PREFACE

The 1975 edition of the Criminal Justice Profile marks a Bureau of Criminal Statistics (BCS) publication policy change. Beginning this year, the annual individual reference table reports representing the Uniform Crime Reporting, prosecution and probation data bases will be incorporated into the profile report series. The Bureau can, in this manner, provide its users with a consolidation of the most relevant criminal justice data in a single publication. We hope this new format will be convenient and encourage the usage and application you make of this criminal justice information.

INTRODUCTION

The Criminal Justice Profile summarizes and combines data describing the many facets of the criminal justice system. Separate publications are available for each county and statewide.

Each profile consists of three sections. The first section displays in tabular form yearly data from 1966 to 1975. The following section shows five-year projections for selected line items. The final section contains reference tables displaying cross tabulations of selected data elements.

Criminal Justice Data

All data in the profile are reported to BCS by state and local agencies, and have been summarized from current statistical reporting systems. It covers the years from 1966 to 1975, and provides county and statewide totals with individual line items on criminal justice activities. The line items are divided into sections dealing with crimes, arrests, processes, personnel, expenditures, and correctional actions.

Population data are shown in hundreds and can be converted to original numbers by moving the decimal point two places to the right. For example, the state population for 1975 is shown as 211,130, which converts to 21,113,000.

Projections

Trend information shown in the profile is based upon data submitted to the Bureau by state and local criminal justice agencies. Such factors as policy changes in the larger agencies, shifts in the proportion of persons less than 25 years of age in the population (the so-called crime prone group), crime prevention programs, changing public attitudes, along with many other factors, undoubtedly influence the incidence of crime and arrests, and prosecution and correction programs to some extent. It should be understood, therefore, that these projections are based upon historical data and are made on the assumption that the elements which powered the rate in the past will continue in the future. This assumption may not be met in the short-term, but should be fulfilled over a longer period of time. These limitations should be considered when using the projections shown in the Profile.

The projections consist of curve fitting by the method of least squares. Two types of equations are used: linear and exponential. The program procedure is to apply both equations to the given data,

CLEARANCE: an offense is cleared or "solved" for crime reporting purposes when at least one person is arrested, charged with the commission of the offense and turned over to the court for prosecution or cited to juvenile authorities. In certain situations a clearance may be counted by "exceptional" means when the police definitely know the identity of the offender, have enough information to support an arrest, and know the location of the offender but for some reason cannot take the offender into custody.

CLEARANCE RATE: method used to determine the amount of crime cleared. The rate is based on the number of total crimes reported.

CRIME: "an act committed or omitted in violation of law forbidding or commanding it . . ." (P.C. 15)
