INTRODUCTION

The major purpose of the Florida Parole and Probation Commission is the resocialization of offenders. In order to help achieve this goal clients must report periodically for consultation to Parole and Probation Officers. While it is known that this consultation provides assistance and guidance in the resocialization process, it is also recognized that other forms of treatment, found in the local communities, are often necessary. The Commission finds these Community Services helpful in the resocialization process, although they are considered supplemental forms of treatment.

During the month of November, 1974, the Florida Parole and Probation Commission conducted a statewide survey to determine the number of parolees and probationers in rehabilitative programs or treatment modalities concurrent with their reporting required by the Commission. The treatment modalities were categorized into five major groups: Alcohol Programs, Drug Programs, Education Programs, Psychological/Psychiatric Programs, and Other Programs.

The survey forms were mailed in late October and were to be completed by every officer with a caseload, based on the November caseload.

The report: STATEWIDE SURVEY: COMMUNITY TREATMENT

MODALITIES presents the findings of the survey for each of the Commission's ten Areas. (Copies of the Statewide Survey may be obtained from the Florida Parole and Probation Commission, Division of Planning and Evaluation.)

The present report consolidates the data for the Drug Programs.

Two points must be remembered when reading this report: First, the survey data presented is representative of the November, 1974 caseload only. Secondly, it should be realized that clients participate in Community Treatment Programs usually within their first year of supervision; therefore, it is plausible that a higher percentage of the overall caseload have, at one time, been involved in this program.

DRUG PROGRAMS

The Statewide Survey: Community Treatment Modalities, March 1975, by the Florida Parole and Probation Commission, Division of Planning and Evaluation, presented information concerning the participation, by the clients under the supervision of the Commission, in Community Treatment Programs. The major program categories were: Alcohol, Education, Drug, Psychological/Psychiatric, and Other. The data on program participation was presented in Area Chapters in the Survey. (The state had been subdivided into 10 Areas for the purposes of the Commission.) This report will consolidate the data on Drug Program participants.*

The Drug program participants constituted 10.3% (1554) of the total participating clients in the state during November 1974. The clients in the Drug programs were grouped into three classifications: Probation Misdemeanants (P. Misdemeanants); Probation Felons (P. Felons); and a Parole, Mandatory Conditional Release (MCR), and Work Release (W/R) grouping. The largest number of participants in the Drug Programs were P. Felons, 67.8% (1053); with P. Misdemeanants second, 23.6% (367); and the Parole, MCR, W/R grouping last, 8.6% (134). (See Chart 1, page 2) Since only two of the eight narcotics or drug offenses are misdemeanors, the number of P. Misdemeanants in the caseload convicted of narcotics or drug offenses would be small compared to the P. Felons.* The distribution of drug offenders as of

^{*}Further information on the Survey techniques, method of data collection, and findings may be found in the Statewide Survey: Community Treatment Modalities.

^{**}See Appendix C for a listing of the narcotics or drug offenses.

September, 1974, was 19.9% (1801) Probation Misdemeanants; 75.1% (6820) Probation Felons; and 5% (457) Parole, MCR, and W/R.* This would explain the weighting of P. Felons in the drug programs.

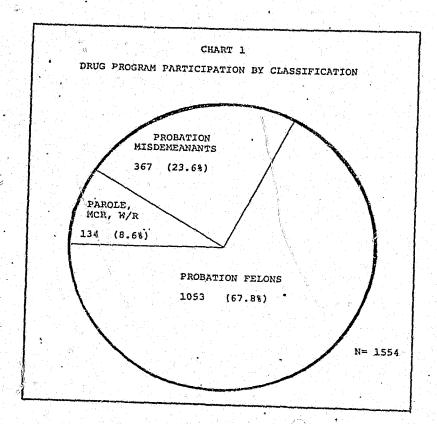

Table 1 ranks the percentage of client participation for each Area. (See Table 1, page 3)

Table 2 shows the relationship between the classifications and the Areas. (See Table 2, page 3)

^{*}Freq. - Frequency ---

^{*}Florida Parole and Probation Commission figures from correspondence between the Chairman, Ray Howard, Florida Parole and Probation Commission and Mr. G. H. Sheldon, Representative, 69th District, March 19, 1975.

In every Area, except Area I, P. Felons ranked first (largest number of participants). Area I has a larger number of P. Misdemeanants than P. Felons. The classifications are ranked within each Area in Table 3.

TABLE 3

DRUG PROGRAM PARTICIPANTS:

CLASSIFICATIONS RANKED WITHIN AREAS

AREA		CLASSIFICATION	
	P. MISDEMEANANTS	P. FELONS	PAROLE, MCR, W/R
I	1	2	3
ıı	3	1	2
III	2	1 1	3
īv	2	1	3
v	2	1	3
VI	2	1	3
VII	3	1	2
VIII	2	1	. 3
ıx	. 2	1	3
x	3	1	2.

Rankings are based on percentage participation of each classification within an Area.

An average rank may be found by summing the ranks within each classification, then dividing by the number of Areas. The average ranks are:

P. Misdemeanants	2.2
P. Felons	1.1
Parole, MCR, W/R	2.7

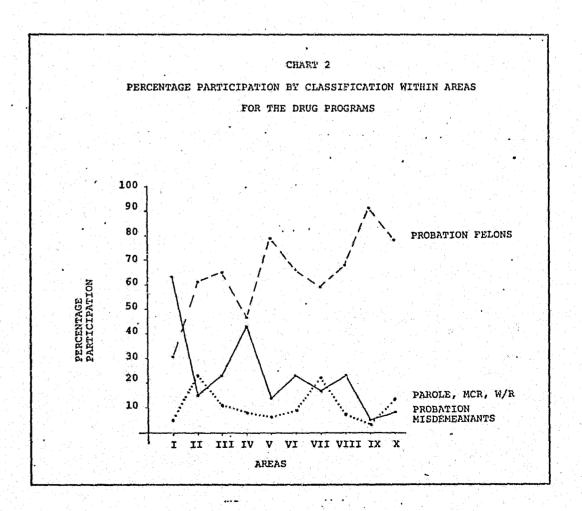

This same ordering may be found if the average percentage participation is computed.

P. Misdemeanants	23.75%
P. Felons	65.03%
Parole, MCR, W/R	11.22%

(Average percentage participation is found by, summing the percentages in Table 2 within a classification, then dividing by the number of Areas - 10).

Both the average ranks and the average percentage participation are representative of the distribution of Drug offenders under supervision by the Florida Parole and Probation Commission.

Chart 2 pictorally presents the data of Table 2.

EVALUATION CONTROL CHARTS

The following charts illustrate the Area data in the form of Evaluation Control Charts. Evaluation Control Charts (ECC) are graphic representations of numeric values. The average or mean of those values is indicated along with the ranges or control limits about the mean on each ECC. The control limits are related to the amount of dispersion of the data involved, and are usually determined statistically. Any data points falling between the control limits depicts an acceptable variation from the mean. However, whenever a data point falls outside these control limits, a unique situation or problem exists which may require further investigation and/or explanation.

The data for the Areas is presented as the Level of Participation in a particular program within a Classification (Probation Misdemeanant; Probation Felon; and the Parole, Mandatory Conditional Release (MCR), and Work Release (W/R) grouping). These data are presented as a percentage of participation.

The mean or State Average Line is indicated along with two control limits. The first control limit extends from -ls to +ls (s = standard deviation). This range is described by the Zone Descriptors as Below Average Participation Zone and Above Average Participation Zone.

The second set of control limits extends from -2s to +2s. In Zone Descriptor terms this would include Low Level, Below Average, Above Average and High Level Participation Zones.

Any Area points which fall in the Minimal Level or the Very High Level Participation Zones would be considered an unusual level of participation for that program and classification. The study for which these data were collected asked only for descriptive information on client participation; therefore, why an Area has an unusual level of participation is presently not known, further study will be necessary.
