ACKNOWLEDGMENTS

This report was prepared for the Law Enforcement Assistance Administration by the Bureau of the Census. In the Law Enforcement Assistance Administration, general supervision was supplied by Charles R. Kindermann, assisted by Paul D. White. In the Bureau of the Census, the collection and processing of data and the formulation and clarification of definitions were under the direction of the National Prisoner Statistics Staff, headed by Kenneth R. Brimmer and assisted by Ronald R. Tucker. The report was prepared by the Crime Statistics Analysis Staff under the general supervision of Robert P. Parkinson. John F. Wallerstedt directed the project. Text and tables were prepared by Mark S. Russell.

The generous assistance of corrections officials in providing data is gratefully acknowledged.

PREFACE

This report presents information on sentenced prisoners confined in Federal and State correctional institutions at the end of each of the years 1971, 1972, and 1973. It examines the size and distribution of the prison population at the national level and, in the case of the State prison population, at regional and State levels as well. Special attention is paid to year-to-year change in the size of the prison population in terms both of the absolute number of prisoners and of the number of prisoners per 100,000 persons in the general civilian population. The extent to which these changes differ as between the Federal and the State systems is indicated. The proportion of males and females in the prison population is discussed. Limited information in the form of tables also has been provided with respect to the types and volume of certain admission and departure transactions which occurred during calendar years 1972 and 1973, although no analysis of these data was feasible.

Certain changes in concept and format differentiate this from earlier issues of Prisoners in State and Federal Institutions,\* which is one of several serial reports published in support of the National Prisoner Statistics (NPS) program. Previously the population dealt with in this series consisted of all adult felons serving a sentence in a Federal or State correctional institution. Beginning on December 31, 1971, however, all jurisdictions were asked to disregard the difference between felons and misdemeanants and to construe as their prison population all those inmates who had been sentenced as adults or youthful offenders and whose maximum sentence length was a year and a day or longer. For most jurisdictions this change in definition did not radically alter the basic makeup of the reportable prison population, but the cumulative data adjustments from the total network of Federal and State institutions were deemed sufficiently significant to question the comparability of data in this report with those of previous years. Consequently, data prior to

\*Formerly entitled Prisoners in State and Federal Institutions for Adult Felons.

December 31, 1971 have been omitted from this report, and no attempt to provide trend analysis involving earlier years has been made.

In the course of the collation of 1972 and 1973 data, a systematic inquiry was made into the extent to which reporting jurisdictions varied in their interpretations of the individual categories of prisoner admission and departure transactions. Because considerable variation was found, no attempt has been made in this report to provide comprehensive tables of these transactions. Table displaying those categories that appeared to be uniformly understood by all reporting jurisdictions have been compiled and are included in Appendix I, but no textual analysis of them was deemed feasible. It is anticipated that continuing efforts to assure consistency of reported data will warrant a more detailed breakdown of categories of prisoner movement transactions in subsequent issuances of this series. A list of definitions and a summary of the exceptions to these definitions is available upon written request from the Law Enforcement Assistance Administration (LEAA), Statistics Division, Washington, D.C. 20531.

The NPS program was instituted to collect and interpret data on inmates of State and Federal correctional institutions, using a voluntary reporting system. It was initiated by the Bureau of the Census in 1926 and was transferred to the Bureau of Prisons in 1950 and to LEAA in 1971. Since 1972, the Bureau of the Census, acting as collecting agent for LEAA, has had responsibility for compiling the statistical data required for the program.

## GENERAL FINDINGS

On December 31, 1973, State and Federal correctional institutions held 204,349 inmates who had been sentenced as adults or youthful offenders and whose maximum sentence length was a year and a day or longer. Of the total, 89 percent were held in State institutions and the remainder were confined in Federal prisons.

The prisoner count at yearend 1973 represented a 4.2 percent increase over the 196,183 enumerated on the last day of 1972. In marked contrast, between December 31, 1971, and December 31, 1972, the number of inmates in State and Federal correctional institutions had declined by 0.9 percent. The overall increase for the 24-month period was 3.2 percent. Accompanying these changes in the size of the Nation's prison population were fluctuations in the number of inmates per 100,000 persons of the civilian population. At yearend 1971, that figure was 96.4 per 100,000; it dropped to 94.7 at yearend 1972, and then rose sharply to 97.8 as of December 31, 1973.

Federal prisons held 22,815 inmates at the end of 1973, compared with 21,713 at the end of 1972 and 20,948 at the end of 1971. Between yearend 1971 and yearend 1973, the Federal prison population increased by 8.9 percent, and the number of inmates per 100,000 civilian population rose from 10.2 to 10.9.

The number of prisoners confined in State correctional institutions fell by 1.5 percent, or from 177,113 to 174,470, between December 31, 1971, and December 31, 1972, the decrease more than offsetting the concurrent increase in the number of inmates in Federal prisons. In the succeeding 12-month period, the State prison population increased by 4.0 percent, rising to 181,534 and accounting for the preponderant portion of total prison population growth between yearend 1972 and yearend 1973. When compared with the end-of-year count for 1971, that for 1973 showed there had been a 2.5 percent increase in the size of the State prison population, and that the number of inmates per 100,000 civilian population had risen from 86.2 to 86.9.

As they have historically, males continued to predominate overwhelmingly in the prison population of the United States, and the overall proportions of males and females in that population remained basically unchanged. On December 31 of each of the years 1971, 1972, and 1973, females accounted for about 3 of every 100 prisoners. Between yearend 1971 and yearend 1973, however, the number of female prisoners grew at a more rapid rate than the number of male prisoners; this more rapid growth was particularly apparent when data for December 31, 1972, were compared with those for December 31, 1973. In that 12-month period, the number of male prisoners rose by 4.0 percent in State institutions and by 4.6 percent in Federal prisons, whereas the corresponding proportions for the female prison population were 5.0 percent and 17.4 percent, respectively. Given the relatively small base that characterizes the female prisoner count, only limited and tentative significance can be imputed to these data. Nevertheless, they tend to reinforce other information indicating gradually increasing female participation in crimes punishable by prison sentences.

Changes in size of the total State prison population from December 31, 1971, to December 31, 1973, did not prevail uniformly among the different regions and States.<sup>1</sup> Thus, the overall decrease in the total State prison population between yearend 1971 and yearend 1972 was attributable almost entirely to a decrease of 9.7 percent, or about 4,000 inmates, in the prison population of the North Central Region. Elsewhere, the West recorded a 2.4 percent decline in its prison population, whereas there were slight increases in the number of inmates in the Northeast and the South. Compared with figures for December 31, 1972, those for December 31, 1973, showed that increases in the prison population were registered in the West (10.9 percent), the Northeast (5.9 percent), and the South (4.8 percent), but that the North Central Region once again recorded a

<sup>1</sup> Regional analysis in this report is based on the four standard regions used by the U.S. Bureau of the Census: Northeast, North Central Region, South, and West. For States included in each region, see map on p. 9 and table on p. 12.

decline, amounting to 3.9 percent. For each of the four regions, Table A shows the extent of change in the size of the prison population between yearend 1971 and yearend 1973.

Table A. Percent change in State prison population and in number of prisoners per 100,000 civilian population by region, December 31, 1971 - December 31, 1973

| Region        | Percent change in prison population | Percent change in number of prisoners per 100,000 civilian population |
|---------------|-------------------------------------|---|
| Northeast     | 6.8                                 | 7.1   |
| North Central | -13.3                               | -13.7   |
| South         | 7.2                                 | 3.6   |
| West          | 8.2                                 | 4.6   |

The South's share of the total State prison population on December 31, 1973, was 47 percent, a proportion markedly larger than that region's share of the national civilian population (Table B). Proportions for the total State prison population and the national civilian population were equal in the West. In both the Northeast and the North Central Region, the share of the total State prison population was substantially below those regions' share of the national civilian population. At yearend 1971 and 1972, the State prison population and the national civilian population were distributed among the four regions in proportions almost identical to those at yearend 1973.

Table B. Percent distribution of State prison population and national civilian population, by region, December 31, 1973

| Region        | Percent of total prison population | Percent of national civilian population |
|---------------|------------------------------------|---|
| Northeast     | 16                                 | 24                                      |
| North Central | 20                                 | 27                                      |
| South         | 47                                 | 32                                      |
| West          | 17                                 | 17                                      |

Between December 31, 1971, and December 31, 1972, when the number of inmates in State correctional facilities declined, 32 States registered decreases in the size of their prison populations and 18 States recorded increases.<sup>2</sup> States reporting reductions of 500 or more prisoners were Michigan (1,076), Ohio (787), Louisiana (738), Indiana (511), and California (504); gains of 500 or more prisoners were reported in Georgia (1,448), Pennsylvania (930), Florida (729), and Maryland (628). During the next 12-month period, when the size of the State prison population increased, it was shown that 31 States had more prisoners on December 31, 1973, than on December 31, 1972; 19 had fewer. Increases of 500 or more inmates were reported for California (2,824), Texas (1,529), North Carolina (1,309), New York (1,252), and Louisiana (612); decreases of 500 or more prisoners were registered in Michigan (597) and Ohio (559). Michigan had altogether 1,673 fewer prisoners at yearend 1973 than it had on December 31, 1971; Ohio had 1,346. At the other extreme, California had 2,320 more inmates in its correctional institutions on December 31, 1973 than at yearend 1971; North Carolina had 1,777 more; Georgia, 1,533; Texas, 1,249; Maryland, 1,063; and New York, 1,017.

Listings of the 10 States holding the largest number of prisoners at the end of each of the years 1971, 1972, and 1973 changed little from year to year. As of December 31, 1973, the 10 States were : California (19,794), Texas (17,238), New York (12,945), Florida (10,376), North Carolina (9,572), Georgia (8,310), Michigan (7,874), Ohio (7,717), Pennsylvania (6,515), and Maryland (6,013). Lists for 1971 and 1972 differed from that for 1973 in that Illinois was included in place of Maryland.

Except for some shifting in rank, little change also took place from year to year in the listings of the 10 States with the largest number of prisoners per 100,000 persons in the general civilian population.

---

<sup>2</sup>Findings at the State level exclude the District of Columbia, which, as a wholly metropolitan area, is not comparable with the 50 States. Overall national and regional findings are based on all data, including those for the District of Columbia.

At the end of each of the years 1971, 1972, and 1973, 9 of the 10 States so ranked were in the South, Nevada being the only exception. As of December 31, 1973, North Carolina, with 183 inmates per 100,000 population, ranked at the top, followed by Georgia (173), Maryland (149), Texas (146), Nevada (135), Florida (133), South Carolina (130), Oklahoma (120), and Louisiana and Virginia (both 108). States with the fewest number of prisoners per capita are characterized for the most part by relatively small populations. North Dakota had fewer prisoners per capita than any other State at the end of each of the years 1971, 1972, and 1973. As of December 31, 1973, it had 28 inmates per 100,000 population.

## METHODOLOGY

The data on which this report is based were derived from two complete censuses of prisons in the United States, one covering calendar year 1972, and the other calendar year 1973. For each year, the data were collected through the use of a standard questionnaire (NPS-1) issued by the Bureau of the Census, acting as collecting agent for the Law Enforcement Assistance Administration. A sample of the questionnaire used for 1973 is attached to this report as Appendix II.

In approximately two-thirds of the States, the census questionnaires were filled out by centralized reporting agencies that accounted for all institutions in their respective correctional systems. This pattern also was followed by the U.S. Bureau of Prisons in supplying data on Federal institutions. With respect to the remaining jurisdictions, the questionnaires were completed by individual correctional institutions, and the data were then aggregated by State.

Inasmuch as the collection operation was a census rather than a survey, the data do not contain errors due to sampling. Response errors were held to a minimum because doubtful data that appeared in returned questionnaires were largely eliminated by means of telephone followups. During these telephone conversations, it became apparent that certain data categories were not being consistently interpreted by each respondent. Therefore, a list of precise definitions was drawn up. Subsequently, a letter was mailed to each respondent with a copy of the questionnaires, the standard definitions, and a list of relevant exceptions, as determined during the telephone followup. Each respondent was asked to examine the 1972 and 1973 submissions with the view of eliminating discrepancies in reporting. Changes so reported were incorporated into final tabulations. Because some respondents did not have information available in the form necessary to make the requisite adjustments, the present report does not include certain types of prisoner movement data customarily treated in this series; some other types of data have been aggregated into composite tabulations.

NOTE: The prison population consists of all prisoners who have been sentenced as adults or youthful offenders and whose maximum sentence length is a year and a day or longer. Beginning in 1972, this definition was adopted by the Law Enforcement Assistance Administration and the Bureau of the Census for use in compiling statistics for the National Prisoner Statistics (NPS) program.

<sup>a</sup>For each of the years 1971, 1972, and 1973, the Federal prisoner totals included an estimated 35 female prisoners transferred from the District of Columbia to a Federal institution. These female prisoners were not included in the prisoner totals submitted by the District of Columbia.

<sup>b</sup>Figures on the number of prisoners for 1971, 1972, and 1973 were submitted as estimates.

<sup>c</sup>For the years 1971 and 1972, the prisoner totals for Vermont included a sizable proportion of inmates with a maximum sentence length of less than a year and a day; however, an estimate of the numbers involved could not be provided.

<sup>d</sup>For the years 1971, 1972, and 1973, the prisoner totals submitted by the following States included a small proportion of inmates whose maximum sentence length was less than a year and a day: Colorado (est. 5%), Maryland (est. 6%), Massachusetts (est. 5%), Oregon (est. 2%).

<sup>e</sup>Figures for 1973 were submitted as estimates.

<sup>f</sup>Figures on the number of prisoners are for end of fiscal years 1972, 1973, and 1974.

<sup>g</sup>Figures for 1971 and 1972 were submitted as estimates.

Table 2. Male population of Federal and State institutions at end of year, 1971, 1972, and 1973 and percent change, by region and State

| Region and State                  | Total prisoners in custody |          |          | Percent change       |                      |                      |

NOTE: The prison population consists of all prisoners who have been sentenced as adults or youthful offenders and whose maximum sentence length is a year and a day or longer. Beginning in 1972, this definition was adopted by the Law Enforcement Assistance Administration and the Bureau of the Census for use in compiling statistics for the National Prisoner Statistics (NPS) program.

<sup>a</sup>Figures on the number of prisoners for 1971, 1972, and 1973 were submitted as estimates.

<sup>b</sup>For the years 1971 and 1972, the prisoner totals for Vermont included a sizable proportion of inmates with a maximum sentence length of less than a year and a day; however, an estimate of the numbers involved could not be provided.

<sup>c</sup>For the years 1971, 1972, and 1973, the prisoner totals submitted by the following States included a small proportion of inmates whose maximum sentence length was less than a year and a day: Colorado (est. 5%), Maryland (est. 6%), Massachusetts (est. 5%), Oregon (est. 2%).

<sup>d</sup>Figures for 1973 were submitted as estimates.

<sup>e</sup>Figures on the number of prisoners are for end of fiscal years 1972, 1973, and 1974.

<sup>f</sup>Figures for 1971 and 1972 were submitted as estimates.

Table 3. Female population of Federal and State institutions at end of year, 1971, 1972, and 1973 and percent change, by region and State

| Hawaii              | 3                          | 6        | 2        | 100.0                | -66.7                | -33.3                |

NOTE: The prison population consists of all prisoners who have been sentenced as adults or youthful offenders and whose maximum sentence length is a year and a day or longer. Beginning in 1972, this definition was adopted by the Law Enforcement Assistance Administration and the Bureau of the Census for use in compiling statistics for the National Prisoner Statistics (NPS) program.

NA Not applicable.

<sup>a</sup>For each of the years 1971, 1972, and 1973, the Federal prisoner totals included an estimated 35 female prisoners transferred from the District of Columbia to a Federal institution. These female prisoners were not included in the prisoner totals submitted by the District of Columbia.

<sup>b</sup>Figures on the number of prisoners for 1971, 1972, and 1973 were submitted as estimates.

<sup>c</sup>For the years 1971 and 1972, the prisoner totals for Vermont included a sizable proportion of inmates with a maximum sentence length of less than a year and a day; however, an estimate of the numbers involved could not be provided.

<sup>d</sup>For the years 1971, 1972, and 1973, the prisoner totals submitted by the following States included a small proportion of inmates whose maximum sentence length was less than a year and a day: Colorado (est. 5%), Maryland (est. 6%), Massachusetts (est. 5%), Oregon (est. 2%).

<sup>e</sup>Figures for 1973 were submitted as estimates.

<sup>f</sup>Figures on the number of prisoners are for end of fiscal years 1972, 1973, and 1974.

<sup>g</sup>Figures for 1971 and 1972 were submitted as estimates.

NOTE: The prison population consists of all prisoners who have been sentenced as adults or youthful offenders and whose maximum sentence length is a year and a day or longer. Beginning in 1972, this definition was adopted by the Law Enforcement Assistance Administration and the Bureau of the Census for use in compiling statistics for the National Prisoner Statistics (NPS) program. In recognition of the fact that some inmates were involved in more than one prisoner movement transaction, all figures represent the number of admission transactions and not the actual number of individual prisoners who were involved in such movement transactions.

NA Not available. Totals are for known data only.

<sup>a</sup>Figures for 1972 and 1973 were submitted as estimates.

<sup>b</sup>Because the yearend prison population counts submitted to NPS program authorities by Colorado, Maryland, and Massachusetts included some prisoners with a maximum sentence length of less than a year and a day, it should be assumed that a proportion of such prisoners is included in the present table.

<sup>c</sup>Figures are for fiscal years 1973 and 1974.

<sup>d</sup>Figures for 1972 were submitted as estimates.

<sup>e</sup>Figures for 1973 were submitted as estimates.

NOTE: The prison population consists of all prisoners who have been sentenced as adults or youthful offenders and whose maximum sentence length is a year and a day or longer. Beginning in 1972, this definition was adopted by the Law Enforcement Assistance Administration and the Bureau of the Census for use in compiling statistics for the National Prisoner Statistics (NPS) program. In recognition of the fact that some inmates were involved in more than one prisoner movement transaction, all figures represent the number of admission transactions and not the actual number of individual prisoners who were involved in such movement transactions.

NA Not available. Totals are for known data only.

<sup>a</sup>Figures for 1972 and 1973 were submitted as estimates.

<sup>b</sup>Because the yearend prison population counts submitted to NPS program authorities by Colorado, Maryland, and Massachusetts included some prisoners with a maximum sentence length of less than a year and a day, it should be assumed that a proportion of such prisoners is included in the present table.

<sup>c</sup>Figures are for fiscal years 1973 and 1974.

<sup>d</sup>Figures for 1972 were submitted as estimates.

NOTE: The prison population consists of all prisoners who have been sentenced as adults or youthful offenders and whose maximum sentence length is a year and a day or longer. Beginning in 1972, this definition was adopted by the Law Enforcement Assistance Administration and the Bureau of the Census for use in compiling statistics for the National Prisoner Statistics (NPS) program. In recognition of the fact that some inmates were involved in more than one prisoner movement transaction, all figures represent the number of departure transactions and not the actual number of individual prisoners who were involved in such movement transactions.

NA Not available. Totals are for known data only.

<sup>a</sup>Figures for 1972 and 1973 were submitted as estimates.

<sup>b</sup>Because the yearend prison population counts submitted to NPS program authorities by Colorado, Maryland, and Massachusetts included some prisoners with a maximum sentence length of less than a year and a day, it should be assumed that a proportion of such prisoners is included in the present table.

<sup>c</sup>For both of the years 1972 and 1973, the totals submitted by New York on the number of unconditional releases included a small proportion of departure transactions which represented prisoners who were released from the State correctional system for the purpose of appealing their cases. The outcomes of these appeals ultimately determined whether these prisoners should or should not have been included in the unconditional release category, although an estimate of the number of inmates who were not released unconditionally could not be provided.

<sup>d</sup>Figures on releases are subject to adjustment pending outcome of discussion with State authorities on the interpretation of details of the standard NPS definitions.

<sup>e</sup>For both of the years 1972 and 1973, the figures submitted by Ohio on the number of conditional releases included a small proportion of unconditional releases, although an estimate of the numbers involved could not be provided.

<sup>f</sup>Figures are for fiscal years 1973 and 1974.

<sup>g</sup>Figures for 1972 were submitted as estimates.

<sup>h</sup>Figures for 1973 were submitted as estimates.

NOTE: The prison population consists of all prisoners who have been sentenced as adults or youthful offenders and whose maximum sentence length is a year and a day or longer. Beginning in 1972, this definition was adopted by the Law Enforcement Assistance Administration and the Bureau of the Census for use in compiling statistics for the National Prisoner Statistics (NPS) program. In recognition of the fact that some inmates were involved in more than one prisoner movement transaction, all figures represent the number of departure transactions and not the actual number of individual prisoners who were involved in such movement transactions.

NA Not available. Totals are for known data only.

<sup>a</sup>Figures for 1972 and 1973 were submitted as estimates.

<sup>b</sup>Because the yearend prison population counts submitted to NPS program authorities by Colorado, Maryland, and Massachusetts included some prisoners with a maximum sentence length of less than a year and a day, it should be assumed that a proportion of such prisoners is included in the present table.

<sup>c</sup>For both of the years 1972 and 1973, the totals submitted by New York on the number of unconditional releases included a small proportion of departure transactions which represented prisoners who were released from the State correctional system for the purpose of appealing their cases. The outcomes of these appeals ultimately determined whether these prisoners should or should not have been included in the unconditional release category, although an estimate of the number of inmates who were not released unconditionally could not be provided.

<sup>d</sup>Figures on releases are subject to adjustment pending outcome of discussion with State authorities on the interpretation of details of the standard NPS definitions.

<sup>e</sup>For both of the years 1972 and 1973, the figures submitted by Ohio on the number of conditional releases included a small proportion of unconditional releases, although an estimate of the numbers involved could not be provided.

<sup>f</sup>Figures are for fiscal years 1973 and 1974.

<sup>g</sup>Figures for 1972 were submitted as estimates.

<sup>h</sup>Figures for 1973 were submitted as estimates.

NOTE: The prison population consists of all prisoners who have been sentenced as adults or youthful offenders and whose maximum sentence length is a year and a day or longer. Beginning in 1972, this definition was adopted by the Law Enforcement Assistance Administration and the Bureau of the Census for use in compiling statistics for the National Prisoner Statistics (NPS) program. In recognition of the fact that some inmates were involved in more than one prisoner movement transaction, all figures represent the number of departure transactions and not the actual number of individual prisoners who were involved in such movement transactions.

NA Not available. Totals are for known data only.

<sup>a</sup>Figures for 1972 and 1973 were submitted as estimates.

<sup>b</sup>Because the yearend prison population counts submitted to NPS program authorities by Colorado, Maryland, and Massachusetts included some prisoners with a maximum sentence length of less than a year and a day, it should be assumed that a proportion of such prisoners is included in the present table.

<sup>c</sup>For both of the years 1972 and 1973, the totals submitted by New York on the number of unconditional releases included a small proportion of departure transactions which represented prisoners who were released from the State correctional system for the purpose of appealing their cases. The outcomes of these appeals ultimately determined whether these prisoners should or should not have been included in the unconditional release category, although an estimate of the number of inmates who were not released unconditionally could not be provided.

<sup>d</sup>Figures on releases are subject to adjustment pending outcome of discussion with State authorities on the interpretation of details of the standard NPS definitions.

<sup>e</sup>For both of the years 1972 and 1973, the figures submitted by Ohio on the number of conditional releases included a small proportion of unconditional releases, although an estimate of the numbers involved could not be provided.

<sup>f</sup>Figures are for fiscal years 1973 and 1974.

<sup>g</sup>Figures for 1972 were submitted as estimates.

# APPENDIX II

REPORT PERIOD COVERED: January 1, 1973 through December 31, 1973 O.M.B. No. 41-R2777; Approval Expires December 31, 1974
