## EXECUTIVE SUMMARY

This project was funded by Grant #75-TN-99-0002 issued by the Office of Technology Transfer, National Institute of Law Enforcement and Criminal Justice, LEAA. The purpose was to develop and present an introductory training seminar on the topic of Crime Analysis. The instruction was presented nationally in each of the ten LEAA regions. Nearly 400 management level law enforcement practitioners and planners participated.

During the three day sessions, the attendees were given an overview of the uses and benefits of crime analysis, theory and methods of conducting analysis, practical exercises in analysis, considerations and an exercise in developing a unit within an agency, evaluation needs, exposure to an operative unit, etc. The course was designed to instill sufficient understanding and interest to cause the participants to return to their own agency with the desire of creating or improving a crime analysis component.

The attendees length of experience in law enforcement varied, however, 99% of them had been assigned to a crime analysis function for five years or less and 50% of them for one year or less. This demonstrates the lack of the use of and training in crime analysis in law enforcement agencies nationally. The formalization of an organized, systematic and effective analysis component or process in law enforcement is relatively new.

Responses to the training were very positive. Evaluation forms completed by the students rating eight different factors of the course resulted in a mean average of 93% rating the course as good to excellent. The majority of comments revealed that the participants felt the course material was of value, that it was presented at an appropriate level and maintained their interest - that the instructors were good to excellent - that the course was not long enough - and that additional training should be made available.

Participation in this project has shown that crime analysis as a structured comprehensive process is on a relative basis just beginning to be utilized by law enforcement practitioners and/or criminal justice planners. It is seen as having the potential to be an extremely effective tool in the better utilization of manpower and resources, in the development of new programs and techniques and to evaluate the effectiveness of programs, etc. It is concluded that insufficient training and support exists and it is, therefore, strongly recommended that additional opportunities for training and technical assistance be made readily available in order to assist local agencies in learning and utilizing crime analysis techniques.

- B Samples of Student Evaluation Responses

## I INTRODUCTION

LEAA Grant #75-TN-99-0002 was made to CCTRF to conduct a Crime Analysis Training Session in each of the ten LEAA regional areas. It prescribed the offering of a three-day course for approximately 400 law enforcement personnel to be selected from municipal and state law enforcement agencies, and state and regional planning agencies. The offering of this training program was a part of the exemplary programs offered under the Office of Technology Transfer of the National Institute of Law Enforcement and Criminal Justice of LEAA. It came in part as a result of a previous grant to CCTRF to develop a handbook regarding the techniques and organization of crime analysis. This publication known as the "Police Crime Analysis Unit Handbook", is a part of the prescriptive package program. It was distributed nationally in 1973 by LEAA and was received by the law enforcement community as an extremely worthwhile publication.

Recognizing that there was little, if any, other material available regarding the theory and practice of crime analysis nor any training available on a national level, the current grant was developed. It was recognized that the techniques involved in crime analysis, if put into application by departments, would allow them to maximize the utilization of their manpower resources and be more successful in their routine and strategical deployment. Additionally, it is a very useful tool for administration and planning. The grant provided for the development of the curriculum and the subsequent presentation of the ten courses in each LEAA regional area.

## II OBJECTIVES

In developing the course content, it was kept in mind that the goal of the grant was to provide instruction to mid-management law enforcement personnel, and to agencies which would be most inclined to immediately benefit from the information obtained from the training. It also was recognized that there would be considerable difficulty in addressing the distinct needs of the various attendees. There would be representatives from departments of various sizes, varying degrees of sophistication from different parts of the country, people who were experienced analysts and people who essentially knew nothing of crime analysis. Because of this, the course would have to be somewhat general in nature and varied in content in an effort to meet those particular needs of the various attendees.

It was determined that it would be inappropriate to attempt to train the participants to be expert analysts. The short amount of time alone did not make this feasible. Additionally, there was the need to address the issue of what is crime analysis, what does it do, how is it conducted, how is it organized within an agency, etc. Consequently, a three-day course was

developed which included elements covering the following:

- an overview of crime analysis
- methods of data collection
- analysis and correlation
- the purposes of crime analysis
- the dissemination of the information developed through the analysis process
- organizational considerations
- the need for evaluation
- practical exercises
- practical exercises in the development of a crime analysis unit design
- discussions from local experts who were involved in operational crime analysis units.

### III GENERAL DISCUSSION

The material for the course was prepared by mid January 1975. Included as Appendix A are the workbook and other materials prepared for the students. These, and the Crime Analysis Unit Handbook previously mentioned, were provided to each student. Exhibit #1, the course outline describes the specific content in greater detail. As the course developed, it was determined that three of the most useful portions of the course were (1) the analytical techniques, (2) the actual involvement in practical exercises on crime analysis, and (3) the operational discussions and presentations provided by local experts.

It appeared prudent that the materials and instructors be tested prior to initiating the series of 10 courses prescribed within the grant. Consequently, a trial or pilot session was held at Rio Hondo Junior College in Whittier, California at their Criminal Justice Institute. This course was held on January 27th and 28th, 1975 and invited as participants were fourteen members of law enforcement agencies from within the Los Angeles area. They were not advised that the course was a pilot course, but only that the opportunity was available for them to attend and participate in the training. Additionally, a representative from the California Department of Justice Advanced Training Center and the California Peace Officers Standards and Training Agencies were invited to serve as independent evaluators. An evaluation form was prepared and the participants were asked to complete it as the course progresses in order to assess the quality of instruction, the course content, the appropriateness of material, etc. This same questionnaire or evaluation form or a version thereof, was used in each of the sessions, two sample summaries of the responses from those evaluations are contained in this report as Appendix B.

The detailed statistical analysis of all evaluation documents are included as Exhibit #2.

Also attending the pilot session was a law enforcement specialist from LEAA, Region IX, who previously had been involved in the development of the Los Angeles Police Department "PATRICK" System, a sophisticated computerized crime analysis effort for that city. A lieutenant from the Sacramento Police Department, originally involved in the development of the prescriptive package, attended as an evaluator and guest speaker.

Upon concluding the third day session, the students were advised that the course was a pilot session and were asked for candid comments as to their evaluation of the course. Based on those comments, the comments of the other four evaluators and the results of the anonymous questionnaires, it was concluded that with very minor changes, the proposed course curriculum would be received successfully and that it would be appropriate to begin the ten courses as scheduled.

Exhibit #3 lists the schedule and the location of each training session. It also lists the names and addresses of all actual attendees at each session. It was a normal practice for this contractor to make an advance visit with the regional representative of each LEAA office and frequently the State Planning Agency representatives as well. This was to provide them with an orientation as to what would be available in the course to solicit their comments, assistance and suggestions and to outline student selection procedures.

The selection of the individual participants was left to the LEAA regional office and the State Planning Agency representatives as they would be aware of the needs and priorities of the agencies within their area. Materials were prepared to assist the state planning agencies in the selection of the attendees, see Exhibit #4. In addition to local law enforcement representatives, it was thought appropriate that members of the state planning agencies participate so they would be able to provide assistance within their states regarding crime analysis subsequent to the training sessions. Student expenses, including travel and per diem were covered in the grant and reimbursed to the students by the contractor. Forms utilized for this purpose are shown as Exhibit #5

#### IV SEMINAR DISCUSSION

The first presentation in Kansas City, Missouri was well attended and received. The evaluations were very gratifying. The second presentation, conducted for Region XIII, was hampered by poor physical facilities and the fact that the entire session was videotaped by the Denver Police Department at the request of the regional office. This put additional pressure on the staff and lecturers and severely inhibited the participation by the students. In addition, this created a more cramped and confused classroom environment.

The third session conducted for Region III was hampered by a lack of students as a result of a failure of the state planning agencies to secure the students in accordance with the stated guidelines.

After conducting the first three sessions, discussions were held with the Office of Technology Transfer and it was concluded that several changes were in order. The wide diversity of assignments and backgrounds of the participants had been a problem evident in each session. It was decided that the guidelines for student selection would be modified to have participation from communities of 100,000 or more. In addition, it was decided that the people attending from the law enforcement agencies would be; (1) the individual who would have the authority within the agency to order the implementation of a crime analysis unit; and/or (2) the individual who would be the actual implementer. It was determined that people from the state planning agencies were appropriate. However, the number and assignment of those individuals should be closely observed and approved by the LEAA monitor in Washington as would be all of the attendees.

Because of the dissatisfaction with the performance of one of the consultants hired by the contractor, he was removed and his role within the training course was absorbed by contractor staff. The course content was modified to include an additional practical exercise. This was the development of a conceptual model of a crime analysis unit based on hypothetical information presented in the work regarding a law enforcement agency and the community known as "Target Town". (See Workbook)

The changes made in the course resulted in a more cohesive class group, having more similar backgrounds and interest and the modifications made with regards to the instructional staff improved the interest of the participants and the worth of the subject matter. Throughout the course, effort was focused on conducting the training sessions in an open-workshop atmosphere where free exchange took place, and the environment was not restricted solely to lectures. It is believed that this environment was effectively created during each session. Consequently, the specific needs of the students were more effectively addressed than if it had been a rigid and structured atmosphere. Likewise, the practical exercises that involved students in team efforts created a beneficial exchange among them, thus they were able to learn from one another and the various degrees of sophistication that they were bringing to the class, plus learning new techniques together in a practical application contributed greatly to student enthusiasm.

Attachment #6 lists the speakers which were secured from different agencies across the United States. These speakers who discussed their own on-going crime analysis operation, were selected in part on the recommendation of the regional office of LEAA, and in part

from sources known to the contractor. Each individual provided a distinct orientation and background and described a different structure and goal for his particular agency. However, it appears that without exception, each guest lecturer provided an appropriate addition to the course. This allowed the students to question someone, usually from within their own geographical area, as to the problems, successes and structure of their particular operation. It also allowed them to talk, firsthand, to someone whom they could later use as a local resource as they later developed their own crime analysis function within their home agency.

#### V EVALUATION

As was previously mentioned, evaluation and critique forms were requested from each participant and they were requested to be frank in their evaluations and encouraged to make comments regarding the positive portions of the course and also anything which they felt might need improvement. The summaries of those evaluations are contained in Appendix B and the analysis of them is contained in Attachment #2. On the basis of those evaluations, the various letters and comments received (see Attachment #7) and the comments of the students during and subsequent to the course, it is concluded that the project was more than successful.

It is recognized that the short duration of the course and the diversity of the attendees made it difficult to address the needs of all of those who attended. Without exception, however, it appeared that each student thought that his attendance was beneficial and the majority of the students indicated that they thought the material was presented on a practical level and not just theory which had no immediate application. Additionally, the majority believed that the length of the course should be extended and made available to more law enforcement personnel than provided for in the grant. Many comments were made to the effect that the information received in the course had prompted them to initiate the crime analysis process in their home agency. Others stated that they had received information which would allow them to improve their current operations. There were many requests from agencies to allow their staff to attend even at the expense of the agency. As an example, Topeka, Kansas Police Department sent one of their captains to the session in California and inquiries are still being received as to when the course will be made available in other areas.

Each attendee was requested to fill out an individual profile sheet providing us with information regarding himself and his agency. This is shown in the final report as Attachment #8. Not every student completed and returned the student profile sheet, however, the compilation of those received is shown as Attachment #9.

#### VI CONCLUSION AND RECOMMENDATION

As is evident from Attachment #9 and the obvious fact that, across the United States, only 400 participants had the opportunity to attend this course, the availability of the information has been only superficially disclosed. Based on those figures, the comments made

by the students (see Attachment #2) and the observed fact that there is very little organized information available regarding crime analysis (other than the prescriptive package and this particular course), it is concluded that additional efforts to provide assistance to local agencies in the area of crime analysis would be justified. The benefits to be obtained by an agency utilizing the techniques are obvious to LEAA and to progressive law enforcement organizations. It is the opinion of the Project Director and the contractor that the relatively small expenditure for this grant is a very appropriate type of expenditure by LEAA, and that compared to some other types of expenditures of a similar amount, the impact can be much greater.

It is recommended that consideration be given to developing some type of program which would provide additional training and orientation in crime analysis, its techniques, and application. This program should be routinely available for local agency participation, and there should be technical assistance available for the creation and development of crime analysis units within law enforcement agencies.

## SESSION NO. 1

Title: Class Introduction & Organization  
Description: Representatives from the regional LEAA office and the Project Staff will welcome the students to the Crime Analysis Unit program, describing LEAA's interests and role in such training. Each student will briefly introduce himself to the class. Basic matters regarding logistics will be cared for.

## SESSION NO. 2

Title: Course Overview  
Description: A general introduction to crime analysis will be presented including discussion of its utility; its input, processing and output requirements; and considerations in organizing and evaluating a Crime Analysis Unit.

## SESSION NO. 3

Title: Introduction to Basic Crime Analysis Techniques  
Description: Students will be introduced to simple, but practical crime analysis techniques; including descriptive statistics, map methods, data enrichment, M.O. analysis, resource management, ratio analysis and prediction techniques. This session will be a mix of lectures and in-class practexes.

## SESSION NO. 4

Title: Crime Analysis Unit Organizational Factors  
Description: Types and levels of skills required to meet the objectives of a Crime Analysis Unit will be discussed. Factors such as automation, sworn-unsworn personnel mixes and unit location with the sponsoring agency will be covered. Operational examples will be presented.

## SESSION NO. 5

Title: CAU Evaluation Techniques  
Description: The necessity and means for evaluating the operational effectiveness of a CAU will be discussed. Both the internal and external impact of the unit will be examined. Quantitative approaches to the evaluation of performance will be addressed.

SESSION NO 6

Title: Planning the Crime Analysis Unit  
Description: Teams will develop a conceptual model of a Crime Analysis Unit. Goals, agency size and structure, community, finances, etc. will be considered. The model will be developed from information on the hypothetical town and police department of "Target Town" contained in the workbook.

SESSION NO. 7

Title: Justifying A Crime Analysis Unit  
Description: Successful methods for "selling" a CAU to a parent organization will be discussed. Pertinent data and other considerations necessary to justify a CAU will be delineated. An operational unit will be used as the basis of this session.

SESSION NO. 8

Title: Summary  
Description: This session will provide a review of the major issues developed in furtherance of course objectives. Closing discussions, questions and answers and course critique will be elicited.

## ANALYSIS OF STUDENT EVALUATIONS

Each student was provided with and requested to complete an evaluation of the course (see workbook and Appendix B). The intent was to constantly monitor the appropriateness and effectiveness of the content and instructors of the course.

Two formats were used on the evaluation questionnaires. Found below is an outline of the questions and a summation of the responses.

FORMAT #1 - Used at Rio Hondo, California; Kansas City, Kansas; Park City, Utah and Alexandria, Virginia

1. Question - Was the course administration satisfactory?  
Responses - Yes 73      No 2
2. Question - Will the course material be of benefit?  
Responses - Useful 59      Limited 21      None 0
3. Question - Rate the instructors.  
Responses - Excellent 51%      Good 46%      Fair 2%      Needs Improve. 1%
4. Question - Rate the value of the material presented.  
Responses - Good 79%      Limited 20%      None 1%
5. Question - Rate the length of the course  
Responses - Long Enough 37%      Too Long 17%      Too Short 46%
6. Question - Rate the appropriateness of material and the level at which it was presented.  
Responses - Appropriate 87%      Not Appropriate 4%      Too Basic 9%
7. Question - Did the course hold your interest?  
Responses - Yes 94%      No 6%

The result from these questionnaires reflect very positively on the course. 97% of the respondents rated the instructors as good to excellent. 87% felt that the material was appropriate and presented at the correct level.

CRIME ANALYSIS COURSES COMPLETED1975

<u>LEAA REGION</u>	<u>DATE</u>	<u>SITE</u>
Pilot Course	Jan. 27-29	Rio Hondo College Whittier, CA
VII - Kansas City, MO	Mar. 17-19	Kansas City, Kansas
VIII - Denver	Apr. 7-9	Park City, Utah
III - Philadelphia	May 19-21	Alexandria, VA
IV - Atlanta	Jun 16-18	Atlanta, GA
VI - Dallas	Jun 19-21	Dallas, TX
X - Seattle	July 30-Aug. 1	Seattle, Wash.
V - Chicago	Aug. 4-6	Rosemont, Ill.
I - Boston	Aug. 25-27	Boston, Mass.
II - New York	Sept. 2-4	New York, N.Y.
IX - San Francisco	Oct. 28-30	Las Vegas, NV

FORMAT #2 - Used at Atlanta, Georgia; Dallas, Texas; Seattle, Washington; Las Vegas, Nevada; Boston, Massachusetts; Des Moines, Illinois; New York, New York

Rate the Following:

	Responses			
	Excellent	Good	Fair	Needs Improvement
Course Overview	57%	42%	.5%	.5%
Theory	64%	34%	2%	---
Practical Exercises	43%	47%	9%	1%
Organization Concepts - Exercise	29%	57%	12%	2%
Examples of Operative Units- Guest Speakers	45%	48%	5%	2%
Summary	30%	58%	9%	3%
Instructors	52%	42%	6%	---
Overall Course	47%	50%	2%	1%
Generally Satisfied with Course Administration?	Yes 99%		No 1%	

Of the eight factors evaluated in Format #2, a mean of 93% of the attendees gave a rating of good-excellent. 99% responded that they were satisfied with the course administration. Only 1% of the responses in either rating called for improvement. Considering the breadth of the factors rated, it is shown by the responses of the attendees that they overwhelmingly considered the course pertinent, of value and interestingly presented.

In addition to submitting the ratings summarized above, candid comments were requested. An effort was made to have the students identify what in particular they liked or disliked, what was most and least useful, etc. and to have them make suggestions for improvements. The comments most frequently made are paraphrased below:

1. Too short
2. Geared very well to practical application
3. Theoretical examples and actual exercises very good
4. Need follow on - another course on technical assistance
5. Instructors - interesting and qualified
6. Exposure to operational units excellent
7. Appreciated the presentation of various alternative methods which can be tailored to departments needs
8. Provided a greater understanding of crime analysis, its utility and applications

UNITED STATES DEPARTMENT OF JUSTICE  
LAW ENFORCEMENT ASSISTANCE ADMINISTRATION  
WASHINGTON, D.C. 20530

We are pleased to advise you that you have been one of forty people from your LEAA Region selected to be invited to attend a seminar on crime analysis to be held October 28, 29 & 30, 1975 in Las Vegas, Nevada.

The National Institute of Law Enforcement and Criminal Justice (NILECJ)--the research and demonstration arm of LEAA--and the LEAA Regional Office are co-sponsoring this program. The Crime Analysis Seminar will include the following components:

- The utility of crime analysis
- Basic techniques of crime analysis
- Crime analysis unit organization
- Considerations in attempting to develop a crime analysis unit

The intent of the course is to provide an orientation to what crime analysis really is, the advantages it can provide for an agency, some of the techniques utilized in the process, and considerations for establishing a unit in an organization.

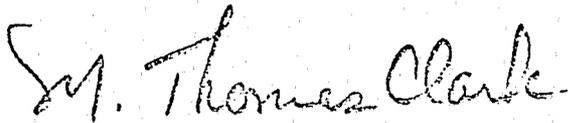

Expenses such as travel, lodging, per diem and course materials will be paid by the contractor (California Crime Technological Research Foundation) in accordance with the grant and federal reimbursement rates.

Please read the enclosed material and then complete and return both the letter indicating your desire to participate in the course, and the questionnaire. This should be done as soon as possible. Upon receipt of your letter requesting attendance at the course, we will include you in the class roster. If you will be unable to attend please immediately advise the contractor by phoning (916) 322-3220.

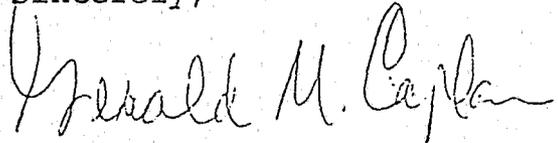

Please return the two forms promptly in the enclosed envelope to insure completion of proper arrangements and receipt of your materials.

We hope you will be able to attend the seminar.

M. THOMAS CLARK  
Regional Administrator  
San Francisco Region IX

Sincerely,

GERALD M. CAPLAN  
Director  
NILECJ

Mr. Bruce Bird

CRIME ANALYSIS UNIT SEMINAR  
FACT SHEET

Seminar Title: "Crime Analysis Unit Seminar"

Seminar Objectives: To encourage development in the use of crime analysis within law enforcement agencies and the use of the Crime Analysis Unit Handbook as a guide in achieving that objective.

- Develop a familiarity with the abilities and functions of a crime analysis unit
- Instill a desire to initiate or improve the crime analysis process in the home agency
- Provide knowledge of approaches to establishing a formal crime analysis unit where none exist

Seminar Content: The course is designed to provide law enforcement departments with an orientation to the process and techniques of crime analysis. It will demonstrate how to analyze in a logical systematic way, crime information which is normally already being collected. The utility will be shown for such analysis in the areas of crime prevention, suppression and prediction as well as in the apprehension of offenders, tactical deployment and management needs. The course is intended as a supplement to the Crime Analysis Unit Handbook used in conjunction with the course. It is generally conducted in the form of a seminar and will cover the following subjects:

- The utility of crime analysis
- Basic techniques of crime analysis
- Crime analysis unit organization
- Justification of a crime analysis unit within a law enforcement agency
- Considerations in attempting to develop a crime analysis unit

We have assembled a staff from the California Crime Technological Research Foundation and private consultants, actively engaged in the field of law enforcement, to present the seminar. Attendees are encouraged to take notes to supplement reference material which will be provided for the seminar. Questions and answers will be encouraged as the discussion leader progresses through his presentation. Practical

exercises and guest speakers will also be utilized.

Seminar Organization: The seminar is co-sponsored by the National Institute for Law Enforcement and Criminal Justice (LEAA) and the Regional Offices of the Law Enforcement Assistance Administration. It is conducted under an LEAA grant to the California Crime Technological Research Foundation.

1. Attendee Selection: Attendance is restricted to 40 law enforcement personnel from the LEAA Region. Agencies serving populations in excess of 100,000 are to be considered for candidates. The candidate should be (a) someone within the agency administration who would have the authority to determine whether or not to create a CAU; (b) the individual who would actually implement the creation and or operation of a crime analysis unit. Preferably both individuals could attend the seminar. Civilian employees meeting the above criteria are not to be excluded. Final determination of who shall attend will be made by LEAA Washington, D.C.
2. Training Costs: Expenses are covered by CCTRF according to the grant guidelines. Claim forms for reimbursement will be explained on the final day of each session. Upon receipt of claims for per diem and travel, return checks should be received by attendee within 10-15 days. Lodging sites and rates will be negotiated by CCTRF.
3. Dates & Time: The seminar will begin at 9:00 a.m. on \_\_\_\_\_ and conclude the afternoon of the third class day.

Location: \_\_\_\_\_  
\_\_\_\_\_

4. LEAA Region Contact: \_\_\_\_\_  
\_\_\_\_\_ Phone: \_\_\_\_\_

5. For further information regarding the course contact the Project Director (Bruce Bird) or Assistant Project Director (William Petersen) at the following address:

(916) 322-3220

TRAINEE SELECTION PROCESS AND PROGRAM INFORMATION  
FOR THE  
CRIME ANALYSIS TRAINING SEMINAR

The course is designed to assist law enforcement agencies in the collection, analysis and dissemination of crime information. Current programs in crime analysis vary from manual to computerized systems. The extent and sophistication of the analysis process varies as greatly as do the names and location of the units within a department which may be performing that function. In a three day seminar it is not possible to provide information that will be of significant value to large agencies having an operative and sophisticated crime analysis process. In the trainee selection process we should then be looking for those departments which probably do not now have a crime analysis unit and need more information, training and federal assistance in developing realistic and workable approaches to fit their individual needs. The following topics will be included in the seminar:

- The utility of crime analysis
- Basic techniques of crime analysis
- Crime analysis unit organization
- Justification of a crime analysis unit within a law enforcement agency
- Considerations in attempting to develop a crime analysis unit

SELECTING THE ATTENDEE

A total of 40 law enforcement personnel from the LEAA Region will be invited to attend the seminar. The State Planning Agency representatives are to nominate individuals fitting the criteria outlined below. These nominations will then be submitted to the Regional LEAA office representative for review by him, CCTRF and the LEAA Project Monitor from Washington, D.C. The final decision of who will be invited will rest with the Project Monitor.

Proposed participants should be selected from agencies serving populations of at least 100,000. The agency representative should be (a) someone who has the authority to make a policy decision of whether or not a crime analysis function will be created in the department, or (b) the person who would be charged with actual implementation and operation of the crime analysis process. If possible attendance by individuals of both descriptions would be advantageous.

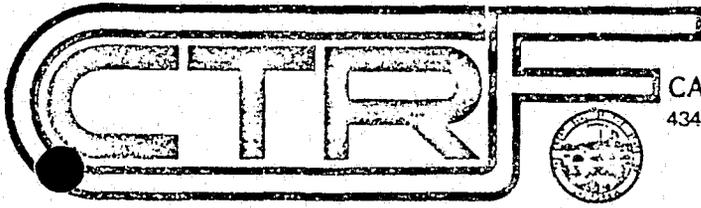

Your assistance is needed in selecting those people who would benefit most from attending the seminar. Your familiarity with local community problems makes your recommendations all important in the overall success of the program.

The enclosed form can be used to recommend \_\_\_\_\_ training participants to the Regional office. Because of the participants being limited to 40 people from the entire LEAA Region, we want to make sure we have no vacancies. To guard against this possibility we are requesting that you submit two nominees in addition to the \_\_\_\_\_ people who will be able to attend from your state. Should a vacancy occur the alternates may be invited to attend with little advance notice. Additional participants beyond the number allotted to you, will not be able to attend. Include those selections who would be expected to benefit most from the Crime Analysis Unit Seminar program.

Upon completing the training recommendation form return it to the Regional contact person for the Crime Analysis Unit Seminar at the following address:

PLEASE SUBMIT YOUR RECOMMENDATIONS TO THE REGIONAL OFFICE BY:

DOUGLAS E. ROUDABUSH, Executive Director

March 25, 1975

Dear Participant:

We are pleased that you will be attending the Crime Analysis Training Program.

Enclosed is a Handbook which you should familiarize yourself with and bring to the seminar.

Please read the other informational enclosures we have prepared for your assistance. If you have any questions, feel free to call either Pete Peterson or myself at (916) 322-3220.

We look forward to meeting you.

Very truly yours,

BRUCE BIRD  
Project Director  
Crime Analysis Training

CRIME ANALYSIS UNIT SEMINAR  
STUDENT INFORMATIONAL LETTER

ORGANIZATION

The sponsoring agency for the Crime Analysis Unit Seminar is the National Institute of Law Enforcement and Criminal Justice of the Law Enforcement Assistance Administration and the Regional LEAA office. The California Crime Technological Research Foundation is charged with conducting the class under Bruce Bird, the Project Manager. For any information or assistance relative to the seminar please contact Mr. Bird or Mr. Petersen by phoning (916) 322-3220.

LOCATION, DATES, AND TIMES

Date and Time: October 28-30, 1975 Beginning at 9 AM on October 28th.

Conference Site: Marina Hotel - Las Vegas, Nevada Room:                     

It is anticipated many participants will arrive the evening of Oct. 27th

Lodgings: Marina Hotel - 3805 Las Vegas Blvd. So. Phone No: (702) 739-1500

Submit enclosed reservation envelope and deposit.

Nearest Airport: McCarren - Las Vegas

Transportation: The Hotel provides no shuttle bus. Use cab or airport limousine and obtain receipt (approximately \$3.50). Hotel is at the Airport end of the "strip".

CONTENT OF COURSE

The course is designed to provide law enforcement departments with an orientation to the process and techniques of crime analysis. It will demonstrate how to utilize crime information, in a logical systematic way, to assist in crime prevention, suppression, and the apprehension of criminal offenders. It will also show applications for planning and management needs. It is intended as a supplement to the Crime Analysis Unit Handbook used in conjunction with the course. The course is generally conducted in the form of a seminar and will cover the following subjects:

- The utility of crime analysis
- Basic techniques of crime analysis
- Crime analysis unit organization
- Justification of a crime analysis unit within a law enforcement agency
- Considerations in attempting to develop a crime analysis unit

We have assembled a staff from the California Crime Technological Research Foundation and private consultants, actively engaged in the field of law enforcement, to present the seminar. Questions and answers will be encouraged as the discussion leader progresses through his presentation. Note taking is encouraged to supplement the lectures, handout materials and practical exercises. Please familiarize yourself with and bring to the session any materials mailed to you in advance.

#### TIME TABLE OF COURSE

The course consists of some twenty hours of materials, presented within a three-day period. The course will commence each day at 9:00 a.m. and will continue in fifty-minute periods until 12:00 noon. After the lunch break classes resume at 1:00 p.m. Each period will normally be followed by a 5 to 10 minute break.

#### EXPENSES

To insure prompt and proper reimbursement for travel expenses, we are including the following instructions.

If air transportation is used, we will pay normal coach fare. If you wish to drive your own vehicle you will be allowed 15¢ a mile, but not more than air coach fare for the same trip. For transportation to the hotel from the airport, please check both limousine and taxi rates and obtain the cheapest mode of transportation. If possible arrange to ride with others attending the training course. Obtain a receipt for your transportation from the airport to the hotel as well as retaining your airport vouchers.

There is no charge for training course tuition. Reimbursement for meals and lodging will be based on the rates defined in the grant but not to exceed \$40 per day. Each participant should have enough money to cover travel, lodging, meals and incidentals.

A group rate has been arranged, of \$21.00 + tax single or double occupancy. Each participant will be personally responsible for paying all motel/hotel charges including room, laundry, telephone, bar, travel, etc.

It is mandatory that all attendees except local residents, stay at the motel/hotel prescribed within this letter due to the class structure, funding arrangements and needed exchange of ideas among students.

Necessary claim forms will be explained and filled out on the final day of the seminar. Receipts for lodging, travel and any other than meals will be required to be submitted with your claim forms. Reimbursement checks will normally be mailed to the participant within 30 days after the close of the session.

AGREEMENT - CRIME ANALYSIS TRAINING

Name: \_\_\_\_\_ Address: \_\_\_\_\_

Position: \_\_\_\_\_

Agency: \_\_\_\_\_

Student shall attend a training session sponsored by the California Crime Technological Research Foundation (CCTRF). Student will attend without compensation. Enrollment will necessitate student's attendance and participation in a training session during the period April 21, 1975 through December 31, 1975.

For travel at the request of CCTRF, student will be paid per diem and reimbursed for transportation costs in accordance with California State Board of Control Rules. Student shall select the method of transportation which is the most economically practical and in the best interest of CCTRF. Expenses will be paid to student upon receipt of a signed Crime Analysis Training Expense Claim in triplicate. Payments under this agreement shall not in the aggregate exceed the sum of \$5,000. Student's signature and return of all three copies of this agreement will constitute acceptance. A copy will be returned when signed by CCTRF.

Sacramento, CA 95823

Dear Mr. Bird:

Sergeant John Richard and I recently attended the Crime Analysis Seminar at Rio Hondo Junior College. We found this to be an excellent seminar due to the very nature of the topic and practical uses within our Department.

We have not had a formal nor even an informal crime analysis unit due mainly to manpower shortages; however, since the seminar, we have temporarily solved the manpower problem and have implemented a basic crime analysis study on some very selected crimes. The manpower we are using is that of an Officer who needs a work experience project for college credit. We have several Officers in the Department in the same situation and will be able to continue with this very basic crime analysis study until, hopefully, we receive a full time Research Officer.

I strongly recommend that any Research Officer attend your Crime Analysis Seminar and will advise my Captain that the next Research man should attend this seminar.

I have attended numerous seminars in my police career and have found this to be one of the most beneficial seminars that disseminated some practical and useful information. I hope these seminars will be made available again in the near future.

Sincerely,

R. BRUCE RAMM, COORDINATOR  
CRIME PREVENTION BUREAU

Dear Bruce:

I would like to take this opportunity to tell you how much I enjoyed the recent seminar on Crime Analysis. Over the past twenty years I have had occasion to attend many seminars sponsored by many agencies including P.O.S.T. I found the Crime Analysis Seminar to be one of the most effective that I have attended, and I gained a great deal of useful knowledge to take back to my agency. Some of this knowledge will be reflected in procedure changes within our organization. I remain,

Sincerely,

Robert T. Reber, Captain

Dear Mr. Bird,

It was an enlightening experience to attend the Crime Patterns Analysis seminar at Rio Hondo College, Whittier, California. The subject matter was of vital interest to me. I was able to bring back to my Department some new ideas in the field of crime pattern analysis. This has renewed our interest in this field in terms of a more formalized process.

The material, particularly the manuals that were distributed for our use, were helpful in reassessing the crime pattern analysis process. They will be of assistance to us if we decide to establish an analysis unit within the Department.

Last, I would like to comment on the personnel that made up the student body, and the instructors. I expect to be associated with students of high professional calibre in law enforcement and this seminar was no exception. However, I think we all were truly seeking a new incite into the nagging crime problem and the quality of input from all members of the class was outstanding. Your instructional staff obviously was well qualified to discuss the subject matter. They brought with them expertise from outside the enforcement community that was helpful.

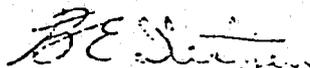

This seminar could be lengthened to give even more assistance to agencies. Perhaps as a result of your initial round of seminars a follow-up seminar might be considered for those agencies who

Page 2

have decided to establish crime pattern units and want to really get into the "nuts and bolts" of the operation.

Thank you again for a worthwhile presentation.

Sincerely yours,

B. E. Ilertsen

Dear Mr. Bird:

Just a note to congratulate you on the recent Crime Analysis Process Seminar presented by your group at the Rio Hondo College in Whittier.

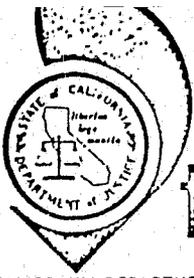

It is my feeling that as a pilot effort in presenting crime analysis information, it was a definite success. The information was not only timely for my agency but was entertaining and well paced for the assimilation of those attending.

Please keep us advised of future seminars you may conduct in this and related fields.

Sincerely,

James R. Corrigan, Lt.

Dear Mr. Roudabush,

I would like to take this opportunity to thank you for inviting me to attend a pilot course in Police Crime Analysis held in Whittier, California on January 27, through January 29, 1975.

The material covered in the seminar was very pointed and relevant to the times. Your staff provided worthwhile instruction and appeared to stimulate the students, evidenced by many classroom discussions.

For a pilot program I feel it was well coordinated, and a tribute to your staff.

Sincerely,

Harry Bradley  
Program Manager/Special Agent

Sacramento, California 95823

Dear Mr. Bird:

I would first like to congratulate your organization on the fine presentation during the seminar in Kansas City, March 16-19. The crime analysis handbook and the notebook from the seminar have already been proven invaluable to me. Presently, we are attempting to incorporate a few ideas we obtained from the seminar into our present program.

In your presentation we frequently skirted the issue that a Research and Planning unit is a necessary function of a police department. Possibly, since CCTRF is a research foundation, you would have some information in regard to establishing a research unit. I would appreciate any information you might have as well as any other organization who I could contact in reference to establishing such a unit. In the near future we are hoping to incorporate a Research and Planning unit within our department.

Thank you very much and again I feel that your presentations in Kansas City were excellent, especially to our department's needs.

Sincerely yours,

Gordon Loveland  
Chief of Police

Dear Bruce:

Enclosed please find my student expense claim and copy of my return airline ticket. In addition, the evaluation of the training program has been completed and is enclosed.

The program was interesting and I learned a great deal. As a result of the seminar, we are presently in the process of adding two separate crime data summaries to our monthly precinct crime reports. I hope to work with using several of the other concepts, such as moving averages, within the next few weeks.

Basically, I believe the program would be of more benefit to a smaller department. With this department's crime data needs serving a population of one million residents and our heavy commitment to computerized data storage, I don't believe the key sort method would be as valuable as it would for a smaller department. However, I do plan to try the key sort method on some experimental projects.

It was a pleasure meeting both you and the instructors for the program.

Sincerely,

  
Dottie Niederkorn  
Research Associate

Referred 4-30-75 TO  
LUNDQUIST (MORSE REP)  
MINN, MINN. SUGG. BLANK KEY  
SORT CARDS.

Dear Bruce:

First of all, I would like to state that I did enjoy the Crime Analysis Seminar recently held at Park City, Utah.

I am sure you had some good criticisms regarding portions of the program, but overall I found it very interesting and informative and I certainly do not, in any way, regret attending same.

I was especially intrigued with the 'punch-card system' - 'ice-pick' method utilized in assembling data on cases.

I would like to conduct some experiments on my own along these lines within this Department. We are, in fact, experiencing a rash of armed robberies recently, which I feel would be an excellent subject for a crime analysis approach.

Rather than investing a lot of money in designing our own card, for the present, I would, however, like to inquire whether or not I could, perhaps, purchase about Two Hundred (200) of your cards, one of your clippers and one of your needles, or ice picks.

This would give me the opportunity to try it out a bit in the Department on various problems and, if it proves successful, we can then print our own cards and implement it further.

I am, of course, most willing to pay you whatever the costs are for the material listed above.

If this is agreeable to you, I would appreciate receiving this material as soon as possible.

Thank you in advance for your cooperation.

Very truly yours,

Edwin R. Anderson

Dr. Sheldon I. Arenberg  
California Crime Technological  
Research Foundation  
4343 Williamsburgh Dr.  
Suite 100  
Sacramento, California 95823

Dear Dr. Arenberg:

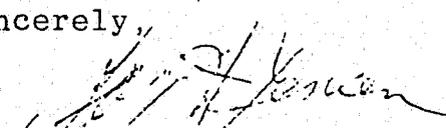

After returning from the Crime Analysis School in Seattle on July 30 - August 1, 1975, the Chief and I had an in-depth discussion on the material that was covered. He was very impressed with the information and literature I brought back and also with the way the school was conducted.

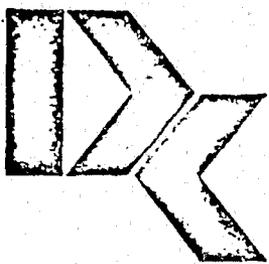

In order to aid us in our crime analysis efforts, we have started to plan and collect data on various crimes for use in the computer. We are going to use the system that Newton uses in Pueblo, only we're going to let the computer do a great deal of the work.

A geographic breakdown of the crimes, in quartermile sections on each beat, will be furnished daily to every man on the street. I certainly hope it works out.

The Chief also wants to set up a Criminal Intelligence File. As all reports come to my office for analysis, he felt the crime analysis and the gathering of criminal intelligence information could be incorporated. Inasmuch as I have had very little experience establishing a system for compiling this type of information, I would appreciate it if you could give me some advice on how to do it. Also, any samples of forms used by other agencies, or the ones you use for teaching, that you could send would be very helpful.

Dear Pete:

First, I'd like to express how much I enjoyed the recent crime analysis seminar conducted in Seattle by your organization. Not only did I enjoy it, I felt that I learned considerable amount of technique.

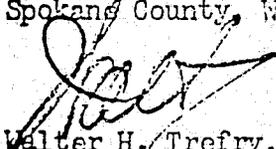

As I expressed to you during the symposium we are involved in a geo-coding process that will be implemented within our criminal information system. On the basis of this project, we are looking into any department that might be able to give us good information relative to crime analysis. I would appreciate it if you could advise me of any agencies that are within the area of Reno and Sacramento and that have a crime analysis unit worth looking at or a geo-coding process worth looking at.

I plan on being in Reno and Sacramento area the week of October 13 and will have anytime during that week to make a visitation.

Based on the presentation by Fred Newton the primary goal of the trip is to visit Pueblo, Colorado and Fred's shop. Needless to say, his presentation captivated the audience and was an outstanding illustration of how crime analysis can be a useful tool to the criminal justice system. I have reviewed the training material in Fred's presentation a couple of times since returning from the symposium and many of these ideas will be a part of our future program. Again, thank you for your cooperation relative to the questions of this letter and also thank you for an outstanding seminar. As you well know, frequently, we attend these types of seminars and come home with at least three days of boredom and not too terrible much information. It was a satisfying experience to have that process reversed.

Sincerely yours,

WILLIAM J. REILLY, Sheriff  
Spokane County, Washington

Dear Pete:

Please find enclosed the forms and vouchers required for reimbursement for expenses incurred at this week's crime analysis seminar in Las Vegas.

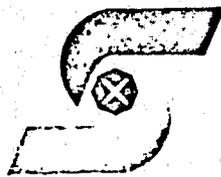

Again I wish to express my gratitude to you and your staff for conducting such an outstanding training session. I am sure all of the participants will benefit tremendously from their newly acquired knowledge.

Please stop by and visit us the next time you are in San Francisco.

Very truly yours,

SUBJECT: CRIME ANALYSIS UNIT SEMINAR

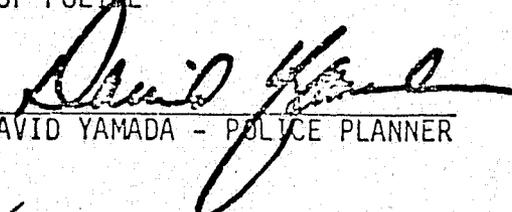

I recently attended the Crime Analysis Unit Seminar being conducted by the California Crime Technological Research Foundation under the auspices of NILECJ. I found the seminar very informative and well-run.

It is my hope that NILECJ plans to conduct further CAU seminars to enable more police agency personnel to learn about crime analysis. I know many agencies wanted to send more people, even at their own expense. Please advise us regarding any plans you may have for continuing this valuable project.

In addition, a state-of-the-art study on crime analysis systems would be highly useful. In March, 1974, the "Report on Latent Fingerprint Identification Systems" was published by Project SEARCH under the auspices of NILECJ. This type of report on crime analysis units throughout the United States would be useful for any police department needing detailed information on the experiences of other police departments which are using or have tried crime analysis as a formalized process for information handling.

Thank you for your consideration of the above.

J. A. CECCHETTI  
CHIEF OF POLICE

RESULTS OF STUDENT INFORMATION SHEET

The Student Information Sheet was mailed to each participant prior to his attendance at the training seminar in his local region. Below is the compilation of the responses received. Of the 325 questionnaires used in developing these figures, certain discrepancies may be noted on an individual item. If so, it is due to one of the following reasons (1) the question was not applicable to the respondent; (2) the question was left unanswered; (3) the answer was not clearly defined.

It is interesting to note that half of the participants had been involved in crime analysis for less than one year. The remainder had been involved for only five years or less. The largest single grouping showing length of employment in law enforcement was those employed 5 years or less (31%).

Sixty-five percent of the responses indicated that the participants' agency had a Crime Analysis Unit or similar operation. However, as the staff had an opportunity to acquaint themselves with the various students and their local operations, these responses were clarified. It was found that the majority of agencies had in fact only a capability to compile statistical reports, such as Uniform Crime Reports, monthly and annual tabulations, annual percent increases/decreases of specific crimes, etc. Comparitively few had an on-going process of any sophistication which provided the capability of projecting crime trends and locations, evaluated programs, provided support to detectives or patrol or developed information of significance for more effective manpower deployment or techniques.

A review of the number of attendees by states represented reveals inappropriate ratios. The selection of attendees was overseen by the LEAA Regional Offices. Factors which may have influenced the ratios are - locations of courses, responsiveness of State & Regional Planning Agencies, "political" influences, departments needs and interests, etc. The design and funding of the course, however, allowed for a very limited number of people having exposure to the training seminars.

1. Does your agency have a Crime Analysis Unit or a similar function currently operating? (Excluding State and Federal agencies)

	<u>Percentages</u>	<u>Responses</u>
Yes	65%	127
No	35%	69
Not applicable	-	117

# WELCOME

WE HOPE YOUR PARTICIPATION IN THE CRIME ANALYSIS PROCESS SEMINAR WILL BE A MEANINGFUL EXPERIENCE. WE REALIZE THAT ALL DEPARTMENTS HAVE USED CRIME ANALYSIS IN SOME FORM. OUR OBJECTIVE IS TO INTRODUCE CONCEPTS, TECHNIQUES AND OPERATIONAL FACTORS TO ASSIST YOU TO FORMALIZE THE PROCESS IN ORDER TO MAXIMIZE THE POLICE EFFORT. CRIME, BEING WHAT IT IS TODAY, REQUIRES US TO DIRECT OUR EFFORTS TOWARDS COST EFFECTIVE USE OF MANPOWER AND EQUIPMENT RELATING TO SPECIFIC LOCAL FACTORS. PLEASE FEEL FREE TO ASK QUESTIONS AND TAKE AN ACTIVE PART IN CLASS DISCUSSIONS.

of Justice.

# CALIFORNIA CRIME TECHNOLOGICAL RESEARCH FOUNDATION

## BACKGROUND AND GENERAL DESCRIPTION

In 1967 the California Crime Technological Research Foundation was created. Thus California became the first state to recognize the importance of technological research and development in combatting crime.

CCTRF's goals are to stimulate, encourage, conduct, evaluate, and sponsor research and development in the field of scientific and technological aids for the prevention and detection of crime, the apprehension and treatment of criminals, and the improvement of the administration of law enforcement in California.

While CCTRF's primary goal is to reduce crime in California, it is almost unlimited in its means to accomplish this goal, because of its nature as both a public corporation and a State agency.

The unique character gives CCTRF the following powers, to:

1. Hold, invest, reinvest and use real or personal property.
2. Accept contributions.
3. Enter into contracts with the Federal and State Governments, political subdivisions of the State, educational institutions, and private industry.
4. All the powers of a State agency. These powers permit CCTRF to attack any problem facing California's criminal justice system.

CCTRF is guided by a 20-member Board of Directors made up of leaders from all sectors of the State government, law enforcement, academic, business and industry, and the general public. The Board has the responsibility to guide CCTRF in its short term goals and develop its long term objectives. Members of the Board are appointed by the Governor with the advice and consent of the Senate.

CCTRF is nationally and internationally recognized as a forerunning agency in the field of advanced research and development for the criminal justice system. CCTRF's work in advanced laser technology for prison security, as well as construction site security; its work in building security; and its participation in Project SEARCH have been among some of the projects responsible for CCTRF's reputation.

CCTRF's efforts thus far have been responsible for an influx of federal dollars and national and international expertise into California. However, the potential of scientific and technological research and development to solve problems facing the criminal justice system has just barely been exploited. CCTRF's ultimate goal is to derive every possible benefit that science and technology has to offer criminal justice and thereby the people of California.

Sacramento, California 95823

## CRIME ANALYSIS TRAINING STAFF

### Project Director

BRUCE B. BIRD - As Criminal Justice Specialist for the State of California, he had managed and worked on other national projects such as the Interstate Organized Crime Index, the Offender Based State Corrections Information System and the Criminalistics Laboratory Information System, etc., prior to being assigned as the Project Director of the Crime Analysis Training Project.

Prior to working at CCTRF, Bruce was a Field Deputy for the California State Attorney General assigned to the Crime Prevention Division. He has a total of approximately 12 years experience in the Criminal Justice field including planning, consulting, and probation.

### Assistant Project Director

WILLIAM "PETE" PETERSEN - Prior to being hired as the Assistant Project Director, Pete managed five criminal intelligence courses for the Organized Crime and Criminal Intelligence Branch of the California Department of Justice. In addition to his involvement in the intelligence and training field, he has over 18 years experience with the California Highway Patrol.

### Lecturer

SHELDON I. ARENBERG - Shel possesses a Ph.D. in Applied Mathematics and has an interesting and varied background of involvement. In the past 6 years, however, he has concentrated his work in the Criminal Justice field and is recognized as an expert in the analysis, collection and utilization of crime information. He has experience in crime prevention and apprehension, organized crime control, management of riots and disorders and the design of information systems for law enforcement agencies.

In addition to working for CCTRF he has served as a consultant and instructor for universities, industry, governmental agencies and private consultant firms.

# CRIME ANALYSIS SEMINAR

## SESSION NO. 1

Title: Class Introduction & Organization  
Description: Representatives from the regional LEAA office and the Project Staff will welcome the students to the Crime Analysis Unit program, describing LEAA's interests and role in such training. Each student will briefly introduce himself to the class. Basic matters regarding logistics will be cared for.

## SESSION NO. 2

Title: Course Overview  
Description: A general introduction to crime analysis will be presented including discussion of its utility; its input, processing and output requirements; and considerations in organizing and evaluating a Crime Analysis Unit.

## SESSION NO. 3

Title: Introduction to Basic Crime Analysis Techniques  
Description: Students will be introduced to simple, but practical crime analysis techniques; including descriptive statistics, map methods, data enrichment, M.O. analysis, resource management, ratio analysis and prediction techniques. This session will be a mix of lectures and in-class practexes.

## SESSION NO. 4

Title: Crime Analysis Unit Organizational Factors  
Description: Types and levels of skills required to meet the objectives of a Crime Analysis Unit will be discussed. Factors such as automation, sworn-unsworn personnel mixes and unit location with the sponsoring agency will be covered. Operational examples will be presented.

## SESSION NO. 5

Title: CAU Evaluation Techniques  
Description: The necessity and means for evaluating the operational effectiveness of a CAU will be discussed. Both the internal and external impact of the unit will be examined. Quantitative approaches to the evaluation of performance will be addressed.

SESSION NO 6

Title: Planning the Crime Analysis Unit  
Description: Teams will develop a conceptual model of a Crime Analysis Unit. Goals, agency size and structure, community, finances, etc. will be considered. The model will be developed from information on the hypothetical town and police department of "Target Town" contained in the workbook.

SESSION NO. 7

Title: Justifying A Crime Analysis Unit  
Description: Successful methods for "selling" a CAU to a parent organization will be discussed. Pertinent data and other considerations necessary to justify a CAU will be delineated. An operational unit will be used as the basis of this session.

SESSION NO. 8

Title: Summary  
Description: This session will provide a review of the major issues developed in furtherance of course objectives. Closing discussions, questions and answers and course critique will be elicited.

INTRODUCTION TO CRIME ANALYSIS

CRIME ANALYSIS: A FORMAL DEFINITION

Crime analysis is a set of systematic analytical processes directed towards predicting criminal trends (in both individual and aggregate situations) for the purpose of reducing crime in a cost - effective manner.

## CRIME ANALYSIS: BASIC APPLICATIONS

- Increase the number of cases cleared by arrest
- Provide investigative leads to detectives
- Improve operational data for patrol
- Furnish support data to public awareness and involvement programs
- Supply law enforcement related data to urban planning, building permits and codes, transportation systems, construction, etc.
- Identify evolving or existent crime patterns
- Yield substantive data for effectiveness measures of specific programs and/or agency's policies and/or procedures
- Provide supporting data for recommended crime control programs
- Furnish trend data for law enforcement planning, targeting, budgeting, and resource allocation

### CRIME ANALYSIS: THE ELEMENTS

- Data Collection - the gathering of specified raw data including, but not limited to, crime reports and known offenders
- Data Collation - the indexing, sorting and storage of raw data to support direct retrieval and data analysis
- Data Analysis - various data processes and organizational schemes to identify patterns
- Recommendations and Dissemination - advice founded on the data analysis and the distribution of same, either written or verbally, within the parent and other organizations on a timely basis
- Implementation - the process of putting the recommendations into operation
- Evaluation - the detailed assessment of change resulting from the implementation and identification of the controllable factors causing the change

CRIME ANALYSIS: REASONS FOR A FORMAL PROCESS

- Increases objectivity
- Enables better coordination between operational units
- Centralizes analytic function with assigned responsibility
- Facilitates intra & inter-agency communication
- Reduces time required to determine patterns
- Improves capability to identify trends

**CONTINUED**

**1 OF 3**

## DATA COLLECTION

A limited list of sources of data\*

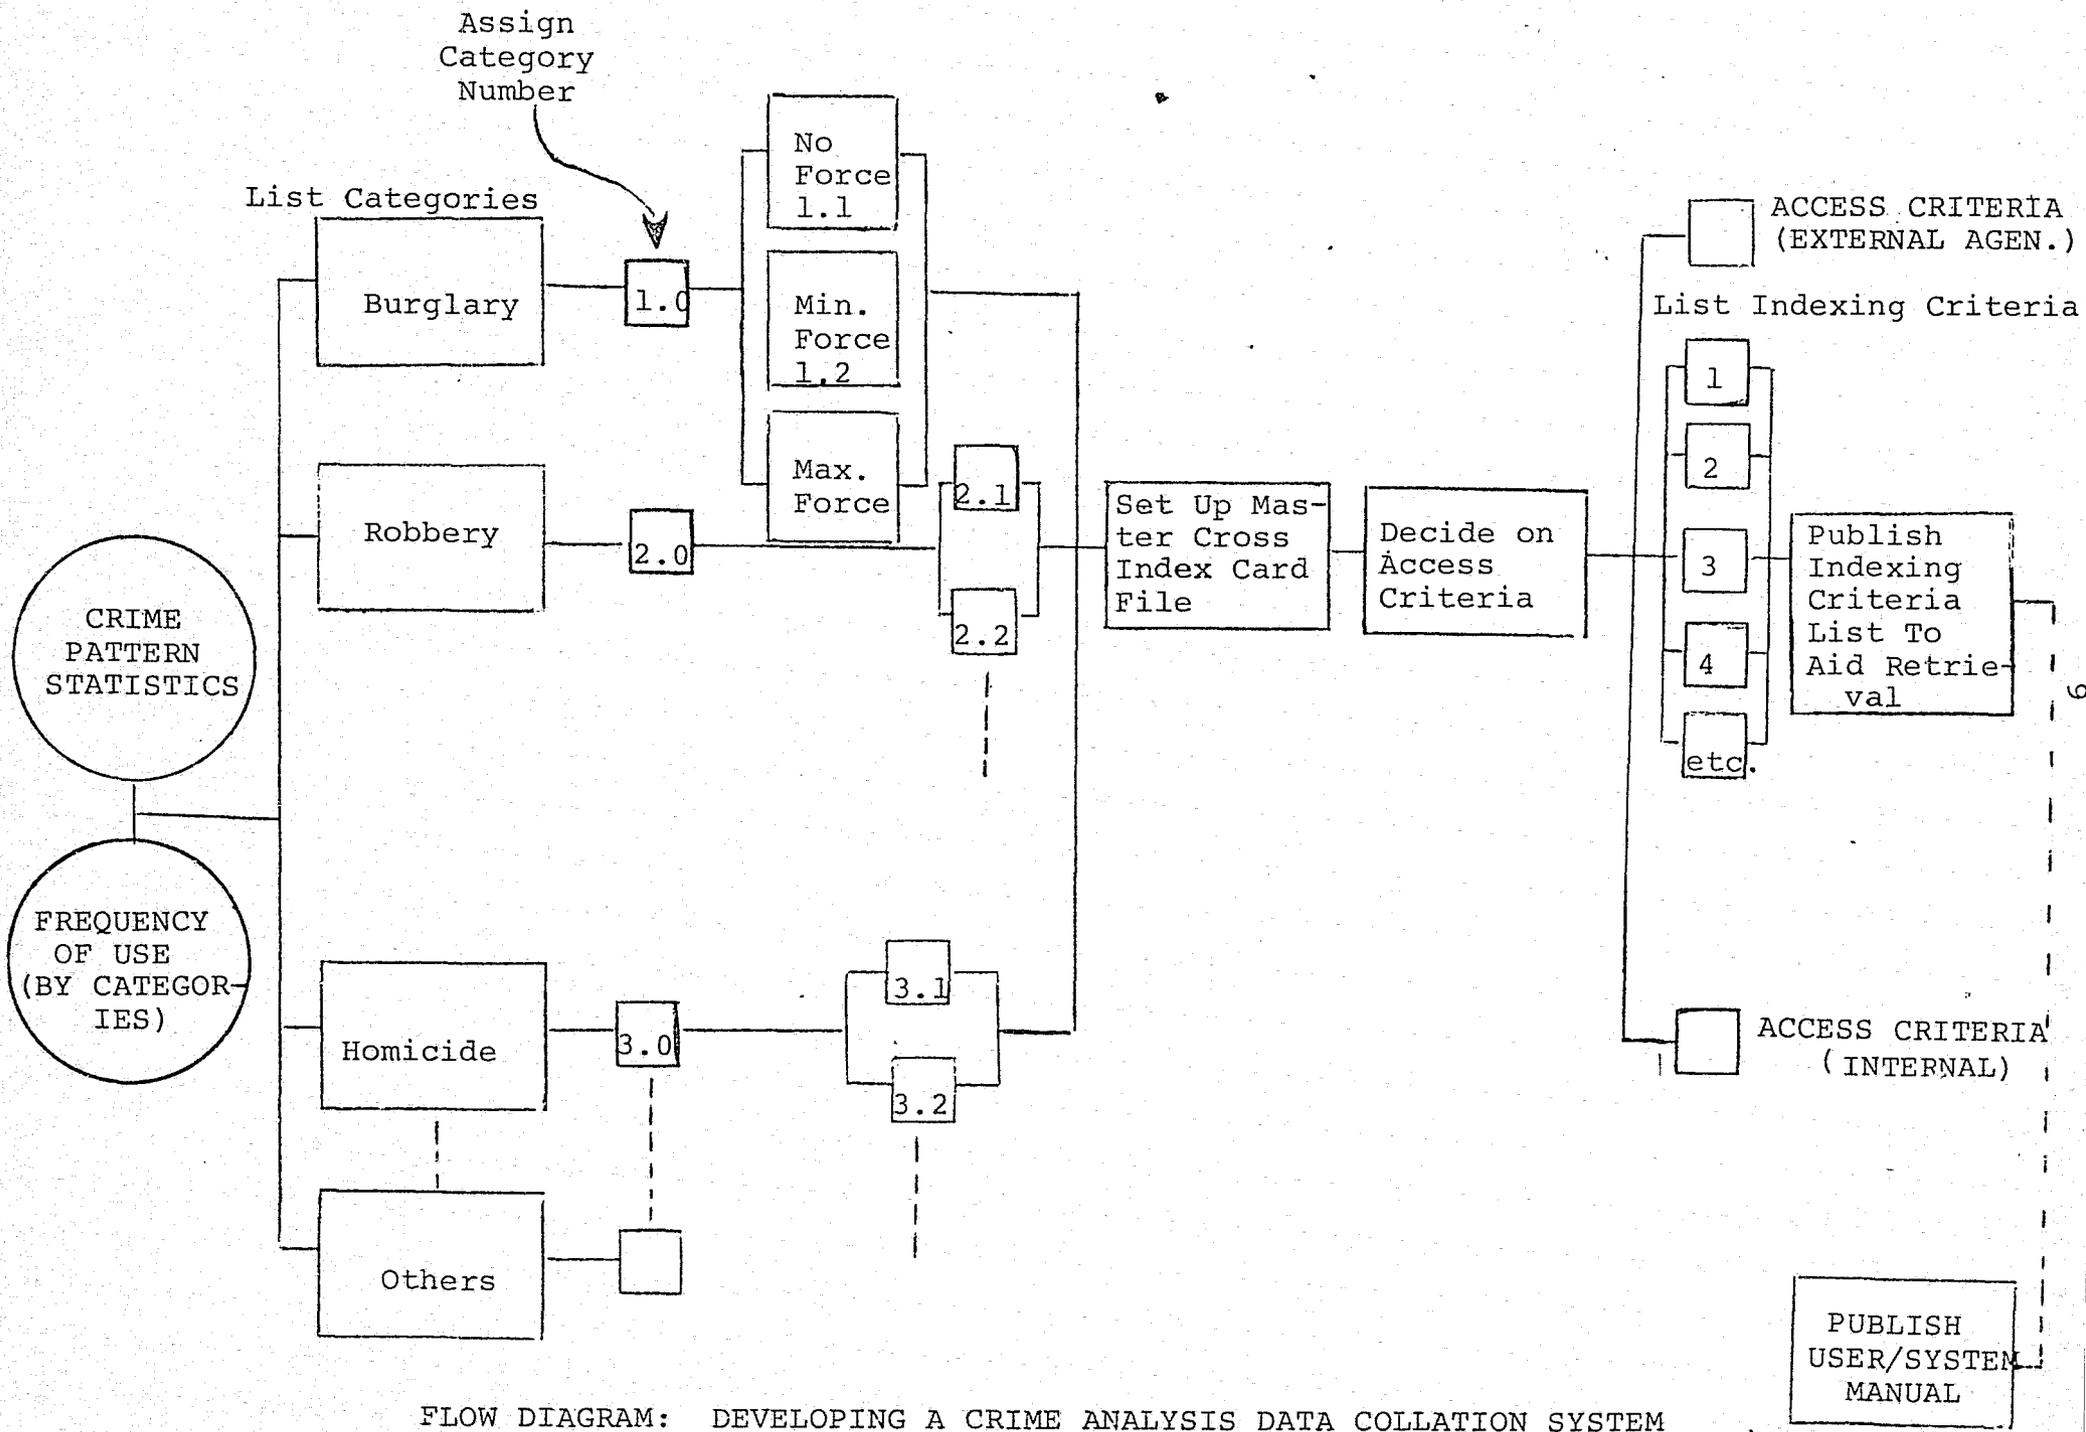

### INTERNAL TO THE LAW ENFORCEMENT AGENCY

- Crime reports
- Field interviews
- Communication records
- Intelligence
- Administrative data

### EXTERNAL TO THE LAW ENFORCEMENT AGENCY

- Other law enforcement agencies
- Other criminal justice agencies
- Social data
- Economic data
- Census data
- Planning data

\*The student is urged to expand this list to meet his/her agency's needs

FLOW DIAGRAM: DEVELOPING A CRIME ANALYSIS DATA COLLATION SYSTEM

## BASIC ANALYTICAL TOOLS\*

- Statistical
- Probabilistic
- Logic
- Correlations
- Graphical
- Allocations
- Factor Analysis
- Extrapolations

\* The analytical tools listed here are considered basic to any crime analysis unit. However, there are many more and the student is encouraged to expand this list of tools to meet his/her personal and/or agency needs

VENN DIAGRAMS, FREQUENCY TABLES AND PROBABILITY

## VENN DIAGRAMS, FREQUENCY TABLES AND PROBABILITY

To develop some important notions related to the manipulation of probabilities, consider the following simple example while keeping in mind the similarity of techniques in establishing M.O. or clearing cases by analysis. A group consists of ten people, four men and six women. Three of the four men smoke, as do two of the six ladies. In formal terms, we can call the group a sample space which includes ten elements. The sample space (or another term, universal set,  $U$ ) can be broken down into four subsets, men, women, smokers, and non-smokers. Note that the subsets "men" and "women" are non-intersecting and may be defined as mutually exclusive; in practical terms this means that there can be no single element that has both the characteristics "male" and "female". The same is true of the subsets "smokers" and "nonsmokers". However, other subsets such as "male" and "smoker", for example, are not mutually exclusive since one person can possess both characteristics.

The situation described above can be seen more readily by drawing a Venn diagram which shows the relationships among the subsets, or by constructing a table showing the number of people in each category. See Figure A and Table I.

Persons 1, 2, and 3 in the Venn diagram can be identified as the three male smokers in the  $M,S$  cell of the frequency table. Similarly, person number 6 is the one male nonsmoker in the  $M,NS$  cell, etc. It is not necessary to identify each element in the Venn diagram with a specific number, but using such a procedure here will help you understand the following.

### MARGINAL PROBABILITY

From the frequency table one can easily find, for example, the probability of choosing a male from the group by a method where every person in the group has an equal chance of being chosen. Since four of the ten people are males, the probability is 4 in 10 that a person, so selected, would be male. To familiarize you with the common symbols that are used in such calculations, let's summarize the previous sentence as:

$$P(M) = \frac{n(M)}{n(U)} = \frac{4}{10}$$

where  $n$  is read as "the number of"

Thus, the probability of a male is the number of elements in the subset  $M$  divided by the number of elements in the universal set  $U$ . This probability, and any other one that includes

	SMOKERS (S)	NON SMOKERS (NS)	
MALES (M)	3	1	4
FEMALES (F)	2	4	6
	5	5	10

TABLE 1

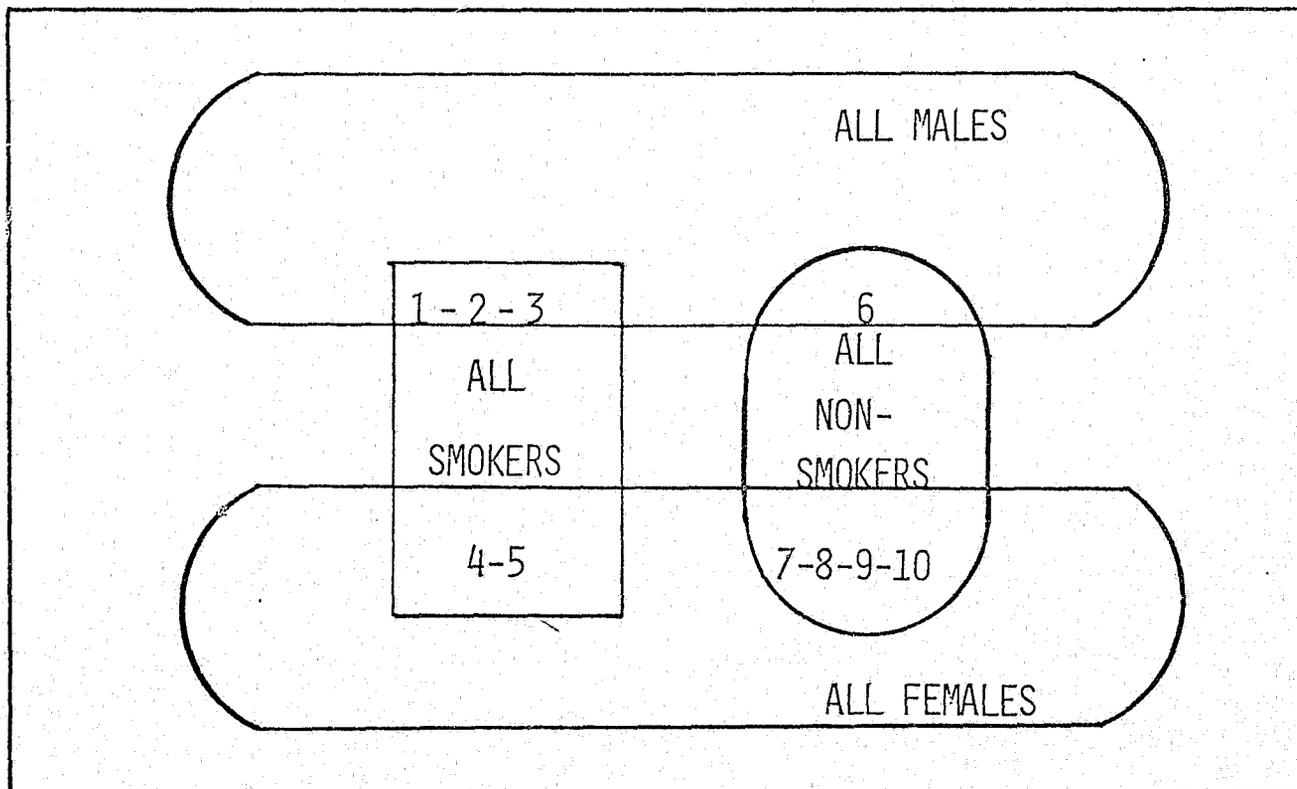

FIG. A

the number of elements in a single category of classification is known as the marginal probability. The term relates to the fact that the numbers in the numerator are to be found in the margins of the frequency table. Other marginal probabilities from the table are:

$$P(F) = \frac{n(F)}{n(U)} = \frac{6}{10}$$

$$P(S) = \frac{n(S)}{n(U)} = \frac{5}{10}$$

$$P(NS) = \frac{n(NS)}{n(U)} = \frac{5}{10}$$

### JOINT PROBABILITY

A joint probability is one that relates to more than one category of classification. The probability of M and S is the number of individuals who are male and smokers divided by the number in the universal set. Since there are three male smokers:

$$P(M \text{ and } S) = \frac{n(M \text{ and } S)}{n(U)} = \frac{3}{10}$$

Similarly:

$$P(F \text{ and } S) = \frac{n(F \text{ and } S)}{n(U)} = \frac{2}{10}$$

$$P(M \text{ and } NS) = \frac{n(M \text{ and } NS)}{n(U)} = \frac{1}{10}$$

$$P(F \text{ and } NS) = \frac{n(F \text{ and } NS)}{n(U)} = \frac{4}{10}$$

### CONDITIONAL PROBABILITY

A conditional probability is contingent upon or conditioned by prior knowledge. Suppose someone picked a person from the group of ten and said, "The person I picked is a male what's the probability that he's a non-smoker?" Looking at the frequency table down the column headed "male", one observes that only one of the four males is a non-smoker. Therefore, the probability that the person picked would be a non-smoker given that he was a male would be:

$$P(NS | M) = \frac{n(NS \text{ and } M)}{n(M)} = \frac{1}{4}$$

The vertical line dividing NS from M is read "given". Thus, the probability of a non-smoker given male is equal to the number of elements in the intersection of "non-smoker" and "male" divided by the number of elements in "male".

Similarly:

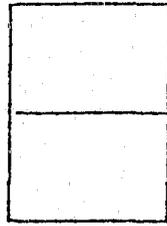

$$P(NS | F) = \frac{n(NS \text{ and } F)}{n(F)} = \frac{4}{6}$$

$$P(M | S) = \frac{n(M \text{ and } S)}{n(S)} = \frac{3}{5}$$

A DO-IT-YOURSELF PUNCHED CARD DATA SORTING SYSTEM

Cut sixteen 3x5 cards in half like this.

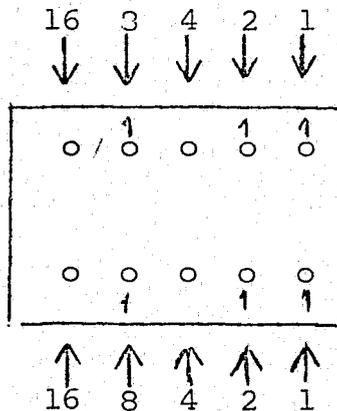

Take one of the 32 cards produced and punch a row of five holes along each of the two longer edges. The holes should be spaced about half an inch apart.

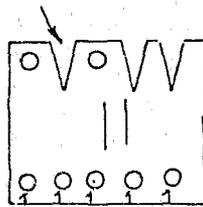

Using this card as a stencil, punch the other 31 cards to match it. Three cards can easily be punched at a time. Number the cards from 0 through 31. The five holes in each row represent the first five numbers of the binary sequence:

16 8 4 2 1.

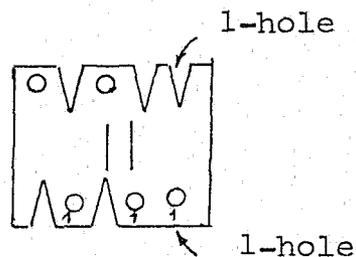

Write the number 1 above the appropriate holes along the upper edge and below the corresponding holes along the lower edge of each numbered card to represent the matching binary numeral. For example, on card number 11, write "ones" at the holes representing 1, 2, and 8.

Along the top edge of each card, cut out the space above each hole marked with a "one".

Then do just the opposite along the lower edge, that is, cut out the space below the holes that are not marked with a "one".

The cards are now ready to use. Shuffle them up, being careful that none get turned upside-down. Make two hooks something like this, out of paper clips.

Stick the hooks through the 1-holes (on the upper and lower right) and lift up slowly. Half of the cards will be pulled up by one hook and the other will be held back by the other. Slide the cards that came up off the hook. Put these cards on top of the other cards that had remained behind. Now stick the two hooks through the 2-holes and carry out the same procedure. Repeat with the remaining three pairs of holes (going from right to left) and you should end up with the cards in correct order from 0 to 31.

## PROBABILITY & STATISTICS

### DEFINITION OF AN EVENT

Let us consider an urn containing six balls, of which two are white. Let the balls be numbered 1 to 6, the white balls being numbered 1 and 2. Let two balls be drawn from the urn, one after the other; the first ball drawn is not returned to the urn before the second ball is drawn. The resultant possibilities (technically called the "set") are:

(1,2)	(1,3)	(1,4)	(1,5)	(1,6)
(2,1)	(2,3)	(2,4)	(2,5)	(2,5)
(3,1)	(3,2)	(3,4)	(3,5)	(3,5)
(4,1)	(4,2)	(4,3)	(4,5)	(4,6)
(5,1)	(5,2)	(5,3)	(5,4)	(5,6)
(6,1)	(6,2)	(6,3)	(6,4)	(6,5)

Now some events are (i) the event that the ball drawn on the first draw is white, (ii) the event that the ball drawn on the second draw is white, (iii) the event that both balls drawn are white, (iv) the event that the sum of the numbers on the balls is 7, (v) the event that the sum of the numbers on the balls drawn is less than or equal to 4.

The mathematical formulation that we shall give of the notion of an event depends on the following fact. For each of the events just described, there is a set of descriptions such that the event occurs if and only if the observed outcome of the two draws has a description that lies in the set. For example, the event that the ball drawn on the first draw is white can be reformulated as the event that the description of the outcome of the experiment belongs to the set (1,2), (1,3), (1,4), (1,5), (1,6), (2,1), (2,3), (2,4), (2,5), (2,6). Similarly, events (ii) to (v) described above may be reformulated as the events that the description of the outcome of the experiment belongs to the set (ii) (2,1), (3,1), (4,1), (5,1), (6,1), (1,2), (3,2), (4,2), (5,2), (6,2); (iii) (1,2), (2,1); (iv) (1,6), (2,5), (3,4), (4,3), (5,2), (6,1); (v) (1,2), (2,1), (1,3), (3,1).

## DEFINITION OF SIMPLE PROBABILITY

Probability of an event =  $\frac{\text{number of ways in a set an event can occur}}{\text{number of ways all events in a set can occur}}$

To illustrate this simple rule, let's refer to the urn above and compute the probability of (i) through (v):

$$\text{Probability that event (i) occurs} = \frac{10}{30} = \frac{1}{3}$$

$$\text{Probability that event (ii) occurs} = \frac{10}{30} = \frac{1}{3}$$

$$\text{Probability that event (iii) occurs} = \frac{2}{30} = \frac{1}{15}$$

$$\text{Probability that event (iv) occurs} = \frac{6}{30} = \frac{1}{5}$$

$$\text{Probability that event (v) occurs} = \frac{4}{30} = \frac{2}{15}$$

Note that the value of a probability never exceeds the value 1 or is less than 0. When the value is 1, the event is called certain--a sure bet. When the value is 0, the event is called null--a sure bet that it will never happen. Note also that the sum of the probabilities of an event occurring and the event not occurring is always equal to 1--a sure bet that something will happen.

## THE AVERAGE

Beware the term "average" which is not described. It is a trick commonly used, sometimes in innocence (often on one-self) but, frequently in guilt. When you are told that something is an average, you still don't know very much about it unless you can find out which of the common kinds of averages it is--mean, median, or mode.

Rather than belabor you with mathematical definitions of each kind of average, let's try to exemplify each to give you a feeling for the differences. Suppose that you belong to an organization that had the following salary distribution among its staff of 25:

Number of people receiving a salary of	Salary
1	\$45,000
1	15,000
2	10,000
1	5,700
3	5,000
4	3,700
1	3,000
12	2,000

The boss might like to express the situation as "average wage \$5,700--using the deceptive mean. (He added up all the salaries and divided by 25). The mode, however, is more revealing: most common rate of pay in this organization is \$2,000. As usual, the median tells more about the situation than any single figure; half the people get more that \$3,000 and half get less.

To compute each of the above averages, apply the following:

- The mean average of a group of items may be obtained by adding all items together and dividing the total by the number of items used.
- The median average is the value of the middle item when the items are arranged according to size. If there is an even number of items, the midpoint is taken as the mean average of the two central items. Note that the mean is a calculated average whereas the median is an average of position.
- The mode is the most frequent, or most common value, of a set of items.

#### TRENDS

A continuous demand placed on law enforcement is to establish trends based on present and past data. In other words, where are things going? What can we expect? Are things getting better or worse?

The utility of such predictions are many. The basic uses are budget oriented, allocation of resources, and measuring operational effectiveness.

Statisticians have developed many techniques to estimate trends over time. The more commonly employed techniques, within law enforcement, are:

- Freehand
- Semi-average
- Moving average
- Least squares

#### FREEHAND

To fit a trend by the freehand method, draw a line through a graph of the data in such a way as to describe what appears to the eye to be the long period movement. The drawing of this line need not be strictly freehand but may be accomplished with the aid of a straight edge or a "French" curve.

### SEMI-AVERAGE

In this procedure, the data are split into two equal parts and the figures in each half are mean averaged. The mean averages, thus obtained, are plotted at the center of their respective periods and a straight line is then drawn through the two points.

### MOVING AVERAGE

In the moving average method, the trend is described by smoothing out the fluctuations of the data. The moving average is a series of successive averages secured from a series of items by dropping the first item in each group (mean) averaged and including the next in the series--thus obtaining the next average. As an example, let's look at a three item moving average shown below (you may use any number of items dependant on the smoothness of the average desired). The first three numbers (3,5,7) are added (the total is entered in column 2 next to the middle item of the group). The first number (3) is then replaced by the next number (in this case, 10) and the process is continued until the entire series has been included. Each total is then divided by three (because we chose a 3 item interval) and the resulting mean averages are placed in column 3.

(1) Values	(2) 3 Item Moving Total	(3) 3 Item Moving Average
3		
5	15	5.00
7	22	7.33
10	29	9.67
12	36	12.00
14	41	13.67
15	46	15.33
17		

The fluctuations caused by seasonal cycle in a crime-time series (such as summer-burglary or Christmas-shoplifting) may be removed or partially eliminated by including in the moving average a number of items (years) equal to the length of the cycle which is evident in the data. The cyclical fluctuations will thus be smoothed out and a better measure of trend obtained.

## LEAST SQUARES

The least squares method is not explained here because of the required mathematical exposition. However, any trained statistician is aware of the method and you are urged to seek him/her out and get some personal training. The method has three decided advantages over the previous techniques. The method expresses the trend in the form of a mathematical formula which may be easily interpreted. Results obtained under the method are definite and independent of any subjective estimate on the part of the statistician. The resulting equation is in convenient form for extrapolation (future or past).

President Straightarrow has applied his firm hand in attempting to stop the flow of heroin from Mexico. He has ordered the U.S. Customs, the Postal Service, Department of Defense, and FAA to stop everything and everybody moving from Mexico and conduct a thorough search for this dangerous narcotic. His goal is to drive the street price up and out of reach and force the users to seek medical help. The going price, at the start of the program, was \$50/gram.

After three months of this intense blockade, law enforcement officers were sent into the streets to make "buys". The following prices were paid throughout the state:

City A - \$40/gram

City B - \$60

City C - \$48

City D - \$45

City E - \$70

City F - \$45

City H - \$61

City I - \$65

City J - \$80

City K - \$45

City L - \$49

Was President Straightarrow's goal achieved using the "average" price as a measure of effectiveness?

Median Average = \_\_\_\_\_

Modal Average = \_\_\_\_\_

Mean Average = \_\_\_\_\_

INFORMATION INPUT FOR TIME-SERIES ANALYSIS

During the year 1973, the average number of burglaries reported each month on Erie's Island was 100.

On January 1, 1973, the Erie Island Police Department initiated a program of registering and identifying personal property. The program was initiated in selected sections of the city on an experimental basis.

Participation in the program by property owners increased steadily through the first nine months of 1973.

The number of burglaries reported each month through the first nine months of 1973 is shown below:

January	95
February	102
March	88
April	90
May	73
June	94
July	85
August	75
September	69

1. What is your estimate of the general trend of burglaries for the last quarter of 1973?
2. What is your estimate for burglaries in November 1973?

EXERCISE I  
TAXICAB HITS

## TAXICAB HITS

### PROBLEM

The Centerville community has been hit by a rash of taxicab robberies over a period of several months. The three cab companies in town have demanded better protection. Their business is sizable. Yellow has 90 units, Checker has 50, and Veterans 24.

If your crime analysis section can develop information with which to organize a strategy for deployment the Chief will consider release of 6 cars for assignment to the case.

What kind of a story will the data tell? Can you provide projections based on specific information?

Develop the material so that you can present a solid proposal of how to deal with the problem and how men and equipment can be utilized by the Chief to successfully reduce the specific crime.

### RESOURCES

1. Keysort Cards
2. Description of City and Bus Routes
3. Location Suspects Board and Leave Cabs
4. Map

### TIME

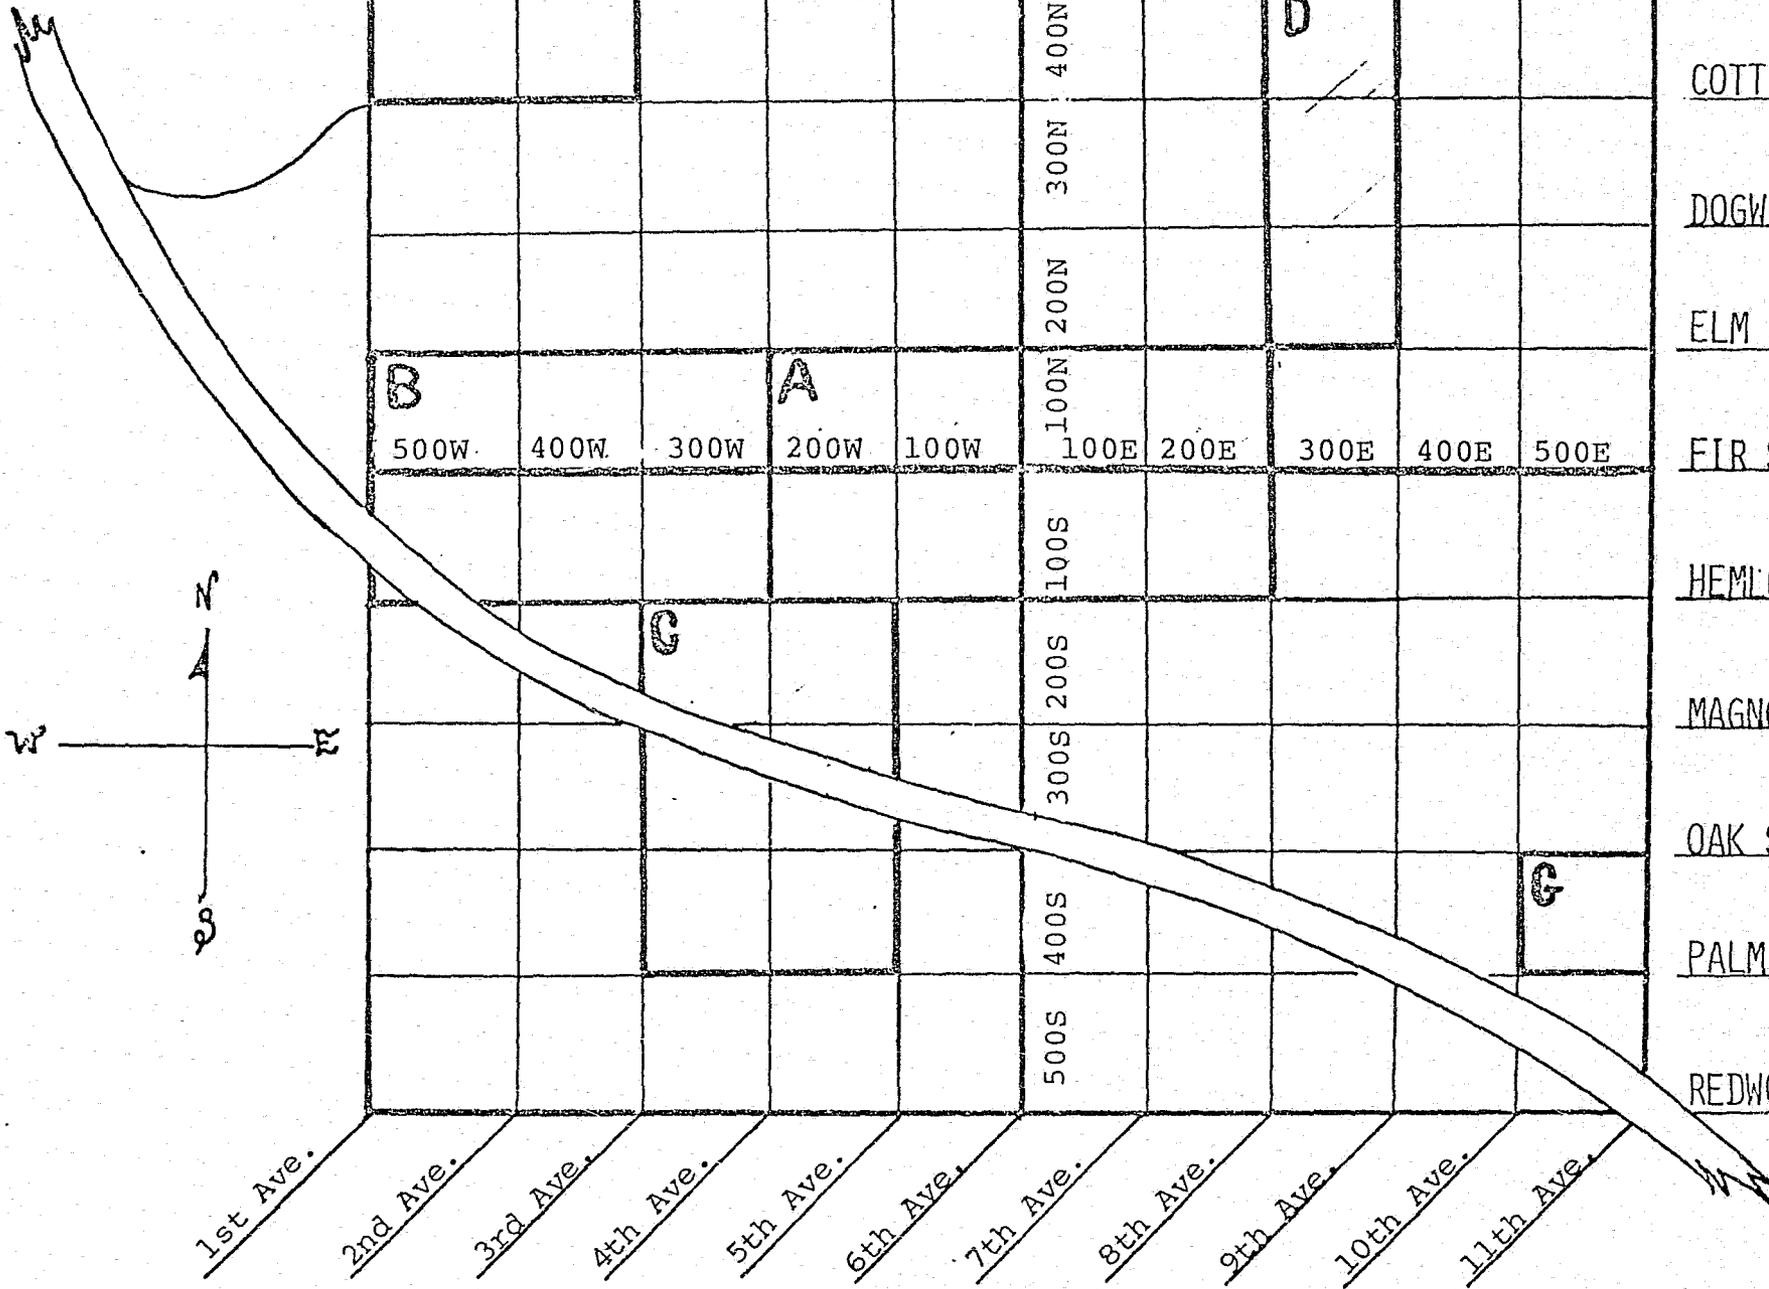

You have 30 minutes to determine your strategy and be prepared to make a verbal presentation which will "sell" the Chief.

CENTERVILLE, USA

- A. DOWNTOWN COMMERCIAL      Bounded by Elm St., 8th, Hemlock St., 4th
- B. INDUSTRIAL AREA      Bounded by Elm St., 4th Ave., Hemlock St., 1st  
    (Kaiser Industrial Park)

EXERCISE II  
PURSE SNATCHINGS

## EXERCISE II

Centerville has been plagued by a major epidemic of purse snatching. The City Manager has directed the Chief of Police to place primary emphasis on the abatement of this problem. The Chief directs his crime analysis unit to recommend a strategy which will be cost-effective.

The CAU's analysts gather all the purse snatching related crime reports for last month. One-hundred purse snatchings were reported. The associated data is attached.

If your team was Centerville P.D.'s Crime Analysis Unit, what would you recommend?

EXERCISE III  
GAS STATION HOLDUPS

## GAS STATION HOLDUPS

### STATEMENT OF THE PROBLEM

On December 31 at 10:00 p.m., a pair of youthful, white holdup men were apprehended during a chase after robbing a filling station in a metropolitan city. While "A" remained in their vehicle to serve as lookout, "B" entered the office, carrying a .38 nickel-plated gun, and wearing a hat and topcoat. He pointed the gun at the victim, and told the victim to put his head between his legs. The suspect then emptied the cash register money into a canvas bag which he had brought with him. On the basis of a thorough analysis of the M.O., revealed in this crime, your team should be able to clear a number of similar cases attributable to the arrested pair. (Hints: if some data patterns appear to be ambiguous, you may ask relevant questions of the instructor to elicit further information. A maximum of 25 cases can be cleared).

Received call at 2005 hour, arrived at scene 2007 hours. Talked to Service station attendant (George Beaker) who stated he was on duty at about 10 pm when a man in a funny looking hat and big brown overcoat entered the station (Suspect #1). Suspect #1 pointed a gun at the complainant, made him sit down and put his head between his legs. Suspect #1 then emptied the cash box of all the money that was there (approx. \$230.00). Suspect #1 then ran to a blue 1973 Chevy convertible where a second suspect #2 was waiting for him. They then took off at a high rate of speed at which time the complainant called the police. The suspects were apprehended by Unit 3, one-half mile from the scene of the crime during a chase for excessive speed. While writing a citation for speed, radio indicated that the suspects were wanted for armed robbery. Suspects were then arrested at scene without offering any resistance.

Received call 2316, arrived at scene 2318. Upon arrival, suspects were lowering small safe down the side of one-story building (Lite Electric Co. Approach of patrol vehicle caused them to drop safe to ground. Suspect #2 left Suspect #1 (Geo. Green) on roof and jumped into vehicle and drove off. Suspect #1 offered no resistance. Patrol unit back up car stated they went head off vehicle as they were near scene but were unable to spot vehicle. Suspect #1 was searched and was carrying concealed .357 magnum. Suspect was advised of his rights and booked for burglary and carrying concealed weapon.

ORGANIZATIONAL CONCEPTS

## LESSON GUIDE

TOPIC: Organizational Concepts

SESSION: 2.2

OBJECTIVES:

1. Discuss the role of crime analysis in law enforcement.
2. Provide a police view of systems management.
3. An overview of problems and manual vs. computerized operation.

SUBTOPICS:

1. Introduction
  - a. Present day crime problems
  - b. Computerization and systems in information handling.
  - c. Crime analysis process
    - collection
    - collation
    - analysis
    - dissemination
  - d. Attitudes towards system management.
2. Why Crime Analysis?
  - a. Professional approach to police problems.
  - b. Informational volume demands it.
  - c. Predictive tool for manpower deployment.
  - d. Systematic effort towards crime prevention and criminal apprehension.
  - e. Furnishes current crime information to users.
  - f. Allows for evaluation of on-going programs.
3. Implementing the crime analysis process
  - a. Three combinations:
    - manual
    - semi-computerized
    - computerized
  - b. Dependent on volume.
  - c. Department involvement in Planning & Designing of systems.
  - d. Department orientation to crime analysis.
  - e. Correct vs. incorrect usage.
    - Human and mechanical problems
4. Crime analysis placement
  - a. Administrative support.
  - b. Location of crime analysis.

5. Staffing the crime analysis operation
  - a. Personnel considerations.
  - b. Uniform vs. non-uniform analysts.
  
6. Information Handling
  - a. Consideration of sources.
    - within the department
    - outside the department
  - b. Formal outlining of tasks.
  - c. Crimes designed for crime analysis.
    - homicide
    - robbery
    - auto theft
    - crimes of violence
    - burglary
  
7. Social applications in crime analysis

## CRIME ANALYSIS PRIORITY LIST

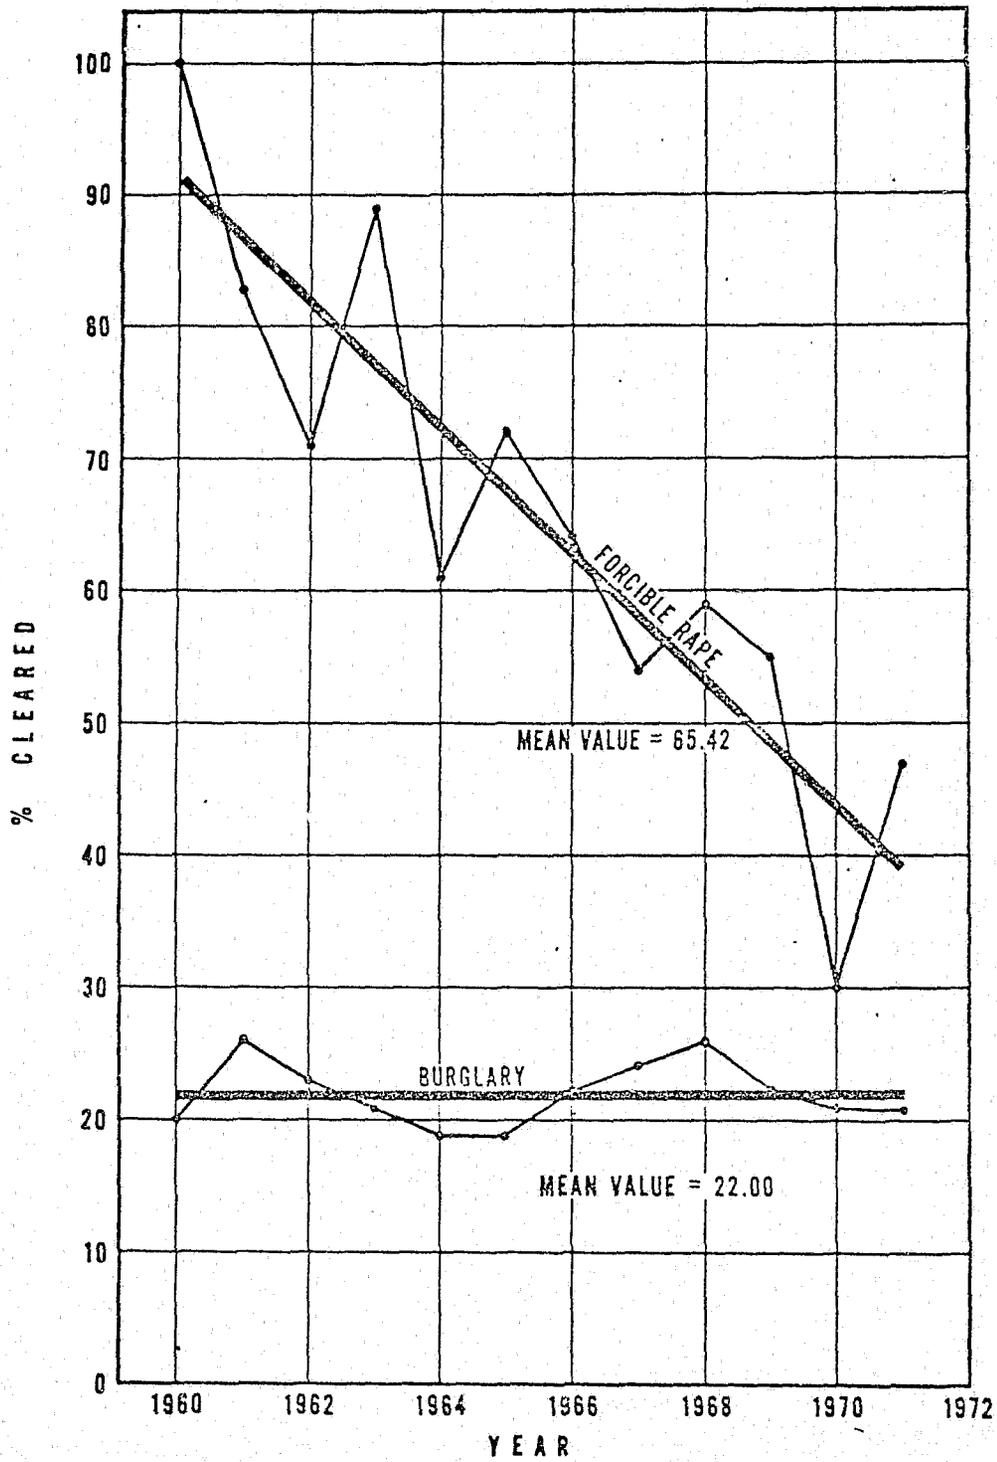

THE FOLLOWING PRIORITIES HAVE BEEN ESTABLISHED TO ASSIST PERSONNEL IN DETERMINING INVESTIGATIVE RESPONSIBILITY. I EMPHASIZE THAT INVESTIGATORS ARE NOT "LOCKED IN" BY THESE RECOMMENDATIONS. I AM SURE THAT OFTEN TIMES INVESTIGATORS, DUE TO THEIR KNOWLEDGE AND PROFESSIONAL EXPERIENCE, WILL FIND A NEED TO VARY FROM THESE PRIORITIES:

- A. THE INVESTIGATION OF OFFENSES INVOLVING GREAT BODILY INJURY AND OTHER MAJOR OR SERIOUS CRIMES AGAINST THE PERSON WHEN:
  - 1. THE CRIME IS OF EXTREME SERIOUSNESS.
  - 2. WHEN THE POSSIBILITY OF REOCCURRENCE EXISTS.
  - 3. WHEN EVIDENCE MAY BE LOST IF INVESTIGATION IS DELAYED.
  - 4. WHEN THE SUSPECT MAY ATTEMPT TO FLEE OUR JURISDICTION.
- B. IN CUSTODY FELONY SUSPECTS.
- C. NAMED SUSPECTS NOT IN CUSTODY FOR FELONY OFFENSES THAT HAVE RECENTLY OCCURRED AND IT IS NECESSARY FOR THE PROTECTION OF LIFE AND PROPERTY THAT THE INDIVIDUAL BE REMOVED FROM SOCIETY AS SOON AS POSSIBLE.
- D. WHERE THERE IS A MAJOR PROPERTY LOSS.
- E. IN CUSTODY MISDEMEANOR SUSPECTS.
- F. NAMED FELONY SUSPECTS ACCUSED OF CRIMES WHERE SUBSTANTIAL DELAY IN REPORTING HAS OCCURRED AND THERE IS NO PRESSING NEED TO IMMEDIATELY REMOVE THE SUBJECT FROM SOCIETY.
- G. OTHER FELONY OFFENSES.
- H. MISDEMEANOR OFFENSES IN WHICH THE LOSS IS GREATER THAN \$50.00.
- I. MISDEMEANOR OFFENSES IN WHICH THE LOSS IS \$50.00 OR LESS.
- J. INVESTIGATION OF VIOLATION OF LOCAL REGULATORY ORDINANCES.

### CRIME ANALYSIS TO PRIORTIZE

UPON RECEIPT OF REPORTS, PRIOR TO REPRODUCING, CRIME ANALYSIS OFFICERS SHALL REVIEW ALL DOCUMENTS AND SET A TENTATIVE PRIORITY. HE SHALL PLACE THE CORRESPONDING ALPHABETICAL INDICATOR ON THE CRIME REPORT TO THE RIGHT OF THE TITLE OF THE REPORT.

WHEN THE REPORT IS RECEIVED BY THE INVESTIGATIVE DETAIL, THE PRIORITY MAY BE CHANGED BY THE INVESTIGATOR AT HIS DISCRETION.

CLEARANCE RATES

## PRACTICAL PROBLEM EXERCISE

### DEVELOPING A CRIME ANALYSIS UNIT

In this exercise, you will be asked to apply some of the skills and considerations discussed by Mr. Petersen and Mr. Arenberg in their sessions covering organizational concepts and evaluation. We have prepared a packet of material utilizing information on the community and law enforcement agency of "Target Town". You will be divided into teams and asked to utilize information in the packet in determining what type of crime analysis unit would be appropriate for that community and agency. You will obviously have to make some assumptions and projections in that we cannot supply every small detail for the exercise.

You should approach the task with the end goal of being able to make a presentation of approximately 15 minutes in length on the final day of the course. The presentation can be made by whomever the team selects as their captain or leader or by various members of the team. The presentation will be made to the class and staff who will assume the role of the police commission of "Target Town". The presentation will be for the purpose of explaining to the commission why a crime analysis unit is needed, its proposed organizational structure, its goals, the proposed achievements and costs. You will have to be able to substantiate your arguments and convince the "commission" of the efficacy of your plan.

During your presentation or at its conclusion, the other class members and the staff will direct questions to your team regarding your plan and presentation. You should consider as you prepare your material the types of questions that you might anticipate from the police commission, the chief himself or the city council. Material will be provided to you to utilize in preparing visual aids.

The following lists are some elements you may want to consider in developing your arguments. It is not intended to be complete nor are you limited to those items.

### OBJECTIVES

- Reporting Procedures
- Number of Personnel
  - Sworn
  - Unsworn
- Locating Crime Analysis in Your Department
  - Administrative Tool?
  - Operational Tool?

- Type of Information System
  - Computerized?
  - Manual?
- Dissemination of Information
  - To Administration
  - To Units (Detective, Patrol)
- Collection Procedures and Sources
- Tasks to be Accomplished
- Manpower and Resource Allocation
- Tactical Deployment

### EVALUATION

- Goals
- Objectives
- Quantitative Measures
  - Efficiency
  - Effectiveness
- Data Collection Techniques
  - Classes of Information
  - Verification
- Proposed Analytical Techniques

The rest of the group will act as members of the Police Commission and reserve the right to ask questions relating to material presentation. Staff will serve as Police Chief, City Manager and Mayor. Limit your time to twenty minutes and make sure your aids are visible to the class.

Additional material on your city, Target Town, with whatever information is available is included with this cover letter.

CHOOSE A TEAM CAPTAIN AND GOOD LUCK, YOU'LL NEED IT!

### TARGET TOWN, USA

#### TOWN DESCRIPTION

An older, established city within a large metropolitan area. Comprised mostly of urban business and multiple residence areas built around a large State University (20,000 students). There is an industrial area on the west side of the city fronting the river. About 200 industrial plants produce a wide variety of products within the city. Industry is limited in expansion by lack of space, higher utility rates and the pressure to clean up the environment. 79.1% of the housing is multiple dwelling units,

many serving the University. This housing is mostly older (59.9% built prior to 1939) with only 13.0% constructed in the last 10 years. 35.2% of the residents have lived in the same residence for the past five years. Lack of available building sites and Target Town's location amidst other surrounding cities, limits the opportunity for future economic and population growth.

Municipal government is of the Council-Manager form. The public has been mostly apathetic toward city government until recently. Now that the students are allowed to register for local election there has been increased interest in a younger and more liberal council. The Police Chief was hired 6 years ago and at that time a new City Manager was also hired. The City Manager is a fiscal conservative and has been in this position for about 6 years. The City Council is made up of five members including the following:

- A Minister (51 years old) who is alarmed at the corrupt morals of the younger student generation.
- A Business woman (age 37) who owns a discount record store and a strong advocate of Womens Lib.
- A Lawyer (age 28) who is popular with local university students and a member of the ACLU.
- A conservative Black Businessman owning three restaurant cocktail lounges.
- An Ex-Target Town Police Sgt. (age 36), critical of the Departments lack of aggressive posture.

### Population

Target Town population was set at 119,000 persons in the 1974 Census. Its growth rate has been below the State and National averages. Last year population change was 1.0%. Cumulative change in the last 5 years (1970-1974) was +5.0%. Age/sex distribution is given in Table 1. Racial population break down in the 1974 Census is given as follows: 72.3% Anglo, 16.8% Black, 9.1% Latin-American, and 1.8% Other.

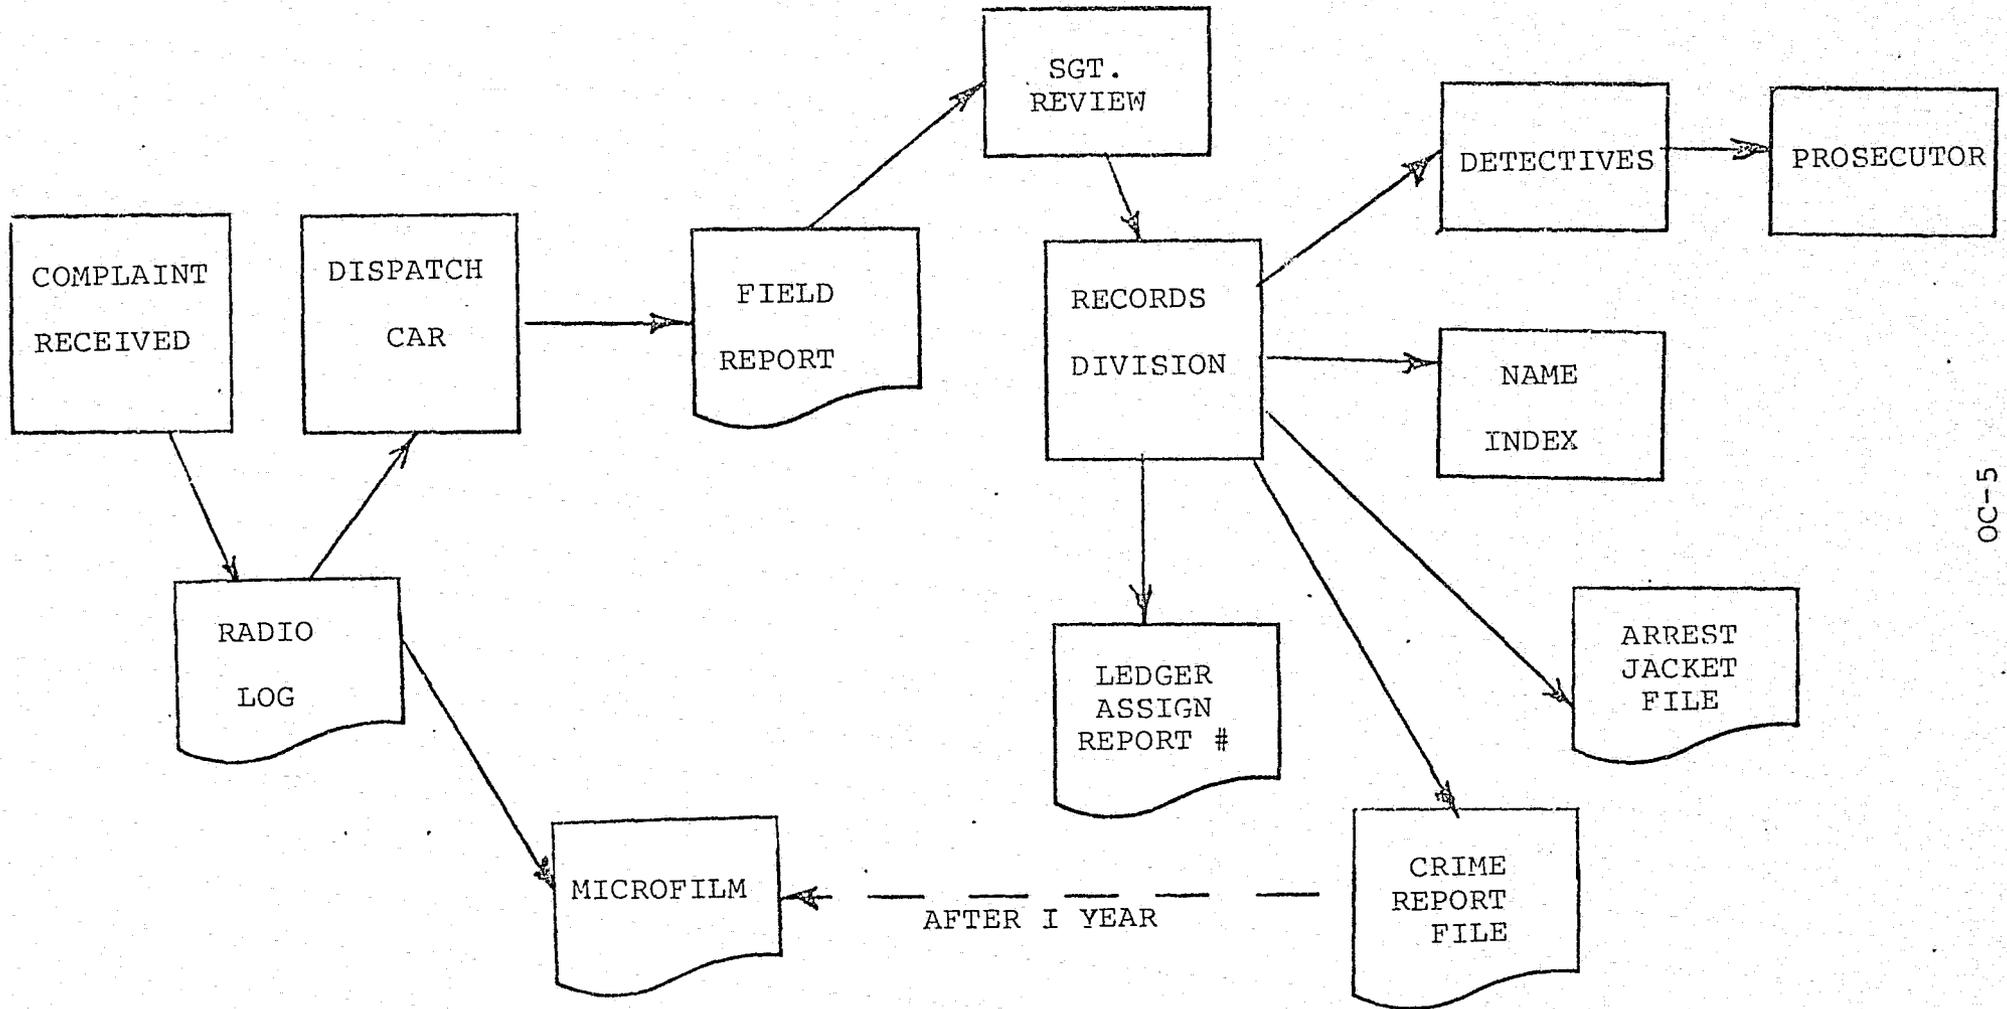

The mean individual income was \$4,511 in 1974, including all retirees and adult students. The university and other Government agencies accounted for 30% of the area payroll. Local industry and business accounted for the rest as few residents work outside of the city. Unemployment is rather high (18.1%) if those students seeking part-time work are included. 9.6% of the families are living below the poverty level and a total of 28% of the city population receives state or local unemployment benefits, or social security.

TARGET TOWN UNIVERSITY

The University offers graduate and post graduate courses to its students. Approximately 20% of the student body lives on campus.

The campus area covers 6.5 square miles and is patrolled by its own Police Force. Crimes committed within the University itself are not included in the crime statistics gathered by the City of Target Town Police Department.

TARGET TOWN

TARGET TOWN P.D.

Complaints are received by radio dispatch where they are logged and given to patrol units. Information logged includes type of complaint, location, time of arrival and when received. No number is assigned to link complaint and initial report at this time.

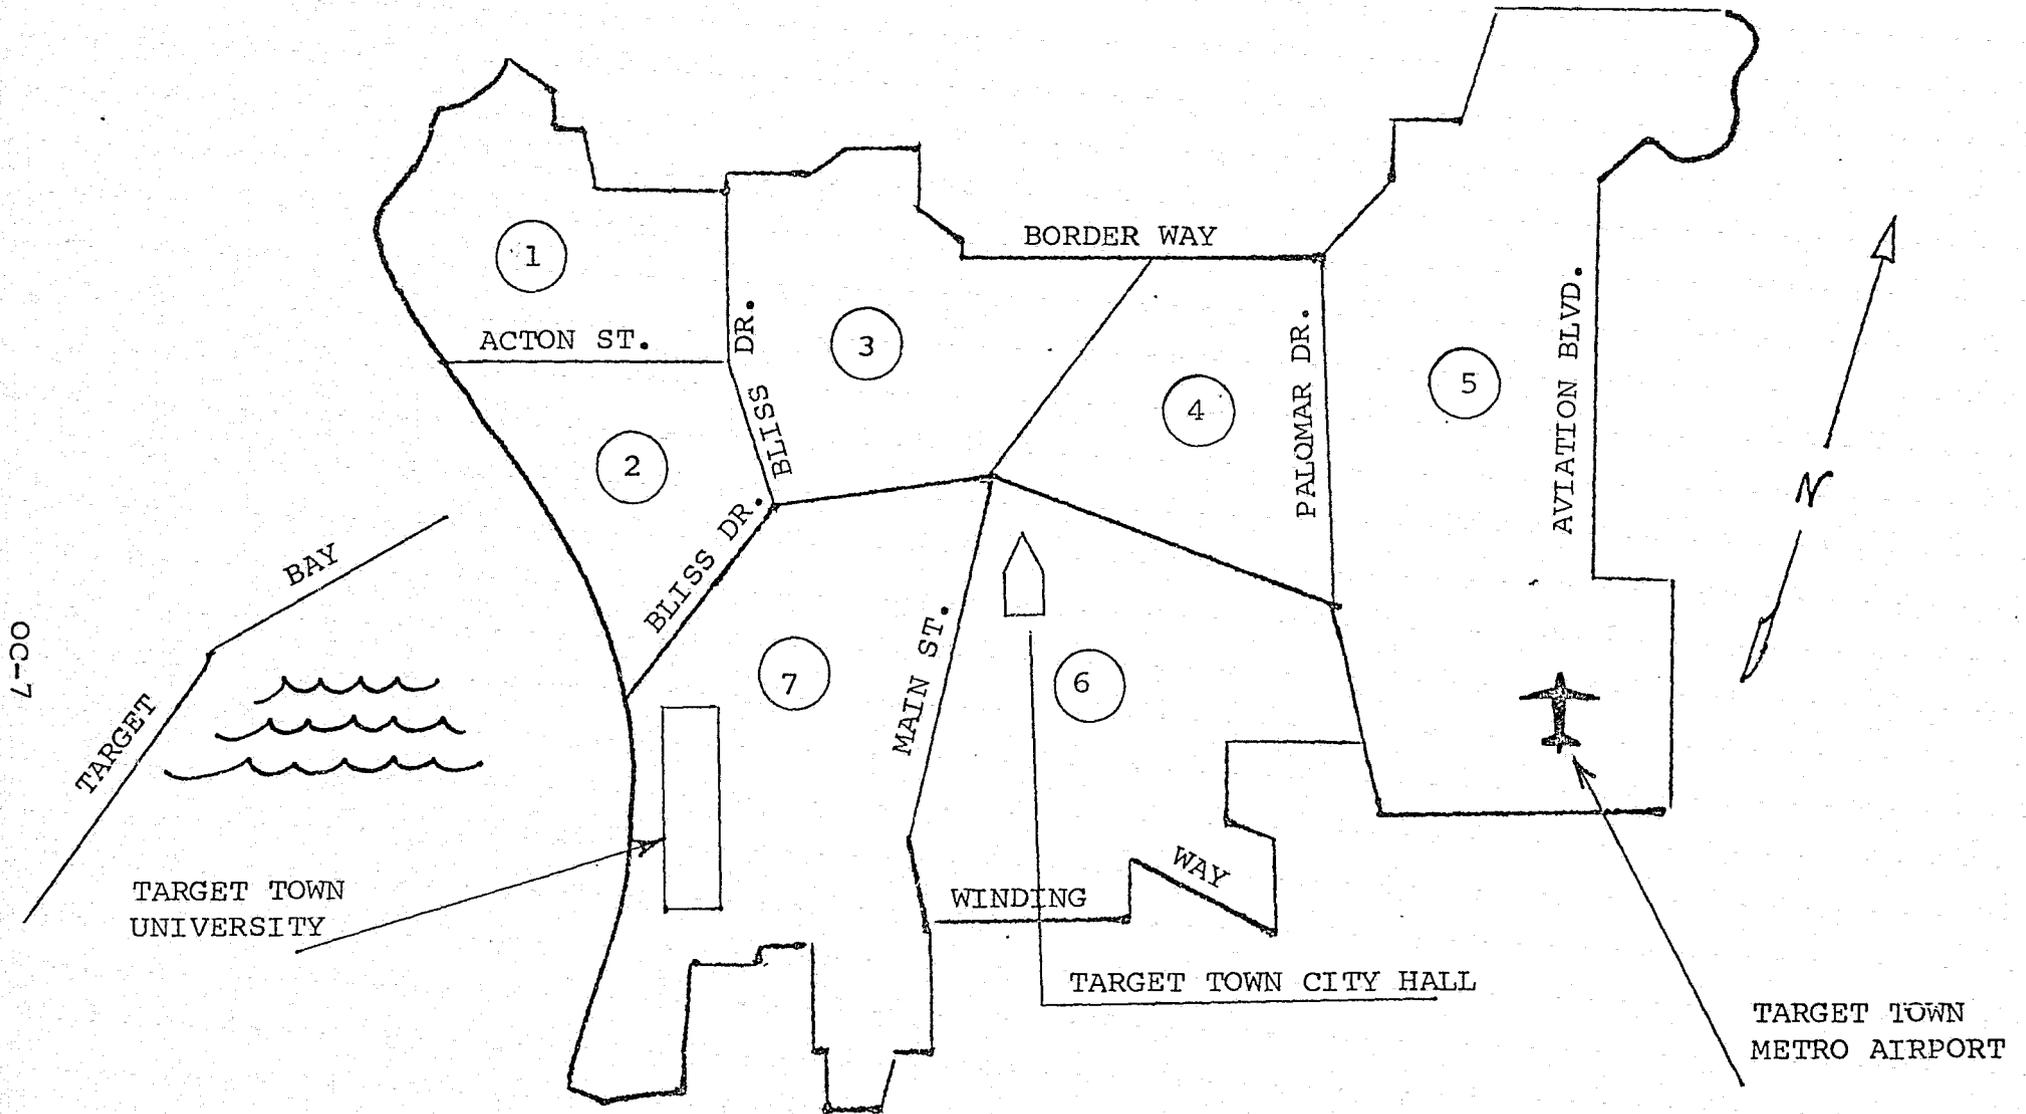

Patrol Officer decides if a report is needed for valid information in compliance with department regulations. Reporting procedures have indicated a great number of errors and generally incomplete reports are being submitted and Sergeant's are to generate better procedures to insure completeness and accuracy in this area.

The report is forwarded to the Records Division where a case # is assigned and correlated with the victim's name.

On followup reports, where necessary, the Detective completes a follow-up report which is assigned the same case # as the original report and the two reports are tied together in records.

No automation is used throughout the process. The District Attorney stresses the need for accurate data correlation and documentation of the crime and witness information. Indicated is the need for the field officer to properly fill out the initial reports.

CRIME ANALYSIS UNIT  
EVALUATION TECHNIQUES

## BASIC DEFINITIONS

EVALUATION - The assessment of the impact of program activities upon the target problem. Evaluation is principally "ends" oriented rather than "means" oriented. That is, evaluation relates to what is ultimately desired, not the way in which it is attained.

EFFICIENCY - The assessment of a program in terms of its execution in accordance with its plan - - - in terms of time, allocation of manpower and equipment, program activities, and funds expended. Thus, efficiency is principally "means" oriented. I.e., given that two programs result in similar results, efficiency is concerned with identifying which of the two is most conservative in the expenditure of resources.

GOAL - A general, hopefully quantified statement of an overall targeted accomplishment.

OBJECTIVE - A specific, quantified target which will contribute to the goal.

PROJECT - An activity directed towards meeting an objective.

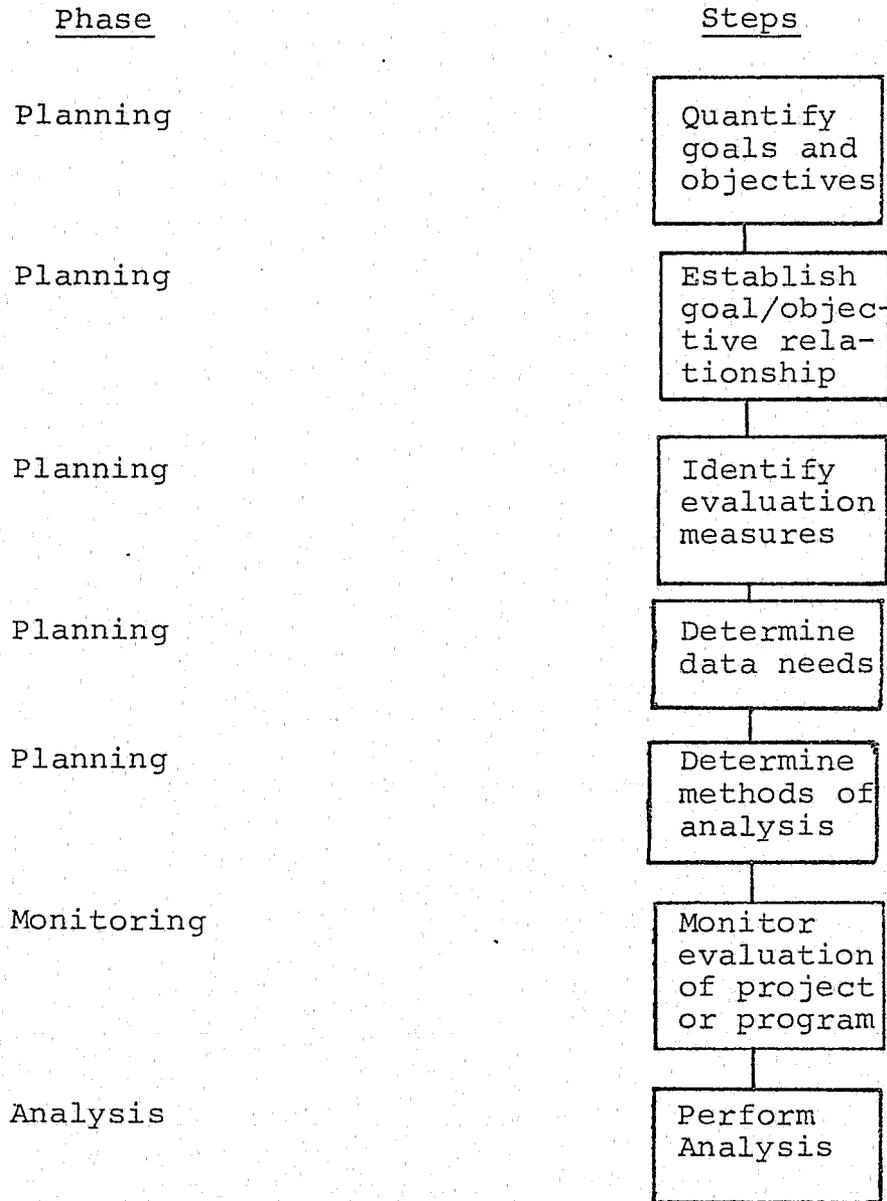

PROGRAM - A set of integrated projects and objectives which, together, are directed towards a goal.

Example: Program goal - habilitate 400 known drug abusers in two years.

Project (1) objective - enroll 500 known heroin abusers in methadone maintenance treatment over the next two years.

Project (2) objective - reduce the unemployment rate for known drug abusers to 6%.

EVALUATION ELEMENTS

AN EXAMPLE OF ESTABLISHING A GOAL/OBJECTIVE RELATIONSHIP

Suppose that the police, courts, prosecution, defense attorneys, and other elements of the law enforcement and criminal justice system of an American city perceives that an estimated 50% of the city's 8,000 stranger-to-stranger crimes and burglaries per year are drug related. If a drug control program aimed at reducing the drug user population 400 (assuming all other factors constant) in two years was met, then crime and burglary would be reduced. The amount of the reduction would depend on the number of habilitated drug users who were involved in crime and burglary and the per capita number of incidents. Suppose that 80% of the reformed drug abusers had committed an average (mean) of two crimes and/or burglaries per user over the two year period of the grant. What percentage reduction in burglaries and stranger-to-stranger crimes could we expect in a year?

## ESSENTIALS FOR AN EFFECTIVE EVALUATION

Each of the following attributes are essential for a successful project evaluation. Each attribute builds and follows upon those which precede it. As a result, all of the attributes must be present in order to obtain an overall picture of the chances for a successful evaluation.

(1) Statement of Goals and Objectives:

Does the evaluation component offer a clear statement of the objectives of the project? Goals or objectives are simply summary statements which highlight what the program or project is designed to achieve. In order to be most useful, they should attempt to quantify desired results. As such, they provide the basis both for the evaluation planning and the evaluation analysis surrounding the program or project.

(2) Identification of Evaluation Measures:

Does the evaluation component clearly identify those measures appropriate to the project's stated objectives? A project's objectives are the key to the development of the overall evaluation component. Hence, the evaluation measures appropriate to a given project should follow the project's objectives.

(3) Specification of Data Requirements:

Does the evaluation component exhaustively specify the data required for developing the evaluation measures? Data from a variety of sources and dealing with diverse aspects of a project will often be required to form a single evaluation measure. The specification of data requirements, therefore, involves the explicit determination of the data elements required for the evaluation.

(4) Statement of Data Collection Approach:

Does the evaluation component state how the data will be collected? Responsibility must be assigned for reporting various required data elements. Specific reporting periods ought to be established, and designs for simplified, standardized forms should be included.

(5) Statement of Data Analysis Approach:

Does the evaluation component present a data analysis plan? The project's objectives and their associated evaluation measures must drive any data analysis efforts. The data analysis plan, then, should summarize how the data elements are to be combined to determine project results.

(6) Presentation of Evaluation Reporting Schedule:

Does the evaluation component present an appropriate evaluation reporting schedule in terms of report timing and content? It is essential to have a project evaluation reporting schedule to work from. There is a need for timely reporting for project monitoring and continuation purposes. There is a managerial need to know what the results of project operation have been and how these results relate to project objectives.

MONITORING

-Project or program implementation

-Evaluation component implementation

-Project and program scope

-Evaluation plan scope

## ANALYSIS

-Responsibilities

AGREEMENT - CRIME ANALYSIS TRAINING

Name: \_\_\_\_\_ Address: \_\_\_\_\_

Position: \_\_\_\_\_

Agency: \_\_\_\_\_

Student shall attend a training session sponsored by the California Crime Technological Research Foundation (CCTRF). Student will attend without compensation. Enrollment will necessitate student's attendance and participation in a training session during the period April 21, 1975 through December 31, 1975.

For travel at the request of CCTRF, student will be paid per diem and reimbursed for transportation costs in accordance with California State Board of Control Rules. Student shall select the method of transportation which is the most economically practical and in the best interest of CCTRF. Expenses will be paid to student upon receipt of a signed Crime Analysis Training Expense Claim in triplicate. Payments under this agreement shall not in the aggregate exceed the sum of \$5,000.

Student's signature and return of all three copies of this agreement will constitute acceptance. A copy will be returned when signed by CCTRF.

\_\_\_\_\_  
Student Signature Date

I hereby certify that all conditions for exemption have been complied with and this contract is exempt from Department of General Services' approval.

\_\_\_\_\_  
Approved Date

CRIME ANALYSIS PROCESS EVALUATION

1. Course Overview (Arenberg)

Excellent (26) Good (8) Fair ( ) Needs Improvement ( )

Comments

Would like expanded presentation of probability analysis with some type of work book available.

An excellent job was done to keep within the understanding capabilities of the class.

Would like it extended to deal in more detail with methods.

Good presentation - but did not tie in with specifics at first so I was not up on what it was leading to.

Well prepared.

Relates well to police problems and is slanted well toward police perspectives.

Enjoyed presentation - instructor lead off well, got everyone interested.

Could be longer for more benefit.

Good general outline of what to expect for three days.

Interesting presentation - Suggest need of better visual aids.

More time.

2. Theory (Arenberg)

Excellent (27) Good (7) Fair ( ) Needs Improvement ( )

Comments

Probably over the head of most non-analytical types.

Made concepts easy to grasp.

Needed more time to absorb all the information and theory presented.

What was beneficial was relating the theory to practical police examples (i.e., probability - police sharp shooters)

Would like expanded presentation of probability analysis with some type of workbook available.

I could find no fault.

Well done.

Needs to be expanded to include more practical applications with exercises to provide deeper understanding.

Need more math formulas presented on handouts for future reference.

Need some practical exercises.

Somewhat more repetitive than needed.

Terrific approach. Would personally like to be taught crime analysis by this individual.

3. Key Sort Exercise (Bird - Petersen)

Excellent (21) Good (12) Fair ( ) Needs Improvement (1)

Comments

Interesting, but time consuming.

Needed more time to work with system.

Didn't have time to go into depth.

My first contact with key sort - very well showed the capabilities of the mechanical system.

The practical exercise can help sort out problems before going to an automated system.

Small system, without mechanical help, seems cumbersome.

No improvement needed.

Exercises could have been improved by giving more or clearer instruction on the function of the card.

Very informational - would like to have had someone now using program to present so first hand experience could add.

Doing this type of exercise is preferable to watching it being done.

Needs to be structured slower for those unfamiliar with its utilization.

**CONTINUED**

**2 OF 3**

Really shows what can be done with just a few dollars.

It's good that s system is introduced, due to some dept's. having no need at the time for the more expensive system.

Enjoyable part of seminar.

Offer class an approximate size of what key sort system might become eventually.

Might have a few cards developed as examples to return to our Department with.

Suggest additional information on system capabilities, etc.

Too much time spent.

Didn't care to much for the system.

4. Organizational Concepts Exercise (Petersen - Bird)

Excellent (13) Good (17) Fair (3) Needs Improvement (.)

Comments

Good to see how the organization best fits in existing Departments.

Again, needed more time.

Gave us a practical experience which many encounter in setting up an analysis unit.

Need more analysis between sworn & non-sworn crime analysis personnel.

Well presented.

Precisely oriented to comprehension.

Thoroughly presented.

Very interesting exercises and very helpful.

More time for more detail.

Better exercise would be to set up the structure of a CAU rather than "selling" a broad general plan.

Hard to organize a CAU for a department you are not very familiar with.

5. Example of an Operative Unit ( Macsas )

Excellent (18) Good (13) Fair (1) Needs Improvement ( )

Comments

This enables us to get a first hand idea of the future potential of our analysis unit.

Would like to have seen some of his computer & manual reports.

Well presented.

The speaker was down to earth, gave real life information and was practical in his advice.

Very excellent. Gained some knowledge of what must be done and what is to be expected.

A necessary "clencher" detailing practical applications of CAU.

Speaker knew subject, however, he rambled - needs to organize his thoughts in some type of sequence.

Give a little more time to this area.

He was a very good speaker.

6. Summary (Bird)

Excellent (12) Good (18) Fair (2) Needs Improvement ( )

Comments

Could be a little more forceful in concluding remarks.

To some extent, it seemed unnecessary.

Well presented.

Excellent as summaries go, but need compacting.

Well administratively presented.

Spoke a little too softly - could have been more dynamic.

Too detailed.

I'm not sure this is necessary. Time could be better used on "overview & theory".

7. Instructor (Shel Arenberg)

Excellent (30) Good (2) Fair ( ) Needs Improvement ( )

Comments

Academic type that relates very well. Should use other examples than LAPD when in areas totally different.

Very well prepared.

Exceptional presentations.

Very easy to listen to.

Has enough character to convey the message without putting

He is knowledgeable in this field and has such a wide experience that is beneficial to us all.

Knows subject matter - has good voice.

Information, delivery, visual aids were all quite impressive.

Personable - showmanship

Best instructor overall - at least kept my attention.

Very interesting in the effects, his material is brought across.

Was able to maintain interest of class and when the subject was rather high in knowledge know how, used common language for easier understanding.

Good background in police ops. Through preparation. "Sold his audience" all of the product.

Very good instructor; interesting and made a dry subject fun to work with.

Relates well to law enforcement people - very articulate speaker, good humor.

Very well presented.

Vocabulary was a little above me. I haven't been to college.

He made what is very complex a lot clearer with his very apparent talent.

8. Instructor (Bruce Bird)

Excellent (24) Good (8) Fair ( ) Needs Improvement ( )

Comments

Good voice and overall effect

Could develop a bit more inflection - tended to speak in a monotone.

All instructors obviously well prepared.

Moves at a well regulated, easy to follow pace.

Very well presented - should smile more.

Needs to loosen up - very well qualified.

Personable - organized.

Lack spark in creating interest more stereo type in lecture structure.

Very informative and prepared.

Voice was good and strong and the training provided by Mr. Bird was helpful.

Very good instructor in all aspects.

Appears very dedicated, however, seems a bit too businesslike at times - Needs to relax some.

Like Shel, Bruce was a very good speaker.

Well done.

Needs some more volume and variation of tone.

9. Instructor (Pete Petersen)

Excellent (25) Good (6) Fair ( ) Needs Improvement (1)

Comments

Had good visual aids.

Well prepared for limited amount of time he instructed.

A little rough - has the knowledge and ability - probably will improve with time.

Delivered the information with a minimal of effort, info received with little effort.

Very good instructor.

Personable - capable.

Very informative and prepared.

It was easy to listen to Mr. Petersen as his voice and personality were easy to understand.

Good visuals and presentation.

Very good instructor in all aspects.

Typical x-cop. Knows his subject and enjoys the association with law enforcement people. Gives real steady presentation.

Pete was a very good speaker and visual aids were very good.

Well done.

Illegible from audience - suggest using oversize print heading and refer to figure # in manual when showing forms and charts, etc.

10. Overall Course

Excellent (21) Good (11) Fair ( ) Needs Improvement ( )

Comments

Maybe a 5-day course needs to be developed with major emphasis on analysis.

Better than 3-week course presented by Northwestern University.

A good course which tries to be all things and thereby suffers; Should be two separate courses; one which is designed to make crime analysts and a separate course (non-technical) for police managers - to make them understand the role of crime analysis.

We should have had two weeks to absorb all the information available.

Need to have a course aimed at existing crime analysis units and personnel.

Short, too much, too quick.

Good instruction, well presented.

Well planned - covers subject.

Needs to be four days instead of three.

Should spend more time on projects - would increase participation #4.

Longer!

Exercises were very helpful and are not stuffed down your throat. Perhaps one or two more short exercises.

The course, well presented, instructors were professional, but material could be better covered in a 5-day time period. This time needed for better comprehension of subject.

Feel I have learned something in new area.

The course was well prepared.

If possible, have field trips to agencies that have such a unit.

11. Were you generally satisfied with the course administration, the travel and motel arrangements, etc.

Yes (33)

No ( )

Comments

Would have been more helpful if part of the course material, prescriptive package book, had been mailed out earlier.

Course should be longer.

My only regret is that this school didn't last longer.

Except for hallway.

Travel and motel excellent.

Thorough saturation is more in line of some needs of those not familiar with CAU.

Excellent.

This was the best and most interesting school that I have attended and I'm sure that my department will take advantage of what I have learned.

A 5-day course would have been more adequate as this subject is new and many more things could have been discussed and some to a greater extent. With the time allotted the instructors did a very excellent job.

Motel arrangements were very good. Course administration was excellent and I feel I have learned very much from the course.

Would like a one or two day fol-ow up after several weeks back with department. This would enable officer to present problem in implementation and any technical aspects he is having trouble with. Should consider six month follow up also. Can review direction of unit as functioning and general impact on crime.

Very worth the time.

CRIME ANALYSIS PROCESS EVALUATION

1. Course Overview (Arenberg)

Excellent (21) Good (11) Fair ( ) Needs Improvement ( )

Comments

Over-simplified.

Well prepared.

Well presented.

Has excellent presentation with his knowledge of police work and procedures.

Gave a new outlook - to old technique - very good.

Background info on statistical methods is essential; a good feature.

Gains and holds attention - understandable.

Very good, really got student's attention.

2. Theory (Arenberg)

Excellent (25) Good (9) Fair ( ) Needs Improvement ( )

Comments

Handouts outlining some of L.A.'s success stories would be nice.

Good instructor. Keeps student interest even on dry subjects.

Very good.

A little deep in places.

May need to spend a little more time here for those of us who haven't added two numbers since college. Possibly add some immediate exercises dealing with theory.

Don't assume that police people do not have the intelligence to comprehend statistical theory.

Very valuable - gave me some good ideas to take back; probably the best part of the program.

Math areas could be simplified a little for the non-mathematician.

Very interesting.

Easily understood.

3. Key Sort Exercise (Bird - Petersen)

Excellent (15) Good (13) Fair ( 3) Needs Improvement ( )

Comments

Need to give more time to groups working on exercises to insure they understand the method and how key-sorting can be used, rather than a rush to keep on schedule. The idea is to convince them that something like key-sort should be used in their departments.

Helped understand how cards function.

Thanks for new methods.

Need more time to work with the cards.

Interesting demonstration and exercise.

Not enough time spent to realize the full potential.

Shows an approach which was not familiar and could be useful in various approaches.

More time could be used.

Need more information on the cards in order to make valid recommendations

This gave us the opportunity to gain experience with expert supervision.

Introduced something new that could be used in my department even though we are automated.

A little more explanation on establishing basic criteria for sort of cards.

Continue use of practical application.

More time should be allotted to this.

Not enough time - reduce number of exercises. (The idea is all we need in this type course).

Not enough time devoted to this particular subject.

4. Organizational Concepts Exercise ( Petersen - Bird)

Excellent (11) Good (18) Fair ( ) Needs Improvement ( 1)

Comments

Organizational charts for actual operational units would be nice.

Subject hard to keep interesting. However, did good job.

Over-simplified.

Improves understanding of class.

4. Organizational Concepts Exercise (Petersen - Bird) (CONTINUED)

Need additional time to cover this material in greater detail.

This project would have been much more valuable if it was assigned ahead and people were given more time to work on it-i.e., pass out exercise at start of seminar.

A little more time could be spent on this.

Never addressed the topic - jumped from subject to subject.

Good.

5. Example of an Operative Unit (Parsons )

Excellent (21) Good (6) Fair ( ) Needs Improvement (1)

Comments

Parson's talk very informative, he's been there and there is no substitute for experience.

I suggest you bring in a chief who can prepare a presentation that relates to the seminar. Especially one who says something more than "crime analysis" is all "pervasive" and the proceeds to explain OBTS data elements.

Very interesting and informative talk.

Interesting as well as informative. One of the highlights of the seminar.

The reality of use of ideas clarified the ideas presented.

Need additional time to cover this material in greater detail.

Super.

Chief Parsons did an excellent job; I would like to visit his department to see if it's as good as he says.

Very informative, especially the parts which expanded on use of crime analysis unit.

Excellent presentation by Chief Parson, good choice for speakers.

This was very informative. A very vital part of the program.

Very informative, delivered very well.

Presentation gave a broad look at how the work of a crime analysis unit fits into the total criminal justice system in an effort to reduce crime.

Not enough time allotted.

6. Summary (Bird)

Excellent (17) Good (7) Fair (1) Needs Improvement (1)

6. Summary (Bird) (CONTINUED)

Comments

The program has definite positive contribution possibilities for implementation and should assist departments.

Hurriedly presented. Time span should be expanded.

7. Instructor (Arenberg)

Excellent (27) Good ( 7 ) Fair ( ) Needs Improvement ( )

Comments

Well versed on all subjects presented-easily understood.

Could be a little less cocky!

Had a good rapport with class and was able to present the information in a meaningful manner.

Very good orator - good before a group. Has ability to relate to police problems.

Very good-kept interest of students.

Wish we could have a longer program in the "nuts & bolts" of CA.

Insight in practical police problems made excellent presentation.

Very good in all of comments.

His understanding of how to communicate with law enforcement personnel in their terms allows for understanding of the points he desires to make.

Well informed on subject material and presented in an outstanding manner.

Include other methods for forecasting - reduce introduction session.

Very good instructor.

His delivery and effectiveness second to none. Number 1 rating in my book.

8. Instructor (Bruce Bird)

Excellent (22) Good (8 ) Fair (2) Needs Improvement ( )

Comments

Did good job of coordinating classes.

When evaluating case studies you asked several direct, pointed questions on evaluation etc. Why not collect these questions over period of time and make handout for evaluation process.

Well prepared.

8. Instructor (Bruce Bird) (CONTINUED)

Extremely personable.

Has a very good ability to field questions.

Very good in all of comments-could speak a little more forceful.

Needs a little more enthusiasm.

Seems a little timid.

Well organized and kept the course moving in a logical manner.

No class control - could be a little more commanding.

Has the ability to follow outlines well - uses visuals well.

9. Instructor (Pete Petersen)

Excellent (17) Good (13) Fair (2) Needs Improvement ( )

Comments

Visual aids well prepared and easily understood.

Lack of knowledge on subject "or" not able to transmit same.

Appeared to be thoroughly with subject matter presented.

Good relations with students.

Very good in all of comments-slow speaker sometime.

Can present material in a concise and understandable manner.

All instructors well prepared, knowledgeable, articulate. All sessions informative and interesting.

Well prepared.

Generally, an impressive staff with excellent credentials and a good ability to get their point across!

Over-simplified but applicable.

Did good job even though topic was hard to keep interesting.

10. Overall Course

Excellent (21) Good (11) Fair ( ) Needs Improvement ( )

Comments

Very good.

Excellent coverage of techniques and basics of running CAU.

Practical applicability of the presentation is its most worthwhile attribute.

11. Were you generally satisfied with the course administration, the travel and motel arrangements, etc. (CONTINUED)

Motel arrangements and classes in-house were excellent.

Will you follow-up - if so, will participants be informed of findings?

I believe the course is excellent for the people it is aimed at - however, instead of suggesting this course be altered, I suggest a course such as this for smaller departments with manual systems - say in the 50,000 population class with approx. 100 officers. We need this concept, but on less grand a scale.

Accommodations very good.

The overall program was successful - there was not any unfavorable comments from any of the attendees. Thanks for the course!

Although criminal analysis is not my line of work and had I known the actual subject of the course I would have sent someone else, I must admit it was very informative and gives me a better insight of this program to explain to our new police planner.
