinquency Intake and Furlough are not available because they are combined in the Delinquency Case Management system.
- ** Cases disposed at intake are cases where one of the following has occurred: a non-judicial decision based on the case manager's recommendation to the state attorney; the state attorney's decision; or, a judicial decision made by the court.

Program Effectiveness

The number of youth who enter the juvenile justice system continues to rise, as indicated by the rate per 1,000 of the population ages 10-17 rising from 112.0 to 120.9. There is notable variation in the rate per 1,000 of the population ages 10-17 across districts which does not appear to be related to either demographic characteristics or the seriousness of alleged offenses. Likewise, variation exists with regard to decisions made on judicial and non-judicial handling.

There appears to be a slight upward trend over the last few years in both the numbers of cases recommended by intake for non-judicial handling and the numbers where the state attorney's action was non-judicial. This year the number handled non-judicially was lower than the numbers recommended by intake, but the number of cases transferred to adult court continues to be much higher than intake's recommendation. Work is still needed in this area, along with a closer look at the wide variation across districts. While solutions require cooperative work with the courts and law enforcement, the Department could take the lead to assure that all cases which can be handled non-judicially are handled in this manner.
