1972 PAROLEES, THREE YEAR FOLLOW-UP AND TREND ANALYSIS

A systematic reporting of parole outcomes analyzed by offender attributes was assigned top priority by participating agencies in planning meetings. This task, as requested by parole administrators, included two further requirements: tables were to be prepared for each agency separately, and for males and females.

The requested reporting system was established in 1967. It is illustrated in this *Newsletter* by the tables for persons paroled in 1972 with three year follow-up, by all agencies combined (with separate tables for men and women). Comparable tables, for each agency which submitted parolee data for this period, have been sent to the respective agencies.

National Tables--1972 Parolees

Parole agencies which submitted 1972 three year follow-up data for the Uniform Parole Reports are listed on the inside back cover. The great majority of these agencies have reported on all their cases which were released to parole supervision by discretionary action of a parole board. A few of the agencies reported on random samples of various proportions.

Thus, the enclosed tables represent national figures for parole outcomes after three years on persons released to parole supervision during 1972 and reported to UPR. It should be emphasized that these data do not represent all persons paroled within the United States; data for some states are not included.

Extent of Data

More than 250,000 persons paroled during 1965 through 1974 have one year follow-up data in the U.P.R. data file. Two year follow-up data are being gathered, beginning with 1968 parolees and three year follow-up data start with release year 1969.

THREE YEAR FOLLOW-UP ANALYSIS--1972 PAROLEES

This Newsletter presents a three-year longitudinal analysis of parolees released in 1972. Not all agencies reported for this entire follow-up period. Therefore, the table has been modified to include only those subjects reported for each of the three years. This facilitates direct comparisons among the yearly samples.

The SUMMARY TABLE* for males shows that between the first and second year after release, the number continued on parole** decreased 6 or 7 percentage points in the six outcome groups. However, there was only a 1 or 2 percentage point drop between the second and third year following release. This pattern is reflected in the total number reported paroled: 81% were coded as continued on parole after one year, 75% after two years, and 74% through the third year.

The proportion of absconders remained stable for all three years in each of the six outcome groups--4% of the total number reported paroled.

The technical violation category also exhibited the largest change between the first and second year after release. There was a 4 percentage point increase during this period in five of the outcome groups and a 3 percentage point rise in the remaining group. All groups had only a 1 percentage point increase between the second and third year after release. Technical violations for the total number reported paroled increased from 10% to 15% over the three year period.

---

*For an explanation of the SUMMARY TABLE construction, see: National Probation and Parole Institutes, Uniform Parole Reports Project, "A New Summary Table and Trend Analysis for 1968, 1969, and 1970," Davis, California: National Council on Crime and Delinquency Research Center, August, 1973.

**The term "continued on parole" means the parolee was not coded an absconder or a prison returnee as the result of any act he committed during his parole supervision period.

Of the total number reported paroled, men recommitted to prison rose from 4% after the first year to 7% following three years from release.

The SUMMARY TABLE for females reflects the same pattern discussed above: the continued on parole and technical violation categories had the largest magnitude of change between the first and second year after release. For the total number reported paroled, 87% were continued on parole after one year, 83% after two years, and 83% through the third year. Women returned to prison as technical violators increased over the three year period from 6% to 9% to 10%. Females recommitted to prison with new major convictions remained stable at 3%, as did absconders at 5%.

Total	64	112	4	217	23	220	3	46

The enclosed data represent the only available national information on parole outcomes, including a large number of parolees from many agencies, collected in terms of uniform, agreed upon definitions, with both these definitions and the reporting format developed in collaboration with paroling authorities. Fractions of less than ½% are represented by "1/2%." We believe the data are in a form which is widely useful, while not overly simplified. Your suggestions for improvement are encouraged.

AGENCIES REPRESENTED IN NATIONAL THREE YEAR TABLES--1972
(Percents show proportions of all parolees)

Alabama	25%	Michigan	18%
Arizona	100%	Mississippi	100%

UNIFORM PAROLE REPORTS

OBJECTIVES	Reliable nationwide statistical reports on parole based upon (1) uniform definitions of items and (2) individual persons paroled.
SPONSORS	Association of Paroling Authorities; Interstate Compact Administrators Association for the Council of State Governments; United States Board of Parole.
PARTICIPATING AGENCIES	Fifty-five agencies in fifty states, the Federal Government, and Puerto Rico contribute data at their own expense.
VARIABLES	Definitions of the variables are given in Uniform Parole Reporting Coding Manual, available upon request.
RELIABILITY	Reliability studies, which have resulted in the conclusion that the data collected are adequately reliable, are available upon request.

INFORMATION FEEDBACK

Production of yearly statistical tables for all participating agencies has been established. The preceding tables show the parole outcomes, analyzed by various offender characteristics, for all persons reported by the agencies indicated during the year shown. The parole outcomes are based on three year follow-up study, and persons discharged during that period are included. The percentages given are rounded to the nearest whole percent. The "1/2%" entries represent ½% or less.
