Public Law 91-513
91st Congress, H. R. 18583
October 27, 1970

An Act

To amend the Public Health Service Act and other laws to provide increased research into, and prevention of, drug abuse and drug dependence; to provide for treatment and rehabilitation of drug abusers and drug dependent persons; and to strengthen existing law enforcement authority in the field of drug abuse.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Comprehensive Drug Abuse Prevention and Control Act of 1970". Comprehensive Drug Abuse Prevention and Control Act of 1970.

TABLE OF CONTENTS

TITLE I—REHABILITATION PROGRAMS RELATING TO DRUG ABUSE

Sec. 1. Programs under Community Mental Health Centers Act relating to drug abuse.
Sec. 2. Broader treatment authority in Public Health Service hospitals for persons with drug abuse and other drug dependence problems.
Sec. 3. Research under the Public Health Service Act in drug use, abuse, and addiction.
Sec. 4. Medical treatment of narcotic addiction.

TITLE II—CONTROL AND ENFORCEMENT

PART A—SHORT TITLE; FINDINGS AND DECLARATION; DEFINITIONS

Sec. 100. Short title.
Sec. 101. Findings and declarations.
Sec. 102. Definitions.
Sec. 103. Increased numbers of enforcement personnel.

PART B—AUTHORITY TO CONTROL; STANDARDS AND SCHEDULES

Sec. 201. Authority and criteria for classification of substances.
Sec. 202. Schedules of controlled substances.

PART C—REGISTRATION OF MANUFACTURERS, DISTRIBUTORS, AND DISPENSERS OF CONTROLLED SUBSTANCES

Sec. 301. Rules and regulations.
Sec. 302. Persons required to register.
Sec. 303. Registration requirements.
Sec. 304. Denial, revocation, or suspension of registration.
Sec. 305. Labeling and packaging requirements.
Sec. 306. Quotas applicable to certain substances.
Sec. 307. Records and reports of registrants.
Sec. 308. Order forms.
Sec. 309. Prescriptions.

PART D—OFFENSES AND PENALTIES

Sec. 401. Prohibited acts A—penalties.
Sec. 402. Prohibited acts B—penalties.
Sec. 403. Prohibited acts C—penalties.
Sec. 404. Penalty for simple possession; conditional discharge and expunging of records for first offense.
Sec. 405. Distribution to persons under age twenty-one.
Sec. 406. Attempt and conspiracy.
Sec. 407. Additional penalties.
Sec. 408. Continuing criminal enterprise.
Sec. 409. Dangerous special drug offender sentencing.
Sec. 410. Information for sentencing.
Sec. 411. Proceedings to establish previous convictions.

TABLE OF CONTENTS—Continued

TITLE II—CONTROL AND ENFORCEMENT—Continued

PART E—ADMINISTRATIVE AND ENFORCEMENT PROVISIONS

Sec. 501. Procedures.
Sec. 502. Education and research programs of the Attorney General.
Sec. 503. Cooperative arrangements.
Sec. 504. Advisory committees.
Sec. 505. Administrative hearings.
Sec. 506. Subpenas.
Sec. 507. Judicial review.
Sec. 508. Powers of enforcement personnel.
Sec. 509. Search warrants.
Sec. 510. Administrative inspections and warrants.
Sec. 511. Forfeitures.
Sec. 512. Injunctions.
Sec. 513. Enforcement proceedings.
Sec. 514. Immunity and privilege.
Sec. 515. Burden of proof; liabilities.
Sec. 516. Payments and advances.

PART F—ADVISORY COMMISSION

Sec. 601. Establishment of Commission on Marihuana and Drug Abuse.

PART G—CONFORMING, TRANSITIONAL, AND EFFECTIVE DATE, AND GENERAL PROVISIONS

Sec. 701. Repeals and conforming amendments.
Sec. 702. Pending proceedings.
Sec. 703. Provisional registration.
Sec. 704. Effective dates and other transitional provisions.
Sec. 705. Continuation of regulations.
Sec. 706. Severability.
Sec. 707. Saving provision.
Sec. 708. Application of State law.
Sec. 709. Appropriations authorizations.

TITLE III—IMPORTATION AND EXPORTATION; AMENDMENTS AND REPEALS OF REVENUE LAWS

Sec. 1000. Short title.

PART A—IMPORTATION AND EXPORTATION

Sec. 1001. Definitions.
Sec. 1002. Importation of controlled substances.
Sec. 1003. Exportation of controlled substances.
Sec. 1004. Transshipment and in-transit shipment of controlled substances.
Sec. 1005. Possession on board vessels, etc., arriving in or departing from United States.
Sec. 1006. Exemption authority.
Sec. 1007. Persons required to register.
Sec. 1008. Registration requirements.
Sec. 1009. Manufacture or distribution for purposes of unlawful importation.
Sec. 1010. Prohibited acts A—penalties.
Sec. 1011. Prohibited acts B—penalties.
Sec. 1012. Second or subsequent offenses.
Sec. 1013. Attempt and conspiracy.
Sec. 1014. Additional penalties.
Sec. 1015. Applicability of part E of title II.
Sec. 1016. Authority of Secretary of Treasury.

PART B—AMENDMENTS AND REPEALS, TRANSITIONAL AND EFFECTIVE DATE PROVISIONS

Sec. 1101. Repeals.
Sec. 1102. Conforming amendments.
Sec. 1103. Pending proceedings.
Sec. 1104. Provisional registration.
Sec. 1105. Effective dates and other transitional provisions.

TITLE IV—REPORT ON ADVISORY COUNCILS

Sec. 1200. Report on advisory councils.

TITLE I—REHABILITATION PROGRAMS RELATING TO DRUG ABUSE

PROGRAMS UNDER COMMUNITY MENTAL HEALTH CENTERS ACT RELATING TO DRUG ABUSE

SECTION 1. (a) Part D of the Community Mental Health Centers Act is amended as follows:

(1) Sections 251, 252, and 253 of such part (42 U.S.C. 2688k, 2688l, and 2688m) are each amended by inserting "and other persons with drug abuse and drug dependence problems" immediately after "narcotic addicts" each place those words appear in those sections. 82 Stat. 1009.

(2) Clauses (A) and (C) of section 252 of such part are each amended by inserting ", drug abuse, and drug dependence" immediately after "narcotic addiction".

(3) The heading for such part is amended to read as follows:

"PART D—NARCOTIC ADDICTION, DRUG ABUSE, AND DRUG DEPENDENCE PREVENTION AND REHABILITATION".

(b) Part E of such Act is amended as follows:

(1) Section 261(a) of such part (42 U.S.C. 2688o) is amended by striking out "$30,000,000 for the fiscal year ending June 30, 1971, $35,000,000 for the fiscal year ending June 30, 1972, and $40,000,000 for the fiscal year ending June 30, 1973" and inserting in lieu thereof "$40,000,000 for the fiscal year ending June 30, 1971, $60,000,000 for the fiscal year ending June 30, 1972, and $80,000,000 for the fiscal year ending June 30, 1973". 82 Stat. 1010; Ante, p. 57.

(2) Section 261(a) of such part is further amended by inserting ", drug abuse, and drug dependence" immediately after "narcotic addiction".

(3) Sections 261(c) and 264 are each amended by inserting "and other persons with drug abuse and drug dependence problems" immediately after "narcotic addicts". Ante, pp. 58, 61.

(4) The section headings for sections 261 and 263 are each amended by striking out "AND NARCOTIC ADDICTS" and inserting in lieu thereof ", NARCOTIC ADDICTS, AND OTHER PERSONS WITH DRUG ABUSE AND DRUG DEPENDENCE PROBLEMS".

(c) Part D of such Act is further amended by redesignating sections 253 and 254 as sections 254 and 255, respectively, and by adding after section 252 the following new section: 42 USC 2688n.

"DRUG ABUSE EDUCATION

"SEC. 253. (a) The Secretary is authorized to make grants to States and political subdivisions thereof and to public or nonprofit private agencies and organizations, and to enter into contracts with other private agencies and organizations, for— Grants. Contract authority.

"(1) the collection, preparation, and dissemination of educational materials dealing with the use and abuse of drugs and the prevention of drug abuse, and

"(2) the development and evaluation of programs of drug abuse education directed at the general public, school-age children, and special high-risk groups.

"(b) The Secretary, acting through the National Institute of Mental Health, shall (1) serve as a focal point for the collection and dissemination of information related to drug abuse; (2) collect, prepare, and disseminate materials (including films and other educational devices) dealing with the abuse of drugs and the prevention of drug

abuse; (3) provide for the preparation, production, and conduct of programs of public education (including those using films and other educational devices); (4) train professional and other persons to organize and participate in programs of public education in relation to drug abuse; (5) coordinate activities carried on by such departments, agencies, and instrumentalities of the Federal Government as he shall designate with respect to health education aspects of drug abuse; (6) provide technical assistance to State and local health and educational agencies with respect to the establishment and implementation of programs and procedures for public education on drug abuse; and (7) undertake other activities essential to a national program for drug abuse education.

Personnel training.

"(c) The Secretary, acting through the National Institute of Mental Health, is authorized to develop and conduct workshops, institutes, and other activities for the training of professional and other personnel to work in the area of drug abuse education.

Appropriation.

"(d) To carry out the purposes of this section, there are authorized to be appropriated $3,000,000 for the fiscal year ending June 30, 1971, $12,000,000 for the fiscal year ending June 30, 1972, and $14,000,000 for the fiscal year ending June 30, 1973."

82 Stat. 1009; Ante, p.1238. 42 USC 2688k.

(d) Such part D is further amended by adding at the end thereof the following new section:

"SPECIAL PROJECTS FOR NARCOTIC ADDICTS AND DRUG DEPENDENT PERSONS

Grants, treatment and rehabilitation.

"SEC. 256. (a) The Secretary is authorized to make grants to public or nonprofit private agencies and organizations to cover a portion of the costs of programs for treatment and rehabilitation of narcotic addicts or drug dependent persons which include one or more of the following: (1) Detoxification services or (2) institutional services (including medical, psychological, educational, or counseling services) or (3) community-based aftercare services.

Conditions.

"(b) Grants under this section for the costs of any treatment and rehabilitation program—

"(1) may be made only for the period beginning with the first day of the first month for which such a grant is made and ending with the close of eight years after such first day; and

Limitation.

"(2) (A) except as provided in subparagraph (B), may not exceed 80 per centum of such costs for each of the first two years after such first day, 75 per centum of such costs for the third year after such first day, 60 per centum of such costs for the fourth year after such first day, 45 per centum of such costs for the fifth year after such first day, and 30 per centum of such costs for each of the next three years after such first day; and

"(B) in the case of any such program providing services for persons in an area designated by the Secretary as an urban or rural poverty area, such grants may not exceed 90 per centum of such costs for each of the first two years after such first day, 80 per centum of such costs for the third year after such first day, 75 per centum of such costs for the fourth and fifth years after such first day, and 70 per centum of such costs for each of the next three years after such first day.

"(c) No application for a grant authorized by this section shall be approved by the Secretary unless such application is forwarded through the State agency responsible for administering the plan submitted pursuant to section 204 of this Act or, if there be a separate State agency, designated by the Governor as responsible for planning, coordinating, and executing the State's efforts in the treatment and

77 Stat. 291; 81 Stat. 79. 42 USC 2684.

rehabilitation of narcotic addicts and drug dependent persons, through such latter agency, which shall submit to the Secretary such comments as he deems appropriate. No application for a grant under this section for a program to provide services for persons in an area in which is located a facility constructed as a new facility after the date of enactment of this section with funds provided under a grant under part A or this part shall be approved unless such application contains satisfactory assurance that, to the extent feasible, such program will be included as part of the programs conducted in or through such facility.

"(d) The Secretary shall make grants under this section for projects within the States in accordance with criteria determined by him designed to provide priority for grant applications in States, and in areas within the States, having the higher percentages of population who are narcotic addicts or drug dependent persons. Criteria.

"(e) There are authorized to be appropriated to carry out this section not to exceed $20,000,000 for the fiscal year ending June 30, 1971; $30,000,000 for the fiscal year ending June 30, 1972; and $35,000,000 for the fiscal year ending June 30, 1973." Appropriation.

BROADER TREATMENT AUTHORITY IN PUBLIC HEALTH SERVICE HOSPITALS FOR PERSONS WITH DRUG ABUSE AND OTHER DRUG DEPENDENCE PROBLEMS

SEC. 2. (a) Part E of title III of the Public Health Service Act is amended as follows:

(1) Section 341(a) of such part is amended by adding immediately after "addicts" the second time it appears the following: "and other persons with drug abuse and drug dependence problems". 80 Stat. 1449. 42 USC 257.

(2)(A) Sections 342, 343, 344, and 346 of such part are each amended by inserting "or other persons with drug abuse and drug dependence problems" immediately after "addicts" each place it appears in those sections. 58 Stat. 699; 68 Stat. 79. 42 USC 258-260, 261.

(B) The section heading of section 342 of such part is amended by inserting "OR OTHER PERSONS WITH DRUG ABUSE AND DRUG DEPENDENCE PROBLEMS" after "ADDICTS".

(3) Sections 343 and 344 of such part are each amended by inserting "or other person with a drug abuse or other drug dependence problem" immediately after "addict" each place it appears in those sections.

(4) Sections 343, 344, and 347 of such part are each amended by inserting ", drug abuse, or drug dependence" immediately after "addiction" each place it appears in those sections. 42 USC 261a.

(5) Section 346 of such part is amended by inserting "or substance controlled under the Controlled Substances Act" immediately after "habit-forming narcotic drug". Post, p. 1242.

(6) The heading for such part is amended to read as follows:

"PART E—NARCOTIC ADDICTS AND OTHER DRUG ABUSERS".

(b) Section 2 of the Public Health Service Act (42 U.S.C. 201) is amended by adding after paragraph (p) the following new paragraph: 58 Stat. 682; 74 Stat. 34.

"(q) The term 'drug dependent person' means a person who is using a controlled substance (as defined in section 102 of the Controlled Substances Act) and who is in a state of psychic or physical dependence, or both, arising from the use of that substance on a continuous basis. Drug dependence is characterized by behavioral and other responses which include a strong compulsion to take the substance on a continuous basis in order to experience its psychic effects or to avoid the discomfort caused by its absence." Post, p. 1243.

RESEARCH UNDER THE PUBLIC HEALTH SERVICE ACT IN DRUG USE, ABUSE, AND ADDICTION

Research populations, protection of identity.
70 Stat. 929.

SEC. 3. (a) Section 303(a) of the Public Health Service Act (42 U.S.C. 242a(a)) is amended by adding after and below paragraph (2) the following:

"The Secretary may authorize persons engaged in research on the use and effect of drugs to protect the privacy of individuals who are the subject of such research by withholding from all persons not connected with the conduct of such research the names or other identifying characteristics of such individuals. Persons so authorized to protect the privacy of such individuals may not be compelled in any Federal, State, or local civil, criminal, administrative, legislative, or other proceedings to identify such individuals."

80 Stat. 1184.
42 USC 246.

(b) Section 314(d)(2) of the Public Health Service Act is amended—

(1) by striking out "and" at the end of subparagraph (I);

(2) by striking out the period at the end of subparagraph (J) and inserting in lieu thereof "; and"; and

(3) by adding after subparagraph (J) the following new subparagraph:

"(K) provide for services for the prevention and treatment of drug abuse and drug dependence, commensurate with the extent of the problem."

81 Stat. 79.

(c) Section 507 of the Public Health Service Act (42 U.S.C. 225a) is amended—

(1) by striking out "available for research, training, or demonstration project grants pursuant to this Act" and inserting in lieu thereof "available under this Act for research, training, or demonstration project grants or for grants to expand existing treatment and research programs and facilities for alcoholism, narcotic addiction, drug abuse, and drug dependence, and appropriations available under the Community Mental Health Centers Act for construction and staffing of community mental health centers and alcoholism and narcotic addiction, drug abuse, and drug dependence facilities", and

77 Stat. 190.
42 USC 2681 note.

(2) by inserting immediately before the period at the end thereof the following: ", except that grants to such Federal institutions may be funded at 100 per centum of the costs".

MEDICAL TREATMENT OF NARCOTIC ADDICTION

SEC. 4. The Secretary of Health, Education, and Welfare, after consultation with the Attorney General and with national organizations representative of persons with knowledge and experience in the treatment of narcotic addicts, shall determine the appropriate methods of professional practice in the medical treatment of the narcotic addiction of various classes of narcotic addicts, and shall report thereon from time to time to the Congress.

Report to Congress.

TITLE II—CONTROL AND ENFORCEMENT

PART A—SHORT TITLE; FINDINGS AND DECLARATION; DEFINITIONS

SHORT TITLE

SEC. 100. This title may be cited as the "Controlled Substances Act". Citation of title.

FINDINGS AND DECLARATIONS

SEC. 101. The Congress makes the following findings and declarations:

(1) Many of the drugs included within this title have a useful and legitimate medical purpose and are necessary to maintain the health and general welfare of the American people.

(2) The illegal importation, manufacture, distribution, and possession and improper use of controlled substances have a substantial and detrimental effect on the health and general welfare of the American people.

(3) A major portion of the traffic in controlled substances flows through interstate and foreign commerce. Incidents of the traffic which are not an integral part of the interstate or foreign flow, such as manufacture, local distribution, and possession, nonetheless have a substantial and direct effect upon interstate commerce because—

(A) after manufacture, many controlled substances are transported in interstate commerce,

(B) controlled substances distributed locally usually have been transported in interstate commerce immediately before their distribution, and

(C) controlled substances possessed commonly flow through interstate commerce immediately prior to such possession.

(4) Local distribution and possession of controlled substances contribute to swelling the interstate traffic in such substances.

(5) Controlled substances manufactured and distributed intrastate cannot be differentiated from controlled substances manufactured and distributed interstate. Thus, it is not feasible to distinguish, in terms of controls, between controlled substances manufactured and distributed interstate and controlled substances manufactured and distributed intrastate.

(6) Federal control of the intrastate incidents of the traffic in controlled substances is essential to the effective control of the interstate incidents of such traffic.

(7) The United States is a party to the Single Convention on Narcotic Drugs, 1961, and other international conventions designed to establish effective control over international and domestic traffic in controlled substances. 18 UST 1407.

DEFINITIONS

SEC. 102. As used in this title:

(1) The term "addict" means any individual who habitually uses any narcotic drug so as to endanger the public morals, health, safety, or welfare, or who is so far addicted to the use of narcotic drugs as to have lost the power of self-control with reference to his addiction.

(2) The term "administer" refers to the direct application of a controlled substance to the body of a patient or research subject by—

(A) a practitioner (or, in his presence, by his authorized agent), or

(B) the patient or research subject at the direction and in the presence of the practitioner,

whether such application be by injection, inhalation, ingestion, or any other means.

(3) The term "agent" means an authorized person who acts on behalf of or at the direction of a manufacturer, distributor, or dispenser; except that such term does not include a common or contract carrier, public warehouseman, or employee of the carrier or warehouseman, when acting in the usual and lawful course of the carrier's or warehouseman's business.

(4) The term "Bureau of Narcotics and Dangerous Drugs" means the Bureau of Narcotics and Dangerous Drugs in the Department of Justice.

(5) The term "control" means to add a drug or other substance, or immediate precursor, to a schedule under part B of this title, whether by transfer from another schedule or otherwise.

Post, p. 1247.

(6) The term "controlled substance" means a drug or other substance, or immediate precursor, included in schedule I, II, III, IV, or V of part B of this title. The term does not include distilled spirits, wine, malt beverages, or tobacco, as those terms are defined or used in subtitle E of the Internal Revenue Code of 1954.

68A Stat. 595.
26 USC 5001.

(7) The term "counterfeit substance" means a controlled substance which, or the container or labeling of which, without authorization, bears the trademark, trade name, or other identifying mark, imprint, number, or device, or any likeness thereof, of a manufacturer, distributor, or dispenser other than the person or persons who in fact manufactured, distributed, or dispensed such substance and which thereby falsely purports or is represented to be the product of, or to have been distributed by, such other manufacturer, distributor, or dispenser.

(8) The terms "deliver" or "delivery" mean the actual, constructive, or attempted transfer of a controlled substance, whether or not there exists an agency relationship.

(9) The term "depressant or stimulant substance" means—

(A) a drug which contains any quantity of (i) barbituric acid or any of the salts of barbituric acid; or (ii) any derivative of barbituric acid which has been designated by the Secretary as habit forming under section 502(d) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 352(d)); or

52 Stat. 1050.

(B) a drug which contains any quantity of (i) amphetamine or any of its optical isomers; (ii) any salt of amphetamine or any salt of an optical isomer of amphetamine; or (iii) any substance which the Attorney General, after investigation, has found to be, and by regulation designated as, habit forming because of its stimulant effect on the central nervous system; or

(C) lysergic acid diethylamide; or

(D) any drug which contains any quantity of a substance which the Attorney General, after investigation, has found to have, and by regulation designated as having, a potential for abuse because of its depressant or stimulant effect on the central nervous system or its hallucinogenic effect.

(10) The term "dispense" means to deliver a controlled substance to an ultimate user or research subject by, or pursuant to the lawful order of, a practitioner, including the prescribing and administering of a controlled substance and the packaging, labeling, or compounding necessary to prepare the substance for such delivery. The term "dispenser" means a practitioner who so delivers a controlled substance to an ultimate user or research subject.

(11) The term "distribute" means to deliver (other than by administering or dispensing) a controlled substance. The term "distributor" means a person who so delivers a controlled substance.

(12) The term "drug" has the meaning given that term by section 201(g)(1) of the Federal Food, Drug, and Cosmetic Act. 52 Stat. 1041; 79 Stat. 234; 21 USC 321.

(13) The term "felony" means any Federal or State offense classified by applicable Federal or State law as a felony.

(14) The term "manufacture" means the production, preparation, propagation, compounding, or processing of a drug or other substance, either directly or indirectly or by extraction from substances of natural origin, or independently by means of chemical synthesis or by a combination of extraction and chemical synthesis, and includes any packaging or repackaging of such substance or labeling or relabeling of its container; except that such term does not include the preparation, compounding, packaging, or labeling of a drug or other substance in conformity with applicable State or local law by a practitioner as an incident to his administration or dispensing of such drug or substance in the course of his professional practice. The term "manufacturer" means a person who manufactures a drug or other substance.

(15) The term "marihuana" means all parts of the plant Cannabis sativa L., whether growing or not; the seeds thereof; the resin extracted from any part of such plant; and every compound, manufacture, salt, derivative, mixture, or preparation of such plant, its seeds or resin. Such term does not include the mature stalks of such plant, fiber produced from such stalks, oil or cake made from the seeds of such plant, any other compound, manufacture, salt, derivative, mixture, or preparation of such mature stalks (except the resin extracted therefrom), fiber, oil, or cake, or the sterilized seed of such plant which is incapable of germination.

(16) The term "narcotic drug" means any of the following, whether produced directly or indirectly by extraction from substances of vegetable origin, or independently by means of chemical synthesis, or by a combination of extraction and chemical synthesis:

(A) Opium, coca leaves, and opiates.

(B) A compound, manufacture, salt, derivative, or preparation of opium, coca leaves, or opiates.

(C) A substance (and any compound, manufacture, salt, derivative, or preparation thereof) which is chemically identical with any of the substances referred to in clause (A) or (B).

Such term does not include decocainized coca leaves or extracts of coca leaves, which extracts do not contain cocaine or ecgonine.

(17) The term "opiate" means any drug or other substance having an addiction-forming or addiction-sustaining liability similar to morphine or being capable of conversion into a drug having such addiction-forming or addiction-sustaining liability.

(18) The term "opium poppy" means the plant of the species Papaver somniferum L., except the seed thereof.

(19) The term "poppy straw" means all parts, except the seeds, of the opium poppy, after mowing.

(20) The term "practitioner" means a physician, dentist, veterinarian, scientific investigator, pharmacy, hospital, or other person licensed, registered, or otherwise permitted, by the United States or the jurisdiction in which he practices or does research, to distribute, dispense, conduct research with respect to, administer, or use in teaching or chemical analysis, a controlled substance in the course of professional practice or research.

(21) The term "production" includes the manufacture, planting, cultivation, growing, or harvesting of a controlled substance.

(22) The term "immediate precursor" means a substance—

(A) which the Attorney General has found to be and by regulation designated as being the principal compound used, or produced primarily for use, in the manufacture of a controlled substance;

(B) which is an immediate chemical intermediary used or likely to be used in the manufacture of such controlled substance; and

(C) the control of which is necessary to prevent, curtail, or limit the manufacture of such controlled substance.

(23) The term "Secretary", unless the context otherwise indicates, means the Secretary of Health, Education, and Welfare.

(24) The term "State" means any State, territory, or possession of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Trust Territory of the Pacific Islands, and the Canal Zone.

(25) The term "ultimate user" means a person who has lawfully obtained, and who possesses, a controlled substance for his own use or for the use of a member of his household or for an animal owned by him or by a member of his household.

(26) The term "United States", when used in a geographic sense, means all places and waters, continental or insular, subject to the jurisdiction of the United States.

INCREASED NUMBERS OF ENFORCEMENT PERSONNEL

SEC. 103. (a) During the fiscal year 1971, the Bureau of Narcotics and Dangerous Drugs is authorized to add at least 300 agents, together with necessary supporting personnel, to the number of enforcement personnel currently available to it.

Appropriation.

(b) There are authorized to be appropriated not to exceed $6,000,000 for the fiscal year 1971 and for each fiscal year thereafter to carry out the provisions of subsection (a).

PART B—AUTHORITY TO CONTROL; STANDARDS AND SCHEDULES

AUTHORITY AND CRITERIA FOR CLASSIFICATION OF SUBSTANCES

SEC. 201. (a) The Attorney General shall apply the provisions of this title to the controlled substances listed in the schedules established by section 202 of this title and to any other drug or other substance added to such schedules under this title. Except as provided in subsections (d) and (e), the Attorney General may by rule—

(1) add to such a schedule or transfer between such schedules any drug or other substance if he—

(A) finds that such drug or other substance has a potential for abuse, and

(B) makes with respect to such drug or other substance the findings prescribed by subsection (b) of section 202 for the schedule in which such drug is to be placed; or

(2) remove any drug or other substance from the schedules if he finds that the drug or other substance does not meet the requirements for inclusion in any schedule.

Hearing opportunity. Rules. 80 Stat. 381. 5 USC 551.

Rules of the Attorney General under this subsection shall be made on the record after opportunity for a hearing pursuant to the rulemaking procedures prescribed by subchapter II of chapter 5 of title 5 of the United States Code. Proceedings for the issuance, amendment, or

repeal of such rules may be initiated by the Attorney General (1) on his own motion, (2) at the request of the Secretary, or (3) on the petition of any interested party.

(b) The Attorney General shall, before initiating proceedings under subsection (a) to control a drug or other substance or to remove a drug or other substance entirely from the schedules, and after gathering the necessary data, request from the Secretary a scientific and medical evaluation, and his recommendations, as to whether such drug or other substance should be so controlled or removed as a controlled substance. In making such evaluation and recommendations, the Secretary shall consider the factors listed in paragraphs (2), (3), (6), (7), and (8) of subsection (c) and any scientific or medical considerations involved in paragraphs (1), (4), and (5) of such subsection. The recommendations of the Secretary shall include recommendations with respect to the appropriate schedule, if any, under which such drug or other substance should be listed. The evaluation and the recommendations of the Secretary shall be made in writing and submitted to the Attorney General within a reasonable time. The recommendations of the Secretary to the Attorney General shall be binding on the Attorney General as to such scientific and medical matters, and if the Secretary recommends that a drug or other substance not be controlled, the Attorney General shall not control the drug or other substance. If the Attorney General determines that these facts and all other relevant data constitute substantial evidence of potential for abuse such as to warrant control or substantial evidence that the drug or other substance should be removed entirely from the schedules, he shall initiate proceedings for control or removal, as the case may be, under subsection (a). Evaluation.

(c) In making any finding under subsection (a) of this section or under subsection (b) of section 202, the Attorney General shall consider the following factors with respect to each drug or other substance proposed to be controlled or removed from the schedules:

(1) Its actual or relative potential for abuse.
(2) Scientific evidence of its pharmacological effect, if known.
(3) The state of current scientific knowledge regarding the drug or other substance.
(4) Its history and current pattern of abuse.
(5) The scope, duration, and significance of abuse.
(6) What, if any, risk there is to the public health.
(7) Its psychic or physiological dependence liability.
(8) Whether the substance is an immediate precursor of a substance already controlled under this title.

(d) If control is required by United States obligations under international treaties, conventions, or protocols in effect on the effective date of this part, the Attorney General shall issue an order controlling such drug under the schedule he deems most appropriate to carry out such obligations, without regard to the findings required by subsection (a) of this section or section 202(b) and without regard to the procedures prescribed by subsections (a) and (b) of this section. Order.

(e) The Attorney General may, without regard to the findings required by subsection (a) of this section or section 202(b) and without regard to the procedures prescribed by subsections (a) and (b) of this section, place an immediate precursor in the same schedule in which the controlled substance of which it is an immediate precursor is placed or in any other schedule with a higher numerical designation. If the Attorney General designates a substance as an immediate precursor and places it in a schedule, other substances shall not be placed in a schedule solely because they are its precursors.

(f) If, at the time a new-drug application is submitted to the Secretary for any drug having a stimulant, depressant, or hallucinogenic effect on the central nervous system, it appears that such drug has an abuse potential, such information shall be forwarded by the Secretary to the Attorney General.

(g) (1) The Attorney General shall by regulation exclude any nonnarcotic substance from a schedule if such substance may, under the Federal Food, Drug, and Cosmetic Act, be lawfully sold over the counter without a prescription.

52 Stat. 1040. 21 USC 321.

Dextromethorphan, exception.

(2) Dextromethorphan shall not be deemed to be included in any schedule by reason of enactment of this title unless controlled after the date of such enactment pursuant to the foregoing provisions of this section.

SCHEDULES OF CONTROLLED SUBSTANCES

Establishment.

SEC. 202. (a) There are established five schedules of controlled substances, to be known as schedules I, II, III, IV, and V. Such schedules shall initially consist of the substances listed in this section. The schedules established by this section shall be updated and republished on a semiannual basis during the two-year period beginning one year after the date of enactment of this title and shall be updated and republished on an annual basis thereafter.

Placement on schedules, findings required.

(b) Except where control is required by United States obligations under an international treaty, convention, or protocol, in effect on the effective date of this part, and except in the case of an immediate precursor, a drug or other substance may not be placed in any schedule unless the findings required for such schedule are made with respect to such drug or other substance. The findings required for each of the schedules are as follows:

(1) SCHEDULE I.—

(A) The drug or other substance has a high potential for abuse.

(B) The drug or other substance has no currently accepted medical use in treatment in the United States.

(C) There is a lack of accepted safety for use of the drug or other substance under medical supervision.

(2) SCHEDULE II.—

(A) The drug or other substance has a high potential for abuse.

(B) The drug or other substance has a currently accepted medical use in treatment in the United States or a currently accepted medical use with severe restrictions.

(C) Abuse of the drug or other substances may lead to severe psychological or physical dependence.

(3) SCHEDULE III.—

(A) The drug or other substance has a potential for abuse less than the drugs or other substances in schedules I and II.

(B) The drug or other substance has a currently accepted medical use in treatment in the United States.

(C) Abuse of the drug or other substance may lead to moderate or low physical dependence or high psychological dependence.

(4) SCHEDULE IV.—

(A) The drug or other substance has a low potential for abuse relative to the drugs or other substances in schedule III.

(B) The drug or other substance has a currently accepted medical use in treatment in the United States.

(C) Abuse of the drug or other substance may lead to limited physical dependence or psychological dependence relative to the drugs or other substances in schedule III.

(5) SCHEDULE V.—

(A) The drug or other substance has a low potential for abuse relative to the drugs or other substances in schedule IV.

(B) The drug or other substance has a currently accepted medical use in treatment in the United States.

(C) Abuse of the drug or other substance may lead to limited physical dependence or psychological dependence relative to the drugs or other substances in schedule IV.

(c) Schedules I, II, III, IV, and V shall, unless and until amended pursuant to section 201, consist of the following drugs or other substances, by whatever official name, common or usual name, chemical name, or brand name designated:

SCHEDULE I

Opiates.

(a) Unless specifically excepted or unless listed in another schedule, any of the following opiates, including their isomers, esters, ethers, salts, and salts of isomers, esters, and ethers, whenever the existence of such isomers, esters, ethers, and salts is possible within the specific chemical designation:

(1) Acetylmethadol.
(2) Allylprodine.
(3) Alphacetylmathadol.
(4) Alphameprodine.
(5) Alphamethadol.
(6) Benzethidine.
(7) Betacetylmethadol.
(8) Betameprodine.
(9) Betamethadol.
(10) Betaprodine.
(11) Clonitazene.
(12) Dextromoramide.
(13) Dextrorphan.
(14) Diampromide.
(15) Diethylthiambutene.
(16) Dimenoxadol.
(17) Dimepheptanol.
(18) Dimethylthiambutene.
(19) Dioxaphetyl butyrate.
(20) Dipipanone.
(21) Ethylmethylthiambutene.
(22) Etonitazene.
(23) Etoxeridine.
(24) Furethidine.
(25) Hydroxypethidine.
(26) Ketobemidone.
(27) Levomoramide.
(28) Levophenacylmorphan.
(29) Morpheridine.
(30) Noracymethadol.
(31) Norlevorphanol.
(32) Normethadone.
(33) Norpipanone.
(34) Phenadoxone.
(35) Phenampromide.

(36) Phenomorphan.
(37) Phenoperidine.
(38) Piritramide.
(39) Proheptazine.
(40) Properidine.
(41) Racemoramide.
(42) Trimeperidine.

Opium derivatives.

(b) Unless specifically excepted or unless listed in another schedule, any of the following opium derivatives, their salts, isomers, and salts of isomers whenever the existence of such salts, isomers, and salts of isomers is possible within the specific chemical designation:

(1) Acetorphine.
(2) Acetyldihydrocodeine.
(3) Benzylmorphine.
(4) Codeine methylbromide.
(5) Codeine-N-Oxide.
(6) Cyprenorphine.
(7) Desomorphine.
(8) Dihydromorphine.
(9) Etorphine.
(10) Heroin.
(11) Hydromorphinol.
(12) Methyldesorphine.
(13) Methylhydromorphine.
(14) Morphine methylbromide.
(15) Morphine methylsulfonate.
(16) Morphine-N-Oxide.
(17) Myrophine.
(18) Nicocodeine.
(19) Nicomorphine.
(20) Normorphine.
(21) Pholcodine.
(22) Thebacon.

Hallucinogenic substances.

(c) Unless specifically excepted or unless listed in another schedule, any material, compound, mixture, or preparation, which contains any quantity of the following hallucinogenic substances, or which contains any of their salts, isomers, and salts of isomers whenever the existence of such salts, isomers, and salts of isomers is possible within the specific chemical designation:

(1) 3,4-methylenedioxy amphetamine.
(2) 5-methoxy-3,4-methylenedioxy amphetamine.
(3) 3,4,5-trimethoxy amphetamine.
(4) Bufotenine.
(5) Diethyltryptamine.
(6) Dimethyltryptamine.
(7) 4-methyl-2,5-dimethoxyamphetamine.
(8) Ibogaine.
(9) Lysergic acid diethylamide.
(10) Marihuana.
(11) Mescaline.
(12) Peyote.
(13) N-ethyl-3-piperidyl benzilate.
(14) N-methyl-3-piperidyl benzilate.
(15) Psilocybin.
(16) Psilocyn.
(17) Tetrahydrocannabinols.

SCHEDULE II

Substances, vegetable origin or chemical synthesis.

(a) Unless specifically excepted or unless listed in another schedule, any of the following substances whether produced directly or indirectly by extraction from substances of vegetable origin, or independently by means of chemical synthesis, or by a combination of extraction and chemical synthesis:

(1) Opium and opiate, and any salt, compound, derivative, or preparation of opium or opiate.

(2) Any salt, compound, derivative, or preparation thereof which is chemically equivalent or identical with any of the substances referred to in clause (1), except that these substances shall not include the isoquinoline alkaloids of opium.

(3) Opium poppy and poppy straw.

(4) Coca leaves and any salt, compound, derivative, or preparation of coca leaves, and any salt, compound, derivative, or preparation thereof which is chemically equivalent or identical with any of these substances, except that the substances shall not include decocainized coca leaves or extraction of coca leaves, which extractions do not contain cocaine or ecgonine.

Opiates.

(b) Unless specifically excepted or unless listed in another schedule, any of the following opiates, including their isomers, esters, ethers, salts, and salts of isomers, esters and ethers, whenever the existence of such isomers, esters, ethers, and salts is possible within the specific chemical designation:

(1) Alphaprodine.
(2) Anileridine.
(3) Bezitramide.
(4) Dihydrocodeine.
(5) Diphenoxylate.
(6) Fentanyl.
(7) Isomethadone.
(8) Levomethorphan.
(9) Levorphanol.
(10) Metazocine.
(11) Methadone.
(12) Methadone-Intermediate, 4-cyano - 2 - dimethylamino-4,4-diphenyl butane.
(13) Moramide-Intermediate, 2 - methyl - 3 - morpholino-1, 1-diphenylpropane-carboxylic acid.
(14) Pethidine.
(15) Pethidine-Intermediate-A, 4 - cyano-1-methyl-4-phenylpiperidine.
(16) Pethidine-Intermediate-B, ethyl - 4-phenylpiperidine-4-carboxylate.
(17) Pethidine-Intermediate-C, 1-methyl - 4 - phenylpiperidine-4-carboxylic acid.
(18) Phenazocine.
(19) Piminodine.
(20) Racemethorphan.
(21) Racemorphan.

Methamphetamine.

(c) Unless specifically excepted or unless listed in another schedule, any injectable liquid which contains any quantity of methamphetamine, including its salts, isomers, and salts of isomers.

SCHEDULE III

Stimulants.

(a) Unless specifically excepted or unless listed in another schedule, any material, compound, mixture, or preparation which contains any quantity of the following substances having a stimulant effect on the central nervous system:

(1) Amphetamine, its salts, optical isomers, and salts of its optical isomers.

(2) Phenmetrazine and its salts.

(3) Any substance (except an injectable liquid) which contains any quantity of methamphetamine, including its salts, isomers, and salts of isomers.

(4) Methylphenidate.

Depressants.

(b) Unless specifically excepted or unless listed in another schedule, any material, compound, mixture, or preparation which contains any quantity of the following substances having a depressant effect on the central nervous system:

(1) Any substance which contains any quantity of a derivative of barbituric acid, or any salt of a derivative of barbituric acid.

(2) Chorhexadol.

(3) Glutethimide.

(4) Lysergic acid.

(5) Lysergic acid amide.

(6) Methyprylon.

(7) Phencyclidine.

(8) Sulfondiethylmethane.

(9) Sulfonethylmethane.

(10) Sulfonmethane.

Nalorphine.

(c) Nalorphine.

Narcotic drugs.

(d) Unless specifically excepted or unless listed in another schedule, any material, compound, mixture, or preparation containing limited quantities of any of the following narcotic drugs, or any salts thereof:

(1) Not more than 1.8 grams of codeine per 100 milliliters or not more than 90 milligrams per dosage unit, with an equal or greater quantity of an isoquinoline alkaloid of opium.

(2) Not more than 1.8 grams of codeine per 100 milliliters or not more than 90 milligrams per dosage unit, with one or more active, nonnarcotic ingredients in recognized therapeutic amounts.

(3) Not more than 300 milligrams of dihydrocodeinone per 100 milliliters or not more than 15 milligrams per dosage unit, with a fourfold or greater quantity of an isoquinoline alkaloid of opium.

(4) Not more than 300 milligrams of dihydrocodeinone per 100 milliliters or not more than 15 milligrams per dosage unit, with one or more active, nonnarcotic ingredients in recognized therapeutic amounts.

(5) Not more than 1.8 grams of dihydrocodeine per 100 milliliters or not more than 90 milligrams per dosage unit, with one or more active, nonnarcotic ingredients in recognized therapeutic amounts.

(6) Not more than 300 milligrams of ethylmorphine per 100 milliliters or not more than 15 milligrams per dosage unit, with one or more active, nonnarcotic ingredients in recognized therapeutic amounts.

(7) Not more than 500 milligrams of opium per 100 milliliters or per 100 grams, or not more than 25 milligrams per dosage unit, with one or more active, nonnarcotic ingredients in recognized therapeutic amounts.

(8) Not more than 50 milligrams of morphine per 100 milliliters or per 100 grams with one or more active, nonnarcotic ingredients in recognized therapeutic amounts.

SCHEDULE IV

(1) Barbital.
(2) Chloral betaine.
(3) Chloral hydrate.
(4) Ethchlorvynol.
(5) Ethinamate.
(6) Methohexital.
(7) Meprobamate.
(8) Methylphenobarbital.
(9) Paraldehyde.
(10) Petrichloral.
(11) Phenobarbital.

SCHEDULE V

Narcotic drugs containing nonnarcotic active medicinal ingredients.

Any compound, mixture, or preparation containing any of the following limited quantities of narcotic drugs, which shall include one or more nonnarcotic active medicinal ingredients in sufficient proportion to confer upon the compound, mixture, or preparation valuable medicinal qualities other than those possessed by the narcotic drug alone:

(1) Not more than 200 milligrams of codeine per 100 milliliters or per 100 grams.

(2) Not more than 100 milligrams of dihydrocodeine per 100 milliliters or per 100 grams.

(3) Not more than 100 milligrams of ethylmorphine per 100 milliliters or per 100 grams.

(4) Not more than 2.5 milligrams of diphenoxylate and not less than 25 micrograms of atropine sulfate per dosage unit.

(5) Not more than 100 milligrams of opium per 100 milliliters or per 100 grams.

Stimulants or depressants containing active medicinal ingredients; exception.

(d) The Attorney General may by regulation except any compound, mixture, or preparation containing any depressant or stimulant substance in paragraph (a) or (b) of schedule III or in schedule IV or V from the application of all or any part of this title if (1) the compound, mixture, or preparation contains one or more active medicinal ingredients not having a depressant or stimulant effect on the central nervous system, and (2) such ingredients are included therein in such combinations, quantity, proportion, or concentration as to vitiate the potential for abuse of the substances which do have a depressant or stimulant effect on the central nervous system.

PART C—REGISTRATION OF MANUFACTURERS, DISTRIBUTORS, AND DISPENSERS OF CONTROLLED SUBSTANCES

RULES AND REGULATIONS

Rules and regulations.

SEC. 301. The Attorney General is authorized to promulgate rules and regulations and to charge reasonable fees relating to the registration and control of the manufacture, distribution, and dispensing of controlled substances.

PERSONS REQUIRED TO REGISTER

Annual registration.

SEC. 302. (a) Every person who manufactures, distributes, or dispenses any controlled substance or who proposes to engage in the manufacture, distribution, or dispensing of any controlled substance, shall obtain annually a registration issued by the Attorney General in accordance with the rules and regulations promulgated by him.

(b) Persons registered by the Attorney General under this title to manufacture, distribute, or dispense controlled substances are authorized to possess, manufacture, distribute, or dispense such substances (including any such activity in the conduct of research) to the extent authorized by their registration and in conformity with the other provisions of this title.

Registration, exceptions.

(c) The following persons shall not be required to register and may lawfully possess any controlled substance under this title:

(1) An agent or employee of any registered manufacturer, distributor, or dispenser of any controlled substance if such agent or employee is acting in the usual course of his business or employment.

(2) A common or contract carrier or warehouseman, or an employee thereof, whose possession of the controlled substance is in the usual course of his business or employment.

Ante, p. 1245.

(3) An ultimate user who possesses such substance for a purpose specified in section 102(25).

Waiver.

(d) The Attorney General may, by regulation, waive the requirement for registration of certain manufacturers, distributors, or dispensers if he finds it consistent with the public health and safety.

Separate registration.

(e) A separate registration shall be required at each principal place of business or professional practice where the applicant manufactures, distributes, or dispenses controlled substances.

Inspection.

(f) The Attorney General is authorized to inspect the establishment of a registrant or applicant for registration in accordance with the rules and regulations promulgated by him.

REGISTRATION REQUIREMENTS

Factors consistent with public interest.

SEC. 303. (a) The Attorney General shall register an applicant to manufacture controlled substances in schedule I or II if he determines that such registration is consistent with the public interest and with United States obligations under international treaties, conventions, or protocols in effect on the effective date of this part. In determining the public interest, the following factors shall be considered:

Controls. Importation and bulk manufacture, limitation.

(1) maintenance of effective controls against diversion of particular controlled substances and any controlled substance in schedule I or II compounded therefrom into other than legitimate medical, scientific, research, or industrial channels, by limiting the importation and bulk manufacture of such controlled substances to a number of establishments which can produce an adequate and uninterrupted supply of these substances under adequately com-

petitive conditions for legitimate medical, scientific, research, and industrial purposes;

(2) compliance with applicable State and local law; Compliance.

(3) promotion of technical advances in the art of manufacturing these substances and the development of new substances; Technology.

(4) prior conviction record of applicant under Federal and State laws relating to the manufacture, distribution, or dispensing of such substances; Applicants, prior conviction record.

(5) past experience in the manufacture of controlled substances, and the existence in the establishment of effective control against diversion; and Experience.

(6) such other factors as may be relevant to and consistent with the public health and safety.

(b) The Attorney General shall register an applicant to distribute a controlled substance in schedule I or II unless he determines that the issuance of such registration is inconsistent with the public interest. In determining the public interest, the following factors shall be considered: Factors consistent to public interest.

(1) maintenance of effective control against diversion of particular controlled substances into other than legitimate medical, scientific, and industrial channels;

(2) compliance with applicable State and local law;

(3) prior conviction record of applicant under Federal or State laws relating to the manufacture, distribution, or dispensing of such substances;

(4) past experience in the distribution of controlled substances; and

(5) such other factors as may be relevant to and consistent with the public health and safety.

(c) Registration granted under subsections (a) and (b) of this section shall not entitle a registrant to (1) manufacture or distribute controlled substances in schedule I or II other than those specified in the registration, or (2) manufacture any quantity of those controlled substances in excess of the quota assigned pursuant to section 306. Prohibition.

Post, p. 1257.

(d) The Attorney General shall register an applicant to manufacture controlled substances in schedule III, IV, or V, unless he determines that the issuance of such registration is inconsistent with the public interest. In determining the public interest, the following factors shall be considered:

(1) maintenance of effective controls against diversion of particular controlled substances and any controlled substance in schedule III, IV, or V compounded therefrom into other than legitimate medical, scientific, or industrial channels;

(2) compliance with applicable State and local law;

(3) promotion of technical advances in the art of manufacturing these substances and the development of new substances;

(4) prior conviction record of applicant under Federal or State laws relating to the manufacture, distribution, or dispensing of such substances;

(5) past experience in the manufacture, distribution, and dispensing of controlled substances, and the existence in the establishment of effective controls against diversion; and

(6) such other factors as may be relevant to and consistent with the public health and safety.

(e) The Attorney General shall register an applicant to distribute controlled substances in schedule III, IV, or V, unless he determines that the issuance of such registration is inconsistent with the public interest. In determining the public interest, the following factors shall be considered:

(1) maintenance of effective controls against diversion of particular controlled substances into other than legitimate medical, scientific, and industrial channels;

(2) compliance with applicable State and local law;

(3) prior conviction record of applicant under Federal or State laws relating to the manufacture, distribution, or dispensing of such substances;

(4) past experience in the distribution of controlled substances; and

(5) such other factors as may be relevant to and consistent with the public health and safety.

Research.

(f) Practitioners shall be registered to dispense or conduct research with controlled substances in schedule II, III, IV, or V if they are authorized to dispense or conduct research under the law of the State in which they practice. Separate registration under this part for practitioners engaging in research with nonnarcotic controlled substances in schedule II, III, IV, or V, who are already registered under this part in another capacity, shall not be required. Pharmacies (as distinguished from pharmacists) when engaged in commercial activities, shall be registered to dispense controlled substances in schedule II, III, IV, or V if they are authorized to dispense under the law of the State in which they regularly conduct business. Registration applications by practitioners wishing to conduct research with controlled substances in schedule I shall be referred to the Secretary, who shall determine qualifications and competency of each practitioner requesting registration, as well as the merits of the research protocol. The Secretary, in determining the merits of each research protocol, shall consult with the Attorney General as to effective procedures to adequately safeguard against diversion of such controlled substances from legitimate medical or scientific use. Registration for the purpose of bona fide research with controlled substances in schedule I by a practitioner deemed qualified by the Secretary may be denied by the Attorney General only on a ground specified in section 304(a).

Pharmacies.

Research applications.

DENIAL, REVOCATION, OR SUSPENSION OF REGISTRATION

SEC. 304. (a) A registration pursuant to section 303 to manufacture, distribute, or dispense a controlled substance may be suspended or revoked by the Attorney General upon a finding that the registrant—

(1) has materially falsified any application filed pursuant to or required by this title or title III;

Post, p. 1285.

(2) has been convicted of a felony under this title or title III or any other law of the United States, or of any State, relating to any substance defined in this title as a controlled substance; or

(3) has had his State license or registration suspended, revoked, or denied by competent State authority and is no longer authorized by State law to engage in the manufacturing, distribution, or dispensing of controlled substances.

(b) The Attorney General may limit revocation or suspension of a registration to the particular controlled substance with respect to which grounds for revocation or suspension exist.

Service of order.

(c) Before taking action pursuant to this section, or pursuant to a denial of registration under section 303, the Attorney General shall serve upon the applicant or registrant an order to show cause why registration should not be denied, revoked, or suspended. The order to show cause shall contain a statement of the basis thereof and shall call upon the applicant or registrant to appear before the Attorney

General at a time and place stated in the order, but in no event less than thirty days after the date of receipt of the order. Proceedings to deny, revoke, or suspend shall be conducted pursuant to this section in accordance with subchapter II of chapter 5 of title 5 of the United States Code. Such proceedings shall be independent of, and not in lieu of, criminal prosecutions or other proceedings under this title or any other law of the United States. 80 Stat. 381. 5 USC 551.

(d) The Attorney General may, in his discretion, suspend any registration simultaneously with the institution of proceedings under this section, in cases where he finds that there is an imminent danger to the public health or safety. Such suspension shall continue in effect until the conclusion of such proceedings, including judicial review thereof, unless sooner withdrawn by the Attorney General or dissolved by a court of competent jurisdiction. Registration, suspension.

(e) The suspension or revocation of a registration under this section shall operate to suspend or revoke any quota applicable under section 306.

(f) In the event the Attorney General suspends or revokes a registration granted under section 303, all controlled substances owned or possessed by the registrant pursuant to such registration at the time of suspension or the effective date of the revocation order, as the case may be, may, in the discretion of the Attorney General, be placed under seal. No disposition may be made of any controlled substances under seal until the time for taking an appeal has elapsed or until all appeals have been concluded except that a court, upon application therefor, may at any time order the sale of perishable controlled substances. Any such order shall require the deposit of the proceeds of the sale with the court. Upon a revocation order becoming final, all such controlled substances (or proceeds of sale deposited in court) shall be forfeited to the United States; and the Attorney General shall dispose of such controlled substances in accordance with section 511(e). Post, p. 1277.

LABELING AND PACKAGING REQUIREMENTS

SEC. 305. (a) It shall be unlawful to distribute a controlled substance in a commercial container unless such container, when and as required by regulations of the Attorney General, bears a label (as defined in section 201(k) of the Federal Food, Drug, and Cosmetic Act) containing an identifying symbol for such substance in accordance with such regulations. A different symbol shall be required for each schedule of controlled substances. Symbol. 52 Stat. 1041. 21 USC 321.

(b) It shall be unlawful for the manufacturer of any controlled substance to distribute such substance unless the labeling (as defined in section 201(m) of the Federal Food, Drug, and Cosmetic Act) of such substance contains, when and as required by regulations of the Attorney General, the identifying symbol required under subsection (a).

(c) The Secretary shall prescribe regulations under section 503(b) of the Federal Food, Drug, and Cosmetic Act which shall provide that the label of a drug listed in schedule II, III, or IV shall, when dispensed to or for a patient, contain a clear, concise warning that it is a crime to transfer the drug to any person other than the patient. 65 Stat. 648. 21 USC 353.

(d) It shall be unlawful to distribute controlled substances in schedule I or II, and narcotic drugs in schedule III or IV, unless the bottle or other container, stopper, covering, or wrapper thereof is securely sealed as required by regulations of the Attorney General. Unlawful distribution.

QUOTAS APPLICABLE TO CERTAIN SUBSTANCES

Production quota.

SEC. 306. (a) The Attorney General shall determine the total quantity and establish production quotas for each basic class of controlled substance in schedules I and II to be manufactured each calendar year to provide for the estimated medical, scientific, research, and industrial needs of the United States, for lawful export requirements, and for the establishment and maintenance of reserve stocks. Production quotas shall be established in terms of quantities of each basic class of controlled substance and not in terms of individual pharmaceutical dosage forms prepared from or containing such a controlled substance.

(b) The Attorney General shall limit or reduce individual production quotas to the extent necessary to prevent the aggregate of individual quotas from exceeding the amount determined necessary each year by the Attorney General under subsection (a). The quota of each registered manufacturer for each basic class of controlled substance in schedule I or II shall be revised in the same proportion as the limitation or reduction of the aggregate of the quotas. However, if any registrant, before the issuance of a limitation or reduction in quota, has manufactured in excess of his revised quota, the amount of the excess shall be subtracted from his quota for the following year.

Manufacturing quota.

(c) On or before July 1 of each year, upon application therefor by a registered manufacturer, the Attorney General shall fix a manufacturing quota for the basic classes of controlled substances in schedules I and II that the manufacturer seeks to produce. The quota shall be subject to the provisions of subsections (a) and (b) of this section. In fixing such quotas, the Attorney General shall determine the manufacturer's estimated disposal, inventory, and other requirements for the calendar year; and, in making his determination, the Attorney General shall consider the manufacturer's current rate of disposal, the trend of the national disposal rate during the preceding calendar year, the manufacturer's production cycle and inventory position, the economic availability of raw materials, yield and stability problems, emergencies such as strikes and fires, and other factors.

(d) The Attorney General shall, upon application and subject to the provisions of subsections (a) and (b) of this section, fix a quota for a basic class of controlled substance in schedule I or II for any registrant who has not manufactured that basic class of controlled substance during one or more preceding calendar years. In fixing such quota, the Attorney General shall take into account the registrant's reasonably anticipated requirements for the current year; and, in making his determination of such requirements, he shall consider such factors specified in subsection (c) of this section as may be relevant.

Quota, increase.

(e) At any time during the year any registrant who has applied for or received a manufacturing quota for a basic class of controlled substance in schedule I or II may apply for an increase in that quota to meet his estimated disposal, inventory, and other requirements during the remainder of that year. In passing upon the application the Attorney General shall take into consideration any occurrences since the filing of the registrant's initial quota application that may require an increased manufacturing rate by the registrant during the balance of the year. In passing upon the application the Attorney General may also take into account the amount, if any, by which the determination of the Attorney General under subsection (a) of this section exceeds the aggregate of the quotas of all registrants under this section.

Controlled substances, incidental production, exception.

(f) Notwithstanding any other provisions of this title, no registration or quota may be required for the manufacture of such quantities of controlled substances in schedules I and II as incidentally and

necessarily result from the manufacturing process used for the manufacture of a controlled substance with respect to which its manufacturer is duly registered under this title. The Attorney General may, by regulation, prescribe restrictions on the retention and disposal of such incidentally produced substances. Restrictions.

RECORDS AND REPORTS OF REGISTRANTS

SEC. 307. (a) Except as provided in subsection (c)— Inventory.

(1) every registrant under this title shall, on the effective date of this section, or as soon thereafter as such registrant first engages in the manufacture, distribution, or dispensing of controlled substances, and every second year thereafter, make a complete and accurate record of all stocks thereof on hand, except that the regulations prescribed under this section shall permit each such biennial inventory (following the initial inventory required by this paragraph) to be prepared on such registrant's regular general physical inventory date (if any) which is nearest to and does not vary by more than six months from the biennial date that would otherwise apply;

(2) on the effective date of each regulation of the Attorney General controlling a substance that immediately prior to such date was not a controlled substance, each registrant under this title manufacturing, distributing, or dispensing such substance shall make a complete and accurate record of all stocks thereof on hand; and

(3) on and after the effective date of this section, every registrant under this title manufacturing, distributing, or dispensing a controlled substance or substances shall maintain, on a current basis, a complete and accurate record of each such substance manufactured, received, sold, delivered, or otherwise disposed of by him, except that this paragraph shall not require the maintenance of a perpetual inventory.

(b) Every inventory or other record required under this section (1) shall be in accordance with, and contain such relevant information as may be required by, regulations of the Attorney General, (2) shall (A) be maintained separately from all other records of the registrant, or (B) alternatively, in the case of nonnarcotic controlled substances, be in such form that information required by the Attorney General is readily retrievable from the ordinary business records of the registrant, and (3) shall be kept and be available, for at least two years, for inspection and copying by officers or employees of the United States authorized by the Attorney General. Availability.

(c) The foregoing provisions of this section shall not apply— Nonapplicability.

(1) (A) with respect to narcotic controlled substances in schedule II, III, IV, or V, to the prescribing or administering of such substances by a practitioner in the lawful course of his professional practice; or

(B) with respect to nonnarcotic controlled substances in schedule II, III, IV, or V, to any practitioner who dispenses such substances to his patients, unless the practitioner is regularly engaged in charging his patients, either separately or together with charges for other professional services, for substances so dispensed;

(2) (A) to the use of controlled substances, at establishments registered under this title which keep records with respect to such substances, in research conducted in conformity with an exemption granted under section 505(i) or 512(j) of the Federal Food, Drug, and Cosmetic Act; 52 Stat. 1052; 76 Stat. 783. 82 Stat. 343. 21 USC 355, 360b.

(B) to the use of controlled substances, at establishments registered under this title which keep records with respect to such substances, in preclinical research or in teaching; or

(3) to the extent of any exemption granted to any person, with respect to all or part of such provisions, by the Attorney General by or pursuant to regulation on the basis of a finding that the application of such provisions (or part thereof) to such person is not necessary for carrying out the purposes of this title.

(d) Every manufacturer registered under section 303 shall, at such time or times and in such form as the Attorney General may require, make periodic reports to the Attorney General of every sale, delivery, or other disposal by him of any controlled substance, and each distributor shall make such reports with respect to narcotic controlled substances, identifying by the registration number assigned under this title the person or establishment (unless exempt from registration under section 302(d)) to whom such sale, delivery, or other disposal was made.

(e) Regulations under sections 505(i) and 512(j) of the Federal Food, Drug, and Cosmetic Act, relating to investigational use of drugs, shall include such procedures as the Secretary, after consultation with the Attorney General, determines are necessary to insure the security and accountability of controlled substances used in research to which such regulations apply.

52 Stat. 1052; 76 Stat. 783. 82 Stat. 343. 21 USC 355, 360b.

ORDER FORMS

Unlawful distribution.

SEC. 308. (a) It shall be unlawful for any person to distribute a controlled substance in schedule I or II to another except in pursuance of a written order of the person to whom such substance is distributed, made on a form to be issued by the Attorney General in blank in accordance with subsection (d) and regulations prescribed by him pursuant to this section.

Nonapplicability.

(b) Nothing in subsection (a) shall apply to—

(1) the exportation of such substances from the United States in conformity with title III;

Post, p. 1285.

(2) the delivery of such a substance to or by a common or contract carrier for carriage in the lawful and usual course of its business, or to or by a warehouseman for storage in the lawful and usual course of its business; but where such carriage or storage is in connection with the distribution by the owner of the substance to a third person, this paragraph shall not relieve the distributor from compliance with subsection (a).

Preservation and availability.

(c) (1) Every person who in pursuance of an order required under subsection (a) distributes a controlled substance shall preserve such order for a period of two years, and shall make such order available for inspection and copying by officers and employees of the United States duly authorized for that purpose by the Attorney General, and by officers or employees of States or their political subdivisions who are charged with the enforcement of State or local laws regulating the production, or regulating the distribution or dispensing, of controlled substances and who are authorized under such laws to inspect such orders.

Duplicate, preservation and availability.

(2) Every person who gives an order required under subsection (a) shall, at or before the time of giving such order, make or cause to be made a duplicate thereof on a form to be issued by the Attorney General in blank in accordance with subsection (d) and regulations prescribed by him pursuant to this section, and shall, if such order is accepted, preserve such duplicate for a period of two years and make it available for inspection and copying by the officers and employees mentioned in paragraph (1) of this subsection.

(d)(1) The Attorney General shall issue forms pursuant to subsections (a) and (c)(2) only to persons validly registered under section 303 (or exempted from registration under section 302(d)). Whenever any such form is issued to a person, the Attorney General shall, before delivery thereof, insert therein the name of such person, and it shall be unlawful for any other person (A) to use such form for the purpose of obtaining controlled substances or (B) to furnish such form to any person with intent thereby to procure the distribution of such substances. Forms, issuance.

(2) The Attorney General may charge reasonable fees for the issuance of such forms in such amounts as he may prescribe for the purpose of covering the cost to the United States of issuing such forms, and other necessary activities in connection therewith. Fees.

(e) It shall be unlawful for any person to obtain by means of order forms issued under this section controlled substances for any purpose other than their use, distribution, dispensing, or administration in the conduct of a lawful business in such substances or in the course of his professional practice or research. Unlawful act.

PRESCRIPTIONS

SEC. 309. (a) Except when dispensed directly by a practitioner, other than a pharmacist, to an ultimate user, no controlled substance in schedule II, which is a prescription drug as determined under the Federal Food, Drug, and Cosmetic Act, may be dispensed without the written prescription of a practitioner, except that in emergency situations, as prescribed by the Secretary by regulation after consultation with the Attorney General, such drug may be dispensed upon oral prescription in accordance with section 503(b) of that Act. Prescriptions shall be retained in conformity with the requirements of section 307 of this title. No prescription for a controlled substance in schedule II may be refilled. 52 Stat. 1040. 21 USC 301. 65 Stat. 648. 21 USC 353.

(b) Except when dispensed directly by a practitioner, other than a pharmacist, to an ultimate user, no controlled substance in schedule III or IV, which is a prescription drug as determined under the Federal Food, Drug, and Cosmetic Act, may be dispensed without a written or oral prescription in conformity with section 503(b) of that Act. Such prescriptions may not be filled or refilled more than six months after the date thereof or be refilled more than five times after the date of the prescription unless renewed by the practitioner.

(c) No controlled substance in schedule V which is a drug may be distributed or dispensed other than for a medical purpose.

(d) Whenever it appears to the Attorney General that a drug not considered to be a prescription drug under the Federal Food, Drug, and Cosmetic Act should be so considered because of its abuse potential, he shall so advise the Secretary and furnish to him all available data relevant thereto.

PART D—OFFENSES AND PENALTIES

PROHIBITED ACTS A—PENALTIES

SEC. 401. (a) Except as authorized by this title, it shall be unlawful for any person knowingly or intentionally—

(1) to manufacture, distribute, or dispense, or possess with intent to manufacture, distribute, or dispense, a controlled substance; or

(2) to create, distribute, or dispense, or possess with intent to distribute or dispense, a counterfeit substance.

(b) Except as otherwise provided in section 405, any person who violates subsection (a) of this section shall be sentenced as follows:

Post, p. 1265.

Penalties.

(1)(A) In the case of a controlled substance in schedule I or II which is a narcotic drug, such person shall be sentenced to a term of imprisonment of not more than 15 years, a fine of not more than $25,000, or both. If any person commits such a violation after one or more prior convictions of him for an offense punishable under this paragraph, or for a felony under any other provision of this title or title III or other law of the United States relating to narcotic drugs, marihuana, or depressant or stimulant substances, have become final, such person shall be sentenced to a term of imprisonment of not more than 30 years, a fine of not more than $50,000, or both. Any sentence imposing a term of imprisonment under this paragraph shall, in the absence of such a prior conviction, impose a special parole term of at least 3 years in addition to such term of imprisonment and shall, if there was such a prior conviction, impose a special parole term of at least 6 years in addition to such term of imprisonment.

Post, p. 1285.

Special parole term.

(B) In the case of a controlled substance in schedule I or II which is not a narcotic drug or in the case of any controlled substance in schedule III, such person shall be sentenced to a term of imprisonment of not more than 5 years, a fine of not more than $15,000, or both. If any person commits such a violation after one or more prior convictions of him for an offense punishable under this paragraph, or for a felony under any other provision of this title or title III or other law of the United States relating to narcotic drugs, marihuana, or depressant or stimulant substances, have become final, such person shall be sentenced to a term of imprisonment of not more than 10 years, a fine of not more than $30,000, or both. Any sentence imposing a term of imprisonment under this paragraph shall, in the absence of such a prior conviction, impose a special parole term of at least 2 years in addition to such term of imprisonment and shall, if there was such a prior conviction, impose a special parole term of at least 4 years in addition to such term of imprisonment.

(2) In the case of a controlled substance in schedule IV, such person shall be sentenced to a term of imprisonment of not more than 3 years, a fine of not more than $10,000, or both. If any person commits such a violation after one or more prior convictions of him for an offense punishable under this paragraph, or for a felony under any other provision of this title or title III or other law of the United States relating to narcotic drugs, marihuana, or depressant or stimulant substances, have become final, such person shall be sentenced to a term of imprisonment of not more than 6 years, a fine of not more than $20,000, or both. Any sentence imposing a term of imprisonment under this paragraph shall, in the absence of such a prior conviction, impose a special parole term of at least one year in addition to such term of imprisonment and shall, if there was such a prior conviction, impose a special parole term of at least 2 years in addition to such term of imprisonment.

(3) In the case of a controlled substance in schedule V, such person shall be sentenced to a term of imprisonment of not more than one year, a fine of not more than $5,000, or both. If any person commits such a violation after one or more convictions of him for an offense punishable under this paragraph, or for a crime under any other provision of this title or title III or other law of the United States relating to narcotic drugs, marihuana, or depressant or stimulant substances, have become final, such person shall be sentenced to a term of imprisonment of not more than 2 years, a fine of not more than $10,000, or both.

(4) Notwithstanding paragraph (1)(B) of this subsection, any person who violates subsection (a) of this section by distributing a small amount of marihuana for no remuneration shall be treated as provided in subsections (a) and (b) of section 404. Marihuana, simple possession.

(c) A special parole term imposed under this section or section 405 may be revoked if its terms and conditions are violated. In such circumstances the original term of imprisonment shall be increased by the period of the special parole term and the resulting new term of imprisonment shall not be diminished by the time which was spent on special parole. A person whose special parole term has been revoked may be required to serve all or part of the remainder of the new term of imprisonment. A special parole term provided for in this section or section 405 shall be in addition to, and not in lieu of, any other parole provided for by law. Special parole term.

PROHIBITED ACTS B—PENALTIES

SEC. 402. (a) It shall be unlawful for any person—

(1) who is subject to the requirements of part C to distribute or dispense a controlled substance in violation of section 309;

(2) who is a registrant to distribute or dispense a controlled substance not authorized by his registration to another registrant or other authorized person or to manufacture a controlled substance not authorized by his registration;

(3) who is a registrant to distribute a controlled substance in violation of section 305 of this title;

(4) to remove, alter, or obliterate a symbol or label required by section 305 of this title;

(5) to refuse or fail to make, keep, or furnish any record, report, notification, declaration, order or order form, statement, invoice, or information required under this title or title III; Post, p. 1285.

(6) to refuse any entry into any premises or inspection authorized by this title or title III;

(7) to remove, break, injure, or deface a seal placed upon controlled substances pursuant to section 304(f) or 511 or to remove or dispose of substances so placed under seal; or Ante, p. 1256. Post, p. 1276.

(8) to use, to his own advantage, or to reveal, other than to duly authorized officers or employees of the United States, or to the courts when relevant in any judicial proceeding under this title or title III, any information acquired in the course of an inspection authorized by this title concerning any method or process which as a trade secret is entitled to protection.

(b) It shall be unlawful for any person who is a registrant to manufacture a controlled substance in schedule I or II which is—

(1) not expressly authorized by his registration and by a quota assigned to him pursuant to section 306; or

(2) in excess of a quota assigned to him pursuant to section 306.

(c)(1) Except as provided in paragraph (2), any person who violates this section shall, with respect to any such violation, be subject to a civil penalty of not more than $25,000. The district courts of the United States (or, where there is no such court in the case of any territory or possession of the United States, then the court in such territory or possession having the jurisdiction of a district court of the United States in cases arising under the Constitution and laws of the United States) shall have jurisdiction in accordance with section 1355 of title 28 of the United States Code to enforce this paragraph. Penalty. Jurisdiction of courts. 62 Stat. 934.

(2) (A) If a violation of this section is prosecuted by an information or indictment which alleges that the violation was committed knowingly and the trier of fact specifically finds that the violation was so committed, such person shall, except as otherwise provided in subparagraph (B) of this paragraph, be sentenced to imprisonment of not more than one year or a fine of not more than $25,000, or both.

Penalty.

(B) If a violation referred to in subparagraph (A) was committed after one or more prior convictions of the offender for an offense punishable under this paragraph (2), or for a crime under any other provision of this title or title III or other law of the United States relating to narcotic drugs, marihuana, or depressant or stimulant substances, have become final, such person shall be sentenced to a term of imprisonment of not more than 2 years, a fine of $50,000, or both.

Post, p. 1285.

Penalty.

Exception.

(3) Except under the conditions specified in paragraph (2) of this subsection, a violation of this section does not constitute a crime, and a judgment for the United States and imposition of a civil penalty pursuant to paragraph (1) shall not give rise to any disability or legal disadvantage based on conviction for a criminal offense.

PROHIBITED ACTS C—PENALTIES

SEC. 403. (a) It shall be unlawful for any person knowingly or intentionally—

(1) who is a registrant to distribute a controlled substance classified in schedule I or II, in the course of his legitimate business, except pursuant to an order or an order form as required by section 308 of this title;

Ante, p. 1259.

(2) to use in the course of the manufacture or distribution of a controlled substance a registration number which is fictitious, revoked, suspended, or issued to another person;

(3) to acquire or obtain possession of a controlled substance by misrepresentation, fraud, forgery, deception, or subterfuge;

(4) to furnish false or fraudulent material information in, or omit any material information from, any application, report, record, or other document required to be made, kept, or filed under this title or title III; or

(5) to make, distribute, or possess any punch, die, plate, stone, or other thing designed to print, imprint, or reproduce the trademark, trade name, or other identifying mark, imprint, or device of another or any likeness of any of the foregoing upon any drug or container or labeling thereof so as to render such drug a counterfeit substance.

(b) It shall be unlawful for any person knowingly or intentionally to use any communication facility in committing or in causing or facilitating the commission of any act or acts constituting a felony under any provision of this title or title III. Each separate use of a communication facility shall be a separate offense under this subsection. For purposes of this subsection, the term "communication facility" means any and all public and private instrumentalities used or useful in the transmission of writing, signs, signals, pictures, or sounds of all kinds and includes mail, telephone, wire, radio, and all other means of communication.

"Communication facility."

Penalty.

(c) Any person who violates this section shall be sentenced to a term of imprisonment of not more than 4 years, a fine of not more than $30,000, or both; except that if any person commits such a violation after one or more prior convictions of him for violation of this section, or for a felony under any other provision of this title or title III or other law of the United States relating to narcotic drugs,

marihuana, or depressant or stimulant substances, have become final, such person shall be sentenced to a term of imprisonment of not more than 8 years, a fine of not more than $60,000, or both. Penalty.

PENALTY FOR SIMPLE POSSESSION; CONDITIONAL DISCHARGE AND EXPUNGING OF RECORDS FOR FIRST OFFENSE

SEC. 404. (a) It shall be unlawful for any person knowingly or intentionally to possess a controlled substance unless such substance was obtained directly, or pursuant to a valid prescription or order, from a practitioner, while acting in the course of his professional practice, or except as otherwise authorized by this title or title III. Any person who violates this subsection shall be sentenced to a term of imprisonment of not more than one year, a fine of not more than $5,000, or both, except that if he commits such offense after a prior conviction or convictions under this subsection have become final, he shall be sentenced to a term of imprisonment of not more than 2 years, a fine of not more than $10,000, or both. Post, p. 1285.

(b) (1) If any person who has not previously been convicted of violating subsection (a) of this section, any other provision of this title or title III, or any other law of the United States relating to narcotic drugs, marihuana, or depressant or stimulant substances, is found guilty of a violation of subsection (a) of this section after trial or upon a plea of guilty, the court may, without entering a judgment of guilty and with the consent of such person, defer further proceedings and place him on probation upon such reasonable conditions as it may require and for such period, not to exceed one year, as the court may prescribe. Upon violation of a condition of the probation, the court may enter an adjudication of guilt and proceed as otherwise provided. The court may, in its discretion, dismiss the proceedings against such person and discharge him from probation before the expiration of the maximum period prescribed for such person's probation. If during the period of his probation such person does not violate any of the conditions of the probation, then upon expiration of such period the court shall discharge such person and dismiss the proceedings against him. Discharge and dismissal under this subsection shall be without court adjudication of guilt, but a nonpublic record thereof shall be retained by the Department of Justice solely for the purpose of use by the courts in determining whether or not, in subsequent proceedings, such person qualifies under this subsection. Such discharge or dismissal shall not be deemed a conviction for purposes of disqualifications or disabilities imposed by law upon conviction of a crime (including the penalties prescribed under this part for second or subsequent convictions) or for any other purpose. Discharge and dismissal under this section may occur only once with respect to any person. Nonpublic record, retention.

(2) Upon the dismissal of such person and discharge of the proceedings against him under paragraph (1) of this subsection, such person, if he was not over twenty-one years of age at the time of the offense, may apply to the court for an order to expunge from all official records (other than the nonpublic records to be retained by the Department of Justice under paragraph (1)) all recordation relating to his arrest, indictment or information, trial, finding of guilty, and dismissal and discharge pursuant to this section. If the court determines, after hearing, that such person was dismissed and the proceedings against him discharged and that he was not over twenty-one years of age at the time of the offense, it shall enter such order. First offense, expunging of records, order.

The effect of such order shall be to restore such person, in the contemplation of the law, to the status he occupied before such arrest or indictment or information. No person as to whom such order has been entered shall be held thereafter under any provision of any law to be guilty of perjury or otherwise giving a false statement by reason of his failures to recite or acknowledge such arrest, or indictment or information, or trial in response to any inquiry made of him for any purpose.

DISTRIBUTION TO PERSONS UNDER AGE TWENTY-ONE

SEC. 405. (a) Any person at least eighteen years of age who violates section 401(a)(1) by distributing a controlled substance to a person under twenty-one years of age is (except as provided in subsection (b)) punishable by (1) a term of imprisonment, or a fine, or both, up to twice that authorized by section 401(b), and (2) at least twice any special parole term authorized by section 401(b), for a first offense involving the same controlled substance and schedule.

(b) Any person at least eighteen years of age who violates section 401(a)(1) by distributing a controlled substance to a person under twenty-one years of age after a prior conviction or convictions under subsection (a) of this section (or under section 303(b)(2) of the Federal Food, Drug, and Cosmetic Act as in effect prior to the effective date of section 701(b) of this Act) have become final, is punishable by (1) a term of imprisonment, or a fine, or both, up to three times that authorized by section 401(b), and (2) at least three times any special parole term authorized by section 401(b), for a second or subsequent offense involving the same controlled substance and schedule.

82 Stat. 1361.
21 USC 333.

ATTEMPT AND CONSPIRACY

SEC. 406. Any person who attempts or conspires to commit any offense defined in this title is punishable by imprisonment or fine or both which may not exceed the maximum punishment prescribed for the offense, the commission of which was the object of the attempt or conspiracy.

ADDITIONAL PENALTIES

SEC. 407. Any penalty imposed for violation of this title shall be in addition to, and not in lieu of, any civil or administrative penalty or sanction authorized by law.

CONTINUING CRIMINAL ENTERPRISE

SEC. 408. (a)(1) Any person who engages in a continuing criminal enterprise shall be sentenced to a term of imprisonment which may not be less than 10 years and which may be up to life imprisonment, to a fine of not more than $100,000, and to the forfeiture prescribed in paragraph (2); except that if any person engages in such activity after one or more prior convictions of him under this section have become final, he shall be sentenced to a term of imprisonment which may not be less than 20 years and which may be up to life imprisonment, to a fine of not more than $200,000, and to the forfeiture prescribed in paragraph (2).

Penalty.

(2) Any person who is convicted under paragraph (1) of engaging in a continuing criminal enterprise shall forfeit to the United States—

Forfeiture.

(A) the profits obtained by him in such enterprise, and

(B) any of his interest in, claim against, or property or contractual rights of any kind affording a source of influence over, such enterprise.

(b) For purposes of subsection (a), a person is engaged in a continuing criminal enterprise if—

(1) he violates any provision of this title or title III the punishment for which is a felony, and Post, p. 1285.

(2) such violation is a part of a continuing series of violations of this title or title III—

(A) which are undertaken by such person in concert with five or more other persons with respect to whom such person occupies a position of organizer, a supervisory position, or any other position of management, and

(B) from which such person obtains substantial income or resources.

(c) In the case of any sentence imposed under this section, imposition or execution of such sentence shall not be suspended, probation shall not be granted, and section 4202 of title 18 of the United States Code and the Act of July 15, 1932 (D.C. Code, secs. 24–203—24–207), shall not apply. 65 Stat. 150; 47 Stat. 697; 61 Stat. 378; 67 Stat. 91; 79 Stat. 113.

(d) The district courts of the United States (including courts in the territories or possessions of the United States having jurisdiction under subsection (a)) shall have jurisdiction to enter such restraining orders or prohibitions, or to take such other actions, including the acceptance of satisfactory performance bonds, in connection with any property or other interest subject to forfeiture under this section, as they shall deem proper. Jurisdiction of courts.

DANGEROUS SPECIAL DRUG OFFENDER SENTENCING

SEC. 409. (a) Whenever a United States attorney charged with the prosecution of a defendant in a court of the United States for an alleged felonious violation of any provision of this title or title III committed when the defendant was over the age of twenty-one years has reasons to believe that the defendant is a dangerous special drug offender such United States attorney, a reasonable time before trial or acceptance by the court of a plea of guilty or nolo contendere, may sign and file with the court, and may amend, a notice (1) specifying that the defendant is a dangerous special drug offender who upon conviction for such felonious violation is subject to the imposition of a sentence under subsection (b) of this section, and (2) setting out with particularity the reasons why such attorney believes the defendant to be a dangerous special drug offender. In no case shall the fact that the defendant is alleged to be a dangerous special drug offender be an issue upon the trial of such felonious violation, be disclosed to the jury, or be disclosed before any plea of guilty or nolo contendere or verdict or finding of guilty to the presiding judge without the consent of the parties. If the court finds that the filing of the notice as a public record may prejudice fair consideration of a pending criminal matter, it may order the notice sealed and the notice shall not be subject to subpena or public inspection during the pendency of such criminal matter, except on order of the court, but shall be subject to inspection by the defendant alleged to be a dangerous special drug offender and his counsel. Notice. Prohibition.

(b) Upon any plea of guilty or nolo contendere or verdict or finding of guilty of the defendant of such felonious violation, a hearing shall be held, before sentence is imposed, by the court sitting without a jury. Hearing without jury.

Notice. The court shall fix a time for the hearing, and notice thereof shall be given to the defendant and the United States at least ten days prior thereto.

Presentence report, inspection. The court shall permit the United States and counsel for the defendant, or the defendant if he is not represented by counsel, to inspect the presentence report sufficiently prior to the hearing as to afford a reasonable opportunity for verification. In extraordinary cases, the court may withhold material not relevant to a proper sentence, diagnostic opinion which might seriously disrupt a program of rehabilitation, any source of information obtained on a promise of confidentiality, and material previously disclosed in open court. A court withholding all or part of a presentence report shall inform the parties of its action and place in the record the reasons therefor. The court may require parties inspecting all or part of a presentence report to give notice of any part thereof intended to be controverted. In connection with the hearing, the defendant and the United States shall be entitled to assistance of counsel, compulsory process, and cross-examination of such witnesses as appear at the hearing. A duly authenticated copy of a former judgment or commitment shall be prima facie evidence of such former judgment or commitment.

Penalty. If it appears by a preponderance of the information, including information submitted during the trial of such felonious violation and the sentencing hearing and so much of the presentence report as the court relies upon, that the defendant is a dangerous special drug offender, the court shall sentence the defendant to imprisonment for an appropriate term not to exceed twenty-five years and not disproportionate in severity to the maximum term otherwise authorized by law for such felonious violation. Otherwise it shall sentence the defendant in accordance with the law prescribing penalties for such felonious violation. The court shall place in the record its findings, including an identification of the information relied upon in making such findings, and its reasons for the sentence imposed.

Sentence.

(c) This section shall not prevent the imposition and execution of a sentence of imprisonment for life or for a term exceeding twenty-five years upon any person convicted of an offense so punishable.

(d) Notwithstanding any other provision of this section, the court shall not sentence a dangerous special drug offender to less than any mandatory minimum penalty prescribed by law for such felonious violation. This section shall not be construed as creating any mandatory minimum penalty.

Conditions. (e) A defendant is a special drug offender for purposes of this section if—

(1) the defendant has previously been convicted in courts of the United States or a State or any political subdivision thereof for two or more offenses involving dealing in controlled substances, committed on occasions different from one another and different from such felonious violation, and punishable in such courts by death or imprisonment in excess of one year, for one or more of such convictions the defendant has been imprisoned prior to the commission of such felonious violation, and less than five years have elapsed between the commission of such felonious violation and either the defendant's release, or parole or otherwise, from imprisonment for one such conviction or his commission of the last such previous offense or another offense involving dealing in controlled substances and punishable by death or imprisonment in excess of one year under applicable laws of the United States or a State or any political subdivision thereof; or

(2) the defendant committed such felonious violation as part of a pattern of dealing in controlled substances which was crimi-

nal under applicable laws of any jurisdiction, which constituted a substantial source of his income, and in which he manifested special skill or expertise; or

(3) such felonious violation was, or the defendant committed such felonious violation in furtherance of, a conspiracy with three or more other persons to engage in a pattern of dealing in controlled substances which was criminal under applicable laws of any jurisdiction, and the defendant did, or agreed that he would, initiate, organize, plan, finance, direct, manage, or supervise all or part of such conspiracy or dealing, or give or receive a bribe or use force in connection with such dealing.

A conviction shown on direct or collateral review or at the hearing to be invalid or for which the defendant has been pardoned on the ground of innocence shall be disregarded for purposes of paragraph (1) of this subsection. In support of findings under paragraph (2) of this subsection, it may be shown that the defendant has had in his own name or under his control income or property not explained as derived from a source other than such dealing. For purposes of paragraph (2) of this subsection, a substantial source of income means a source of income which for any period of one year or more exceeds the minimum wage, determined on the basis of a forty-hour week and fifty-week year, without reference to exceptions, under section 6(a)(1) of the Fair Labor Standards Act of 1938 for an employee engaged in commerce or in the production of goods for commerce, and which for the same period exceeds fifty percent of the defendant's declared adjusted gross income under section 62 of the Internal Revenue Code of 1954. For purposes of paragraph (2) of this subsection, special skill or expertise in such dealing includes unusual knowledge, judgment or ability, including manual dexterity, facilitating the initiation, organizing, planning, financing, direction, management, supervision, execution or concealment of such dealing, the enlistment of accomplices in such dealing, the escape from detection or apprehension for such dealing, or the disposition of the fruits or proceeds of such dealing. For purposes of paragraphs (2) and (3) of this subsection, such dealing forms a pattern if it embraces criminal acts that have the same or similar purposes, results, participants, victims, or methods of commission, or otherwise are interrelated by distinguishing characteristics and are not isolated events.

Substantial source of income.

80 Stat. 838. 29 USC 206.

68A Stat. 17; 83 Stat. 655. 26 USC 62. Dealing.

(f) A defendant is dangerous for purposes of this section if a period of confinement longer than that provided for such felonious violation is required for the protection of the public from further criminal conduct by the defendant.

Defendant, dangerous.

(g) The time for taking an appeal from a conviction for which sentence is imposed after proceedings under this section shall be measured from imposition of the original sentence.

Appeal.

(h) With respect to the imposition, correction, or reduction of a sentence after proceedings under this section, a review of the sentence on the record of the sentencing court may be taken by the defendant or the United States to a court of appeals. Any review of the sentence taken by the United States shall be taken at least five days before expiration of the time for taking a review of the sentence or appeal of the conviction by the defendant and shall be diligently prosecuted. The sentencing court may, with or without motion and notice, extend the time for taking a review of the sentence for a period not to exceed thirty days from the expiration of the time otherwise prescribed by law. The court shall not extend the time for taking a review of the sentence by the United States after the time has expired. A court

Sentence, review.

extending the time for taking a review of the sentence by the United States shall extend the time for taking a review of the sentence or appeal of the conviction by the defendant for the same period. The taking of a review of the sentence by the United States shall be deemed the taking of a review of the sentence and an appeal of the conviction by the defendant. Review of the sentence shall include review of whether the procedure employed was lawful, the findings made were clearly erroneous, or the sentencing court's discretion was abused. The court of appeals on review of the sentence may, after considering the record, including the entire presentence report, information submitted during the trial of such felonious violation and the sentencing hearing, and the findings and reasons of the sentencing court, affirm the sentence, impose or direct the imposition of any sentence which the sentencing court could originally have imposed, or remand for further sentencing proceedings and imposition of sentence, except that a sentence may be made more severe only on review of the sentence taken by the United States and after hearing. Failure of the United States to take a review of the imposition of the sentence shall, upon review taken by the United States of the correction or reduction of the sentence, foreclose imposition of a sentence more severe than that previously imposed. Any withdrawal or dismissal of review of the sentence taken by the United States shall foreclose imposition of a sentence more severe than that reviewed but shall not otherwise foreclose the review of the sentence or the appeal of the conviction. The court of appeals shall state in writing the reasons for its disposition of the review of the sentence. Any review of the sentence taken by the United States may be dismissed on a showing of the abuse of the right of the United States to take such review.

INFORMATION FOR SENTENCING

SEC. 410. Except as otherwise provided in this title or section 303(a) of the Public Health Service Act, no limitation shall be placed on the information concerning the background, character, and conduct of a person convicted of an offense which a court of the United States may receive and consider for the purpose of imposing an appropriate sentence under this title or title III.

70 Stat. 929.
42 USC 242a.

Post, p. 1285.

PROCEEDINGS TO ESTABLISH PRIOR CONVICTIONS

SEC. 411. (a)(1) No person who stands convicted of an offense under this part shall be sentenced to increased punishment by reason of one or more prior convictions, unless before trial, or before entry of a plea of guilty, the United States attorney files an information with the court (and serves a copy of such information on the person or counsel for the person) stating in writing the previous convictions to be relied upon. Upon a showing by the United States attorney that facts regarding prior convictions could not with due diligence be obtained prior to trial or before entry of a plea of guilty, the court may postpone the trial or the taking of the plea of guilty for a reasonable period for the purpose of obtaining such facts. Clerical mistakes in the information may be amended at any time prior to the pronouncement of sentence.

Prohibition.

(2) An information may not be filed under this section if the increased punishment which may be imposed is imprisonment for a term in excess of three years unless the person either waived or was afforded prosecution by indictment for the offense for which such increased punishment may be imposed.

(b) If the United States attorney files an information under this section, the court shall after conviction but before pronouncement of sentence inquire of the person with respect to whom the information was filed whether he affirms or denies that he has been previously convicted as alleged in the information, and shall inform him that any challenge to a prior conviction which is not made before sentence is imposed may not thereafter be raised to attack the sentence. Previous conviction, affirmation or denial.

(c) (1) If the person denies any allegation of the information of prior conviction, or claims that any conviction alleged is invalid, he shall file a written response to the information. A copy of the response shall be served upon the United States attorney. The court shall hold a hearing to determine any issues raised by the response which would except the person from increased punishment. The failure of the United States attorney to include in the information the complete criminal record of the person or any facts in addition to the convictions to be relied upon shall not constitute grounds for invalidating the notice given in the information required by subsection (a) (1). The hearing shall be before the court without a jury and either party may introduce evidence. Except as otherwise provided in paragraph (2) of this subsection, the United States attorney shall have the burden of proof beyond a reasonable doubt on any issue of fact. At the request of either party, the court shall enter findings of fact and conclusions of law. Denial, written response. Hearing. Court without jury. Evidence, introduction.

(2) A person claiming that a conviction alleged in the information was obtained in violation of the Constitution of the United States shall set forth his claim, and the factual basis therefor, with particularity in his response to the information. The person shall have the burden of proof by a preponderance of the evidence on any issue of fact raised by the response. Any challenge to a prior conviction, not raised by response to the information before an increased sentence is imposed in reliance thereon, shall be waived unless good cause be shown for failure to make a timely challenge. Constitution of U.S., violation.

(d) (1) If the person files no response to the information, or if the court determines, after hearing, that the person is subject to increased punishment by reason of prior convictions, the court shall proceed to impose sentence upon him as provided by this part. Sentence, imposition.

(2) If the court determines that the person has not been convicted as alleged in the information, that a conviction alleged in the information is invalid, or that the person is otherwise not subject to an increased sentence as a matter of law, the court shall, at the request of the United States attorney, postpone sentence to allow an appeal from that determination. If no such request is made, the court shall impose sentence as provided by this part. The person may appeal from an order postponing sentence as if sentence had been pronounced and a final judgment of conviction entered.

(e) No person who stands convicted of an offense under this part may challenge the validity of any prior conviction alleged under this section which occurred more than five years before the date of the information alleging such prior conviction. Statute of limitations.

Part E—Administrative and Enforcement Provisions

PROCEDURES

Sec. 501. (a) The Attorney General may delegate any of his functions under this title to any officer or employee of the Department of Justice. Attorney General, functions, delegation.

Regulations.

(b) The Attorney General may promulgate and enforce any rules, regulations, and procedures which he may deem necessary and appropriate for the efficient execution of his functions under this title.

Gifts, etc., acceptance.

(c) The Attorney General may accept in the name of the Department of Justice any form of devise, bequest, gift, or donation where the donor intends to donate property for the purpose of preventing or controlling the abuse of controlled substances. He may take all appropriate steps to secure possession of such property and may sell, assign, transfer, or convey any such property other than moneys.

EDUCATION AND RESEARCH PROGRAMS OF THE ATTORNEY GENERAL

SEC. 502. (a) The Attorney General is authorized to carry out educational and research programs directly related to enforcement of the laws under his jurisdiction concerning drugs or other substances which are or may be subject to control under this title. Such programs may include—

(1) educational and training programs on drug abuse and controlled substances law enforcement for local, State, and Federal personnel;

(2) studies or special projects designed to compare the deterrent effects of various enforcement strategies on drug use and abuse;

(3) studies or special projects designed to assess and detect accurately the presence in the human body of drugs or other substances which are or may be subject to control under this title, including the development of rapid field identification methods which would enable agents to detect microquantities of such drugs or other substances;

(4) studies or special projects designed to evaluate the nature and sources of the supply of illegal drugs throughout the country;

(5) studies or special projects to develop more effective methods to prevent diversion of controlled substances into illegal channels; and

(6) studies or special projects to develop information necessary to carry out his functions under section 201 of this title.

Ante, p. 1245.

(b) The Attorney General may enter into contracts for such educational and research activities without performance bonds and without regard to section 3709 of the Revised Statutes (41 U.S.C. 5).

Research populations, identification, prohibition.

(c) The Attorney General may authorize persons engaged in research to withhold the names and other identifying characteristics of persons who are the subjects of such research. Persons who obtain this authorization may not be compelled in any Federal, State, or local civil, criminal, administrative, legislative, or other proceeding to identify the subjects of research for which such authorization was obtained.

Controlled substances, exception.

(d) The Attorney General, on his own motion or at the request of the Secretary, may authorize the possession, distribution, and dispensing of controlled substances by persons engaged in research. Persons who obtain this authorization shall be exempt from State or Federal prosecution for possession, distribution, and dispensing of controlled substances to the extent authorized by the Attorney General.

COOPERATIVE ARRANGEMENTS

SEC. 503. (a) The Attorney General shall cooperate with local, State, and Federal agencies concerning traffic in controlled substances and in suppressing the abuse of controlled substances. To this end, he is authorized to—

(1) arrange for the exchange of information between governmental officials concerning the use and abuse of controlled substances;

(2) cooperate in the institution and prosecution of cases in the courts of the United States and before the licensing boards and courts of the several States;

(3) conduct training programs on controlled substance law enforcement for local, State, and Federal personnel;

(4) maintain in the Department of Justice a unit which will accept, catalog, file, and otherwise utilize all information and statistics, including records of controlled substance abusers and other controlled substance law offenders, which may be received from Federal, State, and local agencies, and make such information available for Federal, State, and local law enforcement purposes; and

(5) conduct programs of eradication aimed at destroying wild or illicit growth of plant species from which controlled substances may be extracted.

(b) When requested by the Attorney General, it shall be the duty of any agency or instrumentality of the Federal Government to furnish assistance, including technical advice, to him for carrying out his functions under this title; except that no such agency or instrumentality shall be required to furnish the name of, or other identifying information about, a patient or research subject whose identity it has undertaken to keep confidential.

Assistance.

Prohibition.

ADVISORY COMMITTEES

SEC. 504. The Attorney General may from time to time appoint committees to advise him with respect to preventing and controlling the abuse of controlled substances. Members of the committees may be entitled to receive compensation at the rate of $100 for each day (including traveltime) during which they are engaged in the actual performance of duties. While traveling on official business in the performance of duties for the committees, members of the committees shall be allowed expenses of travel, including per diem instead of subsistence, in accordance with subchapter I of chapter 57 of title 5, United States Code.

Appointment.

Compensation.

Travel expenses, etc.

80 Stat. 498; 83 Stat. 190, 5 USC 5701.

ADMINISTRATIVE HEARINGS

SEC. 505. (a) In carrying out his functions under this title, the Attorney General may hold hearings, sign and issue subpenas, administer oaths, examine witnesses, and receive evidence at any place in the United States.

(b) Except as otherwise provided in this title, notice shall be given and hearings shall be conducted under appropriate procedures of subchapter II of chapter 5, title 5, United States Code.

80 Stat. 381, 5 USC 551.

SUBPENAS

SEC. 506. (a) In any investigation relating to his functions under this title with respect to controlled substances, the Attorney General may subpena witnesses, compel the attendance and testimony of witnesses, and require the production of any records (including books, papers, documents, and other tangible things which constitute or contain evidence) which the Attorney General finds relevant or material to the investigation. The attendance of witnesses and the production of records may be required from any place in any State or in any territory

Exception.

Fees.

Service.

Refusal to obey subpena.

Order.

Failure to obey order, penalty.

Jurisdiction.

or other place subject to the jurisdiction of the United States at any designated place of hearing; except that a witness shall not be required to appear at any hearing more than 500 miles distant from the place where he was served with a subpena. Witnesses summoned under this section shall be paid the same fees and mileage that are paid witnesses in the courts of the United States.

(b) A subpena issued under this section may be served by any person designated in the subpena to serve it. Service upon a natural person may be made by personal delivery of the subpena to him. Service may be made upon a domestic or foreign corporation or upon a partnership or other unincorporated association which is subject to suit under a common name, by delivering the subpena to an officer, to a managing or general agent, or to any other agent authorized by appointment or by law to receive service of process. The affidavit of the person serving the subpena entered on a true copy thereof by the person serving it shall be proof of service.

(c) In the case of contumacy by or refusal to obey a subpena issued to any person, the Attorney General may invoke the aid of any court of the United States within the jurisdiction of which the investigation is carried on or of which the subpenaed person is an inhabitant, or in which he carries on business or may be found, to compel compliance with the subpena. The court may issue an order requiring the subpenaed person to appear before the Attorney General to produce records, if so ordered, or to give testimony touching the matter under investigation. Any failure to obey the order of the court may be punished by the court as a contempt thereof. All process in any such case may be served in any judicial district in which such person may be found.

JUDICIAL REVIEW

SEC. 507. All final determinations, findings, and conclusions of the Attorney General under this title shall be final and conclusive decisions of the matters involved, except that any person aggrieved by a final decision of the Attorney General may obtain review of the decision in the United States Court of Appeals for the District of Columbia or for the circuit in which his principal place of business is located upon petition filed with the court and delivered to the Attorney General within thirty days after notice of the decision. Findings of fact by the Attorney General, if supported by substantial evidence, shall be conclusive.

POWERS OF ENFORCEMENT PERSONNEL

SEC. 508. Any officer or employee of the Bureau of Narcotics and Dangerous Drug designated by the Attorney General may—

(1) carry firearms;

(2) execute and serve search warrants, arrest warrants, administrative inspection warrants, subpenas, and summonses issued under the authority of the United States;

(3) make arrests without warrant (A) for any offense against the United States committed in his presence, or (B) for any felony, cognizable under the laws of the United States, if he has probable cause to believe that the person to be arrested has committed or is committing a felony;

(4) make seizures of property pursuant to the provisions of this title; and

(5) perform such other law enforcement duties as the Attorney General may designate.

SEARCH WARRANTS

SEC. 509. (a) A search warrant relating to offenses involving controlled substances may be served at any time of the day or night if the judge or United States magistrate issuing the warrant is satisfied that there is probable cause to believe that grounds exist for the warrant and for its service at such time.

Authority to break and enter under certain conditions.

(b) Any officer authorized to execute a search warrant relating to offenses involving controlled substances the penalty for which is imprisonment for more than one year may, without notice of his authority and purpose, break open an outer or inner door or window of a building, or any part of the building, or anything therein, if the judge or United States magistrate issuing the warrant (1) is satisfied that there is probable cause to believe that (A) the property sought may and, if such notice is given, will be easily and quickly destroyed or disposed of, or (B) the giving of such notice will immediately endanger the life or safety of the executing officer or another person, and (2) has included in the warrant a direction that the officer executing it shall not be required to give such notice. Any officer acting under such warrant, shall, as soon as practicable after entering the premises, identify himself and give the reasons and authority for his entrance upon the premises.

ADMINISTRATIVE INSPECTIONS AND WARRANTS

"Controlled premises."

SEC. 510. (a) As used in this section, the term "controlled premises" means—

(1) places where original or other records or documents required under this title are kept or required to be kept, and

(2) places, including factories, warehouses, or other establishments, and conveyances, where persons registered under section 303 (or exempted from registration under section 302(d)) may lawfully hold, manufacture, or distribute, dispense, administer, or otherwise dispose of controlled substances.

(b) (1) For the purpose of inspecting, copying, and verifying the correctness of records, reports, or other documents required to be kept or made under this title and otherwise facilitating the carrying out of his functions under this title, the Attorney General is authorized, in accordance with this section, to enter controlled premises and to conduct administrative inspections thereof, and of the things specified in this section, relevant to those functions.

(2) Such entries and inspections shall be carried out through officers or employees (hereinafter referred to as "inspectors") designated by the Attorney General. Any such inspector, upon stating his purpose and presenting to the owner, operator, or agent in charge of such premises (A) appropriate credentials and (B) a written notice of his inspection authority (which notice in the case of an inspection requiring, or in fact supported by, an administrative inspection warrant shall consist of such warrant), shall have the right to enter such premises and conduct such inspection at reasonable times.

(3) Except as may otherwise be indicated in an applicable inspection warrant, the inspector shall have the right—

(A) to inspect and copy records, reports, and other documents required to be kept or made under this title;

(B) to inspect, within reasonable limits and in a reasonable manner, controlled premises and all pertinent equipment, finished and unfinished drugs and other substances or materials, containers, and labeling found therein, and, except as provided in para-

graph (5) of this subsection, all other things therein (including records, files, papers, processes, controls, and facilities) appropriate for verification of the records, reports, and documents referred to in clause (A) or otherwise bearing on the provisions of this title; and

(C) to inventory any stock of any controlled substance therein and obtain samples of any such substance.

(4) Except when the owner, operator, or agent in charge of the controlled premises so consents in writing, no inspection authorized by this section shall extend to—

(A) financial data;

(B) sales data other than shipment data; or

(C) pricing data.

(c) A warrant under this section shall not be required for the inspection of books and records pursuant to an administrative subpena issued in accordance with section 506, nor for entries and administrative inspections (including seizures of property)—

(1) with the consent of the owner, operator, or agent in charge of the controlled premises;

(2) in situations presenting imminent danger to health or safety;

(3) in situations involving inspection of conveyances where there is reasonable cause to believe that the mobility of the conveyance makes it impracticable to obtain a warrant;

(4) in any other exceptional or emergency circumstance where time or opportunity to apply for a warrant is lacking; or

(5) in any other situations where a warrant is not constitutionally required.

Administrative inspection warrants, issuance and execution.

(d) Issuance and execution of administrative inspection warrants shall be as follows:

(1) Any judge of the United States or of a State court of record, or any United States magistrate, may, within his territorial jurisdiction, and upon proper oath or affirmation showing probable cause, issue warrants for the purpose of conducting administrative inspections authorized by this title or regulations thereunder, and seizures of property appropriate to such inspections. For the purposes of this section, the term "probable cause" means a valid public interest in the effective enforcement of this title or regulations thereunder sufficient to justify administrative inspections of the area, premises, building, or conveyance, or contents thereof, in the circumstances specified in the application for the warrant.

"Probable cause."

(2) A warrant shall issue only upon an affidavit of an officer or employee having knowledge of the facts alleged, sworn to before the judge or magistrate and establishing the grounds for issuing the warrant. If the judge or magistrate is satisfied that grounds for the application exist or that there is probable cause to believe they exist, he shall issue a warrant identifying the area, premises, building, or conveyance to be inspected, the purpose of such inspection, and, where appropriate, the type of property to be inspected, if any. The warrant shall identify the items or types of property to be seized, if any. The warrant shall be directed to a person authorized under subsection (b) (2) to execute it. The warrant shall state the grounds for its issuance and the name of the person or persons whose affidavit has been taken in support thereof. It shall command the person to whom it is directed to inspect the area, premises, building, or conveyance identified for the purpose specified, and, where appropriate, shall direct the seizure of the property specified. The warrant shall direct that it be served during normal business hours. It shall designate the judge or magistrate to whom it shall be returned.

(3) A warrant issued pursuant to this section must be executed and returned within ten days of its date unless, upon a showing by the United States of a need therefor, the judge or magistrate allows additional time in the warrant. If property is seized pursuant to a warrant, the person executing the warrant shall give to the person from whom or from whose premises the property was taken a copy of the warrant and a receipt for the property taken or shall leave the copy and receipt at the place from which the property was taken. The return of the warrant shall be made promptly and shall be accompanied by a written inventory of any property taken. The inventory shall be made in the presence of the person executing the warrant and of the person from whose possession or premises the property was taken, if they are present, or in the presence of at least one credible person other than the person making such inventory, and shall be verified by the person executing the warrant. The judge or magistrate, upon request, shall deliver a copy of the inventory to the person from whom or from whose premises the property was taken and to the applicant for the warrant.

(4) The judge or magistrate who has issued a warrant under this section shall attach to the warrant a copy of the return and all papers filed in connection therewith and shall file them with the clerk of the district court of the United States for the judicial district in which the inspection was made. Warrants, filing.

FORFEITURES

SEC. 511. (a) The following shall be subject to forfeiture to the United States and no property right shall exist in them:

(1) All controlled substances which have been manufactured, distributed, dispensed, or acquired in violation of this title.

(2) All raw materials, products, and equipment of any kind which are used, or intended for use, in manufacturing, compounding, processing, delivering, importing, or exporting any controlled substance in violation of this title.

(3) All property which is used, or intended for use, as a container for property described in paragraph (1) or (2).

(4) All conveyances, including aircraft, vehicles, or vessels, which are used, or are intended for use, to transport, or in any manner to facilitate the transportation, sale, receipt, possession, or concealment of property described in paragraph (1) or (2), except that—

(A) no conveyance used by any person as a common carrier in the transaction of business as a common carrier shall be forfeited under the provisions of this section unless it shall appear that the owner or other person in charge of such conveyance was a consenting party or privy to a violation of this title or title III; and

(B) no conveyance shall be forfeited under the provisions of this section by reason of any act or omission established by the owner thereof to have been committed or omitted by any person other than such owner while such conveyance was unlawfully in the possession of a person other than the owner in violation of the criminal laws of the United States, or of any State.

Post, p. 1285.

(5) All books, records, and research, including formulas, microfilm, tapes, and data which are used, or intended for use, in violation of this title.

(b) Any property subject to forfeiture to the United States under this title may be seized by the Attorney General upon process issued pursuant to the Supplemental Rules for Certain Admiralty and Maritime Claims by any district court of the United States having jurisdiction over the property, except that seizure without such process may be made when—

(1) the seizure is incident to an arrest or a search under a search warrant or an inspection under an administrative inspection warrant;

(2) the property subject to seizure has been the subject of a prior judgment in favor of the United States in a criminal injunction or forfeiture proceeding under this title;

(3) the Attorney General has probable cause to believe that the property is directly or indirectly dangerous to health or safety; or

(4) the Attorney General has probable cause to believe that the property has been used or is intended to be used in violation of this title.

In the event of seizure pursuant to paragraph (3) or (4) of this subsection, proceedings under subsection (d) of this section shall be instituted promptly.

Property, custody of Attorney General.

(c) Property taken or detained under this section shall not be repleviable, but shall be deemed to be in the custody of the Attorney General, subject only to the orders and decrees of the court or the official having jurisdiction thereof. Whenever property is seized under the provisions of this title, the Attorney General may—

(1) place the property under seal;

(2) remove the property to a place designated by him; or

(3) require that the General Services Administration take custody of the property and remove it to an appropriate location for disposition in accordance with law.

(d) All provisions of law relating to the seizure, summary and judicial forfeiture, and condemnation of property for violation of the customs laws; the disposition of such property or the proceeds from the sale thereof; the remission or mitigation of such forfeitures; and the compromise of claims and the award of compensation to informers in respect of such forfeitures shall apply to seizures and forfeitures incurred, or alleged to have been incurred, under the provisions of this title, insofar as applicable and not inconsistent with the provisions hereof; except that such duties as are imposed upon the customs officer or any other person with respect to the seizure and forfeiture of property under the customs laws shall be performed with respect to seizures and forfeitures of property under this title by such officers, agents, or other persons as may be authorized or designated for that purpose by the Attorney General, except to the extent that such duties arise from seizures and forfeitures effected by any customs officer.

(e) Whenever property is forfeited under this title the Attorney General may—

(1) retain the property for official use;

(2) sell any forfeited property which is not required to be destroyed by law and which is not harmful to the public, but the proceeds from any such sale shall be used to pay all proper expenses of the proceedings for forfeiture and sale including expenses of seizure, maintenance of custody, advertising and court costs;

(3) require that the General Services Administration take custody of the property and remove it for disposition in accordance with law; or

(4) forward it to the Bureau of Narcotics and Dangerous Drugs for disposition (including delivery for medical or scientific use to any Federal or State agency under regulations of the Attorney General).

(f) All controlled substances in schedule I that are possessed, transferred, sold, or offered for sale in violation of the provisions of this title shall be deemed contraband and seized and summarily forfeited to the United States. Similarly, all substances in schedule I, which are seized or come into the possession of the United States, the owners of which are unknown, shall be deemed contraband and summarily forfeited to the United States. Controlled substances, forfeiture.

(g) (1) All species of plants from which controlled substances in schedules I and II may be derived which have been planted or cultivated in violation of this title, or of which the owners or cultivators are unknown, or which are wild growths, may be seized and summarily forfeited to the United States.

(2) The failure, upon demand by the Attorney General or his duly authorized agent, of the person in occupancy or in control of land or premises upon which such species of plants are growing or being stored, to produce an appropriate registration, or proof that he is the holder thereof, shall constitute authority for the seizure and forfeiture.

(3) The Attorney General, or his duly authorized agent, shall have authority to enter upon any lands, or into any dwelling pursuant to a search warrant, to cut, harvest, carry off, or destroy such plants.

INJUNCTIONS

SEC. 512. (a) The district courts of the United States and all courts exercising general jurisdiction in the territories and possessions of the United States shall have jurisdiction in proceedings in accordance with the Federal Rules of Civil Procedure to enjoin violations of this title. Jurisdiction of courts.

(b) In case of an alleged violation of an injunction or restraining order issued under this section, trial shall, upon demand of the accused, be by a jury in accordance with the Federal Rules of Civil Procedure. 28 USC app.

ENFORCEMENT PROCEEDINGS

SEC. 513. Before any violation of this title is reported by the Director of the Bureau of Narcotics and Dangerous Drugs to any United States attorney for institution of a criminal proceeding, the Director may require that the person against whom such proceeding is contemplated be given appropriate notice and an opportunity to present his views, either orally or in writing, with regard to such contemplated proceeding. Notice.

IMMUNITY AND PRIVILEGE

SEC. 514. (a) Whenever a witness refuses, on the basis of his privilege against self-incrimination, to testify or provide other information in a proceeding before a court or grand jury of the United States, involving a violation of this title, and the person presiding over the proceeding communicates to the witness an order issued under this section, the witness may not refuse to comply with the order on the basis of his privilege against self-incrimination. But no testimony or other information compelled under the order issued under subsection (b) of this section or any information obtained by the exploitation of such testimony or other information, may be used against the witness in any criminal case, including any criminal case brought in a court of a State, except a prosecution for perjury, giving a false statement, or otherwise failing to comply with the order. Refusal to testify, prohibition.

Order.

(b) In the case of any individual who has been or may be called to testify or provide other information at any proceeding before a court or grand jury of the United States, the United States district court for the judicial district in which the proceeding is or may be held shall issue, upon the request of the United States attorney for such district, an order requiring such individual to give any testimony or provide any other information which he refuses to give or provide on the basis of his privilege against self-incrimination.

(c) A United States attorney may, with the approval of the Attorney General or the Deputy Attorney General, or any Assistant Attorney General designated by the Attorney General, request an order under subsection (b) when in his judgment—

(1) the testimony or other information from such individual may be necessary to the public interest; and

(2) such individual has refused or is likely to refuse to testify or provide other information on the basis of his privilege against self-incrimination.

BURDEN OF PROOF; LIABILITIES

SEC. 515. (a) (1) It shall not be necessary for the United States to negative any exemption or exception set forth in this title in any complaint, information, indictment, or other pleading or in any trial, hearing, or other proceeding under this title, and the burden of going forward with the evidence with respect to any such exemption or exception shall be upon the person claiming its benefit.

Ante, p. 1264.

(2) In the case of a person charged under section 404(a) with the possession of a controlled substance, any label identifying such substance for purposes of section 503(b)(2) of the Federal Food, Drug, and Cosmetic Act shall be admissible in evidence and shall be prima facie evidence that such substance was obtained pursuant to a valid prescription from a practitioner while acting in the course of his professional practice.

65 Stat. 648.
21 USC 353.

(b) In the absence of proof that a person is the duly authorized holder of an appropriate registration or order form issued under this title, he shall be presumed not to be the holder of such registration or form, and the burden of going forward with the evidence with respect to such registration or form shall be upon him.

(c) The burden of going forward with the evidence to establish that a vehicle, vessel, or aircraft used in connection with controlled substances in schedule I was used in accordance with the provisions of this title shall be on the persons engaged in such use.

Criminal liability, prohibition, exception.
62 Stat. 803.

(d) Except as provided in sections 2234 and 2235 of title 18, United States Code, no civil or criminal liability shall be imposed by virtue of this title upon any duly authorized Federal officer lawfully engaged in the enforcement of this title, or upon any duly authorized officer of any State, territory, political subdivision thereof, the District of Columbia, or any possession of the United States, who shall be lawfully engaged in the enforcement of any law or municipal ordinance relating to controlled substances.

PAYMENTS AND ADVANCES

Informers, payment.

SEC. 516. (a) The Attorney General is authorized to pay any person, from funds appropriated for the Bureau of Narcotics and Dangerous Drugs, for information concerning a violation of this title, such sum or sums of money as he may deem appropriate, without reference to any moieties or rewards to which such person may otherwise be entitled by law.

(b) Moneys expended from appropriations of the Bureau of Narcotics and Dangerous Drugs for purchase of controlled substances and subsequently recovered shall be reimbursed to the current appropriation for the Bureau.

(c) The Attorney General is authorized to direct the advance of funds by the Treasury Department in connection with the enforcement of this title. Funds, advancement, authority of Attorney General.

PART F—ADVISORY COMMISSION

ESTABLISHMENT OF COMMISSION ON MARIHUANA AND DRUG ABUSE

SEC. 601. (a) There is established a commission to be known as the Commission on Marihuana and Drug Abuse (hereafter in this section referred to as the "Commission"). The Commission shall be composed of— Membership.

(1) two Members of the Senate appointed by the President of the Senate;

(2) two Members of the House of Representatives appointed by the Speaker of the House of Representatives; and

(3) nine members appointed by the President of the United States.

At no time shall more than one of the members appointed under paragraph (1), or more than one of the members appointed under paragraph (2), or more than five of the members appointed under paragraph (3) be members of the same political party.

(b) (1) The President shall designate one of the members of the Commission as Chairman, and one as Vice Chairman. Seven members of the Commission shall constitute a quorum, but a lesser number may conduct hearings. Quorum.

(2) Members of the Commission who are Members of Congress or full-time officers or employees of the United States shall serve without additional compensation but shall be reimbursed for travel, subsistence, and other necessary expenses incurred in the performance of the duties vested in the Commission. Members of the Commission from private life shall receive $100 per diem while engaged in the actual performance of the duties vested in the Commission, plus reimbursement for travel, subsistence, and other necessary expenses incurred in the performance of such duties. Travel expenses, etc. Compensation.

(3) The Commission shall meet at the call of the Chairman or at the call of a majority of the members thereof. Meetings.

(c) (1) The Commission shall have the power to appoint and fix the compensation of such personnel as it deems advisable, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and the provisions of chapter 51 and subchapter III of chapter 53 of such title, relating to classification and General Schedule pay rates. Personnel. 80 Stat. 443, 467. 5 USC 5101, 5331.

(2) The Commission may procure, in accordance with the provisions of section 3109 of title 5, United States Code, the temporary or intermittent services of experts or consultants. Persons so employed shall receive compensation at a rate to be fixed by the Commission, but not in excess of $75 per diem, including traveltime. While away from his home or regular place of business in the performance of services for the Commission, any such person may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703(b) of title 5, United States Code, for persons in the Government service employed intermittently. 35 F. R. 6247. Experts and consultants. 80 Stat. 416. Travel expenses, etc. 80 Stat. 499; 83 Stat. 190.

(3) The Commission may secure directly from any department or agency of the United States information necessary to enable it to Information, availability.

carry out its duties under this section. Upon request of the Chairman of the Commission, such department or agency shall furnish such information to the Commission.

Marihuana, study.

(d) (1) The Commission shall conduct a study of marihuana including, but not limited to, the following areas:

(A) the extent of use of marihuana in the United States to include its various sources, the number of users, number of arrests, number of convictions, amount of marihuana seized, type of user, nature of use;

(B) an evaluation of the efficacy of existing marihuana laws;

(C) a study of the pharmacology of marihuana and its immediate and long-term effects, both physiological and psychological;

(D) the relationship of marihuana use to aggressive behavior and crime;

(E) the relationship between marihuana and the use of other drugs; and

(F) the international control of marihuana.

Report to President and Congress.

(2) Within one year after the date on which funds first become available to carry out this section, the Commission shall submit to the President and the Congress a comprehensive report on its study and investigation under this subsection which shall include its recommendations and such proposals for legislation and administrative action as may be necessary to carry out its recommendations.

Drug abuse, study and investigation. Interim reports. Final report to President and Congress. Termination. Expenditures, limitation.

(e) The Commission shall conduct a comprehensive study and investigation of the causes of drug abuse and their relative significance. The Commission shall submit to the President and the Congress such interim reports as it deems advisable and shall within two years after the date on which funds first become available to carry out this section submit to the President and the Congress a final report which shall contain a detailed statement of its findings and conclusions and also such recommendations for legislation and administrative actions as it deems appropriate. The Commission shall cease to exist sixty days after the final report is submitted under this subsection.

(f) Total expenditures of the Commission shall not exceed $1,000,000.

PART G—CONFORMING, TRANSITIONAL AND EFFECTIVE DATE, AND GENERAL PROVISIONS

REPEALS AND CONFORMING AMENDMENTS

Repeals. 79 Stat. 227, 232, 228; 82 Stat. 1361.

SEC. 701. (a) Sections 201(v), 301(q), and 511 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321(v), 331(q), 360(a) are repealed.

Penalties. 82 Stat. 1361.

(b) Subsections (a) and (b) of section 303 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 333) are amended to read as follows:

"SEC. 303. (a) Any person who violates a provision of section 301 shall be imprisoned for not more than one year or fined not more than $1,000, or both.

"(b) Notwithstanding the provisions of subsection (a) of this section, if any person commits such a violation after a conviction of him under this section has become final, or commits such a violation with the intent to defraud or mislead, such person shall be imprisoned for not more than three years or fined not more than $10,000 or both."

79 Stat. 233.

(c) Section 304(a)(2) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 334(a)(2)) is amended (1) by striking out clauses (A) and (D), (2) by striking out "of such depressant or stimulant

drug or" in clause (C), (3) by adding "and" after the comma at the end of clause (C), and (4) by redesignating clauses (B), (C), and (E) as clauses (A), (B), and (C), respectively.

(d) Section 304(d)(3)(iii) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 334(d)(3)(iii)) is amended by striking out "depressant or stimulant drugs or". 79 Stat. 233.

(e) Section 510 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360) is amended (1) in subsection (a) by striking out paragraph (2), by inserting "and" at the end of paragraph (1), and by redesignating paragraph (3) as paragraph (2); (2) by striking out "or in the wholesaling, jobbing, or distributing of any depressant or stimulant drug" in the first sentence of subsection (b); (3) by striking out the last sentence of subsection (b); (4) by striking out "or in the wholesaling, jobbing, or distributing of any depressant or stimulant drug" in the first sentence of subsection (c); (5) by striking out the last sentence of subsection (c); (6) by striking out "(1)" in subsection (d) and by inserting a period after "drug or drugs" in that subsection and deleting the remainder of that subsection; and (7) by striking out "AND CERTAIN WHOLESALERS" in the section heading. 76 Stat. 794; 79 Stat. 231.

(f) Section 702 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 372) is amended by striking out "to depressant or stimulant drugs or" in subsection (e). 79 Stat. 234.

(g) Section 201(a)(2) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321(a)(2)) is amended by inserting a period after "Canal Zone" the first time these words appear and deleting all thereafter in such section 201(a)(2). 76 Stat. 796; 82 Stat. 1362.

(h) The last sentence of section 801(a) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 381(a)) is amended (1) by striking out "This paragraph" and inserting in lieu thereof "Clause (2) of the third sentence of this paragraph,", and (2) by striking out "section 2 of the Act of May 26, 1922, as amended (U.S.C. 1934, edition, title 21, sec. 173)" and inserting in lieu thereof "the Controlled Substances Import and Export Act". 52 Stat. 1058.

(i)(1) Section 1114 of title 18, United States Code, is amended by striking out "the Bureau of Narcotics" and inserting in lieu thereof "the Bureau of Narcotics and Dangerous Drugs". 65 Stat. 721.

(2) Section 1952 of such title is amended— 75 Stat. 498.

(A) by inserting in subsection (b)(1) "or controlled substances (as defined in section 102(6) of the Controlled Substances Act)" immediately following "narcotics"; and 18 USC 1952.

(B) by striking out "or narcotics" in subsection (c).

(j) Subsection (a) of section 302 of the Public Health Service Act (42 U.S.C. 242(a)) is amended to read as follows: Drugs, study. 58 Stat. 692.

"SEC. 302. (a) In carrying out the purposes of section 301 with respect to drugs the use or misuse of which might result in drug abuse or dependency, the studies and investigations authorized therein shall include the use and misuse of narcotic drugs and other drugs. Such studies and investigations shall further include the quantities of crude opium, coca leaves, and their salts, derivatives, and preparations, and other drugs subject to control under the Controlled Substances Act and Controlled Substances Import and Export Act, together with reserves thereof, necessary to supply the normal and emergency medicinal and scientific requirements of the United States. The results of studies and investigations of the quantities of narcotic drugs or other drugs subject to control under such Acts, together with reserves of such drugs, that are necessary to supply the normal and emergency medicinal and scientific requirements of the United States, shall be Report to Attorney General.

Ante, p. 1242. Post, p. 1285.

84 STAT. 1283

reported not later than the first day of April of each year to the Attorney General, to be used at his discretion in determining manufacturing quotas or importation requirements under such Acts."

PENDING PROCEEDINGS

SEC. 702. (a) Prosecutions for any violation of law occurring prior to the effective date of section 701 shall not be affected by the repeals or amendments made by such section, or abated by reason thereof.

(b) Civil seizures or forfeitures and injunctive proceedings commenced prior to the effective date of section 701 shall not be affected by the repeals or amendments made by such section, or abated by reason thereof.

(c) All administrative proceedings pending before the Bureau of Narcotics and Dangerous Drugs on the date of enactment of this Act shall be continued and brought to final determination in accord with laws and regulations in effect prior to such date of enactment. Where a drug is finally determined under such proceedings to be a depressant or stimulant drug, as defined in section 201(v) of the Federal Food, Drug, and Cosmetic Act, such drug shall automatically be controlled under this title by the Attorney General without further proceedings and listed in the appropriate schedule after he has obtained the recommendation of the Secretary. Any drug with respect to which such a final determination has been made prior to the date of enactment of this Act which is not listed in section 202 within schedules I through V shall automatically be controlled under this title by the Attorney General without further proceedings, and be listed in the appropriate schedule, after he has obtained the recommendations of the Secretary.

Ante, p. 1281.

Ante, p. 1247.

PROVISIONAL REGISTRATION

SEC. 703. (a) (1) Any person who—

(A) is engaged in manufacturing, distributing, or dispensing any controlled substance on the day before the effective date of section 302, and

(B) is registered on such day under section 510 of the Federal Food, Drug, and Cosmetic Act or under section 4722 of the Internal Revenue Code of 1954,

Ante, p. 1282.

68A Stat. 555.

shall, with respect to each establishment for which such registration is in effect under any such section, be deemed to have a provisional registration under section 303 for the manufacture, distribution, or dispensing (as the case may be) of controlled substances.

(2) During the period his provisional registration is in effect under this section, the registration number assigned such person under such section 510 or under such section 4722 (as the case may be) shall be his registration number for purposes of section 303 of this title.

(b) The provisions of section 304, relating to suspension and revocation of registration, shall apply to a provisional registration under this section.

(c) Unless sooner suspended or revoked under subsection (b), a provisional registration of a person under subsection (a)(1) of this section shall be in effect until—

(1) the date on which such person has registered with the Attorney General under section 303 or has had his registration denied under such section, or

(2) such date as may be prescribed by the Attorney General for registration of manufacturers, distributors, or dispensers, as the case may be,

whichever occurs first.

EFFECTIVE DATES AND OTHER TRANSITIONAL PROVISIONS

SEC. 704. (a) Except as otherwise provided in this section, this title shall become effective on the first day of the seventh calendar month that begins after the day immediately preceding the date of enactment.

(b) Parts A, B, E, and F of this title, section 702, this section, and sections 705 through 709, shall become effective upon enactment.

(c) Sections 305 (relating to labels and labeling), and 306 (relating to manufacturing quotas) shall become effective on the date specified in subsection (a) of this section, except that the Attorney General may by order published in the Federal Register postpone the effective date of either or both of these sections for such period as he may determine to be necessary for the efficient administration of this title.

Ante, p. 1256.

Publication in Federal Register.

CONTINUATION OF REGULATIONS

SEC. 705. Any orders, rules, and regulations which have been promulgated under any law affected by this title and which are in effect on the day preceding enactment of this title shall continue in effect until modified, superseded, or repealed.

SEVERABILITY

SEC. 706. If a provision of this Act is held invalid, all valid provisions that are severable shall remain in effect. If a provision of this Act is held invalid in one or more of its applications, the provision shall remain in effect in all its valid applications that are severable.

SAVING PROVISION

SEC. 707. Nothing in this Act, except this part and, to the extent of any inconsistency, sections 307(e) and 309 of this title, shall be construed as in any way affecting, modifying, repealing, or superseding the provisions of the Federal Food, Drug, and Cosmetic Act.

52 Stat. 1040.
21 USC 301.

APPLICATION OF STATE LAW

SEC. 708. No provision of this title shall be construed as indicating an intent on the part of the Congress to occupy the field in which that provision operates, including criminal penalties, to the exclusion of any State law on the same subject matter which would otherwise be within the authority of the State, unless there is a positive conflict between that provision of this title and that State law so that the two cannot consistently stand together.

APPROPRIATIONS AUTHORIZATIONS

SEC. 709. There are authorized to be appropriated for expenses of the Department of Justice in carrying out its functions under this title (except section 103) not to exceed $60,000,000 for the fiscal year ending June 30, 1972, $70,000,000 for the fiscal year ending June 30, 1973, and $90,000,000 for the fiscal year ending June 30, 1974.

Ante, p. 1245.

TITLE III—IMPORTATION AND EXPORTATION; AMENDMENTS AND REPEALS OF REVENUE LAWS

SHORT TITLE

Citation of title.

SEC. 1000. This title may be cited as the "Controlled Substances Import and Export Act".

PART A—IMPORTATION AND EXPORTATION

DEFINITIONS

SEC. 1001. (a) For purposes of this part—

(1) The term "import" means, with respect to any article, any bringing in or introduction of such article into any area (whether or not such bringing in or introduction constitutes an importation within the meaning of the tariff laws of the United States).

(2) The term "customs territory of the United States" has the meaning assigned to such term by general headnote 2 to the Tariff Schedules of the United States (19 U.S.C. 1202).

77A Stat. 11.

(b) Each term defined in section 102 of title II shall have the same meaning for purposes of this title as such term has for purposes of title II.

Ante, p. 1242.

IMPORTATION OF CONTROLLED SUBSTANCES

Unlawful acts.

SEC. 1002. (a) It shall be unlawful to import into the customs territory of the United States from any place outside thereof (but within the United States), or to import into the United States from any place outside thereof, any controlled substance in schedule I or II of title II, or any narcotic drug in schedule III, IV, or V of title II, except that—

Exceptions.

(1) such amounts of crude opium and coca leaves as the Attorney General finds to be necessary to provide for medical, scientific, or other legitimate purposes, and

(2) such amounts of any controlled substance in schedule I or II or any narcotic drug in schedule III, IV, or V that the Attorney General finds to be necessary to provide for the medical, scientific, or other legitimate needs of the United States—

(A) during an emergency in which domestic supplies of such substance or drug are found by the Attorney General to be inadequate, or

(B) in any case in which the Attorney General finds that competition among domestic manufacturers of the controlled substance is inadequate and will not be rendered adequate by the registration of additional manufacturers under section 303,

Ante, p. 1253.

may be so imported under such regulations as the Attorney General shall prescribe. No crude opium may be so imported for the purpose of manufacturing heroin or smoking opium.

(b) It shall be unlawful to import into the customs territory of the United States from any place outside thereof (but within the United States), or to import into the United States from any place outside thereof, any nonnarcotic controlled substance in schedule III, IV, or V, unless such nonnarcotic controlled substance—

(1) is imported for medical, scientific, or other legitimate uses, and

(2) is imported pursuant to such notification or declaration requirements as the Attorney General may by regulation prescribe.

(c) In addition to the amount of coca leaves authorized to be imported into the United States under subsection (a), the Attorney General may permit the importation of additional amounts of coca leaves. All cocaine and ecgonine (and all salts, derivatives, and preparations from which cocaine or ecgonine may be synthesized or made) contained in such additional amounts of coca leaves imported under this subsection shall be destroyed under the supervision of an authorized representative of the Attorney General.

EXPORTATION OF CONTROLLED SUBSTANCES

SEC. 1003. (a) It shall be unlawful to export from the United States any narcotic drug in schedule I, II, III, or IV unless— Unlawful acts.

(1) it is exported to a country which is a party to—

(A) the International Opium Convention of 1912 for the Suppression of the Abuses of Opium, Morphine, Cocaine, and Derivative Drugs, or to the International Opium Convention signed at Geneva on February 19, 1925; or 38 Stat. 1912. 61 Stat. 2230.

(B) the Convention for Limiting the Manufacture and Regulating the Distribution of Narcotic Drugs concluded at Geneva, July 13, 1931, as amended by the protocol signed at Lake Success on December 11, 1946, and the protocol bringing under international control drugs outside the scope of the convention of July 13, 1931, for limiting the manufacture and regulating the distribution of narcotic drugs (as amended by the protocol signed at Lake Success on December 11, 1946), signed at Paris, November 19, 1948; or 48 Stat. 1543. 62 Stat. 1796. 2 UST 1629.

(C) the Single Convention on Narcotic Drugs, 1961, signed at New York, March 30, 1961; 18 UST 1407.

(2) such country has instituted and maintains, in conformity with the conventions to which it is a party, a system for the control of imports of narcotic drugs which the Attorney General deems adequate;

(3) the narcotic drug is consigned to a holder of such permits or licenses as may be required under the laws of the country of import, and a permit or license to import such drug has been issued by the country of import;

(4) substantial evidence is furnished to the Attorney General by the exporter that (A) the narcotic drug is to be applied exclusively to medical or scientific uses within the country of import, and (B) there is an actual need for the narcotic drug for medical or scientific uses within such country; and

(5) a permit to export the narcotic drug in each instance has been issued by the Attorney General.

(b) Notwithstanding subsection (a), the Attorney General may authorize any narcotic drug (including crude opium and coca leaves) in schedule I, II, III, or IV to be exported from the United States to a country which is a party to any of the international instruments mentioned in subsection (a) if the particular drug is to be applied to a special scientific purpose in the country of destination and the authorities of such country will permit the importation of the particular drug for such purpose. Ante, p. 1248.

(c) It shall be unlawful to export from the United States any nonnarcotic controlled substance in schedule I or II unless—

(1) it is exported to a country which has instituted and maintains a system which the Attorney General deems adequate for the control of imports of such substances;

(2) the controlled substance is consigned to a holder of such permits or licenses as may be required under the laws of the country of import;

(3) substantial evidence is furnished to the Attorney General that (A) the controlled substance is to be applied exclusively to medical, scientific, or other legitimate uses within the country to which exported, (B) it will not be exported from such country, and (C) there is an actual need for the controlled substance for medical, scientific, or other legitimate uses within the country; and

(4) a permit to export the controlled substance in each instance has been issued by the Attorney General.

(d) Notwithstanding subsection (c), the Attorney General may authorize any nonnarcotic controlled substance in schedule I or II to be exported from the United States if the particular substance is to be applied to a special scientific purpose in the country of destination and the authorities of such country will permit the importation of the particular drug for such purpose.

Ante, p. 1248.

(e) It shall be unlawful to export from the United States to any other country any nonnarcotic controlled substance in schedule III or IV or any controlled substance in schedule V unless—

(1) there is furnished (before export) to the Attorney General documentary proof that importation is not contrary to the laws or regulations of the country of destination;

(2) a special controlled substance invoice, in triplicate, accompanies the shipment setting forth such information as the Attorney General may prescribe to identify the parties to the shipment and the means of shipping, and

(3) two additional copies of the invoice are forwarded to the Attorney General before the controlled substance is exported from the United States.

TRANSSHIPMENT AND IN-TRANSIT SHIPMENT OF CONTROLLED SUBSTANCES

SEC. 1004. Notwithstanding sections 1002, 1003, and 1007—

(1) A controlled substance in schedule I may—

(A) be imported into the United States for transshipment to another country, or

(B) be transferred or transshipped from one vessel, vehicle, or aircraft to another vessel, vehicle, or aircraft within the United States for immediate exportation,

if and only if it is so imported, transferred, or transshipped (i) for scientific, medical, or other legitimate purposes in the country of destination, and (ii) with the prior written approval of the Attorney General (which shall be granted or denied within 21 days of the request).

(2) A controlled substance in schedule II, III, or IV may be so imported, transferred, or transshipped if and only if advance notice is given to the Attorney General in accordance with regulations of the Attorney General.

POSSESSION ON BOARD VESSELS, ETC., ARRIVING IN OR DEPARTING FROM UNITED STATES

SEC. 1005. It shall be unlawful for any person to bring or possess on board any vessel or aircraft, or on board any vehicle of a carrier,

arriving in or departing from the United States or the customs territory of the United States, a controlled substance in schedule I or II or a narcotic drug in schedule III or IV, unless such substance or drug is a part of the cargo entered in the manifest or part of the official supplies of the vessel, aircraft, or vehicle. Ante, p. 1248.

EXEMPTION AUTHORITY

SEC. 1006. (a) The Attorney General may by regulation exempt from sections 1002 (a) and (b), 1003, 1004, and 1005 any individual who has a controlled substance (except a substance in schedule I) in his possession for his personal medical use, or for administration to an animal accompanying him, if he lawfully obtained such substance and he makes such declaration (or gives such other notification) as the Attorney General may by regulation require.

(b) The Attorney General may by regulation except any compound, mixture, or preparation containing any depressant or stimulant substance listed in paragraph (a) or (b) of schedule III or in schedule IV or V from the applicaton of all or any part of this title if (1) the compound, mixture, or preparation contains one or more active medicinal ingredients not having a depressant or stimulant effect on the central nervous system, and (2) such ingredients are included therein in such combinations, quantity, proportion, or concentration as to vitiate the potential for abuse of the substances which do have a depressant or stimulant effect on the central nervous system.

PERSONS REQUIRED TO REGISTER

SEC. 1007. (a) No person may—

(1) import into the customs territory of the United States from any place outside thereof (but within the United States), or import into the United States from any place outside thereof, any controlled substance, or

(2) export from the United States any controlled substance in schedule I, II, III, or IV,

unless there is in effect with respect to such person a registration issued by the Attorney General under section 1008, or unless such person is exempt from registration under subsection (b).

(b) (1) The following persons shall not be required to register under the provisions of this section and may lawfully possess a controlled substance:

(A) An agent or an employee of any importer or exporter registered under section 1008 if such agent or employee is acting in the usual course of his business or employment.

(B) A common or contract carrier or warehouseman, or an employee thereof, whose possession of any controlled substance is in the usual course of his business or employment.

(C) An ultimate user who possesses such substance for a purpose specified in section 102(25) and in conformity with an exemption granted under section 1006(a). Ante, p. 1245.

(2) The Attorney General may, by regulation, waive the requirement for registration of certain importers and exporters if he finds it consistent with the public health and safety; and may authorize any such importer or exporter to possess controlled substances for purposes of importation and exportation.

REGISTRATION REQUIREMENTS

SEC. 1008. (a) The Attorney General shall register an applicant to import or export a controlled substance in schedule I or II if he determines that such registration is consistent with the public interest and with United States obligations under international treaties, conventions, or protocols in effect on the effective date of this section. In determining the public interest, the factors enumerated in paragraph (1) through (6) of section 303(a) shall be considered.

Ante, p. 1253.

(b) Registration granted under subsection (a) of this section shall not entitle a registrant to import or export controlled substances in schedule I or II other than those specified in the registration.

(c) The Attorney General shall register an applicant to import a controlled substance in schedule III, IV, or V or to export a controlled substance in schedule III or IV, unless he determines that the issuance of such registration is inconsistent with the public interest. In determining the public interest, the factors enumerated in paragraphs (1) through (6) of section 303(d) shall be considered.

(d) No registration shall be issued under this part for a period in excess of one year. Unless the regulations of the Attorney General otherwise provide, section 302(f), 304, 305, and 307 shall apply to persons registered under this section to the same extent such sections apply to persons registered under section 303.

Ante, pp. 1253-1258.

Rules and regulations.

(e) The Attorney General is authorized to promulgate rules and regulations and to charge reasonable fees relating to the registration of importers and exporters of controlled substances under this section.

(f) Persons registered by the Attorney General under this section to import or export controlled substances may import or export (and, for the purpose of so importing or exporting, may possess) such substances to the extent authorized by their registration and in conformity with the other provisions of this title and title II.

(g) A separate registration shall be required at each principal place of business where the applicant imports or exports controlled substances.

(h) Except in emergency situations as described in section 1002(a)(2)(A), prior to issuing a registration under this section to a bulk manufacturer of a controlled substance in schedule I or II, and prior to issuing a regulation under section 1002(a) authorizing the importation of such a substance, the Attorney General shall give manufacturers holding registrations for the bulk manufacture of the substance an opportunity for a hearing.

MANUFACTURE OR DISTRIBUTION FOR PURPOSES OF UNLAWFUL IMPORTATION

SEC. 1009. It shall be unlawful for any person to manufacture or distribute a controlled substance in schedule I or II—

(1) intending that such substance be unlawfully imported into the United States; or

(2) knowing that such substance will be unlawfully imported into the United States.

This section is intended to reach acts of manufacture or distribution committed outside the territorial jurisdiction of the United States. Any person who violates this section shall be tried in the United States district court at the point of entry where such person enters the United States, or in the United States District Court for the District of Columbia.

PROHIBITED ACTS A—PENALTIES

SEC. 1010. (a) Any person who—

(1) contrary to section 1002, 1003, or 1007, knowingly or intionally imports or exports a controlled substance,

(2) contrary to section 1005, knowingly or intentionally brings or possesses on board a vessel, aircraft, or vehicle a controlled substance, or

(3) contrary to section 1009, manufactures or distributes a controlled substance,

shall be punished as provided in subsection (b).

(b) (1) In the case of a violation under subsection (a) with respect to a narcotic drug in schedule I or II, the person committing such violation shall be imprisoned not more than fifteen years, or fined not more than $25,000, or both. If a sentence under this paragraph provides for imprisonment, the sentence shall include a special parole term of not less than three years in addition to such term of imprisonment. Ante, p. 1248.

(2) In the case of a violation under subsection (a) with respect to a controlled substance other than a narcotic drug in schedule I or II, the person committing such violation shall be imprisoned not more than five years, or be fined not more than $15,000, or both. If a sentence under this paragraph provides for imprisonment, the sentence shall, in in addition to such term of imprisonment, include (A) a special parole term of not less than two years if such controlled substance is in schedule I, II, III, or (B) a special parole term of not less than one year if such controlled substance is in schedule IV.

(c) A special parole term imposed under this section or section 1012 may be revoked if its terms and conditions are violated. In such circumstances the original term of imprisonment shall be increased by the period of the special parole term and the resulting new term of imprisonment shall not be diminished by the time which was spent on special parole. A person whose special parole term has been revoked may be required to serve all or part of the remainder of the new term of imprisonment. The special term provided for in this section and in section 1012 is in addition to, and not in lieu of, any other parole provided for by law.

PROHIBITED ACTS B—PENALTIES

SEC. 1011. Any person who violates section 1004 shall be subject to the following penalties:

(1) Except as provided in paragraph (2), any such person shall, with respect to any such violation, be subject to a civil penalty of not more than $25,000. Sections 402 (c) (1) and (c) (3) shall apply to any civil penalty assessed under this paragraph. Ante, p. 1262.

(2) If such a violation is prosecuted by an information or indictment which alleges that the violation was committed knowingly or intentionally and the trier of fact specifically finds that the violation was so committed, such person shall be sentenced to imprisonment for not more than one year or a fine of not more than $25,000 or both.

SECOND OR SUBSEQUENT OFFENSES

SEC. 1012. (a) Any person convicted of any offense under this part is, if the offense is a second or subsequent offense, punishable by a term of imprisonment twice that otherwise authorized, by twice the fine otherwise authorized, or by both. If the conviction is for an offense

punishable under section 1010(b), and if it is the offender's second or subsequent offense, the court shall impose, in addition to any term of imprisonment and fine, twice the special parole term otherwise authorized.

(b) For purposes of this section, a person shall be considered convicted of a second or subsequent offense if, prior to the commission of such offense, one or more prior convictions of him for a felony under any provision of this title or title II or other law of the United States relating to narcotic drugs, marihuana, or depressant or stimulant drugs, have become final.

Ante, p. 1242.

Ante, p. 1269.

(c) Section 411 shall apply with respect to any proceeding to sentence a person under this section.

ATTEMPT AND CONSPIRACY

SEC. 1013. Any person who attempts or conspires to commit any offense defined in this title is punishable by imprisonment or fine or both which may not exceed the maximum punishment prescribed for the offense, the commission of which was the object of the attempt or conspiracy.

ADDITIONAL PENALTIES

SEC. 1014. Any penalty imposed for violation of this title shall be in addition to, and not in lieu of, any civil or administrative penalty or sanction authorized by law.

APPLICABILITY OF PART E OF TITLE II

Ante, p. 1270.

SEC. 1015. Part E of title II shall apply with respect to functions of the Attorney General (and of officers and employees of the Bureau of Narcotics and Dangerous Drugs) under this title, to administrative and judicial proceedings under this title, and to violations of this title, to the same extent that such part applies to functions of the Attorney General (and such officers and employees) under title II, to such proceedings under title II, and to violations of title II. For purposes of the application of this section to section 510, any reference in such section 510 to "this title" shall be deemed to be a reference to title III, any reference to section 303 shall be deemed to be a reference to section 1008, and any reference to section 302(d) shall be deemed to be a reference to section 1007(b)(2).

Ante, p. 1274.
Ante, p. 1285.
Ante, p. 1253.

AUTHORITY OF SECRETARY OF TREASURY

SEC. 1016. Nothing in this Act shall derogate from the authority of the Secretary of the Treasury under the customs and related laws.

PART B—AMENDMENTS AND REPEALS, TRANSITIONAL AND EFFECTIVE DATE PROVISIONS

REPEALS

SEC. 1101. (a) The following provisions of law are repealed:

(1) The Act of February 23, 1887 (21 U.S.C. 191–193).

24 Stat. 409.

(2) The Narcotic Drugs Import and Export Act (21 U.S.C. 171, 173, 174–184, 185).

38 Stat. 275.

(3) The Act of March 28, 1928 (31 U.S.C. 529a).

53 Stat. 1262.

(4) Sections 2(b), 6, 7, and 8 of the Act of June 14, 1930 (21 U.S.C. 162(b), 173a, 197, 198).

46 Stat. 585; 70 Stat. 575.

(5) The Act of July 3, 1930 (21 U.S.C. 199). 46 Stat. 850.
(6) Section 6 of the Act of March 28, 1928 (31 U.S.C. 529g). 53 Stat. 1263.
(7) The Opium Poppy Control Act of 1942 (21 U.S.C. 188–188n). 56 Stat. 1045.
(8) Section 15 of the Act of August 1, 1956 (48 U.S.C. 1421m). 70 Stat. 910.
(9) The Act of July 11, 1941 (21 U.S.C. 184a). 55 Stat. 584.
(10) The Narcotics Manufacturing Act of 1960 (21 U.S.C. 501–517). 74 Stat. 55.

(b) (1) (A) Chapter 68 of title 18 of the United States Code (relating to narcotics) is repealed. 70 Stat. 572. 18 USC 1401-1405.

(B) The item relating to such chapter 68 in the analysis of part I of such title 18 is repealed.

(2) (A) Section 3616 of title 18 of the United States Code (relating to use of confiscated motor vehicles) is repealed. 62 Stat. 840.

(B) The item relating to such section 3616 in the analysis of chapter 229 of such title 18 is repealed. 68A Stat. 549.

(3) (A) Subchapter A of chapter 39 of the Internal Revenue Code of 1954 (relating to narcotic drugs and marihuana) is repealed. 26 USC 4701-4776.

(B) The table of subchapters of such chapter 39 is amended by striking out

"SUBCHAPTER A. Narcotic drugs and marihuana."

(4) (A) Sections 7237 (relating to violation of laws relating to narcotic drugs and to marihuana) and 7238 (relating to violation of laws relating to opium for smoking) of the Internal Revenue Code of 1954 are repealed. 70 Stat. 568;

(B) The table of sections of part II of subchapter A of chapter 75 of the Internal Revenue Code of 1954 is amended by striking out the items relating to such sections 7237 and 7238. 80 Stat. 1449. 26 USC 7237, 7238.

(5) (A) Section 7491 of the Internal Revenue Code of 1954 (relating to burden of proof of exemptions in case of marihuana offenses) is repealed. 26 USC 7491.

(B) The table of sections for subchapter E of chapter 76 of the Internal Revenue Code of 1954 is amended by striking out the item relating to such section 7491.

CONFORMING AMENDMENTS

SEC. 1102. (a) Section 4901(a) of the Internal Revenue Code of 1954 is amended by striking out the comma immediately before "4461" and inserting in lieu thereof "or", and by striking out ", 4721 (narcotic drugs), or 4751 (marihuana)". 79 Stat. 149.

(b) Section 4905(b)(1) of the Internal Revenue Code of 1954 (relating to registration) is amended by striking out ", narcotics, marihuana," and ", 4722, 4753,".

(c) Section 6808 of the Internal Revenue Code of 1954 (relating to special provisions relating to stamps) is amended by striking out paragraph (8).

(d) Section 7012 of the Internal Revenue Code of 1954 (relating to cross references) is amended by striking out subsections (a) and (b).

(e) Section 7103(d)(3) of the Internal Revenue Code of 1954 (relating to bonds required with respect to certain products) is amended by striking out subparagraph (D).

(f) Section 7326 of the Internal Revenue Code of 1954 (relating to disposal of forfeited or abandoned property in special cases) is amended by striking out subsection (b). 72 Stat. 1429.

(g) (1) Section 7607 of the Internal Revenue Code of 1954 (relating to additional authority for Bureau of Narcotics and Bureau of Customs) is amended— 70 Stat. 570.

(A) by striking out "The Commissioner, Deputy Commissioner, Assistant to the Commissioner, and agents of the Bureau of Narcotics of the Department of the Treasury, and officers" and inserting in lieu thereof "Officers";

(B) by striking out in paragraph (2) "narcotic drugs (as defined in section 4731) or marihuana (as defined in section 4761)" and inserting in lieu thereof "narcotic drugs (as defined in section 102(16) of the Controlled Substances Act) or marihuana (as defined in section 102(15) of the Controlled Substances Act)"; and

(C) by striking out "BUREAU OF NARCOTICS AND" in the section heading.

(2) The item relating to section 7607 in the table of contents of subchapter A of chapter 78 of the Internal Revenue Code of 1954 is amended by striking out "Bureau of Narcotics and".

70 Stat. 570.

(h) Section 7609(a) of the Internal Revenue Code of 1954 (relating to cross references) is amended by striking out paragraphs (3) and (4).

72 Stat. 1430.

(i) Section 7641 of the Internal Revenue Code of 1954 (relating to supervision of operations of certain manufacturers) is amended by striking out "opium suitable for smoking purposes,".

68A Stat. 905.
26 USC 7641.

(j) Section 7651 of the Internal Revenue Code of 1954 (relating to administration and collection of taxes in possessions) is amended by striking out "and in sections 4705(b), 4735, and 4762 (relating to taxes on narcotic drugs and marihuana)".

(k) Section 7655(a) of the Internal Revenue Code of 1954 (relating to cross references) is amended by striking out paragraphs (3) and (4).

(l) Section 2901(a) of title 28 of the United States Code is amended by striking out "as defined by section 4731 of the Internal Revenue Code of 1954, as amended," and inserting in lieu thereof "as defined by section 102(16) of the Controlled Substances Act".

80 Stat. 1438.

(m) The last sentence of the second paragraph of section 584 of the Act of June 17, 1930 (19 U.S.C. 1584), is amended to read as follows: "As used in this paragraph, the terms 'opiate' and 'marihuana' shall have the same meaning given those terms by sections 102(17) and 102(15), respectively, of the Controlled Substances Act."

58 Stat. 722;
60 Stat. 39.

(n) (1) The first section of the Act of August 7, 1939 (31 U.S.C. 529a), is repealed.

Repeal.
53 Stat. 1262.

(2) Section 3 of such Act (31 U.S.C. 529d) is amended by striking out "or the Commissioner of Narcotics, as the case may be,".

(3) Section 4 of such Act (31 U.S.C. 529e) is amended by striking out "or narcotics" each place it appears.

(4) Section 5 of such Act (31 U.S.C. 529f) is amended by striking out "or narcotics" in the first sentence.

(o) Section 308(c)(2) of the Act of August 27, 1935 (40 U.S.C. 304m) is amended by striking out "Narcotic Drug Import and Export Act" and inserting in lieu thereof "Controlled Substances Act".

49 Stat. 880.

(p) Paragraph (a) of section 301 of the Narcotic Addict Rehabilitation Act of 1966 (42 U.S.C. 3411) is amended by striking out "as defined in section 4731 of the Internal Revenue Code of 1954, as amended," and inserting in lieu thereof "as defined in section 102(16) of the Controlled Substances Act".

80 Stat. 1444.

(q) Paragraph (a) of the first section of the Act of July 15, 1954 (46 U.S.C. 239a) is amended to read as follows:

68 Stat. 484.

"(a) The term 'narcotic drug' shall have the meaning given that term by section 102(16) of the Controlled Substances Act and shall also include marihuana as defined by section 102(15) of such Act."

(r) Paragraph (d) of section 7 of the Act of August 9, 1939 (49 U.S.C. 787) is amended to read as follows: 53 Stat. 1292.

"(d) The term 'narcotic drug' shall have the meaning given that term by section 102(16) of the Controlled Substances Act and shall also include marihuana as defined by section 102(15) of such Act;" "Narcotic drug."

(s) Paragraph (a) of section 4251 of title 18, United States Code, is amended by striking out "as defined in section 4731 of the Internal Revenue Code of 1954, as amended," and inserting in lieu thereof "as defined in section 102(16) of the Controlled Substances Act". 80 Stat. 1442.

(t) The first section of the Act of August 11, 1955 (21 U.S.C. 198a), is amended to read as follows: "That for the purpose of any investigation which, in the opinion of the Secretary of the Treasury, is necessary and proper to the enforcement of section 545 of title 18 of the United States Code (relating to smuggling goods into the United States) with respect to any controlled substance (as defined in section 102 of the Controlled Substances Act), the Secretary of the Treasury may administer oaths and affirmations, subpena witnesses, compel their attendance, take evidence, and require the production of records (including books, papers, documents, and tangible things which constitute or contain evidence) relevant or material to the investigation. The attendance of witnesses and the production of records may be required from any place within the customs territory of the United States, except that a witness shall not be required to appear at any hearing distant more than 100 miles from the place where he was served with subpena. Witnesses summoned by the Secretary shall be paid the same fees and mileage that are paid witnesses in the courts of the United States. Oaths and affirmations may be made at any place subject to the jurisdiction of the United States." Investigations, subpoena power. 69 Stat. 684. 62 Stat. 716. Witnesses, travel expenses.

PENDING PROCEEDINGS

SEC. 1103. (a) Prosecutions for any violation of law occurring prior to the effective date of section 1101 shall not be affected by the repeals or amendments made by such section or section 1102, or abated by reason thereof.

(b) Civil seizures or forfeitures and injunctive proceedings commenced prior to the effective date of section 1101 shall not be affected by the repeals or amendments made by such section or section 1102, or abated by reason thereof.

PROVISIONAL REGISTRATION

SEC. 1104. (a) (1) Any person—

(A) who is engaged in importing or exporting any controlled substance on the day before the effective date of section 1007,

(B) who notifies the Attorney General that he is so engaged, and

(C) who is registered on such day under section 510 of the Federal Food, Drug, and Cosmetic Act or under section 4722 of the Internal Revenue Code of 1954, 76 Stat. 794; 79 Stat. 231. 21 USC 360. 68A Stat. 555. 26 USC 4722.

shall, with respect to each establishment for which such registration is in effect under any such section, be deemed to have a provisional registration under section 1008 for the import or export (as the case may be) of controlled substances.

(2) During the period his provisional registration is in effect under this section, the registration number assigned such person under such section 510 or under such section 4722 (as the case may be) shall be his registration number for purposes of part A of this title. Ante, p. 1285.

Ante, p. 1255.

(b) The provisions of section 304, relating to suspension and revocation of registration, shall apply to a provisional registration under this section.

(c) Unless sooner suspended or revoked under subsection (b), a provisional registration of a person under subsection (a)(1) of this section shall be in effect until—

(1) the date on which such person has registered with the Attorney General under section 1008 or has had his registration denied under such section, or

(2) such date as may be prescribed by the Attorney General for registration of importers or exporters, as the case may be,

whichever occurs first.

EFFECTIVE DATES AND OTHER TRANSITIONAL PROVISIONS

SEC. 1105. (a) Except as otherwise provided in this section, this title shall become effective on the first day of the seventh calendar month that begins after the day immediately preceding the date of enactment.

(b) Sections 1000, 1001, 1006, 1015, 1016, 1103, 1104, and this section shall become effective upon enactment.

Ante, pp. 1234, 1257.

(c)(1) If the Attorney General, pursuant to the authority of section 704(c) of title II, postpones the effective date of section 306 (relating to manufacturing quotas) for any period beyond the date specified in section 704(a) and such postponement applies to narcotic drugs, the repeal of the Narcotics Manufacturing Act of 1960 by paragraph (10) of section 1101(a) of this title is hereby postponed for the same period, except that the postponement made by this paragraph shall not apply to the repeal of sections 4, 5, 13, 15, and 16 of that Act.

(2) Effective for any period of postponement, by paragraph (1) of this subsection, of the repeal of provisions of the Narcotics Manufacturing Act of 1960, that Act shall be applied subject to the following modifications:

"Narcotic drug." Ante, p. 1244.

(A) The term "narcotic drug" shall mean a narcotic drug as defined in section 102(16) of title II, and all references, in the Narcotics Manufacturing Act of 1960, to a narcotic drug as defined by section 4731 of the Internal Revenue Code of 1954 are amended to refer to a narcotic drug as defined by such section 102(16).

(B) On and after the date prescribed by the Attorney General pursuant to clause (2) of section 703(c) of title II, the requirements of a manufacturer's license with respect to a basic class of narcotic drug under the Narcotics Manufacturing Act of 1960, and of a registration under section 4722 of the Internal Revenue Code of 1954 as a prerequisite to issuance of such a license, shall be superseded by a requirement of actual registration (as distinguished from provisional registration) as a manufacturer of that class of drug under section 303(a) of title II.

Ante, p. 1253.

(C) On and after the effective date of the repeal of such section 4722 by section 1101(b)(3) of this title, but prior to the date specified in subparagraph (B) of this paragraph, the requirement of registration under such section 4722 as a prerequisite of a manufacturer's license under the Narcotics Manufacturing Act of 1960 shall be superseded by a requirement of either (i) actual registration as a manufacturer under section 303 of title II or (ii) provisional registration (by virtue of a preexisting registration under such section 4722) under section 703 of title II.

(d) Any orders, rules, and regulations which have been promulgated under any law affected by this title and which are in effect on the day preceding enactment of this title shall continue in effect until modified, superseded, or repealed.

TITLE IV—REPORT ON ADVISORY COUNCILS

REPORT ON ADVISORY COUNCILS

Reports to Congress.

SEC. 1200. (a) Not later than March 31 of each calendar year after 1970, the Secretary of the Department of Health, Education, and Welfare shall submit a report on the activities of advisory councils (established or organized pursuant to any applicable statute of the Public Health Service Act, Public Law 410, Seventy-eighth Congress, as amended, or the Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963, Public Law 88-164, as amended) to the Committee on Labor and Public Welfare of the Senate and the Committee on Interstate and Foreign Commerce of the House of Representatives. Such report shall contain, at least, a list of all such advisory councils, the names and occupations of their members, a description of the function of each advisory council, and a statement of the dates of the meetings of each advisory council.

77 Stat. 282. 42 USC 2661 note.

(b) If the Secretary determines that a statutory advisory council is not needed or that the functions of two or more statutory advisory councils should be combined, he shall include in the report a recommendation that such advisory council be abolished or that such functions be combined.

"Statutory advisory council."

(c) As used in this section, the term "statutory advisory council" means any committee, board, commission, council, or other similar group established or organized pursuant to any applicable statute to advise and make recommendations with respect to the administration or improvement of an applicable program or other related matter.

Approved October 27, 1970.

LEGISLATIVE HISTORY:

HOUSE REPORTS: No. 91-1444 (pts. 1 and 2) (Comm. on Interstate and Foreign Commerce) and No. 91-1603 (Comm. of Conference).
SENATE REPORT No. 91-613 accompanying S. 3246 (Comm. on the Judiciary).
CONGRESSIONAL RECORD, Vol. 116 (1970):
Jan. 23, 24, 26-28, S. 3246 considered and passed Senate.
Sept. 23, 24, considered and passed House.
Oct. 6, 7, considered and passed Senate, amended.
Oct. 8, 14, House agreed to conference report.
Oct. 14, Senate agreed to conference report.

PROPOSED CHANGES IN MARIHUANA CONTROLS,[1] 94TH CONG.—COMPARATIVE ANALYSIS

Subject	Existing law	S. 746/93d Cong., Hughes/Javits	S. 1450/94th Cong., Javits/Cranston et al.
Possession for private use.	1st offense is a misdemeanor, punishable by up to 1 yr in prison and/or up to $5,000. (However, see provision on discharge and record expungement, below.) 2d offense is a felony, punishable by up to 2 yr and/or up to $10,000. [21 U.S.C. 844(a)].	Makes such possession legal, whether for use by the possessor or by others if no profit is involved in the transfer. No limits are set on the amount that can be possessed privately (see below), but public possession is legal only in an amount not exceeding 3 oz.	Makes such possession subject only to a civil fine of up to $100, if the amount possessed does not exceed 1 oz. Makes no distinction between 1st and subsequent offenses.
Definition of "private"	No distinction is made between private and public possession, nor between possession for private use as opposed to possession for use in public.	"Private" means: "within a private dwelling or other residence for [one's] own use or for the use of others, within any such residence or dwelling," if it is not intended to distribute the marihuana for profit.	Same as S. 746.
Nonprofit distribution	Treats distribution of "a small amount" for no remuneration the same as a simple possession offense (see above). [21 U.S.C. 841(b)(4)]	Makes it legal to distribute "lawfully possessed" marihuana (i.e., possessed for private personal use or for the private personal use of others if no profit is involved in the transfer—and, where the possession is in a public area, in an amount not exceeding 3 oz.) when such distribution is not made for profit. Does not define "profit".	Makes nonprofit distribution of "lawfully possessed" marihuana subject only to a civil fine of up to $100. However, since no possession would be lawful under the bill, the language would appear to frustrate the obvious intent of the provision. Apparently, there would be no limit on the amount that could be distributed under the specified circumstances without incurring greater liability than the civil fine.
Special 1st offender treatment.	Provides that a court may, upon finding any person guilty of simple possession of any controlled dangerous substance—who has not previously been convicted of violating a Federal law relating to the substances covered under the Controlled Substances Act—defer further proceedings and place the person on probation for up to 1 yr. Upon fulfillment of the terms of probation, the court is required to dismiss the proceedings. The discharge may not be deemed a conviction for the purposes of the disabilities imposed by law upon persons convicted of crimes. However, the discharge and dismissal is available only once, unless the person were under 21 at the time of the offense. The under-21 offender who is discharged is entitled to an order expunging all records of his arrest and trial except for a nonpublic record retained by the Justice Department. [21 U.S.C. 844(b)].	No comparable provision	No comparable provision, but contains this language: "Nothing in this section shall be construed as requiring the Attorney General to initiate proceedings involving violations of this section whenever he believes that the public interest will be adequately served by a suitable written notice or warning."

PROPOSED CHANGES IN MARIHUANA CONTROLS,[1] 94TH CONG.—COMPARATIVE ANALYSIS—Continued

Subject	Existing law	S. 746/93d Cong., Hughes/Javits	S. 1450/94th Cong., Javits/Cranston et al.
Marihuana intoxication as defense to a charge of violation of a Federal law.	No provision comparable to those of S. 746 or S. 1450.	Provides that in the prosecution of any person charged with a Federal offense, the fact that the person was suffering from marihuana intoxication at the time he committed the offense may not be a defense to the charge.	Same as S. 746, but exempts from the restriction cases where the intoxication was not self-induced.
Definition of "marihuana."	Means "all parts of the plant Cannabis sativa L., whether growing or not; the seeds thereof; the resin extracted from any part of such plant; and every compound, manufacture, salt, derivative, mixture, or preparation of such plant, its seeds or resin . . .". Includes hashish. [21 U.S.C. 802(15)].	Same	Same.

94TH CONGRESS
1ST SESSION

S. 1450

IN THE SENATE OF THE UNITED STATES

APRIL 17, 1975

Mr. JAVITS (for himself, Mr. BROOKE, Mr. CRANSTON, and Mr. NELSON) introduced the following bill; which was read twice and referred to the Committee on the Judiciary

A BILL

To amend certain provisions of the Controlled Substances Act relating to marihuana.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Marihuana Control Act of 1975".

SEC. 2. That the Controlled Substances Act is amended by inserting immediately after section 404 thereof the following new section:

"SEC. 404A. (a) Notwithstanding the provisions of section 308, 401(a)(1), 404, or any other provision of this title or any other Federal law, any person who—

"(1) possesses not more than one ounce of marihuana within a private dwelling or other residence for his own use, or for the use of others, within any such residence or dwelling, if such marihuana is not possessed with the intent to distribute, transfer, or sell such marihuana in violation of this title or any other Federal law; or

"(2) possesses in a public area, not more than one ounce of marihuana if the possession of such marihuana is incident to a private use within the purview of subparagraph (1) of this paragraph, and is not with the intent to distribute, transfer, or sell such marihuana for profit in violation of this title or any other Federal law; or

"(3) distributes or transfers, in public or private, any marihuana lawfully possessed, to any person for a private use within the purview of subparagraph (1) of the first paragraph of this subsection, if such distribution or transfer, is not made for profit—

shall be guilty of an offense, for which such person shall be subject to a civil fine of not more than $100. Such acts shall not constitute crimes against the United States and such person shall not be subject to arrest or suffer any disadvantage or disability except that specified in this section.

"(b) Nothing in this section shall be construed as requiring the Attorney General to initiate proceedings involving violations of this section whenever he believes that the public interest will be adequately served by a suitable written notice or warning.

"(c) In the prosecution of any person charged with an offense in violation of any Federal law, the fact that such person was suffering from marihuana intoxication at the time of the commission of that offense shall not be a defense to that charge or any element thereof, unless such intoxication was not self-induced.".

MARIJUANA DECRIMINALIZATION

WEDNESDAY, MAY 14, 1975

U. S. SENATE,
SUBCOMMITTEE TO INVESTIGATE JUVENILE DELINQUENCY,
COMMITTEE ON THE JUDICIARY,
Washington, D.C.

The subcommittee (composed of Senators Bayh, Hart, Burdick, Kennedy, Mathias, Hruska, and Fong) met, pursuant to notice, at 10:10 a.m., in room 6202, Dirksen Senate Office Building, Senator Birch Bayh (chairman of the subcommittee) presiding.

Present: Senators Bayh and Hart of Michigan.

Also present: John M. Rector, staff director and chief counsel; Mary Kaaren Jolly, editorial director and chief clerk; and Alice Van Landingham, staff assistant.

Senator BAYH. We will convene our hearing this morning.

The subcommittee's enabling resolution, S. Res. 72, section 12, 94th Congress, is hereby noted for the record. I will also include the complete text of Public Law 91–513, the Comprehensive Drug Abuse Prevention and Control Act of 1970, October 27, 1970; a comparative analysis of proposed changes in marihuana controls compiled by the subcommittee; and the text of S. 1450, a bill to amend certain provisions of the Controlled Substances Act relating to marihuana in the hearing record.[1]

I will state my thoughts that compelled me, as the chairman of the subcommittee, to ask the committee to begin to hold hearings on the subject.

I will then yield to my colleague from Michigan, and we will get on to addressing ourselves to the problem of receiving the thoughts of our very distinguished panel of witnesses.

OPENING STATEMENT OF SENATOR BIRCH BAYH, CHAIRMAN

Senator BAYH. We meet today to consider legislation relating to the appropriate legal sanctions for the private possession of small amounts of marihuana.

Throughout the Subcommittee To Investigate Juvenile Delinquency's 4-year investigation of drug traffic and abuse I have noted with concern the growing number of arrests for marihuana possession. Arrests have increased from 188,682 in 1970 to 420,700 in 1973. It may go as high as 500,000 for 1974. This is not nearly as dramatic as the 1,000-percent increase between 1965–70 from 18,815 to 188,682; but it is rather astonishing that this 3-year increase of 232,018 is more than 12 times the total marihuana arrests just 10 years ago.

[1] See p. LXXXIII.

Additionally, the number of marihuana arrests as a percentage of all drug arrests has increased substantially. In 1970 these arrests amounted to 45.4 percent of total drug arrests. During the 1970–73 period 1,127,389 of the total 2,063,900 drug arrests were for marihuana. And in 1973, the most recent year for which records are available, 67 percent of all drug arrests were for marihuana.

Available studies and research to date have found that the majority of those arrested are otherwise law-abiding young people in possession of small amounts of marihuana. In fact, a Presidential commission found that the vast majority of users are essentially indistinguishable from their nonuser peers by any criteria other than its use.

During these last 4 years, I have likewise been especially concerned about the ever-escalating level of serious crime. The recently released FBI report on the trends in crime for 1974 presents a frightening picture of the rising tide of criminal activity in America. Serious crime in the United States rose 17 percent last year, the highest annual increase since the FBI began collecting data 45 years ago. In fact, the increase for the final quarter of 1974 had reached 19 percent. The suburban increase for last year was 20 percent while crime in rural areas increased by 21 percent. In smaller communities—under 10,000—crime increased by 24 percent last year while robbery alone went up 30 percent.

ALLOCATING CRIME FIGHTING RESOURCES

The rising tide of serious crimes inevitably raises the question of whether we are properly allocating our crime fighting resources and aggressively pursuing the arrest and criminal prosecution of the 13 million American users of marihuana. It is estimated that the prosecution of these cases costs $600 million annually.

In 1969 and 1970 the subcommittee considered the adequacy of penalties for marihuana with the result that the new Controlled Substances Act provided that simple possession or distribution of a small amount of marihuana for no remuneration were both designated misdemeanors, not felonies, punishable by up to 1 year in jail and/or up to a $5,000 fine. It was the view of many members that the sanctions should be further reduced. Some suggested that the sanction be eliminated for such conduct.

In order to permit a thorough assessment of these issues the subcommittee recommended the creation of a Presidential commission. The Congress agreed and provided for the establishment of the Commission on Marihuana and Drug Abuse in part F of the Controlled Substances Act.

This body known as the Shafer Commission, after its distinguished chairman, conducted an in-depth study of the issues and concluded that marihuana was not dangerous enough to the user or to the general public for its private possession and use to remain a criminal offense.

In the last several years a growing list of organizations and individuals have endorsed the Shafer Commission recommendations, including the following:

American Bar Association.
Consumer Union, publishers of Consumer Reports.
National Conference of Commissioners on Uniform State Laws.
American Public Health Association.

National Advisory Commission on Criminal Justice Standards and Goals.

National Council of Churches.

The Governing Board of the American Medical Association.

National Education Association.

B'nai B'rith.

Canadian Commission of Inquiry into the Non-Medical use of Drugs [Le Dain Commission].

San Franciso Committee on Crime.

Mayor's Advisory Committee on Narcotics Addiction [Washington, D.C.].

John Finlator, retired Deputy Director, Bureau of Narcotics and Dangerous Drugs, U.S. Department of Justice.

William F. Buckley, Jr., syndicated columnist, author, TV host and editor of National Review.

James J. Kilpatrick, syndicated columnist, Washington Evening Star.

In the Senate, several subcommittees have developed informative records regarding the impact of marihuana abuse. The Subcommittee on Alcoholism and Narcotics, of the Committee on Labor and Public Welfare, has very effectively identified the qualities of marihuana as they impact on the public health and welfare. The Subcommittee on Internal Security, of the Committee on the Judiciary, has assessed the impact of marihuana use on U.S. security and I would agree, as Dr. Robert DuPont, director of the Special Action Office of Drug Abuse Prevention recently said of its work. "I think Senator Eastland is to be commended for his efforts to consolidate many of these new studies and to bring them to the attention of the American people."

S. 1450 POLICY OF MARIHUANA DISCOURAGEMENT

The subject of our hearing S. 1450, the "Marihuana Control Act of 1975" introduced by Senators Javits, Cranston, Brooke, and Nelson, reflects the general recommendation of the Shafer Presidential Commission. It adopts an approach similar to that undertaken by the State of Oregon which abolished criminal penalties for simple possession of marihuana and substituted a civil fine of up to $100 for possession and nonprofit transfers of up to 1 ounce of marihuana. Criminal penalties for sale of the drug for profit would remain intact. Thus, this approach maintains a policy of discouragement toward marihuana use while recognizing the current inappropriate use of law enforcement resources and the destructive impact of criminal records for such common conduct.

This measure and others such as S. 746, introduced by Senators Hughes and Javits in the 93d Congress, are often referred to as decriminalization bills. It is important to note, however, that there are significant difference even between these measures. For example, under the old Hughes-Javits bill private possession of any amount of marihuana, so long as it was not possessed with the intent to sell for profit, would have been lawful. Similarly, the earlier bill removed all sanctions for the public possession of 3 ounces or less if incident to private use and not held with intent to sell for profit, and if lawfully possessed, this amount was not subject, as contraband, to seizure or

forfeiture. The focus of our hearing today—S. 1450—however, while it eliminates criminal sanctions for possession of only 1 ounce for private use, it retains a civil sanction against such possession. We will explore additional differences during the hearing this morning.

Although more can be learned about the Oregon experience, one recent study found that after the first year there was no increase in the number of users and a majority of Oregonians approve the new law. In an interview last week with writer Thomas Love of the Washington Star, Oregon Attorney General, Lee Johnson, said that rather than decrease the respect for law among young people the new approach has probably increased it. He said, "It has given them [young people] a feeling that government is more receptive to changes which have taken place. I think it's probably created more respect for government as a whole."

Similar measures are being considered by more than 20 State legislatures.

REASSESS NATIONAL POLICY RELATED TO SERIOUS CRIME

In view of the failure, nationally, to curb violent and serious crime, I believe it is time to seriously reassess our priorities relative to the limited resources available to the Nation's severely overburdened criminal justice agencies.

Are taxpayers, who are primarily and understandably interested in the protection of properly and safety of person, most effectively served by the investment of $600 million in marihuana possession cases?

Is the public interest served by arresting annually 500,000, mostly young people, for simple possession of small amounts of marihuana and thereby assuring that they are inhibited for life—in their education and careers—by the unrelenting stigma of a criminal record?

Is the public getting the highest return on their tax dollars in the national effort to curb drug traffic and drug-related crime when two-thirds of all drug arrests are for predominately simple marihuana possession?

I am inclined to think not.

As D.C. Superior Court Chief Judge Harold H. Greene emphasized last week, we must concentrate our limited resources on the vigorous pursuit and prosecution of more serious offenders such as murderers, rapists, robbers, burglars, and those committing aggravated assaults.

I, for one, feel that we have had too many efforts on the part of public officials to shy away from controversy by ignoring reality and to try to look at facts and come to what might be a popular conclusion, instead of the accurate conclusion. I am hopeful that these hearings will, by their very existence, show that the Congress of the United States is wiling to pursue the right answer to the question—that is not without significant controversy.

The whole country is deeply alarmed about the fact that we have recently been advised by the Federal Bureau of Investigation that during last year we had a larger increase in crime in this country than at any other previous time in our history.

The Subcommittee to Investigate Juvenile Delinquency has, in many instances, been made painfully aware of the direct correlation

between drug abuse and a certain type of criminal activities. We have been recently advised that there has been another wave of opiate-heroin abuse in the country. We used to have the "French connection" with opium coming in from Turkey. Now, we are advised that a big percentage of heroin comes into the country from Mexico. It has been dramatically increased.

Let there be no question of what this does to society. Yet, when you look at the hard facts, 67 percent of all drug arrests last year were not from opium, barbiturates or amphetamines, but, were from marihuana. A large percentage of these, a half a million Americans, were arrested for the possession of small amounts of marihuana. It is reasonably estimated that we spend almost $600 million each year in the prosecution of offenders whose offense against society is possession or use of small amounts of marihuana.

It seems that we must direct our attention whether we are really serving society well by utilizing that amount of resource toward those who possess small amounts of marihuana. Thus, that money is taken away from the pursuit of criminals who are creating much more serious offense against society.

HYPOCRISY OF LAW ENFORCEMENT POLICIES

In addition, I think we, as public officials, have a responsibility to understand that there is a tremendous amount of hypocrisy in the country today. Large numbers of Americans are deeply concerned about the manner that some of our laws are enforced and some of them are not; the way in which they are not enforced equally against all offenders; and, the way in which our priorities—as far as law enforcement concern—are really not relevant to the critical problems that confront us today.

I want us to pay particular attention, during these hearings to the extent to which some of our laws are not enforced. Some of them are enforced more strenuously against certain segments of our population, than they are against others. In particular, I say to my distinguished colleague from Michigan, I find the ultimate hypocrisy in our society expressed very eloquently in the way which we impose very strenuous sentences on some young people—who for reasons that appear to be good to them, although, frankly, they would not appear to be good to me—that use marihuana. They end up spending long periods of their life in jail. Yet, in the same States that support this type of penalty for the use and individual use of marihuana, you can find someone out on the highway intoxicated, endangering everybody they meet, and their sentence will be, perhaps, to lose their license.

There is, also, a great deal of hypocrisy about the differing ways society reacts to the use of differing kinds of drugs or substances that have a detrimental impact on human beings.

I am hopeful we will pursue the answers to some of these questions. But, frankly, I think the evidence is still out. I hope we can still the hysteria, and that we can pursue the truth wherever it leads us. And if we make some people angry, that is the price we pay and the responsibility we have.

I yield to my distinguished colleague from Michigan.

Senator HART. Thank you, Mr. Chairman.

CONTINUED

1 OF 33

STATEMENT OF SENATOR PHILIP HART

Senator HART. I welcome a chance to be brought up to date on where we are and where we should be on marihuana. Since the record does not contain pictures, I will have to describe myself as from that generation.

I understood that if you used marihuana on Tuesday, that of course you would be on heroin on Friday. I have been updated. It takes at least a full week. There are those who still believe that.

In the last campaign I was running and in 1970 I explained, though from that generation, I had doubts about our wisdom and said that I would like in this term to see the Congress act on the best evidence available. Does it hurt a user? And to what extent? And in what sense is society disadvantaged by possession and distribution of small amounts.

I am satisfied that the answers are in and appear to be correct. I propose to offer an amendment to codification of the criminal code S. 1 to remove any sanction for possession and noncommercial distribution for up to 100 grams. I am told that is about 3½ ounces.

My education, like a lot of people of my generation, included the fact that one of my children is one of the statistics that you have here. He is a minor and spent 20 days in jail for a stub that big [indicating]. That is all the education I needed to convince me that it—marihuana prosecution policy—was a topsy-turvey operation and made no sense.

I hope before I leave here, we will have corrected that.

Senator BAYH. Thank you, Senator Hart.

I would like to say it has been my fortune to serve in the U.S. Senate for over 12 years. Of the inspirations I have had with my colleagues, one whom I would like to be able to emulate fully and completely, is my distinguished friend and colleague from Michigan. I know no one who pursues the truth more doggedly—without regard to where it may lead—to the perspective of his conscience.

I am alarmed at the rumors—which I hope are unfounded—that perhaps the times have weighed heavily enough on my friend from Michigan that he might seek to be removed of this burden. Although, let me say, it would be easy to understand why those burdens would become onerous. However, if you were to leave, it would significantly increase the burden of many of us. We would find it very difficult to follow his example, and pick up the load that he now carries.

This morning we are privileged to hear testimony from a knowledgeable panel of legal experts who are intimately familiar with the issues we intend to discuss. I look forward to an informative and productive session.

Mr. Donald Miller, who is the General Counsel of the Drug Enforcement Administration, here on the behalf of the Attorney General; Mr. Keith Stroup, director of the National Organization for the Reform of Marihuana Laws; Richard Bonnie, assistant professor of law, University of Virginia; Hon. J. Pat Horton, district attorney, Lane County, Eugene, Oreg.; and Richard Wood, assistant district attorney, Denver, Colo.

RELATION TO LAWLESSNESS AND CRIME

Gentlemen, we appreciate your presence. There is so much fiction involved regarding marihuana—what is its potential for harm to human beings and to society; what are the ramifications of current control policies on the total drug picture, and its relationship to lawlessness and crime?

Mr. Horton, in your constituency where a different approach to marihuana is pursued, what has been the impact? And rather than have the traditional, unfortunately rather cold, stereotyped approach of a hearing where we would have a series of witnesses—although each one of you, in your own right, is very well qualified to testify individually—I would like for us to develop a dialog where we can be very frank and open with one another.

I think the panel approach is more desirable than a series of more formalized statements. I understand that all of you may have some thoughts that you would like to share, formally or informally, and I do not mean to put any restrictions on your approach to this subject matter.

I think, perhaps, Mr. Miller, the protocol suggests that you ought to initiate our testimony. So, if we could begin with you, and then proceed to the other witnesses. That is what I would like to do, if it is all right with you other gentlemen.

STATEMENT OF DONALD MILLER, CHIEF COUNSEL, DRUG ENFORCEMENT ADMINISTRATION, U.S. DEPT. OF JUSTICE, ON THE BEHALF OF THE ATTORNEY GENERAL OF THE UNITED STATES

Mr. MILLER. Thank you, Mr. Chairman.

I am appearing here today on behalf of the Department of Justice, specifically the Drug Enforcement Administration. Also, I will qualify or add to my prepared statement [1] which has been transmitted to the subcommittee.

At the outset, I want to state that marihuana in the United States is big business. It is not the same casual transfer and use of small amounts of an innoxious weed that we saw back in the 1930's, when we first decided to take action against marihuana. Today, tons of marihuana are being smuggled into the United States by large well-financed, well-organized criminal organizations.

Total domestic and foreign cooperative removals of marihuana have increased from about 184,000 pounds in 1970 to over 2 million pounds in 1974. Considering that we probably do not remove a high percentage of the marihuana from the total market, the amount getting through is astronomical.

Necessarily, and in accordance with our congressional mandate, the Drug Enforcement Administration has concentrated its investigative resources on the supply of marihuana. DEA has made very few arrests for possession without intent to distribute.

LABORATORY ANALYZES OVER 1,000 1-OUNCE MARIHUANA "CASES"

Parenthetically, Mr. Chairman, I would like to add that our laboratory reports reveal that over 1,000 exhibits of marihuana under 1 ounce were submitted for analysis by DEA agents during the last 12 months. Those simple possession cases made by the Bureau of Customs and the Immigration and Naturalization Service as a result of routine border searches are usually turned over to the States for disposition.

Accordingly, insofar as the Department of Justice is concerned, the criminal sanctions for simple possession in section 404 of the Controlled Substances Act have not been applied as an enforcement measure against marihuana users and minor distributors.

I mean, by that, that our agents do not set out deliberately to make seizures of small amounts of marihuana as an enforcement strategy. It may be worthwhile then to consider what we have sought to do by means of applying criminal sanction against simple possession and distribution of small amounts of marihuana.

Ask the man on the street the purpose of the marihuana penalties and he will probably reply in effect, to prevent social harm. Ask him how the law operates to prevent social harm and he almost certainly will say, by punishing people who commit marihuana offenses, which results in deterring others from committing such offenses. Other people will mention that the law is a symbol; a majority of the society expressing its disapproval of drug use through the criminal law.

[1] See p. 17.

That seems to sum it up. We have concluded since enactment of the Marihuana Tax Act of 1937, that marihuana use should be discouraged by subjecting related activity to criminal punishment. Although substantially reduced from the previous harsh penalties, when the Controlled Substances Act of 1970 was drafted, we again designed a stimulus in the form of penalties in attempt to convince our people to avoid courses of action potentially dangerous.

Has it worked? Are people ever deterred from what they want to do by threat of physical suffering? And, if the threat of punishment does deter marihuana offenders, is it the fear of going to jail rather than the inconvenience and perhaps disgrace of paying a $100 fine that people would fear?

REAL PREVENTION . . . PUBLIC PSYCHOLOGY

Real prevention of the spreading abuse of marihuana is a complicated subject of cause and correction, and of public psychology as well. Not even a short presentation, so far as I am concerned, would be possible in time that I have here today Mr. Chairman.

But, these are important factors that should be studied fully before changes are made—changes that may result in an even less effective social force against marihuana use.

S. 1450 would invoke a new concept into our attempt to control drug abuse. The proposed legislation would amend the Controlled Substances Act of 1970 by eliminating as a crime any offense; (1) of possessing up to 1 ounce of marihuana without intent to distribute it, and, (2) distributing up to 1 ounce of marihuana if not made for profit. Such offenses would be punishable by a civil fine of not more than $100, and violators would not be subject to arrest or any other disadvantage or disability not specified in the new section. Paragraph (b) of the bill would establish additional latitude by authorizing the Attorney General to disregard enforcement of the civil remedy "whenever he believes that the public interest will be adequately served by a suitable written notice or warning."

Senator BAYH. Mr. Miller, excuse me for interrupting, I have to ask if you have any recommendations for perhaps improving this legislation? I would hope that—particularly from the Department of Justice standpoint—we could take a broad approach to this and not just be confined to the one particular bill in question.

Perhaps we will do that. I just want to suggest I think that it is appropriate that you look at the one bill that has been introduced. There have been a number of suggestions and I would like for us to get a general feeling.

Mr. MILLER. In a negative way I can set forth certain recommendations. I have no positive recommendations.

Senator BAYH. You have complete liberty to be either negative or positive, as you care to describe those terms.

Mr. MILLER. The sponsors of the proposed legislation have made an effort to walk the thin line between so-called "legalization" of marihuana and so-called "decriminalization." It is clear to me that the sponsors intend for the legislation to operate as a de facto blockade against enforcement of certain provisions of the Controlled Substances

Act. I say that because of the way the bill is drafted. But also, since such a change in the Federal law would ultimately result in widespread adoption at the State level, the consequences of the proposed legislation could be the elimination of police agencies from enforcing laws against personal possession and distribution of small amounts of marihuana.

Although possession of not more than 1 ounce of marihuana for personal use is still an offense under S. 1450, the ability to enforce the provision is nearly insurmountable. The bill states at the end of subsection (a) that "such person shall not be subject to arrest or suffer any disadvantage of disability except as specified in this new section."

Frankly, I do not know what that means. Does it mean that the offender may not ever be summoned before a U.S. magistrate under Rule 4 of the Rules of Criminal Procedure?

I have no doubt that Rule 41 relating to search warrants would not be applicable, since the essential ground for the issuance of a search warrant is that the property is intended for use as a means of committing a criminal offense. Without the power to search or arrest, the only possibility of a person being charged with simple possession would be pursuant to a lawful search incident to another offense, and I am not even sure that that is really possible.

The difficult feature in paragraph (a) (1) is in determining whether the marihuana is intended for distribution. Considering that paragraph (a) (3) creates a civil fine of up to $100 for distribution of not more than 1 ounce of marihuana before a search warrant could be issued, I believe proof would be required showing that the person possessing the marihuana intended to make a distribution for profit.

Paragraph (a) (2) poses similar difficulties. If the person who possesses the marihuana in public cannot be arrested, how else can the provision be enforced? If a police officer has positive reason to believe that a person is in possession of 1 ounce of hashish, unless the person has the hashish in plain sight what power does the officer have? Without authority to search, I question whether he can do anything.

In the normal street situation, an officer does not always have the facts necessary to make a decision precisely in line with the proposed legislation. He will not be able to readily determine whether the amount possessed is more than 1 ounce; it is not specified in the bill what procedures are to be followed in lieu of arrest; the officer cannot discern whether the person is transient or likely to honor a summons—presuming that we have the authority to issue a summons—and it is not clear what is the recourse when a person does not honor the summons.

The other feature of the bill, namely the provision relating to casual distribution of small amounts of marihuana for no profit, is also objectionable. This feature goes against all reasons for having drug control laws. It is a pronouncement that the Government no longer takes a harsh view regarding proselytizers—those persons who convert naive persons to drug abusers.

This provisions means that if a person desires to introduce marihuana use to juveniles, he may do so and face only a fine of up to $100 so long as the transfer is totally donative or only to reimburse himself for out-of-pocket expenses.

DISCREPANCY IN LANGUAGE OF JAVITS' BILL

I want to add something here, Mr. Chairman, that is not in my prepared text. But it is an important discrepancy. That is between paragraps (a) (1) and (a) (3) of S. 1450, on page 2.[1] Paragraph (1) seems to except from its coverage any marihuana possessed without intent to distribute. It could be concluded that such a person could be charged with a felony under section 401 of the Controlled Substances Act. But, paragraph (a) (3) does something different. If the substantive effect of selling carries a penalty of only a $100 fine, how can the offense of possession for sale carry a higher penalty?

Apparently, what the sponsors of the bill had in mind, was to also add the words "not for profit" to paragraph (1) and also to paragraph (2).

Senator BAYH. Is that question one of your own conviction, or do you view it as a legal——

Mr. MILLER. As a legal difficulty, sir.

Senator BAYH. Do you think we, in the Congress, are prohibited from legislating, "if you sell it we can fine you; if you own it we cannot fine you—or do not choose to"?

Mr. MILLER. The courts would have a field day presuming you would ever get a case to the courts.

Senator BAYH. Well, the courts are having a field day now with several hundred thousand kids and older people who use marihuana; and I think we have to make the best judgment. But looking at this from a constitutional standpoint, if you feel that you are in a position to advise us in that regard we will pursue that question, because that is a legitimate one. It is one that I struggled with in the Schafer Commission report, in trying to balance the differing opinions that exist in the country.

If you think it is wrong to have language saying you cannot sell it, and then treating it differently when in possession, that is one thing. But looking at it from a constitutional question, do you, the Justice Department, or anybody in the administration have a position about the constitutionality of the ability of the Congress to distinguish between possession and sale?

Mr. MILLER. No, sir. I do not make that statement at all.

Senator BAYH. What other question is there except legality, as far as the "courts having a field day" is concerned?

Mr. MILLER. The courts in sentencing people are going to be much concerned about a law that authorizes a felony conviction for possession with intent to sell marihuana, whereas, a person who actually sells under 1 ounce is subject only to a $100 fine. That is the way the bill is presently drafted.

Senator BAYH. There is nothing unique about that.

You could be walking down the street with a coat; you could be driving somebody else's car and have a Rembrandt painting in it; any number of different examples where just ownership is not illegal. Because, in the process, you are not doing anything like selling the object. It is a matter of proof is it not? That is not a new question as far as our courts are concerned.

---

[1] See p. LXXXIV.

Mr. MILLER. That is a new issue, so far as I know, in drug control; that is, where a person can be charged with a higher offense for possessing a substance that he can be charged for selling the same substance.

Senator BAYH. I believe we are trying to see whether we should take a new look at this. This is new as far as drug enforcement is concerned. We are trying to find out just where this course leads; and I appreciate your analysis of it.

PROOF OF INTENT IN CRIMINAL LAWS

The reason I keep interrupting here is that I want us to be absolutely certain that we know what we *are* saying, and what we *are not* saying. The burden of proving intention, as part of a criminal sanction, is not unique as far as criminal laws of this country are concerned.

Mr. MILLER. No, sir, it is not unique. Another troublesome feature, Mr. Chairman, is that the proposed legislation does not authorize the seizure of the marihuana illegally possessed. Although section 511(f) of the Controlled Substances Act considers marihuana as a contraband which may be seized and summarily forfeited, the bill provides that such person shall not suffer any disadvantage or disability except that specified in this section.

Mr. Chairman, I have discussed some of the problems that immediately come to mind in analyzing S. 1450. Perhaps an example of how the bill would operate in practice would be enlightening. Picture this situation at Dulles Airport.

Customs inspectors have found a package containing three-quarters of an ounce of hashish in the luggage of a person entering the United States. Faced with the need to do something, they read this new section 404A and find that the person cannot be arrested; that any search of the person would have to be based on general customs law authority; that they have no power to seize the hashish; and that they have a dubious responsibility to subject the violator to a civil fine. The inspectors debate whether the person can be detained, and whether he can be taken against his will to a U.S. magistrate. They will find no answers in the new law.

How do we get a person charged? This bill is simply devoid of procedure of getting a person charged before the U.S. magistrate. Remember, that our agents are not authorized by anything I have ever read that gives them the power to issue a citation demanding a person to show up before a U.S. magistrate for a civil offense. You might say, well, take them immediately before the U.S. magistrate. We do not have the authority to do that. If a person decides he does not want to go, we could not arrest him, we could not issue a citation, we could not command him to go before the magistrate. I am simply at a loss to say how the bill can be administered.

Another example is the situation where DEA agents executing a search warrant for heroin violation find only a package containing three-quarters of an ounce of hashish. Remembering that the new law would not allow the person to be subjected to any other disadvantage or disability, how can they gather evidence sufficient to prove the charge. Can they seize the marihuana as evidence of the offense? Or does the bill intend to negate that authority? I do not know.

COMITY OF NATIONS . . . AGREEMENTS ON DRUG TRAFFICKING

Turning to another consideration, Mr. Chairman, a very important one, a threshold question in any discussion of making marihuana possession violation virtually unenforceable, is one of comity of nations.

The United States, through bilateral agreements with various foreign states, is involved in a multifaceted attack on drug trafficking worldwide. One important goal is to prevent drugs like heroin and cocaine from reaching our shores. Many of the nations which we have asked to devote a maximum effort to control heroin and cocaine trafficking do not have a severe problem with these drugs.

In many cases, they view cannabis, in its various forms, as their most serious problem. Yet, those countries cooperate with the United States and others either because they believe their adherence to the Single Convention on Narcotic Drugs of 1961 and other agreements, requires them to do so, or because they feel a moral commitment to help eradicate marihuana use.

If, in the face of this international cooperation, the United States or a significant number of its component States were to adopt a permissive attitude toward marihuana, there is a serious possibility that some other nations might perceive this country to be unmindful of its obligations and unconcerned with the domestic problems of other countries.

This position has been confirmed again and again at many meetings of the United Nations Commmission on Narcotic Drugs, the policy-initiating organ of the United Nations Economic and Social Council. At the Commission meeting in February of this year, the Commission adopted a resolution reaffirming that in view of numerous findings of scientific research, there can be no doubt as to the harmful effects of marihuana; and it recommended to all countries and competent international organs and organizations not to lose momentum in taking appropriate measure against cannabis abuse, supply of cannabis and cannabis resin, and, in particular, illegal trade and traffic in cannabis and drugs derived from cannabis, in order not to endanger the success of global and regional efforts in this field.

The Commission specifically noted how a relaxing of controls by one country could affect others by stating that a reduced control regarding cannabis and drugs derived from cannabis in one area might create an important source of supply and illicit traffic in the same substance in other areas.

Mr. Chairman, everybody in that room of the Commission meeting in Geneva knew full well that this resolution was taken against the Netherlands, which had taken a very permissive attitude insofar as the enforcement of its marihuana laws is concerned.

If we do not continue to have and enforce laws against marihuana use, or if other countries would regard our weakening of control as a sign of bad faith or insensitivity to their drug problems, the cooperation we can expect from foreign governments in helping us control our heroin and cocaine problem will be significantly reduced.

STATE ACTION CONCERNING MARIHUANA LAWS

I want to conclude my statement by saying that there has already been much action by the Federal and State governments in the past 4 years. According to a survey I recently conducted through DEA regional directors, nearly all of the States now have provisions for the handling of minor possession cases. In 44 States, possession of small quantities of marihuana is considered as no more than a misdemeanor, and in 4 other States the charge can be reduced to a misdemeanor by the judge.

Only two States handle possession of any amount of marihuana as a felony. Forty-eight States permit conditional discharging of offenders without conviction, and 44 States authorize complete expungement of the record of persons charged with minor possession of marihuana.

Additionally, virtually all States have juvenile delinquency laws whereby the offender is not charged with the substantive violation.

We have an opportunity to observe whether lessening of penalties in those States will have an effect on drug abuse and the ability of law enforcement to cope with the change.

As we have learned from the acceptance of other drugs in our culture, the knowledge gained after acceptance is almost useless in reversing our course irrespective of the proven hazards.

Mr. Chairman, in regard to the last sentence of this prepared statement, I want to point out that the Department of Justice has not yet taken a position on the concept of the proposed legislation. My statement points out many deficiencies in S. 1450, which are, of course, fully supported by the Department. And it does represent my views and so far as I can presume to do so, the views of the law enforcement community.

Thank you, Mr. Chairman.

JUSTICE DEPARTMENT SHIFTS POSITION ON DECRIMINALIZATION BILL

Senator BAYH. The final sentence: "Therefore the Department of Justice recommends against the enactment of this legislation."

Mr. MILLER. It should be deleted from the printed text.

Senator BAYH. So ordered.

[Testimony continues on p. 41.]

Statement

of

Donald E. Miller
Chief Counsel
Drug Enforcement Administration
U.S. Department of Justice

before the

Subcommittee on Juvenile Delinquency
(Birch Bayh, Chairman)
Senate Committee on the Judiciary

May 14, 1975

Mr. Chairman:

I am appearing before you today on behalf of the Department of Justice, and specifically the Drug Enforcement Administration, to furnish the Department's views on the impact of S.1450 on the criminal justice system.

At the outset, I want to state that the marihuana traffic is "big business." It is not the same casual transfer and use of small amounts of an innoxious weed we saw back in the 30's when we first decided to take action to control marihuana. Today, tons of marihuana are being smuggled into the United States by large, well-financed, and well-organized criminal organizations. Total domestic and foreign cooperative removals of marihuana have increased from about 184,000 pounds in 1970 to over 2,000,000 pounds in 1974. Considering that we probably do not remove a high percentage of the marihuana from the total market, the amount getting through is astronomical.

Necessarily and in accordance with our Congressional mandate, the Drug Enforcement Administration has concentrated its investigative resources on the supply of marihuana. DEA has made very few arrests for possession without intent to distribute. Those simple possession cases made by the Bureau of Customs and the Immigration

and Naturalization Service as a result of routine border searches are usually turned over to the States for disposition.

Accordingly, insofar as the Department of Justice is concerned, the criminal sanctions for simple possession in section 404 of the Controlled Substances Act have not been applied as an enforcement measure against marihuana users and minor distributors. It may be worthwhile then to consider what we have sought to do by means of applying criminal sanctions against simple possession and distribution of small amounts of marihuana.

Ask the man on the street the purpose of the marihuana penalties and he will probably reply in effect, "To prevent social harm." Ask him how the law operates to prevent social harm, and he almost certainly will say, "By punishing people who commit marihuana offenses, which results in deterring others from committing such offenses." Other people will mention that the law is a "symbol"; a majority of the society expressing its disapproval of drug use through the criminal law.

That seems to sum it up. We have concluded since enactment of the Marihuana Tax Act of 1937, that marihuana use should be discouraged by subjecting related activity to criminal punishment. Although substantially reduced from the previous harsh penalties, when the Controlled

Substances Act of 1970 was drafted, we again designed a stimulus in the form of penalties in attempt to convince our people to avoid courses of action potentially dangerous.

Has it worked? Are people ever deterred from what they want to do by threat of physical suffering? And, if the threat of punishment does deter marihuana offenders, is it the fear of going to jail rather than the inconvenience and perhaps disgrace of paying a $100 fine that people fear?

Real prevention of the spreading abuse of marihuana is a complicated subject of cause and correction, and of public psychology as well. Not even a short presentation is possible in my brief time here. But, Mr. Chairman, these are important factors that should be studied fully before changes are made -- changes that may result in an even less effective social force against marihuana use.

S.1450 would invoke a new concept into our attempt to control drug abuse. The proposed legislation would amend the Controlled Substances Act of 1970 by eliminating as a crime any offense (1) of possessing up to one ounce of marihuana without intent to distribute it, and (2) distributing up to one ounce of marihuana if not made for profit. Such offenses would be punishable by a civil fine of not more than $100, and violators would not be

subject to arrest or any other disadvantage or disability not specified in the new section. Paragraph (b) of the bill would establish additional latitude by authorizing the Attorney General to disregard enforcement of the civil remedy "whenever he believes that the public interest will be adequately served by a suitable written notice or warning."

The sponsors of the proposed legislation have made an effort to walk the thin line between "legalization" of marihuana and "decriminalization." It is clear to me that the sponsors intend for the legislation to operate as a de facto blockade against enforcement of certain provisions of the Controlled Substances Act. Also, since such a change in the Federal law would ultimately result in widespread adoption at the State level, the consequences of the proposed legislation could be the elimination of police agencies from enforcing laws against personal possession and distribution of small amounts of marihuana.

Although possession of not more than one ounce of marihuana for personal use is still an offense, the ability to enforce the provision is nearly insurmountable. The bill states at the end of subsection (a) that "such person shall not be subject to arrest or suffer any disadvantage or disability except as specified in this section."

Frankly, I do not know what that means. Does it mean that the offender may not ever be summoned before a U.S. magistrate under Rule 4 of the Rules of Criminal Procedure? I have no doubt that Rule 41 relating to search warrants would not be applicable, since an essential ground for issuance of a search warrant is that the property is intended for use as a means of committing a criminal offense. Without the power to search or arrest, the only real possibility of a person being charged with simple possession of marihuana would be pursuant to a lawful search incident to another offense.

The difficult feature in paragraph (a)(1) is in determining whether the marihuana is intended for distribution. Considering that paragraph (a)(3) creates a civil fine of up to $100 for distribution of not more than one ounce of marihuana, before a search warrant could be issued, I believe proof would be required showing that the person possessing the marihuana intended to make a distribution for profit.

Paragraph (a)(2) poses similar difficulties. If the person who possesses the marihuana in public cannot be arrested, how else can the provision be enforced? If a police officer has positive reason to believe that a person is in possession of one ounce of hashish, unless the person

has the hashish in plain sight what power does the officer have? Without authority to search, I question whether he can do anything.

In the normal street situation, an officer does not always have the facts necessary to make a decision precisely in line with the proposed legislation. He will not be able to readily determine whether the amount possessed is more than one ounce; it is not specified in the bill what procedures are to be followed in lieu of arrest; he cannot discern whether the person is transient and likely to honor a summons; and it is not clear what is the resource when a person does not honor a summons.

The other feature of the bill, namely the provision relating to casual distribution of small amounts of marihuana for no profit, is also objectionable. This feature goes against all reasons for having drug control laws. It is a pronouncement that the Government no longer takes a harsh view regarding proselytizers -- those persons who convert naive persons to drug abusers. This provision means that if a person desires to introduce marihuana use to juveniles, he may do so and face only a fine of up to $100 so long as the transfer is totally donative or only to reimburse himself for out-of-pocket expenses.

Another troublesome feature is that the proposed legislation does not authorize the seizure of the marihuana illegally possessed. Although section 511(f) of the Controlled Substances Act considers marihuana as a contraband which may be seized and summarily forfeited, the bill provides that "such person shall not . . . suffer any disadvantage or disability except that specified in this section."

Mr. Chairman, I have discussed some of the problems that immediately come to mind in analyzing S.1450. Perhaps, an example of how the bill would operate in practice would be enlightening. Picture this situation at Dulles Airport. Customs inspectors have found a package containing three-quarters of an ounce of hashish in the luggage of a person entering the United States. Faced with the need to do something, they read the new section 404A and find that the person cannot be arrested; that any search of the person would need to be based on general customs law authority; that they have no power to seize the hashish; and that they have a dubious responsibility to subject the violator to a civil fine. The inspectors debate whether the person can be detained, and whether he can be taken against his will to a U.S. magistrate. They will find no answers in the new law.

Another example is the situation where DEA agents executing a search warrant for a heroin violation find only a package containing three-quarters of an ounce of hashish. Remembering that the new law would not allow the person to be subjected to any other disadvantage or disability, how can they gather evidence sufficient to prove a charge? Can they seize the marihuana as evidence of the offense, or does the bill intend to negate that authority?

Turning to another consideration, Mr. Chairman, a threshold question in any discussion of making marihuana possession violations virtually unenforceable is one of comity of nations. The United States, through bilateral agreements with various foreign states, is involved in a multifaceted attack on drug trafficking world-wide. One important goal is to prevent drugs like heroin and cocaine from reaching our shores. Many of the nations which we have asked to devote a maximum effort to control heroin and cocaine trafficking do not have a severe problem with these drugs. In many cases, they view cannabis, in its various forms, as their most serious problem. Yet, these countries cooperate with the United States and others either because they believe their adherence to the Single Convention and other agreements requires them to

do so, or because they feel a moral commitment to help eradicate marihuana use in other areas of the world. If, in the face of this international cooperation, the United States, or a significant number of its component states, were to adopt a permissive attitude toward marihuana, there is a serious possibility that some other nations might perceive this country to be unmindful of its obligations and unconcerned with the domestic drug problems of others.

This position has been confirmed again and again at many meetings of the United Nations Commission on Narcotic Drugs, the policy initiating organ of the United Nations Economic and Social Council. At the Commission meeting in February of this year, the Commission adopted a resolution reaffirming that in view of numerous findings of scientific research, there can be no doubt as to the harmful effects of marihuana; and it recommended to all countries and competent international organs and organizations not to lose momentum in taking appropriate measures against cannabis abuse, supply of cannabis and cannabis resin, and, in particular, illegal trade and traffic in cannabis and drugs derived from cannabis, in order not to endanger the success of global and regional efforts in this field. The Commission specifically noted how a relaxing of controls by one country could affect others by stating, "[It realized]

that a reduced control regarding cannabis and drugs derived from cannabis in one area might create an important source of supply of, and illicit traffic in the same substance in other areas." If we do not continue to have and enforce laws against marihuana use, or if other countries would regard our weakening of control as a sign of bad faith or insensativity to their drug problems, the cooperation we can expect from foreign governments in helping us control our heroin and cocaine problem will be significantly reduced.

I want to conclude my statement by saying that there has already been much action by the Federal and State Governments in the past four years. According to a survey I recently conducted through DEA Regional Directors, nearly all of the States now have provisions for the handling of minor possession cases. In 44 States, possession of small quantities of marihuana is considered as no more than a misdemeanor, and in four other States the charge can be reduced to a misdemeanor by the judge. Only two States handle possession of any amount of marihuana as a felony. Forty-eight States permit conditional discharging of offenders without conviction, and forty-four States authorize complete expungement of the record of persons charged with minor possession of marihuana. Additionally,

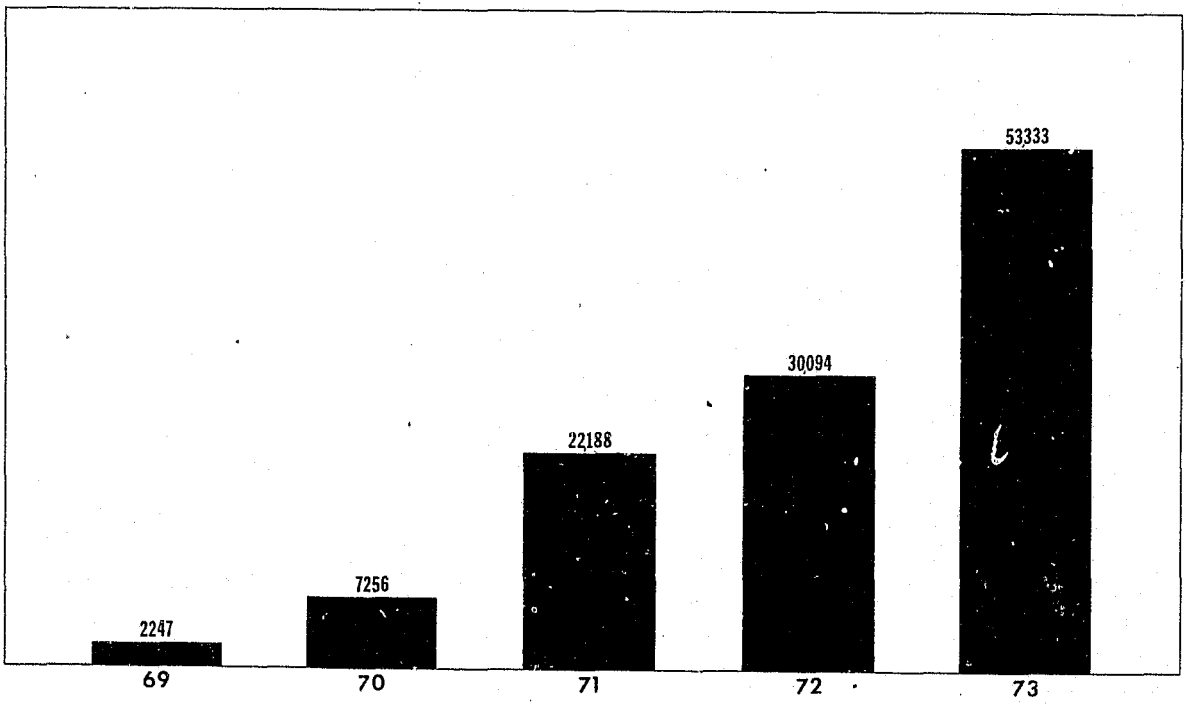
HASHISH

REMOVED FROM ILLICIT MARKET BY FEDERAL AGENTS
(IN POUNDS)



Mr. TARTAGLINO. The first chart illustrates the illicit marihuana and the second chart the illicit hashish by year from 1969 to 1973, removed by Federal agents alone. You can see that when we speak of hashish, seizures have increased from roughly a little more than 2,000 pounds in 1969 to 53,000 pounds in 1973, or some 27 tons. We have gone from 1 to 27 tons in a very short space of time.

In marihuana you can see a very similar increase. We have gone to some 375 tons that were removed in 1973.

Mr. MARTIN. 780,000 pounds?

Mr. TARTAGLINO. Yes, I am reducing that figure to tons; and that is just an illustration of how we have grown from 35 tons in 1969.

I might add that as recently as 10 years ago, the only hashish that was found in the United States was probably a quarter pound in the sole of some seaman's shoe that he brought over for his own use. I recall when our seizure was under 10 pounds a year. But, in 1969 we exceeded 1 ton, and of course last year we have gone to 27 tons.

Mr. MARTIN. I think it might be useful to let people know what 1 pound of hashish can do. A quart of whiskey can only get a few people drunk, but how many people can get drunk on a pound of hashish?

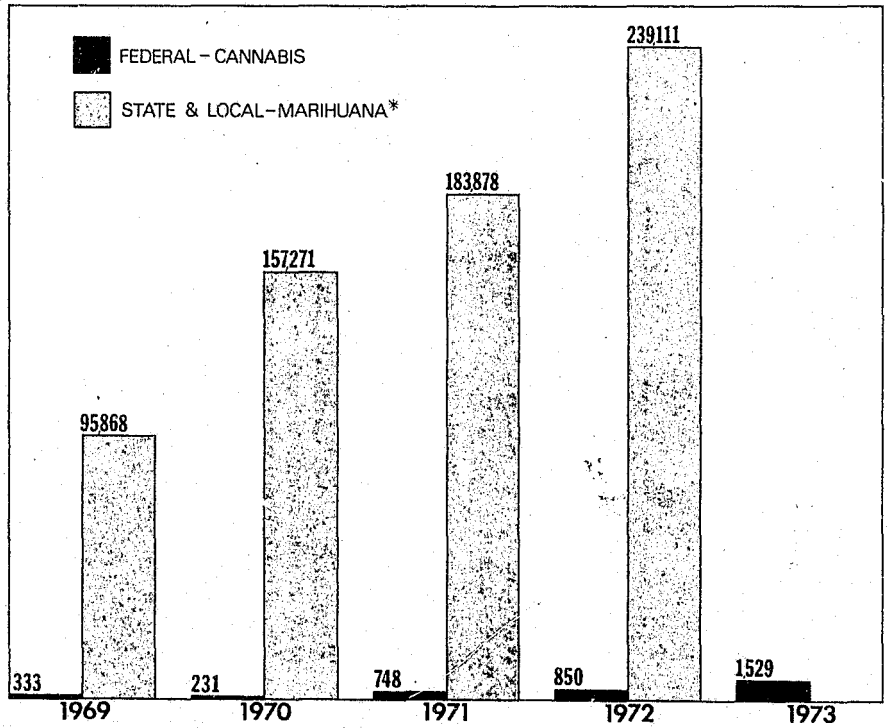
Mr. TARTAGLINO. Well, I would have to go into a discussion of the potency of it, but what you say is roughly correct.

This third chart shows the arrests for cannabis State, local and Federal; the yellow is Federal, we have gone from 333 arrests in 1969 to over 1,500 last year.

You can see local enforcement agencies in 1972 arrested almost a quarter of a million people in the United States for cannabis violations, hashish and marihuana.

In the map that you see before you we have tried to give you an illustration of generally the areas that are affected in the United States today; the purple arrows illustrate hashish; the orange illustrates marihuana. We also have represented there on this chart the largest marihuana seizure on record, 42 tons in Jamaica; a single seizure of marihuana which was destined for the United States. The largest domestic seizure last December, 20 tons in Florida. In hashish the largest domestic seizure, 3,700 pounds, almost 2 tons, in Miami, in March of this year. The largest foreign seizure, 12 tons in Karachi, Pakistan.

ARRESTS



* Source: Uniform Crime Report

"SEA TRADER"

During February 1974, information was developed which indicated that a group of individuals had been smuggling tons of marihuana from the Caribbean into the United States, including New York, Louisiana, and Florida. Information was also developed that this group had been planning to bring a large load of hashish from Morocco. Intelligence indicated that the load would be 7,000 pounds and would be transported on a vessel later identified as the "Sea Trader." The "Sea Trader" is a 153 foot, 45 ton gross freighter, registered out of Panama. The "Sea Trader" was believed to be in Morocco, departure date unknown, and attempts to locate were initiated, and alerts were posted in the continental United States.

On April 9, 1974, information was received that the "Sea Trader" was dead in the water with engine trouble at a point approximately 150 miles south-east of Bermuda.

DEA requested the assistance of the U.S. Coast Guard who dispatched a long-range search plane to locate "Sea Trader" and conduct a search for any vessel enroute to contact "Sea Trader" and attempt to offload the hashish.

The U.S. Coast Guard Cutter "Gallatin" was dispatched and proceeded at the fastest possible speed to attempt to take the vessel in tow to the nearest U.S. Port.

On April 10, 1974, Coast Guard Cutter "Gallatin" arrived on scene and relieved sea going Tug Robin VIII of the tow. "Sea Trader" would not agree to be towed to the nearest U.S. port but agreed to have "Gallatin" tow "Sea Trader" to protected Bahamian waters.

On April 12, 1974, "Sea Trader" was anchored within the 3-mile limit of Bahamian waters and two other boats approached to assist the "Sea Trader."

"Sea Trader" was boarded by Drug Enforcement Administration and Bahamian authorities and subsequent search revealed 70 bags containing approximately 3,700 pounds of hashish. Nine subjects were arrested and two vessels were seized by the Bahamian authorities.

The contraband and subjects were returned to Nassau for criminal proceedings. DEA will initiate conspiracy indictments in the United States.

Mr. SOURWINE. Your charts and tables, sir, appear to indicate that the rate of increase of hashish is substantially greater than the rate of increase of marihuana. For instance, over a 5-year period the marihuana increase is roughly 10 times; the hashish increase is 22 times. Do you take that as an indication that hashish is in some degree replacing marihuana, that the user is starting out with pot and graduating to hash?

MARIHUANA AND HASHISH REMOVED FROM ILLICIT MARKET BY FEDERAL AGENTS (IN POUNDS)

	Calendar year—

SUPPORTING DOCUMENTATION SUBMITTED BY MR. JERRY JENSON, DEPUTY ADMINISTRATOR, DEA

C3-73-0127:

On August 25, 1972, four U.S. citizens smuggled 860 pounds of hashish into the U.S. at New York City. The hashish had been concealed by the group in a 1971 Chevrolet pick-up truck in Casablanca, Morocco and shipped to New York. All of the hashish was seized by U.S. Customs and DEA and DEA Agents subsequently arrested the defendants.

G1-74-0087:

On March 4, 1974, 2,439 pounds of hashish from Morocco was smuggled into the U.S. at Ft. Lauderdale, Florida via a private yacht. Two Canadian citizens, one British citizens, and one U.S. citizens were arrested by DEA and the hashish seized.

M9-74-0058:

On October 22, 1974, DEA working jointly with the Mexican Federal Judicial Police (MFJP) located 20,000 pounds of marihuana stored on a ranch near La Pesca, Mexico. The MFJP assisted by DEA and the Mexican Army seized the entire amount of marihuana, arrested 15 Mexican citizens on the ranch and seized two aircraft. A few hours before the arrests in Mexico, a third aircraft left the La Pesca ranch and was followed by DEA aircraft to a ranch near Fredericksburg, Texas, where the occupants were arrested by DEA Agents and 1,600 pounds of marihuana was seized from the aircraft.

M3-74-0060:

On January 22, 1975, four Greek citizens, one naturalized citizen born in Greece, and one U.S. born citizen were arrested upon the delivery to an undercover DEA Agent of 16½ pounds of hashish and 18 pounds of hashish oil. 3,994 grams of hashish had been purchased by DEA Agents from this group previous to their arrest.

N8-74-0197—Elias Velasquez-Velasquez

On December 26, 1974, the head of a drug smuggling organization responsible for smuggling tons of marihuana from Mexico into the U.S. was arrested by Mexican Federal Judicial Police (MFJP) based on DEA investigative efforts. Eleven vehicles from the Velasquez organization had been previously seized by U.S. Customs in smuggling attempts into the United States involving quantities in excess of 3,000 pounds of marihuana. At the time of his arrest, VELASQUEZ was in possession of 200 pounds of marihuana, marihuana processing equipment and three "load" vehicles containing marihuana residue.

R2-74-1085:

On November 28, 1974 Mexican Federal Judicial Police (MFJP) arrested six Mexican citizens and seized 10,866 kilogram packages of marihuana in Tiajuana, Mexico as a result of extensive investigative effort by DEA. At least three of the defendants were armed and apprehended after an exchange of gunfire by MJFP officers and the defendants. These defendants were a part of the notorious Beltran smuggling organization operating between the interior of Mexico and the Tiajuana border area.

AN ANALYSIS OF DEA MARIHUANA ARRESTEES

(July–December 1973)

I. BACKGROUND

A. Purpose of Survey

The purpose of the survey was to determine the significance of DEA marihuana arrests in terms of the trafficking potential of the marihuana law violator. The principal factors utilized in making this evaluation were the quantity of marihuana

trafficked, the extent to which violators were involved in other drugs, and criminal records of the arrestees. In terms of descriptive information, judicial dispositions were also reviewed.

In brief, the quality of the DEA marihuana arrests were measured to ascertain whether or not these cases were commensurate with the level of traffic normally associated with Federal drug cases.

B. Scope

The case files pertaining to all DEA defendants classified as marihuana violators were reviewed. The following information was extracted from these files, recorded and tabulated:

Name and case number;
Region;
Prior criminal record;
Armed violations;
Total drugs involved in each case; and
Judicial disposition including sentence.

To insure that these cases accurately reflected DEA activities, arrests made in cooperation with other agencies were excluded. Of approximately 720 violators examined, 356 or 49% were found to be exclusively DEA arrests. Cases involving drugs other than marihuana were excluded from consideration, unless the investigation was primarily initiated for marihuana.

II. ANALYSIS

A. Arrests by Region

An examination of the distribution of marihuana arrests by DEA region (Fig. I) indicates that the greatest proportion of these cases are made along the Mexican border. Over seventy percent of the arrests made during the period analyzed occurred in DEA regions Eleven, Twelve, and Fourteen. Underscoring the importance of the Mexican border traffic in DEA marihuana operations is the fact that over sixty-five percent (65%) of DEA marihuana arrestees were Spanish-surnamed; virtually all were Mexicans or of Mexican descent.

FIG. I.—MARIHUANA ARRESTS BY DEA REGIONS

Region	Total arrests	Percent	Rank
1	6	3	8
2	16	4	5
3	4	1	9
4	2	1	10
5	15	4	6
6	13	4	7
7	13	4	7
8	18	6	4
10	6	2	8
11	68	19	2
12	47	13	3
13	6	2	8
14	142	40	1
Total	356	100	

B. Significance of Arrests by Distribution of Removals

In order to separate cases which might reasonably constitute possession for personal use, defendants involved with less than one ounce (28 grams) of marihuana were separated from the total defendants. The remaining cases were separated into four categories based upon the quantity of drug involvement. These were, quantities in excess of one hundred kilograms, fifty-one to one hundred kilograms, and one kilogram to fifty kilograms. Each of these groups represent varying levels of the wholesale traffic. The fourth category comprised cases involving one ounce to one kilogram of marihuana; this volume is normally associated with the retail level of the marihuana traffic.

In addition to a tabulation of drug quantities involved with each DEA arrest, data which would reflect upon the total criminal involvement of each defendant was collected. This information included whether or not the defendant was armed, the prior criminal record, involvement with other drugs, and the pertinent DEA criminal rating assigned to each arrestee.

FIG 2.—DISTRIBUTION OF DEA MARJHUANA ARRESTS BY QUANTITY OF DRUG, JULY–DECEMBER 1973

	Under 28 g	28 g/999 g	1 kg/50 kg	51 kg/100 kg	100 kg-plus
Total arrested (356)	5.0	20.0	155.0	33	143
Average criminal rating point	3.4	3.8	3.8	3.12	3.33
Number armed	1.0	0	(7) 11.0	(3) 1	(15) 22
Number with prior criminal record	(40) 2.0	(50) 10.0	(39) 60.0	(48) 16	(43) 61
Number involved with other drugs	(80) 4.0	(10) 2.0	(15) 23.0	(6) 2	(16) 23
Narcotics	4.0	1.0	2.0	0	6
Other	0	1.0	21.0	2	17

Note: Figures in parentheses indicate percent.

An inspection of the data in Fig. I indicates that the bulk of DEA marihuana cases involve some level of the wholesale traffic, with the majority (50%) involving amounts in excess of fifty (50) kilograms. In most of the cases reviewed, quantities of this size were commonly transported in bulk, by truck or by automobile across the border to a rendezvous point where the shipment was broken up and placed in different vehicles. The marihuana in most of these situations was packaged in brick form.

In numerous cases especially involving smaller quantities of marihuana, the drug was enclosed in paper bags and placed casually in automobile trunks or adjacent to the driver. In most of these situations, the arrestees would attempt to cross routinely into the U.S. during daylight hours at heavily travelled border crossing points. The apparent lack of concern exhibited by many of these persons would suggest that many Mexican nationals who commute to the U.S. daily may supplement their incomes by transporting and selling small lots of marihuana on a routine basis.

A substantial portion of all arrestees had prior criminal records most frequently reflecting previous drug arrests. Sixty-one (43%) of the persons involved in quantities of over one hundred kilograms had previous arrest records. The proportion of persons with prior records in all other categories ranged from forty to fifty percent.

In only one group, those involved in over one hundred kilograms, was the proportion of persons armed significant. In the one hundred kilogram-plus group, twenty-three defendants or 16%, were armed. This fact may be explained by the desire of these persons to protect their shipments from theft by other drug dealers.

Involvement with drugs other than marihuana was significant for only one group, those trafficking in less than one ounce of marihuana. Four of the five defendants (80%) were involved with heroin and, in fact, were originally the subjects of narcotics investigations. These persons were classified as marihuana defendants due to the fact that they possessed only cannabis at the time of their arrest and no purchases of evidence were made by DEA personnel.

C. Judicial Disposition of DEA Marihuana Arrestees

Dismissals and declinations are very high for all groups of arrestees. This fact is probably explained by the unwillingness of prosecuting attorneys and judges to uphold indictments in these cases unless there was "prima facie" evidence presented against the defendant.

There appears to be little consistency in the sentencing related to these cases. Although prison sentences were less frequent for the lower range of arrestees, length of sentence had little relationship to the quantity of drug involvement (Fig. 3).

FIG. 3.—JUDICIAL DISPOSITION OF DEA MARIHUANA CASES, JULY–DECEMBER 1973

	Under 28 g	28/999	1kg/50 kg	51 kg/100 kg	100 kg plus
Total arrests	5	20	155	33	143
Total court disposition	0	2	60	9	47
Dismissed or declined			15	0	10
Probation, YCA or NARA		1	14	2	6
Prison		1	(50) 31	(76) 7	(66) 31
Average sentence in months		96	38	29	42

Note: Figures in parentheses indicate percent.

Conclusion

In general, marihuana arrests which are exclusively made by DEA involve violators capable of trafficking in substantial quantities of the drug. Only a small proportion of these arrestees were involved in less than one kilogram of marihuana. The proportion of persons involved in less than one ounce of marihuana was insignificant.

There is a strong possibility that marihuana arrests made by DEA Task Forces were less significant. These arrests were not reviewed since they do not exclusively involve DEA resource inputs, nor is a DEA laboratory analysis performed upon the evidence in most cases. Consequently, information regarding the actual drugs of involvement for most of these cases would prove difficult to develop.

An evaluation of the case histories of DEA marihuana violators indicates that a significant proportion were previously engaged in illicit activities prior to coming to the attention of DEA. As a group, these persons do not appear particularly dangerous; in fact, a large number appear relatively casual in their trafficking activities. Only in those cases where very large quantities of marihuana were involved did the defendants exhibit a tendency to be armed.

Most DEA marihuana cases are closely associated with the Mexican border, and involve smuggling operations.

TOTAL FEDERAL DOMESTIC AND FOREIGN COOPERATIVE REMOVALS FOR MARIHUANA, HASHISH, AND HASHISH OIL

[EXHIBIT No. 3]

U.S. DELEGATE STATEMENT ON THE PROBLEM OF CANNABIS

26TH SESSION, COMMISSION ON NARCOTIC DRUGS, GENEVA, FEBRUARY 17–28, 1975

While cannabis has been used from the dawn of folk medicine, almost all of this use was based on prescientific observation. In the U.S. cannabis has been used for decades but it is only in the last decade or so that its use has assumed worrisome proportions. The cannabis question became intertwined with other social and political problems, many of them closely related to the dramatic increases in the youth population during the decade of the sixties. While the total U.S. population grew seventeen percent between 1960 and 1973, the number of youth in the 14 to 25 year old age category grew by an astonishing 61 percent, an increase of 16.3 million people. To this change in our population must be added the heavy burden of the ignorance of centuries. The debate on the cannabis issue could not be enlightened by a body of factual knowledge about the drug and its effects because no such body of knowledge existed.

Little more than a decade ago use in the U.S. was still largely confined to small numbers of individuals in a relatively few large cities. By 1971, however, it was estimated that approximately ten million Americans had tried the drug and by 1974, this number had swelled to in excess of 26 million. One in seven persons in the U.S. age twelve or over is currently estimated to have made some use of marihuana; in some parts of the country one in three persons have tried it.

At least two million persons are daily users. Although use is most common among adolescents and young adults, there is increasing evidence that such use is coming to include both younger and older segments of the population. Moreover, of the fifty percent of those who have ever tried the drug who continue its use, half do so once a week or more often and about one in five users do so on a daily basis.

As use came to assume increasing proportions, the United States Government decided to launch a high priority research effort to increase our then rather incomplete knowledge of marihuana's properties and effects. Seven years ago when the program began, even the necessary drug materials to conduct research were difficult to obtain, frequently of unknown origin and of unspecified potency. Because much of the earlier research is difficult to interpret as a result of the poorly characterized cannabis used, early emphasis was placed on developing reliable supplies of natural and synthetic materials considered necessary for basic pharmacological research. Such materials have now been supplied to over a thousand researchers both in the U.S. and abroad. We are grateful to the United Nations Laboratory for its role in facilitating distribution of cannabis materials to overseas investigators. Our research program has evolved from an initial investment of a little over a million dollars a year for twenty projects to its current level of over 60 projects supported at an annual cost of 5 million dollars.

The U.S. has placed heavy emphasis on research to clarify serious questions about the consequences of cannabis use. Summarizing the results of this research, the annual Marihuana and Health Reports of the Secretary of the Department of Health, Education, and Welfare and the report of the National Commission on Marihuana and Drug Abuse, issued in March 1973, have placed the issue in much clearer perspective. They can best be understood as constructive reactions to the prevailing confusion about cannabis. After examining the available evidence, these early reports concluded that there was no clear evidence of serious health hazard from moderate use of cannabis by healthy people. These documents were carefully phrased. They presented scientific evidence in the policy context of discouraging drug use and they explicitly left the door open to new evidence of health-related problems.

Within the last two years, new findings have appeared giving us cause for greater concern than before.

These new areas of concern include the effects of cannabis on male sex hormone levels, interference with the body's immune response, effects on fundamental cell metabolism and the acute effects of marihuana intoxication including the effects on driving and work performance. Work on the metabolism of tetrahydrocannabinol (THC), the major biologically active component of cannabis, showed that the substance was highly soluble in fat but that it had low solubility in water. Thus, like DDT, THC may accumulate in fatty tissues such as the brain and gonads. These questions obviously bear further study.

As mentioned earlier, the last two years have produced new evidence of widespread and frequent use of cannabis to add to the growing evidence of serious potential health hazards. The law enforcement and treatment communities also reported the increasingly common appearance during the last year of hashish oil, a more concentrated cannabis product with THC content of 60 to 90 percent compared to the less than 3 percent potency often found in marihuana cigarettes in the United States.

These recent developments undercut the relatively comfortable image of mature, healthy young persons infrequently using marihuana of low potency. Surely this relatively benign pattern remains the most common in the United States, but there appears to be a large and growing minority who use the drug more frequently at a high potency and at a younger age. These trends disturb even the most optimistic observers of the contemporary marihuana scene in the United States.

Running parallel to these epidemiological and scientific developments, there have been major changes in legal and social policy related to cannabis. Just as the scientific community has struggled to put cannabis into more realistic perspective, so have legal and political communities struggled with the problem during the last decade. These years have seen a clear cut movement away from use of severe criminal penalties for the possession of cannabis. At the Federal level, law enforcement has been "retargeted" during the last few years at the drug distribution system and not at the drug user to maximize the impact on illicit traffic in cannabis. Use of cannabis has been increasingly seen as an important responsibility of the rapidly developing drug abuse treatment system.

These two parallel developments—the increasing evidence of serious health hazard from cannabis use and the strong trend toward reduced criminal penalties for possession—are seen as contradictory only by those who persist in polarizing the issue, reading every statement as either for or against cannabis. Programs aimed at discouragement of the use of marihuana and the movement away from the use of serve criminal sanctions for possession are aimed at a common goal—reducing the overall social costs of marihuana use in our country.

To avoid any misunderstanding of our policy, one distinction should be made absolutely clear. In reducing our possession penalties, we have not legalized use of cannabis and we do not intend to legalize cannabis. In 1970, the Federal Controlled Substances Act reduced the criminal penalties for possession of any illegal drug, including marihuana, from a felony to a misdemeanor, punishable on first offense by imprisonment for not more than a year. Some jurisdictions below the Federal level have reduced penalties even further. Very few of those arrested under Federal law for possession of marihuana went to jail for even one day. Our policy is clearly to discourage use by a variety of means with a flexible series of sanctions depending upon the seriousness of the offense. Penalties for illicit distribution have not been reduced and our policy is to continue the vigorous prosecution of persons engaged in the illicit distribution of cannabis. Major developments in illicit traffic will be described in our statement on Agenda Item 9. We do not see trends described here as weakening our law enforcement efforts; indeed, these developments mean that limited law enforcement resources can be targeted where they will have the greatest impact on availability of unauthorized drugs.

Mr. Chairman, we are well aware that a society cannot change its position on drugs with every new finding from the laboratory, the field or the street. Rapid changes or perceived reversals of social policy contribute to uncertainty and undermine the confidence that people must have in their government and other institutions. That is why, Mr. Chairman, the United States has moved slowly and cautiously away from severe penalties on possession and the exaggerated rhetoric on the dangers of cannabis heard several decades ago. At the same time, we reject the other extreme—the opinions of the misguided reformers of the sixties who wanted to legalize cannabis. At the present time differences of opinion about policy on cannabis in the United States have been resolved. Discussion continues about the various means of discouraging cannabis use without producing excessive social costs. Concerning our basic goal, however, there is unanimity among informed people in the United States that for the benefit of the individual and society, cannabis use should continue to be discouraged. Use will not be authorized. The scientific evidence and our international obligations under treaty are clear on these points. We intend to follow both.

Thank you, Mr. Chairman.

[Testimony continued from page 16.]

Senator BAYH. I hope that as we proceed with the hearings, we might ask some of your colleagues or yourself, Mr. Miller, at Justice, to explore more fully the concept so that we can have an enlightened presentation—relative to this concept. If we decide that the weight of evidence suggests that we should proceed in this area, we would, of course, like to have your critique of any legislative vehicles, just as you have critiqued this particular legislative vehicle.

S. 1450—VIOLATION OF TREATY COMMITMENTS?

Let me ask a question. Then I will come back to other areas you mentioned. I do not remember the exact words; but something to the effect that actions such as this might be interpreted by other nations as violation of treaty commitments.

Would this bill or similar legislation be a violation of treaty commitments?

Mr. MILLER. This bill, as drafted, which I perceive to be unenforceable, would be very close to becoming a violation of treaty obligations because it is completely unenforceable.

Senator BAYH. I ask the question again. Is it yes or no? Will this be a violation of our treaty commitments?

Mr. MILLER. Sir, I cannot answer it yes or no. I can only say that as presently drafted, being unenforceable, it certainly would border on being violations of our treaty obligations.

Senator BAYH. If it could be enforced, would it be a violation?

Mr. MILLER. If it could be enforced, no, sir, it would not be a violation of our treaty obligations.

Senator BAYH. I had asked my staff to give me their judgment on that; and they concluded, as have U.N. legal experts, that this would not violate the treaties.

Mr. Wood, why do not you proceed. Then we will just go from your left to right.

STATEMENT OF RICHARD WOOD, ASSISTANT DISTRICT ATTORNEY, DENVER, COLO.

Mr. WOOD. Thank you, Mr. Chairman.

Initially, I would like to agree with Mr. Miller that there are, it seems to me, some defects in the bill as drafted. From a purely practical point of view the committee, I think, would like to look at or work out.

Senator BAYH. Let me just say, once again, we are not wedded to any particular legislation. We have not arrived at any foregone conclusions.

So, I hope you will all be very frank in assessing this piece of legislation, make alternative suggestions, or/and note a good idea or a poor one. We are trying to determine the precise language necessary.

Mr. WOOD. I understand that. And for that reason I do not think you probably want me to go through this nitpicking every line and dot on the page. And I could perhaps make that available to the staff at a later time.

Senator BAYH. Please.

Mr. Wood. But insofar as the concept is concerned, I want to express support for the concept of the bill and hope that the committee will be able to work out language which will make the concepts enforceable, and will do the things that I think the committee realizes needs to be done.

In Colorado, our legislature is at this very time working with a bill that is very similar in concept to Senator Javits' bill, that has now passed the Colorado house and the senate in different forms. And there is a conference committee that is attempting to work out those differences. But in concept it is quite similar.

In Denver, the city of Denver, which is the jurisdiction that I am representing, on March 18 of last year we enacted a city ordinance violation to handle small-amount marihuana cases. We did that with the support of the Denver Police Department and the Denver district attorney's office, and since that time our experience with that has been excellent.

MONETARY SAVINGS THROUGH CITY'S MARIHUANA ORDINANCE

We have found that we have a money savings to the police department, to the courts, to the prosecutor's office. Our dockets have been relieved. We actually have more arrests for the ticket type of a violation than we did before when it was a State charge. Officers recognizing that the system requires less of their time, less money, are more inclined, I think to issue citations under this system than they were before.

I think before there was to some extent an attitude of maybe feeling it was not worth it if just a couple of cigarettes were found on somebody. It was not worth all the trouble of having to go to court and all the waste of time to everybody concerned.

Now. the officers, if they see an offense, are not dissuaded from writing out a ticket. And in most cases, the person is released and summoned back into court.

There have been virtually no motions to suppress virtually no trials under this new procedure. We saved a great deal of time. The police department narcotics bureau in Denver likes this procedure. We like this procedure. The net result has been in Denver that possession of a small amount of marihuana—our law defines it as one-half ounce because we are tied into a State statute which uses a half ounce as a limiting amount—but the net result has been a fine, generally in the area of $25 to $50. And this applies to first offenders. So far there have not been any second offenders come through this system, I understand.

So, I think the system is working. And what is important is that we only have about 1,300 police officers in Denver. We have a crime problem like any other big city does. And I think that big city or small city, at some point you have got to make a determination where you are going to put a limited amount of dollars. Are you going to put it into half a million marihuana arrests a year? Such as is being done nationally. Or are you going to divert the amount of money that that represents, I do not know how much that is, but it must be a considerable amount of money.

Senator Bayh. The estimated figure is $600 million annually.

UTILIZE MONEY TO ENFORCE MAJOR CRIMINAL LAWS

Mr. WOOD. I think that if as a country we are able to divert $600 million into crimes like robbery and rape and burglary and homicides, things that are extremely serious that have people afraid to live in certain sections of certain cities and have certain cities dying we could put $600 million into the enforcement of that kind of thing and divert it away from marihuana and handle marihuana on the basis of the crimes that you have in this bill, I think we would be way ahead. I think then we would be making a positive step toward the kind of enforcement of laws that people want and that the cities need.

I think Denver is better off than many cities. Like all big cities, we do have a crime problem. And we do have a limited amount of money. We are very close to the red line on our budget every year. We simply cannot afford to waste money on areas of enforcement that are not of primary concern to the citizens of Denver.

As I said, I did have some suggestions about the law, about the particular bill that Senator Javits introduced. But I will save those and just submit those to the committee.

I concede that marihuana may be harmful. I think any drug probably is harmful. And it is a matter of extent and degree. But just again, dealing with the concept I wonder—if a user is harming himself, how are we helping him by adding to that? Possibly ruining his career, throwing him in jail and diverting money from, as I said, the more important kinds of violent crimes against persons that we really should be having our limited resources directed against. I think that it is just a matter of priorities. And I hope that the Federal law may provide something of a guideline for other States to indicate to them that their priorities should be directed toward the violent crimes, the crimes against persons, the crimes that the FBI statistics show we are having much less success against than we certainly wish we were.

Those are all the remarks I have on the concept of it. If you have any questions, later on, I would be happy to answer them.

MARIJUANA CITY ORDINANCE

(DENVER, COLO.)

ANALYSIS OF FIRST YEAR OF OPERATIONS; WITH FORMS USED BY POLICE DEPARTMENT

Prepared By:

Richard Wood
Chief Deputy District Attorney
Denver, Colorado
May 9, 1975

THE DENVER MARIJUANA ORDINANCE

Since March 8, 1974, Denver, Colorado, has been utilizing a city ordinance to handle small amount (less than one-half ounce) possession of marijuana violations. The ordinance carries a maximum possible penalty of $300 and 90 days in county jail (compared to the current Colorado state statute, C.R.S. 12-22-322(7) 1973 which, for the same offense, carries a penalty of $500 and one year in county jail).

The ordinance applies only to first offenders.

Since its effective date, 1,830 marijuana ordinance violations have been filed as of April, 1975. In most cases defendants have pled guilty and received a $25 or $50 fine, and in some cases a 5-day suspended county jail sentence.

The Denver Police Department approves of the new procedure, which reduces paperwork and allows concentration on more serious crimes. The Police Department estimates that approximately 20% of those arrested are "ordered in" (a summons procedure) and approximately 80% are taken to jail--with the majority of this 80% being released without bond following booking and processing procedures which typically take from one to four hours. The small percent held on bond are detained either because they are transient or because the amount of marijuana they possessed is believed to be appreciably above one-half ounce, or because they are known to have prior records of possession, sale, or use or drugs.

To facilitate "order in" procedures, the Police Department is beginning to utilize "identiseal" index finger identifiers on summons forms--to try to avoid problems of false arrest, forged or stolen identification cards, drivers licenses, etc.

Attached are copies of the ordinance, and the Police Department forms currently in use in Denver.

WHEN A SUSPECT IS PICKED UP FOR A MARIJUANA ORDINANCE VIOLATION THIS ANALYSIS FORM IS FILLED OUT, ANALYSIS IS NOT DONE UNLESS SUSPECT ENTERS NOT GUILTY PLEA AND CASE IS SET FOR TRIAL. ROUTINE ANALYSIS IS COSTLY, THIS PROCEDURE RESERVES ANALYSIS FOR ONLY THOSE FEW CASES WHICH ARE NOT RESOLVED BY A PLEA.

hols (methyl, ethyl, isopropyl, propyl, butyl), aliphatic acetates (ethyl, methyl, propyl, methyl cellosolve acetate), acetone, benzene, carbon tetracholoride, cyclohexane, freons (freon 11 and freon 12), hexane, methyl ethyl ketone, methyl isobutyl ketone, naphtha, perchlorethylene, toluene, trichlorocthane, or xylene.

.1-2. Use or Possession. It shall be unlawful for any person intentionally to smell or inhale the fumes of toxic vapors for the purpose of causing a condition of euphoria, excitement, exhilaration, stupefaction, or dulled senses or nervous system, or to possess, buy or use any such substance for the purpose of violating or aiding another to violate this Section 813.1.

.1-3. Under the Influence. It shall be unlawful for any person to be under the influence of any toxic vapors as defined in Subdivision 813.1-1.

.1-4. Sale.

.1-4(1). It shall be unlawful for any person to sell, give, deliver or furnish any substance releasing toxic vapors to any minor without the personal or written consent of a parent, guardian, or other person having legal care or custody of such minor, except when the sale of one tube of glue is made simultaneously with the sale, purchase, and delivery of a hobby or model kit.

.1-4(2). It shall be unlawful for any person, except a person who is at the time of such sale actually employed by or engaged in operating a bona fide commercial establishment at a fixed location, to sell to any other person any substance releasing toxic vapors, and all sales of such substance not made in or from such an establishment shall be unlawful.

.1-4(3). It shall be unlawful for any person knowingly to sell or offer for sale, deliver, or give away to any other person any substance releasing toxic vapors, where the seller, offerer, deliverer, or donor knows or has reason to believe that such substance will be used for the purpose of inducing a condition of euphoria, excitement, exhilaration, stupefaction, or dulled senses or nervous system.

.1-5. Exception. This Section 813.1 shall not apply to the inhalation of anesthesia for medical or dental purposes. (Ord. 120, Series 1974)

.2. Cannabis

.2-1. Definitions. As used in this Section the term "Cannabis" shall mean all parts of the plant cannabis whether growing or not; the seeds thereof; the resin extracted from any part of such plant; and every compound, manufacture, salt, derivative, mixture, or preparation of such plant, its seeds, or resin; but shall not include the mature stalks of such plant, fiber produced from such stalks, oil or cake made from the seeds of such plant, any other compound, manufacture, salt, derivative, mixture or preparation of such mature stalks, except the resin extracted therefrom, fiber, oil, or cake, or the sterilized seed of such plant which is incapable of germination.

.2-2. Unlawful to Possess. It shall be unlawful for any person knowingly to possess cannabis; provided, however, that this Subdivision 813.2-2 shall not apply to any person who shall have been previously convicted under this Subdivision 813.2-2 or under any statute of the State of Colorado of the offence of possession of cannabis, nor to any person knowingly in possession of one-half ounce or more of cannabis. (Ord. 120, Series 1974)

820—OFFENSES RELATING TO MORALS

821 . 821—NARCOTICS AND INTOXICATING LIQUORS

.1. Unlawful Possession of Injection Devices.

.1-1. It shall be unlawful for any person to possess any hypodermic

Senator BAYH. Thank you. We will have questions later. We will hear the other panelists.

Mr. Stroup, will you proceed?

I understand you have a prepared statement to submit and it will be included in the record [1] after your oral testimony.

STATEMENT OF R. KEITH STROUP, DIRECTOR, NATIONAL ORGANIZATION FOR THE REFORM OF MARIHUANA LAWS

Mr. STROUP. Mr. Chairman, I represent a slightly different perspective than the other panelists, and I appreciate the opportunity to participate.

I am the director of an organization called NORML, the National Organization for the Reform of Marihuana Laws.

We are a nonprofit public interest lobby, whose only purpose, since we began some 5 years ago, has been to attempt to remove the marihuana user for the criminal justice system.

I want quickly to disavow the tendency of people to consider NORML a pro-pot lobby. We are not attempting to encourage use, and, in fact, we support discouragement toward all recreational drug use; and that includes tobacco and alcohol, as well as marihuana.

But we also recognize that we live in a culture where literally millions of people do use drugs recreationally. A hundred million people drink alcohol, 60 million smoke cigarettes, and there are now 13 million people who regularly smoke marihuana.

Our position is essentially that while marihuana certainly has some potential for harm, at least among the heavy, chronic, long-term users, we are not properly addressing that risk by handing a criminal arrest record and/or the possibility of jail to the person who smokes.

Our organization supports the Marihuana Commission recommendation of complete decriminalization. It is our strong belief that as individuals in a free society, we have a constitutional right to make the final choice, once well-informed, as to whether we choose to take the risk of smoking marihuana.

Now, most of us would hope that people would not. We would hope that marihuana use would, in fact, decline or disappear. But if our past experience with drug use in this country is any example, that is not likely to occur. We now have 8 percent of the adult population who smoke marihuana.

These people are not generally criminal types. Nor are they any longer the stereotyped long-haired radical of the sixties.

In fact, the Marihuana Commission found that by any criteria other than their use of marihuana, marihuana smokers are indistinguishable from their nonmarihuana smoking peers.

I resent the idea that although I am an adult citizen with a value system much like yours and the rest of the people in this room, I am subject to arrest simply because I choose to smoke marihuana.

MARIHUANA CONTROL LAWS UNCONSTITUTIONAL

I believe that is unconstitutional, and we are challenging these laws in the courts. We are asking the courts to declare the private possession

[1] See p. 52.

and use of marihuana to be protected within the constitutional right to privacy. But as you know, the courts are slow to act in this area. They would prefer to see legislatures act on this.

As a result, we have over the past 4½ years presented our side of the marihuana issue to more than half of the States in legislative hearings.

Currently, 25 States and the District of Columbia are considering measures essentially similar to S. 1450. We expect that perhaps as many as a half a dozen of these will adopt some form of decriminalization this session.

As I was listening to Mr. Miller's testimony, I was thinking how similar our approaches are. The major difference is that we at NORML are simply not willing to say that because we have a heroin problem in this country, which we all know we have, and because the use of cocaine seems to be on the increase, that 13 million of us who smoke marihuana should be subjected to arrest. The Bureau of Narcotics fails to explain how this adds to a more effective enforcement policy toward heroin and cocaine.

I do not understand what Mr. Miller had in mind. I do not see how my possession of an ounce of marihuana has anything to do with his catching a heroin trafficker. But even if it did, in a free society the individual is not supposed to be forced into a position of being a police agent. It becomes a matter of civil rights. And the 13 million of us who occasionally smoke marihuana should not be subject to arrest simply so the Drug Enforcement Administration can have a more impressive enforcement record.

The real opposition to decriminalization in any form, whether a civil-fine version or the complete decriminalization as recommended by the Marihuana Commission, is a legitimate concern that without criminal penalties there will be a giant increase in usage.

OREGON LAW RESULTS: NO INCREASE IN USAGE

While that is a legitimate concern, it is one that is not borne out in fact. As you may know, in the State of Oregon about 28 months ago, criminal penalties were removed for small amounts of marihuana. A year after that new laws was put into effect, a survey was taken by the Drug Abuse Council, an independent foundation here in Washington, D.C., in an attempt to measure any increase in usage which had occurred. The surprising results: there had been no increase in usage whatsoever following decriminalization in Oregon.

In addition, the people who do not smoke marihuana—91 percent of the adults do not use marihuana in Oregon despite the lack of the criminal deterrent—were asked why they do not smoke it.

Over half of the nonsmokers said they simply were not interested. The second biggest category, approximately 23 percent of the nonsmokers, said they were concerned about the health consequences. They were concerned that if they smoked marihuana it would endanger their health, a valid consideration. Only 6 percent of the nonsmokers gave law enforcement reasons for their lack of use.

I think what we are showing is something that many people have suspected for a long time; drug use patterns in this country operate almost totally independent of the criminal law. Certainly this is true

as to drugs like marihuana, which are culturally accepted by at least a growing minority of our population.

So, what our organization is suggesting and what the sponsors of S. 1450 are trying to accomplish is this. There is still great disagreement in this country as to what our ultimate policy concerning marihuana should be. Some people favor a legally controlled market. In other words, eliminate the black market. This would permit age controls, and quality controls and consumer protection measures which are simply not possible with a black market. But there is not yet sufficient political support for that step in the country. And, in fact, this step would be in conflict with our obligations under the Single Convention Treaty of 1961, an international drug control treaty.

Decriminalization in any of its forms is a middle position. It allows us to call a moratorium on minor marihuana arrests. We call a "cease-fire" on arrests for small amounts. That gives us 2 or 3 years during which we can deliberately work out a long-term marihuana policy with better data, with better knowledge of how the various systems have worked, but without the necessity of sacrificing a half million young peoples' careers every year. That is why we support S. 1450.

The civil-fine approach is not our concept. As a marihuana smoker myself, I resent the idea that someone could fine me. But I resent even more adamantly the concept that under current law they can arrest me and throw me in jail. So we see S. 1450 as a compromise, cease-fire measure, which we certainly support. But it is an interim measure and. eventually we should go the full step and eliminate penalties altogether.

[Testimony continued on page 96.]

STATEMENT TO THE

SUBCOMMITTEE ON JUVENILE DELINQUENCY OF THE

JUDICIARY COMMITTEE OF THE UNITED STATES SENATE

BY R. KEITH STROUP

DIRECTOR, NATIONAL ORGANIZATION FOR THE

REFORM OF MARIJUANA LAWS (NORML)

WEDNESDAY, MAY 14, 1975

Mr. Chairman and members of the Subcommittee, I appreciate the opportunity to appear here today and to present our views on S1450, the Marijuana Control Act of 1975. NORML is a non-profit, public interest group seeking a non-criminal response to the private use of marijuana. NORML is supported by approximately twenty thousand active members, and works through public education, with the legislatures, and in the courts.

NORML does not advocate or encourage the use of marijuana, and fully supports a policy of discouragement of all recreational drug use ... including alcohol and tobacco, as well as marijuana ... aimed especially at adolescent use. But we oppose the use of the criminal law against persons who, despite a policy of discouragement, choose to smoke marijuana.

NORML supports the recommendation of the National Commission on Marijuana and Drug Abuse (the Shafer Commission), that the personal use of marijuana be decriminalized. That is, persons found in the possession of a small amount of marijuana for personal use should not be subjected to the criminal process. Thus we have supported, and we have asked others to support, the proposals over the past three years of Senator Jacob Javits and Congressman Edward Koch to amend the federal criminal code to incorporate this recommendation. Additionally, in the three years since the Shafer Commission issued its report on marijuana, Marijuana: A Signal of Misunderstanding, NORML has worked toward the passage of similar marijuana decriminalization proposals in more than half the states.

I regret to report that during that time, the only state to enact the Commission's recommendation ... and then in a modified form ... was Oregon. As you know, in October of 1973 the state of Oregon adopted a civil fine system, enforced with a citation rather than a criminal arrest, for minor marijuana violations. I should add, however, that 21 states and the District of Columbia are presently considering similar proposals.

During the same three year period, the numbers of persons arrested on marijuana charges in this country continued to rise dramatically: from approximately 226,000 arrests

annually to 420,000 annually, and that latter figure represents only the year 1973. The arrest figures for marijuana offenses for 1974 are expected to exceed half a million, and should be released by the FBI within the next few weeks.

The social costs of these arrests are staggering. A study by the California state legislature determined that each arrest costs at least $1,500 to process. Projected nationally, the states may be spending nearly half a billion dollars a year to make marijuana arrests, 93% of which the Shafer Commission found were for simply possessing small quantities of marijuana. The cost to the individual in terms of future opportunities lost through the permanent scar of a criminal arrest record is impossible to calculate.

Since the Javits-Koch proposals were first introduced in the Congress, the debate about a workable and sensible marijuana policy in this country has been steady and growing. We are seeing an emergence of a new national consenses forming around the concept that indeed marijuana use should be discouraged, but that the criminal justice system is an inappropriate, costly and unduly harsh system by which our society indicates its disapproval.

Will a change in the law signal increased usage, a fear often expressed by opponents to decriminalization? No, according to surveys conducted in Oregon one year after

their law was changed. The survey, conducted by the Drug Abuse Council, an independent Washington, D.C. foundation, showed no apparent increase in marijuana usage.

Moreover, other surveys taken by the Drug Abuse Council measured the attitudes of citizens in the state of Oregon and in neighboring California. The surveys indicated that those who do not use marijuana, which comprises 91% of the adult population, do not themselves consider the presence of criminal penalties an important deterrent. Most cited a general lack of interest, or an honest concern that its use might be detrimental to their health, as reasons why they did not smoke marijuana.

The Oregon experience has provided valuable benchmarks to measure the impact of decriminalization. But we must also consider the other side of the marijuana issue: the health questions. This side unfortunately has been subjected on occasion to exploitations and distortions in the popular media. The result is public confusion. Unverified claims by researchers who themselves admit to a strong moral bias against marijuana were accepted as fact and repeated widely and often throughout the media. Meanwhile, follow-up studies conducted with more stringent controls and more objective interpreters have often contradicted or significantly negated the importance of the earlier claims. Instead of clarification in the media, the newer findings have been largely ignored.

Let me stress that NORML does not consider marijuana to be a harmless drug. But we do believe that the potential for marijuana's harm, especially if used at moderate levels, as is the case with the vast majority of marijuana smokers in this country, has been grossly exaggerated.

For a current and objective evaluation of the present state of marijuana research in this country, I would direct the Committee's attention to the 1974 Annual Report submitted to the Congress by the National Institute of Drug Abuse (NIDA), Marijuana and Health, and to special reports appearing in the March and April issues of Consumer Reports magazine. Their conclusion, and I think a reasonable and responsible one, is that adolescent use in particular should be avoided, and that marijuana may have a potential for harm to the user, especially with chronic, long-term heavy use. However, NIDA Director Dr. Robert L. DuPont has this to say concerning the more recent claims:

> The implications of these preliminary studies are, at this point, speculative.... Thus far there is no clinical evidence indicative of such consequences although continuing research is obviously required.

To effectively discourage the use of marijuana, the government must continue to direct a comprehensive research effort into all potential dangers from the use of marijuana. This information, presented in an honest and straightforward manner, should then be made available to all persons who use or may

consider the use of marijuana in an effort to demonstrate what possible harm may be present. In particular, these efforts should be directed towards youth. This is precisely the program envisioned by the Javits-Koch bills over the past three years. Marijuana usage would continue to be discouraged by focusing law enforcement efforts against the commercial trafficker and by warnings of potential health hazards.

Many legislators are not yet willing to remove all penalties for the use of marijuana. They tell us privately that they are concerned that this would be erroneously viewed by their constituents as a "permissive" step. This is why I think we are finding considerable political support for a system based on the Oregon experience, in which the user is subject to a maximum $100 civil ciation, and is removed from the process of the criminal law. The maintenance of the civil citation system is intended to dramatize more strongly that marijuana use is not approved conduct, but in a manner incurring less social and individual costs, and more responsive to current attitudes toward marijuana.

NORML would prefer a policy of complete decriminalization as recommended by the Shafer Commission. There is, however, good cause to actively and aggressively support a civil fine system. Persons using marijuana may be endangering their own health, at least if they fall into the pattern of heavy,

long-term usage, but they are in no sense criminal. The Shafer Commission found that the vast majority are responsible and productive citizens.

In a free society the individual is permitted, though discouraged, to take certain risks as long as they do not endanger others. Skydiving, drinking alcohol, smoking cigarettes and over-eating are but some of the high risk activities people engage in every day. Yet they remain free from arrest. From the best available evidence, smoking marijuana is far less harmful. But the 13 million persons who regularly smoke marijuana are still classified as criminals by the law of 49 states and the federal government.

We cannot in good conscience sit by and continue the frustratingly slow but necessary process of gathering public and legislative support for complete decriminalization, while watching the arrest figures for minor marijuana infractions skyrocket.

The Marijuana Control Act of 1975 (S1450), while allowing a moderate civil fine to be imposed against people found in possession of small amounts of marijuana, eliminates the entire process of arrest and jailing, and the attendant criminal record. The concept of an informed free choice is preserved. Equally important, under the bill the police officer will no longer be asked to attempt to control morals with a nightstick. For most jurisdictions this will represent a considerable time

savings which can be expended in dealing with the mounting toll of serious crime.

NORML supports these efforts as a "cease-fire" approach to this continuing and troublesome issue on the domestic front. We support these bills because we honestly believe it is important now to immediately stop the tragic pattern of criminal arrests. This will allow all sides more time to make a deliberate determination of whether society should go further and remove all penalties.

I have attached to my statement a comprehensive legislative memorandum which describes in greater detail NORML's position on this issue.

V. Conclusion

I. Brief Legal History of Marijuana

Marijuana has been used as an intoxicant in various parts of the world for centuries, and in this country since before the turn of the century. However, its use in the U.S. was generally limited to minority groups, including the Chicano migrant workers in the Southwest and blacks in and around New Orleans. As a result, there was little opposition when states first began to ban its sale, Utah passing the first anti-marijuana law in 1915. Sixteen Western states had adopted anti-marijuana laws by 1930.

In the East, New York state led the way in 1927 with what proved to be the model for the Uniform Narcotics Act.

The Federal Bureau of Narcotics was created in 1930. The marijuana scare had already begun, as evidenced by the many state laws already in existence. But with the start of the Bureau came the first coordinated effort to convince the U.S. public that marijuana was a "killer weed."

Harry Anslinger, the ex-prohibition agent who was named the Bureau's first director, began a campaign that included lobbying for passage of the Uniform Narcotics Act, with an optional provision making marijuana illegal, on the state level and the Marijuana Tax Act federally. By 1937, when the first federal law was passed, marijuana was already illegal in every state and was thought to cause crime and "sexual excess."

In 1951 the Boggs Act raised penalties for drug offenses and for the first time in federal law introduced the concept of minimum mandatory sentences. Additional amendments in 1956 raised federal penalties for drug offenses to their zenith.

During the next decade, marijuana usage skyrocketed. Although never satisfactorily explained, marijuana use became identified with the youth culture of the sixties that was opposing the Viet Nam war. Marijuana became a symbol of dissatisfaction and rebellion, feared by the establishment more for the perceived threat to their value system than for any medical threat.

The rebellious youth of the 60's were generally middle class and white. So marijuana began to enter the mainstream of political America. As the arrests rose -- arrests not of blacks or Chicanos -- but suburban, white, middle class kids -- pressure began to mount to moderate criminal laws against the user.

In 1970, as part of the Controlled Substances Act, federal penalties for possession of all drugs were lowered from a felony to a misdemeanor, with a special provision for first offenders that permitted the defendant who pleads guilty or is found guilty to be placed on a conditional probation which, if the terms are fulfilled, result in the charges being dismissed. Since no adjudication of guilt is ever entered by the

court, the defendant can subsequently report that he has never been convicted of a crime.

Further, if the person when arrested was not over 21 years old, he qualifies to have his arrest records "expunged."

Following the lead of the federal government, states began to similarly moderate their marijuana penalties over the ensuing four years. Where once all states treated possession of small amounts of marijuana as a felony, by 1974 all had reverted to the misdemeanor level, although a few still give the prosecutor and/or the judge the choice of proceeding as a felony or a misdemeanor.

And one state, Oregon, has classified possession of small amounts of marijuana as a civil violation, removing the user from the criminal law altogether.

II. Marijuana Usage Today

According to surveys taken in October 1972 by the National Commission on Marijuana and Drug Abuse (Shafer Commission), 26 million Americans had tried marijuana and 13 million were regular users. This breaks down to 16% of the adult population over 18, and 14% of youth between 12 and 17. Two-thirds of all college students have tried marijuana, as have 55% of persons 18-21 years old and 40%

of the age group 22-25. Recently released survey results taken in October 1974 by the independent, Washington, D.C. based Drug Abuse Council indicate that 18% of the adults have now tried marijuana (approximately 30 million Americans), with 8% continuing to use it (13 million). It is noteworthy that despite recent alarmist claims by Senator Eastland and others, in fact there is no "epidemic" of marijuana use in this country. The number of current users has remained constant since 1972.

The individual who smokes marijuana today hardly fits the stereotyped image concocted in the 1930's -- the depraved criminal who got "high" on his reefer and committed vicious crime. In fact, the Shafer Commission found -- "the most notable statement that can be made about the vast majority of marijuana users -- experimenters and intermittent users -- is that they are essentially indistinguishable from their non-marijuana using peers by any fundamental criterion other than their marijuana use."

The use of marijuana today is socially the equivalent of the use of alcohol by most of our citizens. It is the recreational drug of choice of a growing minority.

III. Is Marijuana Dangerous to the User?

No drug is totally harmless, including marijuana. But the evidence strongly suggests no significant harm is caused by the occasional use of marijuana and whatever risk is involved with marijuana is far less than the demonstrated harm from a number of other drugs permitted in our society.

We should continue to look for potential ill effects from the use of marijuana -- especially the chronic, heavy use. But any findings of potential harm should be used to discourage use, not to justify treating the user as a criminal. As Dr. Tom Bryant, president of the Drug Abuse Council recently stated:

> "...we should not permit a medical debate to frustrate the decriminalization policy recommended by the Marijuana Commission. Even if marijuana were eventually shown to be as dangerous as alcohol or tobacco, giving a criminal record to the user only exacerbates the potential harm."

This past year we have heard several new claims of potential harm from marijuana use. These claims have received widespread media exposure, often far greater than the substance of the study warranted. Because of inadequate controls, excessive dosage levels, the known bias of the researchers, or for other reasons, the claims often fall flat under close objective examination. Unfortunately the public is left only with the original, unfounded impression.

A glaring recent example is the Report of the U.S. Senate Subcommittee on Internal Security entitled "Marijuana-Hashish Epidmeic and its Impact on United States Security." Subcommittee Chairman James O. Eastland talked of a "marijuana-hashish epidemic," a pending "national disaster," and "a large population of semi-zombies."

The Senator's answer to this perceived threat: wage an all-out propaganda campaign, beginning with the distribution of his admittedly unbalanced one-sided Report. Senator Eastland refused to permit anyone to testify unless their testimony would support his premise -- that marijuana was highly dangerous, medically and morally. The result is a biased, frightening document offering little scientific value and no solutions.

Yet, because the Eastland hearings were reported by a generally uncritical press, there now appears to be a rather widespread belief that recent studies have shown marijuana to be terribly dangerous.

Each year the Department of H.E.W. attempts to summarize the research on marijua and to reach some conclusions about the potential dangers. In their recently released Report for 1974, National Institute for Drug Abuse (NIDA) Director Dr. Robert L. DuPont discusses the recent claims:

> "These more recent studies deal with three areas of concern. They are: effects on male sex hormone levels, interference with the body's immune

> response and effects on fundamental cell metabolism. The implications of these preliminary studies are, at this point, speculative. There is concern that alteration in hormone levels as a result of chronic use may interfere with normal adolescent development or with sexual differentiation of male fetuses if cannabis is used by pregnant women at critical periods of fetal development. Effects on the immune response and on cell metabolism might seriously affect resistance to disease or result in a variety of degenerative or genetic changes. Thus far there is no clinical evidence indicative of such consequences although continuing research is obviously required." (emphasis added)

Dr. DuPont also cautioned,

> "We must also recognize that no drug with major pharmacological action -- including marihuana -- can ever be truly safe. It is inevitable that further research will disclose additional hazards. In developing rational social policy, scientific evidence of a health hazard must be balanced against social and economic costs incurred by possible alternative strategies for discouraging drug abuse."

Dr. DuPont, who also serves as chief Presidential drug advisor in his capacity as director of the White House Special Action Office for Drug Abuse Prevention, recently endorsed publicly the Oregon approach. He believes marijuana presents health risks to the user, and should be actively discouraged, but opposes the use of the criminal law for possession of small amounts.

It should be stressed that the National Commission on Marijuana and Drug Abuse, when they recommended decriminalizing the user, did not presuppose marijuana would be harmless.

And several members of the Commission have reiterated their conclusions since the Eastland Hearings.

> "No drug is totally safe or harmless. In a sense, there is no human activity which is totally harmless. However, it is my opinion that marijuana involves only a minimal risk of harm to the user. Clearly the potential harmfulness of marijuana to the user is on a much lower order of magnitude than the potential harmfulness of such other drugs as alcohol, tobacco, amphetamines, barbiturates, and hallucinogens." J. Thomas Ungerleider, M.D., Presidential Appointee to the National Commission."

> Since publication of the Commission's Report in March 1972, numerous studies have been reported, some suggesting that the dangers from marijuana are far greater than the Report indicated, others demonstrating that its use produces relatively little harm. In short, work in the last two years has not fundamentally changed the data base on which the recommendations were made." Dr. Dana Farnsworth, Presidential Appointee to the National Commission."

In response to the flurry of contradictory medical claims, the Drug Abuse Council, a Washington, D.C. based private foundation funded primarily by the Ford Foundation, recently sponsored a seminar to discuss the recent research. The major researchers were invited, including some of the most vocal opponents of marijuana. At the conclusion of the conference, following closed-door meetings involving critiques of the major work by peers, Dr. Daniel X. Freedman, the respected Chairman of the Department of Psychiatry, University of Chicago, had this to say:

> "I don't think that scientists can tell the public there is going to be any major damage to their health on the basis of the current knowledge."

This is also the conclusion of a detailed critique of the recent medical reports by award winning science writer Ed Brecher and the editors of Consumer Reports, in an update of their excellent work Licit and Illicit Drugs. The March and April issues of Consumer Reports conclude that "recent reports, like past reports, fail to prove that marijuana is either harmful or harmless." C.U. reiterated their belief that "no drug is harmless to all persons at all dosage levels or under all conditions of use."

As part of the 1974 NORML Conference, a medical panel headed by Dr. Norman Zinberg, including Drs. Lester Grinspoon, J. Thomas Ungerleider, Andrew T. Weil and David Smith, discussed these recent claims and reached similar conclusions; the risk to the user demonstrated by these studies has been grossly exaggerated by the authors and/or the media.

The potential harm from marijuana has been greatly exaggerated by those who wish to maintain criminal penalties against the user. The thrust of this campaign has been to allege that new research, unavailable when the Marijuana Commission Report was released in 1972, renders their recommendations invalid. This is an attempt to use the medical/health questions as a "red herring."

Marijuana should be decriminalized, even if it were eventually shown to be dangerous. Giving an arrest record to the user only exacerbates the potential for harm.

And while marijuana may not be harmless, neither is it a terribly dangerous drug. Certainly it presents far less of a health hazard than alcohol, tobacco, birth control pills, and a host of other drugs available in our society. Any risk to the user falls within the ambit of choice the informed individual should be allowed in a free society. So long as the research results warrant it, we should warn against the use of marijuana, but we should not criminalize those who ignore our advice.

IV. The Legal Options

There are three general approaches to marijuana available to society.

A. Continued Criminal Prohibition

Even those who oppose decriminalization (E.G. Senator Eastland) no longer want the smoker sent to jail. They claim the criminal law should be maintained as discouragement, though only enforced with fines and suspended sentences, with jail saved for repeat offenders or exceptional circumstances.

Costs of Continued Criminal Prohibition

But the costs of continued criminal prohibition are great.

1. ARRESTS

According to the F.B.I., more than one million persons have been arrested for marijuana offenses in this country in the last four years.

TOTAL MARIJUANA ARRESTS NATIONALLY

Year	Total Marijuana Arrests	% of Total Drug Arrests	Increase Over Prior Year	Total Drug Arrests
1970	188,682	45.4%	--	415,600
1971	225,828	45.9%	19%	492,000
1972	292,179	55.4%	29%	527,400
1973	420,700	66.9%	43%	628,900
TOTAL	1,127,389			2,063,900

Source: Uniform Crime Reports Federal Bureau of Investigation

And note that 62% of those arrested were under the age of 21 and 88% of those arrested were under the age of 26.

A statistical analysis of state marijuana arrests by the Shafer Commission uncovered the unsettling fact that 93% were for possession -- not sale -- and two-thirds of these involved the quantity of one ounce or less. Only 7% of the arrests were against the commercial trafficker.

In sum, what we're doing in this country is arresting more than 400,000 young people each year, the vast majority possessing small quantities of marijuana for their personal use.

2. LAW ENFORCEMENT RESOURCES

The use of the criminal law is a costly and inefficient instrument of enforcing moral standards or combatting different life styles. The marijuana laws stifle the already overburdened and overcrowded criminal justice system with the processing of hundreds of thousands of minor arrests. Over 10% of all defendants charged in federal courts in 1973 were charged with marijuana violations. In 1970, this figure was less than 1%. A vast amount of valuable police and prosecutorial time and resources are used to prosecute marijuana cases, diverting law enforcement resources away from the control of serious crime. Nationally, it is estimated that approximately 600 million dollars is spent annually enforcing the marijuana laws.

3. RESPECT FOR THE LEGAL SYSTEM

To the millions of young people who are defined as criminals, the marijuana laws engender disrespect and bitterness for the entire legal system. They resent being defined as criminal for their use of marijuana in a system which permits, and it often seems encourages, the use of such proven dangerous drugs as tobacco and alcohol.

The enforcement of the marijuana laws is often selective, applied only to those whose life style or political views are not popular. Thus the marijuana laws are viewed as mostly political, a threat to apply when the offender gets "out of line."

Alleged Benefit from Criminal Prohibition

The primary benefit of criminal prohibition is the alleged deterrent effect of the threat of criminal prosecution. This assumes that if we removed the criminal penalties, marijuana usage would increase greatly. Thus, it is reasoned, the costs of criminal prohibition are justified in our fight against drug abuse in this society.

First, one cannot help but conclude that 35 years of criminal prohibition have failed miserably as a deterrent to use. In 1937, when the federal law was passed, it is estimated that there were, at most, 50,000 smokers in the country. Today there are 13 million regular smokers. Consumers Union recently concluded, in Licit and Illicit Drugs:

> "It is now much too late to debate the issue: Marijuana versus no marijuana. Marijuana is here to stay. No conceivable law enforcement effort can curb its availability."

Also, the change to a decriminalization approach in Oregon was effected without any apparent increase in usage. The Drug Abuse Council surveys taken after one year uncovered the following:

1) there has been no significant increase in persons smoking marijuana in Oregon; and

2) those who do smoke marijuana actually reported a decrease in usage (40% reported a decrease; only 5% an increase).

Therefore, decriminalization should not be seen as leading inevitably to increased usage. In fact, in Oregon where we have accumulated some experience, that has not been the result.

B. Legalize the Sale and Use of Marijuana

There are those who favor the adoption of a legal market in order to exercise control over the currently uncontrolled, black market.

With a black market, there is no way to impose age, strength or quality controls. With proper controls, the potential harm from marijuana might be minimized. The country made this decision with alcohol in 1931, and will likely eventually reach the same conclusion as to marijuana.

However, this is not currently a political option. First, the concept of legal marijuana is still opposed strongly by the public. Misunderstood, legalization is seen as a permissive step, opposed by around 80% of the population. Second, our international treaty obligations, under the Single Convention Treaty of 1961, would be in conflict with such a system. These obligations could be redefined, and probably will be eventually, but this argument would be immediately raised should a legalization bill be introduced federally.

The Marijuana Commission rejected this option on the basis that such a system would institutionalize marijuana use. They said they preferred to continue to discourage marijuana use and to see if its popularity diminished. That was their rationalization for decriminalizing use without providing a legal market.

C. Decriminalize the User

Decriminalization was the brainchild of the Shafer Commission. It was intended to balance the potential harm to society from marijuana, or the perceived threat to society's value system from its use, with the need to eliminate the social costs in wrecked lives and careers from bringing criminal charges against so many of our citizens.

Decriminalization, by eliminating criminal penalties from the user, allows the police resources to be concentrated against the commercial seller. This is consistent with a discouragement effort, and morally more defensible.

Since the Marijuana Commission made its recommendation in March of 1972, the concept of decriminalization has been endorsed by a growing list of organizations, including:

American Bar Association
Consumers Union, publishers of Consumer Reports
National Conference of Commissioners on Uniform State Laws
American Public Health Association
National Advisory Commission on Criminal Justice Standards and Goals

National Council of Churches
The Governing Board of the American Medical Association
National Education Association
B'nai B'rith
Canadian Commission of Inquiry into the Non-Medical Use of Drugs (Le Dain Commission)
San Francisco Committee on Crime
Mayor's Advisory Committee on Narcotics Addiction (Washington, D.C.)
American Academy of Pediatrics
Illinois Bar Association
Minnesota Bar Association
Vermont Bar Association
New York Bar Association
Washington Bar Association
Massachusetts Bar Association

In addition, three state legislatures have made their own studies (California, New Jersey and Massachusetts) and have all recommended decriminalization.

The concept has recently been endorsed editorially by William F. Buckley, Jr., James J. Kilpatrick, Ann Landers, The Washington Post, The New York Times, The Boston Globe, The Los Angeles Times, The Chicago Sun-Times, and a host of others.

OREGON

In October, 1973, the state of Oregon adopted a modified form of decriminalization which defined possession of up to one ounce of marijuana as a violation, subjecting the violator to a maximum $100 civil fine. Criminal penalties were retained for all other categories.

Opponents of the bill argued that marijuana use would greatly increase if criminal laws were removed.

But surveys taken by the Drug Abuse Council after the law had been in effect one year showed no increase had, in fact, occurred. And the law has been accepted warmly by the voters. According to this recent survey, 58% of the Oregonians approve of the new law, only 39% favor reverting to stronger penalties.

Other attempts to analyze the Oregon experiment have reached similarly favorable conclusions.

A recently released report by the Legislative Research Office of the Oregon Legislature concluded after one year that

> "it appears that the laws have not caused the major problems for the state which some had predicted, and that the laws have for the most part, been accepted or approved of by those officials who are responsible for enforcing and administering them."

Mr. Pat Horton, District Attorney for Lane County, Oregon, agrees. After one year, Mr. Horton says,

> "Decriminalization has, in fact, prioritized police work into areas of violent crime and crime against property....Currently law enforcement officers spend more time in the area of violent crimes and, thus, better serve their community....The relationship between the youth in the community and the police has improved substantially....It has removed from the docket approximately one-third of the total number of cases awaiting trial."

"Acceptance of the new legislation in Oregon has been been overwhelmingly positive," Horton observes. By all measurable standards, decriminalization was a comfortable transition, signifying fair play to the individual and widespread acceptance by our electorate."

And Consumer Reports, in the April 1975 issue, offers the following opinion of the Oregon experience:

> "CU's research for "Licit and Illicit Drugs" impelled us to be among the first national organizations to recommend marijuana decriminalization -- that is, the removal of all criminal penalties for marijuana possession and personal use."
>
> "Oregon's experience with the practical results of decriminalization buttresses our decision to remain on that list."

Based upon that favorable experience, Oregon type decriminalization bills are now being considered in many states and on the federal level.

This concept, classifying marijuana as a civil-fine offense, was a minority recommendation of the Marijuana Commission, favored by the Commission's only two House members, Congressmen Tim Lee Carter (D-Ky) and Paul Rogers (D-Fl), and by former director of the Illinois Bureau of Investigation, Mr. Mitchell Ware.

V. Conclusion

Public attitudes towards marijuana smoking have changed dramatically over the past few years. Where once stiff jail penalties were required for someone caught with a small amount of marijuana, small fines and suspended jail sentences are routine in almost all jurisdictions today.

But the laws remain, and so do the arrests. In fact, the number of young people arrested grows each year, and

that means costly attorney's fees, life-long criminal arrest records with their debilitating impact on one's educational and career opportunities, as well as the costly drain on law-enforcement resources, badly needed to combat serious crime.

Decriminalization represents a compromise with significant and growing public support. In fact, recent surveys demonstrate that no elected official need fear reprisal, as the public attitudes have shifted dramatically. Bills to eliminate criminal penalties for minor marijuana violations are now being considered in more than 20 states and by the Congress. Several are expected to pass this session.

Decriminalizing the marijuana smoker represents a common-sense approach which deserves support.

STATEMENT ON CONCENTRATED FORMS OF CANNABIS

NORML shares the recommendations of the National Commission on Marijuana and Drug Abuse that statutory distinctions based on potency are neither desirable nor feasible at the present time. Because of current usage patterns and the practical problems inherent in controlling potency in an unregulated market, distinctions between less potent and more potent varieties are unwarranted, impractical and unfair.

STATEMENT ON MARIJUANA AND DRIVING

NORML strongly discourages the driving of automobiles or other vehicles while under the influence of marijuana or any other drug, and recognizes the legitimate public interest in prohibiting such conduct.

(Exhibit No. 4)

NORML STATEMENTS OF POSITION AND POLICY

The following Statements of Position and Policy were formally adopted at the 1975 annual meeting of the NORML Board of Directors, Executive Committee and Advisory Board. The Statements represent the official positions of NORML, and are subject to annual review.

Washington, D.C.
December 5, 1975

Washington, D.C. 20037

National Organization for the Reform
of Marijuana Laws
A Non-profit, Public Interest Group

STATEMENT ON DECRIMINALIZATION

NORML supports the removal of all criminal and civil penalties for the private possession of marijuana for personal use. The right of possession should include other acts incidental to such possession, including cultivation and transportation for personal use, and the casual, non-profit transfers of small amounts of marijuana.

STATEMENT ON PERSONAL USE AND POSSESSION

Removal of criminal penalties for the individual who uses or possesses marijuana in private is consistent with traditional American values of personal choice, individual freedom and the right of privacy. Decriminalization is not based on the premise that marijuana use is harmless or that it should be encouraged, but rather that such use should fall within the ambit of individual choice permitted in a free society. It is a social policy aimed at reducing the harm caused by defining marijuana users as criminals.

By removing penalties for the user, without establishing a legal market, a clear public policy of discouragement is continued. Such a policy reduces the immense human, fiscal and social costs of marijuana prohibition by allowing law enforcement efforts to be concentrated on commercial traffickers, particularly those who sell truly dangerous drugs or who sell any drugs to minors.

NORML is opposed to arbitrary quantity limitations as the standard for defining what constitutes possession for personal use. Marijuana users, like wine drinkers and tobacco smokers, often have more marijuana in their posession than can be immediately consumed. Similarly, individual usage and consumption patterns vary greatly. While quantity limitations appear to be a necessary interim statutory approach to decriminalization, the law should reflect the reality of differences in usage patterns and behavior and should recognize the inherent shortcomings of arbitrary ounce limitations.

STATEMENT ON CULTIVATION FOR PERSONAL USE

The right to possess marijuana for personal use includes the right to grow small amounts for personal consumption. Removal of criminal penalties for the private cultivation of marijuana for personal use provides a legal source of supply for marijuana without resort to the establishment of a legal distribution system.

An individual who grows small amounts of marijuana for personal use is apt to be less involved in the illicit drug culture and will have less contact with drug dealers who have an economic incentive for selling other more dangerous—and more expensive—drugs.

STATEMENT ON NON-PROFIT TRANSFERS

The right to possess marijuana for personal use should include the right to transfer small amounts of marijuana between adults for insignificant consideration.

The National Commission on Marijuana and Drug Abuse, in attempting to differentiate between users and sellers, found that the distinction is more meaningful if the "seller" designation is limited to commercial traffickers.

Most smokers share their marijuana with friends, and often the courtesy is returned. Thus they may purchase more marijuana than they personally will use, selling some to friends at cost. Such transfers, involving little or no profit, should be treated as incidental to personal use, rather than commercial sale or furnishing.

STATEMENT ON UNLAWFUL SALE

It must be recognized that where personal use and possession of marijuana are no longer serious crimes, it is both inconsistent and irrational to provide lengthy prison terms for those who distribute marijuana for profit.

STATEMENT ON DISCOURAGING USE

NORML fully supports a discouragement policy towards the recreational use of all drugs, including alcohol, tobacco and marijuana. This policy should be implemented by a public education campaign aimed at warning users and potential users of the risks involved with the use of all recreational drugs. Such warnings should reflect an honest scientific and medical concern. Similarly, advertising which encourages the recreational use of drugs should not be permitted.

Most importantly, criminal penalties should not be applied against those who use such drugs, despite warnings to the contrary. The limits of the criminal sanction must be recognized and not diluted through application to private social conduct which constitutes no direct threat of harm to others. Society should have confidence in the ability of informed individuals to make decisions as to whether they choose to assume whatever personal risks accompany recreational drug use.

STATEMENT ON LEGALIZATION

Legalization of marijuana generally refers to a system for the sale or distribution of marijuana which is authorized by law. As recommended by such organizations as Consumers Union, studies should be undertaken to consider alternative regulatory models which would both minimize the potential for abuse and not encourage use. Specifically, NORML favors appointment of a Commission to conduct such a review.

I. Brief Legal History of Marijuana

Marijuana has been used an an intoxicant in various parts of the world for centuries, and in this country since before the turn of the century. However, its use in the U.S. was generally limited to minority groups, including the Chicano migrant workers in the Southwest and blacks in and around New Orleans. As a result, there was little opposition when states first began to ban its sale, Utah and California passing the first anti-marijuana laws in 1915. Sixteen Western states had adopted anti-marijuana laws by 1930.

In the East, New York state led the way in 1927 with what proved to be the model for the Uniform Narcotics Act.

When the Federal Bureau of Narcotics was created in 1930, the marijuana scare had already begun, as evidenced by the many state laws already in existence. But with the start of the Bureau came the first coordinated effort to convince the U.S. public that marijuana was a "killer weed."

Harry Anslinger, the ex-prohibition agent who was named the Bureau's first director, began a campaign that included lobbying for passage of the Uniform Narcotics Act, with an optional provision making marijuana illegal, on the state level and the Marijuana Tax Act federally. By 1937, when the first federal law was passed, marijuana was already illegal in every state and was thought to cause crime and lead to insanity.

In 1951 the Boggs Act raised penalties for drug offenses and for the first time in federal law introduced the concept of minimum mandatory sentences. Additional amendments in 1956 raised federal penalties for drug offenses to their zenith.

During the next decade, marijuana usage skyrocketed. Although never satisfactorily explained, marijuana use became identified with the youth culture of the sixties that was opposing the Viet Nam war. Marijuana became a symbol of dissatisfaction and rebellion, feared by the establishment more for the perceived threat to their value system than for any health threat.

The rebellious youth of the 60's were often middle class and white. So marijuana began to enter the mainstream of political America. As the arrests rose -- arrests not of blacks or Chicanos -- but suburban, white, middle class kids -- pressure began to mount to moderate criminal laws against the user.

In 1970, as part of the Controlled Substances Act, federal penalties for possession of all drugs were lowered from a felony to a misdemeanor, with a special provision for first offenders that permitted the defendant who pleads guilty or is found guilty to be placed on a conditional probation which, if the terms are fulfilled, results in the charges being dismissed. Since no adjudication of guilt is ever entered by the court, the defendant can subsequently report that he has never been convicted of a crime.

Further, if the person when arrested was not over 21 years old, he qualifies to have his arrest records "expunged."

Following the lead of the federal government, states began to similarly moderate their marijuana penalties over the ensuing four years. Where once all states treated possession of small amounts of marijuana as a felony, by 1974 all but Nevada had reverted to the misdemeanor level, and Arizona still gives the prosecutor the choice of proceeding as a felony or a misdemeanor.

And eight states, beginning with Oregon in 1973, have adopted a modified form of decriminalization; minor marijuana violations are treated with a fine only, enforced with a citation rather than an arrest, and the offender is not saddled with a permanent criminal record.

II. Marijuana Usage Today

A continuing series of U.S. government sponsored surveys beginning in 1971, complimented by Drug Abuse Council[1] surveys beginning in 1974, show that around 13 million Americans (8% of the adults and 12% of youth aged 12-17) are current[2] marijuana smokers and that a total of 34 million Americans (19% of the adults and 23% of the youth) have smoked marijuana at least once.

Interestingly, the marijuana usage rates demonstrate a number of indentifiable patterns, but there is no indication that they are in any manner related to the particular law in effect in the jurisdiction.

For example, after Oregon had removed their criminal laws on minor marijuana violations for one full year, 19% of their adults had tried marijuana, and 9% were current users.[3] This compares favorably to neighboring California,[4] which then still retained a possible 10 year felony sentence for minor possession cases, where 28% of the adults had tried marijuana and 9% were current smokers; and nationwide[5] figures showing 18% of all adults had experimented with marijuana and 8% were current smokers.

The results of follow-up surveys by the Drug Abuse Council on the second anniversary of decriminalization in Oregon showed equally favorable results: 20% of the adults had tried marijuana, while 8% are current users.[6] There has been absolutely no increase in marijuana smoking since criminal penalties were removed more than two years ago.

Of the Oregonians who did not currently smoke (91% first year/92% second year) only 6% the first year and 4% the second said that the threat of prosecution was a deterrent; the majority (53% and 65%) said they were simply not interested in marijuana, with concern about possible ill-effects to the smoker's health apparently the only accountable deterrent (23% and 28%). In neighboring California, even with the supposed threat of a ten year felony, only 12% of the non-smokers said the fear of criminal prosecution was a deterrent to them. Much as in Oregon, 50% of the non-smokers were simply not interested in marijuana, and 38% were deterred by fears of adverse health consequences.

It becomes apparent that a majority of our citizens don't smoke marijuana because they are not interested in it and because they are not yet certain of the health implications involved. This is true whether the state decriminalizes marijuana or whether it treats even minor violations as a felony. As of December, 1975, the marijuana usage patterns in Oregon were not unlike the rest of the country; but Oregonians who did smoke were not being arrested.

---

1 The Drug Abuse Council, located in Washington, D.C., was established in 1972 by a consortium of private foundations to serve as an independent source of information, policy evaluation and research funding in the field of drug use and misuse.

2 Defined as "having smoked marijuana within the past month and indicates some possibility of using again."

3 Survey of Marijuana Use - State of California, Released by the Drug Abuse Council, March 8, 1975.

4 Survey of Marijuana Use - State of Oregon, Released by the Drug Abuse Council, December 15, 1974.

5 Survey of Marijuana Use and Attitudes, Released by the Drug Abuse Council, January, 1975.

6 Survey of Marijuana Use - State of Oregon, Released by the Drug Abuse Council, December 1, 1975.

Perhaps that accounts for the widespread acceptance of the new approach. The Drug Abuse Council found that two years after decriminalization had become effective, 58% of the Oregonians approved of the new law, or a more liberal version of decriminalization, while only 40% favored a return to criminal penalties. A second survey[7] showed an even higher (61%) approval rating, with only 32% disapproving.

The major factors which appear to be determinative of the likelihood of smoking marijuana are regional (East and West Coasts are highest), age (18-25 is highest), educational level (highest rates associated with higher educational level), and population density (urban rates highest).

The following is a reprint of some highlights of a nationwide usage and attitudinal survey sponsored by the National Institute on Drug Abuse, H.E.W., released in October, 1975, with the 1974 data taken between November, 1974 and March, 1975.[8]

MARIJUANA AND HASHISH EXPERIENCE

	Adults			Juveniles (12-17)		
	1971	1972	1974	1971	1972	1974
Ever Used Marijuana	15%	16%	19%	14%	14%	23%

This same federal survey found that 86% of the American adults now oppose the imposition of any jail penalty for minor marijuana offenses, and 52% favor only a fine and/or probation.

PREFERRED HANDLING OF MARIJUANA OFFENSES

(Adults)	Possession	Sale
No penalty	16%	7%
A fine only	15%	15%
Probation	21%	10%
Require treatment	34%	1%
Up to 1 year in jail	6%	27%
More than 1 year in jail	4%	36%
No opinion	4%	4%

The individual who smokes marijuana today hardly fits the stereotyped image concocted in the 1930's -- the depraved criminal who got "high" on his reefer and committed vicious crime. In fact, the National Commission on Marijuana and Drug Abuse (Shafer Commission) found, in their March 1972 Report[9] recommending marijuana decriminalization -- "the most notable statement that can be made about the vast majority of marijuana users -- is that they are essentially indistinguishable from their non-marijuana using peers by any fundamental criterion other than their marijuana use."

The use of marijuana today by 13 million Americans is socially the equivalent of the use of alcohol by some 100 million Americans. It is the recreational drug of choice of a substantial minority.

---

9 Marijuana, A Signal of Misunderstanding, First Report of the National Commission on Marijuana and Drug Abuse, March, 1972.

III. Is Marijuana Dangerous to the User?

No drug is totally harmless, including marijuana. But the evidence strongly suggests no significant harm is caused by the occasional use of marijuana and whatever risk is involved with marijuana is within the range normally permitted in our society. The U.S. Government's chief drug expert, Dr. Robert L. DuPont, Director of the National Institute on Drug Abuse, recently announced that following massive federal research efforts, he now concludes that marijuana presents far less of a health hazard than either alcohol or tobacco.

We should continue to look for potential ill effects from the use of marijuana -- especially the chronic, heavy use. But any findings of potential harm should be used to discourage use, not to justify treating the user as a criminal. As Dr. Tom Bryant, president of the Drug Abuse Council recently stated:[10]

> ". . . we should not permit a medical debate to frustrate the decriminalization policy recommended by the Marijuana Commission. Even if marijuana were eventually shown to be as dangerous as alcohol or tobacco, giving a criminal record to the user only exacerbates the potential harm."

This past couple of years we have heard several new claims of potential harm from marijuana use. These claims have received widespread media exposure, often far greater than the substance of the study warranted. Because of inadequate controls, excessive dosage levels, the known bias of the researchers, or for other reasons, the claims often fall flat under close objective examination. Unfortunately the public is left only with the original, unfounded impression.

A glaring recent example is the Report of the U.S. Senate Subcommittee on Internal Security entitled "Marijuana-Hashish Epidemic and its Impact on United States Security." Subcommittee Chairman James O. Eastland talked of a "marijuana-hashish epidemic," a pending "national disaster," and "a large population of semi-zombies."

The senator's answer to this percieved threat: wage an all-out propaganda campaign, beginning with the distribution of his admittedly unbalanced one-sided Report. Senator Eastland refused to permit anyone to testify unless their testimony would support his premise -- that marijuana was highly dangerous, medically and morally. The result is a biased, frightening document offering little scientific value and no solutions.

Each year the Department of H.E.W. attempts to summarize the research on marijuana and to reach some conclusions about the potential dangers. In their Report for 1975, N.I.D.A. Director Dr. DuPont discusses the recent claims:

> "This report does not give marihuana a 'clean bill of health,' as some would hope. Nor does it support the fear and irrationality that still characterize some of the public debate about marihuana. Instead, it is a progress report on our effort to understand a challenging health problem with immense social, political, and economic implications."

Dr. Dupont also endorsed the Oregon approach to marijuana decriminalization, suggesting a $25.00 civil fine for minor offenses. Dr. DuPont said he believes we should continue to discourage marijuana smoking, but opposes the use of the criminal law for possession of small amounts.

---

10 "Furor Created By Recent Marijuana Studies Questioned," Release of the Drug Abuse Council, July 17, 1974.

It should be stressed that the National Commission on Marijuana and Drug Abuse, when they recommended decriminalizing the user, did not presuppose marijuana would be harmless. And several members of the Commission have reiterated their conclusions since the Eastland Hearings.

> "No drug is totally safe or harmless. In a sense, there is no human activity which is totally harmless. However, it is my opinion that marijuana involves only a minimal risk of harm to the user. Clearly the potential harmfulness of marijuana to the user is on a much lower order of magnitude that the potential harmfulness of such other drugs as alcohol, tobacco, amphetamines, barbiturates, and hallucinogens." J. Thomas Ungerleider, M.D., Presidential Appointee to the National Commission.

> "Since publication of the Commission's Report in March 1972, numerous studies have been reported, some suggesting that the dangers from marijuana are far greater than the Report indicated, others demonstrating that its use produces relatively little harm. In short, work in the last two years has not fundamentally changed the data base on which the recommendations were made." Dr. Dana Farnsworth, Presidential Appointee to the National Commission.

In response to the flurry of contradictory medical claims, the Drug Abuse Council sponsored a January 1975 seminar to discuss methodological issues of recent research. Participating in the Conference were 19 scientists, representing the disciplines of genetics, immunology, endocrinology, pharmacology, internal medicine, psychiatry, neurology, and psychology, including some of the most vocal opponents of marijuana. At the conclusion of the conference, following closed-door meetings involving critiques of the major work by peers, and Executive Summary Report[11] was released, having this to say:

> "Our present state of knowledge indicates that although there are always ample reasons to be concerned about the use of any drug, there are no new reasons to be especially disturbed by the use of marihuana."

The Drug Abuse Council Seminar also concluded that certain of the widely circulated claims should not have been released without more careful review by other researchers.

> "Also of importance in the emotionally charged area of drug use is utilizing the final check process of presenting research results to the scrutiny of scientific colleagues, before demonstrating them to a non-scientific audience who do not have always the background to make critical assessments."

This is also the conclusion of a detailed critique of the recent medical reports by award winning science writer Ed Brecher and the editors of Consumer Reports, in an update of their excellent work Licit and Illicit Drugs. The March and April 1975 issues of Consumer Reports[12] conclude that "recent reports, like past reports, fail to prove that marijuana is either harmful or harmless." C.U. reiterated their belief that "no drug is harmless to all persons at all dosage levels or under all conditions of use."

---

11 Drug Abuse Council Conference on Methodological Issues In Recent Cannabis Research, An Executive Summary Report, January 5-6, 1975.

12 Marijuana, The Health Questions, Consumer Reports, March 1975 and Marijuana, The Legal Questions, Consumer Reports, April, 1975.

Of the recent alarmist reports, C.U. had this to say:

> "Out of all of these many studies (and others not reviewed here), a general pattern is beginning to emerge. When a research finding can be readily checked -- either by repeating the experiment or by devising a better one -- an allegation of adverse marijuana effects is relatively short-lived. No damage is found -- and after a time the allegation is dropped (often to be replaced by allegations of some other kind of damage due to marijuana)."
>
> "If the test procedure is difficult -- like the air encephalograms thta Dr. Campbell employed, or like Dr. Heath's work with electrodes implanted deep in the brain -- independent repeat studies are not run in other laboratories. So these allegations of damage continue to be cited in the scientific literature and in the lay press. Then they, too, are eventually replaced by fresh allegations of marijuana damage."

The results of a federally funded study of long term (17.5 years average use) users of very strong marijuana in Jamaica indicate no serious physiological or neurological harm. The Jamaican Study[13], the first intensive, multidisciplinary study of actual marijuana smokers, found no significant differences in health or motivation between smokers and non-smokers, concluding that even heavy marijuana use

> . . . "does not diminish work drive or work ethic"
> . . . "There is no evidence of any causal relationship between cannabis use and mental deterioration, insanity, violence or poverty."

The Jamaican results were recently checked against similar studies of long-germ marijuana smokers in Costa Rica and Greece.[14] Despite extremely heavy usage for up to 20 years, these U.S. federally funded researches were unable to distinguish between the health or work performance of smokers and non-smokers. These longitudinal studies of actual marijuana smokers are convincing evidence that marijuana is relatively harmless.

The potential harm from marijuana has been greatly exaggerated by those who wish to maintain criminal penalties against the user. The thrust of this campaign has been to allege that new research, unavailable when the Marijuana Commission Report was released in 1972, renders their recommendations invalid. This is an attempt to use the medical/health questions as a "red herring."

Marijuana should be decriminalized, even if it were eventually shown to be dangerous. Giving an arrest record to the user only exacerbates the potential for harm.

And while marijuana may not be harmless, neither is it a terribly dangerous drug. Certainly it presents far less of a health hazard than alcohol or tobacco, and a host of other drugs available in our society. Any risk to the user falls within the ambit of choice the informed individual should be allowed in a free society. So long as the research results warrant it, we should warn against the use of marijuana, but we should not exaggerate the dangers nor should we criminalize those who ignore our advice.

IV. The Legal Options

There are three general approaches to marijuana available to society.

A. Continued Criminal Prohibition

Even those who oppose decriminalization (e.g. Senator James Eastland) no longer want the marijuana smoker sent to jail. They claim the criminal law should be maintained as discouragement, though only enforced with fines and suspended sentences, with jail saved for repeat offenders or exceptional circumstances.

Costs of Continued Criminal Prohibition

But the costs of continued criminal prohibition are great.

1. ARRESTS

According to the F.B.I., more than one and a half million persons have been arrested for marijuana offenses in this country in the last five years.

TOTAL MARIJUANA ARRESTS NATIONALLY

Year	Total Marijuana Arrests	Increase Over Prior Year	% of Total Drug Arrests	Total Drug Arrests
1970	188,682	--	45.4%	415,600
1971	225,828	19%	45.9%	492,000
1972	292,179	29%	55.4%	527,400
1973	420,700	43%	66.9%	628,900
1974	445,600	6%	69.4%	642,100
TOTAL	1,572,989			2,706,000

Source: Uniform Crime Reports, F.B.I.

A statistical analysis of state marijuana arrests by the Shafer Commission uncovered the unsettling fact that 93% were for possession -- not sale -- and two-thirds of these involved the quantity of one ounce or less. Only 7% of the arrests were against the commercial trafficker.

And note that 52% of those arrested were under the age of 21 and 88% of those arrested were under the age of 26.

In sum, what we're doing in this country is arresting more than 400,000 mostly young people each year, the vast majority possessing small quantities of marijuana for their personal use.

2. LAW ENFORCEMENT RESOURCES

The use of the criminal law is a costly and ineffecient instrument of enforcing moral standards or combatting different life styles. The marijuana laws stifle the already overburdened and overcrowded criminal justice system with the processing of hundreds of thousands of minor arrests. A vast amount of valuable police and prosecutorial time and resources are used to prosecute marijuana cases, diverting law enforcement resources away from the control of serious crime. Nationally, it is estimated that 600 million dollars is spent annually enforcing the marijuana laws.

3. RESPECT FOR THE LEGAL SYSTEM

To the millions of young people who are defined as criminals, the marijuana laws engender disrespect and bitterness for the entire legal system. They resent being defined as criminal for their use of marijuana in a system which permits, and it often seems encourages, the use of such proven dangerous drugs as tobacco and alcohol.

The enforcement of the marijuana laws is often selective, applied only to those whose life style or political views are not popular. Thus the marijuana laws are viewed as mostly political, a threat to apply when the offender gets "out of line."

Alleged Benefit from Criminal Prohibition

The primary benefit of criminal prohibition is the alleged deterrent effect of the threat of criminal prosecution. This assumes that if we removed the criminal penalties, marijuana usage would increase greatly. Thus, it is reasoned, the costs of criminal prohibition are justified in our fight against drug abuse in this society.

First, one cannot help but conclude that 35 years of criminal prohibition have failed miserably as a deterrent to use. In 1937, when the federal law was passed, it is estimated that there were, at most, 50,000 smokers in the country. Today there are 13 million regular smokers. Consumers Union recently concluded, in Licit and Illicit Drugs:

> "It is now much too late to debate the issue: Marijuana versus no marijuana. Marijuana is here to stay. Non conceivable law enforcement effort can curb its availability."

Also, the change to a deciminalization approach in Oregon was effected without any apparent increase in usage. The Drug Abuse Council surveys taken after one year, and again after two years, uncovered the following:

1) there has been no increase in persons smoking marijuana in Oregon; less than one-half of one percent of the adults began smoking marijuana during the first year after criminal laws were removed; and there was an apparent 1% decrease in smoking during the second year.

2) those who do smoke marijuana actually reported a decrease in usage (40% the first year and 35% the second reported a decrease; only 5% an increase).

Therefore, decriminalization should not be seen as leading inevitably to increased usage. In fact, in Oregon, where we have accumulated some experience, that has not been the result.

B. Legalize the Sale and Use of Marijuana

There are those who favor the adoption of a legal market in order to exercise control over the currently uncontrolled, black market.

With a black market, there is no way to impose age, strength or quality controls. With proper controls, the potential harm from marijuana might be minimized. The country made this decision with alcohol in 1931, and will likely eventually reach the same conclusion as to marijuana.

However, this is not currently a political option. First, the concept of legal marijuana is still opposed strongly by the public. Misunderstood, legalization is seen as a permissive step, opposed by around 80% of the population. Second, our international treaty obligations, under the Single Convention Treaty of 1961, would appear to conflict with such a system. These obligations could be redefined, and probably will be evenually, but this argument would be immediately raised should a legalization bill be introduced either federally or by a state.

The Marijuana Commission rejected this option on the basis that such a system would institutionalize marijuana use. They said they preferred to continue to discourage marijuana use and to see if its popularity diminished. That was their rationalization for decriminalizing use without providing a legal market.

C. Decriminalize the User

Decriminalization was the brainchild of the Marijuana Commission (Shafer Commission). It was intended to balance the potential harm to society from marijuana, or the perceived threat to society's value system from its use, with the need to eliminate the social costs in wrecked lives and careers from bringing criminal charges against so many of our citizens.

Decriminalization, by eliminating criminal penalties from the user, allows the police resources to be concentrated against the commercial seller. This is consistent with a discouragement effort, and morally more defensible.

Since the Marijuana Commission made its recommendation in March of 1972, the concept of decriminalization has been endorsed by a growing list of organizations, including:

American Bar Association
Consumers Union, publishers of Consumer Reports
National Conference of Commissioners on Uniform State Laws
American Public Health Association
National Advisory Commission on Criminal Justice Standards & Goals
National Council of Churches
The Governing Board of the American Medical Association
National Education Association
B'nai B'rith
Canadian Commission of Inquiry into the Non-Medical Use of Drugs (Le Dain Commission)
San Francisco Committee on Crime
Mayor's Advisory Committee on Narcotics Addiction (District of Columbia)
American Academy of Pediatrics
State Bar Associations in Illinois, New York, Washington, Massachusetts, California, Arizona and Minnesota.

In addition, nine states have made their own studies (California, Illinois, Maine, Massachusetts, Michigan, New Jersey, Pennsylvania, Virginia and Wisconsin) and all have recommended decriminalization.

The concept has been endorsed editorially by William F. Buckley, Jr., James J. Kilpatrick, Ann Landers, The Washington Post, The New York Times, The Boston Globe, The Los Angeles Times, The Chicago Sun-Times, and a host of others.

OREGON

In October, 1973, the state of Oregon adopted a modified form of decriminalization which defined possession of up to one ounce of marijuana as a violation, subjecting the violator to a maximum $100 civil fine. Criminal penalties were retained for all other categories.

A report by the Legislative Research Office of the Oregon Legislature concluded after one year that:

> "it appears that the laws have not caused the major problems for the state which some had predicted, and that the laws have for the most part, been accepted or approved of by those officials who are responsible for enforcing and administering them"

Mr. Pat Horton, District Attorney for Lane County Oregon, agrees. After one year, Mr. Horton said,

> "Decriminalization has, in fact, prioritized police work into areas of violent crime and crime against property. . . .Currently law enforcement officers spend more time in the area of violent crimes and, thus, better serve their community. . . . The relationship between the youth in the community and the police has improved substantially. . . .It has removed from the docket approximately one-third of the total number of cases awaiting trial."

"Acceptance of the new legislation in Oregon has been overwhelmingly positive," Horton observes. "By all measurable standards, decriminalization was a comfortable transition, signifying fair play to the individual and widespread acceptance by our electorate."

And Consumer Reports, in the April 1975 issue, offers the following opinion of the Oregon experience:

> "CU's research for "Licit and Illicit Drugs" impelled us to be among the first national organizations to recommend marijuana decriminalization -- that is, the removal of all criminal penalties for marijuana possession and personal use."
>
> "Oregon's experience with the practical results of decriminalization buttresses our decision to remain on that list."

And perhaps most importantly, the Drug Abuse Council Surveys indicated that there had been absolutely no increase in marijuana smoking following two years of decriminalization. The use of small civil fines instead of arrest and jail has not led to a greater number of users, as some had feared.

Based upon the favorable Oregon experience, similar citation bills have now been introduced in more than half the state legislatures, and in Congress. And seven states have recently joined Oregon in this approach -- Alaska, Maine, Colorado, California, Ohio, South Dakota and Minnesota.

SUMMARY CHART - MARIJUANA CITATION LAWS

State	Max. Fine Imposed	Max. Amount Possessed	Criminal or Civil Violation	Effective Date
Oregon	$100.00	1 oz.	Civil	Oct. 5, 1973
Alaska	$100.00	Any amount in private for personal use or 1 oz. in public	Civil	Mar. 1, 1976
Maine	$200.00	Any amount[a] for personal use	Civil	Mar. 1, 1976
Colorado[b]	$100.00	1 oz.	Class 2 petty offense - no criminal record	July 1, 1975
California[b]	$100.00	1 oz.	Misdemeanor - no permanent criminal record	Jan. 1, 1976
Ohio[b]	$100.00	100 grams (approx. 3½ oz.)	Minor misdemeanor - no crim. record	Nov. 22, 1975
South Dakota	$ 20.00	1 oz.	Civil	April 1, 1977
Minnesota[b]	$100.00[c]	1½ oz.	Civil	April 10, 1976

[a] There is a rebuttable presumption that possession of less than 1½ oz. is for personal use, and possession of more than 1½ oz. is with an intent to distribute.

[b] Distribution of marijuana by gift, or for no remuneration, is treated the same as possession in four states: California (for up to 1 oz.), Colorado (up to 1 oz.), Ohio (up to 20 gr.), and Minnesota (up to 1½ oz.).

[c] Only Minnesota provides for increased penalties for second offense: 0-90 days in jail and/or a $300 fine for second offense within a two year period.

This concept, classifying marijuana as a civil-fine offense, was a minority recommendation of the Marijuana Commission, favored by the Commission's only two House members, Congressmen Tim Lee Carter (D-Ky) and Paul Rogers (D-Fl), and by former director of the Illinois Bureau of Investigation, Mr. Mitchell Ware.

V. Conclusion

Public attitudes towards marijuana smoking have changed dramatically over the past few years. Where once stiff jail penalties were demanded for someone caught with a small amount of marijuana, small fines are now favored by a majority of our citizens, and are routine in almost all jurisdictions today.

But the laws remain, and so do the arrests. In fact, the number of young people arrested grows each year, and that means costly attorney's fees, life-long criminal arrest records with their debilitating impact on one's educational and career opportunities, as well as the costly drain on law-enforcement resources, badly needed to combat serious crime.

Decriminalization represents a "cease-fire," a compromise measure to stop the senseless and tragic arrest of hundreds of thousands of marijuana smokers each year, while we develop a rational, well thought out, long-term marijuana policy in this country.

[Testimony continued from page 51.]
Mr. STROUP. Thank you, Mr. Chairman.
Senator BAYH. Thank you, Mr. Stroup.
Mr. Horton, will you proceed with your testimony?

STATEMENT OF J. PAT HORTON, DISTRICT ATTORNEY, LANE COUNTY, EUGENE, OREG.

Mr. HORTON. Good morning, Mr. Chairman.
Thank you for the opportunity of appearing this morning.
As you know, Oregon decriminalized marihuana—the possession of small amounts under an ounce, and the use thereof—about October 1973.
If I may, I would like to share with you some of the events leading up to that legislation, as well as the effects that this has had on Oregonians for the last year and a half, and get my biases out of the way and put into perspective, perhaps, my comments.
I advocate the reduction of the penalties of marihuana. And I tell you that, sir, that you can put in perspective what I am about to say. I assure you that I will endeavor to be as frank and precise and candid, on both the strengths and weaknesses of the Oregon legislation, as I can be.
First, we went through a process of trying to identify what the issue was before our legislature—starting about January of 1973, as I remember. We utilized information from both the Shafer Commission study and the Le Dain Commission study—done in Canada, which was corroborative of the earlier study.

PURPOSE OF MARIHUANA CRIMINAL SANCTIONS

From these we attempted to focus upon the true issue, which led us to this question. If marihuana did not cause crime, if marihuana did not casually relate to hardcore drug addiction such as heroin, if marihuana was not one of the most socially damaging drugs to the individual—that is not to say that it is harmless; no doubt it is probably harmful in some degree, but certainly not as harmful as alcohol and possibly not as harmful as tobacco—what was the real purpose to maintain criminal laws for the possession or use of small amounts of marihuana?
In analyzing that ultimate question, we started to look, first, at the social impact on the community. It did not cause crime, it did not cause addiction, it was relatively harmless to the individual.
What about as a law enforcement tool, could we use possession of marihuana to interdict the flow of hard-core narcotics in the community? We started analyzing police practices and we came up with some very startling information, some of which you have already imparted in your statement. Also, the old concept of arresting the marihuana user and in turn granting him or her immunity to determine the source of supply of marihuana, did not complete the drug triangle to the heroin importer or trafficker. Most of the time we found a lot of lateral movement. We found that the possessor of small amounts of marihuana probably got it from his friend or roommate or associate and probably most often in a nonprofit type of trans-

fer. We found that we could not vertically get to the trafficker of heroin by arresting the marihuana user.

We then asked: Why, then, are there so many thousands of arrests for possession of small amounts of marihuana? A pragmatic answer was found by the fact that it is an easy arrest to make; it is an ever-present drug; it is easy to find and prosecute. Police narcotic units can make a statistical basis of success by a lot of marihuana cases.

MARIHUANA LAWS AS ENFORCEMENT TOOL

Those answers are, I believe, reinforced by Mr. Miller as he pointed out in his statement that, as far as the Department of Justice was concerned, the criminal sanction for simple possession under the Controlled Substances Act have not been applied as an enforcement measure against marihuana users. I think that is tacitly an admission that we do not really interdict the flow of hardcore narcotics by concentrating on the marihuana user—that myth has been dispelled in more progressive law enforcement departments. But, it is being retained and used by many law enforcement agencies that are not as progressive as the U.S. Department of Justice.

So, as a law enforcement tool, there is not much good that can be accomplished by strict enforcement of marihuana laws.

What about the deterrent aspect? Can we truly deter others from engaging in the use of and possession of marihuana by harsh enforcement penalties? Probably not. In 1965 there were about 18,800 arrests for possession of marihuana or marihuana-related cases. Of course, in 1973 there were 420,000 arrests.

I can assure you that law enforcement has given its best to enforcing the marihuana laws. And with the idea, of course, that it is going to deter. But it does not deter.

Senator BAYH. In the Oregon experience, have you had more arrests under the new law than under the old? Can you bring your Oregon experiences into the picture?

Mr. HORTON. Our State police have statistics which indicate more citations are issued today than before the law was changed. The Drug Abuse Council[1] indicates there is not, statistically, any significant measurable increase in marihuana use since the passage of the new law.

Senator BAYH. How many more citations?

Mr. HORTON. Approximately 30 percent more citations are issued now. Our citation program is an important vehicle for the decriminalization effort. It answers a lot of the objections that the Department of Justice has to face in its enforcement problems. In Oregon a violation is still an offense under our criminal code. Our police have discretion to issue a citation, a summons, or take into custody for further identification a person accused of possessing marihuana.

This citation system is applicable not only to the violation but it is applicable to any other type of crime, excluding the various, serious felonies. So, if a police officer comes into contact with a person who has some amount of marihuana, regardless of whether it is under an ounce or over an ounce, he has the opportunity of giving that person

[1] See p. 100.

a ticket after he has been technically arrested. For a citation is in lieu of custody, it is not in lieu of arrest. An arrest, technically, must take place first. The citation, then, is a vehicle to dispense with the bail, with the lockup and with the pretrial incarceration that take place in so many States. So, regardless of the amount, if it appears likely the person will show up in court the officer gives him a citation and the marihuana is then sent to the laboratory. It is confiscated, sent to the laboratory for analysis to determine the content and the amount. The prosecutor then decides what to do with the case.

Is he going to issue a criminal type of a charge against him or is he going to issue a civil-type violation offense? Our exclusionary rule applies, for example, if an officer illegally searches a car and finds marihuana, and then searches the trunk and finds heroin. Motions to suppress, and other exclusionary type remedies are available to that defendant to suppress the heroin charge.

You cannot use subterfuge under the marihuana statute to spinoff to have an illegal type of advantage over a suspect. So, those provisions remain intact in Oregon.

Senator BAYH. What is the benefit of that kind of suppression?

NEED TO ASSURE BASIC PRINCIPLES OF LAW ENFORCEMENT

Mr. HORTON. Well, it reaffirms the basic principle that police are to use a certain amount of dignity and fair play in the enforcement of the criminal law. Just because we decriminalized marihuana does not mean that the police may use that as a vehicle to either surreptitiously or in other illegal manners gain an unconstitutional advantage over the suspect in a related or nonrelated offense.

Senator BAYH. It would be an illegal search and seizure.

Mr. HORTON. That is correct. And subject to suppression.

But, of course, what keeps the officer honest is the fact that when he starts to conduct an illegal search and seizure, he has no idea, probably, what he is going to find. It could be less than an ounce of marihuana, it could be a machine gun, it could be heroin.

Thus, in practice, it reenforces the concept that you are going to need probable cause or a warrant to search. Decriminalizing marihuana does not weaken that constitutional protection. I think by any measurable standard, it has had good success in Oregon. It has reaffirmed a lot of the hopes about what it would do to our docket.

I remember a few years ago, nearly one-third of our docket in the courtroom was composed of marihuana cases. What a drain on a valuable resource of judicial time, prosecutor time, for such an innocuous type of offense.

It has reaffirmed, really, a practice that has taken place not only in law enforcement circles, but certainly on the bench, by most members of our judiciary today. And that is to treat marihuana offenses with either a fine or a suspended sentence.

What a waste of time it is to spend 2 days in court before a jury, prosecuting someone for possession of marihuana, to have the court impose a $50 fine.

Our priorities are messed up when we continue to do that. Recognizing that practice, police have started to lay off. The Department of

Justice affirms that laying off. The decriminalization of marihuana is an official legislative recognition of a practice that is going on in the country today.

There is still the tremendous disadvantage that marihuana arrest has on the individual. For nearly a full generation it has disenfranchised young Americans from engaging in certain practices or professions.

In Oregon, I believe, we have about 23 professions that are regulated by statutes. Thus, if you are convicted of a crime, admission to certain professions may be barred. Therefore, the mark of a criminal conviction can have serious consequences. When we talk about the 420,000 to 500,000 marihuana arrests in a year, the effect on our coming generation is a significant one. Even though young people do not get sent to jail as frequently as previously, this is not a realistic appraisal of the true punishment for their "crime."

I believe the laws must be changed to affirm what is a social practice. Certainly, legislation should conform to judicial and law enforcement practice.

SURVEY OF MARIJUANA USE - STATE OF OREGON

A majority (58 percent) of the State of Oregon residents favor the elimination of criminal penalties for the possession of small amounts of marijuana. Three out of every 10 Oregon adults approve of their state law that makes simple possession of marijuana a civil "offense"--akin to a parking ticket--carrying a fine but no jail term or criminal record. An additional 26 percent favor changes making sale and/or possession of small amounts of marijuana legal.

Oregon is the first state to abolish criminal penalties for possession of one ounce of marijuana or less and to replace them with a maximum civil fine of $100. The independent Drug Abuse Council commissioned a survey in October 1974--the first anniversary of the new legislation--to assess what changes have occurred in marijuana usage during that year and to find out what impressions Oregonians have of their new law.

The Oregon survey consisted of 802 personal interviews with adults 18 years or over, representing a balanced sample of the state's population. As might be expected, young adults--ages 18 through 29--took a more liberal view on the four legal choices regarding sale and/or possession of small amounts of marijuana. The division is sharp between those who either have or currently use marijuana and those who have never used marijuana.

ATTITUDE TOWARD MARIJUANA LAW

	Civil penalties, as is	Possession of small amounts legal	Sale and possession of small amounts legal	Stiffer penalties
	%	%	%	%
Total adults	32	15	11	39
By Age				
18-29	36	26	17	19
30-44	38	13	8	40
45-59	25	13	7	51
60 & over	27	5	9	53
By Usage				
Have used	26	37	29	7
Currently use	14	53	33	0
Never used	33	11	6	46

Two out of every ten Oregon adults have at least tried marijuana, with one out of every ten reporting that they currently use marijuana. Again, a sharp difference in marijuana usage is observed between younger adults and older adults.

MARIJUANA USAGE

	Have ever used	Never used
	%	%
Total adults	19	81
By Age		
18-29	46	54
30-44	15	85
45-59	4	96
60 & over	2	98

It appears that the number of individuals using marijuana has not significantly increased in Oregon during the year since it has removed criminal penalties for simple possession of one ounce or less. Nineteen percent of Oregon adults report that they have used marijuana at least once; 9 percent of total adults say that they currently use marijuana. Of those currently using marijuana, only 6 percent report that they have used it for less than one year, 91 percent for more than one year. All of the less-than-one-year users are between 19 and 29 years of age.

Of those individuals currently using marijuana, a large number report a decrease in usage during the last year, while only a small number report an increase.

CHANGE IN MARIJUANA USAGE

	Current users %
Decreased usage	40
Increased usage	5
No change	52

Lack of interest and possible health dangers are the most important reasons chosen for not using marijuana by those who have either never used it or those who have stopped using it. The possibility of legal prosecution and the lack of marijuana availability rank low as reasons for not currently using marijuana.

REASON FOR NOT CURRENTLY USING MARIJUANA

	Current non-users %
No interest	53
Health danger	23
Possibility of legal prosecution	4

The federal National Commission on Marijuana and Drug Abuse, after an exhaustive two-year study, estimated in 1972 that 26 million Americans had tried marijuana, with 8 million of these using it regularly. The Commission recommended that possession of marijuana for personal use no longer be a criminal offense and that casual distribution of small amounts of marijuana not involving profit no longer be an offense. Oregon is the only state to adopt, in part, this recommendation, although many other states are presently considering it.

"It is disturbing to note the dramatic increase in arrests for simple possession of marijuana," according to Thomas E. Bryant, M.D., President of the Drug Abuse Council. "In 1973 alone, state arrests are reported by the FBI to be in excess of 400,000.

"It seems clear that marijuana has been established as the recreational drug of choice by many Americans, youth as well as adults, and that its prohibition has had little effect upon its availability and use. Other states should take a careful look at what has happened in Oregon since it has removed its criminal penalties for small amounts of marijuana and consider moving in the same direction."

The Oregon survey was conducted by Bardsley and Haslacher, Inc., of Portland, Oregon, a marketing research firm, and consisted of several questions asked as part of a longer, regularly scheduled survey of public opinion on a variety of issues.

The Drug Abuse Council, located in Washington, D.C., was established in 1972 by a consortium of private foundations to serve as an independent source of information, policy evaluation and research funding in the field of drug use and misuse.

SURVEY OF MARIJUANA USE AND ATTITUDES:
STATE OF OREGON

New survey results in Oregon show continuing public support for the elimination of criminal penalties for the possession of small amounts of marijuana and an apparent stabilization of marijuana usage among adults.

The Oregon survey, a follow-up of one taken in 1974, reports the latest public attitudes and patterns of marijuana usage since criminal penalties were removed in that state two years ago. Both surveys were commissioned by the independent Drug Abuse Council, a Washington, D.C. based policy evaluation and research group, established in 1972 by a consortium of private foundations.

The latest survey found that a majority of Oregonians (58 percent) continue to favor the approach of the new law that makes simple possession of marijuana a civil "offense"--akin to a parking ticket --carrying a maximum fine of $100 but no jail term or criminal record. Younger adults--ages 18 through 44--share a more lenient view of the four legal choices regarding sale and/or possession of small amounts of marijuana. The division remains sharp between those who either have used or currently use marijuana and those who have never used marijuana.

By Usage				
Have used	23	44	24	9
Currently use	9	54	35	2
Never used	34	11	5	48

In the year since the first survey, there are no significant differences among adults who say they have ever used marijuana or that they currently use it. It would appear that marijuana usage has stabilized among adults in the two years since criminal penalties were removed for simple possession of one ounce or less.

MARIJUANA USAGE

	Adults who have ever used	Adults who currently use
	%	%
October 1974	19	9
October 1975	20	8

Of those currently using marijuana, only 3 percent report that they have used it for less than one year, with an additional 8 percent reporting using it for less than two years. All of the less-than-one-year users are between 19 and 29 years of age.

HOW LONG USED

	Current Users
	%
Less than one year	3
1 year to one year.11 months	8
2 years or more	87
Undecided	2

Of those individuals currently using marijuana, a large number report a decrease in consumption during the past two years, while only a small number report an increase.

CHANGE IN MARIJUANA USAGE

	Current Users
	%
Decreased usage	35
Increased usage	9
No change	54

The survey again found that the non-users gave lack of interest and fear of possible health hazards rather than punishment as the dominant reasons for not currently using marijuana.

Oregon is the first state to abolish criminal penalties for possession of one ounce of marijuana or less and to replace them with a maximum civil fine of $100. In five other states the possession of small amounts of marijuana is now subject to small fines, with little or no prospect of jail sentences or criminal records. Oregon first changed its law in 1973 and was followed in 1975 by Alaska, Maine, Colorado, California and Ohio.

61-801 O - 77 - 13

The 1975 Oregon survey consisted of 800 personal interviews with adults 18 years or over, representing a balanced sample of the state's population. It was conducted by Bardsley and Haslacher, Inc., of Portland, Oregon, a marketing research firm, and consisted of several questions asked as part of a longer, regularly scheduled survey of public opinion on a variety of issues.

The survey is part of an on-going series of activities sponsored by the Drug Abuse Council to provide public information on current drug issues. Similar surveys have recently been completed on the national level and in the State of California. The Council is supported by the Ford Foundation, Commonwealth Fund, Carnegie Corporation, Henry J. Kaiser Family Foundation and the Equitable Life Assurance Society of the United States.

[Testimony continued from page 99.]
Senator BAYH. Thank you, Mr. Horton.
Mr. HORTON. Thank you, Mr. Chairman.
Senator BAYH. Mr. Bonnie.

STATEMENT OF RICHARD BONNIE, ASSOCIATE PROFESSOR OF LAW, UNIVERSITY OF VIRGINIA, CHARLOTTESVILLE, VA.

Mr. BONNIE. Thank you, Mr. Chairman. I would like to submit my prepared statement for the record[1] and keep my opening comments brief. I know you will have some questions for all the witnesses.

I would like to begin by pointing out what I think is a basic and important inconsistency in Mr. Miller's testimony.

I think this bears directly on the issue before this subcommittee. He indicated at various points that adoption of a bill like this—and by "like this," I mean anything that is not a misdemeanor, because that seems to be what he said—would tie the hands of law enforcement in enforcing the marihuana law; that it would impair the deterrent value of the prohibition which has so successfully deterred so many people from using marihuana; and also that it might impair the "comity of nations"—other nations, seeing that we did not arrest and jail people who use marihuana or possess a couple of cigarettes for their own use, are somehow going to be let down in their effort to root out drug abuse and fulfill their international obligations. Mr. Miller suggested that all of these things would happen if we adopted a bill like this.

But on the other hand, Mr. Miller also said, with equal conviction, that the Federal Government does not enforce Federal laws against possession and personal use anyway.

So, the net result is that we have to keep it on the books and yet we do not try to enforce it. I think that here is the germ of this matter. The marihuana issue is confounded by this notion that disapproved behaviors must be crimes in order to preserve public morality.

Thurmond Arnold said, at one point, with regard to the adultery laws and laws against all other consensual sexual misconduct that we so heartily disapprove of in this society that these laws "are unenforced because we want to continue our conduct, and unrepealed because we want to preserve our morals." And I think that that is really the essence of it.

We have here the clear statement of the symbolic value of the criminal law. And under some circumstances, it seems to me that the Nation pays a heavy price for symbolism. Of course, we have a little bit more than symbolism in the case of the marihuana laws, because we also make 500,000 arrests per year for the possession of marihuana for personal use. I suppose you could count the number of arrests for adultery on the fingers of one hand. All over the country, the incidence of that disapproved behavior may parallel the incidence of marihuana use according to various studies that have been run.

Senator BAYH. Do you have any statistics?

Mr. BONNIE. No; I suppose I should have prepared myself for that. That is a harder one to get people to admit than the possession of marihuana.

[1] See p. 113.

Which, of course, leads me to my next point. Mr. Miller on behalf of the Department of Justice, had admitted that the purposes of the criminal sanction here really do come down to symbolism and deterrence. And I think that is an important admission because it brings into clearer focus the role of criminal law in a society.

The omissions are significant. He did not mention that perhaps the reason that we want to have a law against the possession of marihuana for personal use is because it is an immoral and unacceptable behavior that we want to punish; this is important because according to most of the philosophers and theoreticians about the criminal law, moral outrage really ought to be the germ of the criminal law. The criminal law should cover the behavior that tears at the very fabric of the society. And for that reason, the perpetrators of such behavior ought to be punished.

I do not mean to include in this only the notion of retribution. There is something more than that, really, because this is why deterrence is important to begin with; and this sentiment is the source of the deterrent value of the criminal sanction itself.

Clearly, there is not a body of opinion anywhere in this society that we want to punish people who use marihuana. Their behavior is disapproved, but we do not wish to punish them. That was not true, of course, when the laws first appeared on the books. Marihuana users were the "outsiders" of society—those whom society wanted to punish for almost any reason because of who they were, and their marihuana use was a convenient excuse.

Senator BAYH. Mr. Bonnie, let me suggest to you that this may be your assessment and most of the witnesses; it may be the conclusion I reach; it may be that most of the people in this room reach the same conclusion. However, I am not too sure you can't say that there are also Americans that still believe it is immoral; that it is a sin against society. Maybe the lack of informed knowledge is what we need to deal with, rather than a full assault on those who possess the drug.

Mr. BONNIE. You make a very good point. I ought to separate two points. I think that public attitude is still infected with the notion that the use of marihuana brings you several steps closer to the devil. Although perhaps not as close as heroin does. And I think that there is a great deal of public education that has to go on.

I had hoped that the establishment of the National Commission by this committee, by the Senate, and by the Congress, and the issuance of the commission's report had gone a long way toward educating the public and exposing some of the myths. And I think that some of that has occurred.

I think another point though, and the point I guess I would want to emphasize here, is that those persons like Mr. Miller, who are in a position of defending the current law before legislative committees and in the public forum, particularly from a legal side, no longer contend that the reason for doing this is because the users of marihuana are immoral and we must punish them.

Nor, do they contend, by the way—although we heard some of this during the Commission hearings—that the reason that we need to make

possession of marihuana a criminal offense is because we need a "detection device" to identify people, particularly young people, who are in emotional and psychological trouble with regard to their use of drugs. And that we need to exert some leverage over them for purposes of treating them. So, it is not that we want to punish them. We want to treat them. And there is an awful lot of this kind of defense for the criminalization, particularly for young offenders. But, as applied to marihuana use, you do not hear that anymore either.

"DETERRENCE AT WHAT COST?"

Nor, do you hear, of course, another reason for criminalization—we need to use the criminal law as a device for defining, detecting and isolating those people who are dangerous to society. And I think that we ought to recognize that there is a component of the preventive confinement in the criminal law, but it surely does not apply to marihuana users.

So, we are left with the deterrence and symbolism.

The question then becomes "deterrence at what cost"? And it seems to me that the other witnesses have elaborated a great deal on the significant price that this society now pays for whatever deterrent effect we now can get out of a law which is enforced, to be sure, but where the probability of apprehension, the probability of conviction, and surely the probability of incarceration is nowhere near what is threatened in the law books. And I think that this is an important point to make with regard to respect for law—we endanger the law as an institution by having laws like this on the books, that are enforced in the sporadic and selective way in which these laws are.

EMERGENT CONSENSUS FOR SHAFER APPROACH

This leads to my own suspicion that despite all the apparent disagreement, there is really an emerging consensus about the marihuana issue. The debate is about whether or not these laws ought to remain on the books, whether we ought to continue to keep the symbol of disapproval on the books. But beneath this dispute, I do believe that there is an emergent consensus in favor of the national policy toward marihuana use recommended by the National Commission in 1972.

This policy is essentially discouragement of use, but without criminalization of the user and all of the attendant costs. And I do believe that Mr. Miller's comments indicate how widely shared this opinion is, particularly when we look at the basic inconsistency that I pointed out earlier.

POLICY OF DISCOURAGEMENT WITHOUT CRIMINALIZATION

Now, I would like to turn to the bill that the subcommittee now has before it. I view the issue raised by the bill as how to implement the basic policy of discouragement without criminalization. How are we to go about removing the costs of criminalization and still retain whatever deterrent value we think the law carries?

Essentially there are two general alternatives. The approach recommended by the Commission, on the one hand, is to utilize the

symbolic value of the law in its statement that the cultivation and distribution of marihuana are criminal offense. And indeed, they are among our most serious criminal offenses—felonies punished by 5, 10, 20, 25 years in jail.

That is a statement, surely, that the use of marihuana is disapproved. We do not want you to have the drug. We are going to do whatever we can to keep it out of your hands. No one here is contending that the laws against distribution are not meant to be enforced. And surely this is a very potent statement of social disapproval when we enforce those laws. That was exactly the approach, of course, during alcohol prohibition when society said we disapprove of the use of alcohol and we will make it a crime to manufacture and distribute alcohol.

That is one way of stating social disapproval and implementing a policy of discouragement. The Commission said, however, that we should not follow forward with using the law as a symbol when we get to the user, and that the costs of applying the criminal sanction to the user are simply not worth it. So, remove the criminal sanction and do not make it an offense.

That is one possibility. The other approach is to extend the symbolic value of the law just one step further, and make it a civil offence to possess marihuana for one's own use. Use that particular statement of disapproval and whatever deterrent value you get by making it a $100 fine to possess marihuana.

In terms of the "deterrence at what cost" notion, I should emphasize that if we adopt the civil fine approach, we would try as best we can to remove all of the cost of criminalization. When this subcommittee gets down to the drafting the details of the civil fine approach, this kind of issue that the subcommittee might want to look at, assuming that the civil fine alternative is the one adopted.

I have some comments about questions of detail that perhaps the subcommittee would want to consider. I will be glad to submit them in writing.

Senator BAYH. I wish you would proceed with your assessment for the record.

Mr. BONNIE. I will close by indicating my own preference with regard to those two alternatives.

I favor the one recommended by the Commission. Similarly, I believe that the proposal enunciated by Senator Hart earlier—his proposed amendment to S. 1—is an appropriate implementation of the committee's recommendations. And I will support that as well.

On the other hand, I also recognize, as Mr. Stroup has indicated that sometimes reform has to be an incremental process. It perhaps may not be politically feasible to secure majority support for total withdrawal of legal sanctions. Under certain circumstances, it seems to me that a civil fine is an acceptable approach.

Thank you.

[Testimony continued on page 155.]

Statement

of

Richard J. Bonnie

Associate Professor of Law
University of Virginia School of Law
Charlottesville, Va.

Before The

Subcommittee to

Investigate Juvenile Delinquency

of the

Committee on The Judiciary

United States Senate

May 14, 1975

It is my understanding that the subcommittee is stipulating for purposes of today's hearings that the appropriate national policy toward the use of marihuana is that recommended in March 1972 by The National Commission on Marihuana and Drug Abuse--discouragement of use without criminalization of the user. The subcommittee is not inviting debate or testimony on the merits or demerits of this approach but rather wishes to probe technical legal questions regarding its implementation.*

In particular, the Subcommittee wishes to focus on S. 1450, which provides that consumption-related activity would be punishable by a "civil fine" of $100 rather than by a criminal penalty.

I am pleased to have this opportunity to address the many interesting and difficult questions involved in drafting a civil fine statute; before doing so, however, I wish to express, for the record, my own skepticism about the "civil fine" device as a means of implementing the decriminalization approach.

The National Commission considered the civil fine alternative in 1972, concluding:

> Another means of symbolizing the discouragement policy which has been suggested is the imposition of a civil fine on those possessing marihuana outside the home for personal use. Under such an approach, a fine would be levied and processed outside the criminal justice system. Essentially, possession of marihuana would be the equivalent of a traffic offense in those jurisdictions where such an offense is not criminal.

---

* A summary of my views on the merits of decriminalization was presented to the Subcommittee on Alcoholism and Narcotics of the Committee on Labor and Public Welfare of the United States Senate on November 20, 1974. This statement appears on pages 134-174 of the Subcommittee's Hearings, Marihuana Research and Legal Controls, 1974.

> Such a scheme would accomplish little more than that achieved under a partial prohibition scheme. Warrants would presumably not be issued for searches of private residences, and possession offenses would be detected only by accident or if the offender uses the drug in public. The more direct way to confront such behavior is a penalty against public use.

The Commission's position is a sound one. The civil fine is not an essential ingredient of the discouragement policy, its enforcement would consume administrative resources unjustified by its deterrent value and it would be a convenient tool for harassment of the unconventional. The Commission concluded that all legitimate state interests can be served by appropriate prohibitions of public use. Accordingly, since 1972 I have been urging state legislatures to withdraw legal sanctions of any description from private consumption-related activity.

It has become clear, however, that reform is an incremental process. The state legislatures are attracted to the presumed deterent value of the civil sanction, and its potency as a symbol of social disapproval. For this reason, I do not oppose civil fine proposals under state law. However, I would respectfully suggest to the Subcommittee that none of the reasons offered in favor of the civil fine concept under state law are applicable under federal law.

Surely no one really expects DEA agents to begin issuing citations to persons in possession of marihuana cigarettes and ordering them to appear before federal magistrates. The very image is almost comical, and illustrates the absurdity of continuing to make possession of marihuana a federal offense. Indeed sub-

section 404(A)(b) of S. 1450 indicates that the drafters anticipating that through administrative edict, possession of marihuana might become an offense in name only. If this is so, S. 1450 and this body's deliberations are aimed not at marihuana users but at state legislatures. And the task of this subcommittee is to draft model legislation for adoption by the states.* It is from this perspective that I view the subcommittee's inquiry this morning.

---

*Promulgating "model" state legislation is a unique role for federal lawmakers, and Congress should not do so lightly. To assist the subcommittee's efforts to fix the appropriate role for federal law, I have attached a separate statement on this matter.

Statement of Richard J. Bonnie: Attachment

FEDERAL LAW AND MARIHUANA POSSESSION

The purpose of this statement is to establish the context of Congressional action by identifying the federal interests affected by marihuana use and by the current penalties against this behavior.

National Policy Toward Marihuana Use

For purposes of this statement four introductory assumptions will be made regarding national policy toward marihuana use and implementation of that policy at the national level.

First, the overall objective of national policy is to minimize the consumption of marihuana for non-medical, non-scientific purposes, and to curtail the availability of the substance outside authorized scientific or medical channels.

Second, federal law will continue to prohibit importation, cultivation and distribution[1] of the substance with narrowly defined exceptions for research and scientific purposes; if medical uses are established, it is assumed that regulatory provisions of the law will be strictly applied to limit the conditions of legitimate medical availability.[2]

Third, the prohibitions against importation, cultivation and distribution outside the authorized channels will continue to be enforced by federal officials, with priority being place on substantial commercial activity. In short, it is assumed that enforcement

---

1. "Distribution" is intended to encompass "possession with intent to distribute" as well and should be so construed throughout the statement.

2. The important point is that even if marihuana were to become legitimately available for medical purposes (in addition to research and scientific purposes), the issues concerning implementation of the discouragement policy toward non-medical use would be the same.

efforts will remain allocated as they are now, with primary federal competence in the contexts of smuggling and wholesale distribution, while state and local personnel concentrate on retail distribution.

Fourth, the formulation and application of legal sanctions for consumption-related activity will remain a matter primarily for state and local determination. While the national government has the constitutional power to reach the personal possession of marihuana obtained outside the authorized channels,[3] and exercised this power in the 1970 Controlled Substances Act, the actual responsibility for applying legal sanctions to consumption-related behavior lies with local police enforcing state laws and local ordinances. This is in keeping with the operational meaning of federalism -- that behavior with primarily local effects should be regulated by local government. The public consequences of consumption-related behavior (possession, use, casual non-profit distribution, being under the influence) inevitably come to the attention of local police; for this reason it is not surprising that the federal government has consistently left enforcement of the "simple" possession laws to the states and localities despite the fact that this same behavior violates federal law as well.

The National Interest in State Law and Local Enforcement

This is not to say, however, that the federal government is without interest in the manner in which state and local governments

---

3. This has not always been so clear, of course. The Harrison Act and the Marihuana Tax Act were framed as regulatory measures, using complex presumptions in lieu of outright possession offenses, precisely because of the doubts about the constitutionality of direct regulation and prohibition of purely local conduct. See U.S. v. Doremus, 249 U.S. 86 (1919).

choose to respond to consumption-related behavior. Indeed, authoritative National Commissions[4] have thrice recommended non-criminal approaches to possession and use of marihuana, thereby attesting to the depth and breadth of national concern. The locus of this national concern, as a matter of political and historical reality, has been the disastrous impact of this criminal prohibition on the criminal justice system and the perceived injustice of its application to individual violations.

These concerns also have a constitutional dimension. The 14th Amendment establishes national standards of fairness in the administration of criminal justice and also imposes substantive limits on the type of conduct which may be proscribed and on the severity of sanctions which may be imposed. If the courts or Congress determine that these standards are being offended by state and local law and practice, corrective national action is indicated.

We begin with the clearest cases of national limits on state efforts to implement a policy of discouraging marihuana use. In the effort to curb the "spread" of marihuana use, the state surely may not make it a crime to associate with a person known to be a marihuana user, even though this is probably a most effective means for curbing the initiation process. Such a law would undoubtedly violate the free association aspects of the due process clause.[5]

---

4. The National Commission on Reform of the Federal Criminal Code (1971); The National Commission on Marihuana and Drug Abuse (1972); The National Advisory Commission on Criminal Justice Standards and Goals (1973).

5. The state and lower federal courts are now grappling with the broader argument that the private possession prohibition is itself unconstitutional, offending the right of privacy and depriving the user of liberty without "good reason" (i.e., without "due process of law.") See Griswold v. Connecticut, 381 U.S. 479 (1965); Stanley v. Georgia, 394 U.S. 557 (1969); Roe v. Wade, 410 U.S. 113 (1973).

Similarly, the state probably may not seek to maximize the deterrent value of the legal threat by prescribing a long mandatory prison term for simple possession. Such a penalty would be unconstitutionally excessive under emerging doctrine.[6] Nor may the state search every person in a particular public place, or in a certain kind of vehicle, or wearing a particular type of clothes, on the ground of the enhanced likelihood of marihuana possession among such persons. Such enforcement behavior would offend several constitutional principles. So too would the systematically selective application of the possession laws to offenders of a particular racial or ethnic background or a particular social class; this would violate the equal protection clause.

It is clear, then, that the judicial branch of the federal government will enforce national standards of criminal justice, procedural fairness and personal privacy, invalidating state and local marihuana enforcement policies which violate section 1 of the 14th Amendment. And it is also clear that the Congress, under § 5 of the 14th Amendment has the authority to impose further limits on the range of state and local enforcement choices in order to protect these important national values of fairness, privacy and justice. Katzenbach v. Morgan, 384 U.S. 641 (1966).

Within this context, neither the executive nor the legislative branches of the national government can be oblivious to the wide diversity of enforcement policies in the 50 states and their political

---

6. Constitutional challenges are being levied not only against mandatory jail terms, People v. Sinclair, 194 N.W.2d 878 (Mich. 1972), but also against any jail term at all. Conceivably a disproportionality argument may be made against the criminal stigma itself.

subdivisions. Nor can they ignore the impact of 400,000 annual marihuana arrests on the administration of criminal justice or on the respect for law. Nor can the national policymakers ignore the subjectivity of the process by which these offenders are chosen from among the millions of marihuana users for application of criminal sanctions, and by which some of these are convicted and some are not, and by which some of these are jailed and others not. Indeed, Congress might even conclude that the uneven application of local possession laws actually subverts rather than aids the national discouragement policy by increasing the visibility of marihuana use, inflating consumer demand and eroding respect for law.

These national concerns justify and invite national efforts to influence the formulation of state and local law regarding consumption-related activities. Congress might easily conclude that satisfactory pursuit of the discouragement policy, effective protection of fundamental standards of criminal justice and a sensitivity to the right of privacy all require a non-criminal sanctioning structure for consumption-related behavior (including possession for one's own use as well as casual, non-profit distribution). Although Congress might determine that the national objectives do not require drastic measures undercutting state responsibility,[7] it might wish to influence state and local decision-makers to adopt a civil sanction for these offenses. One mechanism for doing so would be by symbolic legislative action

---

7. The factors described in the text may be of sufficient weight to support unprecedented federal legislation under § 5 of the 14th Amendment pre-empting the field or establishing maximum penalties for state law. See generally Marihuana: A Signal of Misunderstanding, Appendix Volume II, pages 1135-1144 (1972).

which would simultaneously serve the national interest and preserve local prerogatives.

Alternative Congressional Actions

The primary value of congressional action would be symbolic. Because the federal authorities do not enforce against consumers the extant misdemeanor provision, substitution of a non-criminal sanction would not actually reduce the social costs of criminalization. Moreover, the issue of federal competence is highlighted by the recognition that any offense so petty as to demand only a civil sanction should not be in the federal criminal code anyway. The more direct federal action would be outright repeal of the possession offense, even if the national policy-makers preferred that the state and local governments substitute a civil sanction.

Be that as it may, the federal government could symbolize its preference for the non-criminal sanction by amending the Controlled Substances Act to substitute a civil fine for the present misdemeanor penalty. (See, e.g., S.1450) The historical experience with the penalty provisions of federal drug laws (in 1951, 1956 and 1970) suggests that the state legislatures are heavily influenced by congressional action.[8]

Another legislative context for modifying the federal marihuana penalty is the current effort to enact a comprehensive federal criminal code. The national Commission on Reform of Federal Criminal Laws (Brown Commission) recommended in its 1971 Report that possession

8. See generally, Bonnie and Whitebread, The Marihuana Conviction (University Press of Virginia 1974) pp. 204 et seq.

of marihuana be an "infraction" (§ 1824) which was defined as a non-criminal offense (§ 109(e)) for which imprisonment is not authorized (§ 109(s)).

The federal code reform effort (S.1) is currently proceeding before the Senate Judiciary Committee's subcommittee on Criminal Laws and Procedures. In its current form S.1 classifies possession of marihuana as a Class C Misdemeanor (See § 1813) permitting up to 30 days imprisonment (see § 2301). However, consideration of this bill provides another vehicle for marihuana law reform by reviving the Brown Commission's infraction recommendation.

Two points should be noted in connection with these options regarding modifications of federal law. First of all, there are many other provisions of federal law under which prohibited conduct is punishable by non-criminal "civil" fines. In connection with its proposal (§ 1006) that "regulatory offenses" ordinarily be regarded as "infractions," the Brown Commission surveyed the provisions of existing federal law. Some examples of conduct punishable by civil fine are violation of regulations concerning railroad passengers and employees (46 U.S.C. § 155 and § 156) failure by railroad, pipeline carriers and motor carriers to keep and submit records (49 U.S.C. § 20(7)(a), § 322(h)) false advertising of seeds (7 U.S.C. § 1596) and failure to file motor carrier rates (49 U.S.C. § 322(h)).

The Brown Commission's working papers elaborate on the rationale for distinguishing between regulatory offenses and "traditional" offenses:

> Criminal law has always differentiated between two kinds of punishable behavior. On the one hand, homicide, rape, robbery and the other common law crimes are universally recognized outrages and threats to common security. Common morality forbids such behavior, and there is little possibility of innocent transgression. Commission of

> offenses of this sort evidences a serious disregard for the rights of other individuals, and identifies the offender as dangerous because of his lack of inhibitions and distorted system of values. Traditionally, offenses of this first type have been designated "mala in se", that is, "evil in themselves", in contrast with the other category of offenses, "malum prohibitum", that is, "bad because forbidden".
>
> The regulatory statutes, which are the concern of section 1006, belong in the "malum prohibitum" class. The behavior is not immediately recognizable as evil or dangerous, and does not necessarily identify the actor as immoral. In a complex modern society, there are hundreds of thousands of legal commands and prohibitions, violation of which may incur criminal liability. The motor vehicle laws offer the best examples: driving over the speed limit or without a license, failure to carry a registration card or a safety inspection certificate, parking in a prohibited zone, passing a stopped school bus, and a host of others. The conduct of businesses is often minutely controlled by statute and by rules and orders issued by administrative agencies. . . .
>
> There are other touchstones by which to distinguish regulatory offenses, in addition to the distinctions between malum in se and malum prohibitum. It is characteristic of regulatory controls that they are prophylactic in purpose. . . .
>
> The prophylactic purpose means that the rules are designed to prevent harms from occurring, rather than to punish perpetrators of actual harms. If the forest rules forbid or restrict campfires, it is to cut down even remote possibilities of conflagration. The rule may prevent ten perfectly safe fires in order to avert the possibility of one unsafe fire. It makes no difference what precautions a particular camper takes with his fire. . . . So, also, rules against conflicts of interest by public servants inhibit many innocent relationships in order to forestall corruption by a few. The fact that prophylactic controls inevitably affect many more law-abiding people than evildoers dictates a policy of relatively low maximum penalties for regulatory offenses.[9]

These observations are equally applicable to prophylactic prohibitions of all marihuana possession. The recreational use in which the great majority of marihuana possessors engage is private,

---

9. Schwartz, "Regulatory Offenses," Working Papers of the National Commission on Reform of the Federal Criminal Code, pp. 403-417 (1971).

inoffensive, morally neutral and without direct social consequence. But possession offenses proscribe all consumption-related behavior in the interest of preventing the injurious behavior which might occur while a person is "under the influence" of the substance, and of preventing the potential social harms associated with widespread heavy use. It is clear, then, why the Brown Commission also recommended that marihuana possession be classified as an "infraction" together with non-"willful" regulatory violations.[10]

The current version of S.1 includes the infraction concept which is not a "crime" (§ 111) but is punishable by up to 5 days in jail. Under §§ 1861-62, disorderly conduct and failing to obey a public safety order are classified as infractions. A minor change to § 1813 would convert possession of marihuana to an infraction as well.

One type of congressional action which would symbolize the decriminalization policy and yet serve a meaningful statutory purpose would be to include the civil fine provision in the federal criminal code, but limit its applicability to violations committed on federal enclaves. This device would adapt the law to the realistic reaches of federal competence; while removing the superfluous federal possession offense, it would also indicate congressional preference for the civil sanctioning concept by applying it to violations prosecuted by federal officials. (Compare the many provisions of the proposed federal criminal codes--Brown Commission draft and S.1 which pertain to offenses of a purely local nature and are therefore applicable only to violations committed on federal enclaves.)

---

10. S.1 does not include the regulatory offense notion in the form recommended by the Brown Commission. However, the policy is easily achieved through appropriate amendment of other law to classify these offenses as infractions.

Supplemental Statement on the Decriminalization of Possession of Marihuana for Personal Use

Submitted to the Subcommittee
to Investigate Juvenile Delinquency
of the
Committee on the Judiciary
United States Senate

DECRIMINALIZATION OF POSSESSION OF MARIHUANA FOR PERSONAL USE: SOME CONCEPTUAL AND DRAFTING ISSUES

By Richard J. Bonnie

Associate Professor of Law

University of Virginia School of Law

This memorandum is in four parts. Part I presents seven alternative approaches for implementing the same basic policy choice -- withdrawing the criminal sanction from possession of marihuana for personal use. The focus is on defining the scope of conduct prohibited and the type of sanctions applicable. Part II presents some specific comments on this aspect of S. 1450. Part III presents various ancillary issues raised by the "civil fine" concept. And Part IV presents three alternative drafts of decriminalization legislation, two of which incorporate "civil fine" approaches and one of which incorporates the central recommendation of The National Commission on Marihuana and Drug Abuse.

I

Prohibitions and Sanctions Relating to Possessory Conduct

A. General Concepts

1. Under any of these approaches "possession-with-intent-to-distribute" is a serious crime -- a felony intent-to-distribute applies only to commercial intent; donative transfers and accommodation, not-for-profit sales are not included. (See § 40(b)(4) of the Controlled Substances Act.)

2. The residual notion under the Controlled Substances Act in § 404(a) is "simple possession," which includes, as a conceptual matter, all other possessory activity; thus it includes, but, as a matter of social reality may not be limited to, possession for personal use. In the decriminalization legislation, the criminal sanction can be withdrawn from all residual possessory behavior. In every case, the legal issue would be whether the prosecution can prove intent-to-distribute; as always, appropriate inferences regarding the presence of such an intent may be drawn from possession of large amounts.

Another approach is to withdraw the criminal sanction from only part of the residual "simple" possessory activity. In theory, this can be done in either of two ways. First, the sanction can be withdrawn only from possessory conduct if the defendant can prove that the drug was held for personal use (or use by immediate others). This would shift the burden of proof to the defendant in all cases (in the nature of an affirmative defense). In so doing, however, it would constitute a substantial deviation from the basic principles of criminal law because the notion is inherently unprovable.

Ordinarily affirmative defenses involve evidence peculiarly within the control of the defendant, such as a prescription; imposing on the defendant the burden of proving intent-to-consume would undermine the reform altogether.

The second approach to subdividing "simple possession" is to draw a statutory amount line. Possession of less than a specified amount is conclusively presumed, as it were, to be for personal use; whereas possession of more than the specified amount constitutes prohibited "simple" possession, even though the prosecution may not be able to prove that it was held with intent to sell, and even though the defendant may be able to prove that his intent was to consume. A less rigid approach would permit an affirmative defense of intent-to-consume in all possession cases even if they involve more than the specified amount.

3. Whenever the basic grading distinction is "amount" possessed, the legislation must specify the statutory amount. In terms of the basic conceptual issues, the amount chosen is of secondary interest, and I have not addressed this choice in this statement (referring instead to "the specified amount"). However, as a substantive matter, the choice is obviously a crucial one; there is clearly a big difference between one ounce and eight ounces.

For present purposes, let me note only that I have perceived two fundamentally different motivations in legislative efforts to define the statutory amount: one approach seeks to approximate the amount which would ordinarily be held for distribution (the higher amounts); whereas the more niggardly approach seeks to approximate the smallest amount which a reasonable marihuana user would regard

as an acceptable effort to remove the criminal stigma from his consumption related conduct. The choice between these two approaches is clearly rooted in political and philosophical considerations. I personally believe the former is the more meaningful approach to the issues at stake in the reform effort.

4. Under any approach, public use of marihuana is a misdemeanor; one might debate whether or not this offense should be punishable by a jail term or only by a fine.

5. To the extent that a statutory distinction is drawn between possession-in-private and possession-in-public, these terms must be defined. A private dwelling is undoubtedly "private," and a public place (street, public building) is undoubtedly "public." The central issue here is whether a vehicle, which bears similarities to both, ought to be defined as "public" or "private." Arguments can be made for both results, and distinctions can be drawn according to whether the vehicle is in transit or at rest, etc. I will not attempt to resolve this issue here and will assume, instead, that "in private" is limited to private dwellings.

6. Under all approaches "casual" distribution (donative transfers or not-for-profit accommodations) of less than a specified amount would be regarded as the functional equivalent of non-criminal possessory activity.

B. Alternative Approaches

Approach #1.

(a) Non-criminal Conduct:

No sanction for simple possession, whether public or private.

(b) Criminal Conduct:

(1) possession-with-intent-to-distribute

(2) use in public

(c) Comment.

The net effect is to place the burden of proof on the prosecution in any "possession" case to prove intent to distribute, relying on any inferences that may appropriately be drawn from the amount possessed. This is the purest reform in a conceptual sense; commercial intent would become the operative element in the criminal offense, a notion in keeping with the basic purposes and reach of the criminal law.

Approach #2.

(a) Non-criminal Conduct:

No sanction for possession of less than a specified amount (1 ounce, 2 ounces, 4 ounces, 8 ounces, 100 grams, 30 grams, etc.), whether in public or private.

(b) Criminal Conduct:

(1) possession-with-intent to distribute

(2) public use

(3) possession of more than the specified amount

(c) Comment.

Possession of more than the specified amount should be a felony if a larger amount is chosen to approximate a presumption regarding intent to distribute. If a smaller amount is chosen, the offense should be a misdemeanor, and the defendant should be permitted to prove, as an affirmative defense, that his was an intent-to-consume.

The net effect under this approach is to remove the subjectivity

and inequality of enforcement which might inhere in an "intent" formulation and adopt in its stead a conclusive statutory line based purely on amount.

Approach #3.

(a) Non-criminal Conduct:

(1) No sanction for simple possession in private.

(2) No sanction for possession of less than a specified amount in public.

(b) Criminal Conduct:

(1) possession of more than the specified amount in public

(2) possession-with-intent to distribute

(3) public use

(c) Comment.

This approach recognizes a need for a per se rule in public (where most marihuana arrests actually are made) but retains the commercial intent-personal use line for private possession (as in Stanley v. Georgia for pornographic materials).

Approach #4.

(a) Non-criminal Conduct:

(1) Civil sanction for possession of less than a specified amount in public

(2) No sanction for "simple possession" in private

(b) Criminal Conduct:

(1) Possession of more than a specified amount in public

(2) Possession with intent to distribute

(3) Public use

(c) Comment.

This approach would make all public marihuana-related activity a violation of law, but would decriminalize the sanction applicable to possession of less than the specified amount; however, no sanction would be applicable in private in recognition of the fundamental distinction between public and private conduct, the improbability of enforcement of a civil sanction in private, and the many difficulties arising under search and seizure law if enforcement were actually attempted. Assuming that the "civil fine" concept is attractive as a deterrent or for purely symbolic reasons, I would strongly urge that private possession be exempted on both constitutional and practical grounds.

Approach #5.

(a) Non-criminal Conduct:

(1) Civil sanction for possession of less than a specified amount in public

(2) No sanction for possession of less than a specified amount in private

(b) Criminal Conduct:

(1) possession of more than the specified amount in public or private

(2) possession-with-intent-to-distribute

(3) public use

(c) Comment.

The only difference between this approach and #4 is the use of an amount device for drawing the line between non-criminal private possessory activity and residual criminal simple possession. The

statutory amounts could well differ for public (1 ounce) and private (4 ounces) possessory activity.

Approach #6.

(a) Non-criminal Conduct:

(1) Civil sanction for possession of less than a specified amount in public

(2) Civil sanction for simple possession in private

(b) Criminal Conduct:

(1) Possession of more than specified amount in public

(2) Possession-with-intent-to-sell

(3) Public use

(c) Comment.

All marihuana-related behavior remains prohibited. The line between conduct subject to civil and criminal behavior is an amount line if the behavior is in public; but the operative line in private is an intent line. Again the sanctity of the home is the key to this approach; an important device for buttressing this choice would be to provide that a magistrate should not issue a warrant for searching a private residence for marihuana possessed in violation of the "simple possession" provision. Only probable cause to believe that a criminal offense was being committed would be sufficient grounds for issuance of the warrant.

Approach #7.

(a) Non-criminal Conduct:

Civil sanction for possession of less than a specified amount, whether public or private (amounts could differ).

(b) Criminal Conduct.

(1) Possession of more than the specified amount in public or private

(2) Possession-with-intent-to-distribute

(3) Public use

(c) Comment.

This is the approach taken in S. 1450. See Comment to Approach §6 regarding the grounds for issuance of a search warrant.

C. Choosing Among the Alternative Approaches

I personally prefer Approaches #1, #2 and #3. As I indicated in my testimony before the Subcommittee on May 14, I believe that the symbolic and deterrent value of a civil sanction is outweighed by the costs of enforcement and the probable use of the violation as a device for harassment.

Assuming that a civil sanction is regarded as desirable, I would limit it to public activity as provided in Approaches #4 and #5.

Assuming that symbolism prevails and the decision is made to prohibit all possessory activity, I would strongly urge Approach #6 in lieu of #7.

II.

Comments on the Scope of Criminal Conduct and Sanctions Applicable Under S. 1450

The sponsors of S. 1450 have adopted an approach like either #6 or #7 (all possessory behavior remains prohibited). As between the two, I would strongly urge #6. Because S. 1450 adopts #7, I will assume that this is the final choice and will comment briefly on the details of the presently drafted provisions:

1. I see no reason to distinguish between public and private behavior in subsections (a)(1) and (2). The net result is the same.

2. The language "if such marihuana is not possessed with intent to distribute . . ." is unnecessary unless the drafters intend to place the burden of proof of lack of such an intention on the defendant. If this is the drafter's intent, it would undercut the purpose of the reform. I assume that this is not the intent, and would therefore delete this language.

3. The language "if the possession . . . is incident to private use . . ." suggests that the burden of proof is on the defendant to demonstrate not only that he intends to use the marihuana himself and perhaps share it with friends, but also that he intends to do so in his own private dwelling. This is incapable of being proved. If a one ounce line is being drawn, it should be left at that.

4. Subsection (a)(1) apparently leaves it open to the prosecution to prove (assuming the burden of proof is on the

state) in any case that less-than-one ounce is held for sale. I think that once the drafters have chosen the amount line (and such a low one at that), possession of less than specified amount ought to be regarded as conclusive on the intent issue.

5. I applaud the purpose of subsection (a)(3). Not-for-profit accommodation transfers should be regarded as the functional equivalent of possession for personal use, and should therefore be decriminalized. However, contrary to line 16, marihuana cannot be "lawfully possessed" under S. 1450. I think there is an easier way to draft this provision, as I have indicated in the attached draft bill.

III

Ancillary Issues Relating to the Legal Consequences of a Civil Fine

If the decriminalization concept is implemented by substituting a civil fine for the present criminal sanction, a number of complicated issues are raised under the law of arrest, search and seizure. Most of these issues can be clarified and resolved by explicit statutory drafting.

1. Arrest and Custody

This is one of the most crucial aspects of this reform. Much of the legal benefit of the "civil fine" concept derives from the removal of this class of law-violators from the criminal process. S. 1450 declares that the offender "shall not be subject to arrest"; but much more is needed.

The objectives of this reform, as I understand them, are:

(a) to limit the circumstances under which the violator can be taken into physical custody;

(b) to limit the legal consequence flowing from the "apprehension" for the violation; and

(c) to minimize the possible friction in citizen-police encounters involving marihuana violations.

"Arrest" is a term of art. The general understanding is that a person lawfully arrested may be taken into custody, searched incident to the "arrest," subjected to identification and investigative procedures, "charged" with a criminal offense, and detained and taken before the appropriate judicial officer. The concept of "arrest" includes some or all of these aspects depending on what source is consulted. The key point for present purposes is that

apprehension for a civil violation of the marihuana laws should not result in any of these consequences.

The statute should specifically provide that a person "apprehended" or cited for a violation is not subject to being taken into custody under any circumstances* and that the police, upon detection, should issue a citation or a notice of violation, including a summons to appear in court. The commentary should make clear that the citation procedure is not merely a substitute for arrest (as are the usual misdemeanor citation provisions) but rather that the citation is the only authorized procedure upon detection of a violation.

Under United States v. Robinson, 414 U.S. 218 (1973), a person may be fully searched incident to a "full-custody arrest." One of the most important reasons for careful drafting on this point is to assure that the mere fact that a policeman has discovered one ounce or less of marihuana does not authorize a full search of the person as if he had been "arrested for a criminal offense." No violation of the person's privacy rights should be permitted that does not come within the rule set out in Terry v. Ohio, 392 U.S. 1 (1968), which permits a frisk for weapons in a non-arrest context.

2. Posting Collateral

The statute should expressly provide that collateral may be

---

*Alternatively, the statute could permit temporary custody for purposes of establishing identification (e.g., by fingerprinting) only, and not for purposes of "arrest." This is probably permissible under dictum in Davis v. Mississippi, 394 U.S. 721 (1969). The statute must be explicit that this is "not for purposes of arrest," therefore limiting the authority of the police to detain and to search incident to the "apprehension."

posted in lieu of appearance (as for traffic violations in most states).* In connection with the effort to minimize the expenditure of criminal justice resources, I would applaud § A(b) of S. 1450 which authorizes discretionary enforcement through warnings or notices rather than citations/summonses/appearances.

3. Status of Juveniles

There are good arguments on both sides of the issue whether civil marihuana violations by juveniles over a certain age, e.g., 14 or 16, should be processed in the "adult" court or whether they should come within the jurisdiction of the juvenile court. (A similar issue is currently being debated regarding traffic violations.)

On balance, I believe the juvenile court should retain jurisdiction over these offenses essentially for two reasons. First indiscrete marihuana-using behavior may, in some cases, be symptomatic of difficulties in social or psychological adjustment; in these cases the juvenile system serves as a detection device and exerts leverage for providing the necessary social and therapeutic services. Second, to the extent that the social aim is to discourage marihuana use, the price of involvement in the juvenile system is not too high in light of the "specific deterrent" value of a stern judicial lecture and perhaps an education program.

---

*If juvenile court retains jurisdiction over marihuana violations, then this provision need cover only adults since juvenile law does not permit juveniles to post collateral.

However, to prevent unfairness to juvenile "violators," a determination of delinquency or that the youngster is a "person in need of supervision" which is based only on violation of the marihuana possession provision should be punishable only by fine not by a deprivation of liberty either by total confinement or through probationary supervision.

4. Police Records

The statute should specifically provide that the records maintained by the police regarding violations of this section, including detentions or citations thereunder, are not records of arrest, shall be separately compiled and maintained apart from records of arrest (compare juvenile records and traffic records), shall not be disseminated in an identifiable way to any person or agency for any purpose other than research and shall be destroyed or sealed after a certain time (e.g., one year).

5. Contraband

The intent of the drafters of S. 1450 is not clear. Because any possessory activity remains an offense, I would ordinarily assume that the marihuana possessed is contraband and remains subject to seizure under § 511 of the Controlled Substances Act. However subsection A(a)(3) at line 16 refers to marihuana "lawfully possessed" under subsection 404A(a). This leaves me a bit perplexed.

If possession is always a violation, then the marihuana is always contraband. Even if the possession were not an offense (as recommended by the National Commission), the marihuana would still be contraband because it was illegally cultivated and distributed. A person cannot, in theory, have a lawful property interest in an illicit article. Conceptually, the contraband concept hinges on what

the substance is, not where it is or whether or not possession is a crime.

If the statute said nothing at all (and private possession were not an offense), the marihuana would still be contraband and subject to seizure wherever found. Indeed, a warrant could probably be obtained to authorize a search of a private dwelling if the police demonstrated probable cause to believe the illegal substance was possessed. Compare Camara v. Municipal Court, 387 U.S. 523 (1967) and Lee v. City of Seattle, 387 U.S. 541 (1967).

Thus, if, as a matter of policy, the legislature wanted to limit the authority of the police to search private residences, the appropriate method would be to declare that a warrant to search a private residence could not be issued solely on the basis of allegations that marihuana was possessed unless there was probable cause to believe that possessory activity was occurring which itself would be a criminal offense.

IV.

Alternative Drafts of Decriminalization Legislation Amending the Controlled Substances Act

Introduction and General Comments

This Part is composed of three alternative drafts of decriminalization legislation. "Alternative Draft #1" incorporates Approach #7, one version of the policy choice reflected in S. 1450. Alternative Draft #2 incorporates Approach #6, a preferable version of this same policy choice. Alternative Draft #3 incorporates Approach #2, which reflects the policy recommended by the National Commission on Marihuana and Drug Abuse and proposed by Senator Hart at the Hearings on May 14.

Under Alternative Draft #1 "simple" possession of one ounce or less, whether in public or private, would be a civil violation. Residual "simple" possession of more than one ounce would be a crime, punishable by a fine only, not by incarceration.

Under Alternative Draft #2 (Approach #6), simple possession in private and possession of one ounce or less in public would be a civil violation. Residual simple possession of more than one ounce in public would be a crime punishable only by a fine, not by incarceration.

Finally, under Alternative Draft #3, possession of one ounce or less would not be an offense, and residual simple possession would be a crime punishable only by a fine, not by incarceration.

As a matter of drafting, it is substantially easier to amend the penalty language of the simple possession proscription

of section 404(a) than to add an entirely new section as is done in S. 1450. All of the language which purports to establish that this new provision doesn't supercede the intent-to-sell provision (section 401(a) would not be necessary under my proposed approach.

Alternative Draft #1

Proposed Amendment to The
Controlled Substances Act

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that the Controlled Substances Act be amended as follows:

SEC. 1. Section 401(b)(4) of the Controlled Substances Act is amended by deleting the words "a small amount of marihuana for no remuneration shall be treated as provided in subsections (a) and (b) of Section," and substituting in lieu thereof:

> "not more than one ounce of marihuana for no remuneration or insignificant remuneration not involving a profit shall be treated as provided in subsection (a)(2) of Section 404."

SEC. 2. Section 404(a) of the Controlled Substances Act is amended by deleting the second sentence and substituting in lieu thereof:

> "Any person who violates this subsection shall be penalized as follows:
>
> (1) If the person possessed more than one ounce of marihuana, he is guilty of a criminal offense and shall be sentenced to a fine of not more than [$500].
>
> (2) If the person possessed one ounce or less of marihuana, he is guilty of a civil violation and shall be subject to a civil penalty of not more than $100. Whenever [an officer of the United States] has determined that a person has committed a civil violation under this paragraph, he may issue a citation or a notice of violation summoning the person to appear before a magistrate, on a date certain, for proceedings in accordance with the [Rules of Procedure for the Trial of Minor Offenses before United States Magistrates]. A person to whom a citation or notice of violation is issued under this paragraph may not be taken into custody and may post collateral in lieu of appearance before the magistrate. Issuance of a citation or notice of violation

under this paragraph is not an arrest and imposition of a civil penalty under this paragraph is not a conviction for a criminal offense and shall not give rise to any disability or legal disadvantage based on conviction for a criminal offense. Records maintained by [officers of the United States] regarding citations or notices of violations issued and penalties assessed under this paragraph are not records of arrest or conviction, and such records shall be maintained in a separate place from records of arrest and conviction, shall not be disseminated or disclosed to any person or agency except for purposes of research and shall be sealed after one year.

(3) If the person possessed a controlled substance other than marihuana, he is guilty of a criminal offense and shall be sentenced to a term of imprisonment of not more than one year, a fine of not more than $5,000, or both, except that if he commits such offense after a prior conviction or convictions under this subsection have become final, he shall be sentenced to a term of imprisonment of not more than 2 years, a fine of not more than $10,000 or both."

Alternative Draft #2

Proposed Amendment to The
Controlled Substances Act

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that the Controlled Substances Act be amended as follows:

SEC. 1. Section 401(b)(4) of the Controlled Substances Act is amended by deleting the words "a small amount of marihuana for no remuneration shall be treated as provided in subsections (a) and (b) of Section," and substituting in lieu thereof:

> "not more than one ounce of marihuana for no remuneration or insignificant remuneration not involving a profit shall be treated as provided in subsection (a)(1) of Section 404."

SEC. 2. Section 404(a) of the Controlled Substances Act is amended by deleting the second sentence and substituting in lieu thereof:

> "Any person who violates this subsection shall be penalized as follows:
>
> (1) If the person possessed marihuana, he is guilty of a civil violation and shall be subject to a civil penalty of not more than $100, provided that if he possessed more than one ounce of marihuana in a public place he is guilty of a criminal offense and shall be sentenced to a fine of not more than [$500]. Whenever [an officer of the United States] has determined that a person has committed a civil violation under this paragraph he may issue a citation or a notice of violation summoning the person to appear before a magistrate on a date certain for proceedings in accordance with the [Rules of Procedure for the Trial of Minor Offenses before United States Magistrates]. A person to whom a citation or notice of violation is issued under this paragraph may not be taken into custody and may post collateral in lieu of appearance before the magistrate. Issuance of a

citation or notice of violation under this paragraph is not an arrest and imposition of a civil penalty under this paragraph is not a conviction for a criminal offense and shall not give rise to any disability or legal disadvantage based on conviction for a criminal offense. Records maintained by [officers of the United States] regarding citations or notices of violations issued and penalties assessed under this paragraph are not records of arrest or conviction, and such records shall be maintained in a separate place from records of arrest and conviction, shall not be disseminated or disclosed to any person or agency except for purposes of research and shall be sealed after one year.

(2) If the person possessed a controlled substance other than marihuana, he is guilty of a criminal offense and shall be sentenced to a term of imprisonment of not more than one year, a fine of not more than $5,000, or both, except that if he commits such offense after a prior conviction or convictions under this subsection have become final, he shall be sentenced to a term of imprisonment of not more than 2 years, a fine of not more than $10,000 or both."

Alternative Draft # 3

Proposed Amendment to The
Controlled Substances Act

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that the Controlled Substances Act be amended as follows:

SEC. 1. Section 401 of the Controlled Substances Act is amended by deleting subsection (b)(4) and substituting in lieu thereof the following:

> "(b)(4) Notwithstanding paragraph (1)(B) of this subsection, it is not a violation of this section to distribute or possess with intent to distribute not more than one ounce of marihuana for no remuneration or insignificant remuneration not involving a profit."

SEC. 2. Section 404 of the Controlled Substances Act is amended by modifying the first sentence of subsection (a) as follows:

> "It shall be unlawful for any person knowingly or intentionally to possess a controlled substance other than marihuana unless such substance was obtained directly, or pursuant to a valid prescription or order, from a practitioner, while acting in the course of his professional practice or except as otherwise authorized by this title or title III.

SEC. 3 The Controlled Substances Act is amended by inserting immediately after Section 404 thereof the following new section:

> "Sec. 404A. It shall be unlawful for a person knowingly or intentionally to possess more than one ounce of marihuana unless the marihuana was obtained directly, or pursuant to a valid presumption or order, from a practitioner, in the course of his professional practice or except as otherwise authorized by this title or title III. A person who violates this section is guilty of a criminal offense and shall be sentenced to a fine or [$500].

CONTROLLED DANGEROUS SUBSTANCES ACT OF 1969

REPORT

OF THE

COMMITTEE ON THE JUDICIARY UNITED STATES SENATE

TOGETHER WITH ADDITIONAL VIEWS

TO ACCOMPANY

S. 3246

DECEMBER 16, 1969.—Ordered to be printed

U.S. GOVERNMENT PRINTING OFFICE
38-296 WASHINGTON : 1969

(Excerpt from page 10)

TITLE VIII—COMMITTEE ON MARIHUANA

This title authorizes the Attorney General and the Secretary of Health, Education, and Welfare to appoint a committee of experts to carry out a study covering all aspects of marihuana use.

The study shall include, but need not be limited to, the following matters:

1. Identification of existing gaps in our knowledge of marihuana.
2. An intensive examination of the important medical and social aspects of marihuana use.
3. Surveys of the extent and nature of marihuana use.
4. Studies of the pharmacology and effects of marihuana.
5. Studies of the relation of marihuana use to crime and juvenile delinquency.
6. Studies of the relation between marihuana and the use of other drugs.

The study is to be completed within 2 years at which time the committee will submit a report of its findings and recommendations to the President and the Congress.

TITLE IX—MISCELLANEOUS

This title repeals essentially all of the existing narcotic and dangerous drug laws and sets forth changes in the United States Code required to conform its terminology to that contained in this legislation.

The title also provides that it does not affect proceedings pending under previous laws. It also establishes severability of the provisions of the act, provides appropriations, and sets forth the effective date of the act.

(Excerpt from page 34)

TITLE VIII—COMMITTEE ON MARIHUANA

Section 801

This section provides for the appointment of a committee of experts by the Attorney General and the Secretary of Health, Education, and Welfare to advise them with respect to all aspects of marihuana use.

Subsection (a) of this section authorizes and directs the committee to review all existing information on marihuana and to execute a study covering all aspects of marihuana use.

Section 801 (a)(1) sets forth the scope of the study to include but not limit it to (*a*) an identification of existing gaps in our knowledge of marihuana; (*b*) an intensive examination of the important medical and social aspects of marihuana use; (*c*) surveys of the extent and nature of marihuana use; (*d*) studies of the pharmacology and effects of marihuana; (*e*) studies of the relation of marihuana use to crime and juvenile delinquency; and (*f*) studies of the relation between marihuana and the use of other drugs.

Subsection (b) of this section provides for the completion of the study within 24 months of the effective date of the act and for the submission of a report to the Congress and to the President with recommendations as to the control of marihuana.

Subsection (*c*) of this section provides for the composition of the committee selected by the Attorney General and the Secretary of Health, Education, and Welfare and sets a minimum of five members therefor.

Subsection (d) of this section provides for the compensation of committee members, for the furnishing of clerical and other assistance to the committee by the Attorney General and the Secretary and for the procedures to be followed by the committee.

Subsection (e) provides for the retention of consultants on a temporary or intermittent basis, and for their compensation while so retained.

PART F—ADVISORY COMMISSION

ESTABLISHMENT OF COMMISSION ON MARIHUANA AND DRUG ABUSE

SEC. 601. (a) There is established a commission to be known as the Commission on Marihuana and Drug Abuse (hereafter in this section referred to as the "Commission"). The Commission shall be composed of— Membership.

(1) two Members of the Senate appointed by the President of the Senate;

(2) two Members of the House of Representatives appointed by the Speaker of the House of Representatives; and

(3) nine members appointed by the President of the United States.

At no time shall more than one of the members appointed under paragraph (1), or more than one of the members appointed under paragraph (2), or more than five of the members appointed under paragraph (3) be members of the same political party.

(b)(1) The President shall designate one of the members of the Commission as Chairman, and one as Vice Chairman. Seven members of the Commission shall constitute a quorum, but a lesser number may conduct hearings. Quorum.

(2) Members of the Commission who are Members of Congress or full-time officers or employees of the United States shall serve without additional compensation but shall be reimbursed for travel, subsistence, and other necessary expenses incurred in the performance of the duties vested in the Commission. Members of the Commission from private life shall receive $100 per diem while engaged in the actual performance of the duties vested in the Commission, plus reimbursement for travel, subsistence, and other necessary expenses incurred in the performance of such duties. Travel expenses, etc. Compensation.

(3) The Commission shall meet at the call of the Chairman or at the call of a majority of the members thereof. Meetings.

(c)(1) The Commission shall have the power to appoint and fix the compensation of such personnel as it deems advisable, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and the provisions of chapter 51 and subchapter III of chapter 53 of such title, relating to classification and General Schedule pay rates. Personnel. 80 Stat. 443, 467. 5 USC 5101, 5331.

(2) The Commission may procure, in accordance with the provisions of section 3109 of title 5, United States Code, the temporary or intermittent services of experts or consultants. Persons so employed shall receive compensation at a rate to be fixed by the Commission, but not in excess of $75 per diem, including traveltime. While away from his home or regular place of business in the performance of services for the Commission, any such person may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703(b) of title 5, United States Code, for persons in the Government service employed intermittently. 35 F. R. 6247. Experts and consultants. 80 Stat. 416. Travel expenses, etc. 80 Stat. 499; 83 Stat. 190.

(3) The Commission may secure directly from any department or agency of the United States information necessary to enable it to Information, availability.

carry out its duties under this section. Upon request of the Chairman of the Commission, such department or agency shall furnish such information to the Commission.

Marihuana, study.

(d)(1) The Commission shall conduct a study of marihuana including, but not limited to, the following areas:

(A) the extent of use of marihuana in the United States to include its various sources, the number of users, number of arrests, number of convictions, amount of marihuana seized, type of user, nature of use;

(B) an evaluation of the efficacy of existing marihuana laws;

(C) a study of the pharmacology of marihuana and its immediate and long-term effects, both physiological and psychological;

(D) the relationship of marihuana use to aggressive behavior and crime;

(E) the relationship between marihuana and the use of other drugs; and

(F) the international control of marihuana.

Report to President and Congress.

(2) Within one year after the date on which funds first become available to carry out this section, the Commission shall submit to the President and the Congress a comprehensive report on its study and investigation under this subsection which shall include its recommendations and such proposals for legislation and administrative action as may be necessary to carry out its recommendations.

Drug abuse, study and investigation. Interim reports. Final report to President and Congress. Termination. Expenditures, limitation.

(e) The Commission shall conduct a comprehensive study and investigation of the causes of drug abuse and their relative significance. The Commission shall submit to the President and the Congress such interim reports as it deems advisable and shall within two years after the date on which funds first become available to carry out this section submit to the President and the Congress a final report which shall contain a detailed statement of its findings and conclusions and also such recommendations for legislation and administrative actions as it deems appropriate. The Commission shall cease to exist sixty days after the final report is submitted under this subsection.

(f) Total expenditures of the Commission shall not exceed $1,000,000.

[Testimony continued from page 112.]

Senator BAYH. Mr. Bonnie, what was your role?

Mr. BONNIE. I was associate director of the National Commission.

Senator BAYH. I understand the Shafer Commission came to the conclusion that as far as harm to the individual or to society, by the use of marihuana, this was not sufficiently significant to continue to criminalize the users. Since that time there have been some medical studies that caused some concern. Did these issues enter into your assessment of the degree of deterrence that should be utilized? Do we need absolute scientific certainty? I do not think we are there yet, are we?

COMPARE ALCOHOL AND MARIHUANA CONTROL POLICIES

Mr. BONNIE. No, I think the best way to deal with that question is to consider the comparison with alcohol. I think I speak on behalf of a substantial majority if not all of the members of the National Commission. Let us assume that the use of marihuana is as harmful as the use of alcohol, which it demonstrably is not. Even if all of the scientific studies that suggested possible harms were accepted and were confirmed by subsequent research, marihuana would not turn out to be as harmful as alcohol if used heavily over a long term. The Commission so stated. Nonetheless, even if we were to assume that marihuana were to be proven as harmful as alcohol, that would not affect the basic issue before this subcommittee and the more specific issues raised by S. 1450. The issue before the subcommittee is not a health issue. It is an issue regarding the proper use of the criminal law—whether or not the criminal sanction ought to be extended to the user of a substance which maybe is as harmful as alcohol, which as I say, it is not.

Senator BAYH. No, but it raises the question of whether a felony penalty for the distribution is sufficent deterrence or whether you should also include a civil fine for possession.

Mr. BONNIE. I think that the issue, the scientific evidence with regard to the possible impact of a long-term use on the individual would be probative on the question whether or not the drug ought to be legitimately available.

This indeed, was essentially the Commission's operating premise in rejecting the legalization approach, in rejecting the regulatory scheme.

The Commission essentially adopted a very cautious, a very conservative view—that we do not know enough about the use of marihuana, and that it is possible that studies will indicate that heavy use of marihauna over a long term does involve serious deleterious consequences to the individual, perhaps even as serious as those associated with alcohol use. Under those circumstances, the Commission concluded that society simply ought not to institutionalize the availability of the drug.

But even assuming this posture toward availability, the Commission concluded that under no conceivable formulation of the scientific findings about the effects of marihuana use, should the criminal sanction be applied to the user. And I think that would apply to the civil sanction notion as well.

61-801 O - 77 - 16

I think on this latter point the issue is drawn between the deterrent effects of the civil sanction versus no sanction, on the one hand, and the possible costs involved in applying such a sanction on the other.

I suppose, and I see one of the Senator's points now, that uncertainty about the effects of use might enter into the determination about the importance of deterrence. It is my own view that it would not—that the possible dangers are simply not great enough to warrant any law enforcement resources in that area.

Senator BAYH. I read the Commission report and have been concerned about its policy recommendations.

CONCERN ABOUT INCONSISTENCY IN SHAFER COMMISSION REPORT

As a lawyer, are you at all concerned about the apparent inconsistency of the Commission report that reached that conclusion that individual possession of the substance would be permissible; but, that a serious criminal sanction should be retained for those who sell the substance?

Mr. BONNIE. As a lawyer, I was not disturbed by the inconsistency. I think it is only an apparent inconsistency. With regard to the position that the Commission adopted, the Commission did not say that it was okay to use it. The Commission did not say that we approve, or that the society ought to approve people using it.

The Commission said we want to discourage the public from using the drug. But the Commission also said we should not be myopic. The law does not stand alone. Consider the arsenal of social control that we have at our disposal, which are in fact "working" for some, I do not know what the number would be, 150 million teenage and adult Americans who are "deterred." Consider those who have not experimented and have been discouraged from using the drug, not by the law, but by other factors—perhaps their notions of individual morality; perhaps, their fear of the harmful effects. This society has a tremendous arsenal of institutions and social control devices to discourage people from using marihuana—the churches and the families and the schools and so on.

The Commission simply said the criminal law is too big a bat to use for this particular fly in the social ointment. And when viewed in that way, I do not believe that that is an inconsistency at all.

Senator BAYH. I would not want to put words into Mr. Stroup's mouth, as I am sure that he could express it better than I. But, it would seem to me, the reason we have laws is to affect the relationship between individuals; and that the net effect of the given laws, is how it affects a citizen.

Thus, if the Commission came to the conclusion that a certain substance does not detrimentally affect an individual citizen, to the extent that we should have penalties, then, I suppose Mr. Stroup would argue, why do we say that someone who sells it should have that kind of penalty imposed?

Mr. BONNIE. I guess I had better put on my other hat at this point. My previous answer was essentially the position, I think, the Commission espoused and the reasons it gave for rejecting the regulatory approach.

SUPPORTS NEUTRALITY POLICY

My own view on that issue is that if, as the Commission found—and I think that there is no evidence to the contrary and never will be—if the use of marihuana in moderate amounts for one's own use, for recreational purposes—exactly the way the overwhelming majority of marihuana users use the drug—if this kind of use carries no possibility of harm to the individual and certainly not to society, then the official social policy toward the recreational use of marihuana ought to be one of neutrality.

We ought to say, that is your business and we ought not to intervene. And if you do begin at that point and say essentially, that the policy ought to be the same as for alcohol, then, naturally, the purpose of legal intervention is not to inhibit a person from obtaining the drug, but to insure that the product that he gets is one that will be the most healthy one.

Thus I think that if you begin from that premise—neutrality toward recreational use—then you are inevitably led to a regulatory model. I think the Commission began at a different point. And I guess, my personal view at the moment is that for any number of reasons, the regulatory approach is not feasible. It does conflict with international obligations. It is not politically acceptable. And for any number of reasons I do not think that the State legislatures or the Congress are about to go that route.

It is crucial, at this stage to get the Commission's recommendations implemented. To do this, it is important to emphasize that this was an extremely cautious, conservative body that began at exactly the opposite position from the one which I just articulated. The Commission's position is that we want to discourage the use of this drug.

COMMISSION'S MEMBERS DECRIED BY LIBERALS

The Senator will perhaps remember that at the time that the Commission was appointed there was an outcry from the liberals. Mr. Stroup was one of those who was making the point that this body was preordained to reach the most conservative possible conclusions on this issue. Most of the commissioners had already made their positions known on the public record. I think it was said by Bill Hines in the Chicago Sun Times in 1971 that their average age was 54, and the color of their hair was white. And under no circumstances would this group, have anything in common with or any solicitude for the long-haired users of marihuana that would appear before them.

Well, the Commission recommended decriminalization despite that, and despite President Nixon's statements at the time that it did not make any difference what the Commission said, anyway, and that he opposed the legalization of marihuana and that meant legalization of use, that is decriminalization. This conservative body, taking an extremely cautious approach, as I have indicated, said that this society pays a devastating price for criminalizing the possession of marihuana for personal use. The marihuana laws cause more harm to the social fabric, particularly the legal system than the use of marihuana. And I think that is the essential conservatism of the Commission position

as the commentary of William Buckley or James J. Kilpatrick and other conservative commentators have indicated. The position of decriminalization is a conservative position. And that is why I recited the Commission's position rather than my own.

Senator BAYH. Sitting here now, I confess I am not prepared to go as far as you would go; that is my own personal opinion.

I must say I am persuaded that there is some inconsistency between the policy, as it affects the individual as far as use is concerned and how you affect others up the chain. We will have to deal with that, considering the practical aspects as best we can, and to be honest with ourselves.

DOES FORD NOW REJECT THE NIXON POSITION?

Let me address some questions.

Mr. Miller, President Nixon did appoint this very prestigious Commission. It did make recommendations which he summarily rejected, indicating that he had already made up his mind about what he thought was the correct policy.

Then in your statement, you had a rather equivocal statement that says that the Department opposes, and then you asked us to strike that.

I believe you are trying to say that your fixed position on that is rather ambivalent. Is there any reason behind that, as far as the Justice Department policy right now?

I do not want to put you in any position that is personally embarrassing; but, is there anything happening in the Justice Department right now that might lead us to believe that they are studying the policy?

Mr. MILLER. Only to the extent that the Department of Justice is always considering policy of this type as to which direction to go in regard to all criminal offences.

There is not a task force, a working party or whatever you might want to call it presently considering making a determination as to what should be the policy of the Department of Justice. There are many of us within the Department who have views that will be made known to the Attorney General. But, I have seen no pronouncements from the Attorney General as to what position he personally takes on the matter.

Attorney General Saxbe made a statement a time or two in public. I have heard none by the new Attorney General.

DEA POSITION ON MARIHUANA QUESTION

Senator BAYH. As you know, our committee has had a number of opportunities to discuss the overall drug problem with DEA. In fact Mr. Bartels earlier stated that DEA was in the process of studying the marihuana question.

Have you reached a conclusion? If not, who now is in charge of that study?

Mr. MILLER. I am.

Senator BAYH. You are.

Mr. MILLER. Yes, sir.

Senator BAYH. Then I think you have more than a passing interest in this problem; and are more than just a conveyor of the opinion of the Justice Department. Where is the DEA, now, in their marihuana study?

Mr. MILLER. I have assigned an attorney to study all the various State laws to find out where we are in regard to what the States have done and are doing.

Something along the line of saying "about 44 of the States do this, and about 48 of the States do that."

Senator BAYH. Is this only an inventory study, to compile statistics?

Mr. MILLER. No, this would be a proposal to send forward to the Department for its consideration, a model statute that could be adopted, perhaps by the Commission on Uniform State Laws by the States.

So far as the position of DEA is concerned, we have already pointed out that the States are now taking adequate action. The States are not sitting still on this matter. They have made many, many changes.

I feel personally, that there is no need for the Federal Government to step in, preempt, lead the way for the States. The States are already examining ways to cope with the matter.

It is the position of DEA there should be a status quo at the Federal level. There should be sufficient experiment at the State level to make a determination as to the best way of controlling this matter before the Federal Government steps in.

People look to the Oregon experience and say: "Well, it is very good; the results are tremendous. It is working."

I do not know whether or not the sociologists have said that yet. I have heard Mr. Stroup say it. But, I do not know what an anthropologist would say or other people who know how to conduct studies of this type, as to whether 18 months is sufficient experience to determine what the consequences of that law will be.

RESPONSIBILITY TO REASSESS FEDERAL PRIORITIES

Senator BAYH. Are we going to wait for the 300 million-year-old man to determine the impact of marihuana?

We have here, Mr. Horton, who is in charge of law enforcement in one of the counties in Oregon; is that not relative evidence, as far as what we should consider here?

I might suggest, your idea of allowing the States to pursue this matter is consistent with division of responsibilities as far as law enforcement is concerned; but we are in the process of considering the reclassification of all the laws codified by the U.S. Government. This is the committee that has the responsibility to assess penalties at the Federal level.

Under the present statutes there is a penalty clause we must assess as far as the use of marihuana is concerned. Thus, as we prepare to codify and assess criminal laws at the national level, I think we have to ask these questions. And I might suggest you, as a representative of the Justice Department, have a responsibility of addressing yourself to these questions as well—not just say we are going to pass the buck.

Senator Hart and I are faced, within the next few weeks, of having to deal with this question in full committee. That is why these hearings are timely.

I do not want to put you over a barrel here, and say that you must answer right now. However, I must say, I cannot accept that we do not have responsibility at the Federal level to look at these laws, just because our predecessors have already looked at them and already assessed the penalty. Thus, they are being reviewed now. I believe we have a responsibility to look at it, in the light of today's facts.

DEA AGAINST BILL AS UNENFORCEABLE

Mr. MILLER. I suppose what I am saying is that we are not sitting on our hands over in the Department of Justice. The Department is fully aware of this hearing. After all, you did send notice to the Attorney General inviting somebody to testify, and I am here. The only thing I am saying right now is that the Department has not yet worked up a final decision as to the concept of so-called decriminalization.

I am here today, testifying against the bill because mainly, it is a poorly drafted bill. And if it stays the way it is and is enacted by the Congress of the United States, in my opinion, it cannot be enforced.

I am not ready to say that since we have a law that is not now enforced, what is the matter with substituting a law that cannot be enforced?

That seems like a very stupid logic to me. Unless a law can be passed that is usable, that can be enforced, then I do not think the Congress of the United States should enact it.

Senator BAYH. I think that is a very responsible position. There is no need in replacing a law that appears in question with another one that is equally at question.

I am not being critical with your assessment of this particular proposed bill. In fact, that is one of the reasons we wanted you to be here. But, I would hope that you and DEA—with the marihuana study that is presently being conducted should go beyond looking at what the States are doing—would address yourselves as to what you feel is the right Federal policy in regard to the use of small amounts of marihuana.

Let me ask you, what is the latest figure, as far as Justice is concerned, about how many users we have of marihuana?

Mr. MILLER. The Justice Department is getting out of the guessing game, sir. Even so far as heroin users are concerned, we do not have the slightest idea how many heroin users there are. We only have reported active addicts.

Scientists make attempts to——

Senator BAYH. Did I ask heroin? I believe I asked about marihuana users.

NO ESTIMATE ON MARIHUANA USERS

Mr. MILLER. I know. I was just going into the whole subject of how difficult it is to compile figures of this type. Getting right down to your answer, we do not know how many marihuana users there are in the country.

Senator BAYH. Do you have an estimate?

Mr. MILLER. Regrettably, we sometimes must rely on imprecise data such as Mr. Stroup who comes up with 13 million. If we have no reason to disbelieve it and it is said more than two times and finally winds up in the Congressional Record, it is accepted as fact.

Senator BAYH. You have no assessment then, that you care to make.

Mr. MILLER. No, sir. The only thing that we can estimate it runs into the millions, obviously, as a result of what we see coming across the border. Tons and tons are coming across the border. Obviously somebody is using it.

Senator BAYH. How many arrests?

Mr. MILLER. I will have to get the figures on that, sir.

I must apologize. I left my statistics back in the office when I left for this meeting.

Senator BAYH. Our estimate is about 500,000. I do not know whether that is close to yours.

Mr. MILLER. As to the number of arrests, I have heard this figure of 420,000 last year. I think that came from the FBI's 1973 crime reports.

The Uniform Crime Reports for 1974 have not been released yet by the FBI. I am puzzled as to where this half a million figure came from.

Senator BAYH. You're positive where the 420,000 figure came from?

Mr. MILLER. I know where that came from. It came from an estimate of the FBI Uniform Crime Reports for 1973.

Senator BAYH. It is reasonably accurate.

Mr. MILLER. I would assume it is reasonably accurate. However, I have not taken a position on how many of those 420,000 were for simple possession only.

The chief of police of Los Angeles Police Department, Edward Davis, indicates from a study of the arrests in Los Angeles in 1972 approximately 85 percent of all marihuana possession cases were incident to some other investigation the officer was conducting at the time, rather than simply waiting behind a bush for a marihuana possessor to come along, grabbing him, searching him, and taking him off to jail. Most arrests were as a result of loitering charges, as a result of speeding charges, where the marihuana was in plain sight, and as a result of disorderly conduct charges.

Many, many violations were involved that officers were looking at, rather than just possession of marihuana per se.

I am not sure that by decriminalizing marihuana the police officers are not going to make arrests for disorderly conduct as they intend to do when they begin investigating the individual's activities. They will still bring people in for loitering. They will still subject those people to many other aspects of the law. They just simply will not charge them with possession of marihuana.

DENVER'S MARIHUANA CITATION ORDINANCE

Senator BAYH. Mr. Wood, I believe you have pointed out that there has been no reluctance to cite people in Colorado, for the specific use of marihuana.

Now, would your Colorado experience lead you to believe that the citations for the use of marihuana were confined to those who were loitering or doing other kinds of illegal activity? I am sure that there is a combination of those instances. However, does that mean that everybody that is assessed a penalty for marihuana use is also doing something else that is illegal? What has been the Colorado experience?

Mr. Wood. I think I mentioned it. And I think also Mr. Horton mentioned that the incidence of ticketing has gone up in Oregon too, the number of arrests. At least that was my understanding of his testimony. And that is consistent. He said something like 30 percent.

Senator Bayh. I think I asked him the question.

Mr. Wood. Thirty percent increase. I think that is probably consistent with what we have seen in Denver. I am not in the position, I do not have the statistics to say for sure, but I think the majority of the marihuana arrests, the ticket arrests under our ordinance in Denver, are either for that charge, itself, primarily, or for a traffic charge, and then for the smaller charge.

Senator Bayh. For example, after the individual suspect is apprehended for a traffic violation then the possession of marihuana is discovered.

Mr. Wood. I think that happens fairly frequently. I would guess that the majority would still be where marihuana would be the prime charge. But I do not have the figures on that.

ENFORCEMENT AND MARIHUANA TRAFFICKING

Senator Bayh. Mr. Miller, despite the fact—since we have had these laws on the books, and have made a major enforcement, public relation effort called, I believe, "Operation Intercept" with legitimate tourist and commercial traffic tied up along the border, and national attention called to the dramatic efforts being made to stop the trafficking over the border—you still point out that tons and tons of marihuana are coming in.

We really have not been successful despite the fact that it is illegal, as far as marihuana entering the country.

Mr. Miller. Mr. Chairman, philosophers and legal scholars certainly will not agree on the use of punishment as a deterrent of crime. Mr. Bonnie has pointed that out very skillfully.

As for me, I find it difficult to prove a negative. I simply cannot answer the question of how many people are deterred from using marihuana as a result of the fact that there is a law against it. There are many people who fear suffering the consequences of the law and that deters countless hundreds of thousands of people. Avoidance of punishment and disgrace are very decisive reactions in the lives of normal people.

I do not believe the law that we now have is an artificial danger. It is true, in comparision with millions of people who are possessing marihuana, at one time or another, actual enforcement of the law seems to be insignificant.

But, Mr. Chairman, there the law is. There it stands. Many people use it as a guide to their behavior, in making a decision as to whether they will or will not use marihuana.

S. 1450 most certainly would do away with whatever preventative

value there is in the law. It would be nothing but a bluff. The bat would be full of escapes and uncertainty and imprecision. It would be recognized as such.

Senator BAYH. Let me ask you another question. Then I am sure my colleague, Senator Hart, has some he would like to ask the members of the panel.

I would hope those of us who are trying to make a judgment about a question as important as this will not respond the same just because of someone's response. With all respect to our witnesses, here, I think we all have to make our own judgments on the subject.

We have talked about the Shafer Commission study. Does it create some interest in your mind about examining the position of the Federal law, now, since organizations such as the American Bar Association, the Consumer Union, the National Congress of Commissioners for Uniform State Laws, the American Public Health Association, the National Advisory Commission on Criminal Justice Standards and Goals, the National Council of Churches, the Governing Board of the American Medical Association, the National Educational Association, the San Francisco Commission on Crime, and Mayors' Advisory Committee on Narcotics Addiction—even James J. Kilpatrick, who is a rather conservative syndicated columnist, William Buckley, John Finlator, our Deputy Director of Narcotics and Dangerous Drugs have endorsed the Shafer Commission Report? Does that have any influence to cause you to have reason to think, perhaps, we ought to take a good look at where we are now, and what is the total impact of continuing that direction?

Mr. MILLER. Yes, sir. Those are very prestigious groups. I do not doubt for a minute that we should take a look at where we are. In fact, that is what we are doing.

Senator BAYH. We are interested to find out what you would recommend, as quickly as we can.

Senator Hart, I will yield to you.

Senator HART. I think I have no questions.

I apologize for my absence during a period of time, compelled by a meeting of another committee.

I appreciate, professor, your endorsement of the amendment. I am encouraging anybody to say so.

Mr. STROUP. You may be sure that our organization will be endorsing it, Senator. I think it is an excellent proposal and I prefer it to the civil fine approach. I think it is a much preferable position. As I explained in my brief presentation, being realistic, and recognizing that somewhere in excess of 400,000 people who occasionally use marihuana are arrested every year, we are willing, if necessary, to accept a "cease-fire" proposal as a compromise. But the eventual marihuana policy we are aiming at is more in line with what you suggested.

Senator HART. And I think that I would just generally agree with Mr. Miller's statement that as long as the law says that this is unacceptable conduct, in terms of sanction, it does deter some people. But it sure does not deter, where there is 13 million regular users, an awful lot of other users and the damage, in my mind, the damage it does to the general public's concept of the justice of the system is so overwhelming that I am game to eliminate the deterrence to the extent that it applies.

MARIHUANA LAWS CREATE DISRESPECT FOR LAWS OF THE LAND

Senator BAYH. I concur that there is some deterrent. But, that deterrence is offset if there is minimal deterrence by a major recognition of the fact that the law either is not being enforced or is incapable of being enforced. That also increases disrespect for the law.

And this feeling of disrespect for our laws and that our law enforcement officers are filled with hypocrisy contributes to continuing the frustration of disbelief in our institutions. I think the disbelief that exists today for our institutional structure is reaching dangerous proportions. If we can strike a blow, even a step at a time, to root out those laws that lend to this belief—that the laws are not honest in their application or their effect—in the final analysis we are going to help clean up our institutional belief which is in grave disrepute at this time.

Mr. MILLER. Mr. Chairman, if the present law is in disrespect, and indeed, it may be, I cannot see how the law would gain any respect by substituting a law that could not be enforced, or is intended by the Congress of the United States not to be enforced. That law would be in more disrepute than the one we have.

Senator HART. If I could interrupt it, then you would be for my amendment in preference to the one you are in here representing.

Senator BAYH. You had better give him some legal advice, Mr. Bonnie.

Mr. MILLER. Senator, I do not have the ability that Mr. Bonnie does, when it comes to a tough question; I cannot put on my other hat.

Mr. HORTON. Mr. Chairman, I might indicate that the Drug Abuse Council in their year-long survey in Oregon, was very concerned with this precise question; namely, is there measurable deterrent effect that laws which made possession illegal have any comity?

They found that only 4 percent of the people, who were interviewed, indicated that the fact that it was illegal to use marihuana, deterred them.

The vast majority of people, as Mr. Stroup indicated, cited reasons they were not interested for fear of personal health as to deterrence for not smoking marihuana. Insofar as, in Oregon at least, whether or not there is more disrespect for the law; I can assure you that there is probably more respect, at least no less, between the law enforcement community and the youth of our cities and our State than ever before. And demonstrably it is because, at least in part, of the realistic approach that we took about marihuana. And that has been personally conveyed to me by numbers of young people. They have affirmatively made that point.

CREDIBILITY OF INSTITUTIONS QUESTIONED

Senator BAYH. I think that factor is an important subject for us to consider. It is hard to define, I am sure. It will not be found anywhere in the FBI statistics or any congressional report.

But, most of us here who have been involved in this business of Government, as long as my colleague from Michigan and I have, develop almost a visceral feeling for these things. One is the sense

of justice that the people, of all ages, wonder whether there is any honesty, responsiveness, and credibility about our institutional system. We have to reverse this trend because it certainly ought to be a government for the people.

Mr. Wood, you mentioned that this position was supported by your police department in Denver, and then you pointed out why.

Do we have evidence that the use of marihuana in your individual jurisdiction does, indeed, lead to the use of barbiturates, amphetamines, cocaine, or heroin? Do we have evidence that the use of marihuana leads to an assortment of other crimes that are associated, say, with the cost of heroin?

Mr. Wood. Let me say, first, that the Denver Police Department supported the Denver City ordinance. I don't know how they feel about Senator Javits' bill. I did not mean to imply they were supporting it.

Senator Bayh. I understand.

Mr. Wood. I do not think the causal connection has ever been established, at least to my satisfaction, on the relationship between marihuana use, or alcohol use, or use of any substance and subsequent use of heroin or cocaine.

I think that a number of heroin and cocaine users have used marihuana. But likewise, they have used alcohol, typically. And, I do not know, I do not believe that the causal connection has been made, as far as effect on crime. The only drug that I have been able to ascertain which has any appreciable effect on crime, is heroin. And that is because of the tremendous cost of heroin.

Senator Bayh. I will ask you to contemplate—was there an established relationship between certain amounts of use of alcohol and the barbiturate-amphetamine syndrome to some people, as far as criminal activity?

Mr. Wood. Yes; I think there is.

Senator Bayh. They are able to get themselves hyped up—this kind of thing. Do we have any statistics on that?

DENVER STUDY RELATED ALCOHOL TO CRIMINAL ACTIVITY—ESPECIALLY ASSAULT AND HOMICIDE

Mr. Wood. We attempted to do a study by interviewing city jail population. And this was done several years ago. I do not know if the figures are still reasonably valid today.

The result of the study was that about two-thirds of all the people who are arrested for various types of violent crimes, assaults, homicides, and things of that sort, were under the influence of alcohol at the time the incident took place. The alcohol seemed to be something that precipitated a good many assaults and homicides.

Senator Bayh. Your study showed no relationship with marihuana?

Mr. Wood. That is correct. Marihuana, we have no study that would show how it fits into there. And I do not say that I know personally of any connection that has been made to that. Heroin, apparently, causes people to commit burglary. It costs $100 or $200 today. The lifestyle does not fit in too well with the workingman's life. So, they generally turn to theft or burglary to support it. There is a link there that is very clearly established.

Mr. HORTON. Mr. Chairman, I think it is tempting to infer that marihuana leads to hard-core drug addiction, because of the fact that so many addicts, or so many people who regularly use barbiturates or amphetamines also use marihuana.

But, of course, I defer, here, to Mr. Bonnie for elaboration on this point. But, I think the Shafer Commission study as well as the Le Dain Commission study showed clearly that there was no causal connection.

By using that type of logical inference, we are truly being very illogical. It would be just as illogical to say that Crest toothpaste or tobacco or alcohol had the causal connecting point between whatever you start with heroin.

But, I think, all these studies that have been done clearly show there is no casual connection.

Senator BAYH. Mr. Stroup and Mr. Bonnie both referred to this aspect as far as studies are concerned.

I was wondering whether, in your roles as law enforcement officials, you had any instances where, for example, you have busted someone for the use of marihuana; then that lead to finding a cache of heroin.

FEW ARRESTEES HAVE PRIOR RECORDS

Mr. HORTON. Absolutely not. We found most marihuana users who are brought into the criminal justice system are not the traditional stereotyped criminal, namely, they have no prior record, they are not involved with crimes of violence.

Most of the young people are either working or going to school. But that is not to say when we arrest a person who has a cache of heroin, we do not find some marihuana. I would not infer that. But the vast majority, you cannot say that 13 million people are going to get turned on to heroin because they occasionally smoke marihuana.

Mr. WOOD. I think it is safe to say that there is no significant correlation. It may occur, as Mr. Horton said, but not to a significant degree.

Senator BAYH. Mr. Miller, do you have any thoughts on that?

Mr. MILLER. Yes, sir. I do.

You know, it is amazing how we can begin to discuss nonsequiturs and then because we cannot disprove it, it winds up to be a virtue for marihuana.

Senator BAYH. That is not the way I asked the question.

ILLEGAL MARIHUANA CAUSES ILLEGAL ASSOCIATIONS

Mr. MILLER. We are talking about the escalation phenomenon that people have discussed since the old Indian cannabis report in the 1800's, which put this down saying that there is no such thing. Now, the only phenomenon that I have ever seen is that a person who uses marihuana is alining himself with the subculture, wherein all drugs are used. The more he uses marihuana, the more he will become a target of people who will introduce him into the culture that uses stronger drugs.

That does not say there is any sort of a chemical within marihuana itself that compels a person to use a more potent substance. It is only his association with the drug culture that may cause him to experiment with other drugs.

Senator BAYH. Let me ask you—since you are quick to suggest that we stick directly to facts as far as the FBI statistics are concerned—what do the facts show? Is there any causal relationship as far as enforcement is concerned?

Mr. MILLER. The only thing it shows is that by far the largest majority of heroin users first started using marihuana. But of course, Mr. Keith Stroup is going to say that the majority of them started also on milk and——

Mr. STROUP. I was going to say alcohol, that is the first drug most of them used. It was not marihuana.

I think it is time you quit saying that. That is "the big lie" put out by the Bureau of Narcotics.

Senator BAYH. This whole DEA responsibility is a very thankless job.

FOCUS SHOULD BE ON DANGEROUS DRUGS, NOT MARIHUANA

We say: Why, in the world, can we not plug up the loophole in our law enforcement system that lets in this heroin? There is no question about what it is doing to us. It is still going up—it is going up at an alarming rate. Yet, he and other law enforcement people in this country, right now, are—either by choice or by lack of choice—spending a significant amount of the enforcement resources chasing marihuana users and enforcing marihuana laws.

Is it not reasonable to assume—if one weighs off the deteriment to society of marihuana via-a-vis the detriment to society of heroin—that we might be a lot better off if we took the law enforcement moneys and personnel to intensify our effort to stop the increase of this heroin poison, about which we are making no appreciable headway?

Does that sound reasonable?

Mr. MILLER. I simply challenge your basic assumption. Your basic assumption is that we are spending an inordinate amount of time chasing marihuana users.

We are not. I do not think I know of a single case where a special agent of the Drug Enforcement Administration set out on a course specifically, deliberately intending to make a small possession of marihuana investigation, or to prosecute him for simple possession under section 404 of the Controlled Substances Act. The attempt of the DEA is to hit at the supply of marihuana.

So far as our congressional mandate is concerned, we think this is what we are supposed to do. The Oversight Committee of the Senate and the Oversight Committee of the House have agreed with us again and again that this is what we should be doing.

IS FEDERAL MARIHUANA POLICY BENEFICIAL FOR THE NATION?

Senator BAYH. That is what the law says. I am not quibbling with the fact that you ought to be out there trying to enforce the law.

What I hope we are trying to do is to look and see whether this law is really effecting something that is in the Nation's good. And, whether the resources we are spending to try to enforce this law are making it more difficult to enforce laws directed at another problem—which is causing a significant greater damage.

You have to recognize that when your people stop users, coincidental to other searches and the other problems, you turn those individuals over to local law enforcement officials. Thus the cost and the amount of time is spent by these local law enforcement officials. That is where the tremendous cost of all this effort—that these prosecutors and their law enforcement officials spend time trying to prosecute people busted for small amounts of marihuana. Also, this detracts—not only from the effort they can make to try to get hard-drug pushers—but rapists, burglars and other major felons. That is what really concerns me. We are proliferating our law enforcement effect.

Mr. MILLER. The whole system, I think, Senator, has to be examined at one time. I do not think we should examine it piecemeal; I do not think we should single out marihuana and independently work on that only.

We also have many other laws that are so-called victimless crimes, that are in fact, minor offenses. The Congress of the United States and the various legislatures around the country should examine the whole judicial system, the whole spectrum of crimes, and perhaps, make a decision as to how many of these minor offenses they want to continue to carry within the criminal justice system. But I would object to just singling out marihuana without also looking at all of the other various minor offenses as well.

WHY PUNISH SUCH VICTIMLESS CONDUCT?

Senator BAYH. With the exception of, perhaps, gambling—most of the other victimless crimes that have been referred to here, adultery, prostitution, and other things that offend our moral sensitivities—I know of no effort the Federal Government has made to punish those participants. Whereas they do punish marihuana users.

That is why we are addressing our attention to this subject right now.

Mr. HORTON. Mr. Chairman, I think it is important to point out that decriminalizing small amounts of marihuana in no way inhibits or disturbs the priorities as established by the Department of Justice. Namely, to go after the importer or smuggler of marihuana. All it does is to prioritize officially the police work at the State level. Police work which, perhaps, is not as enlightened as the policies as enumerated by the Department of Justice today. Namely, it is a big temptation for local police to go after the user and the possessor of small amounts of marihuana.

REDIRECT DECRIMINALIZATION PRIORITIES OF DRUG LAW ENFORCEMENT

By decriminalizing, we are statutorily taking away a big temptation to waste resources, to concentrate on the meaningless area of the law. And we are encouraging local law enforcement especially, in a very positive way, to redirect their priorities to the most serious forms of drug abuse.

So, I do not think what we are proposing here today in any way disturbs the philosophy or the policy that has been enumerated here by the Justice Department.

Senator BAYH. Another question I would like to direct to you and Mr. Wood, because it is a law enforcement kind of question.

During the last year, the FBI crime report shows we have had the biggest increase in crime since they have been keeping records. During that same period of time, both of your jurisdictions have had a different policy in the way marihuana users are treated, compared to most of the rest of the country.

Have you noticed any increase in crime in your jurisdictions that have a relationship to your new policy? Have you had significant criminal activity in Denver or in Oregon—in view of the alarming national statistics—which show is there any causal relationship there?

Mr. HORTON. No. 1, reported crime has been increased and I think we can differentiate that from crime in the raw sense. We do not know what that is: the latter. But we can statistically make some comparisons about recorded crime.

We have had some various plans in Oregon. For example, revising our rape laws encouraging women to report the crime of rape. We have had an intensive impact on burglary through either burglary prevention or reporting crimes of burglary. We have done a lot of victimization studies which show that a lot of people in the past have not reported crimes, so we have made an honest, concerted effort to get the community to have them report crimes to the police, so that we can respond in some way.

So, to that extent, it is working. More people are reporting crimes than ever before. But we say, OK, there are a lot of incidents of reporting major crimes in Oregon. Can that be attributed to decriminalizing marihuana? No, I do not think so.

We have an increase in crime throughout the United States. I read in Time, the magazine, a few months ago that heroin is on the increase. Reported abuse of heroin in Oregon. There is also an increase in Louisville and Des Moines, Iowa. Both those jurisdictions have harsh criminal laws about marihuana. We do not. What is the difference? Crime increases. No causal connection between what they do with possession of small quantities of marihuana and how many burglaries or rapes or robberies were committed by other offenders.

Mr. WOOD. Mr. Chairman, in Denver we were the beneficiaries several years ago of an impact grant from LEAA in the amount of $20 million, which has had some impact, I am sure, on the crime figures in Denver. And it is hard to understand exactly which element produced the reduction in crime that has occurred in most categories.

DECRIMINALIZATION MEANS MORE PERSONNEL AVAILABLE FOR MAJOR FELONY CRIMES

I agree with Mr. Horton, in that it is hard to say, if a reduction in crime occurs, what to pin it to. One thing I can say for sure is that with respect to our office, which prosecutes all felonies and misdemeanors for the city and county of Denver, as a result of the change in the marihuana law, we have established a program to specialize and put additional personnel on the crimes of homicide, robbery, rape, assault, and burglary. And we have been able to do that, in part because we no longer have to deal with the large volume of small amount

of marihuana cases that were just flood'ng us. And those are now no longer a significant problem with us. So, we have additional lawyers, additional prosecutors, ready to take cases to trial, quickly.

We have a speedy trial rule we are trying to meet. We have a speedy filing rule we are trying to meet. And one of the reasons we are able to do that I think is because we are no longer bogged down with, as I mentioned, some 1,800 since this law was in effect, just a little over a year ago, some 1,800 cases that otherwise would have came through our office, clogging up our office, which have been handled as a city ordinance violation in the municipal court. And that is a significant number of cases. We only filed 2,000 felony cases.

Senator BAYH. Some 1,800 cases cleared?

Mr. WOOD. That is right, 1,800 marihuana ordinance violations that would have otherwise gone to our office, and would have had to have been processed by our office and handled as municipal ordinance violations. And we have not had to deal with those. We have been able to concentrate our efforts on those other crimes that I mentioned.

Senator BAYH. Now, the total amount is about 2,000 felony cases?

Mr. WOOD. We file less than 3,000 felony cases a year and about 15,000 misdemeanor cases a year. So, maybe make the total including juvenile cases, 20,000 cases. We have gotten rid of maybe 10 percent, thanks to this ordinance.

Drug cases are often more productive of litigation than other types of cases, because, as a former defense lawyer, I know my part was always, in a drug case, pro forma, to file a motion to suppress. And that does not occur in many other types of cases. And that may be followed by other types of motions, for disclosure of the informants, and so on. Drug cases are productive of seemingly endless litigation. We have been able to avoid that.

Senator BAYH. I certainly believe that one of the things we can do, to help clear this litigation aspect of the crime problem, is to have an early trial. This conduct is generally recognized as a type of a conspiracy to perpetuate a blocked court system. To the extent it would free the dockets and move trials more quickly through the system, this could have a salutory impact on decreasing crime.

Mr. WOOD. I think that is a very worthy goal. And we are doing the best we can. We generally now can set a felony trial within 90 days in our jurisdiction.

Senator BAYH. I want to thank you gentlemen.

I hope we can feel free to call on you as we go ahead with our study. you have been very helpful. We will recess our hearings, subject to the call of the Chair.

[Whereupon the subcommittee was recessed, subject to the call of the Chair.]

APPENDIX

Additional statements and material supplied for the record

61-801 O - 77 - 17

Part 1—Statements, Comments, and Correspondence Regarding Marijuana Control

[From the Congressional Record, Aug. 3, 1976]

BAYH CALLS FOR SENSIBLE FEDERAL DRUG CONTROL PRIORITIES

Legislative Strategy Targeting Drug Traffic Kingpins

Mr. Bayh. Mr. President, last week the Subcommittee to Investigate Juvenile Delinquency began its assessment of President Ford's April 27, 1976, drug abuse message to the Congress and the accompanying proposal for fighting drug abuse. The Narcotic Sentencing and Seizure Act of 1976, S. 3411, which was introduced on May 11, 1976, by Senators Hruska, Eastland, Hugh Scott, Thurmond, and Buckley.

Since this Presidential proposal was introduced in mid-May, other committee business, and my illness coupled with recent recesses made immediate hearings impossible. We are especially appreciative that Majority Leader Mansfield and Minority Leader Scott permitted us to proceed with these vital hearings late in the session.

We intend to give specific attention to the stark reality that many who sustain the flow of heroin and equally dangerous drugs such as barbiturates do so while on bail and that when convicted only a few spend substantial time in custody. To add insult to injury these same high-level traffickers manage to avoid the tax collector while law-abiding citizens carry their share of the tax burden. It is intended that these hearings will help refocus national concern and stimulate fair, but firm Federal response to those who profit from the havoc wrought by drug traffic.

Last week we heard impressive and alarming testimony about our Nation's inability to even focus our drug law enforcement apparatus and our criminal justice resources on these "kingpin" profiteers. While I am especially concerned that the constitutional rights of criminal defendants are fully secured, I am likewise concerned that within such a framework our citizens are fully protected. We must reallocate our resources and sharpen our prosecutorial tools and strengthen our criminal justice system so that it deters, disrupts, and detains these criminals.

Since the pasage of the Comprehensive Drug Abuse Prevention and Control Act—Public Law 91-513—in 1970, our subcommittee to investigate juvenile delinquency, which developed this measure, has monitored its implementation and sought to assure that the Federal agencies responsible for its enforcement acted appropriately to curb the illegal importation, manufacture, and distribution of controlled drugs.

The 1970 act also established a comprehensive scheme for the regulation and control of dangerous drugs manufactured for legitimate purposes. It was to more specifically address this facet of the 1970 act—the Controlled Substances Act and the Controlled Substances Transport and Export Act—that the constitutional cornerstone became the commerce clause rather than the taxing authority. In any case, regarding illegal traffic in natural opiates—heroin, morphine—whether under the tax authority approach or the commerce clause it is difficult to hypothesize a case with no interstate aspect.

Regarding the dimension and abuse or domestic legally manufactured controlled substances we have made considerable progress in the last several years. We have obtained a drastic, but necessary, 95-percent reduction in domestic amphetamine production. We have secured more appropriate control over our production and distribution of other drugs with high abuse potential, including the barbiturates and methaqualone. And to prevent illegal traffic and abuse of methadone we have obtained stricter controls over its storage and distribution.

In short, these and similar important steps have effectively helped to reduce illicit traffic and clandestine manufacture of controlled drugs.

Our efforts aimed at curbing illegal traffic in illegal drugs have not experienced the same degree of success.

The subject of extensive hearings by the subcommittee last year on the effectiveness of the Nation's drug control laws—the opium poppy—is not of domestic origin, but its byproducts, or at least one of them—heroin—is certainly familiar to every American.

Indeed, we are all too familiar with the devastating effects of heroin on the individual addict, their families, and society at large. We know that heroin abuse has destructive physiological consequences, debilitating the health of the abuser and impairing an addict's ability to lead a normal productive life. The social consequences are equally devastating. In order to support a habit, the addict is driven to engage in criminal activities which threaten the safety and well-being of all our citizens. The costs in human and economic terms are enormous:

Billions of dollars are expended each year to protect our citizens from drug-related crime;

Billions of dollars of merchandise are stolen each year to support heroin habits;

Billions of dollars are invested annually in drug prevention, treatment, and rehabilitation programs;

Many innocent people are physically assaulted and even killed in the course of drug-related crime; and

Hundreds of thousands of otherwise productive lives are lost to the destructive and often endless cycle of heroin addiction.

We have learned—and through the course of our recent hearings are still learning—from bitter experience that there are no simple solutions to the epidemic of narcotic addiction nor to the ever-escalating levels of illegal narcotic traffic. There are no panaceas—no magic wands.

In fact, opium control presents especially difficult and complex considerations. The plant which spawns heroin to which our citizens succumb likewise issues drugs to ease the misery of the terminal cancer patient and, ironically, provides us with the antagonist medication necessary to treat those suffering acute narcotic overdose. There is little doubt that the opium poppy is a double-edged sword, life threatening and life saving.

We have made some progress in curbing narcotic traffic and addiction, but we must be forever vigilant that rhetoric about "the light at the end of the tunnel" or "turning the corner" on any problem not delude us into believing that we have actually accomplished our objectives.

One thing that we established through our hearings last year was that the White House was less than candid with Congress and the American people regarding their assessment of the importance of the Turkish ban on the cultivation of opium poppies in the effort to curb heroin traffic and addiction.

Former Presidential assistants with special responsibilities in the area of drug control and abuse told the subcommittee that in October 1971 shortly after the Turkish Government announced the ban, that the plan was ill-conceived.

Dr. Jerome Jaffe, former Director of the White House Special Action Office testified that he never believed that a ban on the growth of opium poppies would be effective in stopping the spread of heroin in the United States.

Mr. Walter Minnick, former White House Staff Assistant to the President for Domestic Affairs and Staff Coordinator for the Cabinet Committee on International Narcotics Control, told the subcommittee, quite candidly, that:

"The Congress and the American people were led to believe that the ban was an indispensable part of getting on top of heroin addiction."

Throughout 1972 the White House produced release after release, heralding the Turkish ban as a major breakthrough in the fight against heroin addiction and as clear evidence that the battle was well on its way to being won. This "hoopla" about the ban stepped up markedly during the fall of that year.

Apparently the Nixon administration was more concerned in 1972 with the re-election campaign than they were about controlling poppy production and solving the heroin problem.

The record developed to date by the subcommittee leaves little doubt that the Nixon administration not only created a misimpression about the ban and the policy of eradication, but that it had little time, if any, to heed the caution and advice of medical experts and others who warned that such policies could have long-term damaging ramifications including possible shortages and the emergence of a strong, viable Mexican connection along our southwestern border.

Even prior to former President Nixon's message to the Congress in June 1971, which set out the duel objectives of a ban on poppies and the development of synthetic alternatives to opiates, agencies experts in a confidential memorandum had alerted the White House to these likely ramifications.

Testimony presented to the subcommittee, however, revealed that White House advisers including Mr. John Ehrlichman, reportedly had decided that the poppy ban was "good politics" in that it would provide a high-profile, simple, ostensible answer to the crime problem with which heroin addiction and traffic are so intimately associated.

Even in late 1972 and 1973 when the prospect of an opiate shortage was rapidly becoming a reality, the White House ignored warnings by the medical community and others that White House "poppy politics" was responsible for the shortage as well as the failure to effectively focus on heroin traffic.

In a very short period of time Mexico had become the primary supplier of heroin to the United States, and although the Turkey ban did cause a shortage of heroin it was, as General Accounting Office investigators told the subcommittee, limited to major cities in the East and "a temporary thing at best."

The heroin problem now is worse than it was before the ban.

The American people are sick and tired of being sold a bill of goods.

As a Member of Congress who has, likewise, relied on less than candid representations at the highest levels of the executive branch in recent years, I know we were sold a bill of goods in this instance.

We are interested in developing a full and complete understanding of these issues so that sound national policies in the area can be substituted for past mistakes.

As late as February 21, 1974, President Nixon concluded his drug abuse in America message to the Congress by saying in part:

"Drug abuse is a problem that we are solving in America. We have already turned the corner on heroin."

Now, even White House officials, as they announce that all indicators of heroin abuse are up again, are cautioning others about claiming victory in the war against the poppy and heroin. In fact, on March 5, 1975, Dr. Robert Dupont then Director of the White House Special Action Office on Drug Abuse Prevention, told the subcommittee that "we can no longer talk about having turned the corner on heroin anywhere."

Similar discouraging observations were contained in the recently released National Institute on Drug Abuse publication "Heroin Indicators Trend Report." Director Dupont reiterated the mistake that was made in interpreting what proved to be a regional, temporary downtrend in usage in 1973 as a turning point in the national antidrug fight and revealed that the evidence is now clear that since 1973 the heroin use problem in the United States had deteriorated.

Maps provided for the subcommittee use in December 1974 by GAO graphically illustrate the source of what Dr. Dupont termed the deteriorating heroin problem: Mexico.

Mexico has become a significant supplier of the heroin reaching United States markets for illicit distribution. DEA statistics show that in the year ending June 30, 1972, 8 percent of the heroin seized in the United States was Mexican. By June 30, 1973, the amount of seized heroin from Mexico had more than quadrupled and accounted for 37.2 percent of all heroin seized in the United States. In March of 1975 DEA informed the subcommittee that 65 percent of the heroin reaching the United States comes from Mexican peoples.

By last fall Mexico had taken over as the dominant or nearly exclusive source for illegal heroin throughout the Nation, overshadowing Europe, the Near East, and Southeast Asia. According to a special October 19, 1975, DEA report to the subcommittee during the first months of 1975, 90 percent of 305 heroin samples confiscated in 13 major cities by the DEA were Mexican processed.

The special DEA report confirms the view that the route that brought French-processed Turkish heroin has been effectively blocked. Less than 2 percent of the confiscated heroin analyzed between January and June 1975, came from Europe or the Near East. In 1972, 44 percent of the sample came from those areas. During the period, Turkey halted the growing of the opium poppy from which heroin is made. Earlier last year Turkey resumed cultivation. Let us hope that the use of the poppy-straw process of harvesting the opium will effectively prevent resurrection of the infamous "French Connection".

Thus I am extremely concerned that all necessary steps be taken to prevent the diversion and traffic in Turkish opium that has formerly contributed so heavily to the destruction of so many thousands of lives and was so intimately linked to the ever-escalating levels of violent crime.

The Turkish Government claims that it will prevent the new opium crop from getting into criminal channels. The resort to the poppy straw method of processing will help to assure the desired objective, but much more is necessary. To date slightly more than 300 agents are reportedly available to monitor 50,000 acres of poppies being cultivated in small plots. The jeeps necessary to reach remote areas as I understand it have not yet arrived. To get the job done will require a dedicated and committed effort by the Turkish Government.

I urge the President to monitor the harvesting and processing of the new crop very carefully, so that if necesary he can take appropriate action under the Foreign Assistance Act to suspend economic and military aid.

When drastic action was taken to rescue American seaman seized by Cambodia, the President stressed the importance of showing that the United States intends to remain strong. If and when the lives of thousands are threatened by diverted Turkish opium, I hope that the President is at least equally committed and willing to show the strength of the United States.

Already the Turkish decision to again cultivate the poppy has made some impact on the illicit market. In Seattle, for instance, the resumption reportedly prompted many distributors to release "stockpiled" Mexican heroin which had been withheld from the market in an attempt to force the price up. This surge in supply has lead to more narcotic seizures in January of this year than in all of 1974 in that area. Similar reports are being received from around the Nation.

Whether the Turkish Government fails to hold to their commitments or not, we are again confronted with a horrendous heroin trafficking problem.

The increasing flow of Mexican heroin toward the major cities of the Northeast and the drying up of the European supply are the most startling aspects of the first half of 1975 DEA figures. A survey completed early in 1972, showed that the furthest penetration of Mexican-processed heroin eastward was an irregular line running from Detroit to the Florida Panhandle. The GAO maps supplied to the subcommittee also illustrate the significant Mexican heroin market during the same period.

For instance, in Boston 100 percent of all confiscated samples came from Mexico in 1975 and none from Europe. In 1974, 50 percent of the Boston samples had come from Mexico and 17 percent from Europe.

In New York City, 83 percent of the samples were Mexican-processed in the first half of 1975 compared with 10 percent from Europe in 1974. 21 percent of the samples were Mexican and 67 percent were European.

For Philadelphia, 83 percent of the samples were Mexican in 1975 and none were from Europe in 1975. In 1974, 50 percent of the samples were Mexican and 17 percent were from Europe.

The new figures show that Mexican-processed heroin has even established itself for the first time in the Pacific Northwest, replacing heroin from Southeast Asia.

The already entrenched position of Mexican-processed heroin in the Middle West and the Southwest was further confirmed by the new figures. For instance Detroit samples were 93 percent Mexican in 1974 and 94 percent in 1975, while Chicago remained at 100 percent Mexican for both years.

However, in 1972, Detroit samples showed 58 percent of the heroin was processed in Europe and 30 percent in Mexico. For Chicago, 44 percent in 1972 was European and 33 percent was Mexican.

The Midwest, and the Chicago area in particular, has become the main line of distribution for the Mexican brown heroin. The DEA deputy regional director in Chicago relates that "we are up to our ears in Mexican heroin." It is estimated that between 3.8 and 7.5 tons of heroin arrive in this principal U.S. marketplace for Mexican brown.

Renewed diplomatic steps are required. Mr. Bensinger, the DEA Administrator and Executive Director of the New Cabinet Committee for Drug Law Enforcement and U.S. Ambassador Sheldon Vance, Senior Adviser and Coordinator for International Narcotics Matters to the Secretary of State have kept the subcommittee appraised of important diplomatic efforts, including the recent June 8. 1976, meeting between Attorney General Levi and Mexican Attorney General Pedno Ojeda-Paullada on the apparently successful opium poppy eradication program, but much more must be done.

I ask unanimous consent that four charts illustrating the extensive impact of Mexican heroin be printed at this point in the Record.

There being no objection, the charts were ordered to be printed in the Record, as follows:

HEROIN SOURCE IDENTIFICATION FOR THE U.S. HEROIN MARKET

[1] Estimate based on 305 in depth analyses, which constitute a 10.5 percent stratified sample of 2,893 DEA heroin records for the first half of 1975.
[2] Sample contained both Mexican type and Southeast Asia #3 type heroin.
[3] Estimate based on 301 indepth analyses, which constitute a 7 percent stratified, sample of 4,216 DEA heroin records for 1974.
[4] Estimate based on 299 indepth analyses, which constitute a 6-percent stratified, sample of 1,973 DEA heroin records.
[5] Estimates based on a random sampling of 280 indepth analyses which represent a 6-percent stratified, sample of 1,972 DEA heroin records.
[6] No exhibits available for Seattle region.

Mr. BAYH. Since the subcommittee's extensive hearings on "poppy politics" in March 1975, I have been encouraged by the work of the Domestic Council Drug Abuse Task Force. In the fall of 1974 and early 1975 the subcommittee staff had detected signs of enlightenment regarding Federal drug enforcement policy in the approach of several individuals, including the chairman of the White House Opium Policy Task Force, Mr. Johnson, who in turn became the Director of the Working Group that developed the "White Paper on Drug Abuse." At our March 1975 hearings we were pleased to learn that this important project was well underway and that they intended to give special attention to the lack of Federal drug law enforcement coordination.

The widely publicized "tug of war" between DEA or its predecessor BNDD and the Bureau of Customs regarding jurisdiction on narcotics investigation has been at best a grave disappointment. I am confident that my colleague, Senator Nunn, and others on the Senate Government Operations Committee are dedicated to assuring that the proper governmental structure is devised to assure integrity and streamlined narcotics law enforcement.

The Government Operations Committee Interim report, "Federal Narcotics Enforcement," raises important issues regarding the respective DEA-Customs roles. It concludes that reorganization plan No. 2 of 1973, which created DEA "caused a break in the jurisdictional authority of this Government to combat drug smuggling." This less than satisfactory result followed after the approval of plan No. 2. The interim report leaves the impression that Congress had little or nothing to do with the approval of the reorganization plan No. 2, and that its role was "sharply limited," because if after 60 days from the date of submission of the plan, Congress had done nothing, the plan would be implemented.

My recollection was that another lengthy discussion and debate accompanied the consideration of reorganization plan No. 2—the vehicle that created DEA and a review of the record supported this view.

A Senate Government Operations Committee Report entitled "Reorganization Plan No. 2 of 1973, Establishing a Drug Enforcement Administration in the Department of Justice" documents the extensive review given the proposed plan No. 2. It reveals that "nearly 3 months before the President submitted reorganization plan No. 2, this committee's Subcommittee on Reorganization, Research, and International Organizations began an investigation of Federal drug law enforcement" and that they conducted "more than 100 staff interviews of current and former law enforcement officials and prosecutors at the Federal, State, and local levels, of other present and past Government officials, including former Cabinet Officers and White House aides, and of drug abuse prevention and treatment specialists."

A central aspect of this inquiry was the "uncontrolled bitter feuding and the actual sabotaging of each other's investigations" by BNDD and Customs. The report notes that "by mid-March representatives of the Nixon administration informed * * * the * * * members of the subcommittee that the President would soon submit a reorganization plan to bring the primary drug enforcement efforts together in a single agency in the Justice Department."

According to the report, testimony was taken regarding plan No. 2 in Washington from Mr. Kleindienst, Attorney General; Roy Ash, Director of the Office of Management and Budget; John Ingersoll, Director of BNDD; Vernon Acree, Commissioner of Customs; Miles J. Ambrose, Director of ODALE and Special Consultant to the President for Drug Abuse Law Enforcement. When coupled with field hearings held around the country on plan No. 2 "a total of 158 witnesses were heard in 11 hearings."

The report on plan No. 2 reveals that the Government Operations Committee found that there was a strong need for the new superagency and it endorsed the reorganization plan and cited, among several, the following advantage expected to be derived from the reorganization:

"(1) It will put an end to the interagency rivalries that have undermined Federal drug law enforcement, especially the rivalry between BNDD and the Customs Bureau."

It is interesting to note that the actual plan No. 2 submitted by the President to the Congress (H. Doc. No. 93-69, March 28, 1973) stressed the need to strengthen our narcotics law enforcement effort at our borders. It proposed in fact, in order to reduce the possibility that narcotics will escape detection at ports of entry because of divided responsibility, and to enhance the effectiveness of the DEA that all functions vested in the Justice Department respecting the inspection of persons or the documents of persons be transferred to Treasury to augment the effort of the Bureau of Customs at our borders.

According to the 1973 committee report, the hearings on plan No. 2 "did not dwell on the BNDD-Customs dispute because the chairman and members felt that no legislative purpose would have been served in as much as the plan acknowledged and remedied the problem by uniting the rival agencies." Apparently because President Nixon proposed the transfer of Immigration and Naturalization Service inspectors to Customs to accomplish the renewed focus at the border—thus possibly jeopardizing the rights and benefits of the inspectors—Customs lost out.

The new agency—DEA—would absorb virtually all of the Customs Service's drug enforcement functions except at the border and ports of entry. It would appear that no attention was given to beefing up Customs in a manner consistent with the rights of the Immigration and Naturalization inspectors, for example providing Customs with 1,000 additional positions. Consistent with such an approach former Assistant of the Treasury Mr. Eugene Rossides in a memorandum he submitted for my review, April 2, 1974, recommended the return of antidrug-smuggling responsibilities, including related intelligence collection, to Customs. The Government Operations Committee should give serious consideration to this recommendation.

Thus the reorganization plan No. 2 apparently did not resolve the "tug-a-war" between DEA and Customs. The Domestic Council in the white paper, however, has called for a settlement of the jurisdictional dispute between DEA and Customs. At the subcommittee hearing last week, both Administrator Bensinger and Commissioner Acree expressed strong support for the December 11, 1975, memorandum of understanding between their two agencies. I ask unanimous consent that the memorandum and attached guidelines be printed at this point in the Record.

There being no objection, the report and guidelines were ordered to be printed in the Record, as follows:

MEMORANDUM

To Principal Field Office (U.S. Customs Service/Drug Enforcement Administration).

From Commissioner of Customs/Acting Administrator, Drug Enforcement Administration.

Subject Memorandum of Understanding Between U.S. Customs Service/Drug Enforcement Administration.

As the Commissioner of Customs and the Acting Administrator, Drug Enforcement Administration, we wish to assure all personnel of both agencies that this Memorandum of Understanding was signed in good faith by both parties and it is our intention to insure that the relationships between our agencies are conducted according to these operational guidelines in both a coordinated and professional manner.

It is of the utmost importance that the U.S. Customs Service and the U.S. Drug Enforcement Administration work together in an atmosphere of harmony and efficiency in combatting the illegal importation and trafficking in illicit drugs. It is essential that each agency complement and support the other in fulfilling their respective obligations.

The attached policy guidelines have been established between the Drug Enforcement Administration and the U.S. Customs Service for the purpose of clarifying the respective operations of each agency in respect to drug related enforcement activities. It is anticipated that the guidance established in this agreement will promote and insure that the inter-agency relationships are in the best interests of the United States and will result in effective and efficient law enforcement.

A copy of this memorandum and the attached Memorandum of Understanding is being sent directly to all field offices of both agencies so that all personnel will be immediately aware of the agreed upon operational guidelines. We expect all principal field offices to insure that meetings are arranged at the earliest date between U.S. Customs Service and Drug Enforcement Administration counterparts at the various managerial and working levels to develop the closest possible working levels to develop the closest possible working relationship within these operating guidelines.

VERNON D. ACREE,
Commissioner of Customs.
HENRY S. DOGIN,
Acting Administrator, Drug Enforcement Administration.

MEMORANDUM OF UNDERSTANDING BETWEEN THE CUSTOMS SERVICE AND THE DRUG ENFORCEMENT ADMINISTRATION ON OPERATING GUIDELINES

The purpose of this memorandum is to emphasize and clarify the roles and the need for cooperation between the respective agencies. Under the broad guidelines of Reorganization Plan No. 2, the Drug Enforcement Administration has been assigned the primary responsibilty for ". . . intelligence, investigative and law enforcement functions . . . which relate to the suppression of illicit traffic in narcotics, dangerous drugs or marihuana . . ." Under the plan and delegations, Customs retains and continues to perform those functions ". . . to the extent that they relate to searches and seizures of illicit narcotics, dangerous drugs, marihuana or to the apprehension or detention of persons in connection therewith at regular inspection locations at ports-of-enry or anywhere along the land or water borders of the United States . . ."

Both agencies have vital roles to perform within the Federal drug enforcement program. Customs, as part of its overall responsibility for interdicting the smuggling of contraband, retains the full responsibility for searching, detecting, seizing smuggled narcotics, and arresting suspected smugglers of any contraband. DEA has the full responsibility for any narcotic-related follow-up investigation, as well as for providing Customs with information related to narcotics interdiction. Clearly, for the Federal effort to accomplish its enforcement goals related to reducing narcotics trafficking, both agencies must cooperate and provide appropriate mutual assistance in performing their respective functions. It is mutually agreed that an employee who willfully violates the intent and conditions of this agreement will be subject to firm disciplinary action.

To implement the above, the Commissioner of Customs and the Administrator of the Drug Enforcement Administration jointly approve the following guidelines for dealing with specific operational problems.

(1) OPERATIONAL ROLES OF CUSTOMS AND DEA

Customs is the agency with primary responsibility for interdiction of all contraband, including all drugs at the land, sea, and air borders of the United States.

DEA is the agency with primary responsibility for investigation and intelligence gathering related to drug smuggling and trafficking.

The Drug Enforcement Administration will notify the U.S. Customs Service of information from its narcotic investigations which indicates that a smuggling attempt is anticipated at or between an established port-of-entry as soon as possible after the information is received. Such information may result in a cooperative joint interdiction effort but shall in no case result in uncoordinated unilateral action.

Within the limitations of its resources, Customs will cooperate when requested to support DEA operations and ongoing investigations, including interception of aircraft suspected of drug smuggling and convoys.

For purposes of this agreement an ongoing investigation includes only those cases in which information indicates a seizure and/or arrest should not occur at the initial point of contact in the United States, but should continue as a convoy to the final delivery point. The mere fact that a suspect or vehicle is known to DEA does not constitute an ongoing investigation.

(2) LAW ENFORCEMENT COORDINATION

Whenever Customs has information on any person, aircraft, vessel, etc., that is involved in or suspected of being involved in drug smuggling or trafficking, DEA will be the first agency contacted by Customs. DEA will then have primary responsibility for the coordination of all investigative efforts.

Whenever DEA has information on any person, aircraft, vessel, etc., that is involved in or suspected of being involved in the smuggling of contraband, Customs will be the first agency contacted by DEA. Customs will then have primary responsibility for interdiction if a seizure or arrest is to occur at the initial point of contact in the United States except in those cases under the control of DEA.

(3) PLACING OF TRANSPONDERS ON AIRCRAFT AND TRANSPONDER ALERTS

Transponders will not be utilized by Customs in drug related activity without prior advice to DEA of the aircraft's identity and suspects involved. If DEA has an ongoing investigation, DEA will make the tactical decision as to the course of action to be taken.

Both agencies will expeditiously advise each other of all transponders placed on aircraft, and immediately upon receiving signals therefrom.

Customs will normally respond to all specially coded transponder alerts crossing the border. DEA will be given immediate notification whenever Customs responds to a drug-related transponder alert.

(4) COMBINED SEIZURES OF NARCOTICS AND OTHER GENERAL CONTRABAND

Where both narcotics and general contraband are seized in the same case, the Customs Office of Investigations is to be notified and they will coordinate with DEA on a joint investigation.

Investigative efforts will be dependent upon the magnitude of the violations and/or the value of the general merchandise seized.

(5) VIOLATIONS TO BE REPORTED TO THE U.S. ATTORNEY

DEA case reports will include any customs reports related to the drug violation. Customs will furnish their reports to DEA in an expeditious manner. DEA will present the violations to the concerned prosecutor for determination of charges.

(6) INTERNATIONAL AND DOMESTIC DRUG INTELLIGENCE GATHERING, COORDINATION

DEA is the agency with primary responsibility for gathering intelligence on drug smuggling and trafficking, including air trafficking.

Customs has primary responsibility for intelligence gathering of smuggling activities and also a supportive role to DEA in drug smuggling and trafficking. Nothing in this agreement precludes Customs from gathering information from the air and marine community related to the smuggling of contraband. Customs will continue to maintain liaison and gather information from foreign Customs services on all smuggling activities.

Customs will expeditiously furnish all drug-related information to DEA. DEA will expeditiously furnish drug smuggling intelligence to Customs. Unless immediate action is required, such drug smuggling intelligence collected will not be subjected to enforcement action prior to coordination between Customs and DEA.

DEA and Customs will refrain from offering or lending support to any derogatory remarks regarding the other agency. When dealing with other law enforcement agencies, Federal, state and local officials should not be misled as to DEA and Customs respective responsibilities.

Neither Customs nor DEA will discourage potential sources of information from working for the other agency. The promising of rewards to informants for intelligence shall not be competitively used to increase the price of information and knowingly encourage the source of information to "Agency Shop."

Under no circumstances will Customs officers employ a participating informant for drug-related matters unless prior agreement and concurrence is obtained from DEA. Both agencies recognize that the identity of an informant may have to be revealed in court and that the informant may have to testify.

In those drug smuggling cases involving a DEA confidential source, Customs will be promptly notified of the role of the informants so that the safety of the cooperating individual is not jeopardized. Customs officers will not attempt to debrief DEA informants.

None of the foregoing is intended to limit total resource utilization of DEA and Customs law enforcement capabilities, but rather to insure coordination, elimination of duplication of effort, and prevention of counter-productive or potentially dangerous enforcement activities.

At the field level, Customs and DEA officers will identify specific persons or organizational units for the purpose of information referral and to coordinate enforcement matters.

(7) PROCEDURES TO BE FOLLOWED WHEN DEA HAS INFORMATION THAT AN AIRCRAFT, VEHICLE, VESSEL, PERSON, ETC., WILL TRANSIT THE BORDER CARRYING NARCOTICS

For criminal case development purposes, DEA may request that such persons or conveyances be permitted to enter the United States without enforcement intervention at that time. These requests will be made by DEA supervisory agents at the ARD level or above to District Directors or their designated representative. Such requests will be rare and made only when DEA intends to exploit investigations of major traffickers.

Customs officers will participate in the enforcement actions until the initial seizure and arrest. The number of Customs personnel and equipment needed will be decided by the Customs supervisor with input from the DEA Case Agent, subject to the limitations of available Customs resources, not to exceed the number recommended by the DEA Case Agent.

On drug-related joint enforcement actions, no press releases will be made by Customs or DEA without the concurrence of each other.

(8) DRUG SEIZURE PROCEDURES

Customs responsibility for interdiction of contraband, including illegal drugs, remains unchanged. Using every enforcement aid and technique available to them, Customs officers will continue to search for illicit drugs. Each time any drugs are discovered, they will be seized and the nearest DEA office will be immediately notified unless otherwise locally agreed upon. Questioning of arrested violators will be limited to obtaining personal history and seizure information for Customs forms. Further questioning is the responsibility of DEA. Chain of custody forms or receipts are required for transfers of all seized items.

Customs will take every step possible to preserve all evidentiary material and not remove suspected drugs from original containers when such action compromises evidentiary and investigative potential.

In these instances where DEA will not accept custody of detained persons or seizure of drugs due to U.S. Attorney prosecutive policy, DEA will notify local enforcement authorities for prosecutive consideration. Otherwise DEA will request Customs to notify these authorities. When local enforcement authority declines, Customs will proceed to assess administrative and civil penalties, as appropriate. Otherwise, administrative and civil penalties should be held in abeyance until local prosecution is completed.

(9) CONVOY OPERATIONS AFTER CUSTOMS SEIZURES

In those instances where DEA decides to convoy the contraband seized by Customs to the ultimate consignee, Customs personnel will fully cooperate, and will withhold publicity. All seized vehicles or conveyances will be included in a chain of custody receipt.

The weighing of the contraband may be waived when the method of concealment makes it impractical. At the termination of the convoy, an accurate weight will be supplied by DEA to the originating district director, and the chain of custody will be annotated with the correct weight. Customs officers will not normally participate in this type of convoy operation.

At the termination of this type convoy operation, involved vehicle or conveyance shall be released to the custody of the nearest district director of Customs.

(10) DISPOSITION OF VEHICLES, VESSELS, AIRCRAFT AND SEIZURES IN JOINT ENFORCEMENT

All vehicles, vessels, and aircraft involved in joint smuggling cases will be seized and forfeited by Customs. Final disposition of the conveyance will be determined by a joint Headquarters review board comprised of Customs and DEA personnel. Guidelines governing disposition will be developed.

Upon prior DEA request in writing, Customs will not administratively dispose of seized aircrafts or other conveyance until it is no longer required for evidence by the courts or termination of DEA investigation.

(11) REFERRAL TO OTHER AGENCIES (CHAIN OF CUSTODY AND LABORATORY SAMPLING)

Customs will continue, in the case of seized heroin and cocaine, weighing two ounces or more, to make samples not to exceed 7 grams. However, the Customs laboratory will not perform the quantitative and qualitative analysis until completion of the prosecutive action, except for special contingencies.

(12) DEA ACCESS TO CUSTOMS PERSONNEL AND CONTROLLED AREAS

Designated Customs areas are not normally accessible to others. Access to Customs controlled areas and Customs personnel on an as needed basis will be obtained from the officer-in-charge of the Customs facility in each instance. Customs will honor such requests, provided that DEA personnel in no way interfere in examination and inspection processes.

(13) PROCEDURES WHEN DISCOVERY OF DRUGS IS MADE BEFORE ACTUAL VIOLATORS HAVE BEEN IDENTIFIED AND GOODS OR CONVEYANCES ARE STILL IN CUSTOMS CUSTODY

When Customs officers discover the presence of concealed drugs in imported goods, and the goods or conveyances are still under Customs custody or control, and they have been claimed by a consignee or reached their ultimate destination, Customs shall maintain control of the drugs, but DEA will be notified immediately. Customs officers will cooperate with DEA and be guided by DEA's tactical-decisions regarding investigative development, arrest and seizure.

Any representation made to Federal, State or local prosecutors for mitigation of sentence or other consideration on behalf of a defendant who has cooperated in narcotic cases or investigations will be made by DEA. DEA will bring to the attention of the appropriate prosecutor cooperation by a narcotic defendant who has assisted Customs.

There are existing DEA/Customs agreements not covered in this document that pertain to cross-designation of DEA agents, mail parcel drug interdiction and other matters. DEA and Customs mutually agree to review each of these and amend where appropriate for consistency with the cooperative intent of this agreement.

No guidelines are all encompassing and definitive for all occasions. Therefore, the appropriate field management of both agencies are directed to establish communication with their respective counterparts to better coordinate their respective operations. Similar cooperation and harmonious working relationships should be implemented at all subordinate levels. It must be recognized that good faith as well as mutual respect for the statutory responsibilities of our agencies and for the employees are the cornerstones upon which full cooperation must be established. To this end, Customs and DEA personnel must take the appropriate affirmative actions to minimize conflict and develop a combined program which adequately serves the interests of the United States of America and its citizenry.

HENRY S. DOGIN,
Acting Administrator, Drug Enforcement Administration.
VERNON D. ACREE,
Commissioner, U.S. Customs Service.

Mr. BAYH. I was impressed by the sincerity of these two men at our hearing last week, but in light of the failure of a similar prior agreement to resolve jurisdictional problems, I urge the President to clearly delineate a White House level monitoring system to assure that our drug law enforcement agencies get on with their mandates namely to curb the flow of heroin and other dangerous drugs into this country.

Whatever agency or agencies are eventually assigned the drug law enforcement responsibilities it is my subcommittee's mandate to assure that the Controlled Substances Act and the Controlled Substances Import and Export Act, that were drafted by the subcommittee after extensive hearings in 1969 and enacted in 1970, provide the Nation's drug law enforcement officers and our criminal justice system with the most effective constitutionally sound tools to help take the profit out of heroin and other illegal dangerous drug traffic.

Through our 1975 hearings on opium policy and presently on legislation introduced by the President the subcommittee intends to develop a better understanding of the ramifications of the public policy developed by the Nixon administration to curb heroin traffic and abuse and whether or not the current administration has learned from their mistakes .

I agreed with the President when he stressed in his April 27, 1976, message that "drug abuse constitutes a clear and present threat to the health and future of our Nation" that we must "refocus and revitalize the Federal effort," especially with regard to those who accumulate substantial wealth through such tainted trade.

This is not the first time, since 1968 that the administration has expressed support for congressional effort to curb drug traffic. Earlier proposals lacked focus and did not reflect the judicious use of limited public resources. Thus, although I am encouraged by some recent remarks, I would be less than candid if I did not admit that the earlier rhetoric and indifference about these important issues only reaffirms former Attorney General Mitchell's enjoinder that it was more important to watch what is done than what is said. You do not help take the easy profits out of drug traffic with tought talk and hollow promises.

MANDATORY PENALTIES

I believe that firm and certain punishment must be the response to drug traffickers. Because of the understandable concern and debate regarding Senate bill 1, a rewrite of the entire Federal Criminal Code, I agree with the President and the distinguished Senator from Nebraska (Mr. Hruska) that we not delay the enactment of appropriate measures to curb narcotics traffickers. Thus I intend to report a separate drug bill this year.

Although there seems to be a bandwagon syndrome regarding the application of mandatory minimum penalties to all crimes I agree with Prof. James Vorenberg "that the rush to mandatory minimum sentences distracts attention from a general restructuring of senencing laws as well as from the futility of efforts to run our criminal justice system 'on the cheap'." But I concur with the distinguished executive director of the American Civil Liberties Union, Mr. Aryeh Neier, that:

"Some people who have committed very serious crimes of violence should be given incapacitating sentences to protect everyone else."

The 1970 act eliminated most mandatory sentences. As the former President said in his June 17, 1971, drug abuse message to Congress:

"The act contains credible and proper penalties against violators of the drug law. Several punishments are invoked against the drug pushers and peddlers while more lenient and flexible sanctions are provided for the users."

The President continued:

"These new penalties allow judges more discretion, which we feel will restore credibility to the drug control laws and eliminate some of the difficulties prosecutors and judges have had in the past arising out of minimum mandatory penalties for all violators."

The only provision of the 1970 act providing minimum mandatory sentences is the continuing criminal enterprise provision, section 408, which was intended to serve as a strong deterrent and to keep those found guilty of such violations out of circulation.

It provides that persons engaged in continuing criminal enterprises involving violations of the bill, from which substantial profits are derived, shall, upon conviction, be sentenced to not less than 10 years in prison, and may be imprisoned up to life, with a fine of up to $100,000, plus forfeiture of all profits obtained in that enterprise. A second conviction under this section will lead to a mandatory sentence of not less than 20 years and up to life imprisonment, a fine up to $200,000, and forfeiture of all such profits.

Except when continuing criminal enterprises serve as the basis for an indictment, manufacture, sale, or other distribution of controlled drugs will carry penalties which vary, depending upon the danger of the drugs involved. If the drugs are narcotic drugs listed in schedules I or II, which have the highest probability of creating severe physical as well as psychological dependence, the penalties which may be imposed are up to 15 years imprisonment and a fine of up to $25,000 for a first offense. If the drug involves nonnarcotic substances listed in schedules I or II, or any substance—whether or not a narcotic—included in schedule III, the penalties for a first offense are up to 5 years imprisonment, plus a fine of not more than $15,000. If the drug is a schedule IV substance the penalty is up to 3 years imprisonment and a fine of $10,000, and if a schedule V substance is involved, the penalty is up to 1 year imprisonment, plus a fine of not more than $5,000.

Where a violation of the bill involves distribution to a person below the age of 21 by a person who is 18 or more years of age, the penalty authorized is twice the penalty otherwise authorized for a first offense, with substantially increased penalties for second and subsequent violations.

The President's proposed legislation would require mandatory minimum sentences for all persons convicted of trafficking in heroin and similar narcotic drugs. It calls for a 3-year mandatory sentence for the first offense, and at least 6 years for any subsequent offenses or selling illegal drugs to a minor, subject in each instance to exceptions.

This approach does not focus on the financier, importer, or organized criminal leaders who control drug traffic—it does not focus on these kingpins. What we need is meaningful sentencing for major traffickers. The problem with current Federal policy and focus was clearly presented to the subcommittee last week by Hon. Sheldon B. Vance, Senior Advisor to Secretary Kissinger for International Narcotics Matters, when he told the subcommittee that—

"While we can point with some satisfaction to our efforts toward improving the effectiveness of international narcotics control over the past several years, our own efforts to deal with traffickers has acquired a reputation of leniency. Minimal sentences, liberal parole policies and prosecutorial bargaining with cooperating defendants have caused some foreign officials to criticize the United States judicial system, often referring to it as a "revolving door." Specific complaints have been registered, primarily from Latin American countries, about low bail, release on personal cognizance, plea bargaining, lenient sentences, and early parolling of traffickers apprehended following close collaboration with foreign law enforcement officials."

Ambassador Vance cited an especially illustrative case. He explained that—

"It concerned two individuals arrested in November 1972 in New York subsequent to their delivery from Singapore of 2.5 kilos of #4 heroin to Special Agents of the Drug Enforcement Administration. The exhibit was delivered as a free sample toward a 23 kilo delivery scheduled for the future. They were tried without a jury in the Southern District of New York and in March 1973 were given sentences of 15 years for each of two counts, to run consecutively. On June 26, 1974, the judge reduced their sentences pursuant to their motions, making them eligible for parole.

"On August 30, 1974, one of them filed an application for parole. His application was heard on October 16, 1974. An Institutional Review Hearing was held in March 1976 and parole was granted. He was delivered to the U.S. Immigration and Naturalization Service Authorities on July 15, 1976 for deportation.

"On July 17, 1976, upon his arrival in Singapore, he was arrested by officers of the Singapore Central Narcotics Bureau. On July 20, 1976, the Assistant Director, Central Narcotics Bureau requested the High Court Magistrate to order his detention for the remainder of his U.S. prison sentence."

Ambassador Vance commented that—

"These developments have caused the Singapore authorities seriously to question the commitment and sincerity of the United States in its efforts against the international trafficking of narcotics."

And that—

"Such cases and other indicators clearly show a soft and imprecise handling of narcotics offenders. This inhibits our ability to obtain cooperation from foreign governments."

We need to restore credibility to the sentencing process to assure that the "kingpins" are disrupted. I endorse the Domestic Council White Paper recommendation regarding sentencing of drug traffickers to require "minimum mandatory sentences for persons convicted of high-level trafficking in narcotics and dangerous drugs." I took particular note of the task force recommendation that the President's proposal be expanded to include high-level traffickers of barbiturates and amphetamines.

The most effective way to curb the flow of illicit drugs is to immobilize substantial trafficking networks through the prosecution and conviction of their leaders. I concur in the White Paper recommendation that:

"Federal law enforcement efforts should focus on the development of major conspiracy cases against the leaders of high-level trafficking networks, and should move away from "street-level" activities."

In calendar year 1974, DEA special agents in the United States spent 28 percent of their time in pursuit of class I violators, or those at the high level of traffic; 19 percent investigating class II's; 45 percent of their time on class III's; and 8 percent of their time on IV's. Even fewer of the arrests made were class I or II violators.

According to DEA Administrator Bensinger, however, the trend has improved. He told the subcommittee last week that class I, major, heroin violator arrests have increased by 106 percent in the 9-month period ending March 31, 1976, and Class IV street-level arrests have decreased significantly.

These are encouraging signs but only time will determine whether DEA has finally focused its limited resources on the class I violators. The New York Drug legislation was recently amended to reflect this priority. The so-called Rockefeller shotgun approach clogged the courts but failed to sharpen the system's focus on major traffickers. To help assure this long-term objective the subcommittee is considering provisions that would restrict Federal drug control jurisdiction and authority to major interstate and international cases.

In 1973, the subcommittee desired to significantly strengthen the hand of

our law enforcement officials in dealing with one of the most dangerous types of criminals in our society—major dealers who are the purveyors of heroin to our young people. This concern was reflected in the public menace amendment to S. 800, introduced by Senators Bayh and Talmadge. This amendment was aimed at the backbone of heroin trade and discribution in this country, not addicts who are supporting a habit, for whom current laws are adequate, but the high-level traffickers who hook others. The Senate passed the amendment on April 3, 1973. It was not favorably reported from the House Judiciary Committee before the close of the 93d Congress. Similar provisions are included in S. 1880 the Violent Crime and Repeat Offender Control Act of 1975, which I introduced last June.

There is no criminal element in this country which is more dangerous and despicable than those who are the purveyors of heroin to our young people. My approach is not aimed at addicts who are already hooked and who are trying to support their habits. For such people laws already on the books and adequate treatment—together with the capture and imprisonment of big time dealers—offer the best hope. My target is those who have hooked others and not themselves.

Under my bill persons convicted of manufacturing, distributing, or dispensing heroin or morphine in amounts equal to or in excess of one-tenth of an ounce of pure narcotic would receive, on the first offense, a mandatory minimum sentence of 10 to 30 years. For second convictions, these pushers would get a mandatory life sentence. In neither case would the offender be eligible for probation, suspended sentence or parole—except after serving 30 years of a life sentence. In both cases the mandatory minimum sentence would have to be imposed in addition to the sentence provided under existing law, and in both cases the additional sentence would have to be consecutive to, not concurrent with, the existing punishment.

One-tenth of an ounce of heroin or morphine may seem to be a tiny amount, Mr. President, but it is as deadly as it is small. It can and is turned into a large number of bags of heroin on the street, and is worth a handsome sum. As a measure of the seriousness of the criminal conduct it is preferable to the President's bill which applies to any detectable amount of opiate. It best assures that we reach the high-level dealers who handle very pure and very valuable heroin. This test also assures that we do not bring under these very severe penalties a person with a mixture which contains only traces of a narcotic. Under this approach the volume of the material sold or manufactured would not matter; the only question would be whether it contained the equivalent of one-tenth of an ounce or pure heroin or morphine.

The following table, prepared by subcommittee staff, illustrates graphically the amount of heroin involved in the application of my bill:

ESTIMATES OF HEROIN DOSAGE UNITS DERIVED FROM 1/10 OUNCE OF PURE HEROIN OR MORPHINE

	Unit size (milligram bags)	Percent of heroin or morphine
Total units:		
a. 2,835	100	1
b. 1,417.5	100	2
c. 945	100	3
d. 708.7	100	4
e. 567	100	5
f. 472.5	100	6
g. 405	100	7
h. 354.3	100	8
i. 315	100	9
j. 283.5	100	10

Note: 0.1 ounce equals 28.35 grm. or 28,350 mgms. 0.2 ounce equals 2.835 grm. or 2,835 mgs.

Any nonaddict who manufactures, distributes, or dispenses one-tenth of an ounce of heroin or morphine is, we can be confident, a high-level trafficker who is rationally and for profit pushing drugs. Such a person deserves no quarter.

The President's bill neither distinguishes as to amount or purity of the drug involved, it would even mandate a 3-year jail term for one who illegally transfers a portion of a methadone maintenance patient's average 100 milligram dosage.

Although we have not received an assessment from the Bureau of Prisons as to the impact of the President's proposal, we can rest assured that multimillions of nonexistent dollars would be required for new prisons. This shotgun-nonspecific approach should be rejected.

While I believe present statutes are adequate for addicts, the subcommittee is considering an amendment to the 1970 act to include an "attempt" section punishable by up to 5 years imprisonment, that would apply to nonaddict traffickers; such provision may provide the necessary impetus for such nonaddicts to cooperate in the prosecution of major trafficking cases.

A sound drug enforcement policy must reflect the reality that all drugs are not equally dangerous, and all drug use is not equally destructive. The Domestic Council White Paper on Drug Abuse stresses this theme when it concludes that enforcement efforts should therefore concentrate on drugs which have a high addiction potential, and treatment programs should be given priority to those individuals using high-risk drugs, and to compulsive users of any drugs.

I ask unanimous consent that chart 12 from the Domestic Council's White Paper, A Summary of Drug Priorities and accompanying text—pages 32–34—be printed at this point in the Record.

There being no objection, the chart and text were ordered to be printed in the Record, as follows:

SUMMARY: DRUG PRIORITIES

Chart 12 ranks the various drugs according to the following criteria: (1) likelihood that a user will become physically or psychologically dependent; severity of adverse consequences, both (2) to the individual and (3) to society; and (4) size of the core problem.

SUMMARY OF DRUG PRIORITIES

		Severity of consequences		
	Dependence liability	Personal	Social	Size of care problem
Heroin	High	High	High	High/400,000.
Amphetamines:				
Needle	High	High	High	High/500,000.
Oral	Low	Medium	Medium.	
Barbiturates:				
Mixed	High	High	High	Medium/300,000.
Alone	Medium	High	Medium.	
Cocaine	Low	Low	Medium	Low.
Marihuana	Low	Low	Low	Low.
Hallucinogens	Medium	Medium	Medium	Low.
Inhalants	Medium	High	Medium	Low.

Though the data are flawed and the rankings therefore imprecise, a clear pattern emerges.

Heroin ranks high in all four categories;

Amphetamines, particularly those injected intravenously, also rank high in all four categories;

Mixed barbiturates rank high three out of four categories;

Cocaine,* hallucinogens, and inhalants rank somewhat lower; and

Marihuana is the least serious.

On the basis of this analysis, the task force recommends that priority in Federal efforts in both supply and demand reduction be directed toward those drugs which inherently pose a greater risk to the individual and to society—heroin, amphetamines (particularly when used intravenously), and mixed barbiturates—and toward compulsive users of drugs of any kind.

This ranking does not mean that *all* efforts should be devoted to the high priorty drugs, and none to the others. Drug use is much too complicated and our knowledge too imprecise for that. Some attention must continue to be given to all drugs both to keep them from exploding into major problems and because there are individuals suffering severe medical problems from even a low priority drug, such as marihuana.

*This ranking is on the basis of current patterns. As mentioned earlier, if intensive use patterns develop, cocaine could become a considerably more serious problem.

However, when resource constraints force a choice, the choice should be made in favor of the higher priority drugs. For example:

In choosing whom to treat, we should encourage judges and other community officials not to overburden existing health facilities with casual users of marihuana who do not exhibit serious health consequences. (But, a person who is suffering adverse consequences because of intensive marihuana use should have treatment available.)

In assigning an additional law enforcement agent, preference might be given to Mexico, which is an important source of both heroin and "dangerous drugs", rather than to Miami, where an agent is more likely to "make" a cocaine or marihuana case.

This drug priority strategy is essential to better targeting of limited resources and it will be further addressed in relation to supply and demand reduction activities in chapters 3 and 4. Further, the process of assessing the current social costs of drug abuse should be a continuing one, to ensure that resources are allocated on the basis of priorities which reflect current conditions and current knowledge.

Mr. BAYH. Our priorities in drug law enforcement must reflect reasoned judgments based on the facts. The fact is that nationally, arrests for marihuana violations have escalated from 188,682 in 1970 to 450,000 in 1974. This is not nearly as dramatic as the 1,000-percent increase between 1965–70 from 18,815 to 188,682, but it is rather astonishing that this 4-year increase is more than 12 times the total marihuana arrests just 10 years ago.

The fact is that the number of marihuana arrests as a percentage of all drug arrests has increased substantially. In 1970 these arrests amounted to 45.4 percent of total drug arrests. During the 1970–73 period 1,127,389 of the total 2,063,900 drug arrests were for marihuana. And in 1974, the most recent year for which records are available, 70 percent of all drug arrests were for marihuana.

Available studies and research to date have found that the majority of those arrested are otherwise law-abiding young people in possession of small amounts of marihuana. In fact, a Presidential commission found that the vast majority of users are essentially indistinguishable from their nonuser peers by any criteria other than its use.

In 1969 and 1970 the subcommittee considered the adequacy of penalties for marihuana with the result that the new Controlled Substances Act provided that simple possession or distribution of a small amount of marihuana for no remuneration were both designated misdemeanors, not felonies, punishable by up to 1 year in jail and/or up to a $5,000 fine. It was the view of many Members that the sanctions should be further reduced. Some suggested that the sanction be eliminated for such conduct.

In order to permit a thorough assessment of these issues the subcommittee recommended the creation of a Presidential commission. The Congress agreed and provided for the establishment of the Commission on Marihuana and Drug Abuse in part F of the Controlled Substances Act.

This body, known as the Shafer Commission, after its distinguished chairman, conducted an indepth study of the issues and concluded that marihuana was not dangerous enough to the user or to the general public for its private possession and use to remain a criminal offense.

In the last several years a growing list of States, organizations, and individuals have endorsed and adopted approaches comparable to the Shafer Commission recommendations.

Rather than ignore the law on marihuana or prosecute possession cases selectively as some would suggest, I believe that: We must recognize that the $600 million invested annually to prosecute marihuana cases can be used in a manner more consistent with the protection of property and safety of the taxpayers who must sustain our severely overburdened criminal justice agencies; we must recognize that public interest is not served by arresting annually 500,000, mostly young people, for simple possession of small amounts of marihuana and thereby assuring that they are inhibited for life—in their education and careers—by the unrelenting stigma of a criminal record; and we must recognize that the public is not going to get the highest return on their tax dollars in the national effort to curb drug traffic and drug-related crime when 7 in 10 drug arrests are for predominantly simple marihuana possession. We must reject such counterproductive drug law enforcement policy.

Thus an integral title of the bill we plan to report from the subcommittee will provide for the decriminalization of marihuana. I will recommend an approach

similar to that undertaken by the State of Oregon which abolished criminal penalties for simple possession and substituted a civil fine up to $100 for possession and nonprofit transfers of up to 1 ounce of marihuana. Criminal penalties for the sale of the drug for profit would remain intact. This approach maintains a policy of discouragement toward marihuana use while recognizing the current inappropriate use of law enforcement resources and the destructive impact of potentially 30 million criminal records for such common conduct.

The fact of the matter is that if the American public knew that more dollars are spent each year to prosecute marihuana cases than the Federal Government expends on its combined drug law enforcement and drug treatment program with the results I have outlined, I would speculate that rather than the near deadlock of opinion reflected in the most recent Harris poll—January 26, 1976—on decriminalization showing 43 percent in favor and 45 percent opposed a clear majority would support my approach. Concentrating our Federal drug enforcement resources on high-level heroin and dangerous drug traffickers is sound policy, but will call for a shift in the standards for measuring success. We in Congress should deemphasize the number of arrests as a criterion of success. And as the Assistant Attorney General for the Criminal Division concluded in his July 22, 1976, speech before the fifth Controlled Substances Conference in Minneapolis, Minn.: "No statistical striving or" seizure syndromes can or will substitute for the quality, prosecution of those cases which place behind bars for extended jail sentences individuals responsible for the plan of illegal drugs into American communities. Such a strategy applies limited public resources more judiciously and simultaneously reflects sensible priorities.

REFORM OF BAIL LAWS FOR DRUG TRAFFICKERS

Another serious problem with current Federal law and practice is that even the most notorious drug traffickers are often released on bail. I agree with the President's concern about bail jumpers. He emphasized in the April 22, 1976, message one aspect of the problem when he stated:

"These offenders simply flee to their homelands upon posting bail. Then, they serve as walking advertisements for international traffickers attempting to recruit other couriers."

Yet, title II of the President's legislation, S. 3411, would enable judges to deny bail to almost anyone arrested for a drug offense if otherwise suspected, such as nonresident aliens. Thus, the nearly 7 million aliens admitted last year under nonimmigrant status whether foreign government officers, temporary visitors for business, or pleasure, and a myriad of other bases for admission become suspect under S. 3411.

Rather than resort to preventive detention which would reverse the basic tenet of our criminal justice system—the presumption of innocence—what we lack today is a realistic application of bail within the confines of the constitutional protection of the eighth amendment. We need full and expeditious implementation of the Speedy Trial Act to assure that justice is not only fair but swift and certain.

Incidentally, I recently reviewed the status of the 540 Americans in Mexican jails, mostly on drug offenses, with an eye to numerous allegations of torture and police brutality and general outrage at the fact that these Americans were "languishing" in foreign jails. The impact and significance of our cherished presumption of innocence was unmistakably clear when juxtaposed to the plight of these persons. The reliance in Mexico on the Napoleonic Code's "guilty until proven innocent" had assured that some innocent persons could be held as long as a year and that many would not be able to prepare an adequate defense. It is ironic that the White House is recommending a similar denial of basic rights for suspected citizens and nonresident aliens.

Aside from constitutional and humanitarian objections, preventive detention has failed to accomplish its goals in the District of Columbia. The 1972 Vera Institute-Georgetown University Law Center Study as well as testimony before the subcommittee last week supported this conclusion. Earl Rauh, the Chief Assistant U.S. Attorney, testified that of the more than 30,000 felony cases handled by the District of Columbia criminal justice system the preventive detention procedure has been used only 70 times in the last 5 years. Even on practical grounds such a track record hardly bespeaks adoption of this approach on a national basis.

The subcommittee will carefully consider for incorporation in the drug legisla-

tion, however, provisions that mandate the denial of bail when necessary to prevent the flight of major drug traffickers. These provisions will include specific judicial guidelines. DEA Administrator Bensinger discussed what appeared to be an appropriate case for the mandatory denial of bail with the subcommittee last week. He set out the case as follows:

"In Miami in 1975, two defendants were arrested at the Miami International Airport for smuggling 13½ pounds of pure Asian heroin. Initial bond was set at $500,000 surety bond for each defendant, but was later reduced to $100,000 surety bond each despite the following facts; (1) At the time of their arrest, each defendant possessed false identification; (2) they were operating a smuggling conspiracy bringing in 35–40 kilos of Asian heroin per month; (3) they had access to Swiss bank accounts of several million dollars; (4) one defendant was under a murder indictment in Southern California, and both were under other Federal narcotic indictments in California; (5) they were extensive international travelers. Both defendants posted the surety bonds by paying a $10,000 premium. Both are now fugitives, and have since withdrawn $400,000 from their Swiss bank accounts."

An additional reform under consideration by the subcommittee concerns major narcotics traffickers who jump bail.

To help remedy this growing problem we may amend the Federal law to make the penalty for bail jumping equal to that of the underlying substantive offense.

These are the type of realistic changes we need to more effectively combat those who accumulate incredible profits from the misery of hundreds of thousands.

NARCOTICS AND PROFITS

A primary premise of the legislation that the subcommittee intends to report is that the Federal Government must act more decisively to attempt to take the easy profits out of major drug trafficking. I support provisions that would require the forfeiture of the proceeds used or intended to be used in illegal narcotic or dangerous drug transactions.

These forfeiture provisions should apply to subsequent profits or value generated by the investment of the tainted proceeds. We must disrupt major narcotic distribution lines and attempt to provide a greater degree of deterrence and risk for those kingpins.

As policymakers we must place the nature and extent of heroin traffic in perspective. As Assistant Secretary of the Treasury David Macdonald told the subcommittee last week, it is important to recognize that what we are talking about "is big business. In terms of dollars, it is one of the larger industries in the United States and exceeds the gross sales of many multinational corporations."

The Treasury Department estimates that the retail value of heroin sold in the United States each year is in the neighborhood of $7 billion. In my view this is a conservative estimate. Others speculate that the domestic heroin market sales are in excess of $10 billion annually. In 1972, the entire domestic prescription drug industry accounted for $5.4 billion in sales, or significantly less than the domestic heroin industry, which incidentally pales by comparison with our legitimate domestic narcotic market. The drug industry employed 143,985 persons in the United States and in the latest year for which data are available paid a total of nearly a billion dollars in taxes. The outlaw drug industry paid negligible taxes, if any.

What does it mean when one says that high level drug dealing is very profitable? According to analysis of the distribution hierarchy gross profits are considerable at every level. At the higher levels of the distribution systems, however, the operating costs—basically wages and stock finance costs—are claimed to be a larger percentage of the value added than at lower levels. So-called average profits in this market would be considered astronomical in most markets with which I am familiar. The rate of return on investment is approximately as follows: 300 percent for the importer; 100 percent for the kilo connection; 145 percent for the connection—or ounce man; 114 percent for the weight dealer; 124 percent for the street dealer; and 50 percent for the juggler or the seller from whom the average street addict buys heroin.

According to Sterling Johnson, Jr., Special Narcotics Prosecutor for New York City, an active seller at a level comparable to the street dealer—one-eighth ounce of diluted heroin selling for an average price of $55—can clear $500 to $1,000 profit a day. A key dealer in the Baltimore, Md., area was recently sent to prison for a 15-year term. As the No. 2 person in Baltimore heroin trade he was clearing

$140,000 a week in 1973. Kilo importers in Harlem are reportedly clearing $150,000 a week and their distributors a paltry $50,000 a week. It is estimated that these dealers take home more than $4 million every week in this one community. These figures are all "before taxes" for little revenue is collected from this multi-billion-dollar-a-year business.

Obviously these illicit activities generate large flows of money, both domestically and internationally. Secretary Macdonald reported to the subcommittee that "hundreds of millions of dollars, usually in the form of currency, are moved out of the United States annually to pay foreign producers and processors for their services." He went on to say that "within the United States, drugs are also a cash-and-carry business." In a recent case a major trafficker was arrested with $1 million in cash in his possession.

I believe that as a basic theme of our drug law enforcement strategy we should attack drug smugglers and traffickers through the currency and profits generated by their illegal activity.

High-level traffickers, who may be insulated from the illegal merchandise and consequently cannot readily be convicted for drug violations are often vulnerable to financially oriented investigations. As Secretary Macdonald pointed out last week such an approach "could have greater impact than by concentrating solely on the drug transactions themselves." In this connection the United States-Swiss Mutual Assistance Treaty in Criminal Matters, recently ratified by the Senate should help to expedite the exchange of information relative to the international aspects of this dirty, tainted trade. By carefully monitoring the vast flow of currency and monetary instrument important information is developed with respect to narcotics trafficking.

To help facilitate the prosecution of major trafficker couriers, I intend to amend current law to clarify the time frame for violations relating to traffickers' proceeds and by granting additional authority to search persons suspected of smuggling tainted drug proceeds in excess of $5,000 out of the country. These provisions will include fines that are far more than those under present law which any major traffickers could assume as a cost of doing business.

The subcommittee is concerned that DEA reliance on techniques in which their agencies and informants use Federal moneys to purchase illegal narcotics or information may be far to costly and even counterproductive. There is some evidence that these practices, known as PE—purchase of evidence—and PI—purchase of information—may actually expand the narcotic trade.

We intend to address this problem, to the extent necessary, in the subcommittee legislation.

To even the casual student of the activities of those who control the flow of heroin and other dangerous drugs in the United States one think is strikingly clear: they take in exhorbitant profits and pay no income tax.

I was especially pleased that the President stressed, in his April drug message, the need to reestablish the Internal Revenue Service tax enforcement program aimed at high-level drug traffickers. In reaffirming his support for this vital program the President said:

"We know that many of the biggest drug dealers do not pay income taxes on the enormous profits they make on this criminal activity. I am confident that a responsible program can be designed which will promote effective enforcement of the tax laws against these individuals who are currently violating these laws with impunity."

The IRS program aimed specifically at major drug traffickers was announced by the former President in June 1971, and the Congress then voted emergency funds for this vital and worthwhile initiative. Though a recent review of the impact of this program by the Domestic Council Drug Abuse Task Force characterized it as "extremely successful," all is not well with this special attempt to tax narcotics merchants. In fact, since 1973, after an impressive 18-month track record, the current IRS Commissioner downgraded and eventually deemphasized—some would assert dismantled—the program.

An especially articulate supporter of this innovative program, who played a major role in its establishment is former Assistant Secretary of the Treasury, Mr. Eugene Rossides. In the past we have worked together to help curb the unrestricted availability of nonsporting handguns as well as on efforts to curb drug traffic. I recall that my good friend Congresman Paul Rogers, chairman of the House Interstate and Foreign Commerce Subcommittee on Public Health and Environment, brought to my attention the impressive and persuasive October 27, 1971, testimony of Mr. Rossides regarding the narcotics trafficker tax program.

He set ou the program for tax investigators of major narcotics traffickers as follows:

"Included in the June 17, 1971, Presidential message, which announced the administration's expanded effort to combat the menace of drug abuse, is a high priority program to conduct systematic tax investigations of middle- and upper-echelon narcotics traffickers, smugglers and financiers. These are the people who are generally insulated from the daily operations of the drug traffic through a chain of intermediaries. This program will mount a nationally coordinated effort to disrupt the narcotics distribution system by intensive tax investigations of these key figures. By utilizing the civil and criminal tax laws, our objective is to prosecute violators and to drastically reduce the profits of this criminal activity by attacking the illegal revenues of the narcotics trade.

"Reflecting the high priority given this program by the President, Congress has provided financial support for the program amounting to $7.5 million in fiscal 1972 and authorization for 541 additional positions—200 special agents, 200 revenue agents, and 141 support personnel.

"Certain major features of this program should be noted:

"(1) Treasury will not only coordinate its efforts with all other interested Federal agencies, but will actively seek the maximum cooperation of State and local enforcement agencies as well. This is a vital feature of this program:

"(2) With the manpower provided, our goal is to have at least 400 full-scale ongoing IRS investigations;

"(3) In line with the high priority given this program by the President, the Internal Revenue Service has already assigned more than 100 experienced special agents and more than 100 experienced revenue agents, full time to this program. Additional experienced agents are presently being phased into the program."

Mr. Rossides has recently expounded upon the need to revitalize this effort to remove the caiptal and the profit from the drug trafficking business by utilizing the Federal tax laws, and I ask unanimous consent that these pertinent and timely remarks regarding the IRS NTTP be printed at this point in the Record.

There being no objection, the remarks were ordered to be printed in the Record, as follows:

REMARKS OF EUGENE ROSSIDES

It seemed clear to me in 1969 that from an enforcement point of view the Achilles heel of the illicit drug trafficking business was its financing and its illegal but taxable income or profits.

Obtaining evidence against major drug dealers on drug charges is one of the most difficult law enforcement jobs. They can easily insulate themselves from the street-level pusher and minor dealers. It is a rarity to catch them in possession of drugs. The crime is victimless in the enforcement sense in that the addicts and users are not interested or willing to give evidence. They don't consider it a crime. They want the drugs. They want to protect their source of supply, not turn him in.

This is the key reason why I felt it was a necessity to develop a tax enforcement program against the illicit drug traffickers.

I tried unsuccessfully in mid-1960 to get the Organized Crime Strike Forces to accept illicit drug trafficking as a priority item, if not the priority item. I then recommended that Treasury initiate its own special Narcotics Trafficker Tax Program for two reasons: (1) jurisdiction over the tax laws was in Treasury, and (2) from the time of Al Capone, the tax laws have proven to be an effective tool to put major crime figures out of business.

In the short period the Treasury/IRS Narcotics Trafficker Tax Program,* was active—from July 1, 1971 to early 1974, it proved to be one of the most successful enforcement efforts in Federal history. (I happen to believe it is the finest from the point of view of results, professionalism, and costs.)

The NTTP was designed to take the illegal profit out of drug trafficking and to disrupt the distribution system. In th short period of its active existence, the IRS initiated full tax audit investigations of over 1800 upper and middle level drug traffickers and dealers; found tax deficiencies totaling $200 million; it paid for itself or practically paid for itself in taxes and penalties collected; and its impact put drug dealers out of the illicit drug business.

The essence of the NTTP was (1) the careful selection of targets utilizing the talents and information of Federal, state and local enforcement agencies, and (2) the use of both the criminal and civil sections of the IRS Code against major

*The abbreviation most often used is NTP. I prefer NTTP because it emphasizes that it is a tax program.

drug distributors and financiers who are often insulated from the traffic and, therefore, in effect, immune from prosecution under the drug laws.

The Treasury Department developed through the target selection system of the NTTP a comprehensive nationwide list of over 1800 major drug traffickers and financiers who were put under full tax audit investigations; gathering information from the then BNDD, Customs, IRS, the Bureau of Alcohol, Tobacco & Firearms, and of substantial importance from state and local police.

The importance of this substantial list of major drug dealers cannot be overemphasized. While DEA and its predecessors tried, with little success, to bring drug cases against major drug dealers (there were not more than a handful of successful cases), the NTTP, within its first twelve months, identified and put under tough tax investigation 793 major targets in 53 metropolitan areas in 40 states!

State and local police agencies and personnel welcomed the NTTP because it helped them get immediate, short-term, and long-term results, they could see and feel the almost immediate effect of their activities, and of great significance, the NTTP did not encroach on their jurisdictions.

The NTTP was downgraded by IRS Commissioner Donald Alexander shortly after he assumed his duties in mid-1973 and by 1974 it was gutted, despite the clear Congressional and Executive policy, and specific earmarked appropriations. Although Commissioner Alexander has unjustifiably criticized the NTTP, the fact remains it was a most successful tax program which had an extraordinary impact on the illicit drug traffic. Fortunately, the NTTP has now been revived by Presidential directive.

The importance of NTTP to our nation's efforts to reduce the illicit drug traffic and bring it within manageable proportions is overriding and requires a detailed analysis of the program.

I state to this Subcommittee and to the Congress that without an effective Treasury/IRS Narcotics Trafficker Tax Program we will fall in our efforts to reduce the illicit drug traffic. In view of the overriding importance of this program, I would like to describe in some detail its theory and practice.

The NTTP was initiated as part of the overall effort to crack down on the illegal traffic in narcotics. Recognizing that the huge profits of the drug trafficking business are largely unreported and therefore untaxed, in late 1969 I recommended to the Secretary of the Treasury, David M. Kennedy, and to Under Secretary Charles E. Walker, who had the responsibility for direct supervision of IRS, that the Treasury develop a tax program aimed at the drug trafficking business.

Preliminary surveys in 1970 showed that among a group of suspected narcotics traffickers several patterns could be observed. First, there was a high incidence of nonfiling of income tax returns. Second, a large number appeared to have life styles which would require income far in excess of that on which taxes were being paid.

As a result of these findings and our general studies and review, in the late spring of 1971, Secretary John B. Connally obtained White House and Congressional approval for the program and $7½ million in appropriations for the first year of operation.

Thus, this program had the full backing of the Congress and the Executive Monies were appropriated specifically for the NTTP—monies and manpower which would not have been authorized or appropriated but for this program and were not authorized and appropriated for any other IRS activity.

The Narcotics Trafficker Tax Program is an income tax program. The goal of the NTTP is to tax the illegal profits of the drug trafficking business, a major area of tax noncompliance. The program was carefully developed over a two-year period and the results during the short time it was active—from July 1, 1971, to some time in 1974, including substantial start-up and training time—demonstrate that it was extremely successful.

It is important and central to the NTTP program to understand that the income from the illegal narcotics traffic business is taxable. And it is the responsibility of the Treasury Department to go after this taxable income. Drug trafficking is a business. It is not some isolated activity.

It is damaging to the "voluntary compliance" concept of tax administration to suggest that income from illegal activity should be given a lower priority than income from lawful activity. The narcotics trafficking business is a highly organized criminal activity which requires a sophisticated and comprehensive program to identify the individuals involved and to determine the income which is taxable. Are we to encourage unlawful activity of the most serious kind by our failure to enforce the tax laws against the narcotics traffickers?

The enormous profits of the narcotics trafficking business constitute taxable income to traffickers. To develop a program to identify major narcotics traffickers and tax them is part of administering the tax laws. There is no meaningful distinction between this type of activity and the ordinary IRS methods of identifying what is referred to as "pockets of noncompliance."

There is no difference in concept in deciding to select suspected major drug traffickers for tax audit and in deciding to select waitresses and taxicab drivers regarding gratuities income, corporate executives, individuals regarding interest and dividends payments or tax resister groups, and other classifications of taxpayers. Indeed, the incidence of tax noncompliance by drug traffickers is, I submit, higher than other noncompliance groups.

The significant point with respect to the NTTP was that under such a tax program we were able for the first time on an organized and comprehensive basis to get at major drug traffickers, persons who use intermediaries to insulate themselves from the day-to-day operations of the drug traffic. In this way, they achieve virtual immunity from prosecution under the substantive narcotics laws. The Narcotics Trafficker Tax Program was able to get at many of the "Kingpins" of the traffic.

In developing the original program and thereafter while I served at the Treasury, the program had the full bipartisan support of the Congress; the full support of three Secretaries of the Treasury, David M. Kennedy, John B. Connally, and George P. Shultz; the excellent cooperation and leadership of two Commissioners of IRS, Randolph Thrower and Johnnie M. Walters; and the full support of the Tax and Criminal Divisions of the Department of Justice and the various U.S. Attorneys.

Important and central to the NTTP was the policy decision to stress civil as well as criminal enforcement. This policy decision was a significant improvement on previous uses of tax administration to go after profits from criminal activity. It was our position that the illegal profits must be taxed and should be attacked either by civil enforcement or criminal enforcement. If a criminal case could be made, fine. If not, then the decision should be made as soon as possible and appropriate civil action pursued vigorously. It can be argued that in many cases the greater punishment and deterrent is taking the illegal profits from the illicit drug trafficker.

A critical innovation in federal law enforcement, and essential to the success of NTTP, was the development of the major drug traffickers target selection procedure—a coordinated and cooperative selection of persons to be audited.

As of July 1, 1971, the paucity of information identifying known major drug traffickers was appalling.

We developed a program for selection of targets, which once selected would be turned over to the IRS for audit. We organized field target selection committees throughout the country and developed guidelines for target selection. The persons selected had to be considered major traffickers and there had to be an indication of assets to warrant a full audit.

The field target selection committees were composed of professional career personnel from federal, state and local agencies. On the federal level, the committees included personnel from IRS, the then BNDD, and Customs. On the state and local levels, it included representatives from the local and state police. The committees would meet periodically and pool their knowledge.

Targets selected would then be sent to Washington, D.C. for review and final selection by an inter-agency target selection committee composed of personnel from IRS, BNDD and Customs and chaired by the Deputy Assistant Secretary for Enforcement. This Treasury committee would meet periodically to review the field recommendations and decide to accept, reject, or hold for further consideration each field recommendation.

Once a person was accepted the file would be sent to IRS and from that point on in the investigative process, it was an IRS tax case and handled in accordance with IRS operating procedures. After investigation if the decision was that the evidence justified a criminal prosecution it was referred to the appropriate U.S. attorney's office. Otherwise it was pursued civilly by IRS.

Important byproducts of multi-agency analyses and review of potential targets, supervised by the Office of the Secretary and not at IRS or other agency level, are that it insures selection of high-level targets, increases cooperation and efficiency, and reduces the possibilities of corruption in the selection process to a minimum. I want to stress my belief that this interdepartmental and interagency activity must be supervised by the Office of the Secretary of the Treasury and not at an agency level.

We also developed a minor drug trafficker tax program designed to go after the profits of the minor dealer and pusher. The individuals involved were primarily lower-level drug traffickers—dealers and pushers—who were arrested by state, local and federal officials on substantive drug charges and where there was cash found. We decided against a full audit of these individuals but instead we took tax action; we stressed a tax check type of investigation—did they file a return—and the use of tax year termination and jeopardy assessment procedures on these individuals to reach their large, conspicuous assets. Such tax action was taken on over 3,300 minor dealers and pushers.

This part of the program achieved outstanding success in taxing and reducing the working capital and street-level profits and, thereby, in disrupting the distribution system.

A monthly report system was developed to monitor the progress of this tax program. That report system enabled the Secretary and me to follow the progress of each element of the program. The monthly report listed the number of cases by states and metropolitan areas and the status of the cases.

Within the first twelve months of the NTTP, 793 major targets in 53 metropolitan areas in 40 states were selected for intensive tax investigation and 565 minor traffickers were put under tax action. Within seventeen months 1,175 major targets were selected for intensive tax investigation and 1,239 minor traffickers were put under tax action * * *.

The extraordinary success of the program stems from three groups of dedicated personnel: (1) the target selection efforts of Federal, state and local officials; (2) the several hundred men and women in IRS—tax specialists performing a tax function—who took this program to heart and dedicated themselves to it; and (3) the attorneys in the Department of Justice and the U.S. attorneys' offices throughout the country.

I strongly recommend that the NTTP be reactivated quickly and given the highest priority possible under the overall supervision of the Assistant Secretary of the Treasury for Enforcement, Operations and Tariff Affairs.

This highly successful program was unique in the spirit of cooperation it engendered among state, local and Federal officials and among Federal agencies. No jealousies and no infringement of jurisdiction existed among the various agencies cooperating in the NTTP. I submit that it ranks as one of the finest, if not the finest, cooperative law enforcement programs in our history from the point of view of results, professional performance, and costs. It can be put back in operation and effective within months with strong supervision from the Office of the Secretary of the Treasury.

Mr. BAYH. It appears that the Internal Revenue Service is in the processes of reconsidering the viability of the NTTP. Whether this apparent reassessment was voluntary or not should be left to the speculators; but, coincidentally, the day before our first hearing on the President's drug message, July 27, 1976, the Administrator of DEA and the Commissioner of the Internal Revenue signed a memorandum of understanding regarding the Presidential directive to reestablish a tax enforcement program aimed at high level drug trafficking. Though the ink had actually dried when the memorandum was presented in testimony to the subcommittee by DEA Administrator Bensinger, the Executive Director of the newly appointed Presidential Cabinet Committee for Drug Law Enforcement—members are the Secretary of the Treasury, the Attorney General, and the Secretary of Transportation—we did not have the opportunity to inquire as to the details of this July 27, 1976, agreement.

The ostensible objectives of the new agreement as well as the development and track record of the NTTP will be diligently assessed at the subcommittee hearing on August 5, when IRS Commissioner Donald Alexander and others will appear before the subcommittee.

NARCOTICS SMUGGLING

In addition to provisions which will assist the detection of couriers smuggling tainted proceeds out of the country, the subcommittee legislation will incorporate sections to facilitate the detection and prosecution of narcotics smugglers who use seagoing vessels, including private yachts and pleasure boats. The so-called deep-six connection has developed into an integral conduit for major narcotics smugglers and distributors.

The Commissioner of Customs, Mr. Vernon Acree, explained this growing problem to the subcommittee, in part as follows:

The high speed and fuel carrying capabilities of today's small boats permits

them to travel distances which were not envisioned when the vessel reporting requirements were enacted in 1930. Thus, a small boat can journey from our eastern coast to larger vessels hovering off-shore outside the 12 mile Customs waters, or to the Bahamas or other nearby foreign islands for the purpose of picking up narcotics. They may then return to the U.S., pull into a small cove or marina and unload the drugs. Some of these boats will then call Customs to report their arrival, while others will ignore this requirement. In either case, the present reporting requirements are virtually useless since any contraband will have been removed before Customs officers arrive to inspect the vessel.

This problem has become particularly acute in Florida where private yachts and pleasure vessels, with easy access to nearby foreign islands, the high seas and the United States' inland waterways, complicate detection. Further magnifying the problem is the fact that hard evidence has been developed establishing that foreign flag vessels are moving multi-ton loads of marijuana and smaller portions of hashish to positions on the high seas adjacent to the United States eastern and gulf coasts. At a position usually between 40 and 60 miles offshore, the mother ship—or hovering vessel—is met, under cover of darkness, by small vessels that take on a portion of the load for introduction into the United States. The mother ship then moves to the next rendezvous point where similar discharges are made. When the mother ship is empty it returns to its country of origin without ever having entered U.S. waters.

To respond more effectively to these special distribution channels and to address the fact that many vessels consistently ignore current law the subcommittee intends to amend the relevant reporting requirements.

As I mentioned earlier we are concerned that the reorganization plan No. 2 proceessed by the Government Operations Committee in 1973, though not without merit, has resulted in the under utilization or misdirection of intelligence gathering and dissemination, especially at our borders and most importantly our Southwestern border. The full utilization of Customs intelligence and investigative resources is a necessary step in bringing Federal narcotics enforcement effectiveness to its highest possible level. It should be recalled that narcotics traffic is a giant, incredibly profitable industry. Even if it were taxed comparable to the level of our domestic prescription drug industry—it would owe the American taxpayers at least $1 billion or every American citizen $5 each year. Thus these merchants of death—by the most conservative and cautious assessment—would owe more in taxes than the combined Federal drug abuse law enforcement and Federal drug abuse prevention budgets. I ask unanimous consent that two tables prepared by Peter Goldberg of the Drug Abuse Council be printed in the Record at this point.

There being no objection, the tables were ordered to be printed in the Record as follows:

TOTAL FEDERAL DRUG ABUSE PREVENTION FUNDING

[In millions of dollars]

	Fiscal year—

State	32.0	43.4	34.0
Other	1.9	2.1	2.1
Total	294.6	308.7	296.2

[1] Both DEA and Customs have applied for a supplemental appropriatini in local year 1976. DEA asked for $2,200,000, primarily for salary and insurance increases. Customs asked for $4,000,000, $2,000,000 of which would be carried over into fiscal year 1977. These funds are for the Customs drug interdiction program.

Source: OMB, Federal Drug Management Division.

Mr. BAYH. There is little doubt that the drug law enforcement task at hand is substantial. Thus, it is even more essential than ever to focus resources at our borders where high purity narcotics are traded in volume. It is with this focus that we can most effectively disrupt key distribution networks.

Another unfortunate aspect of reorganization plan No. 2 is that though the Government Operations Committee cited the benefit of a single focal point for coordinating Federal drug enforcement with that of State and local authorities, the plan as approved did not contain stipulations to prevent Federal interference with State and local drug law enforcement activities.

As I indicated, in the discussion of Federal drug control jurisdiction, the subcommittee will consider restricting Federal enforcement agencies statutorily to interstate and international trafficking cases. While we are concerned that Federal efforts do not erode local initiative and accountability, we believe that the Federal Government should expand its programs of assistance to State and local drug enforcement officials. The controlled substance units and diversion investigation units should be expanded to assist State and local investigation and prosecution of major diversion and trafficking cases.

The subcommittee is exploring the possible use of forfeited assets of drug traffickers and moneys collected by IRS under a revitalized NTTP to support the expansion of these successful efforts to assist State and local governments.

I intend to incorporate other salutory provisions in the legislation which I will soon ask the subcommittee to consider, including crucial enabling legislation to permit Senate ratification of the psychotropic treaty and sections addressing the problem of pharmacy related crime and more adequate controls for some barbiturates. I especially appreciate the enthusiastic support of the Senate leadership for our efforts and invite my colleagues to assist us in the enactment of a sensible statutory response to high risk drugs and to major drug traffickers. It is about time and it is clear that the taxpayers of this country demand and deserve no less.

[From the Congressional Record, Apr. 17, 1975]

STATEMENT OF SENATOR JAVITS INTRODUCING S. 1450

MARIHUANA CONTROL ACT OF 1975

Mr. JAVITS. Mr. President, I send to the desk for myself, Mr. Cranston, Mr. Brooke and Mr. Nelson for appropriate reference, a bill respecting the decriminalization of personal, private use of marihuana.

Two million or more Americans it is estimated are using marihuana today. As many as 400,000 of them may be arrested this year. For many of them their lives will be irrevocably changed.

CONTINUED

3 OF 33

According to the FBI, more than 1 million persons have been arrested for marihuana offenses in this country in the last 4 years. Sixty-two percent of those arrested were under the age of 21, and 83 percent of those arrested were under the age of 26. Ten years ago there were less than 18,000 marihuana arrests Nationwide.

A statistical analysis of State marihuana arrests by the Shafer Commission uncovered the unsettling fact that 93 percent were for possession—not sale—and two-thirds of these involved the quantity of one ounce or less. Only 7 percent of the arrests were against the commercial trafficker.

Yet, it has now been almost 3 years since the first report of the National Commission on Marihuana and Drug Abuse was made to the American people. Following an exhaustive study of the subject, the Commission produced an extraordinary body of information, documentation and original research probing every aspect of marihuana use in our society. The principal conclusion of its extensive report is that marihuana is not sufficiently dangerous to the user or to our society for its private possession and use to be a criminal offense. That conclusion has been endorsed by the Washington based drug abuse council and by many other organizations.

Established by Congress in 1970, the Commission was charged with the responsibility for analyzing and illuminating an area of our public policy which for 40 years had been charged with emotion and predicated upon misinformation. The Commission consisted of a broadly representative group of persons from all sectors of American life with diverse experiences, professional backgrounds, and points of view, and as the Senate knows, with former Senator Harold Hughes and I, and Congressman Paul Rogers and Tim Lee Carter as members.

Based upon the impressive record made by the Commission, Senator Hughes and I on April 20, 1972, introduced the first bill (S. 3517) to decriminalize the personal possession and use of small amounts of marihuana. We reintroduced that bill in the 93d Congress as S. 746. Congressman Ed Koch introduced the bill in the House. I am today reintroducing that bill, but with an additional feature. The bill would decriminalize small amounts of marihuana for personal use, but would substitute for any criminal penalty a system of civil fines of up to $100. This is the basic approach adopted by the State of Oregon which in 1973 became the first State in the Nation to abolish criminal penalties for simple possession of marihuana. Similar measures are currently being considered by more than 20 State legislatures, with perhaps as many as 6 of them expected to pass this year. I am hopeful that the bill can be the subject of early hearings.

I was pleased to learn that California is expected to adopt the civil fine approach in the near future and that New York's Governor Hugh Carey recently stated that he is seriously considering recommending removal of criminal penalties for possession of small amounts of marihuana in New York and replacing them with "a system of fines or mandatory attendance at health clinics." A partial list of the many organizations and individuals supporting decriminalization are:

American Bar Association.
New York State Bar Association.
Consumer Union, publishers of Consumer Reports.
National Conference of Commissioners on Uniform State Laws.
American Public Health Association.
National Advisory Commission on Criminal Justice Standards and Goals.
National Council of Churches.
The Governing Board of the American Medical Association.
National Education Association.
B'nai B'rith.
Canadian Commission of Inquiry into the Non-Medical use of Drugs (Le Dain Commission).
San Francisco Committee on Crime.
Mayor's Advisory Committee on Narcotics Addiction (Washington, D.C.).
John Finlator, retired Deputy Director, Bureau of Narcotics and Dangerous Drugs, U.S. Department of Justice.
William F. Buckley, Jr., syndicated columnist, author, TV host and editor of National Review.
James J. Kilpatrick, syndicated columnist, Washington Evening Star.

Mr. President, this bill would not change the Federal law regarding criminal penalties which apply to the sale of the drug for profit. Its main objective, decriminalization of personal possession of smell amounts of marihuana, makes sense for the following four reasons:

First. It recognizes that criminal penalties for its use and possession in private are so disproportionate to the degree of mental and physical risk involved that there can no longer be any justification for their imposition in view of the Commission's findings.

To equate the risk of using marihuana—which the Commission found to be a relatively benign drug—with the risk inherent in the use of hard narcotics is in my view totally indefensible. Yet in many jurisdictions throughout the country, this equation is written into the criminal law.

Second. It recognizes that casual marihuana usage is so common—the Commission found that 24 million Americans have tried marihuana at least once, and that 8.3 million are current users—that fair and impartial enforcement and prosecution are impossible. Updated national surveys indicate that these totals have increased to 30 million and 13 million respectively.

In some States, a first offender can be jailed for 10 to 20 years. In others, he may be placed on probation. Yet, in most, he will not enter the criminal justice system at all.

Third. It recognizes that use of the drug has reached such proportions that the present law is clearly ineffective as a deterrent.

Fourth. It recognizes that the "rhetoric and emotion" generated by the use of the criminal sanction in cases of personal marihuana use is severely impairing the fight against more dangerous drug abuse.

Mr. President, S. 1450, "the Marihuana Control Act of 1975, would change existing Federal law in that it would no longer be a criminal offense for a person to possess within a private dwelling up to 1 ounce of marihuana for his own use, or for the use of others, so long as it is not possessed with the intent to sell it for profit.

It would also no longer be a criminal offense to possess in public an amount not to exceed 1 ounce of marihuana, if such possession is incident to a private use and is not with the intent to sell it for profit. In the prosecution of any person charged with a violation of Federal law, the fact that such person was under the influence of marihuana would not be a defense to that charge.

Most importantly, our bill would implement the civil fine approach which has met with demonstrated success in the State of Oregon. In that jurisdiction marihuana offenders are given citations that are processed like traffic tickets. If the approach followed in Oregon and in the bill we introduce today were adopted throughout the Nation, 90 percent of all marihuana arrests would be eliminated and nearly half a billion dollars now being spent on those arrests would be saved. More importantly, the indiscriminate wrecking of people's lives and careers brought about by these unjust laws would end.

Following 1 year's experience with the Oregon law, a statewide survey by the Drug Abuse Council, a research organization funded by the Ford Foundation, revealed several interesting findings:

Forty percent of the respondents who said they had used pot said they had decreased their consumption.

Fifty-two percent reported no change and only 5 percent increased use.

Fifty-eight percent favored the new law or a more lenient one; only 39 percent thought the law was too lenient.

Mr. President, I ask unanimous consent that the summary of the Drug Abuse Council survey, entitled "Survey of Marihuana Use—State of Oregon," be printed in the Record.

Mr. President, I wish to reiterate that I do not support and this bill does not provide for the legalization of marihuana, and I wish to clarify the distinction between legalization and decriminalization.

Legalization, as the term is used in the drug field, means that marihuana could be legally sold, under appropriate governmental controls. This could, though not necessarily would, be similar to alcohol licensing. The important concept here is that both use and sale would be legal.

Decriminalization only pertains to the user. The user is taken out of the criminal justice system, although selling remains illegal. This concept is intended to continue a discouragement policy against marihuana; thus no legal market is

permitted. By focusing the law enforcement attention against the commercial traffickers, rather than the user, over 90 percent of the marihuana arrests can be eliminated.

I oppose legalization because such action may be inconsistent with our current treaty obligations under the Single Convention of 1961.

Second, legalization might institutionalize marihuana and give it the status of official approval, thus making its use more inviting and widespread.

Third, there are still unanswered questions about the effects of long-term chronic use, and there is still considerable moral opposition to making marihuana available legally.

It has been suggested that decriminalization is illogical since it only applies to the user, leaving penalties against the seller. This is not the case. Criminal penalties are retained against the seller as a means of discouragement. This is consistent with the way we treat such other "victimless crimes" as pornography, gambling, and prostitution.

It balances the right of the individual in a free society to remain free from governmental interference in his private life, with society's right to protect itself against those who would purvey something society deems potentially detrimental.

Mr. President, although the entire report of the National Commission deserves the careful reexamination of every Member of the Senate, there are several important statements which I wish to call to the Senate's attention:

A. Medical and Health Data: "the most notable statement that can be made about the vast majority of marihuana users—experimenters and intermittent users is that they are essentially indistinguishable from their non-marihuana using peers by any fundamental criterion other than their marihuana use." (p. 41)

"From what is known about the effects of marihuana, its use at the present level does not constitute a major threat to public health." (p. 90)

"No conclusive evidence exists of any physical damage, disturbances of bodily processes or proven human fatalities attributable solely to even very high doses of marihuana." (pp. 56–57)

"Although a number of studies have been performed, at present no reliable evidence exists indicating that marihuana causes genetic defects in man." (p. 84)

"No objective evidence of specific pathology of brain tissue has been documented. This fact contrasts sharply with the well-established brain damage of chronic alcoholism." (p. 85)

"In a word, cannabis does not lead to physical dependence." (p. 87)

"Research has not yet proven that marihuana use significantly impairs driving ability or performance." (p. 79)

B. Public Safety: "neither the marihuana user nor the drug itself can be said to constitute a danger to public safety." (p. 78)

"In sum, the weight of the evidence is that marihuana does not cause violent or aggressive behavior." (p. 73)

C. Marihuana and Hard Drugs: "marihuana use per se does not dictate whether other drugs will be used; nor does it determine the rate of progression, if and when it occurs, or which drug might be used." (p. 88–89)

"The fact should be emphasized that the overwhelming majority of users do not progress to other drugs." (p. 87)

D. Extent of Marihuana Use: 26 million Americans, or 16% of the adult population, have tried marihuana at least once. This represents an increase of 2 million people over 1971. (Marihuana Commission, News Release, February 13, 1973)

18 million Americans smoke marihuana on a regular basis. This figure was 8.34 million in 1971. (Ibid.)

E. Arrest Statistics. more than 706,000 persons were arrested for marihuana-related offenses during the period 1970–72. Arrests have increased steadily from a low of 18,815 in 1965. (p. 106)

In 1972 there were 292,000 marihuana arrests, an increase of 29% over 1971. (Uniform Crime Reports, 1972, Federal Bureau of Investigations, p. 119)

93% of all arrests are for possession, with only 7% for sale. 67% of those arrested possessed less than one ounce of marihuana. (p. 10)

88% of those arrested are under the age of 26. (p. 111)

62% of those arrested are under the age of 21. (Uniform Crime Reports, 1972, Federal Bureau of Investigation, p. 34)

53% of all young people 16 and 17 years old know someone who has been arrested for possession of marihuana. (p. 121)

Mr. President, it should not be necessary to emphasize once again that neither I, nor any other member of the Commission would encourage the use of marihuana. We all believe that the Government should not encourage the use of any drug or hallucinogen, no matter how mild, for recreation purposes.

The Commission conducted an exhaustive study of marihuana from the medical, legal, social, and political standpoints. As a result of this study, even the most conservative members of the Commission reached the conclusion that our criminal penalties against marihuana were based largely on sheer myth.

It is not a physically addictive substance and of those who do use it, only a very small number develop any psychic dependency. That small number for whom marihuana becomes a device for avoiding reality would, in all probability, find some other substance, perhaps a very harmful one, to obtain the same objective if they were not using marihuana.

At the same time, Mr. President, we recognize that although it has not been possible to identify physically harmful effects of marihuana, more research is needed in order to be certain that there are not incipient effects which might not appear until after long usage.

Mr. President, we all have heard recent claims that marihuana may be more dangerous than we originally thought.

No drug is totally harmless, including marihuana. But the evidence strongly suggests no significant harm is caused by the occasional use of marihuana and whatever risk is involved with marihuana is far less than the demonstrated harm from a number of other drugs permitted in our society.

We should continue to look for potential ill effects from the use of marihuana especially the chronic, heavy use. But any findings of potential harm should be used to discourage use, not to justify treating the user as a criminal. As Dr. Tom Bryant, president of the Drug Abuse Council recently stated:

"We should not permit a medical debate to frustrate the decriminalization policy recommended by the Marihuana Commission. Even if marihuana were eventually shown to be as dangerous as alcohol or tobacco, giving a criminal record to the user only exacerbates the potential harm."

This past year we have heard several new claims of potential harm from marihuana use. These claims have received widespread media exposure, often far greater than the substance of the study warranted.

Each year the Department of HEW attempts to summarize the research on marihuana and to reach some conclusions about the potential dangers. In their recently released report for 1974, National Institute for Drug Abuse—NIDA—Director Dr. Robert L. DuPont discusses the recent claims:

These more recent studies deal with three areas of concern. They are: effects on male sex hormone levels, interference with the body's immune response and effects on fundamental cell metabolism. *The implications of these preliminary studies are, at this point, speculative.* There is concern that alteration in hormone levels as a result of chronic use may interfere with normal adolescent development or with sexual differentiation of male fetuses if cannabis is used by pregnant women at critical periods of fetal development. Effects on the immune response and on cell metabolism might seriously affect resistance to disease or result in a variety of degenerative or genetic changes. *Thus far there is no clinical evidence indicative of such consequences although continuing research is obviously required.* (emphasis added)

Dr. DuPont also cautioned:

We must also recognize that no drug with major pharmacological action—including marihuana—can ever be truly safe. It it inevitable that further research will disclose additional hazards. In developing rational social policy, scientific evidence of a health hazard must be balanced against social and economic costs incurred by possible alternative strategies for discouraging drug abuse.

Dr. DuPont, who also serves as chief Presidential drug adviser in his capacity as Director of the White House Special Action Office for Drug Abuse Prevention, recently endorsed publicly the Oregon approach. He believes marihuana presents health risks to the user, and should be actively discouraged, but opposes the use of the criminal law for possession of small amounts.

It should be stressed that when the National Commission on Marihuana and Drug Abuse recommended decriminalizing the user it did not presuppose marihuana would be harmless. And several members of the Commission have reiterated their conclusions:

No drug is totally safe or harmless. In a sense, there is no human activity which is totally harmless. However, it is my opinion that marihuana involves

only a minimal risk of harm to the user. Clearly the potential harmfulness of marihuana to the user is on a much lower order of magnitude than the potential harmfulness of such other drugs as alcohol, tobacco, amphetamines, barbiturates, and hallucinogens. J. Thomas Ungerleider, MD, Presidential Appointee to the National Commission.

Since publication of the Commission's Report in March 1972, numerous studies have been reported, some suggesting that the dangers from marihuana are far greater than the Report indicated, others demonstrating that its use produces relatively little harm. In short, work in the last two years has not fundamentally changed the data base on which the recommendations were made. Dr. Dana Farnsworth, Presidential Appointee to the National Commission.

However, treating the user of marihuana as a criminal, can and has had a shattering effect upon the lives of thousands of individuals who are otherwise law-abiding citizens. The consequences of such a policy for the individual and society are more serious than any personal or societal harm resulting from the use of the drug itself.

The penalties do not fit the crime. The time has come for us to decide honestly what the crime is. If we decided that certain private conduct is not a crime, then we should eliminate the penalties for it, and to the extent that we believe that criminal sanctions should be retained for conduct then we should measure the penalties in relation to the seriousness of the conduct.

As I nave in the past, I wish to acknowledge once again the extraordinary work of the National Organization for the Reform of Marihuana Laws—NORML—and its able executive director, Mr. Keith Stroup. His efforts combined with the dedicated work of hundreds of interested citizens in States throughout the country have had a significant impact in changing attitudes as well as laws on this subject.

Mr. President, the laws we seek to change are indefensible. Logic, commonsense, and honesty have had very little to do with the evolution of national drug policy in the last 40 years, and these failings are rooted in the current law. I think we have ignored for far too long the consequences of that failure for our society. I urgently request the Senate Judiciary Committee to act on this bill at the earliest possible time. There are several articles and editorials which have appeared in the media in recent months on the subject of decriminalization and I ask unanimous consent that the following be printed in the Record at the conclusion of my remarks:

"Harsh Penalties for 'Pot'," an editorial in the New York Times, December 28, 1974.

"Legal Hostility to Pot Fades," an article by Al Parachini in the New York Times; December 8, 1974.

"The limits of the Criminal Sanction," an editorial in the Washington Post; November 18, 1974.

"Shifting Emphasis on 'Pot,'" an editorial in the Buffalo Evening News; November 30, 1974.

"End the Pot Penalties," an article by William F. Buckley; Novembber 10, 1974.

"Reefer," a column by Ann Landers; November 14, 1974.

"Thoughts on Marihuana," a column by James J. Kilpatrick, Washirgton Star News; December 4, 1974.

"Pot: Long Smouldering Issue May End in Decriminalization," an article by William Hines, Chicago Sun-Times; December 1, 1974.

A column by Richard C. Cowan, "About Marihuana"; November 6, 1974.

An article by Susan Fogg, Newhouse News Service concerning the therapeutic uses of marihuana.

"A Change in Policy on Pot?" an article by William J. Lanouette, The National Observer; November 30, 1974.

"Carey Considers Dropping Harsh Marihuana Penalty," an article in the New York Times, January 29, 1975.

There being no objection, the articles and editorials were ordered to be printed in the Record, as follows:

HARSH PENALTIES FOR "POT"

Two years ago the National Commission on Marijuana and Drug Abuse reported that marijuana was a "low priority" risk compared with other drugs, including alcohol, and recommended the elimination of legal penalties for private possession and use while retaining stiff criminal penalties for marijuana traffickers.

This carefully considered proposal got short shrift from then President Nixon, who promptly denounced it. Efforts to liberalize drug laws along lines recommended by the commission so far have been stymied in Congress and in the Legislature of New York which retains some of the toughest antimarijuana legislation in the country.

Private possession of small amounts of marijuana, which would be subject to no criminal charges under the commission's proposals, still can invoke penalties of up to fifteen years in jail in this state. Only last March, a man in Buffalo was sentenced to five years in prison for possessing 1.9 ounces of "pot." Last year in New York City alone there were nearly 6,800 arrests on marijuana charges, mostly of young people who were stigmatized for life because they were caught with less than one-quarter of an ounce of this drug.

Fears that liberalizing the law would encourage the use of "pot" and compound police problems do not appear to be borne out by the experience of at least one state that has pioneered in this area. In October, 1973, Oregon abolished criminal penalties for marijuana use, substituting civil fines of up to $100. After the law's first year, a statewide evaluation found that 40 per cent of respondents who acknowledged they had used "pot" said they had decreased their consumption; 52 per cent reported no change and only 5 per cent had increased use.

No one should underestimate the potential risks in marijuana use which are still incompletely understood.

The question is whether the harsh legal sanctions against marijuana prevailing in this and most other states really serve as a deterrent. The evidence is that they do not. Public attempts to control private vices through excessive and heavily punitive laws only undermine respect for law and divert law enforcement agencies from more urgent tasks.

Legal Hostility to "Pot" Fades

(By Allan Parachini)

Despite recent medical studies purporting to show evidence of physiological risks to smokers of marijuana, there is a clear and growing trend toward decriminalizing the drug. Opposition to "pot," once centered in the law-enforcement community, seems to be crumbling.

Either by statute or de facio means, police and prosecutors seem prepared to accept the fact that marijuana use now is widely accepted and that continued stringent enforcement of antimarijuana laws is unrealistic.

Decriminalization would mean the easing or elimination of penalties for private use or possession of marijuana. Penalties vary widely at present, ranging from a $100 fine in Oregon to a possible 15-year prison term in New York.

Captain Jerry Kennedy, commander of the Denver, Colo., vice squad, recalls that his officers at first opposed a Denver marijuana ordinance easing penalties, but have changed their minds. "Before," he says, "we were bogged down in marijuana arrests. We could never get on to the quality cases."

The New Jersey Narcotics Officers Association has backed decriminalization in that state. In many cities, police arrest users only, as one New York City policeman has said, "If they blow smoke in your face." When Los Angeles Police Chief Edward M. Davis issued a statement opposing, on moral grounds, any statute change, the local police commission forced him to distribute a cover letter saying he had spoken as an individual and not on behalf of the department.

"The simple fact is that there is a tremendous number of people using marijuana these days," says Wesley Pomeroy, police chief in Berkeley, Calif., and a former Justice Department official, "and from a pragmatic point of view, the police ought not to be put in the uncomfortable position of having to enforce an unenforceable law."

In Washington, D.C., United States Attorney Earl J. Silbert announced last month that his office would no longer prosecute, and capital police should not arrest, users in possession of five or fewer marijuana cigarettes. Mr. Silbert canceled the order before it was to go into effect last Monday, however, because of the controversy that developed over the issue.

Prospects for widespread easing of marijuana laws appear greater now than ever before. Federal decriminalization legislation is expected to be introduced in the next session of Congress in the Senate by Jacob K. Javits, Republican of New York; and in the House by Representative Edward I. Koch, Democrat of New York. Mr. Javits has said that "it's time to do something" about marijuana laws to make them conform to what has become accepted social behavior.

CHANGING STANCES

At the Federal level, the change in administration seems to have had a pronounced effect. Former President Richard Nixon repeatedly told aides there was "no way" he would ever support less stringent marijuana penalties, even after the National Commission on Marijuana and Drug Abuse called for such a change in 1972.

Betty Ford, the new President's wife, has publicly said she is certain her three children have tried "pot." One of the Fords' two sons has reportedly met several times with officials of the National Organization for the Reform of Marijuana Laws (NORML). Offspring of public officials, including Oregon's Gov. Tom McCall and former Presidential counsel J. Fred Buzhardt, have been arrested on marijuana charges.

Mr. Ford's chief policy adviser, Dr. Robert L. DuPont, said publicly in recent Senate subcommittee hearings and at a NORML-sponsored conference what he has long told intimates privately—that there is little point in continuing to jail marijuana users.

Keith Stroup, who as NORML's director keeps close watch on the legal aspects of marijuana, believes that several states are almost certain to decriminalize it next year. They are Colorado, California, Hawaii, Minnesota, New Jersey, Vermont and Massachusetts.

Various cities and states have already chosen to remove marijuana from criminal law enforcement:

In October, 1973, Oregon abolished criminal penalties for marijuana use, substituting civil fines of up to $100. Marijuana offenders are given citations that are processed like traffic tickets.

After the law's first year, a statewide evaluation was conducted by the Drug Abuse Council, a privately funded Washington, D.C., research organization. Forty per cent of the respondents who said they had used "pot" said they had decreased their consumption; 52 per cent reported no change and only 5 per cent had increased use. And 58 per cent of all respondents favored the present law or a more liberal statute; only 39 per cent thought the law was too lenient.

In Denver, the City Council last spring passed its ordinance overriding the state marijuana law, which had held possession to be a misdemeanor. The new ordinance treats possession of up to a half-ounce as a noncriminal violation. In October, the State District Attorneys Association approved, by a 31 margin, a resolution to support a change in the state law to conform with the Denver experiment. The measure will be introduced next year.

The so-called "parking ticket model" was first introduced in Ann Arbor and Ypsilanti in Michigan. A year ago, voters in the two neighboring cities approved a referendum providing for a maximum $5 fine in marijuana cases. The referendum reimplemented a system initially approved in Ann Arbor three years ago but briefly eliminated by the City Council.

In New York City, District Attorney Richard Kuh last summer instituted a circumvention of the potential 15-year prison term for possession of more than a quarter-ounce of marijuana. Under the Kuh plan, which also has the backing of three of the other four district attorneys in the city (Staten Island declined to participate), persons accused of "simple possession" of up to two pounds of marijuana are permitted to plead guilty to a single misdemeanor count.

Decriminalization ferment might seem to be contradicted by arrest statistics, which continue to show an upward trend. In 1973, for instance, 420,700 persons were arrested nationally on marijuana charges, up from 188,682 in 1970 and as few as 18,815 in 1965. Many observers believe the increase is the result of more uninhibited and widespread use. Though few of the offenders ever go to jail and many cases are dismissed, suspects retain their arrest records for life in most states.

Significantly, none of the proposed state and federal statute changes goes beyond the elimination of penalties for private use and possession of marijuana. The sale and distribution of marijuana would still be illegal.

THE LIMITS OF CRIMINAL SANCTION

Over the last several years, most states have reduced the felony statutes for possession of small quantities of marijuana to misdemeanors. One state, Oregon, has made simple possession of the drug the legal equivalent of a traffic offense.

It was only a matter of time before the federal government would begin to move in the same direction. A presidentially appointed commission argued in 1972 for "decriminalization" and although President Nixon simply rejected the recommendation, a number of federal officials have since taken the position that making marijuana possession a federal felony offense serves no useful purpose.

The latest federal official to take that position is Dr. Robert L. DuPont, President Ford's chief adviser on drug abuse control. Significantly, Dr. DuPont chose a meeting here of the National Organization for the Reform of Marijuana Laws to endorse the Oregon solution. In doing so, Dr. DuPont took the same stance that many responsible officials in federal and state government have taken: Marijuana is potentially dangerous to the individual smoker, but smoking by individuals poses no threat to the society that justifies locking up those unlucky enough to be caught.

The marijuana laws, because they proscribe a "crime" that has no victim, are ordinarily enforced against those whose "criminality" comes to the attention of the authorities by accident. Thus, the other day, a federal official whose home here had been burglarized was arrested the same day for possession of an ounce of marijuana found by the police officers investigating the burglary. But for that accident, we can assume his private use of marijuana would have remained his private affair.

That is how it is with most of the 20 million Americans estimated to have smoked marijuana. There is hardly a legal restraint that compares with the law on marijuana for inconsistency of enforcement. Most people who smoke never are caught. About a half million people will probably be arrested this year. Many of those will be released as first offenders without any action having been taken against them, particularly if they are juveniles. The application of the law is selective in many parts of the country. Young people the police may wish to detain for other reasons often go to jail because they happen to have a small quantity of marijuana on their persons during encounters with police.

Under those circumstances, the logic of Dr. DuPont and those other federal officials who have called for "decriminalization" makes sense. It is unwise for a society to permit the creation of so large a class of presumptive criminals when their crime can be of no demonstrable harm to anyone other than themselves. This is especially so when other recreational drugs are readily available and legal. The danger to the individual who drinks alcohol is at least as great as the danger of smoking marijuana, and may be far more so. Yet, it is perfectly legal for persons who are not minors to buy all the alcohol they wish. If the theory behind proscribing marijuana was that its use would diminish, the policy has been a failure. When the substance was made illegal in 1934, it was estimated that 50,000 Americans used it. The figure could be as high as 25 million today. "Marijuana," said a study by Consumers Union several years ago, "is here to stay."

Since there is little evidence to contradict that conclusion, and since many prosecutors—most recently the U.S. Attorney for the District of Columbia—have argued that they would like to get marijuana out of the way so they and the police can concentrate on real crime, it makes sense to support Dr. DuPont and those who argue for "decriminalization." But "decriminalization" should be recognized for what it is. It is a politically delicate way of saying that you are taking a first step toward the day marijuana will be legal. That is apparent on its face. Dr. DuPont says that "decriminalization" should be accompanied by programs that educate the public to the dangers of marijuana use. Despite such programs, it is doubtful that the use of marijuana is going to decline. If there is merit in relaxing the rules on possession, simple logic dictates that it makes sense eventually to legalize its sale and use and control its quality. That is the way to keep some of the more harmful and dangerously potent forms of the drug off the market. It is also a way of separating marijuana from some of the much more dangerous substances, such as cocaine, LSD and heroin, that now circulate through the same channels as marijuana.

For many young people, the illegality of marijuana makes a mockery of the law. Despite what those who seek to justify the criminal sanction might argue, the logic of the matter causes many youngsters to see duplicity in the current state of affairs. It is perfectly legal for their parents to drink alcohol but an indictable offense for them to possess marijuana. That kind of double standard is corrosive of the principle of the rule of law. The value of the criminal sanction in a society rests on the foundation of fairness. For that reason, the criminal sanction is most effective when it is limited to proscribing those offenses of genuine danger to the society. Possession of marijuana does not meet that test.

Shifting Emphasis on "Pot"

It is evident from the renewed debate on marijuana penalties, and from the reduction of them in some states and localities, that public attitudes are becoming increasingly receptive to a shift in policy emphasis toward eliminating criminal penalties for casual use even while continuing public discouragement of the traffic in a medically risky substance.

Significantly, much of the current talk about "decriminalizing" the personal use of marijuana comes, not from the social apologists for "pot," but from some of the very reputable medical researchers who are voicing new concern about the health impairment potentially associated with marijuana overuse.

The latest to advocate a balanced new approach to the medical and legal aspects of marijuana is none other than the Ford administration's drug-policy spokesman. While raising new questions about the health risks incurred by marijuana smokers, Dr. Robert L. DuPont makes clear his own doubt that prevailing criminal penalties constitute a fair or effective way to deter the spread of marijuana smoking.

From the health standpoint, Dr. DuPont finds enough basis from the implications of animal research—bearing upon the potential marijuana link with chromosome damage and lowering of disease resistance—to advocate social policies of discouragement and restraint.

But such deterrence, in his view, can be achieved "at a lower cost than the current criminal sanction" which constitutes a case of overkill, when those convicted for possession of minor quantities of pot "may bear forever the stigma of an arrest record which can affect their employment opportunities and their entire future."

What this distinction between education programs and criminal penalties reflects is a growing body of opinion—shared by many philosophical conservatives and liberals alike—that prevailing reliance on Prohibition-style criminal prosecution is a poor way to cope with what is essentially a health problem involving risks much like those of overdependence or overuse of alcohol or tobacco.

For one thing, there is simply no way to enforce criminal penalties against the estimated 25 million or so who are said to have been tempted by the forbidden fruit. And the effort to do so is inevitably selective, capriciously discriminatory against the young, and a costly diversion of limited police manpower and resources better reserved for apprehending the peddlers of hard drugs as well as burglars, rapists, and other serious threats to public safety.

In this regard, the approach taken by such states as Oregon in treating minor marijuana possession as a "violation" roughly equivalent to a traffic offense, is seen by decriminalization advocates as perfectly consistent with "law and order" concern for stern policing against the hard-drug traffic.

The difference between "legalization" and "decriminalization" is in our view an entirely tenable one, and not mere semantics. For legalization would imply a social tolerance equivalent to that for liquor, and this is not warranted by the present ambiguous medical evidence, nor have any practical means been suggested for regulating marijuana traffic in the thorough way the liquor industry is regulated. Decriminalization for possession and use of minor quantities, however, need not let down the bars at all to criminal prosecutions for large-scale possession or selling to minors. This would tend to shift the focus from controversy over unfair effects of present criminal laws to rational social measures of deterrence, including educational programs and credible controls against marijuana use among minors.

Much as a persuasive case has been made for a sensible "decriminalizing" of first drunk-driving offenses as an effective remedy for laws that now remain notoriously ill-enforced, so is there a gathering consensus that excessive and unenforceable penalties for pot-smoking are no effective way to deal with any of the possibly serious adverse effects that medical science is beginning to worry about in the case of marijuana.

End the Pot Penalties

(By William F. Buckley, Jr.)

A couple of years ago Johnny Carson turned suddenly to me, in a general discussion of the drug laws, and asked me pointblank. "Have you ever tried pot?" I said, yes, I had. And added primly that I was on my boat, outside the

3-mile limit, so that I wasn't breaking any law. (He went on to ask: "Did it do anything for you?" And I replied, "No.")

Now as a matter of fact, Carson should not have asked that question. It is in the category of questions you do not ask, like: "Have you ever cheated on your wife?" The rule is that you should never ask somebody a question if there is a high probability that the answer will reveal the questionee to be either a law-breaker or a liar. And of course for some questions there is no escape clause. There is no such thing as cheating on your income tax outside the 3-mile limit.

But Carson did ask me, and my reply was truthful, and I have been plagued by it ever since. I seldom address a college audience without somebody bringing it up in some way or other during the question period. Example: "Mr. Buckley, how did pot get into your boat in the first place?" (My answer: Parthenogenesis.) Or: "Do you think it's fair that only people who have yachts can smoke pot legally?" (My answer: "Anybody can rent a boat. They come as low as ten, 15 bucks a day.") The audience is good-humored, mostly because if you are addressing a college audience, you are talking to a group 95 percent of which has experimented with pot. College students recognize that to experiment with pot is extremely safe, and you don't have to go out into the ocean to do it with impunity.

I say extremely safe with sharp reservations, having read the figures for the arrests during 1973, and the projected arrests for this year. These come to 400,000 and a half-million respectively. The figures are appalling, and I pass them along only because there is no reason to distrust the author of them. But what they seem to suggest is that although the typical campus is nowadays never, ever raided, still there are busts, hundreds of thousands of them, and a continuation of those preposterous penalties which are indefensible.

It is widely noticed that the Senate Internal Security Subcommittee has been transcribing a lot of anti-pot material offered by various doctors and scientists. It has not been widely noticed that the head of that committee, the draconian Senator James Eastland, has himself come out against any penalties for the users of marijuana (as distinguished from purveyors of it).

But somewhere along the line, the American public decided not to legalize pot. This conclusion it reached, in my opinion, on the grounds that any different conclusion would appear to be a capitulation to the counterculture.

But at the same time, American parents reached the conclusion, or such is my reading of it, that they did not desire their 18-year-old boys and girls to be sent to jail for smoking pot which said parents had every reason to suppose they were experimenting with at school.

If the awful figures are correct—a half-million arrests—there has been a breakdown in communication between the public and the police.

The old adage is that the best way to get a bad law repealed is to enforce it. Perhaps this is what the police are trying to effect: the repeal of the law by the enforcement of it. In which event it is paradoxical that the police do not interfere with the colleges. Or is the problem that there aren't enough police to arrest the guilty students?

Little by little, the distinctions emerge, Richard Cowan, a young journalist from Texas, makes them most neatly, in my judgment. They are: Pot is harmful; but people shouldn't go to jail for smoking it. The difficulty is in trying to take the two positions simultaneously. The art of communication seems to break down. It is instantly supposed that if you desire decriminalization, you are saying there is nothing wrong in smoking pot. Or that if you disapprove of pot, you must be in favor of illegalizing it.

But there is a book in prospect on the subject, being written by the aforesaid Mr. Cowan, and it will be a blessing. In his case, frustration has been the mother of invention: he cannot communicate these simple disjunctions, so he is writing a book.

Meanwhile, the apparent indifference of parents to other parents' children being sent to jail for smoking pot, speaks poorly of our sense of community.

Ann Landers: Reefer

Dear Ann Landers: I figured that all those loony letters would get to you sooner or later, but I didn't expect it to happen so soon. I honestly believe you've gone off your rocker.

I just read where you and some other odd-balls have signed sort of endorsement for marijuana. Now you say it is "normal" for kids to use it and all the scare stories about marijuana are nonsense and actually turning kids to harder stuff because they don't believe any of the propaganda about drugs.

I always thought you had good common sense, and I was pleased you were against pot because it helped me make a case with my own children. They have faith in what you say and will take it from you, but not from me.

Now, what am I to tell them when they catch up with your latest? Please explain, I am—Dumbfounded.

Dear Founded—or perhaps I should say Dear Dumb:

Talk about getting facts twisted, you win the cutglass fly swatter. My position on marijuana is unchanged. I haven't budged an inch. I still believe that marijuana is not harmless. I continue to be opposed to any mind-altering drug—including alcohol, especially for teen-agers.

I did sign a statement declaring that I am in favor of the decriminalization of marijuana. This does not mean that I want to see it legalized. I do not. But I do want to see the laws in regard to possession changed.

The name of the organization whose statement I endorsed is "NORML." It is The National Organization for the Reform of Marijuana Laws. The state volunteer coordinator is Paul H. Kuhn Jr., a highly respected gentleman.

The other "oddballs" (your term, not mine) who have endorsed the decriminalization statement are John Finlator, William F. Buckley Jr., James J. Kilpatrick, Sens. Barry Goldwater, Jacob Javits, Harold Hughes, Charles Percy and Adlai Stevenson II, and Joel Fort, M.D.

You write better than you read—and your apologies are accepted.

THOUGHTS ON MARIJUANA

(By James J. Kilpatrick)

Proposals for the "decriminalization" of marijuana once again are being heard. The proposals make sense—much sense that they ought to be seen as a first step toward reconsideration of public policy on the whole field of victimless crime.

Granted, "criminalize" and "decriminalize" are verbs that make a man wince, and "decriminalization" is a noun that would have driven H. L. Mencken up the wall. Yet the words are useful, all the same, in defining an area of the law in which an act is illegal but not criminal. Overparking is a familiar example. If I recall my dog Latin correctly, such an offense once was known as "malum prohibitum" as distinguished from "malum in se."

Over the past 40 years, most states have treated even the mere possession and use of marijuana as crimes—as felonies or grave misdemeanors, punishable by both fine and imprisonment. Here and there, as reason has replaced emotions, attitudes have moderated. Oregon now treats simple possession as a "violation," usually punished by a $25 fine.

Dr. Robert L. DuPont, chief White House spokesman on drug abuse, last month recommended that possession of marijuana (as distinguished from sale) be decriminalized at the federal level. His predecessor, Dr. Jerome H. Jaffe, concurred. Here in Washington, U.S. Atty. Earl J. Silbert announced that his office no longer would prosecute cases in which the evidence indicated possession of five or fewer cigarettes. Chief Judge Harold H. Greene backed him up. (Silbert later backed down.) On Capitol Hill, Rep. Edward Koch, D-N.Y., said he would reintroduced a discriminalization bill next month. In Miami, Atty. Gen. William Saxbe said he would welcome a change in the law.

For the most part, the recommendations draw support fron iberals. Such conservatives as James Eastland, chairman of Senate Judiciary main stoutly opposed. Yet carefully examined, the idea of decriminalizing arijuana precisely accords with conservative thinking.

Conservative doctrine holds that to the greatest degree possible, consistent with a demonstrably overriding public interest, the individual citizen should be both free and responsible—free to do what he pleases, responsible for the harm he himself may suffer. Unless it can be demonstrated convincingly that marijuana constitutes a health hazard to society, conservatives cannot consistently support the criminal sanctions that now apply.

No such evidence has been brought forward. Even as to individual harm, medical testimony is in conflict. The notion that most or all pot smokers proceed

from marijuana to heroin has been exploded. As a hazard to public health, marijuana plainly does not qualify.

There is a second, pragmatic reason for abolishing criminal prosecution of marijuana users. It is a foolish and wasteful use of the time of both policemen and judges to continue the spasmodic and capricious enforcement of the marijuana law.

Half a million such arrests will be made this year. The cases divert police from such truly serious crimes as burglary and robbery, and they clog the courts with defendants—mostly young defendants—not guilty of any true offense against society.

To be sure, only 2 or 3 percent actually wind up in jail, but all of them suffer the strain of a criminal arrest on their records.

The same considerations ought to be applied to many other "crimes." Distasteful as the process may be, conservaties should reexamine their hostility to repeal of laws that make it criminal for adults to engage in homosexual relationships.

Why is simple drunkenness a "crime"? Why are those who gamble still lawfully subject to arrest and imprisonment?

We need to think on these things. The decriminalization of marijuana offers a fine place to start.

POT: LONG SMOLDERING ISSUE MAY END IN DECRIMINALIZATION

(By William Hines)

WASHINGTON.—For the first time since ex-Commissioner of Narcotics Harry J. Anslinger trumped up a marijuana crisis in 1935, a real possibility exists that jail terms for pot users will be eliminated from Federal law. It could happen before another year has passed.

In turn, it is widely believed that if Congress acts to decriminalize marijuana, the 49 states that still hold the threat of jail over users (as opposed to peddlers) of the drug will soon fall in line.

Oregon has pointed the way in a law that went into effect last fall. Under its statute, possession of less than an ounce of pot—a misdemeanor in the Federal code and in all other states—is redefined as a "violation" to be dealt with through tickets and fines.

Already preliminary skirmishes are taking place on Capitol Hill, foreshadowing a serious legislative battle in the next Congress, whose coloration will be substantially more liberal.

Last week, a Senate alcoholism and narcotics subcommittee headed by Sen. Harold E. Hughes (D-Iowa) held two days of hearing aimed at showing that present punitive policies directed at minor pot offenders were doing the nation more harm than good and developing a generation not of "semi-zombies" but of cynics and scofflaws.

Hughes, who has heard and heeded a religious evangelical call, will not be in the Senate next year, but Jacob K. Javits (R-N.Y.), re-elected this month, will. And Javits has sworn an all-out effort to decriminalize pot.

As Javits and others of like mind see it, decriminalization is the way off the horns of a dilemma that bothers those in this country (probably a majority) who do not want to sanction the smoking of grass, but who, at the same time, dislike the idea of young lives being ruined by a criminal record imposed for an impulsive, and ultimately trivial offense.

Decriminalization in the Oregon manner recognizes that public acceptance of marijuana as a major recreational drug has passed the point of no return.

When Anslinger created his pot scare in 1935, he estimated (probably overestimated) that 50,000 persons in the United States were smoking the devil weed. The best estimate now is than 13 million Americans—260 times as many—smoke it occasionally, and that about 2,500,000 smoke "regulary" (say twice a week or more). And 26 million are estimated to have "tried" marijuana at least once.

These numbers probably represent a greater proportion of the population than was guzzling illicit hootch while the writ of Andrew J. Volstead was running (1919–1933) during the "noble experiment" of Prohibition. Sociologists and law enforcement officers are virtually unanimous in agreeing that when an illegal activity achieves this wide an acceptance, there is no stamping it out.

So what to do?

The alternative, in the case of the Volstead Act and the 18th Amendment, was repeal with subsequent legalization of beverage aclohol under state and local controls.

As long as the two sides had to fight about the hazards of marijuana, they never could reach a definitive conclusion.

That has changed recently, but such results as have been reported are either inconclusive, controversial or both. The latest Health, Education, and Welfare Department report on "marijuana and health" (the government persists in spelling marijuana with an "h") was delayed for several months to obtain and inculde some new experimental data, but much of these results left a lot to be desired scientifically.

As far as the relative hazards of the three most widely used recreational drugs—alcohol (95 million users), tobacco (55 million) and marijuana—are concerned, Federal mortality statistics on the first two are revealing.

The National Clearinghouse on Smoking and Health identifies 92,000 deaths a year attributable to cigarettes .The Clearinghouse on Alcoholism has statistics that suggest something in the order of 20,000 deaths a year from alcohol abuse (not including vehicular and other forms of homicide perpetrated by drunks.)

By contrast, Sen. Hughes in sharp questioning of Dr. Robert L. DuPont, head of the special Action Office for Drug Abuse Prevention, drew from the psychiatrist-bureaucrat the admission that he knows of not one death directly attributable to marijuana abuse. It is on these statistics that the pro-reform element will test its case about relative health hazards.

But this is not the real ace-in-the-hole of Javits. Rep. Edward Koch (D-N.H.) and ohers who will be sponsoring decriminalization legislation in the next Congress. They offer two intriguing arguments—one philosophic, the other pragmatic. The philosophic argument is directed at conservatives, the pragmatic at every person preoccupied with crime, taxes and inflation.

To the true conservative (and such conservatives as William F. Buckley and James J. Kilpatrick are on written record to this effect), there is no justification for the law stepping in to save the fool from his own folly. It is bad public policy to punish crimes without victims.

This goes hand-in-hand with the pragmatic argument that great deal of law enforcement effort is being frittered away in combatting the ubiquitous, victimless crime of marijuana use.

Another Column Not About Marijuana

Fort Worth.—When a writer fails to get his point across he would naturally like to blame the obtuseness of his readers, but that doesn't do anyone any good. From time to time, perhaps too often, I attempt to convey my views on the subject of marijuana, and I can't say that I feel exactly triumphant.

Actually, I do not write so much about the weed itself, as about the controversy surrounding it. There are several reasons for this approach. First, it is difficult and really pointless to try to critique a research report in a seven hundred word column for general readers. Secondly, I hope that younger readers who know what a mess the government has made of the "drug problem" will be consequently less anxious for the government to "solve" other problems, if this question is handled in a general way. (Of course, I run the risk of turning off conservatives who will simply put me down as a pot-head.) Finally, I don't go into specifics, because the arguments for decriminalization of possession (or legalization of sale) do not rest at all on the "alleged harmlessness" of pot. Not at all, but simply on the harm done by the laws.

Recently, however, we have been inundated by a new wave of anti-pot propaganda which is the grand finale of two years of hearings by the Senate Internal Security Subcommittee, headed by Sen. James O. Eastland, D-Miss.

There are several points about these hearings that are interesting. First, Senator Eastland seems to have endorsed the decriminalization of possession of small quantities. Thus, supposedly his objective is not to support the jailing of your kids, but to warn America about the dangers of marijuana. There is an interesting twist here. While many conservatives and even one tired old liberal (on whom I will pounce in a moment) have seen fit to report the "findings" of the hearings, few have mentioned the seemingly newsworthy endorsement of decriminalization by the senator.

What makes this even stranger is that invariably the columns assert that the "harmlessness of pot" has been argued by those favoring decriminalization, and

even that the burden of the argument for decriminalization somehow rests on the "alleged harmlessness." Well, the National Organization for the Reform of Marijuana Laws (the only pot lobby in Washington), the Shafer Commission, William Buckley, and James Jackson Kilpatrick, and yours truly, have never said that pot is harmless. Maybe someone's favorite hippy says so, but that would hardly be representative of the "national debate" if there is such a debate. It is just the old "strawman" technique, of misrepresenting the opposition, subversive of the truth, i.e., a lie.

Secondly, following the press releases of the Subcommittee, writers frequently start with some statement to the effect that "pot isn't harmless, after all, like everyone thought." Not just pot-heads like Kilpatrick, but the general population of America has thought for forty years that pot is harmless. Sure. This is a "news" lead in for a column. "Contrary to popular misconception" keeps propaganda from looking like propaganda.

Well, if you can find me a person who, one, thinks that pot is harmless and, two, thinks that Senator Eastland is an authority on the subject, I'll roll him in your newspaper and smoke him. The point is that the only people who will be influenced by this propaganda will be those seeking to justify the laws.

Senator Eastland has been attacked for his efforts, but he has in fact been more honest than those who bought his story. The old senator never made any bones about it. He carefully admits that these hearings have been open only to known antimarijuana crusaders most of whom had testified before the Shafer Commission. Generally, however, the results of the hearing have been presented as "new research" when in fact much was old and no actual research was done by the Sub-Committee.

I have been disappointed, of course, that a number of conservative columnists have fallen for the "new evidence" bit, but the really incredible all-time sucker has to be John P. Roche, former head of the super-liberal Americans for Democratic Action. Professor Roche was turned off by the New Left, which turned on, so in the Oct. 5 issue of TV Guide he saluates NBC news for overcoming liberal inhibitions about believing Eastland, just this once, of course. For some reason Roche finds all this "authoritative" (such interesting epistemology), but that's okay. What really got me, though, was that he says that, "Except in rare cases, the police simply ignored pot parties." After one million arrests, the former head of the ADA can say that?

Another half million Americans will be arrested this year, and if you think that this column is pro-pot, or even about pot, I have struck out again.

A Change in Policy on Pot?

(By William J. Lanouette)

More than two million Americans will smoke some marijuana today. Maybe 2,000 of them will be arrested.

For some very different reasons, those statistics are beginning to disturb a growing number of people and their elected representatives here. And if this concern spreads, as now appears likely, it could produce a fundamental shift in the nation's policy toward pot.

Attitudes are quite dissimilar. Some people are annoyed because they think that all pot smokers should be arrested. Some think no pot smokers should be arrested. Some think that pot smoking is wrong—for medical or moral reasons—but also that laws applied so selectively are unfair. And some think that regardless of the arguments for or against pot smoking, the police should be battling more serious crimes.

SEPARATE CONCERNS

These varied concerns were focused here recently by a series of loosely related events that together renewed debate about the public and political response to pot. From this debate emerges one fundamental shift in attitudes; a tendency to separate concern about the possible medical harm of pot from the legal harm caused by enforcing the present laws.

Marijuana is still a long way from being "legalized," that is, sold commercially as a legitimate product. Yet the chances that the possession and use of

small amounts will be discriminalized—publicly discouraged but not punished by jail terms—may be only months away. And oddly enough, the move to decriminalize pot could be boosted by a widespread concern for "law and order."

The shift in public attitudes began at the top. Although former President Nixon wouldn't even read the 1971 commission report recommending decriminalization, President Ford and the First Family have taken a different approach. "I'm sure the children have tried it," Betty Ford said in September. "I think children try everything, don't they?"

"THE KEY QUESTION"

Columnists, including William F. Buckley, Jr., Ann Landers, and James J. Kilpatrick have supported decriminalizing pot. Attorney General William Saxbe said he would not lobby for a change in marijuana laws on Capitol Hill, but "neither will I block any efforts to make the changes."

Last week the Ford Administration's chief drug-policy spokesman edged close to advocating decriminalization without explicity saying so. Dr. Robert L. DuPont, director of both the White House Special Action Office for Drug Abuse Prevention and of the National Institute on Drug Abuse, said: "The key question today is whether the benefits of deterrence are available at a lower cost than the current criminal sanction. I think that they are."

THE COST OF JAIL

With this shift in attitudes, New York Democratic Rep. Edward Koch is trying to muster support for his pot-decriminalization bill. "While many thousands are being arrested for possessing marijuana, many millions are not," Koch said in an interview last week. "I think that both Constitutional liberals and Constitutional conservatives will want to rally around this issue—because of the unfairness of it. By an estimate I've seen it would cost $79 billion a year to put every pot smoker in jail. And even assuming pot's as vile as its worst critics say, so do you correct that by putting everybody in jail?"

Sen. Harold Hughes, Iowa Democrat, is now posing two questions to witnesses before his subcommittee on alcoholism and narcotics, which is examining current pot policies. "Is the health hazard so great as to endanger society or is it so minimal that government should refrain from interfering with the individual user? Do the criminal laws impose on the individual and on society a burden which is so great and so unfair that they are far more damaging than the use of marijuana itself could be.

"Even if we find that marijuana does present serious health hazards," Hughes says, "are we justified in using the criminal law to solve a health problem when we do not use it in any similar way to solve the very well-known problems created by the use of such substances as alcohol and nicotine?"

THE OREGON APPROACH

Committee witnesses, including narcotics agents from New Jersey, urged a reassessment of national marijuana laws. Most favored an approach begun last October in Oregon, whose possession of 10 ounces or less is a "violation," like a traffic ticket, punishable by a maximum fine of $100.

Also last week, Dr. DuPont presented to Congress his agency's fourth annual "Marijuana and Health" report. It was due in March but delayed, he said, "to include new findings from several important studies in order that the report would accurately reflect the present state of our full scientific knowledge." He conceded, however, that "there are more unanswered than answered questions. But these recent findings give reason for concern in several areas."

SEX AND DRIVING

Among those he highlighted were: depressed levels of the male sex hormone testosterone in heavy users of marijuana, possible interference with the body's immunity responses, and adverse effects on driving skills while high on marijuana. Yet, he warned, "we do not know today that *cannabis* [marijuana] use definitely is more dangerous in all respects than we previously thought. Much of the research reported is very preliminary, involving testing in animals, not man. Some of it is contradictory."

New Federal Report Outlining Medical Applications of Pot

(By Susan Fogg)

Almost lost amid reports on the ill effects of marijuana on human health were findings that the drug shows some promise as a medical application to a variety of physical and emotional ailments.

The bulk of the official federal report on "Marijuana and Health" (the government continues to favor the "h" spelling) released last week was devoted to detailing the latest research on the dangers of pot smoking.

But the report also outlined some of the therapeutic applications of marijuana that researchers have been testing. These findings are tentative, and have little or no application to recreational use of the drug.

Perhaps the most striking study was conducted with 34 cancer patients at the Medical College of Virginia, where patients receiving marijuana showed a number of benefits.

Marijuana apparently served as an appetite stimulant which helped check weight loss. The drug also helped suppress nausea, and worked as a pain killer.

Marijuana also served as a mood elevator and tranquilizer, but without giving the cancer patients the "high" experience by street users.

The researchers attributed this lack of a high both to the hospital setting and to the fact that the patients did not know what drug they were taking.

Other tests on lab animals indicated that marijuana may have some potential as an adjunct to anesthesia during surgical procedures. Initial studies show, according to the federal report, that use of marijuana as a sedative may reduce the amount of anesthesia needed.

Other research into the usefulness of marijuana as a sedative in treating disorders like insomnia and emotional depression has shown mixed results, but the federal report said further investigation was warranted.

In one study five retarded children with grand mal epilepsy were treated with a synthetic drug based on the active ingredient in marijuana, with results as good or better than conventional medications.

However, animal studies indicate that the anti-convulsive properties of marijuana may be limited by an apparent increase in tolerance for the drug, so that doses must be increased for it to continue to work.

Traditionally, marijuana was used in Western medicine as a treatment for convulsions, chronic pain, opiate and alcohol addiction, and asthma.

Over the past two years, researchers have again been looking at marijuana in the treatment of asthma, on the basis that in normal users, smoking marijuana dilates the major airways into the lungs.

However, scientists are concerned with other findings that smoking can cause respiratory damage. Nonetheless, the report concluded that "further investigation is desirable."

Other studies reported in "Marihuana and Health" indicate that the drug can impair driving ability, temporarily lower male sex hormone level and possibly bring about changes in cell structure that could lead to lowered body resistance to infection or genetic damage.

These hormonal and cellular effects of marihuana—still unconfirmed—could have especially serious effects on either the young adolescent or on the old, the federal report said.

Survey of Marihuana Use—State of Oregon

A majority (58 percent) of the State of Oregon residents favor the elimination of criminal penalties for the possession of small amounts of marihuana. Three out of every 10 Oregon adults approve of their state law that makes simple possession of marihuana a civil "offense"—akin to a parking ticket—carrying a fine but no jail term or criminal record. An additional 26 percent favor changes making sale and/or possession of small amounts of marihuana legal.

Oregon is the first state to abolish criminal penalties for possession of one ounce of marihuana or less and to replace them with a maximum civil fine of $100. The independent Drug Abuse Council commissioned a survey in October 1974—the first anniversary of the new legislation in marihuana usage during that year and to find out what impressions Oregonians have of their new law.

The Oregon survey consisted of 802 personal interviews with adults 18 years or over, representing a balanced sample of the state's population. As might be ex-

pected, young adults—ages 18 through 29—took a more liberal view on the four legal choices regarding sale and/or possession of small amounts of marihuana. The division is sharp between those who either have or currently use marihuana and those who have never used marihuana.

ATTITUDE TOWARD MARIHUANA LAW

[In percent]

	Civil penalties, as is	Possession of small amounts legal	Sale and possession of small amounts legal	Stiffer penalties
Total adults	32	15	11	39
By age:				
18 to 29	36	26	17	19
30 to 44	38	13	8	40
45 to 59	25	13	7	51
60 and over	27	5	9	53
By usage:				
Have used	26	37	29	7
Currently use	14	53	33	0
Never used	33	11	6	46

Two out of every ten Oregon adults have at least tried marihuana, with one out of every ten reporting that they currently use marihuana. Again, a sharp difference in marihuana usage is observed between younger adults and older adults.

MARIHUANA USAGE

Total adults: Have ever used, 19 percent; never used, 81 percent.

By age: 18–29 have ever used, 46 percent; never used, 54 percent; 30–44 have ever used, 15 percent; never used, 85 percent; 45–59 have ever used, 4 percent; never used, 96 percent; 60 and over have ever used, 2 percent; never used, 98 percent.

It appears that the number of individuals using marihuana has not significantly increased in Oregon during the year since it has removed criminal penalties for simple possession of one ounce or less. Nineteen percent of Oregon adults report that they have used marihuana at least once; 9 percent of total adults say that they currently used marihuana. Of those currently using marihuana, only 6 percent reoprt that they have used it for less than one yar, 91 percent for more than one year. All of the less-than-one-year users are between 19 and 29 years of age.

Of those individuals currently using marihuana, a large number report a decrease in usage during the last year, while only a small number report an increase.

Change in marihuana usage

Current users:	*Percent*
Decreased usage	40
Increased usage	5
No change	52

Lack of interest and possible health dangers are the most important reasons chosen for not using marihuana by those who have either never used it or those who have stopped using it. The possibility of legal prosecution and the lack of marihuana availability rank low as reasons for not currently using marihuana.

Reason for not currently using marihuana

Current non-users:	*Percent*
No interest	53
Health danger	23
Possibility of legal prosecution	4
Not available	2
Other reasons	9
Undecided	9

The federal National Commission on Marihuana and Drug Abuse, after an exhaustive two-year study, estimated in 1972 that 26 million Americans had tried marihuana, with 8 million of these using it regularly. The Commission recom-

mended that possession of marihuana for personal use no longer be a criminal offense and that casual distribution of small amounts of marihuana not involving profit no longer be an offense. Oregon is the only state to adopt, in part, this recommendation, although many other states are presently considering it.

"It is disturbing to note the dramatic increase in arrests for simple possession of marihuana," according to Thomas E. Bryant, M.D., President of the Drug Abuse Council. "In 1973 alone, state arrests are reported by the FBI to be in excess of 400,000.

"It seems clear that marihuana has been established as the recreational drug of choice by many Americans, youth as well as adults, and that its prohibition has had little effect upon its availability and use. Other states should take a careful look at what has happened in Oregon since it has removed its criminal penalties for small amounts of marihuana and consider moving in the same direction."

The Oregon survey was conducted by Bardsley and Haslacher, Inc., of Portland, Oregon, a marketing research firm, and consisted of several questions asked as part of a longer, regularly scheduled survey of public opinion on a variety of issues.

The Drug Abuse Councils, located in Washington, D.C., was established in 1972 by a consortium of private foundations to serve as an independent source of information, policy evaluation and research funding in the field of drug use and misuse.

[From the New York Times, Jan. 29, 1975]

Carey Considers Dropping Harsh Marihuana Penalty

(By Alfonso A. Narvaez)

Albany, Jan. 28.—Governor Carey said today that he was considering the removal of criminal penalties for possession of small amounts of marihuana and replacing them "with a system of fines or mandatory attendance at health clinics" for treatment.

He said that two panels he had appointed—one on health and the other on law enforcement—were studying the entire question of drug abuse with an eye toward a major revamping of the state's stringent narcotic laws, which went into effect in 1973.

The Governor's proposal for an easing of the marihuana statutes, which he first broached during the gubernatorial campaign, came as two Democratic legislators proposed complete legalization of its use by people over 18 years of age. They also called for state control of the raising and sale of marihuana similar to state controls over alcohol.

The two, Senator Franz S. Leichter, of Manhattan, and Assemblyman Alan G. Hevesi of Queens, said at a news conference that they would reintroduce a bill to create a state marihuana control authority to license and regulate growers, producers, manufacturers and distributors of marihuana.

The proposed authority would enforce regulations setting the strength of marihuana, which could be sold at licensed liquor stores, and the state would impose a tax on the product.

The Governor made his comments during a walk to the Camelot Restaurant, for a luncheon speech to members of the Maritime Port Council of Greater New York and Vicinity.

He said that present indications were that judges were dismissing cases involving the use of marihuana because of the severity of the penalties and that the police were not arresting people who had minor amounts of marihuana in their possession.

The Governor quickly added that his proposal for the decriminalization of the possession of small amounts of the drug "does not mean legalization."

Mr. Carey reiterated the theme of what he had said during the campaign, that the state's drug laws had to be revamped "because the law doesn't seem to be working" and because "it is not being enforced."

He said that "any law on the books that is not being enforced becomes a mockery" and that he favored the imposition of "appropriate" penalties for drug abusers, but that he was more inclined toward treatment programs rather than long-term incarceration.

STUDY BEING PREPARED

Governor Carey forecast that the health panel would come up with a program that "would lead youngsters and depressed adults away from the use of drugs." He added that the panel was preparing a comprehensive study of the effects of the use of marihuana, hard drugs and alcohol so as to provide a basis for drawing up the new drug proposals.

The Governor's proposals, when they are offered, are expected to receive a warm reception in the Democratic-controlled Assembly but continued resistance in the Republican-controlled Senate.

Warren M. Anderson, Republican of Binghamton, the majority leader of the Senate, has expressed reservation about changing the present drug laws, saying that such action would be premature. He also said that easing penalties for marihuana might lead people on to experiment with harder drugs, adding that he would have to see exactly what Governor Carey's proposals were before commenting further.

[From Tuesday, Jan. 28, 1975]

CAREY MOVES TO EASE DRUG LAW

(By Josh Friedman)

ALBANY.—The Carey Administration is seeking a major overhaul of the tough drug laws put into effect in 1973 at the insistence of Gov. Rockefeller, The Post has learned.

The Carey plans would include reducing the penalty for possession of marihuana from imprisonment to a fine.

"The judges aren't sentencing people for marihuana possession anymore because of the severity of the law. We want some from of penalties that would work, such as fines," Carey explained in a recent interview.

Since his election, Carey has been working closely with his personal physician and adviser, Dr. Kevin Cahill, to devise a replacement for the current law—which he promised to do during his campaign.

The Administration intends to have the state Dept. of Mental Hygiene prepare a comprehensive study on the effects of marihuana, hard drugs and alcohol as a basis for drawing up its new drug law proposals.

Such proposals, leaning away from punishment and toward medical treatment, are expected to get Democratic support in the Legislature. Their fate among Republicans is uncertain.

In an interview last night, Senate majority leader Warren Anderson, whose support would be crucial, said a change in the current law would be premature.

Anderson also expressed doubt about creating milder penalties for marihuana possession.

"I still think marihuana might open the door to hard drug use, but would have to see more medical evidence. I would want to see what the Governor is proposing before I say anthing," Anderson said.

Assembly minority leader Perry Duryea, denying he was making a pun, said he could not comment on changing the law "until the medical people give us some more dope on the problem."

If New York changes its treatment of marihuana possession, it would be joining a trend in several other states.

The California Legislature is expected to vote within weeks on a law to set a $100 fine for possession of up to two ounces. The bill has the support of Gov. Brown.

Oregon already has such a law. The Vermont, Minnesota and Massachusetts legislatures are considering them. In Nebraska, the penalty for possession of up to one pound of marihuana is seven days in jail.

There is widespread agreement the current drug law does not work.

Because the law does not allow prosecutors to offer reduced sentences for possession of very small amounts of hard drugs, virtually every person arrested has demanded a trial, and the courts are swamped with their cases.

According to Special Narcotics Prosecutor Frank Roger, who enforces the law in New York City, 1297 accused narcotics users or sellers are out on bail in Manhattan alone, a number growing by as much as 200 each month.

"They're out on the streets, so this does not attack the drug problem," Rogers said.

He said the legislature would either have to reduce the harshness of the law or add 30 more judges in the city—at an estimated annual cost of $18 million.

More than 7000 persons were arrested for marihuana use or sale in the city last year. Almost all of those accused were released without jail sentences. Upstate, penalties for marihuana possession are more strictly applied, with some users now serving jail sentences of up to 15 years.

Meanwhile, State Sen. Franz Leichter (D-Man.) is introducing a bill today that would completely decriminalize marihuana possession and set up a regulation system for legalized marihuana sales similar to that governing the sale of alcohol.

Leichter first proposed the law four years ago, when he was hissed on the Assembly floor as he explained it.

"I can't believe my bill will pass this year. I can't believe the legislature is so enlightened," Leichter said, even though, he comments, those who hissed him now favor some lesser form of penalty.

The only other proposal for a change in marijuana penalties is being drawn up by the National Organization for the Reform of Marijuana Laws (NORML). The measure is expected to be sponsored by Assemblyman Richard Gottfried (D-Man.).

The NORML proposal would eliminate penalties for possession of up to four ounces of marihuana, but would not allow use of the drug in public.

Sale of marihuana would be a misdemeanor, carrying a sentence of up to one year in jail. Sale to a minor under 16 would be an E felony, with a sentence of up to four years.

Mr. JAVITS. I ask unanimous consent that a statement by Senator Brooke in respect of the matter may be part of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT OF SENATOR BROOKE

Today I have joined Senator Javits as a co-sponsor of the legislation to remove the cruel and unrealistic penalties existing law sets for private possession of marihuana. Irreparable damage is done to the half million people who are arrested on marihuana charges annually. The vast majority of these are very young, and they will have to bear serious criminal records and perhaps even the pain of serving time. Their lives and their futures will thus be devastated. Simple private use of marihuana, which long study has shown is not addictive and does not cause hard drug use, cannot justifiably be punished so severely.

This legislation does not legalize marihuana use. There is still a $100 fine imposed on persons carrying the drug. Furthermore, the sale and distribution of marihuana remain serious felonies punishable by the full weight of the law.

A comparable law has been in effect in the state of Oregon for a year and a half. Careful study by the Drug Abuse Council has shown that the law has the intended effect. Law enforcement agencies are free to pursue more serious drug offenses. There has been no increase in the number of users of marihuana, nor any increase in the amount of the drug used by the people who are already using it. Other state legislatures are currently considering such sane and humane reforms in their drug laws, and I hope many will adopt similar statutes. The time has come for the Federal laws to change.

This is not an easy position for me to take. Many persons will misinterpret the legislation and believe it legitimizes the use of marihuana, although it does not. I am personally deeply repelled by the idea of using any drug. I wish Americans would give all these up together with smoking of any kind. I firmly believe the medical evidence shows marihuana may have harmful long term effects and that it therefore must be controlled like other hazardous substances. My position is that it just does not belong in a legal category with heroine, opium or cocaine, the "hard" or addictive drugs. I do, however, feel that this bill will not lead to any increase in marihuana use and that it provides the first realistic move to control that drug.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

Mr. JAVITS. Mr. President, I also ask unanimous consent that the bill be printed in the Record.

There being no objection, the bill was ordered to be printed in the Record, as follows:

S. 1450

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the Marihuana Control Act of 1975.

That the Controlled Substances Act is amended by inserting immediately after section 404 thereof the following new section:

"SEC. 404A. (a) Notwithstanding the provisions of section 308, 401(a)(1), 404, or any other provision of this title or any other Federal law, any person who

"(1) possess not more than one ounce of marihuana within a private dwelling or other residence for his own use, or for the use of others, within any such residence or dwelling, if such marihuana is not possessed with the intent to distribute, transfer, or sell such marihuana in violation of this title or any other Federal law; or

"(2) possess in a public area, not more than one ounce of marihuana if the possession of such marihuana is incident to a private use within the purview of subparagraph (1) of this paragraph, and is not with the intent to distribute, transfer, or sell such marihuana for profit in violation of this title or any other Federal law; or

"(3) distributes or transfers, in public or private, any marihuana lawfully possessed, to any person for a private use within the purview of subparagraph (1) of the first paragraph of this subsection, if such distribution or transfer is not made for profit—

Shall be guilty of an offense, for which such person shall be subject to a civil fine of not more than $100. Such acts shall not constitute crimes against the United States and such person shall not be subject to arrest or suffer any disadvantage or disability except that specified in this section.

"(b) nothing in this section shall be construed as requiring the Attorney General to initiate proceedings involving violations of this section whenever he believes that the public interest will be adequately served by a suitable written notice or warning.

"(c) In the prosecution of any person charged with an offense in violation of any Federal law, the fact that such person was suffering from marihuana intoxication at the time of the commission of that offense shall not be a defense to that charge or any element thereof, unless such intoxication was not self-induced.

STATEMENT OF HON. ALAN CRANSTON, U.S. SENATOR FROM THE STATE OF CALIFORNIA

Mr. Chairman, I am delighted to have an opportunity to testify before your committee on the decriminalization of marihuana use. As a principal sponsor, along with Senator Javits, of S. 1450, the Decriminalization of Marihuana Act of 1975, I am very pleased that this issue is being given a full airing by the Judiciary Committee's Subcommittee on Juvenile Deliquency—and so soon after we introduced the bill on April 17, 1975.

As you know, S. 1450 would remove the criminal sanctions in Federal law applying to the possession of small amounts of marihuana, and make the offender subject to a civil fine of not more than $100. Arrest for violations of the offense would be prohibited. The bill would not change the Federal law regarding criminal penalties for the sale of marihuana for profit, or for possession of more than 1 ounce.

Under present Federal law, marihuana offenses can be treated either as a felony or misdemeanor, depending on whether or not the defendant intended to sell the drug. Thus, even though a conviction for simple possession without intent to sell is a Federal misdemeanor, a defendant often ends up with a felony arrest record.

The legislation Senator Javits and I have introduced proposes a moderate reform of our outmoded laws on the possession of small amounts of marihuana. The state of Oregon took this approach in 1973. Similar legislation has passed the State Senate in California and is pending in over twenty other state legislatures. Public opinion polls show growing support for decriminalization.

The time has come to legislate like it is. When we brand as "criminal," private behavior which has become socially acceptable, we undermine the credibility of law and justice in our Nation. To brand as a criminal act private conduct 29 million Americans at one time or another have engaged in, perpetuates an ivory tower approach to criminal justice.

According to the FBI, more than one million persons have been arrested for marihuana offenses in this country in the last four years. Eighty-eight percent were young adults under the age of 26; 62 percent were under the age of 21. Furthermore, ⅔ of all marihuana arrests were for possession of one ounce or less.

I can think of no area of criminal law where so-called crime and punishment are in such imbalance. Hundreds of thousands of young lives have been marked indelibly with criminal arrest or conviction records for the simple possession of marihuana. The injustice is compounded every time one of these young people sits down to apply for a job, membership in a professional organization, or even a driver's license.

For those punished with prison terms and denied civil liberties, the tragedy is deeper and the scars even greater.

In California alone, each marihuana arrest costs enforcement authorities approximately $1,400. At this rate, California spends more than $100 million annually trying to enforce unenforceable marihuana laws. The costs nationally are probably in excess of $600 million. In addition, marihuana prosecutions jam our courts, thereby effectively prohibiting due process of law for thousands of other cases and undermining by delay the deterrent effect sought by our criminal justice system.

This legislation proposes an important step toward restoring a reasonable balance between an individual's right to be free from government interference in private matters and society's right to protect itself from activities clearly detrimental to the common good.

In sponsoring this legislation, I am cognizant that the health hazard of marihuana use remains controversial. Several research findings reported in the past year have pointed to possibly damaging consequences for heavy users. However, much of the research conducted to date, according to Dr. Robert DuPont, Director of the National Institute of Drug Abuse (NIDA) and the Special Action Office on Drug Abuse (SAODAP), "is of a preliminary nature . . . (and) some of the findings are frankly contradictory." There is accumulated evidence in one area—the effect that marihuana use has on driving—which does demonstrate that marihuana has a detrimental effect. But findings dealing with reduction in marihuana smokers' immunity system to disease, or lowered production of the male hormone testosterone, are not conclusive. In fact, according to Dr. DuPont's November 1974 testimony, other studies attempting to duplicate these findings have produced different results.

It should be stressed that the National Commission on Marihuana and Drug Abuse, when they recommended decriminalizing the user in 1972, did not presuppose marihuana would be harmless. And several members of the Commission have reiterated their conclusions since the Eastland hearings last fall.

"No drug is totally safe or harmless. In a sense, there is no human activity which is totally harmless. However, it is my opinion that marihuana involves only a minimal risk of harm to the user. Clearly the potential harmfulness of marihuana to the user is on a much lower order of magnitude than the potential harmfulness of such other drugs as alcohol, tobacco, amphetamines, barbiturates, and hallucinogens." J. Thomas Ungerleider, M.D., Presidential Appointee to the National Commission.

"Since publication of the Commission's Report in March 1972, numerous studies have been reported, some suggesting that the dangers from marihuana are far greater than the Report indicated, others demonstrating that its use produces relatively little harm. In short, work in the last two years has not fundamentally changed the data base on which the recommendations were made." Dr. Dana Farnsworth, Presidential Appointee to the National Commission.

While marihuana may not be harmless, it certainly presents far less of a health hazard when used to excess than does alcohol, tobacco, and a host of other drugs available in our society. Any risk to the user falls within the ambit of choice the informed individual should be allowed in a free society. So long as the research results warrant it, we should warn against the use of marihuana, but we should not criminalize those who choose to ignore our advice.

It has been over 3 years since the National Commission on Marihuana and Drug Abuse urged decriminalization. So I don't in any way underestimate the difficulty of our task.

Simple justice is never simply achieved. But we owe it to our young people and we owe it to society as a whole to make this fight. I can think of no other single action which would more enhance the credibility of our criminal justice system and our overall law enforcement efforts. And I can think of no other single act which would more symbolically reach out to our youth, to tell them that our eyes and ears are open; that we are trying to conform our laws to what we see and hear, and to remove one unnecessary and heavy-handed governmental incursion into individual freedom.

Enactment of this legislation is one important way to rebuild faith in our government of laws so recently shattered by the harsh hypocrisies of Watergate.

Dear Senator Bayh:

Mr. Ronald Gaetano, Director of the Broome County Drug Awareness Center in Johnson City, New York, has recently written you requesting an opportunity to have an input in your hearings on the marijuana bill, S. 1450. I personally know Mr. Gaetano and believe he is very knowledgeable about the drug abuse problem.

I would appreciate it if you would give his request every consideration.

With regards.

Yours truly,

Matthew F. McHugh

Subcommittee to Investigate Juvenile Delinquency
Washington, D.C. 20510

Dear Senator Bayh:

Thank you for your response to my letter of June 23, 1975. Although I appreciate you having our report added to the files on Drug Thoughts for research, your response did not address my inquiry regarding how I might offer input regarding the Senate hearings on the Marijuana Bill S1450. Congressman Matthew F. McHugh, 27th District, New York, informed me that the Subcommittee on Juvenile Delinquency of the Judiciary Committee, which you chair, is conducting the hearings. I believe you have received a letter from the Congressman substantiating my credibility. As I stated in my previous letter, if there is some reason I could not offer oral testimony to these hearings, I would at least like to submit a written statement for the record. Please advise me as to what steps I might take to arrange this.

Thank you for your consideration.

Respectfully,

Ronald J. Gaetano
Director
Broome County Drug Awareness Center

Senator Birch Bayh, Chairman
United States Senate, Committee on the Judiciary
Subcommittee to Investigate Juvenile Delinquency
Washington, D.C. 20510

Dear Senator Bayh:

Thank you for your invitation to submit this letter regarding the concerns we have with the decriminalization of marijuana bill, S-1450.

A quick review of that bill will show that the chief impetus behind it is to prevent "the indiscriminate wrecking of people's lives and careers" as a result of the hundreds of thousands of arrests relating to marijuana.

The evidence presented to support decriminalization all sounds very good; of course a new means of dealing with marijuana use must be substituted and Senator Javits states that the civil fine approach, which he believes has met with "demonstrated success" in Oregon, should be implemented. Senator Javits does not go into detail in discussing the "demonstrated success" in Oregon. He does say that:

Forty percent of the respondents who said they had used pot said they decreased their consumption while only five percent reported increased use. There is no mention of how many people are now using marijuana who did not use it before its decriminalization. This figure would be interesting since <u>there was a 63.1% increase in arrests for marijuana after it was decriminalized</u> in Oregon although the police were devoting no additional effort toward enforcing the marijuana laws. (Report Enclosed - I) Since those who were using marijuana prior to its decriminalization report an overall reduction in their use, the logical deduction is that there are <u>many</u> new marijuana users since the drug's decriminalization. This fact should make a reasonable person question Senator Javits' statement that the present law is clearly ineffective as a deterrent.

We would think that if the objective of S-1450 is to <u>decrease</u> the number of arrests for marijuana, then the Oregon experience which demonstrated a substantial <u>increase</u> in those arrests

would show that the bill is, in fact, counter-productive. How Senator Javits can substantiate his statement that this type of bill would eliminate 90% of the marijuana arrests is, in light of the Oregon report, beyond our statistical reasoning. Although we would hope that this very plain fact would be enough to warrant the scrapping of that bill, we would like to address other concerns we have regarding it. First, so that you understand our philosophy, we would like to make several statements that we are sure you can agree with.

- We are both opposed to harsh laws that put non-threatening users of marijuana behind bars.

- We are both opposed to the use of marijuana by the young (under the age of 18).

- We are both opposed to those people who deal with and sell marijuana in large quantities.

1. One of the problems we have with S-1450 is its failure to provide any measures for keeping marijuana out of the hands of the young. In introducing the bill, Senator Javits quoted statistics showing that 53% of all 16 and 17 year olds know someone who has been arrested for possession of marijuana and that 62% of all those persons arrested for marijuana possession in the past four years are younger than 21. The questions that these statistics should prompt are: "How many of those arrested were under the age of eighteen?"; "How prevalent is marijuana use by those under the age of 18?"; "What percentage of the new users of marijuana in Oregon are under the age of 18?" Nationwide research shows that drug usage is continuing to spread into younger age brackets. For the nearly 250 persons referred to our criminal justice program this past year, over 42% were seventeen or younger! Although over 90% of the referrals from the criminal justice system to our program were charged with possession of marijuana, 63% of these referrals admitted they had used more drugs than just alcohol and marijuana and 44% were currently using other drugs in addition to marijuana and alcohol. Polydrug use is widespread among persons using marijuana. Indeed, the Oregon report notes that <u>since the decriminalization of marijuana there has been a corresponding increase in the use of other drugs as well as with marijuana.</u> The enclosed report (II) shows the high percentage of referrals to our program involved in polydrug abuse. All these facts should be taken into consideration when evaluating Senator Javit's statement that "the overwhelming majority of users do not progress to other drugs." Additionally, although we make no pretense that use of marijuana or any other drugs <u>causes</u> one to advance to use of narcotics, our figures (III) show that individuals we have worked with who are using narcotics have a long history of non-narcotic polydrug use before their involvement with narcotics.

2. We assume you realize that there are some people who cannot handle marijuana just as there are some people who cannot handle alcohol. For every quote Senator Javits offers espousing the harmlessness of marijuana, we can provide a statement to the

contrary and can document cases in which people have encountered problems. Although we are sure you have read many reports regarding marijuana, we are enclosing two more which should be of interest to you (IV - the first is particularly relevant). The Oregon report did not report on any change in health-related problems, either emotional or physical, as a result of the decriminalization, and subsequent increase in the use, of marijuana. Perhaps such statistics would take several years to compile; however, it is our belief that such a study would show an increase in these problems. The fact that, as Senator Javits points out, "casual marijuana usage is so common" does not mean that since its usage is popular that there are no problems with marijuana. Our history of problems with the two most widely accepted drugs in our society, alcohol and tobacco, should have taught us that. We challenge Senator Javits' statement that marijuana is a device for avoiding reality for "only a small number." We think research would show that a large percentage of users, particularly among the young, use marijuana and other drugs specifically for that purpose.

3. Although Senator Javits is opposed to legalization because it would "institutionalize marijuana and give it the status of official approval, thus making its use more inviting and widespread," it is obvious that the decriminalization of marijuana in Oregon has had the same effect. The deterrent effect of any law is difficult to measure; however, the fact that the use of marijuana has increased substantially in Oregon since its decriminalization demonstrates the law did have a substantial deterrent effect. Additionally, the very fact that possession of marijuana is illegal provides the youngster with another reason to resist peer pressure to experiment with it.

4. Senator Javits is evidently very concerned with the disrespect for the criminal justice system which has been fostered by harsh laws against marijuana. We concur but question whether the appropriate corrective measure shouldn't be a reduction of the penalties rather than the outright decriminalization of marijuana. While he attempts to mitigate the illogical factor in applying decriminalization only to the user, leaving penalties against the seller, (he reminds the reader that this "Catch 22" is consistent with our handling of other "victimless crimes" such as pornography, gambling and prostitution), that factor is inherent. Certainly he could not deny the disrespect that is generated for those other "victimless crimes" despite their decriminalization for the "user" of the service. The disrespect for the law would no doubt be just as great, if not greater, due to increased arrests as a result of the decriminalization of marijuana (as has happened in Oregon).

5. It seems to us that if Senator Javits' bill was to be considered despite its obvious shortcomings, that something more appropriate than a civil fine could be used. Everyone agrees the public should be educated regarding the possible dangers of the drug so why not at least institute a policy of mandatory attendance at a "health clinic" for violators, as suggested by Governor Carey of New York. As you know, our agency has been,

in effect, providing this service for Broome County and the results have been impressive.

6. S-1450 refers to certain quantities of marijuana (e.g. - one ounce) without mentioning the T.H.C. (the psychoactive drug in marijuana) content. We are very aware of the ability of those who deal in drugs to adapt to loopholes in the law and there are already procedures for extracting a potent percentage of T.H.C. from cannabis sativa in order to carry it in small amounts. There is a drug around currently called "Number One" which is made in this way and which averages 65% T.H.C. (a normal marijuana plant may have around 1% T.H.C.; See V). Individuals using this drug have had trouble all too often with LSD-type reactions.

Without controlling the potency of the drug you are not effectively controlling the true amount an individual possesses.

7. Bill S-1450 has no provisions for the problem of dealing with drivers under the influence of marijuana. Oregon officials admit they have a problem in this area since there is no known standard for marijuana intoxication and no test to indicate when the defendant is under the influence of marijuana. Yet studies have shown that use of marijuana alters depth perception and does affect one's driving abilities. Oregon is side-stepping the issue by charging those possessing less than one ounce or for using marijuana when the intoxicated individual is encountered on the highways. (They do not say how they know he is intoxicated). But is such a charge sufficient if a driver, intoxicated by the use of marijuana, is responsible for an accident and subsequent loss of another's life? Clearly a solution needs to be found before marijuana is decriminalized and usage increases.

We feel that we should offer an alternative to S-1450, as we feel it is a very inept solution to a very real problem.

In our recent experience we have found that the jailing of persons for possession of small amounts of marijuana is the exception rather than the rule. We realize our awareness of practices is necessarily limited since such practices, at least as they stand in law, vary widely. However, in Broome County, and in New York State in general (which is known to have one of the toughest drug laws in the nation) we have a procedure by which persons arrested for possession of small amounts of marijuana almost always receive an Adjournment in Contemplation of Dismissal, at least on the first charge. This "ACD" allows for a probationary-type period of up to a year in which the individual must stay out of trouble and abide by the stated conditions. If the individual abides by the conditions of the ACD all records of his arrest are destroyed, and therefore, he is not labelled as a criminal for the rest of his life. In this county, one of the conditions has often been attendance at our program at the Drug Awareness Center. Our program, on an out-patient, drug-free basis, consists of a drug and law educative process and of individual "counseling" which is essentially a joint venture in problem solving. The Center offers such services as emergency food, clothing and shelter, job placement, tutoring, etc. in an attempt to meet all of our clients' needs. We have had documented success in substantially reducing drug use with two-thirds of these clients. The Center is a com-

munity agency which depends in large part on volunteers and is therefore fiscally responsible. A system of this type avoids arrest records yet at the same time maintains the illegality of marijuana and addresses the needs of those abusing drugs.

The answer to the dilemma over marijuana is not decriminalization. An editorial in the Washington Post on 11/18/74 entitled "The Limits of the Criminal Sanction" (included in S-1450) states that: ".....decriminalization should be recognized for what it is. It is a politically delicate way of saying you are taking a first step toward the day marijuana will be legal...If there is merit in relaxing the rules on possession, simple logic dictates that it makes sense eventually to legalize its sale and use and control its quality."

This statement seems quite reasonable. The problem with decriminalization then is crystallized when one reads on to the next article in S-1450, "Shifting Emphasis on Pot", an editorial from the Buffalo Evening News, which states that:

> "....legalization would imply a social tolerance equivalent to that of liquor, and this is not warranted by the present ambiguous medical evidence."

Why are we going to decriminalize marijuana when it is a step toward legalization which we are not willing to support and when, in fact, decriminalization itself will imply a social tolerance of marijuana as shown by the Oregon experience?

We suggest that the federal government take the initiative by reducing penalties for possession of less than one ounce and implementing a policy of referral to a health/education program under the criminal law. We cannot be swayed by those mis-informed or selfish people who would handle marijuana as alcohol is currently being handled. Everyday we read about the immense alcohol problem which is prevalent in this country; do we want to repeat our past mistakes?

The marijuana issue should be approached slowly and cautiously and we should, in Senator Javits' own words, "continue to look for potential ill effects from the use of marijuana, especially with chronic, heavy use".

If, after all the evidence is in, it is decided that marijuana is not sufficiently harmful to be illegal, it should be legalized, not decriminalized. For, as pointed out in this paper, decriminalization in Oregon has not only involved more people in the criminal justice system but has also introduced more people to another psychoactive drug and one we are not yet fully knowledgeable of.

Senator Bayh, we realize decriminalization is quite popular politically, or at least seems to be. But we think you will act on the evidence and, in our opinion, (and as the polls demonstrate) there is a silent majority who are not in favor of completely discarding the criminal law regarding marijuana.

If you truly believe that marijuana is harmless enough to warrant the dropping of the criminal law against it, we would urge you then to pursue its legalization. Decriminalization in our opinion is a "cop-out" and, rather than solving anything, will merely aggravate the problem. If the time ever does arise for legalization of marijuana we would like to offer you a means for regulating marijuana traffic and sale in a way which we hope would be more efficient and responsible than the way we have handled alcohol. However, from the problems we have seen as a result of marijuana use and in light of the growing body of medical evidence against the drug, we do not believe the criminal law should be dropped.

Thank you for your consideration. If you desire any more input from us, or would like clarification on any of the points we have made, please contact us. We would also be willing to offer verbal input for your subcommittee's hearings on this matter.

Sincerely,

Ronald J. Gaetano

OCTOBER 8, 1975

"YOUTH AND CRIME RESISTANCE"

AN ADDRESS

BY

CLARENCE M. KELLEY

DIRECTOR

FEDERAL BUREAU OF INVESTIGATION

AT A LUNCHEON

SPONSORED BY ATLANTA METROPOL

ATLANTA, GEORGIA

OCTOBER 8, 1975

It is a pleasure to be in Atlanta again and especially to visit with our partners in the Crime Resistance Program in De Kalb County. Each time I am in the Atlanta area, the hospitality of the people makes me feel more at home.

What makes this occasion particularly pleasant is that I have the opportunity to address others in the law enforcement profession as well as the distinguished community leaders who are present today.

It is hardly necessary to mention to this audience that cooperation is essential to the fight against crime.

The successes achieved in the Atlanta area through Metropol are a splendid example of the fact that we in law enforcement have learned to work together and have been rewarded with significant results.

But law enforcement alone, despite the professional level it has achieved and the sophisticated equipment and techniques it employs, can do little more than keep crime from rising at an even greater rate.

We will experience a reduction in crime only when every American pitches in to work shoulder to shoulder with their police to accomplish this end. A united front is the key to crime reduction.

It is this message that we are hoping to spread through the Crime Resistance Program--the joint endeavor of the FBI, the Police Foundation, and police departments in four communities, including your own De Kalb County.

The FBI is involved in this program because we are concerned about the effect that crime is having on the quality of life in this Nation.

Uniform Crime Reports figures released just a week ago reflected that serious crimes increased 13% during the first half of 1975 over the corresponding period a year ago.

Recent public opinion polls reflected that crime heads the list of those problems of concern to the American public.

And particularly distressing is the fact that too often it is our young people who are victimized. Violent crimes--robberies, assaults, extortions, homicides--strike our children even in their schools.

These are indications that we are losing the fight against crime and we have no alternative but to try in new ways to reverse this trend.

We in the FBI chose not to sit back idly and adopt the attitude that the type of crime which is of most concern--street crime--is for the most part a matter outside our jurisdiction and therefore not our responsibility.

We elected instead to contribute what influence and expertise we could to an effort to mobilize Americans against crime.

The FBI does not in any way seek to extend its jurisdiction into that reserved for our states and municipalities. I am dead set against any program which would constitute a step toward nationalizing police.

Our objective is to provide assistance in creating the impetus for a sustained effort to convince citizens they must work with their police to fight crime at the community level.

On both the national level and the community level, we must promote the idea that there are things each citizen can and must do to reduce crime.

First, it is necessary for each of us to practice crime safety to avoid becoming the victims of crime.

Crime safety begins with an analysis of our individual vulnerabilities to crime. These must be determined according to the types of crime peculiar to our community and the segment of the population to which we belong--women, children, elderly persons, for example. It is particularly helpful to seek information from local crime prevention programs as to the types of crimes to which we must be most alert.

Once we have determined our vulnerabilities, we must be wary and adopt preventive measures so that

we do not fall victim to these crimes. Many of these preventive measures are the products of common sense but many others can be learned through local crime prevention projects which disseminate such information.

I think that it is particularly desirable that we practice crime safety as a family by holding family councils. In this way the vulnerabilities of the family as a whole and those of the individual members can be discussed along with preventive measures to be employed.

The crime resistance programs to which I have been referring should be conducted under the auspices of the local police departments because of the expertise they can provide.

A number of these programs already exist and have been very successful, but many more people must participate in these programs. Moreover, where such a program does not exist, citizens should insist that one be initiated.

These community programs can help not only in promoting crime safety but also in helping citizens to learn another way in which they can act to reduce crime. That is to participate in a responsible fashion with their police in the law enforcement process.

All of us should understand that we must assist in investigations, report suspicious activities, and testify as witnesses when the need arises. These are civic duties--duties which must be performed if we are to keep our communities safe.

Through community programs, citizens can learn the types of suspicious activity they should report, to whom they should report this activity, and the way to obtain useful descriptions of suspects.

A third thing that we all must do in order to reduce crime is to familiarize ourselves with the functions of each element of the criminal justice system. Only through such an understanding can we as citizens effect useful changes if we believe that any one of these elements is failing to deal effectively with crime and criminals.

For example, we should begin to concern ourselves more with recidivists or career criminals. These individuals commit a substantial portion of our crime despite repeated efforts to rehabilitate them.

I believe that we will all begin to realize that the criminal justice system must discover more effective ways of dealing with such criminals.

The need for desired changes in the criminal justice system must always be brought to the attention of those in Government who can effect such changes.

As an essential aspect of the Crime Resistance Program, two police officers and two FBI Agents are working under the direction of the chiefs of police in each of four communities.

They are attempting to elicit citizen participation in a community effort to reduce a specific type of crime--trafficking in stolen property in Birmingham, Alabama; crimes against women in Norfolk, Virginia; crimes aginst the elderly in Wilmington, Delaware; and, of course, crimes against youths in De Kalb County.

In the De Kalb County project, under the direction of Chief Hand, we have a fine example of what can be done when we all work together as members of a community and as Americans. The county government, the school system, civic organizations, and individual citizens are all pitching in to meet the challenge.

I am particularly gratified that in De Kalb County young people are being viewed as victims. Normally, because of the proportion of crime committed by youths, we have a tendency to emphasize their role as offenders.

When I was a youth growing up in a small town near Kansas City, we didn't worry about crime because it was something almost foreign to us. Now even in the

small towns our young people have reason to fear crime. Maybe we can't reduce crime to the level of yesteryear, but for the sake of our children we should certainly make every effort in that direction.

The effect of crime on youthful victims is particularly great. Fear and a loss of self-esteem--the latter often a consequence of crimes such as sex offenses--are the obvious results.

But over and above these, I think that in many cases crime has an even more insidious effect on young victims. There is a real danger that as they are victimized they will begin to view crime, or at least certain crimes, as an acceptable form of behavior.

A friend who is an educational psychologist told me of a study done in a school located in a disadvantaged area. The study concerned the extortion of money by older or larger children from others.

Through the study, it was discovered not only that a great percentage of the offenders were unaware that they were doing anything wrong, but that many had previously been victims of such extortions. They had come to believe that these extortions were permissible activity in which they could engage when they were old or large enough to do so.

We must come to understand these attitudes and to see that our young people are exposed to influences which will enable them to form a sense of right and wrong along with a respect for life under law.

The causes of crime are many but I believe that chief among them is an unfortunate lack of the stabilizing influences to which the previous generations were exposed.

Whereas the family, the church, and the school once provided this stabilizing influence to a great degree, there are now many other elements--particularly in the area of entertainment--which have a profound influence on our children. Unfortunately, much of this influence is not good.

Many of our crime problems will disappear when we see a return to a closer family unit wherein the principles of ethics and the law are fostered, to be bolstered thereafter by training received in our churches and schools.

Our young people are impressionable and carry the values they learn with them throughout their lives. We must do more than talk to them, we must set an example.

Through our examples, young people can first learn the value of crime safety.

They can learn, too, how they might act as responsible citizens and act together with their police in the law enforcement process.

Young people should, for example, be shown that they must report crimes. They must understand that in doing so they increase the chances that the perpetrators will be caught and prevented from victimizing others.

Finally, our youth can be taught to take an interest in the criminal justice system so that they are in a position to understand its operation and later to assess its performance.

Our young people must learn to resist crime. Our future, and more importantly, their future, depend on this.

We must insure that our children learn to avoid becoming victims while they are growing up as responsible Americans.

The project in De Kalb County holds great promise as an example for others to follow in furthering this ideal.

WILLOUGHBY, OHIO, *February 28, 1975.*

HON. BIRCH BAYH,
Chairman, Subcommittee To Investigate Juvenile Delinquency, U.S. Senate, Washington, D.C.

To Whom It May Concern:

I write my feelings as a father of a 20-year-old son who has fallen victim to an imperfect system of justice. The time is a few hours after my son, Jimmy, was sentenced to prison. Perhaps I am still in shock!

The incredible punishment visited upon my son is wholly irrational and disproportionate to the imprudent, foolish, and victimless act of a 20-year-old boy. (An informer for the Lake Geauga narcotics unit asked Jimmy, as a friend, to obtain an ounce of marijuana for him. Unfortunately, Jimmy did so and when his so-called friend showed up to receive it, an undercover agent was with him. By exchanging the ounce for what he paid for it, Jimmy technically committed a crime).

While the court has called my son a criminal and has sentenced him to from one-to-five years in prison, he has the consolation of knowing that his parents, seven brothers and sisters, relatives, friends, and understanding neighbors in no way consider him to be a criminal. Immature and foolish? Yes! Criminal? No!

Should I, as a father, feel a sense of shame or responsibility for a son caught in an activity engaged in by a vast number in his peer group? I think not! Many parents reading this will silently say, with a sigh of relief, "there but for the grace of God go I."

As long as none of our children commits a malicious act, causing harm or injury to others, then my wife and I take satisfaction in knowing that our children have been responsive to our example and teaching.

My most intense feeling is one of righteous anger with a system which allows a punishment which inflicts real harm and injury on Jimmy who has harmed no one and who lacks the capacity to do so. I worry about how this traumatic experience will affect Jimmy. I believe he has the strength to endure it for a while, but I am not sure for how long.

I now also worry about Jimmy's brothers and sisters and their attitude toward the law! As they see their brother sentenced to jail they also see a motor company official and a judge, charged with drunken driving, given their freedom to drink and drive again . . . perhaps killing someone the next time. If the judge, the corporate executive, and my boy were made to spend thirty (30) days in jail they undoubtedly would be more cautious and prudent in the future, society in general would be better off, and my children would be impressed with a system of justices designed to correct or discourage reckless anti-social behavior.

As a father who, in his every act, has tried to exemplify the virtues of liberty and justice for his children, I fear my children's view of justice as applied to their brother will undermine my example and cast me as a harmless Don Quixote!

Victims of this imperfect legal system are a small minority and, like all minorities, lack a spokesman. Correcting the system is a prime responsibility of bar associations, but most lawyers are either too busy handling cases on an ability-to-pay basis or striving for a judgeship to leave them much time to devote to this work of civilization. Perhaps hope lies in those few law schools which still teach the philosophy of law along with its principles and practices.

Tragic as we consider Jimmy's plight to be, I know there are many more victims suffering far greater injustices. My heart goes out to them and to their parents.

I am completely helpless! I have neither wealth nor means to protect or save my son from the heavy hand of society's police power. There is, however, no power on earth which can strip my son of the love that his family and friends have for him. It is this love which I pray will help Jimmy tough it out!

These are my feelings which I had to get out of me by expressing them in writing. Perhaps the reading of them by a few with time and money will prompt them to help correct this system which harshly punishes young people who have harmed no one!

ROBERT P. WOODMAN.

Part 2—The History, Development and Current Status of Marijuana Control Policy

VIRGINIA LAW REVIEW

VOLUME 56 OCTOBER 1970 NUMBER 6

THE FORBIDDEN FRUIT AND THE TREE OF KNOWLEDGE: AN INQUIRY INTO THE LEGAL HISTORY OF AMERICAN MARIJUANA PROHIBITION

Richard J. Bonnie & Charles H. Whitebread, II***

Mr. Snell. *What is the bill?*

Mr. Rayburn. *It has something to do with something that is called marihuana. I believe it is a narcotic of some kind.*

Colloquy on the House floor prior to passage of the Marihuana Tax Act.

*Assistant Professor of Law, University of Virginia. B.A., 1966, Johns Hopkins University; LL.B., 1969, University of Virginia.

**Assistant Professor of Law, University of Virginia. A.B., 1965, Princeton University; LL.B., 1968, Yale University.

We wish to express our sincere appreciation to the students who assisted us in the preparation of the tables at Appendix A. Because the drug statutes of the several states are particularly confusing and difficult to find, and because so many jurisdictions have recently changed their drug laws, the preparation of the chart required long, tedious work which so many were kind enough to perform. To them, our most sincere thanks.

We should like to thank especially Michael A. Cohen, John F. Kuether, W. Tracey Shaw, Alan K. Smith, and Allan J. Tanenbaum, all students at the University of Virginia School of Law, whose research assistance and tireless effort were invaluable.

We are particularly indebted to Professor Jerry Mandel who supplied us with much of the raw data used in the historical case studies in this Article. In his excellent article on drug statistics in the *Stanford Law Review, Problems with Official Drug Statistics*, 21 STAN. L. REV. 991 (1969), Professor Mandel suggested in a footnote that someone should attempt a history of the passage of anti-marijuana legislation. We have followed his suggestion and earnestly hope that our product will fill this gap.

A modified and expanded version of this Article will be published in book form in the spring of 1971.

I. Introduction

LAW may be rooted in fiction as well as fact. Indeed, a public policy conceived in ignorance may be continuously reaffirmed, ever more vehemently, so long as its origins remain obscure or its fallacy unexposed. Yet once a spark of truth ignites the public opinion process, the authority of time will not stay the flames of controversy. In stable times the policy may soon be reversed or modified to comport with reality. In volatile times, however, a single controversy may lose its urgency. Fueled by flames generated by related public issues, the fire may spread; truth may again be consumed in the explosive collision of competing cultural ideologies.

So it has been with marijuana.[1] Suppressed for forty years without significant public attention, the "killer weed" has suddenly surfaced as the preferred euphoriant of millions of Americans. Hardly a day passes without public exposure to propaganda from one side or the other. Hardly a day passes without arrests of newsworthy figures for violations of marijuana laws. Before legislatures and courts, the law is attacked and defended with equal fervor. Sociological, medical and

[1] Throughout its tumultuous history, the common name of the cannabis drug has been spelled in numerous ways—marihuana, meriguana, mariguana, marijuana. We will use the last spelling because it appears most often in modern publications and conforms more nearly to the Spanish.

police testimony regarding the drug's effects is delivered feverishly to an attentive public.

Yet, apart from some expedient peripheral actions, little has been done. Detailed studies have been commissioned, but there has been no significant reconsideration of basic assumptions. Because the marijuana issue has become ensnared in broader social polemics, it has been stalemated. Stability and change, defiance and repression, hippieism and middle-Americanism, "law and order" and protest politics define the cultural milieu of which the marijuana issue is viewed as but a symptom.

This Article is motivated by twin concerns: that the flagrant disregard of marijuana laws bespeaks a growing disenchantment with the capacity of our legal system rationally to order society, and that the assimilation of the marijuana issue into larger social conflicts has consigned the debate to the public viscera instead of the public mind. Through a historical analysis of the marijuana laws we hope to refocus the debate. An understanding of the origins of the laws might modulate the challengers' hostile accusations and at the same time promote in legislators an awareness of their own responsibility.

For the purposes both of description and evaluation, law is inseparable from the process by which it is adopted and the values it manifests. Accordingly, our history focuses both on the public policy formation process and on evolving patterns of our culture. With respect to policy formation, marijuana's legal history is a significant illustration of the interaction of the public opinion, legislative and judicial processes, and, in a broader sense, the relation between folkways and stateways. With respect to its value-content, the evolution of marijuana policy reflects quite precisely emerging cultural attitudes toward pluralism, privacy and individual pursuit of pleasure in an increasingly mechanized and depersonalized technological society.

II. The Antecedents: Criminalization of Narcotics and Alcohol

The restrictive public policy with respect to marijuana, initiated in the late twenties and thirties and perpetuated to the present day, has never been an isolated phenomenon. At each stage of its development marijuana policy has been heavily influenced by other social issues because the drug has generally been linked with broader cultural patterns. Particularly at its inception, nationwide anti-marijuana legis-

lation and its fate in the courts were inseparably linked with the earlier anti-narcotics and prohibition experiences. In fact, the facility with which marijuana policy was initiated is directly related to the astoundingly sudden and extreme alteration of public narcotics and alcohol policy between 1900 and 1920.

In 1906 there were only three dry states, and judicial precedent abounded for the proposition that the right to possess alcohol for private consumption was an inalienable right. Yet, by 1917, twenty states had enacted prohibitionary legislation and most others were contemplating it. Two years later the eighteenth amendment and the Volstead Act had been enacted, and it was a federal crime to possess alcohol even for the purpose of drinking it within the home. Similarly, in 1900 only a handful of states in any way regulated traffic in narcotic drugs—opium, cocaine, morphine and heroin—even though all but heroin had been available for a decade or more. Yet, by 1914, all states had enacted some type of prohibitionary legislation, and the national government had enacted the Harrison Narcotic Act.

There were many major differences between the temperance and anti-narcotics movements. The temperance movement was a matter of vigorous public debate; the anti-narcotics movement was not. Temperance legislation was the product of a highly organized nationwide lobby; narcotics legislation was largely ad hoc. Temperance legislation was designed to eradicate known evils resulting from alcohol abuse; narcotics legislation was largely anticipatory.

On the other hand, there were striking similarities between the two movements. Both were first directed against the evils of large scale use and only later against all use. Most of the rhetoric was the same: These euphoriants produced crime, pauperism and insanity. Both began on the state level and later secured significant congressional action. Both ultimately found favor with the courts, provoking interchangeable dissenting opinions.

We do not propose to unearth new truths about the events of this period. However, we do believe that a familiarity with the political and judicial response to the alcohol and narcotics problems is essential to an understanding of the eventual suppression of marijuana. We believe further that an understanding of the relation between public opinion and any sumptuary law is germane to a discussion of the predicament of current marijuana legislation. Finally, since much of the current debate about marijuana is focused on its harmful effects as

compared with those of narcotics and alcohol, the evolution of public policy in those areas is particularly material.

A. A Review of the Temperance Movement

Although aggressive prohibition campaigns had been mounted in every state in 1851-69,[1] and again in 1880-90,[2] in 1903 only Maine (1884), Kansas (1880) and North Dakota (1889) were completely dry states.[3] Ernest Cherrington, the chronicler *par excellence* of the Prohibition movement, blamed the failure of the first thrust in part on the intervention of the slavery question, which siphoned the moral fervor of the people from the temperance movement.[4] The failure of the second campaign he attributed to the inability of the prohibition activists to compete politically with growing liquor interests that dominated state and local governments.[5]

By 1906, however, the progress of the anti-saloon arm of the temperance movement in local option contests[6] and the adoption of alcohol prohibition by the people of Oklahoma in a provision of their constitution ratified upon admission to statehood[7] signalled a new crusade for state prohibitionary legislation. The Oklahoma vote so "electrified the moral forces of other states" [8] that by 1913 six additional states had enacted statewide prohibition, and half of the remaining states were contemplating action.[9]

Perhaps the most significant development during this period occurred on the national level. The Supreme Court had earlier declared the police powers of the states, under which state prohibition laws were enacted, impotent to prevent importation of liquor from a wet state, of which there were still many, into a dry state and to stay the sale and delivery of such liquor to the buyer while in the original package.[10]

[10] Leisy v. Hardin, 135 U.S. 100 (1890).

After a congressional attempt to deal with this decision in 1890 aborted in the courts,[11] the buyer of liquor shipped in interstate commerce still had the right to receive and therefore to use such liquor. But in 1913 Congress, by the Webb-Kenyon Act,[12] filled the gap by prohibiting the *shipment* of liquor from one state to another to be used in violation of the laws of the latter; dry states could thus enforce their prohibition laws against imported liquor.[13] The mere passage of this law, according to Cherrington, committed Congress to a policy that recognized the liquor traffic as an outlaw trade and indicated congressional desire to assist the dry states.[14]

By November 1913, the tide had decidedly turned. More than half the population and 71 percent of the area of the United States were under prohibitionary laws.[15] Accordingly, the Fifteenth National Convention of the Anti-Saloon League of America unanimously endorsed immediate passage of National Constitutional Prohibition, whereupon the National Temperance Council was formed to combine the forces of the various temperance organizations toward this end.[16]

By April 4, 1917, when a joint resolution was introduced in the Senate proposing an amendment to the Constitution prohibiting the manufacture, sale or transportation of intoxicating liquors within the United States for beverage purposes,[17] eighty percent of the territory of the United States was dry.[18] Adopted by the constitutional majorities of both houses on December 18, 1917, the eighteenth amendment was ratified by the thirty-sixth state on January 16, 1919, and became effective on January 16, 1920.[19] The Volstead Act,[20] passed on October 28, 1919, pursuant to section 2 of the eighteenth amendment, outlawed

[11] Four months after *Leisy* Congress enacted the "Wilson Law," designed to make all intoxicating liquors subject "upon arrival" to the laws of the state into which they were sent. Act of Aug. 8, 1890, ch. 728, 26 Stat. 313. In Rhodes v. Iowa, 170 U.S. 412 (1898), however, the Supreme Court held that "upon arrival" meant *after delivery* to the consignee. Thus the right to receive the liquor and the attendant enforcement problems remained.

[12] Act of Mar. 1, 1913, ch. 90, 37 Stat. 699.

[13] The Act was upheld in Clark Distilling Co. v. Western Md. Ry., 242 U.S. 311 (1917).

possession of intoxicating liquor and therefore went significantly beyond the amendment itself.

The National Commission on Law Observance and Enforcement (the Wickersham Commission) attributed the passage of the eighteenth amendment not to public opposition to use of intoxicating beverages,[21] although this was indeed the view of many of the leaders of the movement, but rather to antipathy to three major related evils: excessive consumption, political corruption and licensed saloons.[22] Excessive use increased with the commercialization of production and distribution, and the expansion of saloons. Public resentment against the corrupting influence of the large liquor dealers in local politics, especially in the larger cities, tended to focus public attention on removing a cancer from the body politic. Finally, the institution that most strongly aroused public sentiment against liquor traffic was the licensed saloon, itself the symbol of intemperance and corruption. Owned or controlled by the large brewers or wholesalers, centers of political activity, homes of commercialized vice, the saloons were the *bêtes noires* of middle-American public opinion.

Because public opinion was largely opposed only to the socio-political consequences of massive liquor traffic, the enforcement of total abstinence under the eighteenth amendment became increasingly difficult. By 1931 it was an accepted fact that the upper and middle classes were "drinking in large numbers in quite frank disregard of the declared policy" of the Volstead Act.[23]

---

[21] In 1904 Ernst Freund had noted, quoting from an article on "personal liberty" in the *Cyclopedia of Temperance and Prohibition:*

> Even the advocates of prohibition concede that the state has no concern with the private use of liquor. "The opponents of prohibition misstate the case by saying that the state has no right to declare what a man shall eat or drink. The state does not venture to make any such declaration. . . . It is not the private appetite or home customs of the citizen that the state undertakes to manage, but the liquor traffic. . . . If by abolishing the saloon the state makes it difficult for men to gratify their private appetites, there is no just reason for complaint."

E. FREUND, POLICE POWER 484 (1904).

[22] WICKERSHAM COMMISSION 6-7.

[23] *Id.* at 21. In 1929 President Hoover had devoted a major part of his inaugural address to the "disregard and disobedience" of the eighteenth amendment. He attributed to the ordinary citizen "a large responsibility" for a "dangerous expansion in the criminal elements." Attempting to generate moral support for the law, he chastised the citizenry:

> No greater national service can be given by men and women of goodwill—who, I know, are not unmindful of the responsibilities of citizenship—than that they should, by their example, assist in stamping out crime and outlawry by refusing participation in and condemning all transactions with illegal liquor. Our whole

The difficulties of securing compliance in such circumstances were aggravated by an inadequately designed enforcement strategy,[24] public resentment of the lawless tactics of prohibition agents,[25] and the lack of any sustained attempt at public education.[26] For twelve years, however, millions of dollars were spent by federal and state governments in a fruitless effort to secure compliance with the law. Contemporary legal observers were particularly incensed by the dilution of constitutional protections, especially those provided by the fourth amendment, which was sanctioned by the courts in response to the "felt needs" of securing compliance through enforcement alone.[27]

Although many plans were advanced for changing the prohibition laws to mitigate the lawlessness rampant during this period, as late as

---

system of self government will crumble either if officials elect what laws they will enforce or citizens elect what laws they will support. The worst evil of disregard for some law is that it destroys respect for all law. For our citizens to patronize the violation of a particular law on the ground that they are opposed to it is destructive of the very basis of all that protection of life, homes and property which they rightly claim under laws.

INAUGURAL ADDRESSES OF THE PRESIDENTS OF THE UNITED STATES 227 (Gov't Printing Off. 1969). The President's sermon fell on deaf ears.

[24] President Hoover also noted in his inaugural address:

Of the undoubted abuses which have grown up under the eighteenth amendment . . . part are due to the failure of some States to accept their share of the responsibility for concurrent enforcement and the failure of many State and local officials to accept the obligation under their oath of office zealously to enforce the laws.

INAUGURAL ADDRESSES OF THE PRESIDENTS OF THE UNITED STATES 277 (Gov't Printing Off. 1969). *See generally* WICKERSHAM COMMISSION 10-20, 22-43.

[25] WICKERSHAM COMMISSION 44-46.

[26] *Id.* at 48.

[27] The Wickersham Commission noted:

Some advocates of the law have constantly urged and are still urging disregard or abrogation of the guarantees of liberty and of sanctity of the home which had been deemed fundamental in our policy. . . . High-handed methods . . . even where justified, alienated thoughtful citizens, believers in law and order. Unfortunate public expressions by advocates of the law . . . deprecating the constitutional guarantees involved, aggravated this effect. Pressure for lawless enforcement, encouragement of bad methods and agencies of obtaining evidence, and crude methods of investigation and seizure on the part of incompetent or badly chosen agents started a current of adverse public opinion in many parts of the land.

Id. at 46.

Many legal commentators thought that the courts, manned by "fanatically dry" judges, succumbed to these pressures, especially in the fourth amendment area. *See, e.g.*, F. BLACK, ILL STARRED PROHIBITION CASES (1931), where the author criticizes, among other cases, Olmstead v. United States, 277 U.S. 438 (1928) (upholding wiretapping), and Carroll v. United States, 267 U.S. 132 (1925) (upholding warrantless search of automobile).

1931 even its most vigorous opponents felt that repeal of the eighteenth amendment was politically unfeasible.[28] By 1932, however, public opinion had become so inflamed that the Democratic National Convention included repeal in the party platform.[29] Proposed by Congress on February 20, 1933, the twenty-first amendment was ratified by the thirty-sixth state on December 5, 1933.

B. Anti-Narcotics Legislation to 1914

For our purposes, the major feature of temperance history is the responsiveness of the political process to public opinion. Whether or not a majority of Americans ever favored prohibition and whether or not the thrust of public opinion was ever accurately assessed, the public opinion *process* was attuned to the question for half a century. The alleged evils of alcohol abuse were matters of public knowledge; the proper governmental response was a subject of endless public debate; enactment and repeal of Prohibition were attended by widespread public participation.

In contrast, the early narcotics legislation was promulgated largely in a vacuum. Public and even professional ignorance of the effects of narcotic drugs contributed both to the dimensions of the problem and the nature of the legislated cure. The initial legislation was attended by no operation of the public opinion process, and instead generated a new public image of narcotics use. Only after this creation of a public perception occurred did the legislative approach comport with what we shall call latent public opinion.

1. Narcotics Use at the Turn of the Century: A Growing Problem

Although estimates have varied widely regarding the number of persons regularly using cocaine, opium, morphine and heroin during the pre-criminalization period, a sufficiently accurate figure can be drawn from a composite of contemporary surveys[30] conducted between 1878 and 1924.[31] Estimates range from 182,215 (1884) to 782,118 (1913). We

[28] F. BLACK, *supra* note 27, at 149-50.

[29] R. CHILDS, MAKING REPEAL WORK 12 (1947).

[30] The earliest surveys employ a methodology much less sophisticated than those conducted after 1914. The later studies, however, suffer from a time lag which inevitably detracts from accuracy. In any event, taken together, these surveys adequately describe the contours of the phenomenon under consideration.

[31] The earliest attempt at a compilation of addiction figures was undertaken by O. Marshall in 1878. Marshall, *The Opium Habit in Michigan*, 1878 MICH. STATE BD. OF

can safely estimate that there were between one-quarter and one-half million Americans addicted to narcotics around the turn of the century, comprising at least one percent of the population.[32]

This rather large addict population included more females than males.

HEALTH ANN. REP. 61-73. From questionnaires sent to doctors, Marshall found 1,3 users of opium or morphine and concluded therefrom that there were 7,763 addicts the state. Dr. Charles Terry later concluded that, if Marshall's figures were representative, total incidence of addiction in the United States in 1878 was 251,936. C. TERRY & M. PELLENS, THE OPIUM PROBLEM 15 (1928) [hereinafter cited as TERRY & PELLENS]. Marshall was unable fully to take into account the fact that the incidence of drug abuse in the cities was much higher than that in the rural areas he studied; accordingly, his figures probably underestimate the extent of addiction in the state.

In a similar study of Iowa in 1884, J. M. Hull found 5,732 addicts which, if representative, would reflect a national addict population of 182,215. Hull, *The Opium Habit*, 1885 IOWA STATE BD. OF HEALTH BIENNIAL REP. 535-45, *quoted in* TERRY & PELLENS 16-18.

In 1900 the author of a Vermont study sent 130 questionnaires to various druggists in an attempt to determine the monthly sales of various drugs. His 116 replies indicate that 3,300,000 doses of opium were sold every month, or enough for every person in Vermont over the age of 21 to receive 1½ doses per day. Grinnel, *A Review of Drug Consumption and Alcohol as Found in Proprietary Medicine*, 23 MEDICO-LEGAL J. 426 (1905), *quoted in* TERRY & PELLENS 21-23.

Perhaps the best pre-1914 estimate was made by Dr. Charles Perry who, as Health Officer of Jacksonville, Florida, compiled data for that city in 1913. He found that 541 persons, or .81% of the city's population, used opium or some preparation thereof in 1913. Nationwide, this incidence would be 782,118. 1913 JACKSONVILLE, FLA., BD. OF HEALTH ANN. REP., *quoted in* TERRY & PELLENS 25.

A researcher in 1915 found 2,370 registered addicts in Tennessee and put the national addict population at between 269,000 and 291,670. Brown, *Enforcement of the Tennessee Anti-Narcotic Law*, 5 AM. J. PUB. HEALTH 323-33 (1915), *quoted in* TERRY & PELLENS 27-29.

The first post-Harrison Act study, and perhaps the most reliable of all research during this period, was done by Lawrence Kolb and A. G. DuMez of the United States Public Health Service. Utilizing previously computed statistics together with information regarding the supply of narcotics imported into the United States, these authors concluded the addict population never exceeded 246,000. KOLB & DUMEZ, THE PREVALENCE AND TREND OF DRUG ADDICTION IN THE UNITED STATES AND FACTORS INFLUENCING IT 1-20 (39 Public Health Reports No. 21) (May 23, 1924).

At the same time the Narcotic Division of the Prohibition Unit of the IRS estimated that there were more than 500,000 drug addicts in America. Narcotic Division of the Prohibition Unit, Bureau of Internal Revenue, Release (May 4, 1924), *quoted in* TERRY & PELLENS 42 n.25.

For more recent estimates of drug addiction in America, see W. ELDRIDGE, NARCOTICS AND THE LAW 49-103 (2d rev. ed. 1967); A. LINDESMITH, THE ADDICT AND THE LAW 99-134 (1965); ARTHUR D. LITTLE, INC., DRUG ABUSE AND LAW ENFORCEMENT A1-21 (1967).

[32] *But see* M. NYSWANDER, THE DRUG ADDICT AS A PATIENT 1-13 (1956) (the author suggests that perhaps 1 to 4% of American adult population was addicted in 1890).

[33] Of the 1,313 addicts in Marshall's Michigan study, 803 were females and only

more whites than blacks,[34] and was confined neither to particular geographical regions nor to areas of high population concentration.[35] Its most significant characteristic was its predominantly middle-class composition.[36] Such attributes contrast starkly with the overwhelmingly black, lower-class male addict population that today inhabits our major urban centers.

Nineteenth century narcotics addiction was generally accidental. It is widely believed that medical addicts far outnumbered "kicks" or "pleasure" addicts.[37] Medical addiction stemmed from many sources. The first was overmedication. Civil War hospitals used opium and morphine freely and many veterans returned addicted to the drugs.[38] Overmedication continued long after peace had been restored, due to the ready availability of these drugs with and sometimes without prescription. Since physicians were free to dispense these drugs as painkillers, persons given morphine first for legitimate therapeutic purposes often found themselves addicted.[39] This problem was exacerbated by the absence of restrictions upon druggists in refilling prescriptions containing extensive amounts of morphine and other opiates[40] and by the introduction of the hypodermic syringe.[41] The danger of overmedication increased in 1884 when cocaine was first introduced into the prac-

510 males. TERRY & PELLENS 11. In the Florida study, there were 228 men and 313 women. *Id.* at 25. Of the 2,370 registered addicts in the Tennessee study, 784 were men and 1,586 women. *Id.* at 27. A modern observer has concluded that there were at least as many and probably twice as many women addicts as men. O'Donnell, *Patterns of Drug Abuse and Their Social Consequences*, in DRUGS & YOUTH 62, 64 (J. Whittenborn ed. 1969). For the last thirty years, male addicts have probably outnumbered female addicts by four or five to one. *Id.*

[34] Of the 228 men included in the Florida study, 188 were white and 40 black; of the women 219 were white and 94 black. TERRY & PELLENS 25. At that time the white and black populations in Jacksonville were equal. Of those covered in the Tennessee study, 90% were white. *Id.* at 28.

[35] The Michigan, Iowa and Vermont studies covered primarily rural areas.

[36] *See, e.g.*, Eberle, *Report of Committee on Acquirement of Drug Habits*, AM. J. PHARMACY, Oct. 1903, at 474-88. "While the increase is most evident with the lower classes, the statistics of institutes devoted to the cure of habitues show that their patients are principally drawn from those in the higher walks of life." *Id., quoted in* TERRY & PELLENS 23.

[41] TERRY & PELLENS 66.

tice of medicine, and again in 1898 when an advance in Germ... chemistry produced heroin, a partially synthetic morphine derivativ... For a time recommended as a treatment for morphine addiction, heroin was also widely used for medicinal purposes.

A second source of accidental addiction was the use and popular... of patent medicines. Exotically labeled elixirs were advertised as ge... eral cures for ills ranging from snake bite to melancholia. By contain... ing up to thirty or forty percent morphine or opiates by volume, m... patent medicines fulfilled their cure-all promises. However, a hea... price was exacted for such cures. In the absence of a requirement th... contents be printed on the label, many an unsuspecting person becam... addicted without ever knowing the medicine that worked so well co... tained dangerous narcotics.[44]

Thus, careless prescription, incessant dispensation and hidden distri... bution of harmful drugs, the addictive effects of which were unknown until too late, fostered a large addict population which continued t... increase in the early twentieth century. The increase in narcotic... consumption, and therefore addiction, is well illustrated by the fac... that 628,177 pounds of opiates were brought into this country in 190... three times the amount imported thirty years earlier.[45] Governmental and medical default explains the innocent nature of nineteenth century narcotics addiction and therefore its predominantly middle-class, nationwide character.

Not all addiction was accidental and private. It has been suggested that both medical knowledge and governmental regulation occurred only when each narcotic drug achieved a significant degree of "street" use. Our research supports this thesis, especially when "street" use is identified with the poor and with racial minorities. For example, opium, the drug first determined addictive and first identified with "pleasure" use, was the earliest prohibited. Legislation was first passed in the west coast states with newly immigrated Chinese populations among whom its use was prevalent. Heroin early achieved a widespread nonmedical or "street" use, especially in large urban centers among lower-class males.[46]

[46] *Id.* at 84-87.

Nevertheless, addiction, even to opium,[47] was predominantly involuntary until 1900. Professional attention was not focused directly on "street" use until after two developments had significantly reduced the possibility of medical addiction. First, the passage of the Pure Food and Drug Act[48] in 1906 led to the demise of the patent medicine industry, one of the primary causes of medical addiction. The labelling requirements of the Act, coupled with the later regulation of the production and distribution of the opiates, protected the public from the dangers of ignorance and virtually put the patent medicine industry out of business.[49] Second, the discovery of new nonaddictive pain killers and anesthetics reduced the likelihood of post-operative addiction since physicians no longer needed to rely so heavily on morphine and opium preparations to reduce and control pain.

2. State Legislative Response Before 1914

Although many states regulated narcotics indirectly through their general "poison laws" before 1870,[50] the first anti-narcotics legislation did not appear until the last quarter of the nineteenth century. Most of the early legislation focused primarily on crime prevention[51] and public education regarding the dangers of drug use.[52] The spread of opium-smoking, especially in the western states with high oriental populations,[53] provoked legislation in eighteen states between 1877 and 1911 designed

[47] *See* H. KANE, OPIUM-SMOKING IN AMERICA AND CHINA (1882), in which the author supports the contention that by approximately 1890 narcotic addiction had become widespread among the respectable and professional classes. He states:

> The practice [opium smoking] spread rapidly and quietly among this class of gamblers and prostitutes until the latter part of 1875, at which time the authorities became cognizant of the fact, and finding, upon investigation, that many women and young girls, as also young men of respectable family, were being induced to visit the dens . . . .

[50] U.S. TREASURY DEP'T, STATE LAWS RELATING TO THE CONTROL OF NARCOTIC DRUGS AND THE TREATMENT OF DRUG ADDICTION 1 (1931) [hereinafter cited as STATE LAWS].

[51] The first drug legislation enacted in eight states outlawed the administering of a narcotic drug to any person with the intent to facilitate the commission of a felony. These states were California (1872), Idaho (1887), New York (1897), North Dakota (1883), Pennsylvania (1901), South Dakota (1883), Utah (1876) and Wisconsin (1901). *Id.* at 1-2.

[52] Twenty-two states made such legislation their first laws concerning the drug problem. *Id.* at 2.

[53] *Id.* at 3-4.

to eradicate the practice either by preventing the operation of opium dens or by punishing the smoking of opium altogether.[54] As the addictive qualities of opium, cocaine, morphine and later heroin became known, primarily through observation of "street" use, concerned physicians finally began to agitate for stricter regulation than that provided by the "poison laws," even though such laws included opium and cocaine. Nevada enacted the first law prohibiting the retail sale of opiates for nonmedical purposes in 1877.[55] In 1887, Oregon prohibited sale of cocaine without a prescription,[56] and seven states followed suit by the turn of the century,[57] as did thirty-nine more by 1914.[58] However, only twenty-nine states had included opiates in their prohibitionary legislation by 1914.[59]

With the exception of the Oregon scheme,[60] nineteenth century narcotic laws did not attempt to restrict or prohibit possession of narcotics, and were directed solely at distribution and sale. By 1913, only six states had prohibited the mere possession of restricted drugs by unauthorized persons.[61] Three additional states prohibited possession with intent illegally to dispense such drugs.[62]

3. *Watershed: The Passage of the Harrison Act*

The first national legislation designed to regulate narcotics distribution, the 1909 "Act to Prohibit Importation and Use of Opium,"[63] barred the importation of opium at other than specified ports and for other than medicinal use. The law further required the keeping of import

[63] Act of Feb. 9, 1909, ch. 100, 35 Stat. 614, *as amended*, 21 U.S.C. § 173 (1964). This act was revised by Act of Jan. 17, 1914, ch. 9, 38 Stat. 275, in the same wave of reform that produced the Harrison Act.

records. The main force behind the passage of this statute was a desire to bring the United States into line with other nations that had signed international conventions against the use of the drug.[64] However, as state anti-narcotics legislation began to take on crusade proportions, pressure was generated for federal regulation of the importation of opium for medicinal purposes and of the interstate trade in cocaine, morphine and heroin. Consequently, the Harrison Act, until this year the foundation of federal law controlling narcotic drugs, was passed in 1914.[65]

The Harrison Act, a taxing measure, required registration and payment of an occupational tax by all persons who imported, produced, dealt in, sold or gave away opium, cocaine or their derivatives. The Act required all legitimate handlers of these narcotics to file returns setting forth in detail their use of the drugs. Each legitimate handler was required to use a special order form in making any transfer of narcotics. Since the Act also provided that only legitimate users could register and no one but a registered user could obtain the specified form, any transfer by an illegitimate user was a violation of the Act. For those failing to comply with its registration requirements, the original Harrison Act provided penalties of not more than $2,000 in fines or more than five years imprisonment, or both.

The passage of the Harrison Act was the culmination of increasing concern in the medical profession[66] about the freedom with which physicians prescribed and druggists dispensed addictive drugs, primarily morphine and heroin. During the period of little or no regulation, the innocent addicts were regarded as victims of an unfortunate sickness in need of treatment; usually they could find a friendly physician or druggist willing to sustain their habits. The passage of the Harrison Act, however, by imposing a stamp of illegitimacy on most narcotics use, fostered an image previously associated primarily with opium—that of the degenerate dope fiend with immoral proclivities. As the regulation of physicians and druggists became more stringent, especially after the Supreme Court held that prevention of withdrawal was not a legitimate medical use that justified a prescription to an unregistered

person,[67] this image fulfilled itself. All addicts, whether accidental pleasure-seeking, were shut off from their supply and had to turn underground to purchase the drugs. Inflated underground prices often provoked criminal activity and this activity in turn evoked in the public moral response, cementing the link between iniquity and drug addiction.[68]

The early clinical experiments dealing with narcotics addiction were inevitable victims of enforcement of the Act.[69] The concept that underlay the clinical effort—that addiction was a medical problem to be dealt with by sustaining the addict cheaply while trying to induce gentle withdrawal—was antithetical to the attitude provoking the criminal classification of unlawful possessors of narcotic drugs.[70] Clinics were run in such cities as New York, Shreveport and Jacksonville,[71] but by 1923 all were closed, thus removing still another legitimate source of supply for the addict. Again, the crimes committed to enable these people to tap the illicit sources increased public hysteria and misunderstanding about the link between the opiates and crime.[72]

[67] Webb v. United States, 249 U.S. 96 (1919).

[68] *See* Weber, *Drugs and Crime*, 44 A.B.A. Rep. 527 (1919). Kolb, *Factors That Have Influenced the Management and Treatment of Drug Addicts*, in Narcotic Drug Addiction Problems 23, 26 (R. Livingston ed. 1958) states:

> Another result of the physicians' resignation to pressure was that addicts to the opiates began to commit petty crimes in order to secure the drugs which could prevent their suffering. These inevitable law-induced crimes greatly accentuated the general public belief that opiates had some inherent sinister property which could change normal people into moral perverts and criminals.

See generally T. Duster, The Legislation of Morality 3-28 (1970).

[69] *See generally* A. Lindesmith, *supra* note 31, at 135-61; King, *Narcotic Drug Laws and Enforcement Policies*, 22 Law & Contemp. Prob. 113, 124-26 (1957); King, *The Narcotics Bureau and the Harrison Act*, 62 Yale L.J. 736 (1953); Note, *Narcotic Regulation*, 62 Yale L.J. 751, 784-87 (1953).

[70] For a savage attack on the clinic system by a well-known supporter of the law enforcement model of the Harrison Act, see Stanley, *Narcotic Drugs and Crime*, 12 J. Crim. L. & Criminology (1921).

[71] Lindesmith reports that for a brief period of time from 1919 to 1923 some forty clinics of this type existed in the United States. A. Lindesmith, *supra* note 31, at 136.

[72] The closing of the New York Clinic in 1919 was an especially potent factor in promoting hysteria about heroin. More than 7,400 addicts, about 90 percent of whom were users of heroin, were thrown on the streets of the city. Driven to commit crimes, including those of narcotic violations, many of these addicts were arrested. The increased number of arrests was widely interpreted as an indication of moral deterioration due to narcotics instead of evidence of maladministration of what could have been a useful law. There were, of course, physicians who dissented both as to the wisdom of closing the clinics and as to the harmful effect of the drugs. Many of those who persisted in helping their patients were arrested. Kolb, *supra* note 68, at 27.

In addition to redefining the public conception of narcotic addiction in a way that would not be seriously challenged for half a century, the Harrison Act also provided a strange model for the administration of narcotics laws which would significantly affect future developments. Drafted as a tax law rather than an outright criminal statute, the Act was intended to do indirectly what Congress believed it could not do directly—regulate possession and sale of the opiates. Indeed, congressional caution was justified. A five-to-four decision by the Supreme Court in the 1903 *Lottery Case*[73] suggested what later became fact—the Court, as self-appointed arbiter of the federal system, would plant the tenth amendment in the path of congressional regulation of "local" affairs. That direct regulation of medical practice was indeed considered beyond congressional power under the commerce clause is clearly indicated in contemporary opinions. First, in its 1918 decision in *Hammer v. Dagenhart*,[74] the Court held the Child Labor Act unconstitutional. Second, the Court ultimately upheld the Harrison Act as a valid exercise *of the taxing power*[75] only by a five-to-four margin. Finally, there is some fairly explicit language about congressional regulation of medical practice in subsequent Harrison Act opinions.[76]

This indirect regulation of narcotics traffic under the pretext of raising revenue had a number of significant consequences. First, since the Act could not penalize users or addiction directly, there was an immediate need for complementary residual state legislation in order to deal effectively with the drug problem. Second, the enforcement of the

[73] 188 U.S. 321 (1903).

[74] 247 U.S. 251 (1918).

[75] United States v. Doremus, 249 U.S. 86 (1919). The four dissenters asserted that "the statute was a mere attempt by Congress to exert a power not delegated, that is, the reserved police power of the States." *Id.* at 95. It is interesting to note, however, that a subsequent congressional attempt to regulate child labor through the taxing power was also invalidated. Bailey v. Drexel Furniture Co., 259 U.S. 20 (1922).

[76] Justice McReynolds stated for the Court in Linder v. United States, 268 U.S. 5, 18 (1925):

> Obviously, direct control of medical practice in the States is beyond the power of the Federal Government. Incidental regulation of such practice by Congress through a taxing act cannot extend to matters plainly inappropriate and unnecessary to reasonable enforcement of a revenue measure.

The Court also held that the Harrison Act did not apply to mere possession of opium. In reaching this conclusion the Court pointed out that any congressional attempt to punish as a crime possession of any article produced in a state would raise the gravest questions of power. United States v. Jin Fuey Moy, 241 U.S. 394, 401 (1916).

Act was necessarily assigned to the Internal Revenue Service in the Treasury Department.

The first enforcement agency for the Harrison Act was the Narcotics Division of the Prohibition Unit of the Internal Revenue Service created in 1920.[77] This division was incorporated in the Prohibition Bureau which was created in 1927.[78] In 1930, the enforcement of the narcotics laws was severed from the Bureau of Prohibition and established as the separate Bureau of Narcotics in the Treasury Department.[79] The existence of this separate agency anxious to fulfill its role as crusader against the evils of narcotics has done as much as any single factor to influence the course of drug regulation from 1930 to 1970.[80] Although the impact of the Bureau on the passage of the Uniform Narcotic Drug Act and the Marihuana Tax Act will be explained in detail in subsequent sections, it is important here to note that the existence of a separate bureau having responsibility only for narcotics enforcement and for educating the public on drug problems inevitably led to a particularly prosecutorial view of the narcotics addict. Moreover, this creation of the Bureau separate from the newly created FBI in the Justice Department unnecessarily bifurcated federal law enforcement operations in this area.

C. The Judicial Role and the Constitutional Framework: The Police Power and Intoxicant Prohibition to 1920

It is not novel to suggest that the fate of contemporary constitutional challenges to marijuana prohibition depends in part on a judicial reading of public opinion as well as on the availability of a constitutional peg on which to hang an "activist" judicial inquiry. Since contextual pressure and analytical conflict were also central elements of the judicial response to alcohol and narcotics prohibition between 1850 and 1920, it is worthwhile to trace that response.

As in today's court battles over marijuana laws, the clash then was between two polar constitutional concepts—the police powers of the state and allegedly "fundamental" personal constitutional rights. The

conflict opened on state constitutional grounds and was continued in the realm of the fourteenth amendment. On the issues of alcohol and "hard" narcotics, the police power was triumphant. In the light of the comparisons drawn in current constitutional arguments among marijuana, alcohol and narcotics, an inquiry into the long struggle is informative.

1. Phase One: Prohibition of Sale and Manufacture of Alcohol

During the first wave of prohibitionist legislation in the 1850's, thirteen states outlawed manufacture[81] and sale of intoxicating beverages.[82] The constitutionality of such laws under the commerce clause of the Federal Constitution had been presaged in the *License Cases*[83] in 1847, where in six separate opinions the Supreme Court upheld Massachusetts, New Hampshire and Rhode Island laws regulating wholesale and retail sales of liquor. Chief Justice Taney's famous dictum stated:

> And if any State deems the retail and internal traffic in ardent spirits injurious to its citizens, and calculated to produce idleness, vice, or debauchery, I see nothing in the constitution of the United States to prevent it from regulating and restraining the traffic, or from prohibiting it altogether, if it thinks proper.[84]

Armed with this pronouncement, the courts of eight states rebuffed challenges under their own constitutions.[85] Some of these decisions gave scant attention to the constitutional argument but simply defined the police power in broad terms[86] and perhaps cited the Taney dictum.[87]

[81] The primary objective of prohibitionary legislation was to suppress all traffic in intoxicating beverages. Accordingly, most states prohibited both manufacture and sale. However, New Hampshire's law, in effect from 1855 through 1903, forbade only sale.

[82] Sixteen states passed prohibitionary legislation for the whole territory of the state. However, twelve of them had repealed this legislation by 1903, and a thirteenth, Maine, had repealed its statute before 1884 when prohibition was embodied in a constitutional amendment. E. FREUND, POLICE POWER 202, 203 (1904).

[87] State v. Wheeler, 25 Conn. 290 (1856); State v. Allmond, 7 Del. 612 (1856); Santo v. State, 2 Iowa 165 (1855); Lincoln v. Smith, 27 Vt. 328 (1855).

However, the rationale and rhetoric of those decisions squarely rejecting the constitutional objections merit a detailed comparison with that of two decisions, in New York[88] and Indiana,[89] declaring the statutes void.

Even the opponents of the laws acknowledged the potential public evils of intemperance[90]—crime, pauperism and vice—the eradication of which was the objective of prohibitionary legislation. Yet they argued that the means employed to accomplish this end—prevention of sale—was beyond the police power. Alcohol had admittedly beneficial uses[91] and was harmful only when abused.[92] In order to eliminate it from channels of commerce, thereby depriving its owners of a fundamental incident of ownership—the right to sell[93]—a more pernicious character had to be shown.[94] Accordingly, the public benefit did not justify the

---

[88] Wynehamer v. People, 13 N.Y. 378 (1856).

[89] Beebe v. State, 6 Ind. 501 (1855).

[90] Dissenting in People v. Gallagher, 4 Mich. 244 (1856), Justice Pratt noted: "That intemperance is a great evil, no sane man can doubt." *Id.* at 284. The Iowa court asserted:

> There is no statistical or economical proposition better established, nor one to which a more general assent is given by reading and intelligent minds, than this, that the use of intoxicating liquors as a drink, is the cause of more want, pauperism, suffering, crime and public expense, than any other cause—and perhaps it should be said, than *all* other causes combined.

Santo v. State, 2 Iowa 165, 190 (1855).

[91] Dissenting in People v. Gallagher, 4 Mich. 244 (1856), Justice Pratt stated: "Spiritous liquors are necessary in the prosecution of many of the most valuable arts, as well as for mechanical, manufacturing and medicinal purposes." *Id.* at 260.

[92] The Indiana Court noted "as a matter of general knowledge . . . that the use of beer &c. as a beverage, is not necessarily hurtful, any more than the use of lemonade or ice cream. . . . It is the abuse, and not the use, of all these beverages that is hurtful." Beebe v. State, 6 Ind. 501, 519-20 (1855).

[93] Justice Pratt reasoned:

> Liquors, then, whether produced by fermentation or distillation, do legally constitute property of use and value; and the owner of this species of personal property, when lawfully acquired, is, upon every principle, . . . entitled to the possession and use of it. This legally includes the right of keeping, selling or giving it away, as the owner may deem proper. This is a natural primary right incident to ownership . . . .

People v. Gallagher, 4 Mich. 244, 263 (1856); *accord*, Wynehamer v. People, 13 N.Y. 378, 396-98 (1856) (Comstock, J.).

[94] Said the Indiana Court:

> [T]he legislature enacted the law in question upon the assumption that the manufacture and sale of beer . . . were necessarily destructive to the community, and in acting upon that assumption, in our judgment, has unwarrantably invaded the right to private property, and its use as a beverage and article of traffic.
>
> . . . We repeat, the manufacture and sale and use of liquors are not necessarily hurtful, and *this the Court has a right to judicially inquire into* and act upon in deciding upon the validity of the law in question—in deciding . . . whether it is

restriction of private rights. The criminalization of sale of alcohol beverages constituted a deprivation of "property" without due process;[95] or, failing that, it constituted an infringement of the inalienable right of life, liberty and the pursuit of happiness rooted in the precepts of natural justice that the people reserved to themselves when they entered into the social compact.[96] New York, in *Wynehamer v. People*,[97] accepted the due process argument, at least with respect to alcohol lawfully acquired, and Indiana endorsed the inalienable rights argument in *Beebe v. State*.[98]

The virtues of judicial restraint were vehemently defended in the decisions rejecting these arguments: The courts uniformly refused to interfere with the discretionary exercise of the police power in the absence of a specific constitutional prohibition. The Vermont Supreme Court view was typical:

> The legislature in passing the law in question doubtless supposed that the traffic and drinking of intoxicating liquors went hand in hand . . . and that by cutting off the one, the other would also fall with it. Whether the drinking of intoxicating liquors tends to produce intemperance and whether the intemperance is a gangrene, tending to corrupt

an indirect invasion of a right secured to the citizen by the Constitution. Beebe v. State, 6 Ind. 501, 520-21 (1855) (emphasis added).

[95] In an opinion often cited as the first to invoke the substantive construction of "due process of law," Judge Comstock in Wynehamer v. People, 13 N.Y. 378, 392-93, 398 (1856), stated:

> To say . . . that "the law of the land" or "due process of law", may mean the very act of legislation which deprives the citizen of his rights, privileges or property, leads to a simple absurdity. The Constitution would then mean, that no person shall be deprived of his property or rights unless the legislature shall pass a law to effectuate the wrong, and this would be throwing the restraint entirely away. The true interpretation of these constitutional phrases is, that where rights are acquired by the citizen under existing law, there is no power in any branch of the government to take them away.
>
> . . . .
>
> When a law annihilates the value of property, and strips it of its attributes, by which alone it is distinguished as property, the owner is deprived of it according to the plainest interpretation, and certainly within the spirit of a constitutional provision intended expressly to shield private rights from the exercise of arbitrary power.

[96] The Indiana court held the prohibitionary legislation in contravention of a provision in the state constitution declaring that "all men are endowed by their Creator with certain inalienable rights; that among these are life, liberty and the pursuit of happiness." Beebe v. State, 6 Ind. 501, 510 (1855). Dissenting in People v. Gallagher, 4 Mich. 244, 258 (1856), Justice Pratt conducted an identical natural rights inquiry without the benefit of Thomas Jefferson's penmanship.

[97] 13 N.Y. 378 (1856).

[98] 6 Ind. 501 (1855).

> the moral health of the body politic, and to produce misery and lamentation; and whether the law in question is well calculated to cut off or mitigate the evils supposed to flow directly from intemperance and indirectly from the traffic in intoxicating liquors, were questions to be settled by the lawmaking power; and their decision in this respect is final and not to be reviewed by us.[99]

Under this view, societal self-protection, the essence of the police power, is broadly defined.[100] So long as the *legislature determines* that the use of alcoholic beverages exerts an adverse effect on public health, safety or morals, the courts may question neither the factual determination nor the means employed to restrict that use. In answer to the argument that the courts have a special obligation to review the relation between means and ends where personal liberties are curtailed, these courts disavowed any power "to annul a legislative Act upon higher grounds than those of express constitutional restriction," [101] or, after assuming for sake of argument the existence of such power, they declined to exercise it.[102] In response to the argument accepted by Judge Comstock in *Wynehamer v. New York*—that prohibition of sale of legally acquired alcohol was a deprivation of property without due process of law—most courts distinguished *Wynehamer* on its facts,[103] held that no essential "property" right had been violated,[104] or construed "due process" to refer only to due procedure and not to the "power . . . to create and define an offense." [105]

Two polar conceptions of the scope of judicial review clashed over a subject of intense public interest. The immediate question was settled in favor of the constitutionality of prohibiting manufacture and sale of alcoholic beverages; in fact, the Indiana court itself disavowed its contrary decision in *Beebe* three years after rendering it.[106] However, the jurisprudential dialogue[107] had merely begun. Today, *Wynehamer* is

[107] In People v. Gallagher, 4 Mich. 244 (1856), the majority stated:

> The legislature has said that . . . no man shall sell liquors to be used as a

regarded as the initial step on the road to the vested rights conception of due process. Similarly, *Beebe* is the philosophical ancestor of all challenges to prohibition of intoxicants—alcohol,[108] narcotics and marijuana.

With the passage of the fourteenth amendment, the Supreme Court was called upon to determine whether prohibitionary exercises of the state police powers were now limited by federal law. The battle fought in the 1850's on state constitutional grounds was refought in the 1870's and 80's on federal territory—with the same outcome. In a series of cases culminating in *Mugler v. Kansas*,[109] it slowly became settled that the manufacturer or seller of intoxicating liquors had no constitutional rights under either the privileges and immunities or due process clauses that could prevent the operation of the police power of the state, regardless whether the liquor was bought or manufactured before passage of the law or even whether it was manufactured solely for personal use.[110]

> beverage, because by so doing, he inflicts injury on the public; but, says the defendant, irrespective of the evil, this right to sell liquors is a *natural right*, and you have no power to pass a law infringing that right. How does he prove it? Not by any adjudged cases; there are none, nor by anything in the constitution preserving to him this right; but it is to be determined by the nature and character of the right. . . . [The manner in which the determination is to be made is] a question very suitable and proper for the discussion and deliberation of a legislative body, but one which cannot be entertained by this court.

Id. at 257. Judge Pratt replied:

> If the doctrine is true that the legislature can, by the exercise of an implied discretionary power, pass any law not expressly inhibited by the constitution, then it is certain that a hundred laws may be enacted by that body, invading directly legitimate business pursuits, impairing and rendering worthless trades and occupations, and destroying the substantial value of private property to the amount of millions of dollars. . . . But who, I ask, believes that the legislature possesses the power, or that the people, in their sovereignty, ever intended to confer on that body such unlimited omnipotence? As appears to me, no man of reason and reflection can believe it.

Id. at 277-79 (dissenting opinion).

[108] Mere possession or consumption of alcohol was not prohibited during this phase of temperance legislation. Many of the courts were careful to allude to this feature and to note that forfeiture could result only from illegal possession—possession with intent to sell in violation of the law. *See, e.g.*, Santo v. State, 2 Iowa 165 (1855); Commonwealth v. Kendall, 66 Mass. (12 Cush.) 414 (1853).

[109] 123 U.S. 623 (1887).

[110] In Bartemeyer v. Iowa, 85 U.S. (18 Wall.) 129 (1873), the Supreme Court held that the prohibition of traffic in intoxicating drinks violates no privilege and immunity of United States citizenship; the Court avoided the question whether a law prohibiting sale of liquor owned before the law was passed was a deprivation of property without due process. Four years later, in Beer Co. v. Massachusetts, 97 U.S. 25 (1877), the Court sustained a prohibition law against a challenge under the obligation of contracts clauses but still deferred consideration of the *Wynehamer* question. In upholding

Thus, as a matter of both state and federal constitutional law, the courts required no more, and probably less, than that legislation be designed to retard a public evil—here pauperism and crime—and be rationally related to that end.[111] Absent a specific constitutional limitation, it did not concern the courts that such regulations affronted personal liberty and property rights. The theoretical justification of incidental curtailment of private liberties in the public interest was that the legislature must conduct the balancing; if the balance is unsound, the law will be repealed. Indeed, the courts were probably willing to indulge that presumption as a practical matter since the passage of the prohibition laws was preceded by vigorous public debate. In fact, the public opinion process did work in reaction to these curtailments of private liberty, and most such laws were subsequently repealed[112] in the ensuing decade.

2. *Phase Two: Prohibition of Sale of Opium*

As noted above, the first prohibitionary narcotics legislation was enacted on the west coast in the 1880's in order to prohibit sale and distribution of opium for nonmedical purposes. The racial overtones

---

the seizure and forfeiture of liquors belonging to the petitioner, Justice Bradley stated:

> If the public safety or the public morals require the discontinuance of any manufacture or traffic, the hand of the legislature cannot be stayed from providing for its discontinuance, by any incidental inconvenience which individuals or corporations may suffer. All rights are held subject to the police power of the State.

97 U.S. at 32.

Finally, in Mugler v. Kansas, 123 U.S. 623 (1887), *Wynehamer* was slain. The Court sustained a conviction for selling beer manufactured before the passage of the law. The Court even held that, in order to make effective its regulations against sale, the State might forbid manufacture for personal use. *Id.* at 662. The only constitutional inhibitions remaining after *Mugler* emanated from the commerce power. For a discussion of the gradual elimination of these restrictions by congressional action, see Safely, *Growth of State Power Under Federal Constitution to Regulate Traffic in Intoxicating Liquors*, 3 IOWA L. BULL. 221, 229-34 (1917).

[111] In *Mugler*, Justice Harlan stated:

> There is no justification for holding that the State, under the guise merely of police regulations, is here aiming to deprive the citizen of his constitutional rights. . . . If, therefore, a state deems the absolute prohibition of the manufacture and sale, within her limits, of intoxicating liquors for other than medical, scientific, and manufacturing purposes, to be necessary to the peace and security of society, the courts cannot, without usurping legislative functions, override the will of the people as thus expressed by their chosen representatives. They have nothing to do with the mere policy of legislation.

123 U.S. at 662.

[112] See note 82 *supra*.

of this legislation were self-consciously acknowledged by the initial Oregon and Nevada decisions. Sustaining the conviction of an alien for selling opium in *Ex parte Yung Jon*,[113] the Oregon district court noted:

> Smoking opium is not our vice, and therefore it may be that this legislation proceeds more from a desire to vex and annoy the "Heathen Chinee" in this respect, than to protect the people from the evil habit. But the motives of legislators cannot be the subject of judicial investigation for the purpose of affecting the validity of their acts.[114]

The opium laws were attacked on precisely the same grounds as had been the alcohol prohibition legislation. The Nevada court had no trouble in *State v. Ah Chew*,[115] it simply cited the *License Cases*, the Delaware decision sustaining prohibition of alcohol sale, and distinguished *Wynehamer* as holding only that the sale of lawfully acquired property could not be prohibited. Within this framework, the result was obvious:

> It is not denied that the indiscriminate use of opium . . . tends in a much greater degree to demoralize the persons using it, to dull the moral senses, to foster vice and produce crime, than the sale of intoxicating drinks. If such is its tendency, it should not have unrestrained license to produce such disastrous results. . . . Under the police power . . . in the interest of good morals, the good order and peace of society, for the prevention of crime, misery and want, the legislature has authority to place such restrictions upon sale or disposal of opium as will mitigate, if not suppress, its evils to society.[116]

The Oregon court, in the *Yung Jon* decision five years later, did not take the easy way out. The court was apparently not disposed to imply that sale of previously owned alcohol and cigarettes could be prohibited, and thus reject outright the *Wynehamer* conception of due process;[117] instead it chose to hold that sale of opium for nonmedical purposes was

[113] 28 F. 308 (D. Ore. 1886). The prisoner had been convicted in an Oregon court and was being heard on petition for habeas corpus.

[114] *Id.* at 312.

[115] 16 Nev. 50 (1881).

[116] *Id.* at 55-56.

[117] The Supreme Court rejected it one year later in Mugler v. Kansas, 123 U.S. 623 (1887).

not an incident of ownership and, since the law did not prohibit sale for medical purposes, no property right was deprived. Not as cautious as his brethren, Judge Deady inquired more actively into the nature of opium before upholding the legislation. Whether a legislative act is "prohibitory" (and by implication whether it violates the due process clause) "must depend on circumstances, and particularly the character of the article, and the uses and purposes to which it has generally been applied in the community." [118] He then noted that opium was primarily a medicinal drug; that although used in the East for centuries as an intoxicant, that use was new in the United States and confined primarily to the Chinese; that it was classed as a poison and was less easily detected than alcoholic intoxication, "which it is said to replace where law and custom have made the latter disreputable;" and that its "evil effects" were manifest upon the nervous and digestive systems, resembling delirium tremens. Thus, there was no longstanding regard of opium as a legitimate article of property except for medical use. Accordingly,

> the act does not in effect prohibit the disposition of the drug, but allows it under such circumstances, and on such conditions, as will, according to the general practice and opinions of the country, prevent its improper and harmful use.[119]

Thus, whatever the judicial propensity to limit the police power in the interest of property rights, prohibition of traffic in opium—worse than alcohol and confined to aliens—violated no implied or express constitutional limitations.

3. Phase Three: Prohibition of Possession of Alcohol to 1915

At this stage of constitutional jurisprudence, criminalization of pos-

---

[118] *Ex parte* Yung Jon, 28 F. 308, 311 (D. Ore. 1886).

[119] *Id.* In defining property essentially in terms of habits of the community, Judge Deady was leaving room for the "natural" rights argument with regard to alcohol and tobacco:

> True, we permit the indiscriminate use of alcohol and tobacco, both of which are classed by science as poisons, and doubtless destroy many lives annually. But the people of this country have been accustomed to the manufacture and use of these for many generations, *and they are produced and possessed under the common and long-standing impression that they are legitimate articles of property*, which the owner is entitled to dispose of without any unusual restraint. . . . On the other hand, the use of opium, otherwise than as this act allows, as a medicine, has but little, if any, place in the experience or habits of the people of this country, save among few aliens.

Id. at 311-12 (emphasis added).

session or consumption of alcohol or narcotics was arguably a deprivation of property without due process of law. The first wave of prohibition cases had held only that the right to sell even previously acquired liquor was not an essential element of ownership. They had not held that the state could forbid the essential attribute of ownership—the right to use. In fact, many courts had expressly noted that alcohol was still a legitimate article of property.[120]

Until 1915 the weight of authority was that it was beyond the police power to prohibit mere possession of alcoholic beverages unless the quantity justified an inference that they were held for sale. A few cases so held;[121] many courts so stated in dictum, while holding the laws either in conflict with particular constitutional provisions regarding the "sale" of liquor[122] or in excess of the power of municipal corporations;[123] and many contemporary commentators so stated.[124]

Although the due process rationale was sometimes employed,[125] the preferred approach was "inherent" limitation. In his 1904 treatise, *Police Power*, Ernst Freund premised the "inherent" limitation of noninterference with purely private conduct not on any inalienable natural right but on the requirement that interference be justified on grounds of the public welfare.[126] This and the "practical difficulties of enforce-

[125] *E.g.*, State v. Williams, 146 N.C. 618, 61 S.E. 61 (1908).

[126] E. Freund, Police Power 486 (1904):

> Under these circumstances it seems impossible to speak of a constitutional right of private consumption. There seems to be no direct judicial authority for declaring private acts exempt from the police power, and the universal tolerance with regard to them should be ascribed to policy. Like any other exercise of the

ment, coupled with the constitutional prohibition of unreasonable searches," [127] would sufficiently deter legislative abuse.

Absent the addition of a natural rights notion, however, this decisional frame becomes ambivalent on the dispositive question in an adjudication questioning such legislative "abuse": Can the mere "policy" of nonintervention with private conduct justify a more rigorous judicial inquiry into the relation between the prohibited private acts and the alleged *public* evil? If it cannot, the constitutional attack on prohibition of possession is no stronger than that on prohibition of sale. If it can, is not the judicial role subject to the same charge of usurpation as it would be if the courts employed a pure natural rights approach?

In any event, when the courts first confronted possession prohibition, the rhetoric was varied—due process,[128] natural rights[129] and private liberty[130]—but the approach was the same—a refusal to accept the legislative findings as to the relation between private act and public harm and a refusal to defer to the legislative balance of private liberty and public need. For example, in one of the leading cases, *Commonwealth v. Campbell*,[131] the Court of Appeals of Kentucky cited Cooley, Mill and Blackstone for the proposition that

> [i]t is not within the competency of government to invade the privacy of the citizen's life and to regulate his conduct in matters in which he alone is concerned, or to prohibit him any liberty the exercise of which will not *directly* injure society.[132]

Noting next that defendant was "not charged with having the liquor in his possession for the purpose of selling it, or even giving it to another" and that "ownership and possession cannot be denied when that ownership and possession is not in itself injurious to the public," [133] the court concluded that

> [t]he right to use liquor for one's own comfort, if the use is without

police power, control of private conduct would have to justify itself on grounds of the public welfare.

[131] 133 Ky. 50, 117 S.W. 383 (1909).

[132] *Id.* at 58, 117 S.W. at 385 (emphasis added).

[133] *Id.* at 63, 117 S.W. at 387.

> direct injury to the public, is one of the citizen's natural and inalienable rights . . . . We hold that the police power—vague and wide and undefined as it is—has limits . . . .[134]

The key to this reasoning, of course, is the court's insistence that the injury be *direct* as measured according to a judicial yardstick. Although the court devoted little attention to the question, it implicitly rejected arguments that the only way to exorcize the public evils attending excessive use and adequately to enforce prohibitions against sale was to prevent any private use at all. The court impliedly held that the posited connection, albeit rational, was "remote" or "indirect" or "unreasonable" and therefore entitled to no deference.[135]

4. *Phase Four: Prohibition of Possession of Narcotics*

This active judicial role in alcohol cases should be compared with the courts' simultaneous refusals to second-guess legislative "findings"

---

[134] *Id.* 63-64, 117 S.W. at 387.

[135] Similarly, in State v. Gilman, 33 W. Va. 146, 10 S.E. 283 (1889), the court stated:

> It can hardly be questioned that the right to possess property is [an inalienable] right, and that that right embraces the privilege of a citizen to keep in his possession property for another. It is not denied that the keeping of property which is injurious to the lives, health, or comfort of all persons may be prohibited under the police power. . . . [I]t must, of course, be within the range of legislative action to define the mode and manner in which every one may so use his own as not to injure others. *But it does not follow that every statute enacted ostensibly for the promotion of these ends is to be accepted as a legitimate exercise of the police power of the State* . . . .
>
> The keeping of liquors in his possession by a person, whether for himself or for another, unless he does so for the illegal sale of it, or for some other improper purpose, can by no possibility injure or affect the health, morals, or safety of the public; and, therefore, the statute prohibiting such keeping in possession is not a legitimate exertion of the police power.

Id. at 148-49, 10 S.E. at 284 (emphasis added); *accord, Ex parte* Brown, 38 Tex. Crim. 295, 42 S.W. 554 (1897).

In *Ex parte* Wilson, 6 Okla. Crim. 451, 119 P. 596 (1911), the court, after quoting extensively from *Commonwealth v. Campbell*, noted, "The only conclusion that we can legitimately arrive at is that the act in question is not within a *reasonable* exercise of the police powers of the state—is unconstitutional and void." 6 Okla. Crim. at 475, 119 P. at 606 (emphasis added). Finally, the Alabama Supreme Court stated, in striking down a local ordinance prohibiting possession by beverage dealers of alcoholic beverages:

> [The ordinance] can be justified only, if at all, on the ground that it sustains some reasonable relation to the prohibition law in the way of preventing evasions of that law by trick, artifice, or subterfuge under guise of which that law is violated. But it has no such relation. It undertakes to prohibit the keeping in any quantity and for any purpose, however innocent, of intoxicating liquors and beverages in places which are innocent in themselves.

Eidge v. City of Bessemer, 164 Ala. 599, 606, 51 So. 246, 249 (1909).

with regard to the criminalization of possession of opium. In a series of cases decided in Washington, Oregon and California[136] in 1890, 1896 and 1911 respectively, courts held that the relation between narcotics use and public harm was to be drawn by the legislature.

In answer to the argument, accepted in the alcohol cases, that despite the absence of explicit constitutional limitations the police power of prohibition was inherently limited to acts which "involve direct and immediate injury to another," [137] the courts replied in predictable fashion: The state may prevent a weak man from doing injury to himself if it determines that such injury may cause the individual to become a "burden on society;" [138] the state could find that excessive use of opium, an active poison, would debase the moral and economic welfare of the society by causing ill health, pauperism and insanity;[139] the state could find that the potential for and evils attending excessive use demand a prohibition also of nondeleterious moderate use.[140] Accordingly, in the words of the Supreme Court of Washington,

> [i]t is for the legislature to place on foot the inquiry as to just in what degree the use is injurious; to collate all the information and to make all the needful and necessary calculations. These are questions of fact with which the court cannot deal. The constitutionality of laws is not thus to be determined.[141]

[136] *Ex parte* Yun Quong, 159 Cal. 508, 114 P. 835 (1911); Luck v. Sears, 29 Ore. 421, 44 P. 693 (1896); Ah Lim v. Territory, 1 Wash. 156, 24 P. 588 (1890).

[137] Ah Lim v. Territory, 1 Wash. 156, 163, 24 P. 588, 589 (1890).

[138] If the state concludes that a given habit is detrimental to either the moral, mental or physical well being of one of its citizens to such an extent that it is liable to become a burthen upon society, it has an undoubted right to restrain the citizen from the commission of that act; and fair and equitable consideration of the rights of other citizens make it not only its right, but its duty, to restrain him.

Id. at 164, 24 P. at 590; *accord, Ex parte* Yun Quong, 159 Cal. 508, 515, 114 P. 835, 837 (1911); Luck v. Sears, 29 Ore. 421, 426, 44 P. 693, 694 (1896).

[139] *Ex parte* Yun Quong, 159 Cal. 508, 515, 114 P. 835, 837 (1911); Luck v. Sears, 29 Ore. 421, 425, 44 P. 693, 694 (1896).

[140] But it is urged . . . that a moderate use of opium . . . is not deleterious and consequently cannot be prohibited. We answer that this is a question of fact which can only be inquired into by the legislature.

Ah Lim v. Territory, 1 Wash. 156, 164, 24 P. 588, 590 (1890). The dissent argued that moderate use by some could not be punished to prevent excessive use by others. *Id.* at 172-74, 24 P. at 592-93.

[141] *Id.* at 165, 24 P. at 590.

> [W]hether [opium's] nature and character is such that for the protection of the public its possession by unauthorized persons should be prohibited is a ques-

The California court had more difficulty with the argument that punishment of possession of alcohol had been held beyond the police power. Despite its rhetoric regarding the wide bounds of legislative fact-finding, the court actually made its own determination that public injury from private abuse was more likely with narcotics than alcohol. The lower court had said so overtly:

> But liquor is used daily in this and other countries as a beverage, moderately and without harm, by countless thousands . . .; whereas it appears there is no such thing as moderation in the use of opium. Once the habit is formed the desire for it is insatiable, and its use is invariably disastrous.[142]

The California Supreme Court shied away:

> We do not understand this to have been intended to declare an established or conceded fact. So interpreted, the expression would be, perhaps unduly sweeping. But the validity of legislation which would be necessary or proper under a given state of facts does not depend upon the actual existence of the supposed facts. It is enough if the law-making body may rationally believe such facts to be established. If the belief that the use of opium, once begun, almost inevitably leads to excess may be entertained by reasonable men—and we do not doubt that it may—such belief affords a sufficient justification for applying to opium restrictions which might be unduly burdensome in the case of other substances, as, for example, intoxicating liquors, *the use of which may fairly be regarded as less dangerous to their users or to the public.*[143]

What the court said is unobjectionable. What it did not say, however, is significant. This reasoning implies that if the legislature should determine that the potential for excessive use of alcohol—and consequently for the public evils of pauperism, crime and insanity—is great enough to prohibit all use, that judgment would have to stand. Probably not intending so to suggest, the court really held that *it* thought that opium use was more likely adversely to affect the public welfare

---

tion of fact and of public policy, which belongs to the legislative department to determine.

Luck v. Sears, 29 Ore. 421, 426, 44 P. 693, 694 (1896).

[142] *Ex parte* Yun Quong, 159 Cal. 508, 514, 114 P. 835, 838 (1911) (quoting lower court opinion) (citations omitted).

[143] *Id.* at 515, 114 P. at 838 (emphasis added).

than alcohol use; accordingly, paternal criminal legislation was "reasonable" in the former case and not in the latter, even though they were identically "indirect." It helped, perhaps, that the legislature was not telling the judge and his white, middle-class colleagues that *they* shouldn't smoke opium, and that the objective was merely to prevent a few "Heathen Chinee" from hurting themselves through their stupidity and from spreading their nasty habit to the whites.[144]

The only astounding thing about the opium possession cases is that there was at least one dissenting opinion. In the Washington case, *Ah Lim v. Territory*,[145] Judge Scott, for himself and another judge, insisted on either a more conclusive demonstration that the private act of smoking opium "directly and clearly affected the public in some manner" or a more narrowly drawn statute. He catalogued the alleged public justifications:

> That smoking or inhaling opium injures the health of the individual, and in this way weakens the state; that it tends to the increase of pauperism. That it destroys the moral sentiment and leads to the commission of crime. In other words, that it has an injurious effect upon the individual, and, consequently, results indirectly in an injury to the community.[146]

After noting the insufficiency of all of the justifications including the argument that the moderate desires of some must be sacrificed to prevent abuse by others,[147] the judge concluded:

> [The Act] is altogether too sweeping in its terms. I make no question but that the habit of smoking opium may be repulsive and degrading. That its effect would be to shatter the nerves and destroy the intellect; and that it may tend to the increase of pauperism and crime. But there is a vast difference between the commission of a single act, and a confirmed habit. There is a distinction to be recognized between the use and abuse of any article or substance. . . . If this

[144] "It must be conceded that its indiscriminate use would have a very deleterious and debasing effect upon our race . . . ." *Id.* at 514, 114 P. at 838.

[145] 1 Wash. 156, 24 P. 588 (1890).

[146] *Id.* at 168, 24 P. at 591.

[147] Individual desires are too sacred to be ruthlessly violated where only acts are involved . . . which do not clearly result in an injury to society, unless, possibly, thus rendered necessary in order to prevent others from like actions which to them are injurious.

Id. at 173, 24 P. at 592. He concluded, however, that the statute was too broad and that this question need not be reached.

> act must be held valid it is hard to conceive of any legislative action affecting the personal conduct, or privileges of the individual citizen. that must not be upheld. . . . The prohibited act cannot affect the public in any way except through the primary personal injury to the individual, if it occasions him any injury. It looks like a new and extreme step under our government in the field of legislation, if it really was passed for any of the purposes upon which that character of legislation can be sustained, if at all.[148]

The sanctity of "the personal conduct or privileges of the individual citizen" had suffered its first blow. The knockout was only a few rounds away.

5. *Phase Five: Prohibition of Possession of Alcohol After 1915*

The year 1915 was the watershed year for prohibitionists in the courts. By 1913, the tide had finally turned in the state legislatures, many of which prohibited possession of more than a certain quantity of alcoholic beverages. The first of these statutes to reach the courts was that of Alabama in *Southern Express Co. v. Whittle*.[149]

Overruling its earlier decision in *Eidge v. City of Bessemer*,[150] one of the leading cases during the earlier phase, the Alabama court swept away all restraints on the police power. So long as the legislation was directed at some legitimate purpose and was not arbitrary, the court should not interfere.[151] Whether or not the Supreme Court had so intended, the Alabama court, like other state courts, relied heavily on Justice Harlan's opinion in *Mugler v. Kansas*,[152] and gave its legislature a blank check when exercising police powers:

> If the right of common law to manufacture an intoxicating liquor for one's own personal use, out of one's own materials by the application of one's own personal effort, may be forbidden by appropriate legislation under the police power, as was expressly ruled in *Mugler v. Kan-*

---

[148] *Id.* at 174-75, 24 P. at 593.

[149] 194 Ala. 406, 69 So. 652 (1915).

[150] 164 Ala. 599, 51 So. 246 (1909).

[151] It is the peculiar function of the lawmakers to ascertain and to determine when the welfare of the people requires the exercise of the state's police powers, and what are appropriate measures to that end, subject only to the power and authority of the courts to see, when assured to the requisite certainty, that the measures of police so adopted do not arbitrarily violate rights protected by the organic laws.
194 Ala. at 421, 69 So. at 656.

[152] 123 U.S. 623 (1887), *quoted in* 194 Ala. at 428-33, 69 So. at 659-60.

> *sas* . . . , it cannot be logically or soundly asserted that the receipt or possession of more than a specified quantity at one time may not be forbidden by a statute . . . .[153]

The alleged sanctity of private conduct gave the court little pause; this was just one of a number of instances

> where ancillary prohibitions of acts and conduct, innocent in themselves, have been sustained and confirmed as an exercise of the police power of the state; and so upon the theory that some valid legislative purpose might be more certainly made effective, or that evasions of the laws might be prevented or hindered of accomplishment.[154]

Though the Alabama court did not do so, it could have cited the opium possession cases as authority. Most courts did.

The Alabama decision was quickly followed in Idaho[155] and in nine other states.[156] When the Idaho case, *Crane v. Campbell*,[157] came before the Supreme Court, Justice McReynolds dealt the knockout blow:

> As the state has the power . . . to prohibit [sale and manufacture], it may adopt such measures as are reasonably appropriate or needful to render exercise of that power effective. And, considering the notorious difficulties always attendant upon efforts to suppress traffic in liquors, we are unable to say that the challenged inhibition of their possession was arbitrary and unreasonable or without proper relation to the legitimate legislative purpose.[158]

The principle noted by Freund,[159] that the police power did not easily extend to matters of private conduct, was ignored:

159 See text at note 126 *supra*.

> [I]t clearly follows from our numerous decisions upholding prohibition legislation that the right to hold intoxicating liquors for personal use is not one of those fundamental privileges of a citizen of the United States which no State may abridge. A contrary view would be incompatible with the undoubted power to prevent manufacture, gift, sale, purchase or transportation of such articles—the only feasible ways of getting them. An assured right of possession would necessarily imply some adequate method to obtain not subject to destruction at the will of the State.[160]

Given the restrictive interpretation of the privileges and immunities clause[161] and the refusal to extend substantive due process outside the economic area,[162] there was no existing federal constitutional pigeonhole for "private conduct" as a principle of constitutional limitation. And on the state level the courts ignored the "intrinsic limitation" argument and discarded the direct-indirect yardstick in the wake of the temperance movement.

The commentators were outraged. Again and again the courts were indicted for interpreting constitutional precepts to correspond with public opinion.[163] The judicial retreat on the temperance question coincided perfectly with the final success of the Prohibition movement. And the commentators were quite justified in so noting.

It was merely icing on the cake when the Supreme Court upheld the provision of the Volstead Act[164] outlawing possession of intoxicating liquor. The Court predictably rebuffed[165] an argument that it was beyond congressional power under section 2 of the eighteenth amendment to prohibit possession for personal consumption of liquor owned before the passage of the Act.[166]

166 This argument was accepted in United States v. Dowling, 278 F. 630 (S.D. Fla. 1922).

6. A Postscript on the Police Power: The Cigarette Cases

Interestingly, the legislative solicitude for the health of the citizenry during the period under discussion also extended to the prohibition of cigarette smoking in several jurisdictions. In 1897, the General Assembly of Tennessee made it a misdemeanor to sell, give away or otherwise dispose of cigarettes or cigarette paper.[167] The Supreme Court of Tennessee upheld the statute under the police power on the grounds that cigarettes were not legitimate articles of commerce, being "inherently bad and bad only."[168] The United States Supreme Court affirmed in *Austin v. Tennessee*,[169] primarily on the authority of the alcohol and opium cases, noting that there need be only a rational basis for the legislative determination that the commodity is harmful to justify its prohibition.[170] The Court did not even mention any objection based on deprivation of property rights or personal liberty.

The issue was posed more directly in Kentucky and Illinois cases[171] regarding the validity of local ordinances prohibiting smoking of cigarettes "within the corporate limits" in one case and "in any street, alley, avenue . . . park . . . or [other] public place" in the other. Both courts held the ordinances unreasonable interferences with personal

167 Law of Feb. 11, 1897, ch. 30, [1897] Tenn. Acts 156.

168 Austin v. State, 101 Tenn. 563, 48 S.W. 305 (1898), *aff'd*, 179 U.S. 343 (1900).

169 179 U.S. 343 (1900).

170 The primary issue before the Court was whether the statute infringed the exclusive power of Congress to regulate interstate commerce. *Id.* at 344. However, before turning to the "original package" questions, the Court first had to conclude that the statute was a legitimate exercise of the police power, for only then could an indirect interference with interstate commerce be sustained. *Id.* at 349. The Court noted on this point:

> Cigarettes do not seem until recently to have attracted the attention of the public as more injurious than other forms of tobacco; nor are we now prepared to take judicial notice of any special injury resulting from their use or to indorse the opinion of the Supreme Court of Tennessee that "they are inherently bad and bad only." At the same time we should be shutting our eyes to what is constantly passing before them were we to affect an ignorance of the fact that a belief in their deleterious effects, particularly upon young people, has become very general and that communications are constantly finding their way into the public press denouncing their use as fraught with great danger to the youth of both sexes. Without undertaking to affirm or deny their evil effects, we think it within the province of the legislature to say how far they may be sold, or to prohibit their sale entirely . . . provided . . . there be no reason to doubt that the act in question is designed for the protection of the public health.

Id. at 348-49; *cf.* Gundling v. City of Chicago, 177 U.S. 183 (1900) (affirming validity of licensing sale of cigarettes).

171 City of Zion v. Behrens, 262 Ill. 510, 104 N.E. 836 (1914); Hershberg v. City of Barbourville, 142 Ky. 60, 133 S.W. 985 (1911).

liberty.[172] The argument that the ordinances were calculated to insure the public safety by preventing fire hazards was held to be too remote and the argument accepted in *Austin* regarding potential injury to the smoker's health apparently was not made or at least went unacknowledged by both courts.

These decisions, rendered in 1911 and 1914, were probably consistent, under a direct-indirect injury to society theory, with *Austin* and with the alcohol and narcotics cases up to that time. The post-1915 alcohol possession cases, however, undermined any such distinction, insofar as it authorized a more active judicial inquiry into the relationship between the private conduct and the public need. At least at this stage of its development it may be fruitless to seek out a "neutral principle" beyond common sense regarding the undefined constitutional limitations on the police power. Professor Brooks Adams noted in 1913 that the scope of the police power

> could not be determined in advance by abstract reasoning. Hence, as each litigation arose, the judges could follow no rule but the rule of common sense, and the Police Power, translated into plain English, presently came to signify whatever, at the moment, the judges happened to think reasonable. Consequently, they began guessing at the drift of public opinion, as it percolated to them through the medium of their education and prejudices. Sometimes they guessed right and sometimes wrong, and when they guessed wrong they were cast aside, as appeared dramatically enough in the temperance agitation.[173]

And Justice Holmes noted:

> It may be said in a general way that the police power extends to all the great public needs. It may be put forth in aid of what is sanctioned

---

[172] In the broad language in which the ordinance is enacted it is apparently an attempt on the part of the municipality to regulate and control the habits and practices of the citizen without any reasonable basis for so doing. The ordinance is an unreasonable interference with the private rights of the citizen . . . .
262 Ill. at 513, 104 N.E. at 837-38.
The ordinance is so broad as to prohibit one from smoking a cigarette in his own home or on any private premises in the city. To prohibit the smoking of cigarettes in [such circumstances] is an invasion of his right to control his own personal indulgences.
142 Ky. at 61, 133 S.W. at 986 (1911). By holding that the ordinance applied in the home, the Kentucky court avoided the question raised in the Illinois case. The reasoning would appear to compel the same result, however.

[173] B. Adams, The Theory of Social Revolutions 94 (1913).

> by usage, or held by the prevailing morality or strong and preponderant opinion to be greatly and immediately necessary to the public welfare.[174]

Whether the development of the judicial response to exercises of the police power at the time was the result of the changing public opinion or a changing analytical framework, trends in that response were evident. It remains to be seen whether any trends are evident today to indicate how marijuana users will fare in the future.

III. The Genesis of Marijuana Prohibition

Until the inclusion of marijuana in the Uniform Narcotic Drug Act in 1932 and the passage of the Marihuana Tax Act in 1937, there was no "national" public policy regarding the drug. However, as early as 1914 the New York City Sanitary Laws included cannabis in a prohibited drug list and in 1915 Utah passed the first state statute prohibiting sale or possession of the drug. By 1931 twenty-two states had enacted such legislation. In the succeeding section, we shall delve into the circumstances surrounding the passage of several of these early laws and the ensuing judicial acquiescence in the legislative value judgments concerning marijuana. We conclude that the legislative action and judicial approval were essentially kneejerk responses uninformed by scientific study or public debate and colored instead by racial bias and sensationalistic myths.

A. Initial State Legislation: 1914-1931

As indicated above, the Harrison Act, a regulatory measure in the garb of a taxing statute, left many gaps unfilled in the effort to prohibit illegal or nonmedical use of opiates and cocaine. Although Commissioner Anslinger of the Federal Bureau of Narcotics stated in 1932 that few states had responded to the Harrison Act,[1] most states had in fact enacted or reenacted narcotics laws in the period from 1914 to 1931.[2] In so doing, twenty-one states had also restricted the sale of marijuana as part of their general narcotics articles, one state had prohibited its use for any purpose, and four states had outlawed its

[1] Anslinger, *The Reason for Uniform State Narcotic Legislation*, 21 Geo. L.J. 52, 53 (1932).

[2] State Laws 35-327.

cultivation.[3] Our objective in this section is to determine why these states chose to include cannabis in their lists of prohibited drugs.

The first consideration was the increasing public awareness of the narcotics problem. As noted above, the Harrison Act engendered a shift in public perception of the narcotics addict. With ever-increasing frequency and venom, he was portrayed in the public media as the criminal "dope fiend." This hysteria, coupled with the actual increases in drug-related criminal conduct due to the closing of the clinics,[4] was the basis for a good many of the post-Harrison Act narcotic statutes.[5] Other forces such as lurid accounts in the media,[6] publications of private narcotics associations,[7] and the effective separation of the addict and his problems from the medical profession[8] all pressed legislatures into action to deal more effectively with what was perceived as a growing narcotics problem.

Despite the increasing public interest in the narcotics problem during this period, we can find no evidence of public concern for, or understanding of, marijuana, even in those states that banned it along with the opiates and cocaine. Observers in the middle and late 1930's agreed that marijuana was at that time a very new phenomenon on the national scene.[9] The perplexing question remains—why did some states include marijuana in their prohibitive legislation a decade before it achieved any notice whatsoever from the general public and the overwhelming majority of legislators?

From a survey of contemporary newspaper and periodical commentary we have concluded that there were three major influences. The most prominent was racial prejudice. During this period, marijuana legislation was generally a regional phenomenon present in the southern and western states. Use of the drug was primarily limited to Mexican-Americans who were immigrating in increased numbers to those states. These movements were well noted in the press accounts

of passage of marijuana legislation. A second factor was the assumption that marijuana, which was presumed to be an addictive drug, would be utilized as a substitute for narcotics and alcohol then prohibited by national policy. This factor was particularly significant in the New York law, the forerunner of nationwide anti-marijuana legislation. Finally, there is some evidence that coverage of the drug by the Geneva Conventions in 1925 was publicized in this country and may have had some influence.

1. Rationale in the West: Class Legislation

Geometric increases in Mexican immigration after the turn of the century naturally resulted in the formation of sizeable Mexican-American minorities in each western state.[10] It was thought then[11] and is generally assumed now[12] that use of marijuana west of the Mississippi was limited primarily to the Mexican segment of the population. We do not find it surprising, therefore, that sixteen of these states prohibited sale or possession of marijuana before 1930.[13] Whether motivated by outright prejudice or simple discriminatory disinterest, the result was the same in each legislature—little if any public attention, no debate, pointed references to the drug's Mexican origins, and sometimes vociferous allusion to the criminal conduct inevitably generated when Mexicans ate "the killer weed."

In Utah, for example, the nation's first statewide prohibition of marijuana[14]—in 1915—was attended by little publicity. The combina-

[10] The Bureau of Immigration recorded the entry of 590,765 Mexicans into the United States between 1915 and 1930. Of these, upwards of 90% in each year were to be residents in the 22 states west of the Mississippi, and more than two-thirds were to reside in Texas alone. Information compiled from Tables, Immigrant Aliens, By States of Intended Future Residence and Race or Peoples, published yearly for each fiscal year from 1915 to 1930 in COMM'R GEN. OF IMMIGRATION ANN. REP.

[12] THE MARIHUANA PAPERS at xiv (D. Solomon ed. 1966).

[13] *Id.* at xv.

[14] At its 1915 session, the Utah legislature passed an omnibus narcotics and pharmacy bill which included under it the cannabis drugs. Ch. 66, §§ 7, 8, [1915] Utah Laws 77. The law forbade sale and possession of the named drugs, and provided for medical use under a system of prescriptions and order blanks. Interestingly, clinical treatment of addicts was allowed. *Id.* at 77-80. The law also prohibited possession of opium and marijuana pipes. *Id.* at 80. Violations were misdemeanors punishable by fines and/or imprisonment for terms up to six months, but third offenders faced prison terms from one to five years. The statute made no distinction between sale and possession, nor among the various drugs. The law was revised in 1927. Ch. 65, [1927] Utah Laws 107.

tion of increasing Mexican immigration[15] and the traditional aversion of the Mormons to euphoriants of any kind[16] led inevitably to the inclusion of marijuana in the state's omnibus narcotics and pharmacy bill. Similarly, when the New Mexico and Texas legislatures passed marijuana legislation in 1923, the former by separate statute[17] and the latter by inclusion,[18] newspaper reference was minimal despite coverage in both states of legislative action.[19] The longest of the *Santa Fe New Mexican* references noted:

> The Santa Fe representative, however, had better luck with his bill to prevent sale of marihuana, cannabis indica, Indian hemp or hashish as it is variously known. This bill was passed without any opposition. Marihuana was brought into local prominence at the penitentiary board's investigation last summer when a convict testified he could get marihuana cigarets anytime he had a dollar. The drug produces intoxication when chewed or smoked. Marihuana is the name commonly used in the Southwest and Mexico.[20]

[15] See note 10 *supra*.

[16] *See* THE DOCTRINE AND COVENANTS OF THE CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS, CONTAINING THE REVELATIONS GIVEN TO JOSEPH SMITH, THE PROPHET § 89, at 154 (1921) (¶¶ 5, 7, wine or strong drink) (¶ 8, tobacco) (¶ 9, hot drinks) (revelations given through Joseph Smith the Prophet, at Kirtland, Ohio, February 27, 1833, known as the Word of Wisdom).

[17] The statute made importation of cannabis illegal and established a presumption of importation whenever a person was found to possess the drug. Ch. 42, §§ 1-2, [1923] N.M. Laws 58-59. Violations were punishable by fine and/or imprisonment from one to three years. Cultivation, sale or giving away cannabis except for use by physicians and pharmacists was also prohibited, and violations were punishable on first offense by one to three years in prison and on subsequent offenses by three to five years imprisonment. *Id.* §§ 3, 4.

[18] The Texas general narcotics statute, ch. 150, [1919] Tex. Gen. Laws 277-79, *as amended*, ch. 61, [1919] Tex. Special Sess. Laws 156-57, similar in format to the Utah statute and the Harrison Act, included "any drug or preparation known or sold under the Spanish name of 'Marihuana' . . . ." *Id.* at 278. Unlike the Utah and New Mexico statutes, Texas prohibited only selling, furnishing or giving away marijuana. Except for the exempted medical purposes, such divestment of any of the listed narcotics could have resulted in a fine and/or imprisonment from one month to one year. *Id.* at 279.

[19] The *Santa Fe New Mexican*, hometown paper of the bill's sponsor, made only one mention of marijuana at the time of passage, and that was to note that the drug was being smuggled into the state prisons. Santa Fe New Mexican, Feb. 1, 1923.

The *Austin Texas Statesman* gave heavy coverage to legislative news at this time because the legislature was in special session called by the Governor to deal with a budgetary problem.

[20] Santa Fe New Mexican, Jan. 31, 1923. The statute was passed on February 27, 1923; during the period from January 20 to February 28, there were only three other

In its only direct reference to marijuana, the *Austin Texas Statesman* stated:

> The McMillan Senate Bill amended the anti-narcotic law so as to make unlawful the possession for the purpose of sale of any marihuana or other drugs. Marihuana is a Mexican herb and is said to be sold on the Texas-Mexican border.[21]

The discriminatory aspects of this early marijuana legislation, suggested only obliquely by origin and apparent disinterest in Utah, New Mexico and Texas, are directly confirmed in Montana and Colorado. Montana newspapers gave relatively "full" coverage to a proposal to exclude marijuana from the general narcotics law and to create a separate marijuana statute.[22] On seven different days from January 24 to February 10, 1929 (the date of the bill's passage), the *Montana Standard* succinctly noted the progress of the bill through the legislature. The giveaway appeared on January 27 when the paper recorded the following:

> There was fun in the House Health Committee during the week when the Marihuana bill came up for consideration. Marihuana is Mexican opium, a plant used by Mexicans and cultivated for sale by Indians. "When some beet field peon takes a few rares of this stuff," explained Dr. Fred Fulsher of Mineral County, "He thinks he has just been elected president of Mexico so he starts out to execute all his political enemies. I understand that over in Butte where the Mexicans often go for the winter they stage imaginary bullfights in the 'Bower of Roses' or put on tournaments for the favor of 'Spanish Rose' after a couple of whiffs of Marijuana. The Silver Bow and

references to marijuana. The newspaper first noted the bill in a one sentence report that a ban on sale of marijuana was to be discussed. *Id.*, Jan. 20, 1923. Finally, in articles entitled "A Day In The Legislature," the progress of the bill (H.B. 56) was noted on February 21 and 27 in simple lists of bills enacted. *Id.*, Feb. 21, 27, 1923. So inconsequential was the bill that it was not even mentioned in two stories describing the activities of the legislature for that session. *Id.*, Feb. 27, 1923, at 1, col. 1.

[21] Austin Texas Statesman, June 19, 1923. Despite heavy coverage of legislative news and of narcotics generally, the *El Paso Times* made no reference to marijuana between June 10 and June 25. The *Texas Statesman* mentioned the "McMillan Bill" only two other times, each time without direct reference to marijuana.

[22] Unlike most states that passed laws early in the 1920's against marijuana use, Montana in 1927 passed a statute which merely amended the first section of its general narcotic law, Rev. Code of Mont. ch. 227, § 3186 (1921), to include marijuana. Ch. 91, § 1, [1927] Mont. Laws 324. The new law, ch. 6, [1929] Mont. Laws 5, made use, sale or possession without a prescription a misdemeanor.

> Yellowstone delegations both deplore these international complications." Everybody laughed and the bill was recommended for passage.[23]

The same year, a change in Colorado's marijuana law was precipitated by less comic apprehensions of the drug's evil effects. On April 7, 1929, a girl was murdered by her Mexican step-father. The story was lead news in the *Denver Post* every day until April 16, probably because the girl's mother was white. On the 16th it was first mentioned that this man might have been a marijuana user. Headlined "Fiend Slayer Caught in Nebraska[;] Mexican Confesses Torture of American Baby," and subheaded "Prisoner Admits to Officer He is Marihuana Addict," the story relates in full the underlying events:

> "You smoke marihuana?"
> "Yes"
> The Mexican said he had been without the weed for two days before the killing of his step-daughter.[24]

On April 17, the story on the Mexican included the following:

> He repeated the story he had told the Sidney Chief of Police regarding his addiction to marihuana saying that his supply of the weed had become exhausted several days before the killing and his nerves were unstrung.[25]

With regard to the legislative news there is no mention at any time of a bill to regulate marijuana; however, on April 21, the *Denver Post* noted the Governor had signed a bill increasing penalties for sale, possession or production of marijuana.[26]

The reader should note that public perception of marijuana's ethnic origins and crime-producing tendencies often went hand in hand, especially in the more volatile areas of the western states. Stories such as the one appearing in the *Denver Post*, where defendants charged with

[24] Denver Post, April 16, 1929, at 2, col. 1.

[25] *Id.*, April 17, 1929, at 2, col. 1.

[26] *Id.*, April 21, 1929. Ch. 95, [1927] Colo. Laws 309, penalized possession, sale, gift, or cultivation of any of the cannabis drugs as a misdemeanor. Offenses carried a fine and/or imprisonment in the county jail for not less than one or more than six months. The new law, ch. 93, [1929] Colo. Laws 331, increased the penalties for second offenders to one to five year terms in the penitentiary.

violent crimes attempted to blame their actions on the effects of marijuana, were primarily responsible for the drug's characterization as a "killer weed." In any event, from this brief survey of marijuana prohibition in the western states, we have concluded that its Mexican use pattern was ordinarily enough to warrant its prohibition, and that whatever attention such legislative action received was attended by sensationalist descriptions of crimes allegedly committed by Mexican marijuana users.

2. *Rationale in the East: Substitution*

The first significant[27] instance of marijuana regulation appeared in the 1914 amendments to the New York City Sanitary Laws. The inclusion by the New York legislature of marijuana in its general narcotics statute in 1927 was the precursor of nationwide legislation.[28] For these reasons, we have chosen New York as the most likely source of information regarding the rationale for marijuana prohibition in Maine, Massachusetts, Michigan, Ohio, Rhode Island and Vermont, all of which had acted before 1931.[29]

In January 1914 the New York legislature passed its first comprehensive statute—The Boylan Bill—regulating the sale and use of habit-forming drugs[30] and did not include marijuana among its list of pro-

[27] Although Commissioner Anslinger stated in the 1937 Tax Act Hearings that the District of Columbia had no law regulating marijuana, Dr. Woodward of the AMA refuted the Commissioner's statement by citing a 1906 provision which limited the sale of cannabis to pharmacists and regulated sale of the drug by such pharmacists to the public. *Tax Act Hearings* 92-93. The D.C. provision, Act of May 7, 1906, ch. 2084, § 13, 34 Stat. 175, is typical of early attempts to deal with the drug under the general poison laws, but it is noteworthy in its treatment of marijuana separately from opiates.

[28] See pp. 1030-33 *infra*.

[29] In 1913, Maine prohibited the sale of *cannabis indica* without a prescription. STATE LAWS 137. Massachusetts passed a similar law in 1917, *id.* at 150, and Michigan forbade possession in 1929, *id.* at 161. A 1923 Ohio law prohibited sale or possession with intent to sell, *id.* at 242; Rhode Island prohibited sale in 1918, *id.* at 263; and Vermont barred sale without a prescription in 1915, *id.* at 296.

[30] Ch. 363, [1914] N.Y. Laws 1120. The first narcotics legislation in New York was enacted in 1893. Ch. 661, art. XII, § 208, [1893] N.Y. Laws 1561. The 1893 law provided that no prescription containing opium, morphine, cocaine or chloral could be filled more than once. Two years later, the legislature enacted a provision requiring that the effect of narcotics on the human system be taught in the public schools. Ch. 1041, § 1, [1895] N.Y. Laws 972. In 1897, a law was passed making it a felony to possess any narcotic "with intent to administer the same or cause the same to be administered to another" without his consent. Ch. 42, § 1, [1897] N.Y. Laws 21. The first provision aimed at the sale of narcotics was passed in 1907 and

nibited narcotics. It appears that the Board of Health of New York City then amended its Sanitary Code adding "Cannabis indica, which is the Indian hemp from which the East Indian drug called hashish is manufactured," [31] to the City's list of prohibited drugs. Violation of this provision of the City Sanitary Code was a misdemeanor punishable by a small fine and/or a jail term of up to six months. On July 29, 1914, an article reporting the amendment appeared in the *New York Times* wherein the drug was described:

> This narcotic has practically the same effect as morphine and cocaine, but it was not used in this country to any extent while it was easy to get the more refined narcotics.[32]

The next day the editors of the *Times* commented:

> [T]he inclusion of cannabis indica among the drugs to be sold only on prescription is only common sense. Devotees of hashish are now hardly numerous enough here to count, but they are likely to increase as other narcotics become harder to obtain.[33]

From these observations, it would appear (1) that there were few marijuana users at the time; and (2) that use of the drug was expected to increase as a direct result of the restriction of opiates and cocaine.

Despite New York City's early classification of cannabis with known narcotics, New York State did not prohibit sale and possession of the drug for other than medicinal purposes until 1927.[34] And this was true despite a great deal of activity on the narcotics front from 1914 to 1927, when the legislature acted four different times.[35] Throughout

provided that the sale or distribution of cocaine without a prescription was unlawful. Ch. 424, § 1, [1907] N.Y. Laws 879. This provision was subsequently amended to provide for the keeping of records of sales and of transactions between dealers. Ch. 470, § 2, [1913] N.Y. Laws 984; ch. 131, § 1, [1910] N.Y. Laws 231; ch. 277, § 1, [1908] N.Y. Laws 764.

[31] N.Y. Times, July 29, 1914, at 6, col. 2.

[32] *Id.*

[33] *Id.*, July 30, 1914, at 8, col. 4.

[34] Ch. 672, [1927] N.Y. Laws 1695-1703.

[35] The 1914 act was amended by the Whitney Act in 1918 which also provided for the repeal of the 1914 act. Ch. 639, [1918] N.Y. Laws 2026. In 1921 an act was passed that in effect repealed all the legislation relating to the narcotics problem. Ch. 709, [1921] N.Y. Laws 2496. The measure made no provision for other laws on the subject. This surprising move was made in the interests of economy, N.Y. Times, Jan. 6, 1921, at 1, col. 8, and with the belief that the drug problem could be better handled by local authorities working in concert with federal agencies. *See id.*, Jan. 9.

all this tumult and in the variety of narcotics proposals suggested ... enacted,[36] marijuana or cannabis was not classified among the restricted drugs until the drafting of the 1927 Act. This act[37] defined cannabis as a "habit-forming drug," [38] and accordingly punished as misdemeanors[39] the control, sale, distribution, administration and dispensing[40] of cannabis except for medical purposes. The penalty provision of the statute did not discriminate among types of offenses, first or subsequent violations, or the prohibited narcotic drugs.[41]

There is no apparent indication in the contemporary commentary of the reasons for inclusion of marijuana in the New York laws. When the 1927 law was passed, public concern was focused on the general need to reduce narcotic addiction; none of the commentators were concerned about marijuana.[42] While there were numerous articles in the media dealing with the problems of the opiates, morphine, cocaine and heroin, only four articles about marijuana appeared in the major New York newspaper during the entire period from 1914 until 1927. In 1923 the *New York Times* noted that the "latest habit forming drug . . . marihuana, which is smoked in a cigarette" was exhibited at a women's club meeting.[43] In 1925 the same paper reported that the drug had been banned in Mexico.[44] One year later, the paper reported the results

1921, § 2, at 1, col. 7; *id.*, May 22, 1921, § 2, at 11, col. 3. An act making illegal the sale of cocaine without a prescription was enacted in 1923. Ch. 130, [1923] N.Y. Laws 160. The possession of opium or cocaine without a prescription was outlawed in 1926. Ch. 650, § 2. [1926] N.Y. Laws 1198.

[36] As late as 1918, a legislative committee that had exhaustively studied the narcotics problem in New York did not mention the use of marijuana and concluded: "The drugs which are the sources of the difficulty are cocaine and eucaine with their salts and derivatives and opium and its derivatives, codeine, morphine and heroin." JOINT LEGISLATIVE COMM. TO INVESTIGATE THE LAWS IN RELATION TO THE DISTRIBUTION AND SALE OF NARCOTIC DRUGS, FINAL REPORT, NEW YORK SENATE DOC. No. 35 (1918), *quoted in* TERRY & PELLENS 833.

[37] The Act of April 5, 1927, repealed both the 1923 and 1926 laws and replaced them with a comprehensive narcotic control scheme. Ch. 672, [1927] N.Y. Laws 1695. This act contained provisions relating to the control and use of narcotic drugs and treatment of addicts; it also exempted certain preparations from its coverage. The act furnished the model for the Uniform Narcotic Drug Act. *See* pp. 1030-31 *infra*.

Subsequently, in 1929, unlawful sale of narcotics was made a felony and all other violations of the 1927 act were made misdemeanors. Ch. 377, [1929] N.Y. Laws 881.

[38] Ch. 672, § 421(14), [1927] N.Y. Laws 1697.

of testing in Panama on the effects of marijuana. The article noted that as a result of these tests the study group concluded marijuana smoking was relatively safe; thus, it was "recommended that no steps be taken by the authorities of the Canal Zone to prevent the sale or use of marijuana and that no special legislation on that subject was needed." [45] Finally, in July 1927, the *Times* reported that a Mexican family was said to have gone insane from eating marijuana.[46] Perhaps the clearest indication of the absence of notice given the marijuana section of the 1927 Act is that none of the articles discussing the Act after its passage refer to marijuana.[47]

It is likely, then, that the inclusion of cannabis in the state law was motivated primarily by the same fear that had provoked the Sanitary Law Amendment in 1914. Use, though still slight, was expected to increase. Throughout the entire New York experience the main argument was preventive: Marijuana use must be prohibited to keep addicts from switching to it as a substitute for the drugs which had become much more difficult to obtain after the enactment of the Harrison Act, and for alcohol after Prohibition.[48] Accordingly, the passage of the Harrison and Volstead Acts were direct causes of the preventive inclusion of marijuana among prohibited drugs. In fact, it has been observed that marijuana use *did* increase during this period.[49]

Another factor that may have influenced the passage of the 1927 Act was the Second Opium Conference at Geneva in 1925,[50] which included Indian hemp within the Convention against Opium and other Dangerous Drugs, even though the United States had withdrawn in

---

> Cocaine in particular is greatly in demand. When prohibition is in force, persons, especially drinkers from compulsion of habit who have been robbed of their daily drink, will naturally resort to cocaine . . . .

Weber, *supra* note 7, at 372.

[49] B. RENBORG, INTERNATIONAL DRUG CONTROL 216 (1947):

> As the campaign against the illicit traffic in opium, morphine, and cocaine drugs made progress and gradually resulted in diminution of the supplies on the illicit market, a marked increase in the illicit traffic and the use of Indian hemp drugs was noticed, more particularly on the North American Continent (the problem of marihuana) and in Egypt (the hashish problem).

[50] See Second Geneva Opium Conference, Convention, Protocol and Final Act, *quoted in* W. WILLOUGHBY, OPIUM AS AN INTERNATIONAL PROBLEM, 534-70 (1925).

1925 from the League of Nations deliberations on controlling and regulating the international traffic in dangerous drugs.[51]

3. The International Scene

The first mention of marijuana on the international front came with the preliminary negotiations for the Hague Conference of 1912. In preparing for this Conference, which represented an attempt to deal with the international opium traffic, the government of Italy proposed that the production and traffic in Indian hemp drugs be included as part of the agenda of the Conference.[52] During the Conference itself, there was no mention of the drug, and the Convention did not include cannabis in its provisions. In addition to the Convention, however, the delegates signed a closing protocol:

> 2. The Conference considers it desirable to study the question of Indian hemp from the statistical and scientific point of view, with the object of regulating its abuses, should the necessity thereof be felt, by internal legislation or by an international agreement.[53]

It was not until just before the Geneva Conference of 1925 that the proposal was mentioned again. In 1923 the following resolution was passed by the Advisory Committee on Traffic in Opium and Other Dangerous Drugs of the League of Nations:

> IV. With reference to the proposal of the Government of the Union of South Africa that Indian hemp should be treated as one of the habit-forming drugs, the Advisory Committee recommends the Council that, in the first instance, the Governments should be invited to furnish to the League information as to the production and use of, and traffic in, this substance in their territories, together with their observations on the proposal of the Government of the Union of South Africa.[54]

At the 1925 meeting in Geneva, the Egyptians led the way in proposing that hashish be included within the Convention.[55] An Egyptian dele-

gate presented a paper on the effects and use of hashish in Egypt. Mr. El Guindy's study is so typical of the so-called scientific or empirical evidence that has been presented to justify the drug's prohibition that the following excerpt must be included. In stating that the real danger of hashish is that it will produce insanity, the Egyptian delegate presented the following:

> The illicit use of hashish is the principal cause of most of the cases of insanity occurring in Egypt. In support of this contention, it may be observed that there are three times as many cases of mental alienation among men as among women, and it is an established fact that men are much more addicted to hashish than women.[56]

The Egyptian proposal was referred to a subcommittee for study and later in the Conference this group reported that the use of Indian hemp drugs should be limited to medical and scientific purposes. The proceedings contain no record of what medical or scientific evidence might have been brought forward to support the inclusion of the Indian hemp drugs in the Convention.[57] Nevertheless, they were the subject of Chapters IV and V of the Convention.[58]

4. Conclusion

The early laws against the cannabis drugs were passed with little public attention. Concern about marijuana was related primarily to the fear that marijuana use would spread, even among whites, as a substitute for the opiates and alcohol made more difficult to obtain by federal legislation. Especially in the western states, this concern was identifiable with the growth of the Mexican-American minority. It is clear that no state undertook any empirical or scientific study of the effects of the drug. Instead they relied on lurid and often unfounded

[56] *Quoted in id.* at 378. Mr. El Guindy concludes by saying: "Generally speaking, the proportion of cases of insanity caused by the use of hashish varies from 3 to 60 percent of the total number of cases occurring in Egypt." *Id.* at 379.

[57] There are no records of these subcommittee hearings, so we can only surmise that the quality of the evidence might have been about as bad as that presented in the floor report of the Egyptian delegation.

[58] Geneva Convention of 1925, *quoted in* W. WILLOUGHBY, *supra* note 50, at 539. Moreover, the Convention defines Indian hemp as follows:

> "Indian hemp" means the dried flowering or fruiting tops of the pistillate plant *Cannabis sativa L.* from which the resin has not been extracted, under whatever name they may be designated in commerce.

Id. at 535

accounts of marijuana's dangers as presented in what little newspaper coverage the drug received. It was simply assumed that cannabis was addictive and would have engendered the same evil effects as opium and cocaine. Apparently, legislators in these states found it easy and uncontroversial to prohibit use of a drug they had never seen or used and which was associated with ethnic minorities and the lower class.

B. Judicial Corroboration

Two significant conclusions appear from a study of the few cases[59] involving convictions for marijuana offenses under the initial wave of state laws. First, the argument regarding a private conduct limitation on the police power had been so discredited it was not even made. Second, the courts, like the legislatures, relied on nonscientific materials to support the proposition that marijuana was an addictive, mind-destroying drug productive of crime and insanity.

In only one case was there a serious constitutional challenge to the validity of the legislation. Appealing a Louisiana conviction for possession of five hundred plants of marijuana, the defendant in *State v. Bonoa*[60] argued not that the state could not punish mere possession but rather that the statute was overbroad, since aside from its use as an intoxicant the marijuana plant was employed in the manufacture of hemp line, in the preparation of useful drugs and for the production of bird seed for canaries. Defendant's contention was that only possession, sale or use for deleterious purposes could be prohibited.

The court's reply was that the drug's deleterious properties outweighed its uses, especially since "[t]he Marijuana plant is not one of the crops of this state."[61] Defendant also offered the *reductio ad absurdum* argument that if possession of the marijuana plant may be prohibited simply because intoxicating resin may be extracted from the flowering tops, then the possession of corn or grapes may be prohibited

[59] In an extensive survey of cases appearing in the Fourth Decennial Digest for the years 1926 to 1936, we could find only eight cases dealing with marijuana under laws enacted prior to the Uniform Narcotic Drug Act. In chronological order: Gonzales v. State, 108 Tex. Crim. 253, 299 S.W. 901 (1927); State v. Franco, 76 Utah 202, 289 P. 100 (1930); State v. Bonoa, 172 La. 955, 136 So. 15 (1931); Santos v. State, 122 Tex. Crim. 69, 53 S.W.2d 609 (1932); Baker v. State, 123 Tex. Crim. 209, 58 S.W.2d 534 (1933); Horton v. State, 123 Tex. Crim. 237, 58 S.W.2d 833 (1933); State v. Navaro, 83 Utah 6, 26 P.2d 955 (1933); People v. Torres, 5 Cal. App. 2d 580, 43 P.2d 374 (Dist. Ct. App. 1935).

[60] 172 La. 955, 136 So. 15 (1931).

[61] *Id.* at 964, 136 So. at 18.

because whiskey and wine may be made from them, or possession of poppies because opium may be extracted from them. To this the court replied that alcohol was less injurious than marijuana and that both alcohol and opium were difficult to prepare from these sources while the marijuana plant was easily converted into tobacco and cigarettes.

The court's reasoning is admirable if we accept the basic premise that the marijuana drug is deleterious. To support this conclusion the court quoted from Solis Cohen Githens' *Pharmacotheraupeutics:*

> The first symptom is usually an exaltation of the mind . . . . The ideas are joyous . . . . Sleep follows . . . . When aroused from sleep . . . the mind . . . passes into the same somnolent condition, which lasts for several hours and is followed by a sense of weakness and extreme mental depression. In certain eastern people . . . perhaps because of continued use, the somnolent action is replaced by complete loss of judgment and restraint such as is seen more often from alcohol. An Arab leader, fighting against the crusaders, had a bodyguard who partook of haschisch, and used to rush madly on their enemies, slaying everyone they met. The name of "haschischin" applied to them has survived as "assassin."
>
> The habitual use of cannabis does not lead to much tolerance, nor do abstinence symptoms follow its withdrawal. It causes, however, a loss of mentality, resembling dementia, which can be recognized even in dogs.[62]

The court also quotes Rusby, Bliss & Ballard, *The Properties and Uses of Drugs:*

> The particular narcosis of cannabis consists in the liberation of the imagination from all restraint . . . . Not rarely, in [the depression] state, an irresistible impulse to the commission of criminal acts will be experienced. Occasionally an entire group of men under the influence of this drug will rush out to engage in violent or bloody deeds.[63]

On these two sources, the entire opinion stands. The allegedly deleterious consequences—criminal activity and insanity—are supported only by the mythical etymology of the word "assassin." The marijuana user's purported propensity toward crime, based on similar and often

CONTINUED

4 OF 33

weaker authority, was the primary rationale underlying passage of the Marihuana Tax Act.[64] So preposterous is this assertion that even the proponents of criminalization—including the Commissioner of the Bureau of Narcotics—later implicitly rejected it.[65]

In any event, the courts were as willing to accept such evidence as the legislatures. In a Utah case, *State v. Navaro*,[66] where the court cited the acknowledged evils of marijuana to repel a vagueness attack,[67] it relied on another set of dubious authorities. First, the court referred to the case of *State v. Diaz*[68] wherein a defendant in a first degree murder prosecution tried to disprove the requisite mens rea by showing that he was under the influence of marijuana at the time of the offense. Diaz had claimed that "his mind was an entire blank as to all that happened to him and stated that after smoking the marijuana he became 'very crazy.' "[69] To corroborate his assertion, defendant summoned a physician whose testimony was summarized in *Diaz* in a passage quoted in full in *Navaro:*

> He stated that [marijuana] is a narcotic and acts upon the central nervous system affecting the brain, producing exhilarating effects and causing one to do things which he otherwise would not do and especially induces acts of violence; that violence is one of the symptoms of an excessive use of marijuana. . . . That the marijuana produces an "I don't care" effect. A man having used liquor and marijuana might deliberately plan a robbery and killing and carry it out and escape, and then later fail to remember anything that had occurred . . . .[70]

Thus an attempt in an adversary setting by an accused to escape criminal responsibility by blaming his offense on marijuana intoxication

[67] Appellant, convicted on an information charging "possession of marijuana," contended that the statute prohibited only possession of the flowering tops and leaves of the marijuana plant. The court held that marijuana was the popular name for the drug, not just the plant, and that the information accordingly charged an offense. For this proposition, it cited dictionaries, other state statutes, articles, cases and texts. It is the court's familiarity with the articles describing the allegedly evil effects of the drug with which we are concerned.

[68] 76 Utah 463, 290 P. 727 (1930).

became medical authority for the scientific hypothesis that marijuana use causes crime.

The second source of support in *Navaro* for the allegedly deleterious effects of marijuana was a 1932 article by Hayes and Bowery (the latter a member of the Wichita, Kansas, Police Department) entitled *Marihuana*.[71] Calling for stricter penalties for marijuana use, the authors stated that during the exhilaration phase, the user is likely to have increased sexual desires[72] and to commit "actions of uncontrollable violence, or even murder." [73] For these propositions, they cited newspaper accounts of crimes the causes of which the reporter attributed to marijuana[74] and police testimony to the same effect.[75] For example, the Chief Detective of the Los Angeles Police Department was quoted as saying:

> In the past we have had officers of this department shot and killed by Marihuana addicts and *have traced the act of murder directly to the influence of Marihuana, with no other motive.* Numerous assaults have been made upon officers and citizens with intent to kill by Marihuana addicts which were directly traceable to the influence of Marihuana.[76]

It should be noted that Hayes and Bowery attributed the violent impulse to the absence of restraint engendered during the so-called exhilaration phase, while each of the authorities cited by the Louisiana court in *Bonoa* attributed the same impulse to the sufferings experienced during the "depression" phase.[77]

The authors also asserted that habitual use leads to a "loss of mental activity, accompanied by a general dullness and indolence, like that of chronic alcoholics or opium eaters," to "destruction of brain tissues" and inevitably to insanity. For this proposition, the authors merely said that "seventeen to twenty per cent of all males admitted to mental hospitals and asylums in India have become insane through the use of this drug." [78]

Finally the court cited an article by Eugene Stanley, the District Attorney of New Orleans, entitled *Marihuana as a Developer of Criminals*.[79] The title conveys the message. We will return to Mr. Stanley in the succeeding section.[80]

The nonchalance with which Utah and Louisiana courts cited sensationalistic, nonscientific sources to support the proposition that marijuana produced crime and insanity suggests how widely accepted this hypothesis was among decision-makers, both judicial and legislative, prior to 1931. Given the prevalence of this attitude, the noninvolvement of the middle class, and the precedent established in the earlier alcohol and narcotics cases, it is not surprising that constitutional challenges were either not made or easily rebuffed. Nor is it surprising that challenges regarding the ambiguity of the word "marijuana" were unsuccessful.[81] The courts, like the legislatures, assumed marijuana caused crime and insanity, and assumed that had public opinion crystallized on the question, it would have favored the suppression of a drug with such evil effects.

IV. Passage of the Uniform Narcotic Drug Act: 1927-1937

Our conclusions to this point bear summarization. During the first two decades of the twentieth century, state as well as national policy was steadfastly opposed to manufacture, sale and consumption of narcotics and alcohol except for medical purposes. Constitutional objections were uniformly ignored, in the narcotics cases primarily because the nexus between the private conduct and public harm was *in fact* a close one, and in the alcohol cases primarily because the legislation was in response to full operation of the public opinion process, to which the courts were willing to defer.

We have also found that public opinion had not crystallized against

[79] Stanley, *Marihuana as a Developer of Criminals*, 2 Am. J. Police Sci. 252 (1931), *cited in* State v. Navaro, 83 Utah 6, 14-15, 26 P.2d 955, 958 (1933).

[80] See p. 1044 *infra*.

[81] *E.g.*, State v. Navaro, 83 Utah 6, 15, 26 P.2d 955, 959 (1933); State v. Bonoa, 172 La. 955, 959, 136 So. 15, 17 (1931). The Texas court was somewhat stricter in a series of cases charging simply sale or possession of "narcotic drugs" without specifying marijuana. On the same day, the court reversed convictions in Baker v. State, 123 Tex. Crim. 209, 58 S.W.2d 534 (1933) (possession); Baker v. State, 123 Tex. Crim. 212, 58 S.W.2d 535 (1933) (sale or possession); and Horton v. State, 123 Tex. Crim. 237, 58 S.W.2d 833 (1933) (possession). On the other hand the court held that an indictment charging "possession of marijuana" is sufficient even though it does not allege that marijuana is a narcotic drug. Santos v. State, 122 Tex. Crim. 69, 53 S.W.2d 609 (1932).

intoxicants generally, although public policy was moving rapidly in that direction. Ultimately, the mere existence of that public policy—even in the form of criminal law—was not sufficient to convert a public antipathy toward the evils of commercial alcohol traffic into opposition to moderate use of alcohol. On the question of private use, the public policy was unenforceable and eventually abandoned. However, with respect to narcotics, the public policy, also expressed through the criminal law, effectively converted narcotics use, in the public view, from a medical problem to a legal-moral problem. Sympathy for unfortunate victims turned into moral indictment. Because other laws and medical advances had reduced the number of accidental addicts, the number of addicts decreased; in this sense the public policy was successful. However, to the extent that this policy effectively ostracized a group of users from the rest of society, drove them to criminal activity to sustain their habit, and engendered a moralistic public image, the stage was set for many ensuing problems the consequences of which have only recently become matters of public debate.

Ancillary to these developments during this period was the classification of marijuana in some half the states as an addictive drug that produced the same evils as the opiate and cocaine—crime, pauperism and insanity. The users, few in number, were primarily Mexicans. But as Mexican immigration increased and the legitimate supply of narcotics and alcohol disappeared, a fear developed, particularly in the western states, that marijuana use would increase, particularly among the white youth. As a result, some twenty-two states restricted marijuana use to medical channels. The private conduct objection having evaporated, the courts uncritically affirmed the legislative classification, accepting on faith nonscientific opinion that marijuana was a "killer weed."

Even though the public opinion process did not operate on the issue during this period, the decision-makers in all probability thought that their actions comported with latent public attitudes. If indeed marijuana caused crime and insanity, of course the public would oppose its use, as it presumably did use of opium and cocaine. Because the users were few in number and confined primarily to a suppressed social and economic minority, there was no voice *which could be heard* to challenge these assumptions. To put it another way, the middle class had successfully frustrated alcohol prohibition because the public opinion process came to reflect its view that the law should not condemn intoxication. Yet because marijuana use was primarily a lower class phenomenon, the middle class was generally unaware of the proposed leg-

islation. The public opinion process did not operate, and decision makers remained uninformed about the drug. Quickly and with neither consideration nor dissent, the laws were enacted, thus establishing a deliberative format followed often in the succeeding decades.

Although the groundwork had been laid, denigration of the "loco weed" was primarily a regional phenomenon until 1932. Nationalization ensued in two fell swoops in the 1930's. First, cannabis was included in an optional provision of the Uniform Narcotic Drug Act proposed in 1932. Second, Congress enacted the Marihuana Tax Act in 1937. In the following sections we shall scrutinize these two watershed developments.

A. Origins of the Uniform Law

As we have suggested, the Harrison Act's masquerade as a revenue measure required residual state legislation in order to effectuate full prohibition of the narcotics trade in America.[1] After its passage most states obediently marched to the tune played in Washington. By 1931 every state had restricted the sale of cocaine and, with the exception of two, the opiates.[2] Thirty-six states had enacted legislation prohibiting unauthorized possession of cocaine[3] and thirty-five prohibited unauthorized possession of the opiates and other restricted drugs.[4] Eight states also prohibited possession of hypodermic syringes.[5] Perhaps the most significant feature of the state response to the Harrison Act was the sharp increase in penalties between 1914 and 1931.[6] Even these penalties, however, seem light in comparison with current penalties.[7]

On the other hand, some influential legislators thought that the Federal Act was sufficient to deal with the problem.[8] And there was a con-

[8] For example, in 1921 New York had repealed its general narcotics provision, ch. 708, [1921] N.Y. Laws 2496. See note 35 at pp. 1017-18 *supra*. Governor Miller of New York at that time stated:

> *Being unable to resolve that conflict of opinion,* I have deemed it the *safest course* to leave the subject to be governed by the Federal statute *until such time at least as it shall more clearly appear in what way that statute may be wisely supplemented by the State.*

siderable lack of uniformity regarding the offenses prohibited and the penalties imposed by the several states. Finally, there was little attention devoted to development of enforcement patterns within and among the states.[9]

With such a variety of state legislation, it is not surprising that little data is available on the enforcement of these laws. Since the *Uniform Crime Statistics*, currently the most reliable source for enforcement data, were first compiled in 1932, there are no figures on the number of drug arrests by state authorities in the 1920's. One commentator asserts:

> As of June 30, 1928, of the 7738 prisoners in federal penitentiaries, 2529 were sentenced for narcotics offenses, 1156 for prohibition law violations, and 1148 for stolen-vehicle transactions. Data are not available for approximately the same number in state institutions at this time.[10]

Despite the significant degree of federal enforcement activity evidenced by the above data, state law enforcement agencies seldom involved themselves with narcotics.[11] Perhaps the best evidence of the lax enforcement of state narcotic laws from 1914 to 1927 is the 1921 call for more effective enforcement of the 1917 Massachusetts anti-narcotic law by the Medical Director of the Boston Municipal Court:

---

missioner Anslinger felt that the states had failed to do their part during this period:

> Notwithstanding the limited power of the Federal Government, state officers immediately became imbued with the erroneous impression that the problem of preventing abuse of narcotic drugs was one now [after the Harrison Act] exclusively cognizable by the National Government, and that the Federal Law alone, enforced, of course, by Federal agencies only, should represent all the control necessary over the illicit narcotic drug traffic.

[11] *See* JOINT LEGISLATIVE COMM. TO INVESTIGATE THE LAWS IN RELATION TO THE DISTRIBUTION AND SALE OF NARCOTIC DRUGS, FINAL REPORT, NEW YORK SENATE DOC. No. 35 (1918):

> No fixed policy exists for the enforcement of the State statutes except in the larger cities of the State but their enforcement has been left to the desultory or spasmodic efforts of local police officials . . . .

Quoted in TERRY & PELLENS 834. *See also* H. BECKER, OUTSIDERS 137-38 (1963).

> Our laws aiming at the suppression of morphinism could perhaps be better, but, no matter whether they be improved or not, they will not have their maximal efficiency without *adequate appropriations* for their enforcement. Even with the insufficient funds now available, more could be reached. I understand, for instance, that there is a *special police force* (white squads) entrusted with the detection and arrest of cases of V.D.L. [Violation of the Drug Law] and that officers are very much hampered by not being allowed to follow suspected persons outside their particular districts.[12]

The general lack of uniformity in anti-narcotic legislation,[13] the weakness of state enforcement procedures,[14] and the growing hysteria about dope fiends and criminality[15] converged in several requests beginning as early as 1927 for a uniform state narcotic law.[16]

The drafting process of the Uniform Narcotic Drug Act must also be viewed against the backdrop of two larger movements: (1) the trend toward the creation and dissemination of uniform state laws by the National Commissioners on Uniform State Laws, a group to which each state sent two representatives appointed by the governor; and (2) the general concern in the late 20's and early 30's about controlling interstate crime, manifested, for example, in the creation of the nearly autonomous Federal Bureau of Investigation in 1930.

Because the concepts of states rights and narrowly construed federal power held such sway in this period, appeal to the National Commissioners was the inevitable recourse for those pressing for uniform anti-narcotic regulations.

B. Drafting the Law

A committee of Commissioners in conjunction with Dr. William C. Woodward, Executive Secretary of the Bureau of Legal Medicine and Legislation of the American Medical Association, prepared and submitted at the 1925 meeting of the Commissioners the First Tentative Draft.[17] The Committee report stated: "It occurs to your committee

[17] 1925 HANDBOOK 977-85.

that the New York Act should be taken as a basis for framing a Uniform Act, and the draft submitted herewith is largely a copy of the New York Act." [18] It appears that the First Draft was drawn up by the Chairman of the Committee alone.[19] It was never presented on the floor of the full meeting but was recommitted for further study.[20] The First Draft included the following definitions:

> (12) "Cannabis indica" or "cannabis sativa" shall include any compound, manufacture, salt, derivative or preparation thereof and any synthetic substitute for any of them identical in chemical composition.
>
> (13) "Habit forming drugs" shall mean coca leaves, opium, cannabis indica or cannabis sativa.[21]

Nowhere in the Committee report or in the Proceedings does there appear an explanation of the inclusion of cannabis under the prohibited or regulated drugs.

The Second Tentative Draft was presented in 1928,[22] and again the draft was not discussed at the Conference but recommitted for further study.[23] The Second Draft was an exact copy of the 1927 New York statute.[24] It retained cannabis in the class of "habit forming drugs." [25] The lack of concern on the part of the Commissioners themselves for the whole narcotics matter is reflected in the remarks of the President of the Conference in introducing a brief statement to the Conference by Dr. Woodward:

> *President Miller:* In view of the importance of the act I think it would not be amiss to listen to the Doctor for a few minutes, that he may point out to us why it is important. In some of the states we do not recognize the importance because it has not been called to our attention.[26]

Moreover, the statements of Dr. Woodward point out that one of the major forces supporting the drafting of the Uniform Act was the

AMA. The doctors not only wanted to protect the public from drug addiction but also sought uniformity among state laws "in order that the profession may have a better understanding of its obligations and duties and of its rights in the use of narcotic drugs." [27]

Two Third Drafts were submitted. The initial one closely resembled the first two Tentative Drafts and was presented in 1929.[28] Again, it was recommitted for further study.[29] The second Third Tentative Draft[30] was the first to remove cannabis from the definition of "habit forming drugs" and to include only a supplemental provision for dealing with the drug.[31] The explanation for this change from the first two drafts is contained in this note following the supplemental section

> *Note:* Because of the many objections raised to the inclusion of cannabis indica, cannabis americana and cannabis sativa in the general list of habit-forming drugs, no mention is made of them in other sections of this act. The foregoing section is presented in order to meet an apparent demand for some method of preventing the use of such drugs for the production and maintenance of undesirable drug addiction. It may be adopted or rejected, as each state sees fit, without affecting the rest of the act.[32]

Judge Deering, the Chairman of the Committee on the Uniform Narcotic Drug Act, recommended recommission for further study because the committee had not yet had a chance to consult with the newly created Bureau of Narcotics. At the time of this conference (August 14, 1930) no one had yet been appointed to fill the office of Commissioner of the Bureau.[33]

After receiving suggestions from the newly appointed Commissioner

[30] 1930 HANDBOOK 485-97.

[31] The provision, which made an exemption for medicinal or scientific use, read in part as follows:

> Section 12. (*Cannabis Indica, Cannabis Americana and Cannabis Sativa.*) No person shall plant, cultivate, produce, manufacture, possess, have under his control, sell, prescribe, administer, dispense or compound cannabis indica, cannabis americana, or cannabis sativa, or any preparation or derivative thereof, or offer the same for sale, administering dispensing or compounding . . . .

Id. at 493.

[32] *Id.* There is no evidence of what objections had been raised. The authors feel certain that the dissenters were birdseed and hemp growers who also objected to the passage of the Marihuana Tax Act. See pp. 1054, 1059 *infra.*

[33] 1930 HANDBOOK 126-27.

Anslinger; the Committee presented a Fourth Tentative Draft to the national conference in September 1931.[34] The section dealing with marijuana was identical to that included in the 1930 revised version of the Third Tentative Draft.[35] The national conference directed the Committee to return the next year with a Fifth Tentative or Final Draft.[36]

The Fifth—and final—Tentative Draft was adopted by the National Conference of Commissioners on October 8, 1932.[37] There were some major changes in the Uniform Act between the Fourth and the Fifth Tentative Drafts with regard to the regulation of marijuana. Although the marijuana provisions remained supplemental to the main body of the Act, any state wishing to regulate sale and possession of marijuana was instructed to simply add cannabis to the definition of "narcotic drugs," in which case all the other provisions of the Act would apply to marijuana as well as the opiates and cocaine.[38] It appears that the change from a supplemental section to a series of amendments to the relevant sections of the Act was preferred by the Narcotics Bureau.[39] The only opposition to adoption of the Final Draft came from some Commissioners who objected to tying the uniform state law to the terms of the Federal Harrison Act.[40] This last obstacle to adoption of the Act was overcome by the argument that a number of states had already passed such legislation so that the federalism problem should not stand in the way; the Act was adopted 26-3.[41] These floor arguments at the national conference are a most important indication that no one challenged or even brought up the issue of the designations of the drugs to be prohibited. Moreover, this brief debate confirms the notion that the Act received very little attention of any of the Commissioners other than those sitting on the committee that drafted it.[42]

[40] 1932 HANDBOOK 95-107.

[41] *Id.* at 107.

[42] From our own computations, the total time spent by all the Commissioners discussing this Act from 1927 to 1932 could not have exceeded one hour. Moreover, the small number of states present at the time of the roll call, as compared with the

Examination of the annual proceedings of the Commissioners immediately suggests several conclusions about the drafting and proposal of the Uniform Narcotic Drug Act. (1) It was drafted in conjunction with the American Medical Association and, after 1930, Commissioner Anslinger of the Federal Bureau of Narcotics. (2) It was not one of the more controversial uniform laws and it was given little consideration during the full meetings of the Commissioners. (3) Impetus for the legislation, especially the optional marijuana provisions, came from the Bureau of Narcotics itself. (4) No scientific study of any kind was undertaken before the optional marijuana section was proposed. (5) The first three tentative drafts included marijuana within the general part of the Act while the last two (including the one finally adopted by the Commissioners) made marijuana the subject of a separate, optional provision. (6) The model for all the drafts of the Uniform Act was the 1927 New York State statute.

C. Passage of the State Laws

By 1937 every state had enacted some form of legislation relating to marijuana, and thirty-five had enacted the Uniform Act.[42] The process by which a previously regional phenomenon became nationwide closely parallels that which characterized the earlier state-by-state developments. The major difference is that the Bureau of Narcotics sought to insure passage of the Act in each state through lobbying and testifying before the legislatures and by propagandizing in channels of public opinion. The Bureau's role has been overstated, however. The same factors that combined to produce the earlier legislation were exacerbated during the nationalization period, 1932-1937, and the legislation probably would have passed just as easily without the efforts of the Bureau.

Use of the drug was still slight and confined to underprivileged or fringe groups who had no access either to public opinion or to the legislators. The middle class had little knowledge and even less interest in the drug and the legislation. Passage of the Act in each state was attended by little publicity, no scientific study and even more blatant ethnic aspersions than the earlier laws. In short, the laws went unnoticed by legal commentators, the press and the public at large, despite the propagandizing efforts of the Bureau of Narcotics.

---

48 that voted on the Uniform Machine Gun Act the day before, indicates that concern for this Act was less than overwhelming.

42 *Tax Act Hearings* 25-26.

1. Use Patterns and Public Knowledge: 1931-1937

As we noted earlier, marijuana use began in this country in states near the Mexican border,[44] "marijuana" in fact being a Mexican label for the cannabis drug. Throughout the 1920's marijuana use was confined primarily to the Mexican-American community; however, by the late 20's use of this drug had spread to many of the larger cities and had become quite popular among some elements in the Black ghettoes.[45] Jazz musicians, dancers and others found the drug a cheap and readily available euphoriant.[46]

Nevertheless, use still remained slight even in 1934. Commissioner Anslinger himself asserted in 1937: "Ten years ago we only heard about it [marijuana] throughout the Southwest . . . . [I]t has only become a national menace in the last 3 years." [47] Still another commentator has written:

> Only in the 1920's was there any significant usage even by the Mexican-American communities in border cities, and only in the mid and late 1920's did Negro, jazz musicians and "degenerate" bohemian sub-cultures start smoking marijuana. Even the most lurid journalists did not claim marijuana "seeped" into society at large until the 1930's and usually the mid-30's.[48]

As late as 1928, the arrest of one Harlem youth for possession of a small amount of marijuana was news.[49] Thus, we conclude that the number of users was still small, although it may have begun to grow around 1935, and that these users were still concentrated regionally in the West and Southwest and socio-economically within the lower-class Mexican-American and Black communities.

[49] N.Y. Times, Oct. 7, 1928, § 2, at 4, col. 6.

At the same time, the overwhelming majority of middle-class Americans in the 1930's knew nothing of marijuana use—they had never seen marijuana and knew no one who used the drug. Prior to 1935 there was little, if any, attention given marijuana in major national magazines[50] and the leading national newspapers.[51] That few middle class Americans in this period knew anything of marijuana or its effects is best illustrated by the fact that the Bureau of Narcotics conducted a campaign to alert people to the dangers of marijuana. The Bureau as early as 1932 began arousing public opinion against marijuana by "an educational campaign describing the drug, its identification and its evil effects." [52] In July 1936, the New York City police were shown marijuana so that they would recognize it growing or in dried, smokeable form.[53] Thus, even policemen had to be shown the plant as late as 1936 to permit effective enforcement of the New York state law. We may accordingly infer that the level of public familiarity with the drug was quite low indeed.[54]

What little information filtered to the middle class was generated by sporadic campaigns by local newspapers detailing the potential evils of marijuana; the accounts, as before, were sensationalistic and tended to exacerbate latent ethnic prejudices. For example, a 1934 newspaper account linked crime in the Southwest with marijuana smoking Mexican-Americans in the region.[55] In a 1935 letter to the editor of the *New York Times*, a Sacramento, California, reader asserted:

> Marijuana, perhaps now the most insidious of our narcotics, is a direct by-product of unrestricted Mexican immigration . . . . Mexican peddlers have been caught distributing sample marijuana cigarettes to school children.[56]

---

[50] There is only one article even vaguely related to marijuana listed prior to 1935—*Our Home Hasheesh Crop*, LITERARY DIGEST, Apr. 3, 1926, at 64. *See* H. BECKER, OUTSIDERS 141 (1963).

[51] From 1923 to 1935 there were only thirteen short articles related in any way to marijuana in the New York Times, even though New York City had banned marijuana as early as 1914 and the state legislature had acted in 1927.

[52] BUREAU OF NARCOTICS, U.S. TREASURY DEP'T, TRAFFIC IN OPIUM AND OTHER DANGEROUS DRUGS 59 (1937). *See also* H. BECKER, OUTSIDERS 140 (1963).

[53] N.Y. Times, July 24, 1936, at 6, col. 3.

[54] In 1923 the *New York Times*, in a short article, reported: "The latest habit forming drug . . . marijuana, which is smoked in a cigarette—was exhibited" at a women's club meeting. N.Y. Times, Jan. 11, 1923, at 24, col. 1.

[55] N.Y. Times, Sept. 16, 1934, § 4, at 6, col. 3.

[56] *Id.*, Sept. 15, 1935, § 4, at 9, col. 4.

The writer went on to demand a quota on Mexicans permitted to enter the country. In testifying in favor of the Marihuana Tax Act, Commissioner Anslinger submitted a letter he had received from the editor of a Colorado newspaper asking the Bureau to help stamp out the marijuana menace. After describing an attack by a Mexican-American, allegedly under the influence of marijuana, on a girl of his region the writer stated:

> I wish I could show you what a small marijuana cigaret can do to one of our degenerate Spanish-speaking residents. That's why our problem is so great; the greatest percentage of our population is composed of Spanish-speaking persons, most of whom are low mentally, because of social and racial conditions.[57]

Again, in the testimony at the hearings on the Marihuana Tax Act the following is excerpted from an article included in the record:

> We find then that Colorado reports that the Mexican population there cultivates on an average of 2 to 3 tons of the weed annually. This the Mexicans make into cigarettes, which they sell at two for 25 cents, mostly to white school students.[58]

Thus, not only did few middle-class Americans know about marijuana and its use, but also what little "information" *was* available provoked an automatic adverse association of the drug with Mexican immigration, crime and the deviant life style in the Black ghettos. Naturally, the impending drug legislation, as had the earlier state legislation, became entangled with society's views of these minority groups.

2. *Role of the Federal Bureau of Narcotics*

It has become quite fashionable among critics of existing marijuana legislation to assert that the sole cause of the illegal status of marijuana has been the crusading zeal of the Federal Bureau of Narcotics and especially of its long-time head, Harry J. Anslinger. Some observers have suggested that the Bureau's activity was produced by bureaucratic exigencies and the need to expand;[59] others have said the Bureau was

[57] *Tax Act Hearings* 32.

[59] Dickson, *Bureaucracy and Morality: An Organizational Perspective on a Moral Crusade*, 16 SOCIAL PROB. 143 (1968).

on a moral crusade;[60] still others have asserted that the Bureau believed its own propaganda about the link between criminality and dope fiends.[61] While much of this may be true, it is clear that the Bureau did not single-handedly conjure up the idea of banning marijuana use. Since many states had already undertaken the regulation of marijuana before the creation of the Bureau in 1930, we cannot credit the Bureau alone with the pressure to outlaw the drug.

At the same time, it is certain that the Federal Bureau of Narcotics' actions quickened the pace of the passage by state legislators of the Uniform Narcotic Drug Act. The Bureau saw the passage of state narcotics laws as one of its primary objectives. To this end we have detailed how directly the Bureau was involved in the creation of the Final Draft of the Uniform Act. After approval of the Final Draft, the Bureau began a significant campaign in the newspapers and legal journals to boost public support for the Uniform Act.[62] By detailing the inability of federal enforcement agencies to deal with the burgeoning narcotics traffic, the Bureau continued to press for passage of the Uniform Act by creating a felt need in the public for such legislation.[63] Despite the efforts of the Bureau, the Uniform Act went virtually unnoticed by legal commentators and periodicals, and by the public media.

3. Legislative Scrutiny and Media Coverage

The Uniform Act was passed by the legislatures of most states without scientific study or debate and without attracting public attention. In examining in detail the passage of the Uniform Act in Virginia and some other selected states, it will be clear that public concern over marijuana succeeded the outlawing of the drug and did not precede it. Our methodology to determine the extent of public attention in a given state at the time of the passage of the act was to review the newspapers of larger cities for the two weeks before and after passage.[64]

[63] *See, e.g.*, N.Y. Times, Sept. 16, 1931, at 37, col. 2.

[64] It seems that if there were any public concern at all about the Uniform Act and its adoption, it should appear at those times in mention of the bill, marijuana or narcotic drugs in general. We used the papers of the larger cities under the assumption

In Virginia the Uniform Narcotic Drug Act passed the House 88-0 on February 16, 1934,[65] and was approved 34-0 by the Senate on February 22.[66] Although the Act as passed in Virginia contained no marijuana provisions, the same legislature the next month passed a bill (H.B. 236), prohibiting "use of opium, marijuana [and] loco weed . . . in the manufacture of cigarettes, cigars" and other tobacco products.[67] This law, which amended a 1910 Virginia statute prohibiting the use of opium in the manufacture of cigarettes,[68] was the first mention of marijuana or any of its derivatives in the Virginia Code.

An examination of the *Richmond Times-Dispatch*, the newspaper of the state capital and perhaps the most influential newspaper in the state at that time, for the period surrounding the enactment of these two provisions (February 1 to March 15, 1934) shows clearly that little, if any, public attention attended their passage. There is no mention at any time of H.B. 236.[69] As for H.B. 94 (the Uniform Act), the *Times-Dispatch* reported on February 7 that the bill had been introduced. This announcement was buried among the list of all bills introduced and referred on February 6.[70] In a February 12 article dealing with "controversial" bills before the House and Senate that week no mention was made of H.B. 94. On March 6, the newspaper recorded: "Among the important bills passed were: . . . [far down the list] the Scott bill, mak-

that they would usually contain the fullest and most accurate account of the business of state legislatures.

[65] VA. HOUSE JOUR. 324 (1934).

[66] VA. SENATE JOUR. 308-09 (1934).

[67] Any manufacturer or manufacturers of cigarettes who shall employ opium, marihuana, loco weed, or any other sedative, narcotic or hypnotic drug, like chemical or substance, either in the tobacco used or paper wrappers of cigarettes, cigars, tobacco or any otherwise undiluted foodstuff or beverage, other than that advertised, sold and used as a drug or medicine, shall be guilty of a misdemeanor, and upon conviction shall be fined not less than one hundred dollars nor more than one thousand dollars, or confined in jail not less than six months nor more than twelve months, or both, for each offense.
Ch. 268, [1934] Va. Acts of Assembly 411 (H.B. 236).

[68] Ch. 246, [1910] Va. Acts of Assembly 358 (codified as amended in VA. CODE ANN. §§ 18.1-345, -346 (Supp. 1970)).

[69] On March 11, 1934, the day after the prohibition of use of opium in cigarettes was amended to include marijuana, the *Richmond Times-Dispatch* did not mention the action, and an article entitled "Bills Passed by Assembly" did not mention any marijuana or narcotic laws. Richmond Times-Dispatch, Mar. 11, 1934, at 4, col. 2. A March 12, six-column article, entitled "Vital Measures Passed in Busy 1934 Assembly" also did not mention either the narcotics legislation or the marijuana amendment. *Id.*, Mar. 12, 1934, at 1, col. 2.

[70] *Id.*, Feb. 7, 1934, at 4, col. 1.

ing the State narcotic law conform to the Federal statute."[71] That the sum of the publicity received by the Uniform Act and the statute that first regulated marijuana in any way in Virginia.

In 1936, the legislature passed a separate statute prohibiting the sale and use of marijuana. This bill—S.B. 289—passed the House and Senate unanimously.[72] The Act prohibited, except for a narrow medical exception, sale, possession, use and cultivation of marijuana.[73] The penalties for violation, interestingly, were more severe than those for violation of the 1934 Uniform Act. Looking again at the *Times-Dispatch* for the period from February 15 to March 19, 1936, we find only one brief article on the new marijuana legislation. After the Senate passed the measure on February 29, the following appeared:

> Among the bills passed by the Senate was the Apperson measure prohibiting the cultivation, sale or distribution of derivatives of the plant cannabis sativa, introduced as an outgrowth of alleged traffic in marihuana cigarettes in Roanoke. It fixes punishment for violation of its provisions at from one to 10 years in the penitentiary, or by confinement in jail for 12 months and a fine of not more than $1,000 or both.
>
> Charges that school children were being induced to become addicts of marihuana cigarettes and that the weed was being cultivated in and near the city on a wide scale were laid before the Roanoke City Council last year. A youth who said he was a former addict of the drug testified before the Council that inhalation of one of the cigarettes would produce a 'cheap drunk' of several days' duration.[74]

No further mention of this statute was made after the House passed it or after the Governor signed it into law.

In order to determine whether the lack of public attention in Virginia was common to other states when the first prohibition of marijuana took place, we have surveyed the leading newspapers of several other states at the times encompassing passage of the law. We tried to select states that had not previously regulated use of the drug under the assumption that more publicity would attend initial legislation than an amendment of existing law.

In New Jersey, Rhode Island, Oregon and West Virginia, for ex-

[71] *Id.*, Mar. 6, 1934, at 2, col. 5.

[72] VA. HOUSE JOUR. 827 (1936); VA. SENATE JOUR. 498 (1936).

[74] Richmond Times-Dispatch, Mar. 1, 1936, at 12, col. 3.

ample, the major newspapers of Newark,[75] Providence,[76] Salem[77] and Charleston,[78] respectively, referred to the Uniform Act only once and to marijuana not at all. In Kentucky, the *Louisville Herald Post* printed only two short references to the Uniform Act,[79] one of which referred to marijuana:

> [Congressman] Kramer added that boys and girls of school age are being led into the use of habit forming drugs by underworld leaders. . . . "[M]uggles" or cigarettes made from marijuana, commonly called loco weed or hemp, are also tabooed under the new state law, it was learned.[80]

Typical of both legislative and newspaper concern about the new law is the following *Charleston Daily Mail* comment:

> A Narcotic Bill
>
> Inconspicuously upon the special calendar of the house of delegates—rather far down upon it—is Engrossed S.B. No. 230, lodging specific powers in the hands of state authorities for the control of the traffic in narcotics. It has passed the Senate unanimously. It should pass the

[75] The *Newark Star Ledger* was surveyed from May 20 to June 10, 1933, a period surrounding the passage of the statute, ch. 186, [1933] N.J. Acts 397, on June 5, 1933. On the day of the signing of the bill, there appeared a short article noting that the Uniform Narcotic Drug Act had become law. Newark Star Ledger, June 5, 1933, at 2.

[76] The statute, ch. 2096, [1934] R.I. Acts 101, was approved April 26, 1934. The *Providence Journal* was surveyed from April 10 to April 28, 1934, and on April 12 there appeared five sentences on the Uniform Act. Providence Journal, Apr. 12, 1934, at 8. On April 21, the law was described in a short article summarizing the business of the legislative session. *Id.*, Apr. 21, 1934, at 7. Neither article mentioned marijuana.

[77] The *Salem Oregon Statesman* in the period from February 8 to February 28, 1935, had only one article dealing with drugs. Salem Oregon Statesman, Feb. 21, 1935, at 2, col. 2.

[78] The Uniform Act was passed in West Virginia on March 8, 1935. Ch. 46, [1935] W. Va. Acts 179. The *Charleston Daily Mail*, which carried detailed legislative news, was surveyed from March 1 to March 20, 1935. On March 1, the legislature reconvened under a special calendar including the Uniform Act. During this period, the Act attracted little attention except for an editorial on March 7. Charleston Daily Mail, Mar. 7, 1935, at 10, col. 1. The bill was mentioned in passing in two other stories on upcoming legislation, and in a report that a federal judge criticized West Virginia's failure to enact the Act. *Id.*, Mar. 6, 1935, at 6, col. 4.

[79] The *Louisville Herald Post* was surveyed from April 15 to June 15, 1934. The marijuana section of the Uniform Act became effective on June 14, 1934. Ch. 142, [1934] Ky. Acts 562. The only reference to the Act was Louisville Herald Post, June 6, 1934, at 10.

[80] *Id.*

> House, and its only danger of defeat there is the very real one that it will become lost in the shuffle of adjournment now but a few hours away.
>
> The bill goes under the name of the uniform narcotic drug act and it is just that. Identical measures for the control by the states of illicit traffic on drugs have been passed by other states, notably the Southern group. Its passage here would result in a broad territory in which there are corresponding laws . . . .[81]

The editorial nowhere mentions marijuana. The bill itself passed in the waning hours of the special session with no subsequent attention given it.[82]

From our survey of these and other states, we have concluded that with but one exception[83] the Virginia experience was the norm. (1) The laws prohibiting use, sale, possession, and distribution of marijuana passed unnoticed by the media. There was no public outcry for such legislation. (2) Quite often the bill was buried beneath more controversial bills in a busy legislative session. (3) In many states the Act was passed late in the session along with myriad other "uncontroversial" laws. (4) Finally, no state undertook independent study to determine the medical facts about marijuana—they relied on information supplied by the Federal Bureau of Narcotics[84] or a few lurid newspaper stories.[85]

4. *Available Medical Opinion*

In conjunction with the fourth conclusion from our state case histories of the passage of this Act, we should examine the extent of medical knowledge that might have been available to legislators had they wanted to conduct an independent evaluation of the dangers of the hemp drugs.

---

[81] Charleston Daily Mail, Mar. 7, 1935, at 10, col. 1.

[82] *Id.*, Mar. 11, 1935, at 1, col. 1, reports: "In the confusion of the closing hours Saturday night the legislature passed many bills, many of them unread and unprinted and not understood."

[83] In Missouri, the passage of the Uniform Act was attended by pressure on the legislature stemming from a hysteria campaign in the *St. Louis Star Times* which contained 5 major articles urging the outlawing of marijuana and presenting lurid case studies of the evils of the drug. These articles were quoted in the *Tax Act Hearings*. *See* St. Louis Star Times, Jan. 17-Feb. 19, 1935.

[84] *See, e.g.*, N.Y. Times, Sept. 15, 1931, at 37, col. 2 (recording Commissioner Anslinger's statements on the need for uniform state laws to regulate marijuana).

[85] In the Missouri case, the legislature, in response to the scare stories in the *St. Louis Star Times*, took only 10 days to present the law, hold quick hearings, and unanimously pass the anti-marijuana legislation.

There were five influential sources for information about the effects of marijuana and hemp on humans. None of these were conducted with the scientific precision characterizing modern studies of drug effects. However, they each deserve mention here either because they deserved attention then or because they heavily influenced later commentators.

The first exhaustive study of the effects of cannabis and the other hemp drugs was done by the British in India. Their Indian Hemp Drugs Commission studied cannabis use among the native population in India in 1893 and 1894,[86] and submitted its conclusions in a 500-page report. The Commission received evidence from 1,193 witnesses, including 335 doctors, and studied the relevant drug-related judicial proceedings and the intake records of every mental hospital in British India. As a result they concluded:

> In regard to the moral effects of the drugs, the Commission are of opinion that their moderate use produces no moral injury whatever. There is no adequate ground for believing that it injuriously affects the character of the consumer. Excessive consumption, on the other hand, both indicates and intensifies moral weakness or depravity. Manifest excess leads directly to loss of self-respect, and thus to moral degradation. In respect to his relations with society, however, even the excessive consumer of hemp drugs is ordinarily inoffensive. His excesses may indeed bring him to degraded poverty which may lead him to dishonest practices; and occasionally, but apparently very rarely indeed, excessive indulgence in hemp drugs may lead to violent crime. But for all practical purposes it may be laid down that there is little or no connection between the use of hemp drugs and crime.[87]

It is quite clear, however, that the Indian Hemp Drug Commission Report was not disseminated in the United States until 1969.[88]

On the other hand, periodic reports of the Panama Canal Zone Governor's Committee to study the physical and moral effects of the use of marijuana *were* available to legislators before the passage of the Uniform Act. After an investigation extending from April to December 1925, the Committee reached the following conclusions:

> There is no evidence that marijuana as grown here is a "habit-forming" drug in the sense in which the term is applied to alcohol,

[86] INDIAN HEMP DRUGS COMMISSION 1893-94, REPORT: MARIJUANA (J. Kaplan ed. 1969).
[87] *Id.* at 264.
[88] *Id.* at vi.

> opium, cocaine etc. or that it has any appreciable deleterious influence on the individual using it.[89]

In 1933, a similar Panama Canal Zone committee reported:

> Delinquencies due to mariajuana smoking which result in trial by military court are negligible in number when compared with delinquencies resulting from the use of alcoholic drinks which also may be classed as stimulants and intoxicants.[90]

About the time that the final Governor's Committee Report from the Canal Zone was completed, a New Orleans physician, Dr. Fossier, completed a study from which he concluded that marijuana was a highly dangerous drug with habit-forming properties.[91] This piece would have remained relatively unnoticed due to the obscurity of the journal in which it was published had it not been picked up by the New Orleans District Attorney, Eugene Stanley, and made the basis for his own article—*Marihuana as a Developer of Criminals*[92]—which appeared in a law enforcement journal. Mr. Stanley stated:

> It is an ideal drug to cut off inhibitions quickly. . . .
>
> At the present time the underworld has been quick to realize the value of this drug in subjugating the will of human derelicts to that of a master mind. Its use sweeps away all restraint, and to its influence may be attributed many of our present day crimes. It has been the experience of the Police and Prosecuting Officials in the South that immediately before the commission of many crimes the use of marihuana cigarettes has been indulged in by criminals so as to relieve themselves from the natural restraint which might deter them from the commission of criminal acts, and to give them the false courage necessary to commit the contemplated crime.[93]

Mr. Stanley's article, based on no empirical data whatsoever, was widely used by courts to corroborate early legislation and by lobbyists to justify the later prohibitive legislation against the hemp drugs.[94]

In 1933 the following colloquy appeared in the Journal of the American Medical Association:

Effects of Cannabis

To the Editor:—I have been hearing about the smoking of cigarets dipped into or medicated with fluidextract of Cannabis americana. I can find nothing about the use of the drug by addicts. What is its immediate effect? What are its late effects? What is the minimum lethal dose? In what way does it differ from or resemble "muggles" in its action? While in Louisiana I was told that the use of marihuana causes dementia. Is this true? Please omit name.

M.D., Illinois.

ANSWER.—The effect of Cannabis americana is the same as that of Cannabis indica; and, of the effect of the latter, the books are so full that it is hardly necessary to detail them here. It must suffice here to say that cannabis, at the height of its action, usually produces hallucinations, with or without euphoria, and that these are followed by a deep sleep. Its most marked after-effect is the liability to the establishment of a craving for the drug, the habitual use of which undermines the intellectual qualities and the social value of the victim and leads to general physical deterioration. It is stated that smokers nearly always become imbecile in time. The minimum lethal dose is unknown, no fatalities having been reported in man. In view of the fact that one dose may kill one dog that has no marked effect on another, one must admit the possibility of a lethal effect on man. In view of what has been said, it must be admitted that "marihuana," which is merely another name for Cannabis indica, may cause dementia.[95]

The reply contains no indication how or where the persons who answered the question got their data. It seems clear from the nature of the response that the medical community was quite uncertain as to the effects of the drug in 1933.

In 1934, Dr. Walter Bromberg, senior psychiatrist at Bellevue Hospital, reported that marijuana was not a habit-forming drug and was far less responsible for crime than other drugs such as alcohol. In this study, Bromberg drew his data from examination of 2,216 inmates convicted of felonies.[96] Dr. Bromberg pointed out that marijuana users tend to be passive in comparison to users of alcohol and that the hemp drugs

[95] 100 J.A.M.A. 601 (1933).

[96] Bromberg, *Marijuana Intoxication: A Clinical Study of Cannabis Sativa Intoxication*, 91 AM. J. PSYCHIATRY 303 (1934).

should lead to crime only in cases of use by already psychopathic types.[97]

This then was the extent of medical evidence available to laymen and legislators alike at the time the Uniform Narcotic Drug Act and the first prohibitions of marijuana were enacted in most states. We can conclude the following from our brief review of the medical literature: (1

---

[97] *Id.* at 309; *see Facts and Fancies About Marijuana*, LITERARY DIGEST, Oct. 24, 1936, at 7-8. This presentation begins by digesting Dr. Bromberg's article for laymen:

> It is clear from this study [of 2,216 criminals convicted of felonies] that in this region the drug is a breeder of crime only when used by psychopathic types in whom the drug allows the emergence of aggressive, sexual or antisocial tendencies. . . . It is quite probable that alcohol is more responsible as an agent for crime than is marihuana.

The article continues:

> The following facts stand out in social and medical reports:
>
> 1. Marihuana is not a habit-forming drug, as is heroin or opium.
>
> 2. It prolongs sensations; it is in high favor as an aphrodisiac.
>
> 3. It is the most inexpensive of drugs; marihuana cigarettes usually selling at from three to twenty-five cents each.

The article then describes the effects of marijuana:

> After smoking from one to three "reefers," if one has not been told what to expect, the first effects of the drug pass almost unnoticed—nothing, perhaps, but a slight twitching of muscles of the neck, back or legs. The mind remains calm and clear. Suddenly, without apparent cause, a chance remark . . . sends the subject into a spasm of violent laughter.
>
> Becoming calm again, while the drug continues to exert its weird effects, the smoker finds ideas crowding through his brain with bewildering rapidity; those around him become slow—dull. Nor is the language of his own tongue swift enough to keep pace with his lightning thoughts.
>
> Soon the self-esteem of the smoker begins to grow in like proportion. . . .
>
> Paradoxically, trifling discomforts become unbearable evils; the flare of a match near-by brings a resentment that is immediately transformed into an overwhelming desire for revenge. But before the "reefer man" could possibly climb to his feet, or even reach a hand for a gun or knife, new thoughts have come crowding in. . . .
>
> Above all other distinguishing effects of marihuana intoxication is the fact that all normal conceptions of time and space are lost.
>
> As in the split-second dream that seems to last the night through, time seems of interminable length; the clock stands still for days.
>
> Vision, too, takes on new concepts. Inconsiderable distances become tremendous. . . .
>
> . . . .
>
> Yet, throughout the intoxication, there is constant awareness that the strange fancies rushing through the mind are not natural, but purely the effects of the drug; unlike the opium-eater, he is acutely conscious of those about him. He has many of the sensations of the gay "drunk" at the ball.

Describing a pot-party:

> There is little noise; windows are shut, keeping the smell of smoking weeds away from what might be curious nostrils.
>
> Nor is there any of the yelling, dashing about, playing of crude jokes or physical violence that often accompany alcoholic parties; under the effects of marihuana, one has a dread of all these things.

Little was really known about the effects of marijuana use—there were few studies and what studies there were had serious methodological flaws. (2) Even if the studies we record had been adequate methodologically, they appeared generally in obscure medical journals not widely read by laymen. (3) Of these studies, most found marijuana relatively harmless especially in contrast to use of alcohol. (4) None of these studies were considered in either the formulation or the passage of the Uniform Act in the states examined. And what is more astounding is that instead of consulting medical opinion, legislators relied on lurid newspaper accounts of marijuana, often provided by defendants in criminal prosecutions whose motivation was to use marijuana to escape criminal responsibility.

5. *Provisions of the Uniform Narcotic Drug Act and Supplemental Virginia Marijuana Statute*

Having studied the circumstances surrounding passage of the Uniform Act and similar legislation in several states between 1932 and 1937, we shall briefly summarize the provisions of those laws.

(*a*) *Classification and Offenses.*—The Virginia legislature made no changes in the Uniform Act as drafted by the Commissioners and did not include the supplementary marijuana provisions in passing that Act.[98] In 1936, Virginia passed special marijuana legislation[99] which defined cannabis exactly as did the definitional provision of the Uniform Act. Both the special marijuana statute in Virginia and the Uniform Act prohibited possession, transfer and cultivation of the drug[100] but did not refer to the more specific acts that later came to be separated and punished more heavily, such as sale to a minor and possession of more than a certain amount.

(*b*) *Penalties.*—The Uniform Act contained no specific penalties for its violations; the matter of supplying the appropriate penalties was left to each state. Virginia punished first violations of its Uniform Act by a fine not exceeding $100 and/or imprisonment in jail not exceeding one year, and second and subsequent offenses by a fine not exceeding $1,000 and/or imprisonment for not more than five years in the penitentiary.[101] The penalties for violation of Virginia's 1936 marijuana

[98] Ch. 86, [1934] Va. Acts of Assembly 81.
[99] Ch. 212, [1936] Va. Acts of Assembly 361.
[100] *Id.*
[101] Ch. 86, § 20, [1934] Va. Acts of Assembly 90.

statute were *stiffer* than for violation of its Uniform Act. Each offense was punishable by imprisonment in the penitentiary for from one to ten years or by confinement in jail for not more than twelve months and/or by a fine up to $1,000, in the discretion of the court or jury.[102]

An analysis of penalties for violation of the marijuana statutes enacted in other states at about the same time indicates Virginia's penalties were atypically harsh. In New Jersey, for instance, the penalty for unlawful possession and sale of marijuana was that attaching to a high misdemeanor.[103] In Rhode Island the penalty for unlawful possession was a fine of not more than $1,000 or imprisonment for not more than three years or both.[104] For unlawful selling, Rhode Island provided a fine of not more than $2,000 or imprisonment for not more than five years or both.[105] In Kentucky the penalty for a first offense violation was a fine of not less than $100 and not more than $500 or jail for not less than thirty days nor more than one year or both. For second and subsequent offenses the statute required imprisonment in the penitentiary for not less than one nor more than five years.[106] Finally, West Virginia penalized a first offender by a fine not exceeding $100 or jail for not exceeding one year or both, and subsequent offenders by fine not exceeding $1,000 or imprisonment in the penitentiary not exceeding five years or both.[107]

This comparison indicates that Virginia penalties could be more severe than the average. Moreover, Virginia did not distinguish in penalty between possession and sale of the drug, and violation of Virginia's separate marijuana law could be more heavily penalized than violation of the Uniform Act.

V. Passage of the Marihuana Tax Act of 1937

The first assertion of federal authority over marijuana use was the Marihuana Tax Act, passed in 1937. The obvious question, from a historical point of view, is why such legislation was thought to be nec-

[102] Ch. 212, § 1(c), [1936] Va. Acts of Assembly 362. The penalty for violation of ch. 268, [1934] Va. Acts of Assembly 411, which prohibited the use of marijuana in the manufacture of cigars and cigarettes, was confinement in jail for from 6 to 12 months and/or a fine of from $100 to $1000.

[103] Ch. 186, § 12, [1933] N.J. Laws 411.

[104] Ch. 2096, § 14, [1934] R.I. Acts 111.

[105] *Id.* § 15.

[106] Ch. 142, [1934] Ky. Acts 562.

[107] Ch. 46, § 23, [1935] W. Va. Acts 192.

essary, especially after the brushfire passage of the Uniform Act and related legislation in every state in the previous few years. Enforcement difficulty and public hysteria are two reasons which have been propounded for the federal action. We subscribe to a third, one which we rejected with respect to the uniform acts—Congress was hoodwinked by the Federal Bureau of Narcotics.

A. State Enforcement of the Uniform Law

One of the primary arguments in support of the Marihuana Tax Act was that the legislation was required to permit and facilitate adequate enforcement of the Uniform Narcotic Drug Act.[1] Initial examination of enforcement statistics after passage of the Uniform Act suggests that marijuana seizures and arrests in most states rose dramatically.

[1] The best example of this argument is contained in Commissioner Anslinger's statement to the congressional committee hearings on the Marihuana Tax Act:

> STATE LAWS
>
> All of the States now have some type of legislation directed against the traffic in marijuana for improper purposes. There is no legislation in effect with respect to the District of Columbia dealing with marijuana traffic. There is unfortunately a loophole in much of this State legislation because of a too narrow definition of this term. Few of the States have a special narcotic law enforcement agency and, speaking generally, considerable training of the regular peace officers will be required together with increased enforcement facilities before a reasonable measure of effectiveness under the State laws can be achieved.
>
> NEED FOR FEDERAL LEGISLATION
>
> Even in States which have legislation controlling in some degree the marijuana traffic, public officials, private citizens, and the press have urged or suggested the need for national legislation dealing with this important problem. A partial list of States wherein officials or the press have urged the need for Federal legislation on the subject are Colorado, Kansas, New Mexico, Louisiana, and Oklahoma.
>
> The uniform State narcotic law has now been adopted by some 35 States, many of these including cannabis or marijuana within the scope of control by that law. However, it has recently been learned that the legislative definition of cannabis in most of these laws is too narrow, and it will be necessary to have the definition amplified in amendatory legislation in most of the States, to accord with the definition in the pending Federal bill. As is the case at present with respect to opium, coca leaves, and their respective alkaloids, the uniform State law does not completely solve the enforcement problem with respect to marijuana but it will provide the necessary supplement to the Federal act and permit cooperation of State and Federal forces, each acting within its respective sphere, toward suppression of traffic for abusive use, no matter in what form the traffic is conducted. The Bureau of Narcotics, under the Marijuana Taxing Act, would continue to act as an informal coordinating agency in the enforcement of the Uniform State law, exchanging information as between the respective State authorities in the methods of procedure and attempting to secure true uniformity in the enforcement of the act in the various States which have adopted it.

Tax Act Hearings 31.

However, we should be careful to note at the outset the inadequacies of most drug statistics, which, especially during this period, do not permit conclusive analysis regarding the extent of enforcement.

Reporting officials frequently do not differentiate among the drugs. Different jurisdictions employ different measures of enforcement—number of arrests, convictions, kilograms of the drug seized, or number of seizures; even where the same measures are used, statistics are often compiled for different time frames. In addition, changes in the definitions in the laws—such as a change from considering cannabis as only the flowering top of the plant to considering it the whole plant—can wildly distort the statistics from year to year. To add to the confusion, enforcement agencies can manipulate the data for their own uses; if they must appear to be attacking the drug problem or to need more resources, they can change radically the statistical appearance of the enforcement problem by using, for example, arrests as their enforcement measure. Finally, the mere passage of prohibitive legislation will in itself be reflected in the enforcement data. This is especially important for our study of enforcement patterns in the states before passage of the Marihuana Tax Act. As one commentator has explained:

> A point that should be obvious but that is sometimes overlooked is that there are no official statistics relating to violations of a drug law until the drug law is enacted. To compare official preenactment and postenactment data is to compare nothing to something, and naturally drug use will appear to rise.[2]

For all these reasons, the drug statistics from the period of the 1930's must be used somewhat hesitantly to support any contention about the extent of state enforcement before the enactment of Marihuana Tax Act. With this caveat in mind, we shall proceed, nevertheless, to do so.

Although Commissioner Anslinger testified at the hearings on the Tax Act that state officials frequently asked for federal assistance,[3] it appears from the Federal Bureau's own statistics that state and municipal agencies were proceeding with vigor to stamp out marijuana use.[4] We

[2] Mandel, *Problems with Official Drug Statistics*, 21 STAN. L. REV. 991, 1002 (1969). This article is the most complete discussion of the present inadequacies of all official drug statistics.

[3] *Tax Act Hearings* 26-27.

[4] The FBN statistics for 1935 through 1937 on quantities (in pounds) of harvested marijuana seized by state and municipal authorities in the major states are as follows:

do not have fully accurate data, but there are indications that both New York and Louisiana were moving against marijuana use. In 1934, the New York police discovered a large field of marijuana growing near the Brooklyn Bridge. In making a related raid, the police also seized 1,000 marijuana cigarettes.[5] In 1935, the police burned a marijuana crop found growing on the grounds of the Welfare Island penitentiary.[6] Throughout 1936, the narcotics division of the New York police found and destroyed several marijuana crops growing in and around the city.[7] Fragmentary figures are available on law enforcement in Louisiana which indicate there were 219 arrests or marijuana charges in New Orleans alone from 1930 until April of 1936.[8] In Louisiana as a whole for 1936 over 1,195 pounds of bulk marijuana were seized.[9]

This evidence suggests that state authorities in areas where marijuana use had become common at all were dealing fairly effectively with the trade in the drug. Although some states may have hoped that passage of a federal law dealing with marijuana would reduce the enforcement burden on state and local police and bring additional federal services and money,[10] the law cannot really be justified as filling an enforcement void. Nevertheless, this was one of the most effective arguments advanced by Commissioner Anslinger in the halls of Congress.

	1935	1936	1937
Louisiana	20	1,196	30
Mississippi	5	1,309	*
New York	372,000	1	*
Ohio	17,314	431	86
Texas	216	463	20
All other states	2,232	1,972	120
TOTALS	391,787	5,372	256

BUREAU OF NARCOTICS, U.S. TREASURY DEP'T, TRAFFIC IN OPIUM AND OTHER DANGEROUS DRUGS 63 (1935) [hereinafter cited as TRAFFIC IN OPIUM]; *id.* at 90 (1936); *id.* at 81 (1937); Part of the erratic quality of these figures may stem from failure to weigh only the dried flowering tops of the plants seized. For example, 256 pounds seized in 1937 may represent a larger quantity of total plants than 391,787 pounds seized in 1935. *See* Mandel, *supra* note 2, at 999.

[5] N.Y. Times, Oct. 18, 1934, at 4, col. 4. The article goes on to refer to "mariajuana [*sic*], or loco weed, which produces a pleasant, relaxed sensation when smoked, and eventually drives the habitual user insane . . . ."

Second, since cannabis had been removed from the *United States Pharmacopoeia* and had no recognized medicinal uses, the variety of medical exceptions in the Harrison Act were inapplicable.[21] Third, even though the Supreme Court had upheld the Harrison Act's prohibition against *purchase* by unregistered persons of the designated drugs, there was some uncertainty whether the earlier 5-4 decision[22] would be followed. Accordingly, the Marihuana Tax Act imposed a prohibitive tax of $100 an ounce on the designated transactions, rather than prohibit the purchases directly.[23]

The brief three days of hearings on the Act[24] present a case study in legislative carelessness. At no time was any primary empirical evidence presented about the effects of the drug, and the participating congressmen seem never to have questioned the assumed evils. Furthermore, the only real concerns seem to have been that farmers would be inconvenienced by having to kill a plant which grew wild in many parts of the country, and that the birdseed, paint and varnish, and domestic hemp industries would be damaged by passage of the law.[25] Finally, the one witness appearing in opposition to the bill, Dr. William C. Woodward, legislative counsel of the American Medical Association and an early and respected participant in the drafting of the Uniform Narcotic Drug Act,[26] was roundly insulted for his audacity in daring to question the wisdom of the Act.

We reproduce in the following few pages some of the dialogue from the hearings, to give the reader the flavor of these ramshackle proceedings, and to allow him to understand more fully the pyramiding of absurdity represented by the amendments of the 1950's. From the hearings we extract contemporary perception of use patterns and harmful effects of marijuana, the quality of medical and other evidence presented, and a short glimpse at how the witnesses were treated by the committee.

1. Who Were Users?

The record of the hearings indicates quite clearly that the Federal

[21] *Tax Act Hearings* 13-14. Earlier state statutes, particularly Virginia's, had taken great pains to outline medical exemptions from the marijuana prohibition. See p. 1040 *supra*.

[23] *Tax Act Hearings* 13-14.

[24] The hearings, including all material not actively discussed but merely read into the record, cover only 124 pages.

[25] *Tax Act Hearings* 77-86; *see* State v. Bonos, 172 La. 955, 136 So. 15 (1931).

[26] See pp. 1030-32 *supra*.

Narcotics Bureau was anxious for the committeemen to believe marijuana use was a relatively new phenomenon that was on the increase in America.[27] Once again, marijuana use and the Mexican minority were closely linked: "The Mexican laborers have brought seeds of this plant into Montana and it is fast becoming a terrible menace, particularly in the counties where sugarbeets are grown."[28] Again, also, marijuana was presented as the agent by which the underworld class hoped to enslave American youth.[29] The youth of the marijuana users was contrasted with the increasing age of the usual opiate addict. Perhaps most interestingly for later developments, Commissioner Anslinger succinctly noted that heroin addicts and marijuana users came from totally different classes and that the use of one drug was unrelated to use of the other:

> Mr. Anslinger. This drug is not being used by those who have been using heroin and morphine. It is being used by a different class, by a much younger group of people. The age of the morphine and heroin addict is increasing all the time, whereas the marihuana smoker is quite young.
>
> Mr. Dingell. I am just wondering whether the marihuana addict graduates into a heroin, an opium or cocaine user.
>
> Mr. Anslinger. No sir; I have not heard of a case of that kind. I think it is an entirely different class. The marihuana addict does not go in that direction.[30]

The hearings shed no more light on who was using the drug and in what numbers.

2. *What's Wrong with Marijuana?*

If the proceedings did not shed light on the patterns of usage, this in no way was an obstacle to unanimity on the evils of the drug—insanity, criminality and death. Three major sources were relied on to support

---

[27] *See Tax Act Hearings* 30-31.

[28] *Id.* at 48.

[29] Quoting Dr. Walter Bromberg, Mr. Anslinger stated:

> Young men between the ages of 16 and 25 are frequent smokers of marihuana; even boys of 10 to 14 are initiated (frequently in school groups); to them as to others, marihuana holds out the thrill. Since the economic depression the number of marihuana smokers was increased by vagrant youths coming into intimate contact with older psychopaths.

Tax Act Hearings 24. *See also id.* at 32-35, 39, 45.

[30] *Id.* at 24.

this consensus: (1) a variety of horror stories from newspapers cited by Mr. Anslinger and others about atrocious criminal acts committed by individuals under the influence of the drug;[31] (2) studies by Eugene Stanley, the District Attorney of New Orleans, linking the drug and the population of the Louisiana jails;[32] and (3) some inconclusive experimentation on dogs.[33] As we noted earlier, the newspaper stories about crimes committed under the influence of marijuana have two things in common: The reports are unsubstantiated, and many of the accused invoked their use of marijuana as a defense to the charge.[34]

The New Orleans report concluded: "After an exhaustive research on marijuana from its earliest history to the present time, this drug is in our judgment the one that must be eliminated entirely." [35] What was this exhaustive research? It appears to have been nothing but quotations from the most hysterical series of newspaper articles to appear at that time[36] and reports of the number of marijuana addicts to be found in the prison population.[37] The relation of these figures to the conclusion that the drug must be regulated was never established.

The Stanley study[38] was even less well documented and even more outrageous in its description of the effects of marijuana use. "It is an ideal drug to quickly cut off inhibitions." [39] For this proposition Stanley relied on the story of the Persian "Assassins" who allegedly committed

[31] *Id.* at 22-23.

[32] *Id.* at 32-37.

[33] *Id.* at 50-52.

[34] *See id.* at 22-23. It is entirely likely that some of these particularly lurid stores were the product of desperate defendants, who, upon being caught red-handed in the commission of crime, sought mitigation of their penalties by claiming to be under the influence of the drug. *See* Bromberg, *Marijuana: A Psychiatric Study*, 113 J.A.M.A. 4 (1939). Bromberg cautions, "The extravagant claims of defense attorneys and the press that crime is caused by addiction to marihuana demands [*sic*] careful scrutiny, at least in this jurisdiction [New York County]." *Id.* at 10.

[35] *Tax Act Hearings* 35.

[36] A good example is the series run by the *St. Louis Star-Times* in early 1935 which featured such articles as the one entitled "Young Slaves to Dope Cigaret Pay Tragic Price for Their Folly" on Jan. 18, 1935.

[37] *See* Gomila & Gomila, *Marihuana—A More Alarming Menace to Society Than All Other Habit-Forming Drugs, quoted in Tax Act Hearings* 32, 34. Mr. F. R. Gomila was public safety director of New Orleans.

[38] Stanley, *Marihuana as a Developer of Criminals*, 2 AM. J. POLICE SCI. 252 (1931). *quoted in Tax Act Hearings* 37-42, is based on, and indeed is nearly a word-for-word paraphrase of, Fossier's article in the *New Orleans Medical Journal*, *supra* note 91 at p. 1044. As we have seen, Fossier, in reaching his conclusions, overlooked the Panama Canal Zone study.

[39] *Tax Act Hearings* 39.

acts of terror while under the influence of hashish. Although Stanley included in his list of references the Indian Hemp Drugs Commission Report, it is clear he made little effort to catalogue the then available data but contented himself with a number of bold and undocumented assertions. In reading the hearings, one continues to expect some report of a medical or scientific survey, and instead one finds these two reports by New Orleans law enforcers. The contrary conclusions of the Canal Zone studies were not even mentioned.

Finally, a scientific study of the effects of marijuana was presented, but, in keeping with the overall tone of the hearings, this was the most preposterous evidence of all. The Treasury Department presented a pharmacologist who had tested the effects of the cannabis drugs on dogs.[40] He concluded that "[c]ontinuous use will tend to cause the degeneration of one part of the brain."[41] One paragraph later, however, this scientist stated: "Only about 1 dog in 300 is very sensitive to the test."[42] Later in the doctor's testimony, after he had stated over and over the potential evils found from the testing on dogs, he was unable to make the crucial link between a dog's response to the drug and the human response. More incredibly, as the following exchange points out, the doctor really had no knowledge of what effect the drug had on the dogs, since he was not familiar with the psychology of dogs:

> Mr. McCormack. Have you experimented upon any animals whose reaction to this drug would be similar to that of human beings.
>
> Dr. Munch. The reason we use dogs is because the reaction of dogs to this drug closely resembles the reaction of human beings.
>
> Mr. McCormack. And the continued use of it, as you have observed the reaction on dogs, has resulted in the disintegration of the personality?
>
> Dr. Munch. Yes. So far as I can tell, not being a dog psychologist . . . .[43]

Dr. Woodward, the sole witness representing the American Medical Association, noted the inadequacy of these medical statistics. We include his statement on that point in full:

---

[40] One assumes the drug was thought to be too dangerous to risk experimentation on people.

[41] *Tax Act Hearings* 48.

[42] *Id.*

[43] *Id.* at 51.

> That there is a certain amount of narcotic addiction of an objectionable character no one will deny. The newspapers have called attention to it so prominently that there must be some grounds for their statements. It has surprised me, however, that the facts on which these statements have been based have not been brought before this committee by competent primary evidence. We are referred to newspaper publications concerning the prevalence of marihuana addiction. We are told that the use of marihuana causes crime.
>
> But yet no one has been produced from the Bureau of Prisons to show the number of prisoners who have been found addicted to the marihuana habit. An informal inquiry shows that the Bureau of Prisons has no evidence on that point.
>
> You have been told that school children are great users of marihuana cigarettes. No one has been summoned from the Children's Bureau to show the nature and extent of the habit, among children.
>
> Inquiry of the Children's Bureau shows that they have had no occasion to investigate it and know nothing particularly of it.
>
> Inquiry of the Office of Education—and they certainly should know something of the prevalence of the habit among the school children of the country, if there is a prevalent habit—indicates that they have had no occasion to investigate and know nothing of it.
>
> Moreover, there is in the Treasury Department itself, the Public Health Service, with its Division of Mental Hygiene. The Division of Mental Hygiene was, in the first place, the Division of Narcotics. It was converted into the Division of Mental Hygiene, I think, about 1930. That particular Bureau has control at the present time of the narcotics farms that were created about 1929 or 1930 and came into operation a few years later. No one has been summoned from that Bureau to give evidence on that point.
>
> Informal inquiry by me indicates that they have had no record of any marihuana or Cannabis addicts who have even been committed to those farms.
>
> The Bureau of the Public Health Service has also a division of pharmacology. If you desire evidence as to the pharmacology of Cannabis, that obviously is the place where you can get direct and primary evidence, rather than the indirect hearsay evidence.[44]

Dr. Woodward's testimony clearly manifests the deficiencies of the hearings, for at no time did the congressional committee hear primary sources of competent medical evidence before labeling cannabis the producer of crime and insanity.

---

[44] *Id.* at 92.

5. How Dare You Dissent!

Following the testimony of the Treasury Department and its witnesses, the only witnesses who came forward were representatives of legitimate industries that feared the Tax Act would damage their businesses, because manufacture of their products required some part or parts of the cannabis plant.[45] These witnesses were assured that the Tax Act would have little if any impact on their operations.[46]

The one witness who opposed the adoption of the Act was roundly accused of obstructionism and bad faith. Dr. Woodward, one of the chief drafters of the Uniform Narcotic Drug Act, appeared on behalf of the AMA to suggest that, if there was to be any regulation of the cannabis drugs at all, it should be added to the Harrison Act and not be the subject of this separate, and he felt inadequately considered, legislative proposal.[47] We have already examined Dr. Woodward's skepticism on the dangers of the drug. He added to this a thinly veiled attack on the lack of cooperation the AMA had received from the Federal Bureau of Narcotics.[48] Finally, he advocated either assisting state enforcement of their existing laws dealing with the drug or at most including marijuana as a regulated and taxed drug under the Harrison Act.

Either because of antipathy to the AMA or because of the audacity of these suggestions, the Committee members savagely attacked both Dr. Woodward and the AMA. Witness the following exchange, starting with the doctor's answer to questions why he had not proposed marijuana legislation:

> Dr. Woodward. In the first place, it is not a medical addiction that is involved and the data do not come before the medical society. You may absolutely forbid the use of Cannabis by any physician, or the disposition of Cannabis by any pharmacist in the country, and you would not have touched your Cannabis addiction as it stands today,

[45] Thus, the following witnesses appeared: Hon. Ralph E. Lozier, General Counsel of the National Institute of Oilseed Products; Raymond G. Scarlett of the birdseed industry; and Joseph B. Hertzfeld, Manager, Feed Department, The Philadelphia Seed Co.

[46] *See id.* at 74.

[47] *Id.* at 87-121.

[48] *Id.* at 87-88 ("During the past 2 years I have visited the Bureau of Narcotics probably 10 or more times. Unfortunately, I had no knowledge that such a bill as this was proposed until after it had been introduced").

because there is no relation between it and the practice of medicine or pharmacy. It is entirely outside of the those two branches.

The Chairman. If the statement that you have just made has any relation to the question that I asked, I just do not have the mind to understand it; I am sorry.

Dr. Woodward. I say that we do not ordinarily come directly to Congress if a department can take care of the matter. I have talked with the Commissioner, with Commissioner Anslinger.

The Chairman. If you want to advise us on legislation, you ought to come here with some constructive proposals, rather than criticism, rather than trying to throw obstacles in the way of something that the Federal Government is trying to do. It has not only an unselfish motive in this, but they have a serious responsibility.

Dr. Woodward. We cannot understand yet, Mr. Chairman, why this bill should have been prepared in secret for 2 years without any intimation, even, to the profession, that it was being prepared.[49]

After accusing Dr. Woodward of obstruction, evasion and bad faith, the Committee did not even thank him for his testimony.[50]

D. Congressional "Deliberation" and Action

We noted earlier that the marijuana "problem" and the proposed federal cure were virtually unnoticed by the general public. Unable to arouse public opinion through its educational campaign, the Bureau of Narcotics nevertheless pushed the proposed legislation through congressional committees. The Committee members were convinced by meaningless evidence that federal action was urgently needed to suppress a problem that was no greater and probably less severe than it had been in the preceding six years when every state had passed legislation to suppress it. The Committee was also convinced, incorrectly, that the public was aware of the evil and demanded federal action.

The debate on the floor of Congress shows both the low public visibility of the legislation and the nonchalance of the legislators. The bill passed the House of Representatives in the very late afternoon of a long

[49] *Id.* at 116.

[50] *See id.* at 121. There is some indication in Fred Vinson's questioning of Dr. Woodward that one cause of the hostility directed at the witness was the growing disfavor with which the New Deal Congress viewed the fairly conservative AMA. Vinson was particularly pointed when he said that the AMA was trying to obstruct here as it had with the Health Care provisions of the Social Security Act. *Id.* at 102-04.

session; many of the members were acquainted neither with marijuana nor with the purpose of the Act. When the bill first came to the House floor late on June 10, 1937, one congressman objected to considering the bill at such a late hour, whereupon the following colloquy occurred:

> Mr. DOUGHTON. I ask unanimous consent for the present consideration of the bill (H.R. 6906) to impose an occupational excise tax upon certain dealers in marihuana, to impose a transfer tax upon certain dealings in marihuana, and to safeguard the revenue therefrom by registry and recording.
>
> The Clerk read the title of the bill.
>
> Mr. SNELL. Mr. Speaker, reserving the right to object, and notwithstanding the fact that my friend, Reed, is in favor of it, is this a matter we should bring up at this late hour of the afternoon? I do not know anything about the bill. It may be all right and it may be that everyone is for it, but as a general principle, I am against bringing up any important legislation, and I suppose this is important, since it comes from the Ways and Means Committee, at this late hour of the day.
>
> . . . .
>
> Mr. RAYBURN. Mr. Speaker, if the gentleman will yield, I may say that the gentleman from North Carolina has stated to me that this bill has a unanimous report from the committee and that there is no controversy about it.
>
> Mr. SNELL. What is the bill?
>
> Mr. RAYBURN. It has something to do with something that is called marihuana. I believe it is a narcotic of some kind.
>
> Mr. FRED M. VINSON. Marihuana is the same as hashish.
>
> Mr. SNELL. Mr. Speaker, I am not going to object but I think it is wrong to consider legislation of this character at this time of night.[51]

On June 14 when the bill finally emerged on the House floor, four representatives in one way or another asked that the proponents explain the provisions of the Act. Instead of a detailed analysis, they received a statement of one of the members of the Ways and Means Committee repeating uncritically the lurid criminal acts Anslinger had attributed to marijuana users at the hearings. After less than two pages of debate, the Act passed without a roll call.[52] When the bill returned as amended from the Senate, the House considered it once again, and adopted as

[51] 81 CONG. REC. 5575 (1937).

[52] *Id.* at 5689-92.

quickly as possible the Senate suggestions, which were all minor.[53] The only question was whether the AMA agreed with the bill. Mr. Fred Vinson not only said they did not object when in fact their committee witness had dissented strenuously, but he also claimed that the bill had AMA *support*. After turning Dr. Woodward's testimony on its head, he also called him by another name, Wharton.[54]

In summary, the Act passed the Congress with little debate and even less public attention. Provoked almost entirely by the Federal Bureau of Narcotics and by a few hysterical state law enforcement agents hoping to get federal support for their activities, the law was tied neither to scientific study nor to enforcement need. The Marihuana Tax Act was hastily drawn, heard, debated and passed; it was the paradigm of the uncontroversial law.

E. Provisions of the Act

Except for the three differences noted above, the Marihauna Tax Act is modelled directly after the earlier federal tax act regulating the opiates —the Harrison Act. As with that Act, the enforcement of the new marijuana tax was left to the Bureau of Narcotics in the Treasury Department. Thus, as a result of the 1937 statute, the jurisdiction of the Bureau was increased substantially.[55]

The Marihuana Tax Act deals specifically with the seeds, resin and most other parts and derivatives of the plant *Cannabis Sativa L.* The Act requires persons importing, producing,[56] selling or in any other way dealing with the drug to pay an occupational tax and to register with the Internal Revenue Service. In addition, all transferees of marijuana are required to file a written order form and to pay a transfer tax, $1 per ounce if registered and a prohibitive $100 per ounce if not registered.[57] Possession of the drug without a written order form constitutes presumptive evidence of noncompliance with the Act. It is also unlawful for a transferor to transfer the drug to a person who has not secured the

---

[53] *Id.* at 7624-25.

[54] *Id.* at 7625.

[55] *See* Dickson, *Bureaucracy and Morality: An Organizational Perspective on a Moral Crusade*, 16 SOCIAL PROB. 143 (1968) (relating this expansion of the Bureau's area of enforcement to their solid support for the need of such federal legislation).

[56] Section 4(b) of the Act (now INT. REV. CODE of 1954, § 4755(a)(2)) gives rise to a presumption that one is a producer of marijuana within the terms of the Act if marijuana is found growing on his property.

[57] The Act does not prohibit possession or purchase of marijuana per se.

order form and paid the tax. As originally enacted, section 12 of the Act assessed a fine of not more than $2,000 and/or imprisonment for not more than five years for violation of each provision of the Act.

VI. The 1950's: Harsher Penalties and a New Rationale—The "Stepping Stone" Theory

The 1950's witnessed the advent of an extremist legislative policy with respect to drugs generally and marijuana in particular. For the first time in our national history, there was public interest in narcotic drugs. Apparently there had been an increase in narcotic drug abuse in the late 40's, and the public mind was ripe for the FBN propaganda. In the paranoid atmosphere of the times, the call for harsher penalties was soothing. Unfortunately, marijuana was caught in the turbulence of this era. Although the pharmacological facts about the drug were beginning to emerge, congressional furor was aroused by the novel assertion, rejected by Commissioner Anslinger in 1937, that use of marijuana led to use of harder drugs. This new plateau of misinformation was to provide the base for continual escalation of penalties and proliferation of offenses throughout the decade.

A. The Boggs Act and Its Progeny: The First Escalation

In 1951 Congress passed the next major piece of federal narcotics legislation[1]—the Boggs Act.[2] The importance of this legislation is that it provided much harsher penalties for all drug violators. Also, for the first time on the federal level, marijuana and other narcotics were lumped together as a result of the Act's provision for uniform penalties for violators of either the Narcotic Drugs Import and Export Act[3] or the Marihuana Tax Act.[4] This indiscriminate treatment of marijuana as just another narcotic drug flew in the face of contemporary testimony challenging the assumption that the hemp drugs were addictive, crime-producing, and likely to lead to insanity and death. New testimony that marijuana was unlikely to be addictive was buried under the new rationale for harsh penalties against offenders of the marijuana laws—that the drug

[1] Between 1937 and 1951, the Uniform Narcotic Drug Act was amended to change the definition of cannabis from the flowering or fruiting tops of just the female plant to include the corresponding parts of the male plant. *See* 1942 Handbook 172-73.

[2] Act of Nov. 2, 1951, ch. 666, 65 Stat. 767.

[3] 21 U.S.C. § 174 (1964).

[4] 26 U.S.C. §§ 4741-76 (1964).

inevitably is the stepping stone to heroin addiction. Eventually, the states followed the federal lead in striking out against drug violators with the same mindless fervor that characterized their anti-communist campaigns.

1. The Problem: Increased Narcotics Use

The hearings before the Subcommittee of the House Ways and Means Committee and the floor debate show that the primary reason for passage of the Boggs Act was the increase in narcotic use in the period 1948-1951. Testimony and evidence from a wide variety of sources indicated an abrupt and substantial increase in addiction, especially among teenagers, between 1947 and 1951.[5] Young people under 21 who had rarely been addicts suddenly became a predominant group involved in addiction and narcotics crimes.[6] Representative Boggs, speaking during the congressional debates on his bill, enunciated a concern which was reflected in many other quarters. After noting that there had been a 24 percent increase in arrests for narcotics violations between 1949 and 1950 and a 77 percent increase between 1948 and 1950, Representative Boggs stated:

> The most shocking part about these figures is the fact that there has been an alarming increase in drug addiction among younger persons. In the first 6 months of 1946, the average age of addicted persons committed . . . at Lexington, Ky. was 37½ years. Only 3 patients were under the age of 21. During the first 6 months of 1950, only 4 years later, the average had dropped to 26.7 years, and 766 patients were under the age of 21. . . .

[5] *Hearings Before the Special Senate Comm. to Investigate Organized Crime in Interstate Commerce*, 82d Cong., 1st Sess., pt. 14, exhibit 1, at 131, 240-41, 266 (1951) [hereinafter cited as *Kefauver Committee Hearings*]. Senator Kefauver stated at the June 26, 1951, session of the hearings:

> Illegal drug use has reached epidemic proportions, according to information secured by this committee from different parts of the country. One of the most alarming aspects is the reported increase in addiction among the younger generation, some of school age.

Id., pt. 14, at 235. *See also* N.Y. Times, June 19, 1951, at 25, col. 1 ("the present wave of juvenile addiction struck us with hurricane force in 1948 and 1949, and in a short time had the two Federal hospitals bursting at the seams") (statement of Commissioner Anslinger).

[6] A 57 year-old addict witness, who had started smoking opium around 1912, stated that he had never seen significant use of drugs by young people until recently and theorized that marijuana was the cause. *Kefauver Committee Hearings*, pt. 14, at 382.

> . . . [I]n New York City alone it has been estimated that 1 out of every 200 teen-agers is now addicted to some type of narcotics.[7]

Later he said, "We need only to recall what we have read in the papers in the past week to realize that more and more younger people are falling into the clutches of unscrupulous dope peddlers . . . ." [8]

Representative Boggs then proceeded to insert in the record eleven newspaper and magazine articles dated between May 2 and July 16, 1951.[9] The *Washington Evening Star* of July 16 (the day of the debate) carried a story on the results of a mayor's committee report on drug addiction in New York City. According to the newspaper, "between 45,000 and 90,000 persons in New York City are using illicit dope. . . . Based on the city's population of 7,835,099, that would be 1 out of every 87 or 1 out of 174 persons." The paper indicated that the report showed an increase in addiction among teenagers, and it called for "more severe penalties for dope sellers, and for wholesale revisions of Federal and State penal statutes relating to sale."

An article in *Time* magazine of June 25, 1951, inserted by Mr. Boggs, related New York City School Superintendent William Jansen's statement that one out of every 200 high school students in the city was a user of habit forming drugs. The article went on to describe the "alarming increases in dope consumption" in other major cities and the ease with which school children obtained narcotics. Another article, in the *Washington Evening Star* of June 12, 1951, contained statements by a member of the staff of the Attorney General of New York to the effect that between 5,000 and 15,000 of New York City's 300,000 high school students were drug addicts. To supplement the stock figures, these articles included the testimony of witnesses who described their own acts of prostitution and thievery, the loss of educational opportunities, the death of addicts from "hot shots," the horrors of withdrawal, and a wide variety of other aspects of drug abuse.

This evidence of increasing use of narcotics, especially among the young, and the fear that narcotics use would continue to spread, presented a problem that Congress felt needed a quick and effective solution.

[8] *Id.* at 8198.

[9] *Id.* at 8198-8204.

2. The Solution: Harsher Penalties

In the same way that the congressional hearings, investigations and debates reflect the impetus for enactment of the Boggs Act, they also reveal the official and public consensus as to the solution—harsher penalties. Perhaps Commissioner Anslinger best described the prevailing climate when he stated:

> Short sentences do not deter. In districts where we get good sentences the traffic does not flourish. . . .
>
> . . . .
>
> There should be a minimum sentence for the second offense. The commercialized transaction, the peddler, the smuggler, those who traffic in narcotics, on the second offense if there were a minimum sentence of 5 years without probation or parole, I think it would just about dry up the traffic.[10]

This statement before the Committee was quoted by Representative Boggs during the congressional debate on his bill, along with the Kefauver Committee's recommendation that "mandatory penalties of imprisonment of at least 5 years should be provided for second offenders." [11] Representative Boggs indicated that his bill was intended to incorporate the Kefauver Committee recommendations of mandatory minimum sentences for drug peddlers and had as its

> principal purpose . . . to remove the power of suspension of sentence and probation in the cases of second and subsequent offenders against the narcotics and marijuana laws, and to provide minimum sentences . . . .[12]

Moreover, Representative Boggs and others supported the mandatory minimum sentences because they felt some federal judges had been lax in enforcing the narcotic laws[13] and because they believed harsher penalties had reduced crimes, particularly kidnapping and the white slave trade, in other areas.[14] Representative Edwin Arthur Hall of New

[10] *Id.* at 8198 (as quoted by Representative Boggs). *See also Kefauver Committee Hearings*, pt. 14, at 430-31 (testimony of Commissioner Anslinger).

[11] 97 CONG. REC. 8198 (1951).

[12] *Id.* at 8196.

[13] *See id.* at 8197, 8207. One of the most critical statements on this point came from Representative Harrison of Virginia who, after noting that narcotics laws violations had been increasing "only" in those jurisdictions where federal judges had failed to impose adequate sentences on recidivists, stated: "Where the judiciary is abusing its discretion, it is the duty of the law-making body to limit the discretion in order that the public may be protected." *Id.* at 8211.

[14] *Id.* at 8207.

York urged substitution of his bill, which provided for minimum sentences of 100 years for dope peddlers.[15] Although there was some opposition to the Boggs Act, notably by Representative Celler, who thought that the mandatory minimum sentence provision would be unjust for addicts,[16] the majority opinion was clearly that mandatory minimum sentences were necessary to insure punishment of peddlers.[17] In response to Mr. Celler's contention that young addicts could be subjected to long prison terms because of the loss of judicial discretion in sentencing, Representative Jenkins stated:

> The enforcing officers will always have sympathy for the unfortunate consumer, especially if he is harmless. These enforcing officers are going to protect the little boys and little girls. They are not going to drag the high school boys and girls before the criminal courts until they know that they are collaborating with the peddlers.[18]

Mr. Boggs presented a more reasonable justification for mandatory minimums:

> [I]t is not the intention of this legislation to affect a teen-ager or any such person who has possession of narcotics. But the gentleman also knows that if we try to make a distinction between possession and peddling that we immediately open the law to all types of abuses.[19]

The Act as passed provided uniform penalties for violations of the Narcotic Drugs Import and Export Act and the Marihuana Tax Act. The penalties prescribed were:

First offense	2 - 5 years
Second offense	5 - 10 years
Third and subsequent offenses	10 - 20 years
Fine for all offenses	$2,000.00

The relatively low fines reflected a congressional belief that monetary penalties were an insignificant deterrent.[20] An essential provision of the

[15] *Id.* at 8209.

[16] *Id.* at 8210.

[17] Representative Celler suggested that harsh mandatory sentences would have "two results: grand juries will refuse to indict and petit juries will refuse to convict." *Id.* at 8206.

[18] *Id.* at 8207.

[19] *Id.* at 8206.

[20] *Id.* at 8197.

Act removed judicial discretion in sentencing by providing that upon conviction for a second or subsequent offense the imposition or execution of the sentence could not be suspended nor probation granted. As in the nontax predecessors of the Boggs Act since 1909 and the Marihuana Tax Act, possession of a narcotic drug was sufficient for conviction unless the defendant could explain the possession to the satisfaction of the jury.[21]

3. Marijuana and the Boggs Act

Congressional and public attention was clearly focused on hard narcotics use, primarily the opiates. Judging from the recorded proceedings, especially the floor debate in the House, marijuana seems to have been along for the ride, much as it had been during enactment of the Uniform Narcotic Drug Act. However, here there was a conscious decision to include marijuana violations in the new penalty provisions. Underlying this decision were determinations that marijuana use had also increased during the later 1940's, that it too was spreading to white teenagers, and that the drug's dangers warranted the harsh treatment contemplated by the Act.

(*a*) *Increased Use.*—To test the allegation of an increase in marijuana use during this period, we have used the seizure and enforcement figures used by the proponents of the legislation. These figures tend to sustain the hypothesis that marijuana traffic increased from 1948 to 1951, following a decline throughout the early 40's. However, the figures are also consistent with other hypotheses, for example that improved enforcement techniques and increased state-federal cooperation had increased arrests.

Federal agents of the Narcotics Bureau began vigorously enforcing the Marihuana Tax Act almost as soon as President Roosevelt signed it into law. From October 1 to December 31, 1937, alone, the FBN made 369 seizures totaling 229 kilograms of the drug.[22] Moreover, state

[21] Representative Keating questioned the constitutionality of the provision. *Id.* at 8206. Apparently Keating accepted Representative Harrison's statement that the language had been in the statutory predecessors for years and had been passed on by the Supreme Court. *Id.* at 8211.

[22] TRAFFIC IN OPIUM 80 (1937). For a full and effective discussion of the flaws in these drug statistics from 1937 until the mid 1940's due to a confusion over what parts of the marijuana plant were to be weighed in determining how much of the drug had been seized, see Mandel, *Problems with Official Drug Statistics,* 21 STAN. L. REV. 991, 998-99 (1969).

officials made extensive seizures either in conjunction with FBN agents or in pursuance of their newly-passed state controls over marijuana.[23]

Marijuana seizures by federal authorities hit their low point in 1945 when only 257 kilograms were taken, 128 of which were seized by the FBN and the rest by United States Customs agents.[24] At this time the FBN had approximately 180 agents.[25] This low seizure figure suggests a decrease in marijuana use throughout the early 1940's.[26]

Beginning in about 1948, however, the arrest and seizure[27] figures rose

---

[23] The following figures are available from 1936 to 1941. After 1941 the FBN ceased publication of the number of seizures by state and municipal authorities:

Year	*Number of seizures*	*Amount seized*
1935	unreported	195 + tons
1936	377	386 tons
1937	335	116 Kg.
1939	289	22,807 Kg.
1940	433	71,129 Kg.
1941	193	19 Kg.

TRAFFIC IN OPIUM 63 (1935); *id.* at 57 (1936); *id.* at 81 (1937); *id.* at 80 (1939); *id.* at 73 (1940); *id.* at 38 (1941). The great discrepancy in these numbers may be one reason the FBN ceased their publication in 1941.

[24] *Id.* at 80 (1945).

[25] *Hearings on Dep'ts of Treasury and Post Office Appropriations for 1951 Before a Subcomm. of the House Comm. on Appropriations*, 81st Cong., 2d Sess., pt. 1, at 128 (1950).

[26] The figures on the amount seized by federal agents from 1939-1945 are as follows:

Year	*No. of Kgs. Seized*	
	FBN	*Customs*
1939	419	63
1940	495	100
1941	396	212
1942	289	44
1943	150	168
1944	247	78
1945	128	129

TRAFFIC IN OPIUM 78 (1939); *id.* at 72 (1940); *id.* at 37 (1941); *id.* at 49 (1942); *id.* at 42 (1943); *id.* at 34 (1944); *id.* at 23 (1945).

[27] The figures for the period 1946-1951 are as follows:

Year	*No. of Kgs. Seized*		*No. of Arrests for Violations of Marijuana Laws*
	FBN	*Customs*	
1946	293	331	953
1947	307	466	911
1948	422	1023	1278
1949	384	1165	1643
1950	323	933	1490
1951	447	558	1177

TRAFFIC IN OPIUM 23, 27 (1946); *id.* at 23, 29 (1947); *id.* at 23, 28 (1948); *id.* at 22, 26 (1949); *id.* at 29, 33 (1950); *id.* at 25, 29 (1951).

dramatically, the arrest figures rising 33 percent from 1947 to 1948. These figures tend to corroborate the Commissioner's assertion that there was a drastic increase in narcotics use between 1948 and 1951[28] and to justify the simultaneous calls for amendment of the narcotics and marijuana laws.[29] On the other hand, these figures could reflect increased or improved enforcement. For example, in 1949 the FBN had begun to encourage the largest cities to form special narcotics squads to deal especially with the drug problem.[30] By 1951, however, only New York and Los Angeles had formed the separate police detail the FBN had requested.[31] Thus even if one were tempted to try to correct for improvements in the law enforcement machinery, the seizure figures for the late 40's and 50's do sustain the notion that the traffic in marijuana increased from 1948 to 1951.

(*b*) *Youthful Users.*—As with the hard narcotics, Congress was especially alarmed by the alleged spread of marijuana to white teenagers and school children. Militating against this proposition is evidence that marijuana use was not widespread among the young as late as 1944. In that year, the famous La Guardia Report reached the following conclusions among others: Marijuana use was widespread in the Borough of Manhattan but tended to be limited to certain areas, notably Harlem; the majority of marijuana smokers were Negroes and Latin-Americans; and marijuana smoking was *not* widespread among school children.[32]

[28] *See Teen-Age Dope Addicts New Problem?*, U.S. NEWS & WORLD REPORT, June 29, 1951, at 18 (interview with Commissioner Anslinger).

[29] See text at note 10 *supra*.

[30] *See Teen-Age Dope Addicts New Problem?*, *supra* note 28, at 19.

[31] Anslinger, *The Facts About Our Teen-Age Addicts*, READERS DIGEST, Oct. 1951, at 139.

[32] The conclusions of the La Guardia Report are discussed in THE MARIHUANA PAPERS 277-410 (D. Solomon ed. 1966). The thirteen conclusions on the sociology of marijuana use are so significant we include them in full:

> From the foregoing study the following conclusions are drawn:
> 1. Marihuana is used extensively in the Borough of Manhattan but the problem is not as acute as it is reported to be in other sections of the United States.
> 2. The introduction of marihuana into this area is recent as compared to other localities.
> 3. The cost of marihuana is low and therefore within the purchasing power of most persons.
> 4. The distribution and use of marihuana is centered in Harlem.
> 5. The majority of marihuana smokers are Negroes and Latin-Americans.
> 6. The consensus among marihuana smokers is that the use of the drug creates a definite feeling of adequacy.
> 7. The practice of smoking marihuana does not lead to addiction in the medical sense of the word.
> 8. The sale and distribution of marihuana is not under the control of any single

The La Guardia study portrays marijuana use in this period as a rather casual adjunct to ghetto life. Since it was not costly, this euphoriant was well within the reach of ghetto residents. It appears that throughout the early 40's marijuana use in the West as well as in the East continued to be associated with the ethnic minorities, especially in the inner city.[33]

The fear that marijuana use would spread to white teenagers is one that has recurred since the earliest legislative cognizance. In fact, it was probably a factor in the early opium laws.[34] We have been unable to confirm whether the fear was justified at this time, but in light of the documentation of increased narcotics use among the young, we shall presume the same use patterns to be true of marijuana.

(*c*) *The Danger: A New Rationale.*—The FBN had begun its educational campaign for harsher marijuana penalties immediately after passage of the Tax Act.[35] In the early years, the campaign was particularly effective with judges. For example, in one of the first cases under the Tax Act, a Colorado judge stated:

> I consider marihuana the worst of all narcotics—far worse than the use of morphine or cocaine. Under its influence men become beasts, just as was the case with [the defendant]. Marihuana destroys life itself. I have no sympathy with those who sell this weed.
>
> In the future I will impose the heaviest penalties. The Government is going to enforce this new law to the letter.[36]

---

organized group.

9. The use of marihuana does not lead to morphine or heroin or cocaine addiction and no effort is made to create a market for these narcotics by stimulating the practice of marihuana smoking.

10. Marihuana is not the determining factor in the commission of major crimes.

11. Marihuana smoking is not widespread among school children.

12. Juvenile delinquency is not associated with the practice of smoking marihuana.

13. The publicity concerning the catastrophic effects of marihuana smoking in New York City is unfounded.

Id. at 307.

[33] The New York trend was also typical of Los Angeles. California Division of Narcotic Enforcement, Marijuana—Our Newest Narcotic Menace, April 1, 1940, at 12. *See also* Note, *Youth and Narcotics*, 1 U.C.L.A.L. REV. 445, 453 (1954) (reporting a breakdown by race of narcotics arrests by the Oakland police department).

[34] For example, in 1895 New York had passed a statute, ch. 1041, § 1, [1895] N.Y. Laws 972, requiring instruction in public schools on the effect of narcotics.

[35] For full accounts of the FBN "educational campaigns" up through the present day, see TRAFFIC IN OPIUM from 1937 to the present. For the full exposition of the FBN's position on the drug user as a criminal before he becomes an addict, see *Recidivism on Narcotic Law Violators*, in TRAFFIC IN OPIUM for each year.

[36] Judge J. Foster Symes of Denver, Colorado, *quoted in* TRAFFIC IN OPIUM 57 (1937).

The crime, pauperism and insanity rationale was accepted unquestioningly as late as 1951.[37] Under this rationale, harsher penalties were certainly as imperative for marijuana offenders as they were for opiate offenders. However, in a paper filed as an exhibit to the hearings[38] on the Boggs Act, Dr. Harris Isbell, Director of Research at the Public Health Service hospital in Lexington, Kentucky, exploded the traditional rationale. He stated that marijuana was not physically addictive.[39] Although he postulated a definition of addiction which amounts to nothing more than chronic intoxication[40] and noted the possibility of "temporary psychoses" in "predisposed individuals," Isbell's description of marijuana was extraordinarily favorable. Before the Kefauver Committee he testified:

> [M]arijuana smokers generally are mildly intoxicated, giggle, laugh, bother no one, and have a good time. They do not stagger or fall, and ordinarily will not attempt to harm anyone.
>
> It has not been proved that smoking marijuana leads to crimes of violence or to crimes of a sexual nature. Smoking marijuana has no unpleasant after-effects, no dependence is developed on the drug, and the practice can easily be stopped at any time. In fact, it is probably easier to stop smoking marijuana cigarettes than tobacco cigarettes.
>
> In predisposed individuals, marijuana may precipitate temporary psychoses and is, therefore, not an innocuous practice with them.[41]

Dr. Isbell's statements that marijuana does not cause a physical dependence were supported by other doctors,[42] prison officials,[43] and per-

---

[37] *See, e.g.*, G. CREIGHTON, NARCOTICS: THEIR LEGITIMATE AND ILLICIT USE (1951).

[38] *Hearings on H.R. 3490 before the Subcomm. on Narcotics of the House Comm. on Ways and Means*, 82d Cong., 1st Sess. 147 (1951) [hereinafter cited as *Boggs Act Hearings*].

[39] Dr. Isbell's paper stated:

> Any definition [of addiction] which makes dependence an essential feature will also not include intoxications with such substances as cocaine, marijuana, and amphetamine, because dependence on these substances is no more marked than is dependence on tobacco and coffee and yet, in some ways, intoxication with cocaine or marijuana is more harmful than is addiction to morphine. Furthermore, definitions which exclude cocaine and marijuana from the list of addicting drugs would cause endless confusion because, in common parlance and legally, both drugs are regarded as addicting.

Id. at 147-48.

[40] *Id.* at 148.

[41] *Kefauver Committee Hearings*, pt. 14, at 119.

[42] *Id.* at 136. *See also Boggs Act Hearings* 101.

[43] *Boggs Act Hearings* 96.

haps most significantly by the statement of a number of narcotics addicts.[44]

Despite this testimony the legislators approved greatly increased penalties for marijuana users. The crucial reason for this severe treatment can be seen in the following colloquy during the House subcommittee hearings:

> Mr. Boggs. From just what little I saw in that demonstration, I have forgotten the figure Dr. Isbell gave, but my recollection is that only a small percentage of those marijuana cases was anything more than a temporary degree of exhiliration . . . .
>
> Mr. Anslinger. The danger is this: Over 50 percent of those young addicts started on marijuana smoking. They started there and graduated to heroin; they took the needle when the thrill of marijuana was gone.[45]

Many others—doctors,[46] crime prevention experts,[47] police and narcotics bureau officials[48]—testified to the link between marijuana use and ultimate heroin addiction. Representative Boggs himself summed up this novel danger of marijuana in one of the few statements even to mention marijuana in House floor debate:

> Our younger people usually start on the road which leads to drug addiction by smoking marijuana. They then graduate into narcotic drugs—cocaine, morphine, and heroin. When these younger persons become addicted to the drugs, heroin, for example, which costs from $8 to $15 per day, they very often must embark on careers of crime . . . and prostitution . . . in order to buy the supply which they need.[49]

---

[44] *Kefauver Committee Hearings*, pt. 14, at 73, 101, 109 (statements of three addicts). *See also id.* at 190, 204 for statements by addicts to the effect that upon moving from marijuana to hard drugs they did not know that the latter were addictive. The implication is clear that marijuana is not addictive. *See id.* at 91.

[45] *Boggs Act Hearings* 206.

[46] *Kefauver Committee Hearings*, pt. 14, at 133.

[47] *Boggs Act Hearings* 105.

[48] *Kefauver Committee Hearings*, pt. 14, at 449; *Boggs Act Hearings* 62.

[49] 97 CONG. REC. 8197-98 (1951). The linkage of marijuana use to heroin was also supplied by some of the testimony by addicts themselves. Of 27 addicts interviewed in part 14 of the *Kefauver Committee Hearings*, 15 testified that they had started their drug use with marijuana. This figure is misleading because a substantial majority of the 12 who had not used marijuana were addicts because of illness or were older addicts who had begun using drugs before marijuana was readily available. *See Kefauver*

The passage of this new Federal Act marked a significant shift in rationale for the illegal status of marijuana; that status became more entrenched by the indiscriminate lumping of marijuana with the other narcotic drugs.

4. The State Response: Mindless Escalation

While the Boggs Act was still pending in Congress, the Bureau of Narcotics encouraged the states to modify their existing narcotic and marijuana legislation to enact "penalties similar to those provided for in the Boggs bill [which] would be of material assistance in the fight against the narcotic traffic." [50] Seventeen states (including Virginia) and the Territory of Alaska responded by passing "little Boggs Acts" by 1953, and eleven other states increased their penalties by 1956.

In 1951, seven states and the Territory of Alaska passed penalty provisions similar to those contained in the Boggs Act.[51] In addition, nine other states amended their drug laws to provide for more severe penalties, but the provisions were neither uniform nor identical to those provided for under the federal measure.[52] In 1952, four more states, including Virginia, amended the penalty provisions of their drug laws

Committee Hearings, pt. 14, at 11, 29, 54, 62, 71, 84, 93, 99, 104, 108, 153, 157, 160, 162, 167, 171, 182, 189, 194, 203, 211, 216, 220, 367, 380, 432, 436. Approximately 5 of the addict witnesses indicated that marijuana did in fact lead to the use of the harder drugs but only one gave definite reasons why he thought this transition inevitably took place. One male addict, after stating that the average age of marijuana smokers was 13 or 14, stated:

> You would very seldom find a person smoking marijuana who does just that, he keeps on, and he gets to the point where he does not have the same drive or feeling that he first had, and it is like a stepping stone, he graduates to heroin.

Kefauver Committee Hearings, pt. 14, at 199-200.

Note that among many of these addicts curiosity and peer group pressure was the primary factor in starting them into the use of hard drugs. *Id.* at 12, 32, 94, 109, 254. Moreover, Representative Boggs introduced some mystery into his statements during the House debates by stating:

> A study in February of 1950 of 602 case reports indicates that 53 percent . . . started their addiction to drugs by reason of association with other addicts, and 7 percent of them started on marijuana.

97 CONG. REC. 8197 (1951). This study is cited on the same page with Representative Boggs' statement that our young people usually start on the road to drug addiction by smoking marijuana.

to bring them in line with the Boggs Act.[53] Six more states followed suit in 1953.[54] Finally, in 1955 and 1956 two states, Ohio and Louisiana respectively, enacted penalty provisions which were substantially more severe than those passed previously in any jurisdiction.[55]

The Virginia "little Boggs Act" was signed into law on April 1, 1952,[56] after having passed both houses unanimously.[57] The measure was regarded as routine, and as one of the "less controversial" proposals to come before the legislature during the 1952 session.[58] It cleared the House on a day when bills were being passed "at the rate of about one a minute during some periods" [59] and won Senate approval during the final rush to complete business in the waning hours of the 1952 General Assembly.

The Act produced three basic changes in Virginia's scheme of narcotics control. It added marijuana to those drugs whose sale was forbidden under the state's version of the Uniform Narcotic Drug Act; it created the new substantive crime of sale to a minor; and it provided for harsher penalties for violations of the drug laws.

Prior to 1952, the Virginia anti-marijuana provision[60] was separate from those provisions governing the sale of "hard" drugs. But the 1952 Act repealed this provision and included marijuana under the state's general narcotic control law. As a result, a person illegally selling marijuana became subject to the same penalties imposed upon a person illegally vending such drugs as heroin, morphine and cocaine.[61]

The heart of the 1952 Act was the provision for stiffer penalties for the violation of Virginia's general narcotic laws prohibiting the sale of drugs without a prescription. For the first offense, the penalty was im-

[61] Ch. 451, [1952] Va. Acts of Assembly 736.

prisonment in the penitentiary for not less than three nor more than five years plus a fine of not more than $1,000. For the second offense, the penalty was imprisonment for not less than five nor more than ten years and a fine of not more than $2,000. For the third and succeeding offenses, the penalties were fines of not more than $3,000 and imprisonment for not less than ten nor more than twenty years.

The 1952 Act also made it a felony to sell, barter, peddle, exchange or otherwise dispense marijuana or any other narcotic drug to a minor. Any person found guilty of such offense was subject to imprisonment for a term of not less than ten years nor more than thirty years, no part of which could be suspended, and a fine of not more than $1,000 for the first offense, $2,000 for the second offense and $3,000 for the third and subsequent offenses. Such a provision exemplifies the increased sophistication of anti-narcotic legislation during the 1950's. Thus, the continued escalation of penalties for drug law violators was followed in Virginia. Moreover, despite the public concern and attention in the national media, in Virginia it is plain that the 1952 amendments to the narcotic laws passed virtually unnoticed in the press.[62]

B. The Late 1950's: Another Escalation of the Penalties

Whether because use had decreased or because the propagandists had accomplished their main mission, the narcotics problem dropped almost entirely from public view after the Boggs Act was passed. Nevertheless, state and federal police authorities, armed with data suggesting that the strengthening of the drug laws had at least halted the increase in drug use, pressed for further increases in penalties in order entirely to root out the drug menace.[63] Without significant debate or public

[62] *See also* Proffit, *An Analysis of the Missouri Narcotic Drug Laws*, 17 Mo. L. Rev. 252 (1952), in which the author shows that narcotic hysteria was closely linked to the general hysteria and "Red Scare" of the early fifties: "The opinion has been advanced that the recent upsurge in consumption [of drugs] is fostered by Communists in an effort to undermine the morals of our youth." *Id.* at 252-53. He cites a Missouri official who so testified before a state legislative committee. For more of the same, see W. Oursler & L. Smith, Narcotics: America's Peril 266 (1952). The Missouri case parallels the Virginia data in that great public concern is expressed about the possible spread of narcotics addiction but little if any separate notice was given marijuana. Everywhere the narcotics evil was linked by veiled references to international communism, especially that of China, the traditional home of the opium habit.

[63] *Hearings on Illicit Narcotics Traffic Before the Subcomm. on Improvements in the Federal Criminal Code of the Senate Comm. on the Judiciary*, 84th Cong., 1st Sess. 57 (1955) [hereinafter cited as *Daniel Committee Hearings*]; *see* H. Anslinger & W. Oursler, The Murderers (1962).

interest, Congress responded by passing the Narcotic Control Act of 1956.[64]

Although the legislators paid even less attention to marijuana than they had in 1951, the precedent there established of classifying marijuana with hard narcotics resulted in a proliferation of marijuana offenses and a further increase in penalties. In some ways, this legislation represents the high-water mark of uninformed public policy regarding marijuana. In almost every respect, the provisions of the Act and the legislative motivation bear absolutely no rational relation to marijuana's pharmacology and to the drug's actual use and traffic patterns.

1. Provisions of the Narcotic Control Act of 1956

Public Law 728, an act intended to make more effective control of the narcotic drugs and marijuana, was approved on July 18, 1956. It amended the Internal Revenue Code of 1954 and the Narcotic Drugs Import and Export Act[65] primarily in the direction of increasing still further the penalties for violation of those acts and proliferating the scope of federal control over the use, possession and sale of narcotic drugs and marijuana.

The new law raised the potential fine for all narcotics and marijuana offenses to $20,000[66] and increased the mandatory minimum sentences for offenses in the prescription, registration and possession categories to two, five and ten years for successive offenses.[67] No distinction was made between addicts and traffickers with regard to these types of violations. Violations of the sale, transfer and smuggling provisions of the Act carry a minimum sentence of five years for first offenses and ten years for all subsequent offenses.[68] In this connection the Act created a new offense by prohibiting illegal importation of marijuana and forbidding knowing receipt, concealment, purchase, sale, and facilitation of transportation or concealment of such illegally imported marijuana.[69] Simple possession was by statute sufficient evidence of guilt to convict.[70] This provision, now 21 U.S.C. § 176a, paralleled a similar importation provision for narcotics originally passed in 1909.

69 *Id.* § 106, 70 Stat. 570 (codified at 21 U.S.C. § 176a (1964)).

70 *Id.* (declared unconstitutional in Leary v. United States, 395 U.S. 6 (1969)).

In addition, any sale or transfer of any drug by an adult to a juvenile was made punishable by a minimum ten-year sentence.[71] Finally, the Act made suspension, probation and parole unavailable to all offenders except those convicted of a first offense for possession, prescription or registration.[72]

In addition to the increases in offenses and penalties, the law contained a wide variety of provisions relating to enforcement. Customs and Narcotics Bureau agents were authorized to carry weapons and to make arrests without a warrant on belief that a drug violation had been committed.[73] The Government was allowed to appeal unfavorable decisions suppressing evidence[74] and to compel testimony from witnesses by a grant of immunity.[75] In a concession to those legislators who favored a wiretapping provision, the new law created a category of offense based on the use of communications instrumentalities in violation of the drug laws.[76] This provision carried penalties of a minimum two-year sentence and up to a $5,000 fine. The Act required that citizens who are drug users and drug law violators must register with the immigration authorities upon entering or leaving the United States.[77] The Act also amended the Immigration and Nationality Act to provide for deportion of alien drug users and drug law violators.[78]

2. *Marijuana—Along for the Ride*

The Narcotic Control Act of 1956 was premised on the same beliefs as was the Boggs Act. Few if any of the legislators recognized that marijuana was in any way different from the physically addictive narcotics.[79] The stepping stone concept was now so widely accepted that only once

[78] *Id.* § 301, 70 Stat. 575 (codified at 8 U.S.C. §§ 1182(a)(5), (23) (1964)).

[79] The House Subcommittee on Narcotics, which produced what became the essentials of the Narcotic Control Act of 1956, revealed its knowledge of the distinction between marijuana and narcotics solely by a footnote to the major heading "Narcotics" which stated in fine print that the term narcotics included marijuana. *See* U.S. Code Cong. & Ad. News 3294 (1956).

during the extensive congressional debates on the House and Senate versions of the bill was the subject of marijuana as a separate substance even raised. In a statement reflecting both ignorance of the basic characteristics of marijuana and naive acceptance of the stepping stone concept, Senator Daniel, Chairman of the Senate subcommittee that investigated the drug problem, described marijuana:

> That is a drug which starts most addicts in the use of drugs. Marihuana, in itself a dangerous drug, can lead to some of the worst crimes committed by those who are addicted to the habit. Evidently, its use leads to the heroin habit and then to the final destruction of the persons addicted.[80]

Because Congress bought the FBN's propaganda lock, stock and barrel, it is not surprising that there was no dissent from the proposition that harsher penalties were the means to eliminate illicit use and sale of all drugs.[81]

3. *Trafficking Patterns*

The 1956 Act reflected an unsupported conception of the nature of the marijuana traffic. Under the assumption that "peddlers" of all drugs, marijuana included, are controlled by organized crime, the Act assessed

---

[80] 102 CONG. REC. 9015 (1956).

[81] Representative Boggs, father of the Boggs Act and Chairman of the Subcommittee on Narcotics of the House Ways and Means Committee, stated that "[e]ffective steps to eliminate the unlawful drug traffic requires . . . the imposition of severe punishment by the courts." *Id.* at 10689. The subcommittee, which had set out to determine the effect of the Boggs Act on narcotics traffic, U.S. CODE CONG. & AD. NEWS 3291 (1956), began its recommendations with calls for further increases in the penalties for narcotics law violations. *Id.* at 3309. In fact, the subcommittee felt that this was the only way to eliminate the drug menace, and recommended that educational programs on the evils of narcotics *not* be instituted in the schools for fear of exciting the curiosity of young people. *Id.* at 3305. Both the House Ways and Means Committee report and the subcommittee report are filled with statements to the effect that harsher penalties are the most effective weapons in the war against illicit narcotics. *Id.* at 3281-3303 *passim*. The Ways and Means Committee conclusion was succinct: "Experience with the Boggs law . . . has clearly demonstrated the efficacy of severe punishment in reducing the illicit commerce in drugs." *Id.* at 3286.

Finally, Senator Daniel, speaking for the Senate subcommittee investigating the drug situation in the United States, found "it absolutely necessary for the Congress of the United States to strengthen the hands of our law enforcement officers and provide higher penalties if we are to stop the narcotics traffic in this country." 102 CONG. REC. 9014 (1956). His subcommittee also recommended the kind of across-the-board increases in penalties that the Act eventually contained.

extremely heavy penalties for sale, especially to minors. For example, the House Ways and Means Committee report noted that "narcotic traffickers . . . are in most cases well organized professional racketeers." [82] Similarly, in recommending prohibition of probation or suspension of sentence for first-offender peddlers, the House subcommittee had asserted that if the first offender peddler problem was not solved, there would eventually be "large scale recruiting of our youth by the upper echelon of traffickers." [83]

While the reference to organized crime was undoubtedly valid with respect to hard drugs, the assumption that marijuana traffic was controlled by large-scale racketeers was completely unsupported. The marijuana distribution pattern today is far different than the distribution pattern for "hard" drugs. On college campuses today, the marijuana seller is likely to be a smoker who has a small amount he wants to sell. Unless one is to believe that organized crime has abdicated a distribution role to "amateurs," it is difficult to imagine that it controlled the distribution of marijuana in 1956. Accordingly, the 1956 Act's widely divergent treatment of sale and use of marijuana may not have been justified at the time of enactment, and it certainly makes little sense today.

4. Origin and Use

A related misconception about the marijuana trade concerns the new importation offenses. Underlying the presumption of knowing concealment of smuggled marijuana arising from possession are two findings—that the mainstay of marijuana traffic is imported from Mexico and that possessors are likely to be aware of that fact. Even in 1956, such findings were dubious.[84] As to the presumption of importation, Commissioner Anslinger's estimate that 90 percent of all marijuana seized by federal authorities had been smuggled from Mexico[85] was grossly misleading. The Federal Bureau of Narcotics had practically abandoned the responsibility for marijuana control to increasingly effective state

[82] U.S. Code Cong. & Ad. News 3283 (1956); *see id.* at 3302.

[83] *Id.* at 3304.

[84] In holding unconstitutional the presumption of knowledge that marijuana was smuggled, the Supreme Court in Leary v. United States, 395 U.S. 6 (1969), relied on the change in use patterns from 1959 to 1967. We think the presumption was unconstitutional when passed in 1956, both as to importation and knowledge.

[85] *Daniel Committee Hearings* 18.

narcotics squads and to the Customs agents.[86] Of course, federal figures taken alone would suggest a high percentage of importation. Furthermore, the Commissioner's conclusion was inconsistent with an essential premise of the Tax Act[87] and with other materials before the Congress,[88] all of which emphasized the large degree of domestic cultivation.

As to the possessor's knowledge, the underlying assumption again was that there was an organized trade pattern so that each user knew where his drug came from. As we know, marijuana was then a casual adjunct to ghetto life. It was a social, rather than an economic, phenomenon limited almost exclusively to unemployed or menially employed members of racial minorities in the center cities.[89] As applied to such a class of people, the presumption is farcical.[90]

5. *Enforcement Patterns*

Although the proliferation of federal offenses suggests on its face that state enforcement was inadequate to cope with marijuana trade or that increased use of the drug presaged increased narcotics addiction, nothing could be farther from the truth. Considering marijuana alone, the 1956 legislation was passed in response to no need at all. The enforcement statistics confirm our hypothesis that marijuana was simply "along for the ride."

---

[86] The decline in the number of FBN arrests and seizures is directly related to the increase in local and state enforcement personnel. This thesis is supported by data from California where statewide arrests soared while federal arrests remained stable. Bureau of Criminal Statistics, California Dep't of Justice, Crime in California (1956). *See also* A. LINDESMITH, THE ADDICT AND THE LAW 238 (1963). One commentator has suggested that except for the years immediately after the passage of the Marihuana Tax Act, when the Bureau wanted to concentrate on its newly acquired enforcement field, the FBN arrest data show clearly its emphasis on the hard narcotics. Mandel, *Problems with Official Drug Statistics*, 21 STAN. L. REV. 991, 1019-20 (1969).

[87] See note 20 at p. 1053 *supra*.

[88] Written materials inserted into the record of the Senate hearings included the testimony of an experienced federal Customs official that high quality marijuana was being grown near the Texas cities of Laredo and Brownsville. *Daniel Committee Hearings* 3488-89. In addition, the Attorney General of Ohio noted that marijuana "may grow unnoticed along roadsides and vacant lots in many parts of the country." *Id.* at 4814. Also, a bulletin issued by the Philadelphia Police Academy recited that "[p]lenty of marijuana is found growing in this city." *Id.* at 599.

[89] Blum, *Mind-Altering Drugs and Dangerous Behavior: Dangerous Drugs*, in THE PRESIDENT'S COMMISSION ON LAW ENFORCEMENT AND ADMINISTRATION OF JUSTICE, TASK FORCE REPORT: NARCOTICS AND DRUG ABUSE 21, 24 (1967); Bouquet, *Cannabis*, 3 U.N. BULL. ON NARCOTICS, Jan. 1951, at 22, 32-33.

[90] This is especially true with respect to the young and black minorities. The

First, as we noted above, federal arrests declined continually after 1952.[91] Although attributable in part to increased state enforcement and to a conscious FBN decision to concentrate on narcotics, the figures do suggest a decline in or at least a stabilization of marijuana use by the middle fifties, even in areas in which narcotics use continued unabated. Second, the class of users does not seem to have changed at all during this period. Arrest statistics still indicate that use was centered in the ghetto areas of major cities[93] in California, Texas, Louisiana, Michigan, New York and Illinois.[94] However, because statistics were not refined according to race, age, sex and often even the drug used,[95] we cannot state categorically that there was no change in use patterns.[96]

6. The Epitome of Irrationality: Virginia's 1958 Amendment

In 1958, Virginia's Uniform Drug Act was further amended to make the "possession of illegally acquired narcotic drugs [which included marijuana] in any quantity greater than twenty-five grains, if in solid form, or eight ounces, if in liquid form," a crime punishable by a fine of not more than $5,000 and imprisonment for not less than twenty nor more than forty years.[97] The effect of this enactment was to provide a penalty for illegal possession that was more than twice as severe as the penalty for unlawful sale and one and one-half times more stringent than that for sale to a minor. It is incredible that despite the extreme

---

presumption has validity only as applied to recently immigrated Mexicans. *Cf.* Chein, *The Status of Sociological and Social Psychological Knowledge Concerning Narcotics*, in NARCOTIC DRUG ADDICTION PROBLEMS 146, 155 (R. Livingston ed. 1963). Mr. Chein reports a shift in drug use from 1930-1960 from old to young and a continued increase in the percentage of drug users who are Black or Spanish-speaking.

[91] The number of federal arrests for marijuana violations fell from 1288 in 1952 to 169 in 1960. TRAFFIC IN OPIUM 26 (1952); *id.* at 69 (1960).

[92] By 1954, many major states and cities had special narcotics squads. *See Daniel Committee Hearings* 13-14, 110.

[93] *Cf.* TRAFFIC IN OPIUM 66 (1956); *id.* at 41 (1959). The FBN charts show clearly the extraordinary incidence of drug abuse among Blacks, Mexican-Americans and other minority communities.

[94] *Daniel Committee Hearings*, exhibit 7, at 267-71. Local arrests in those six states accounted for 2,822 of the 3,205 marijuana arrests made by local law enforcers in 1954.

[95] For example, the statistics in TRAFFIC IN OPIUM seldom even distinguish among the drugs involved, and the FBI Uniform Crime Statistics frequently report all drug related arrests together, with no delineation of the type of drug used or the nature of the offender.

[96] Chein, *supra* note 90, at 152, suggests that whatever patterns of drug use existed in the fifties were merely continuations of patterns observed in the thirties.

[97] Ch. 535, [1958] Va. Acts of Assembly 675.

harshness of this penalty, the measure passed both houses of the General Assembly with but one dissenting vote, and no mention was made of it in the *Richmond Times-Dispatch* during the period of February 14 to April 7, 1958.

In conclusion, the Federal Narcotic Control Act of 1956 and subsequent state legislation reflect the same basic congressional and public misconceptions about the nature and dangers of marijuana that characterized the early fifties. Even more unchanged, and in fact strengthened by results under the Boggs Act, was the assumption that the key to the solution of the narcotic drug problem was the imposition of harsher penalties on both users and traffickers in illicit drugs. Classification of marijuana with narcotic drugs was now a foregone conclusion. In fact, legislators seemed less aware that marijuana was a distinct substance than they had been in 1951.

VII. Marijuana Users in the Courts: 1930-1965

Having studied the evolution of legislative hostility to marijuana from a regional phenomenon with racial overtones to a nationwide paranoia, it is worthwhile to consider the fate of marijuana users in the courts during this evolutionary period. After the courts had summarily rejected the substantive constitutional arguments, appeals in marijuana cases tended to focus on three contentions particularly germane to drug violations: procedural objections arising from interrelated statutory schemes on the state and federal levels punishing essentially the same conduct; objections to police conduct intrinsic to victimless crimes; and objections to sufficiency of evidence at trial. Like their legislative colleagues, state and federal judges translated what they knew of the drug's mythical effects into overt hostility. Coupled with the traditionally conservative treatment afforded the rights of criminal defendants, especially in state prosecutions, this judicial hostility produced ever-lengthening sentences and few reversals.

A. Statutory Fantasies: The Complications of Federal Legislation

1. Quadruple "Jeopardy" and the "Killer Weed"

When Congress passed the Marihuana Tax Act in 1937, marijuana had already been included in the Uniform Narcotic Drug Act and every state had enacted some form of marijuana prohibition.[1] In addition to

[1] See p. 1034 *supra*.

its ostensible revenue-raising function, the Act was obviously designed both to deter further use of the drug[2] and to facilitate enforcement of the state laws.[3] The statute assured the availability to state prosecutors of the order forms filed with the IRS at the time of payment of the tax.[4] Congress had thought that the order forms and registration requirements would develop an "adequate means of publicizing dealings in marihuana in order to tax and control the traffic effectively."[5]

Thus, after 1937, possession of marijuana without filing the transfer form and paying the federal tax constituted a violation of both state and federal law;[6] yet filing the form and paying the tax would probably not have eliminated the buyer's exposure to prosecution under state law. Indeed, compliance would probably have readily identified the buyer to state officials. To this unfairness the courts paid no heed, noting that exposure to state and federal prosecution for the same act did not constitute double jeopardy[7] and that the fifth amendment did not protect defendants from prosecution for violation of state law.[8]

---

[2] *See, e.g., Hearings on H.R. 6506 Before a Subcomm. of the Senate Comm. on Finance*, 75th Cong., 1st Sess. 5-7 (1937); H.R. Rep. No. 792, 75th Cong., 1st Sess. 1-3 (1937).

[3] *See* Leary v. United States, 395 U.S. 6, 26-27 (1969).

[4] 26 U.S.C. § 4773 (1964).

[5] H.R. Rep. No. 792, 75th Cong., 1st Sess. 2 (1937); S. Rep. No. 900, 75th Cong., 1st Sess. 3 (1937).

[6] With minor exceptions, the Marihuana Tax Act requires all transactions in marijuana to be carried out by written order form. 26 U.S.C. §§ 4741-44 (1964). It is unlawful for a transferor to transfer except by such form obtained by the transferee, 26 U.S.C. § 4742 (1964), and for the transferee to acquire, transport or conceal marijuana without filing the transfer form, registering with the IRS and paying the applicable transfer tax. 26 U.S.C. § 4744(a) (1964). For heretofore unregistered persons, that tax is $100 an ounce. 26 U.S.C. § 4741 (1964). Since marijuana was excised from the United States Pharmacopoeia, there have been few legitimate transactions by registered persons. The President's Commission on Law Enforcement and Administration of Justice, Report: The Challenge of Crime in a Free Society 214 (1967). Since the tax is otherwise prohibitive, the Act is in effect almost entirely a criminal law; the crime is having anything to do with marijuana—possession, sale, acquisition or importation—since proof of possession coupled with failure, after reasonable notice and demand by the Secretary of the Treasury or his delegate, to produce the transfer form is "presumptive evidence" of guilt. 26 U.S.C. § 4744(a) (1964).

[7] *Cf.* Abbate v. United States, 359 U.S. 187 (1959); Bartkus v. Illinois, 359 U.S. 121 (1959); United States v. Lanza, 260 U.S. 377 (1922). One state court held, as an interpretation of state legislative policy rather than under constitutional compulsion, that acquittal of a federal marijuana possession charge would constitute a defense to the same state charge. State v. Wortham, 63 Ariz. 148, 160 P.2d 352 (1945).

[8] *See* Leary v. United States, 383 F.2d 851, 870 (5th Cir. 1967), *rev'd*, 395 U.S. 6 (1969); Haynes v. United States, 339 F.2d 30, 31-32 (5th Cir.), *cert. denied*, 380 U.S. 924 (1965).

After passage of the 1956 federal narcotic drug legislation,[9] possession of marijuana constituted at least one, and often two, additional crimes. First, the Narcotic Drugs Import and Export Act was amended[10] in 1956 to punish directly illegal importation[11] of marijuana or other dealings in the drug with knowledge that it had been illegally imported. Since mere possession was sufficient evidence to convict under the Act,[12] possession without registration and order form now constituted three crimes, and compliance with the filing and tax provisions would have exposed the defendant to liability under state law and under the importation provision if the original importation was illegal. Again the courts saw no fifth amendment violation.[13] Second, another provision of the 1956 package required every person addicted to or using narcotics or convicted of a violation of the narcotics or marijuana laws punishable by over one year's imprisonment to register upon leaving the country.[14] Designed to aid the Government in identifying potential smugglers, the statute was upheld, as a strict liability offense,[15] against a multitude of constitutional challenges.[16] Since penalties for marijuana possession almost uniformly exceeded one year's imprisonment during this period, a first offense possession conviction by either sovereign triggered the registration provision.

2. *Statutory Presumptions*

Because the federal statutes punished sale and possession of marijuana only indirectly, each had to bridge the gap between those acts and the

[9] See pp. 1077-78 *supra*.

[10] 21 U.S.C. § 176a (1964).

[11] Importation "contrary to law" was that in violation of the Marihuana Tax Act, 26 U.S.C. § 4755 (1964), or the Customs Act, 19 U.S.C. §§ 1496-97 (1964).

[12] See note 19 *infra* and accompanying text.

[13] *See, e.g.*, Rule v. United States, 362 F.2d 215 (5th Cir. 1966), *cert. denied*, 385 U.S. 1018 (1967).

[14] 18 U.S.C. § 1407 (1964).

[15] Application of the statute was particularly harsh. Even though defendant, found guilty of a drug offense and sent to the California Youth Authority for several months, had been told upon release that his record was clean, the court held that he had violated the statute by failing to register. Adams v. United States, 299 F.2d 327 (9th Cir. 1962).

[16] *See* Palma v. United States, 261 F.2d 93 (5th Cir. 1958); Reyes v. United States, 258 F.2d 774 (9th Cir. 1958); United States v. Eramdjian, 155 F. Supp. 914 (S.D. Cal. 1957). The courts struggled mightily with arbitrariness, vagueness, right to travel, self-incrimination, and equal protection arguments, but upheld the statute. *But cf.* Russell v. United States, 306 F.2d 402 (9th Cir. 1962) (gun registration requirement unconstitutional since it required admission of presumptively unlawful possession).

technical crimes—tax violations and importation-related acts. As a bootstrap from the federal taxing power to a federal police power, Congress chose presumptions. Thus, under the Marihuana Tax Act, possession plus failure to produce the required forms was presumptive evidence of the criminal act—failure to pay the tax[17]—and the courts had no trouble upholding this provision.[18] In addition, under the Import and Export Act possession of marijuana constituted presumptive evidence of illegal importation and of defendant's knowledge of such importation.[19]

Against a rash of attacks on the rationality of this presumption, the lower federal courts[20] noted that the Supreme Court had upheld the same statutory language in the original Federal Import and Export Act with respect to opium,[21] and that there was sufficient general knowledge that most marijuana was imported from Mexico to make the presumption rational. Although the Ninth Circuit at one time indicated that a defendant could rebut the presumption by showing that the marijuana in his possession was manicured and therefore more likely to have been domestically grown,[22] that court later held that such proof was insufficient and that the defendant must also show actual domestic production.[23]

[17] 26 U.S.C. § 4744(a) (1964).

[18] *E.g.*, Manning v. United States, 274 F.2d 926 (5th Cir.), *rev'd on other grounds on rehearing*, 280 F.2d 422 (5th Cir. 1960).

This provision was early interpreted *not* to require government agents to request the transfer form at the time of arrest, the courts holding that possession of the form was an affirmative defense. *E.g.*, Hill v. United States, 261 F.2d 483 (9th Cir. 1958); Hensley v. United States, 160 F.2d 257 (D.C. Cir.), *cert. denied*, 331 U.S. 817 (1947).

[19] 21 U.S.C. § 176a (1964).

[20] Leary v. United States, 383 F.2d 851, 869 (5th Cir. 1967), *rev'd*, 395 U.S. 6 (1969); Borne v. United States, 332 F.2d 565 (5th Cir. 1964); United States v. Gibson, 310 F.2d 79 (2d Cir. 1962); Claypole v. United States, 280 F.2d 768 (9th Cir. 1960); Butler v. United States, 273 F.2d 436 (9th Cir. 1959); Caudillo v. United States, 253 F.2d 513 (9th Cir.), *cert. denied*, 357 U.S. 931 (1958).

[21] Yee Hem v. United States, 268 U.S. 178 (1925).

[22] Caudillo v. United States, 253 F.2d 513 (9th Cir.), *cert. denied*, 357 U.S. 931 (1958). Implying that the presumption of importation was a rule of evidence, not of substantive law, the court noted that imported marijuana was ordinarily composed of mixed twigs and stems since the growers waited until maturity before harvesting. In the United States, on the other hand, growers avoided police detection by picking individual leaves before the plant matured. Since appellant possessed mixed twigs and stems, the court upheld application of the presumption; the clear suggestion, however, was that the presumption would not be applied to manicured marijuana.

[23] Costello v. United States, 324 F.2d 260 (9th Cir. 1963), *cert. denied*, 376 U.S. 930 (1964).

B. Attacks on State Legislation

Most attacks on the state statutes focused on the vagueness of statutory terms—marijuana, however spelled, or cannabis or Indian Hemp[24]—both as a scientific matter and in terms of common experience.[25] Predictably, however, few state courts were of a mind to inhibit legislative proscription of the "killer weed." Due in part to greatly exaggerated conceptions about the effects of the drug[26] and in part to the ease with which the mature plant is processed for the outlawed purposes,[27] the courts construed these statutory definitions as broadly as possible,[28] despite the traditional rule of strict construction of criminal statutes.

With the progressive increase in the severity of penalties which accompanied adoption of the Uniform Act in the 1930's and 1940's and the surge of amendments in the 1950's in the wake of the Boggs Act,[29]

---

[24] Use of the Latin word "cannabis" was challenged as an unconstitutionally vague definition of the prohibited substance in People v. Oliver, 66 Cal. App. 2d 431, 152 P.2d 329 (Dist. Ct. App. 1944), on the basis of an early holding that the use of Latin to define a sex crime was unconstitutionally vague, *Ex parte* Lockett, 179 Cal. 581, 178 P. 134 (1919) (fellatio and cunnilingus). In rejecting the vagueness argument, the court held that "cannabis" was later explained in the statute by the use of the word "marijuana" and that the two words were synonymous. *See* People v. Martinez, 117 Cal. App. 2d 701, 256 P.2d 1028 (Dist. Ct. App. 1953) ("Indian Hemp" not unconstitutionally vague); *cf.* People v. Johnson, 147 Cal. App. 2d 417, 305 P.2d 82 (Dist. Ct. App. 1957) ("lophophora" not unconstitutionally vague reference to peyote).

[25] A related issue was whether the charge of possession of "marijuana" was specific enough where there were statutory exceptions to protect the bird seed and hemp industries. The general rule was that the state need not allege that the parts possessed were not within the statutory exceptions. *E.g.*, Simpson v. State, 129 Fla. 127, 176 So. 515 (1937). *Contra*, People v. Sowrd, 370 Ill. 140, 18 N.E.2d 176 (1938).

[26] *See, e.g.*, Simpson v. State, 129 Fla. 127, 131, 176 So. 515, 517 (1937) (marijuana causes erotic hallucinations, loss of sense, false conviction, loss of values, a general weakening of powers, making it dangerous to mind and body). In Commonwealth v. LaRosa, 42 Pa. D. & C. 34, 36-37 (Fayette County Dist. Ct. 1941), the court stated:

> The deleterious, even vicious, qualities of the plant which render it highly dangerous to the mind and body, upon which it operates to destroy the will, to produce imaginary delectable situations, and gradually to weaken the physical powers, reside in a sticky resin of great narcotic power that pervades the entire plant . . . .

[27] State v. Bonos, 172 La. 955, 136 So. 15 (1931).

[28] *See* State v. Hall, 41 Wash. 2d 446, 249 P.2d 769 (1952); Commonwealth v. LaRosa, 42 Pa. D. & C. 34 (Fayette County Dist. Ct. 1941). *LaRosa* held that the statute, passed two years earlier, created a duty to cut down marijuana plants before they could seed and that defendant had no right to plant marijuana even if he meant to cut the plants before maturity. Defendant's conviction for possession of two thousand mature plants and one hundred fifty thousand immature plants was accordingly affirmed.

[29] See pp. 1074-75 *supra*.

some problems of application arose. Interestingly enough, some courts applied the lesser penalty where one of two penalties could be imposed.[30] Similarly many courts tended to impose minimum sentences until the late 1950's when they, too, lost all sense of proportion.[31]

C. *Procedural Defenses and Entrapment*

Statutory attacks during this period tended to reflect the complicated interrelation of state and federal law and the scientific imprecision of legislative drafting. These attacks were usually rebuffed, and defendants, caught in a squeeze of judicial and legislative hostility, had few, if any, viable defenses based on whether or not they had violated the regulatory scheme. Both state and federal statutes merely required the prosecution to prove that the particular defendant was found in possession of a substance which when chemically tested was found to be marijuana. There were few tricky problems of proof, and the prose-

[30] *E.g.*, State v. Economy, 61 Nev. 394, 130 P.2d 264 (1942).

[31] This was particularly true in the Southwest, where use cases were more numerous and appeals more frequent. Indicative of this trend are the following Texas cases in chronological order: Gonzales v. State, 108 Tex. Crim. 253, 299 S.W. 901 (1928) ($25 fine); Baker v. State, 123 Tex. Crim. 209, 58 S.W.2d 534 (1933) (5-year sentence reversed); Horton v. State, 123 Tex. Crim. 237, 58 S.W.2d 833 (1933) (2-year sentence reversed); Spangler v. State, 135 Tex. Crim. 36, 117 S.W.2d 63 (1938) (1-year sentence affirmed); Ramirez v. State, 135 Tex. Crim. 442, 125 S.W.2d 597 (1938) (3-year sentence affirmed) (possession of a crop of 300 plants); Fawcett v. State, 137 Tex. Crim. 14, 127 S.W.2d 905 (1939) (2-year sentence reversed); Anderson v. State, 137 Tex. Crim. 461, 131 S.W.2d 961 (1939) (5-year sentence affirmed) (defendant tried to dispose of marijuana in station house); Martinez v. State, 138 Tex. Crim. 51, 134 S.W.2d 276 (1939) (6-year sentence reversed); Carrizal v. State, 138 Tex. Crim. 103, 134 S.W.2d 287 (1939) (2-year sentence affirmed); Lufkin v. State, 144 Tex. Crim. 501, 164 S.W.2d 709 (1942) (2-year affirmed); Cornelius v. State, 158 Tex. Crim. 356, 256 S.W.2d 102 (1953) (2-year sentence affirmed); Sparks v. State, 159 Tex. Crim. 111, 261 S.W.2d 571 (1953) (2-year sentence reversed); Rao v. State, 160 Tex. Crim. 416, 271 S.W.2d 426 (1954) (2-10 year sentence); Brewer v. State, 161 Tex. Crim. 28, 274 S.W.2d 411 (1954) (8-year sentence affirmed); Torres v. State, 161 Tex. Crim. 480, 278 S.W.2d 853 (1955) (3-year sentence affirmed); Gomez v. State, 162 Tex. Crim. 30, 280 S.W.2d 278 (1955) (5-25 year sentence affirmed); McWhorter v. State, 163 Tex. Crim. 318, 291 S.W.2d 329 (1956) (2-3 year sentence affirmed); Orosco v. State, 164 Tex. Crim. 257, 298 S.W.2d 134 (1957) (2-year sentence affirmed); Garcia v. State, 166 Tex. Crim. 482, 316 S.W.2d 734 (1958) (life sentence affirmed); Sherrad v. State, 167 Tex. Crim. 119, 318 S.W.2d 900 (1958) (13-year sentence reversed); Leal v. State, 169 Tex. Crim. 222, 332 S.W.2d 729 (1959) (75-year sentence affirmed) (one prior conviction); King v. State, 169 Tex. Crim. 34, 335 S.W.2d 378 (1959) (7-year sentence affirmed); Locke v. State, 169 Tex. Crim. 361, 334 S.W.2d 292 (1960) (15-year sentence affirmed); Massiate v. State, 365 S.W.2d 802 (Tex. Crim. App. 1963) (life sentence affirmed) (two prior burglary convictions).

curion usually had a clear case. If these offenders were caught dead to rights on the merits, the energetic attorney had to look elsewhere for his defense.

Fortunately, the exigencies of police practice in the field of narcotics law enforcement provided a defendant's attorney with a new area of attack—procedural irregularities in the arrest and apprehension of his client. The possession and sale of marijuana epitomize the crime without a victim; neither seller nor buyer is apt to complain of the transaction. In order to promote vigorous law enforcement in this area, the police have had to use a series of undercover agents, surprise raids and often questionable search and arrest techniques. Because of the nature of the conduct they are trying to stifle, the police must intrude into a private social relationship where none of the parties wants it; thus, the police have found it essential to employ highly secretive and often patently deceitful practices. It is no coincidence that the vast developments in the law of criminal procedure—especially in the fourth amendment area—have been outgrowths primarily of narcotics and marijuana cases.

1. Search and Seizure

Today the major remedy for an illegal search is exclusion of the seized items as evidence. Some states and the federal courts have used this exclusionary rule since early in the twentieth century. However, before the 1961 decision in *Mapp v. Ohio*[32] required all states to adopt this remedy, many state courts did not exclude illegally seized evidence. In jurisdictions without the rule, it scarcely helped the victim of an illegal search to raise the point. So, for example, in a 1945 Louisiana case, the court permitted introduction of marijuana seized without a warrant from defendant's room while he was out of town.[33]

Because of the scope permitted the searching officer, things were not much better in jurisdictions adhering to the exclusionary rule. In states using the rule before *Mapp*, the crucial issue when the lawfulness of a search was questioned was whether or not the search was reasonable under the circumstances.[34] One might expect, in view of the

[32] 367 U.S. 643 (1961).

[33] State v. Shotts, 207 La. 898, 22 So. 2d 209, *cert. denied*, 326 U.S. 730 (1945).

[34] *See, e.g.*, United States v. Rabinowitz, 339 U.S. 56 (1950). The Court here upheld the search of a one-room office on the grounds that the search was incident to a lawful arrest, and said that the scope of such searches must turn on the reasonableness of the search considering all the underlying circumstances.

judicial hostility toward marijuana defendants, that the reasonableness standard provided sufficient leeway for circumvention of the exclusionary rule in more than a few cases.[35] Other end runs around the rule were developed in the federal system and in the states purporting to apply the rule to evidence seized in an illegal search. First, courts upheld searches if there was arguably an untainted source for seizure of the evidence. For example, a court might admit marijuana seized in a concededly illegal search where a police officer saw the marijuana before beginning the illegal search.[36] Second, in order to have standing to assert the inadmissibility of seized items, one had to admit the narcotics in question belonged to him.[37] Third, courts often permitted searches pursuant to a warrant to extend far beyond the items named in the warrant[38] under what came to be known as the contraband theory. This theory reasoned that certain items could never lawfully be pos-

[35] *Cf.* Anderson v. State, 137 Tex. Crim. 461, 131 S.W.2d 961 (1939). *See also* Leal v. State, 169 Tex. Crim. 222, 332 S.W.2d 729 (1959), holding it reasonable for a policeman to search defendant's shorts where he suspected from an informer's tip that the "out of the ordinary bulge" in defendant's pants concealed marijuana.

[36] Ramirez v. State, 135 Tex. Crim. 442, 125 S.W.2d 597 (1938). Eventually, courts began to allow the admission of illegally seized evidence if there was any untainted source whatsoever. Thus, where defendant testified that the police had found marijuana in a dresser drawer in his house, the court permitted the state to introduce the marijuana based on the untainted source of defendant's own statements in court. Rao v. State, 160 Tex. Crim. 416, 271 S.W.2d 426 (1954).

[37] *See* Connolly v. Medalie, 58 F.2d 629 (2d Cir. 1932). In that case Judge Learned Hand wrote:

> Men may wince at admitting that they were the owners, or in possession, of contraband property; may wish at once to secure the remedies of a possessor, and avoid the perils of the part; but equivocation will not serve. If they come as victims, they must take on that role, with enough detail to cast them without question. The petitioners at bar shrank from that predicament; but they were obliged to choose one horn of the dilemma.

Id. at 630.

[38] *See* King v. State, 169 Tex. Crim. 34, 335 S.W.2d 378 (1959). Here the Texas court held, with one dissent, that a search warrant for the premises of the husband authorized a search of the wife's bag in the house; her conviction for the materials found in the bag was affirmed.

In the field of search incident to an arrest, courts went even farther. Thus, a Texas court affirmed a conviction based upon the arrest and search of a defendant, even though the police officer admitted he had arrested the defendant solely for the purpose of searching him. The officer ostensibly arrested the defendant for a knife fight, but later admitted that he had arrested him because he suspected him of possession of marijuana. The court noted that the defendant was unable to give any authority for his contention that the state should be bound by the officer's statement as to the purpose of the arrest. Gonzales v. State, 160 Tex. Crim. 548, 272 S.W.2d 524 (1954).

sessed and belonged only to the government; thus any seizure of these items was permissible.[39]

2. Entrapment

In order for federal and state agents to detect narcotics traffic and use, it is essential that they infiltrate the drug culture. Obtaining this inside information may often involve police use of special employees—informers—or may require that the police become directly involved in the commission of the criminal act.[40] Many defendants in narcotics cases have claimed that they were forced into sales or purchases of narcotics by the police or their agents. These charges led to the affirmative defense of entrapment, first recognized in federal courts by the Supreme Court in *Sorrels v. United States*.[41] Since that time, the principles of the defense, as stated in that decision, were reaffirmed by the Supreme Court in *Sherman v. United States*.[42] In *Sherman*, a government informer induced the defendant, who was trying to quit his use of narcotics and was undergoing treatment at a narcotics rehabilitation center, to resume his use and supply the informer. The Court held that the conduct of the police informer constituted entrapment.

The entrapment defense would seem the ideal defense tactic in marijuana cases, because so often the defendant has been apprehended due to some police informer or police trick.[43] However, the theoretical and practical outlines of the defense narrowly restrict its scope and make it rarely successful. Moreover, because it may entail an admission that defendant committed the act charged,[44] it is usually the last resort.

From the beginning there have been two conflicting views of the entrapment defense. The majority view has considered entrapment an exception to the given criminal statute on the ground that the legislature could not have intended entrapment to fall within the statutory defi-

[39] It had been held that contraband may be seized in a search incident to arrest although the items taken had no relationship to the crime for which the arrest was made. Harris v. United States, 331 U.S. 145 (1947), *overruled*, Chimel v. California, 395 U.S. 752 (1969).

[40] THE PRESIDENT'S COMMISSION ON LAW ENFORCEMENT AND ADMINISTRATION OF JUSTICE, TASK FORCE REPORT: NARCOTICS AND DRUG ABUSE 8. *See also* MASS PRODUCTION JUSTICE AND THE CONSTITUTIONAL IDEAL 52-53 (C. Whitebread ed. 1970).

[41] 287 U.S. 435 (1932).

[42] 356 U.S. 369 (1958).

[43] *See* A. LITTLE, DRUG ABUSE AND LAW ENFORCEMENT (1967).

[44] *See* Henderson v. United States, 237 F.2d 169, 172 (1956); State v. Taylor, 375 S.W.2d 58, 62 (Mo. 1964). *But see* People v. Perez, 62 Cal. 2d 769, 401 P.2d 934, 44 Cal. Rptr. 326 (1965) (Traynor, C.J.).

nition of the crime. With this as the theoretical justification of the defense, the inquiry focuses on the innocence of the defendant but for the police conduct. The practical question is whether the police merely supplied an opportunity for a person with a pre-existing predilection to the criminal act. In the majority view this question of fact is to be resolved by the jury.[45]

Throughout the years a substantial minority position has contended that the entrapment defense should be considered a police control mechanism. Under this view, the focus is on the police and their conduct rather than on the character of the defendant. This rationale is premised on the court's supervisory powers over the administration of justice, and the question of entrapment is one of law to be decided by the judge, not by the jury.[46]

The focus of the defense on the character of the defendant and the use of usually unsympathetic juries to decide the issue have greatly hindered the successfulness of the entrapment defense. Since the defense must be raised affirmatively, the defendant bears a heavy burden in proving that he would not have committed the crime but for the police inducement. Thus, in *Gilmore v. United States*[47] the defendant was unable to carry the burden of proving that he would not have otherwise committed the marijuana offense. A government agent approached the defendant and requested marijuana, but the jury found no entrapment and the court could not declare that there was entrapment as a matter of law.

With the entrapment defense, as with illegal searches, the court has a known lawbreaker before it and for this reason is reluctant to free him unless there is an overwhelming reason to dismiss the charges. As a California court stated, "It is not the entrapment of a criminal upon which the law frowns . . . ."[48] The focus upon the defendant and his

[46] *Id.* at 378 (Frankfurter, J., concurring); Sorrells v. United States, 287 U.S. 435, 453-59 (1932) (Roberts, J., dissenting).

[47] 228 F.2d 121 (5th Cir. 1955). *See also* United States v. Davis, 272 F.2d 149 (7th Cir. 1959). *Davis* was not strictly an entrapment case; the government agents had arranged for the transportation of a bag of marijuana from Texas to Chicago. The defendant argued that the agents' activities were illegal, and for that reason, the government was estopped from prosecuting him and that the evidence was inadmissible. The trial court found that the defendant had arranged for the deal and instructed the jury to acquit if the agents had illegally caused the importation. As in *Gilmore*, the jury was not willing to condemn the police.

[48] People v. Branch, 119 Cal. App. 2d 490, 494, 260 P.2d 27, 30 (Dist. Ct. App. 1953), where the police had their witness call the defendant and ask to buy some

mental state, rather than a focus on the government enforcement practices and their possible effect of creating a particular crime, places an incredible burden on the defendant to try to convince the jury that he is otherwise blameless. The use of informers and special agents who become friendly with those suspected of dealing in marijuana, and the use of this friendship to try to purchase marijuana, often by supplying the cash,[49] are bound to have a detrimental effect on the lay enforcement officers as well as to assure a slight increase in the supply of marijuana which would otherwise not have entered the trade. Nevertheless, the defense as presently structured remains virtually impossible for the defendant to raise with any real hope of success.

D. The Pro Forma Trial

When the marijuana defendant had exhausted his motions for dismissal or suppression of the evidence and was brought to trial, he was usually in deep trouble, faced with judicial hostility, lax methods of identification, and loose standards of proof. Convictions were rarely reversed for any reason and especially not for insufficient evidence. And penalties, no matter how harsh, were never set aside.

The first line of defense in the marijuana trial often involved the defendant's claim that the substance seized from him was not really marijuana. In general, the state had no difficulty proving the substance to be marijuana. In the important case, expert evidence of chemical tests may have been introduced,[50] but more commonly courts permitted the testimony of police officers,[51] undercover agents and other lay witnesses[52] to be sufficient to create a question of fact for the jury to decide.[53] Thus, when chemical evidence was not introduced, juries

marijuana and then accompanied the witness to the defendant's home.

[49] *See* People v. Williams, 146 Cal. App. 2d 656, 304 P.2d 100 (1956); Commonwealth v. Jones, 46 Dauph. 300 (Dauphin County, Pa., Dist. Ct. 1938).

[50] *See, e.g.*, People v. Agajanian, 97 Cal. App. 2d 399, 218 P.2d 114 (Dist. Ct. App. 1950); People v. Oliver, 66 Cal. App. 2d 431, 152 P.2d 329 (Dist. Ct. App. 1944); Valdez v. State, 135 Tex. Crim. 201, 117 S.W.2d 459 (1938).

[51] McWhorter v. State, 163 Tex. Crim. 318, 291 S.W.2d 329 (1956).

[52] People v. Sanchez, 197 Cal. App. 2d 617, 17 Cal. Rptr. 230 (Dist. Ct. App. 1961); People v. Haggard, 181 Cal. App. 2d 38, 4 Cal. Rptr. 898 (Dist. Ct. App. 1960); People v. Janisse, 162 Cal. App. 2d 117, 328 P.2d 11 (Dist. Ct. App. 1958). Even minors who receive the marijuana from the defendant are competent to identify the substance. People v. Sanchez, *supra*.

[53] *See* Hernandez v. State, 137 Tex. Crim. 343, 129 S.W.2d 301 (1938).

were strongly inclined to believe the policeman or a disinterested prosecution witness as against the defendant.[54]

This ease of identification combined with the uncritical acceptance of uncorroborated testimony[55] produced what amounted in fact to a very low standard of proof. Thus, in a California case, *People v. Janiss*,[56] the conviction was upheld on the testimony of teenage boys, though the defendant's co-workers testified for an alibi. The evidence of rookie police officers who later failed their civil service exams[57] has been accepted over the word of the defendant. Finally, even the testimony of witnesses who stand to benefit only from the conviction of the defendant has been accepted without corroboration, whether the benefit was indirect[58] or direct.[59] The wisdom of allowing such testimony by itself to be legally sufficient for a conviction is doubtful.

Although in theory the state must prove the defendant's possession was knowing,[60] through the use of circumstantial evidence the state usually encountered few problems in meeting its burden of proof. The state was permitted to use circumstantial evidence to link the defendant to a quantity of marijuana, but where only circumstantial evidence existed there must have been an instruction to the jury that all other

[59] People v. Winston, 46 Cal. 2d 151, 293 P.2d 40 (1956) (witnesses against defendant for sale to minor were due to go on trial themselves); People v. Ballejos, 216 Cal. App. 2d 286, 30 Cal. Rptr. 725 (Dist. Ct. App. 1963) (agent alleged to be paid by government if successful was only witness against defendant).

[60] *See* People v. Carrasco, 159 Cal. App. 2d 63, 323 P.2d 129 (Dist. Ct. App. 1958); People v. Antista, 129 Cal. App. 2d 47, 276 P.2d 177 (Dist. Ct. App. 1954) (defendant never reported having previously used marijuana and apartment used by many other persons); People v. Candiotto, 128 Cal. App. 2d 347, 275 P.2d 500 (Dist. Ct. App. 1954); People v. Savage, 128 Cal. App. 2d 123, 274 P.2d 905 (Dist. Ct. App. 1954) (maid found marijuana wrapped in napkins two days after a party held to be insufficient evidence) (trial judge held to be prejudiced); Fawcett v. State, 137 Tex. Crim. 14, 127 S.W.2d 905 (1939) (reversed for failure to give instruction on ignorance as a defense).

reasonable inferences of innocence had been overcome.[61] For example, behavior such as running away from police, if marijuana was found along the path run, was sufficient to link the defendant to possession,[62] though mere proximity without other guilty behavior was not enough to prove possession.[63]

Finally, judicial hostility to the "morally depraved" marijuana user was so strong that often judges condoned inflammatory statements by the prosecution to the jury about the nature of the drug and its users. Indeed, some judges themselves often participated in these highly emotional statements. For example, one judge in *instructing a jury* announced:

> Marijuana is a vicious, demoralizing substance that robs a person of morality, honor, integrity, decency, and all the virtues that are the foundation of good character and good citizenship. The Government is constantly engaged in an effort to stamp out traffic in this and in narcotic drugs. Officers of the Government are employed in this effort usually and are entitled to credit for their loyalty and integrity.[64]

In the same way, direct aspersions toward a defendant's character were tolerated.[65] For instance, courts overlooked prosecution comments

[61] Gonzales v. People, 128 Colo. 522, 264 P.2d 508 (1953); State v. Walker, 54 N.M. 302, 223 P.2d 943 (1950).

[63] People v. Miller, 162 Cal. App. 2d 96, 328 P.2d 506 (Dist. Ct. App. 1958) (reversible error to introduce marijuana found down the street from the defendant's apartment without further proof of defendant's ownership). In Sherrad v. State, 167 Tex. Crim. 119, 318 S.W.2d 900 (1958), defendant's conviction was reversed for the failure of the prosecutor to connect the payment to the defendant with the later payment to another defendant who made delivery of the marijuana to the agent. The court noted that defendant had been charged as the principal, and that no proof of any conspiracy had been made. *See also* People v. Vasquez, 135 Cal. App. 2d 446, 287 P.2d 385 (Dist. Ct. App. 1955) (defendant chargeable with transporting, not possession, where he told co-defendant to throw marijuana away and co-defendant did not do so).

[64] Lake v. United States, 302 F.2d 452 (8th Cir. 1962).

[65] *See, e.g.*, People v. Sykes, 44 Cal. 2d 166, 280 P.2d 769, *cert. denied*, 349 U.S. 934 (1955) (evidence of defendant's activities as a pimp admissible in a trial on charge of marijuana sale to minor in order to prove that there was a plot to subjugate both the body and mind of the minor) (Traynor, C.J., dissented, stating that the evidence was prejudicial and of no probative value); Escamilla v. State, 162 Tex. Crim. 346, 285 S.W.2d 216 (1955) (permissible for prosecutor to call defendant a peddler and then to withdraw statement); People v. Salo, 73 Cal. App. 2d 685, 167 P.2d 269 (Dist. Ct. App. 1946);

that the defendant sold his drugs near a junior high school[66] or that drug use among teenagers must be stopped.[67]

In sum, then, defendants in marijuana cases had great difficulties at trial during this period. Easy identification methods, jury acceptance of uncorroborated testimony, use of circumstantial evidence to prove defendant's possession was knowing, and the judicial participation in inflammatory statements to the jury made defense success at trial a virtual impossibility.

VIII. The Public Discovers the Truth About Marijuana

We need not belabor the point, but sometime after 1965 the wisdom of the marijuana laws suddenly became dinner-table conversation in most American middle-class homes along with the Indochina war and campus dissent. Many sons and daughters, and even mothers and fathers, of the middle class had tried the drug, and those who had not were certainly familiar with "pot" and the law. The medical profession finally commenced a research effort to determine who was right—the user who said the drug was a harmless pleasant euphoriant or the lawmakers, who by their actions had condemned it as a noxious cause of crime, addiction and insanity.

A. Marijuana and the Masses

Although marijuana arrests and seizures hit their all-time low point in 1960,[1] the middle and late sixties witnessed a revolution in marijuana use. Vast numbers of people have recently adopted the drug as their principal euphoriant; however, by all estimates, the new users are the sons and daughters of the middle class, not the ethnic minorities and ghetto residents formerly associated with marijuana.[2] Student marijuana

[2] In reporting the marijuana arrests of Robert Kennedy, Jr., and R. Sargent Shriver, Jr., Walter Cronkite noted that "[t]his case is not unusual; more and more parents across the nation find themselves going to court with their children on drug charges. It's becoming an incident of modern living." CBS Evening News, Aug. 6, 1970. *See also* J. Goldsevear, Pot: A Handbook of Marihuana 117-31 (1967); Traffic in Opium 2, 40 (1966).

use is now so common that it has been associated in the public eye with the overall campus life style.[3] Accompanying the growth of widespread marijuana use on campus has been an increasing experimentation with the drug by intellectuals, professors, young professionals and members of several other social groups who would never have considered using the drug ten years ago.[4]

Dr. Stanley F. Yolles, former Director of the National Institute of Mental Health, testifying before a Senate subcommittee, said, "A conservative estimate of persons in the United States, both juvenile and adult, who have used marihuana, at least once, is about 8 million and may be as high as 12 million people."[5] Other estimates have run as high as twenty to twenty-five million users.[6] This vast increase in the number of people using marijuana seems to have begun in the early and middle sixties. It is likely that this new use pattern was initially precipitated by the publicity surrounding the LSD experimentation of Doctors Alpert and Leary at Harvard in 1963.[7] As a growing segment of the academic fringe began to preach consciousness-expansion, students began to find marijuana available on campus. From that point the phenomenon snowballed. As more novice marijuana users reported no ill effects from its use, more students tried it, and in turn those who used and enjoyed the drug began to "turn on" those who had not. By 1970, some campuses reported that over seventy percent of the student body were users.[8] More recently, marijuana use spread beyond the student subculture; reportedly its use has become common even among young professionals on Wall Street.[9] Moreover, since it is readily available and widely used in Vietnam, marijuana has become popular with many soldiers.[10]

[10] D. Louria, The Drug Scene 10 (1968).

The general public is clearly aware that there has been both a vast increase in the number of users and a shift from lower- to middle-class use of the drug. These great changes in the nature of marijuana use have had important social consquences. First, with the sharp rise in the number of users and the tendency of marijuana users to share common life styles and often political opinions, the drug has become associated in the past few years with a major counter-culture. Many proponents of that counter-culture have contended that the illegal status of marijuana —which puts large numbers of people on the wrong side of the criminal law—is the most significant unifying and recruiting agent for the New Left and the other political and social causes of the late sixties.[11] Some New Left leaders have gone so far as to oppose reduction in the penalties for marijuana possession because they feel severe penalties aid their recruiting ends by making marijuana users outraged against a society that overacts so strongly to a nonexistent danger.[12] We feel the general disrespect for marijuana laws may be causing a dangerous disrespect for all laws in a sizeable segment of the population. The credibility of government suffers on all issues when its handling of the use of this drug seems to so many so far removed from reality. This opinion is supported by the increasing medical evidence that the dangers of the drug are *de minimus*.

Secondly, the new middle-class use of marijuana has induced the first significant medical inquiry into the nature of the drug, has spawned increasing numbers of challenges to the constitutionality of marijuana laws and penalties, and has spurred the passage of more lenient legislation. One commentator has stated:

> Nobody cared when it was a ghetto problem. Marijuana—well, it was used by jazz musicians or the lower class, so you didn't care if they got 2-to-20 years. But when a nice, middle-class girl or boy in college gets busted for the same thing, then the whole community sits up and takes notice. And that's the name of the game today. The problem has begun to come home to roost—in all strata of society, in suburbia, in middle-class homes, in the colleges. Suddenly, the punitive, vindictive approach was touching all classes of society. And now the

[11] Perhaps the best statement the authors have yet encountered to this effect was made by Jerry Rubin, one of the Chicago Seven, in Charlottesville, Virginia, on May 6, 1970, when he said: "Smoking pot makes you a criminal and a revolutionary—as soon as you take your first puff, you are an enemy of society." *See also* J. RUBIN, Do It! (1970).

[12] Wash. Post, Feb. 24, 1970, at B1, col. 3.

> most exciting thing that's really happening is the change in attitude by the people. Now we have a willingness to examine the problem, as to whether it's an experimentation, or an illness rather than "an evil." With this change I think we can come to a more rational approach to methods of drug control.[13]

Without doubt, the new class of users has successfully demanded more favorable attention from the legislatures and the courts than the lower class could have attracted. In fact, even the slightest circumscription of the reach of a state marijuana law is now national news.[14]

A third result of the widespread use of marijuana has been a substantial challenge to the traditional picture of the national marijuana trade. Over the past three decades, law enforcement officials continued to convince legislators that the traffic in marijuana was controlled by professional criminals.[15] Confronted with this portrait of the marijuana trade, legislators naturally stereotyped the "seller" as the vicious criminal pushing his wares for high profit and felt that extraordinarily harsh penalties were justified for sellers.[16] From several recent studies it appears that the structure of marijuana traffic bears little or no relation to the traditional stereotype. In a recent survey of 204 users it was found that 44 percent had sold to friends at least once. Many casual users sell to leave themselves enough profit to cover the amount of their own use.[17] The study further finds that even at the very top, profits are too small and the product too bulky to interest the criminal class that probably underwrites sales of heroin and other "hard drugs."[18] Thus even at the top, amateurs—composed generally of the students, young professionals and soldiers who constitute the users—are the main source of the drug.[19] It is also important to note that marijuana is typi-

cally sold by the ounce[20] rather than by the cigarette as was traditionally assumed. Thus, even the relatively casual experimenter is likely to have at least an ounce of the drug in his possession.

B. Enforcement of the Marijuana Laws: 1960-1970

As a result of the rapid spread of marijuana use, full enforcement of the marijuana laws has become impossible.[21] By 1967 the Federal Bureau of Narcotics had 299 agents, roughly 50 more than in 1956;[22] in the same period the use of marijuana probably increased 1,000 fold. It seems obvious from both FBN statistics and the best available state and local statistics that two enforcement patterns emerged in the sixties: concentration on "sellers" and selective enforcement.

Since 1960 the FBN and major state and municipal narcotic squads have concentrated on the larger sellers. In the early sixties this trend was less pronounced,[23] but by 1968 the Commissioner of the FBN said that 75 percent of federal marijuana arrests were of dealers and that even the remaining 25 percent were sellers but were charged with possession as a result of plea bargains.[24] Statistics from California show the same concentration on sellers;[25] nevertheless the California bureau found that most of these sellers were young and first offenders.[26] Thus, at least by 1968 it became clear that sellers were quite often neophytes.

At the same time that the police have abandoned full enforcement for concentration on dealers, enforcement of the laws has remained necessarily haphazard and somewhat selective. Since marijuana use has become so common, there are certain student and hippie communities

---

[25] The state of California has kept excellent statistics since 1959. In 1968, as a typical year of the late sixties, the police seized over 30,000,000 grams of marijuana of all kinds in only 10,000 arrests. The high amount seized relative to the number of arrests seems to indicate the concentration on dealers. BUREAU OF CRIMINAL STATISTICS, DEP'T OF JUSTICE, STATE OF CALIFORNIA, DRUG ARRESTS AND DISPOSITIONS IN CALIFORNIA 41, 43 (1968).

[26] *Id.* at 37-39.

in which the police could arrest nearly everyone. Here the problem of selective enforcement necessarily arises—the police arrest those they dislike for other reasons, either political disagreement or suspicion of use of other drugs. This inevitable practice, although perhaps not consciously planned, has brought outcry from some victimized communities.[27] This policy—if not a policy by the police at least a perception by the hippies—of selective enforcement has provided them increased impetus toward the anti-establishment life style they have adopted. Their attitude is aggravated when the police engage in particularly aggressive tactics, such as use of informers, to trap the offenders.[28]

By 1970, the unenforceability of the marijuana laws was most clearly evidenced by the failure of President Nixon's Operation Intercept which was designed to seal off the Mexican border and the supply of marijuana coming into the United States from Mexico.[29] Both national and international tensions led to the failure of the "Noble Experiment." By now, the marijuana trade is so scattered and at the same time so fragmented (with no real hierarchy in the trade) that the unenforceability of these laws has reached Prohibition proportions.

C. *Emergence of Medical Opinion*

One of the most significant causes of widespread middle-class use of marijuana was the lack of any medical proof of the allegedly evil effects of its use.[30] In fact, what authoritative studies had been conducted up to this time were inconsistent with the assumptions underlying anti-marijuana legislation. In this situation, users viewed themselves as experimenters with a mild euphoriant, not criminals endangering themselves or society at large. The inevitable consequence was increased medical inquiry into the effects of the drug, beginning in about 1967.[31]

[27] *See* Fort, *Social Problems of Drug Use and Drug Policies*, 56 CALIF. L. REV. 17, 23 (1968). *See also* H. BECKER, OUTSIDERS 159 (1963); T. DUSTER, THE LEGISLATION OF MORALITY: LAW, DRUGS AND MORAL JUDGMENT (1970).

[29] TIME, Sept. 26, 1969, at 70.

[30] One commentator has charged that those most knowledgeable about marijuana have "dodged" the topic. Kaplan, *The Special Case of Marihuana (Or, It's the Doctor's Fault)*, 9 J. CLINICAL PHARMACOLOGY 349, 351 (1969).

[31] At the end of 1968 there existed only four known studies on human subjects conducted by Americans. *See* Weil, Zinberg & Nelson, *Clinical and Psychological Effects of Marihuana in Man*, 162 SCIENCE 1234, 1235 (1968) [hereinafter cited as Weil

Concurrently, the National Institute of Mental Health significantly increased its funding for grants and contracts for marijuana research.[32]

Despite this intensified inquiry, uncertainty about the effects of the drug persists. There are several major research obstacles responsible for continued absence of reliable research. After outlining the impediments to conclusive findings, we shall extract from the existing studies the present state of medical knowledge.

1. Research Obstacles

The major obstacle is the nature of the marijuana plant itself. Marijuana is a derivative of the plant *Cannabis Sativa*, commonly denoted the hemp plant. It is classified as a dioecious plant, that is, the male reproductive parts are on one individual plant and the female parts are on another. The differentiation of the male and female plants is exceedingly significant because the chemical compounds responsible for the euphoric effect of marijuana are found primarily in the sticky resin that covers the unfertilized female flowers and adjacent leaves. The male plant may contain a small amount of this active resin, but it is grown mainly for hemp fiber.[33]

The hemp plant yields three rough grades of intoxicating substances, the least potent of which is "marijuana."[34] Yet, because the classifica-

Study]. The previous lack of concern with marijuana can also be observed by an examination of the number of articles appearing in medical periodicals. During the decade between 1942 and 1951, only six articles dealing with the subject are listed in the index for medical journals. Eleven reports were noted as being published in the next ten years. From 1962 to 1966, an average of three materials per year were available. It was not until 1967 that the subject became of sufficient interest to occupy the time of a reasonable number of medical authors. In that year, eleven articles appeared in medical periodicals. By 1968, this number had increased to 30, and in 1969 more than 60 articles dealing with the topic of human marijuana consumption have appeared. In other words, more than three times the number of articles appeared in the last three years than in the 25 preceding years.

[32] "In Fiscal year 1967, NIMH obligated $786,000 for marihuana research grants and contracts. Comparable figures for 1968 and 1969 respectively were $1,239,000 and $1,330,000. In Fiscal year 1970, if funds are available, the Institute proposes to obligate $2,550,000 to support grant and contract studies of marihuana, which means that there will have been a more than three-fold increase for support of these studies in the last four years." Statement by Dr. Roger O. Egeberg, Assistant Secretary for Health and Scientific Affairs, M.S. Dep't of HEW, before the Select Committee on Crime, U.S. House of Representatives (mimeographed press release).

[33] Weil Study 1234.

[34] The three substances are charas—pure unadulterated resin that has been scraped from the leaves and flowering tops of the female plant; hashish or ganja—an agglomeration of female flowering tops and stems with whatever resin is attached to their surfaces,

tions are imprecise, confusion is engendered by attributing to "marijuana" the effects produced by the excessive use of the more potent forms of cannabis.[35] In addition, the psychic potency of the plant differs depending upon where the marijuana is grown,[36] and upon cultivation variables such as occurrence of fertilization and time of harvesting:

> If the male plants are not removed and fertilization occurs, the female plants which carry the main intoxicating properties are considerably weakened in that respect. In addition, unless harvesting is carried out immediately before the blossoming of the flowers there is further weakening and variation in the potency of the produce.[37]

It is interesting to note in this connection that the marijuana used in the United States is among the weakest in the world.[38] These factors frus-

---

thought to contain about 40% resin; and marijuana—a low potency preparation consisting of dried mature leaves and flowering tops of both male and female plants, thought to contain between 5 and 8% resin. Schwarz, *Toward a Medical Understanding of Marihuana*, 14 CAN. PSYCHIATRIC ASS'N J. 591, 592 (1969).

[35] As long as the term *marihuana* is used indiscriminately to refer to cannabis of all kinds and potencies, confusion will continue. . . . In this country some of the vigorous opponents of marihuana seem to foster this confusion by attributing to any use of marihuana the effects produced primarily by the excessive use of the more potent forms of cannabis in an attempt to preserve a strongly negative public image of marihuana.

H. NOWLIS, DRUGS ON THE COLLEGE CAMPUS 93 (1969).

[36] "The major botanical feature of the plant is the extreme variability in its appearance, characteristics and properties when grown in different geographical and climatic condition." Schwarz, *supra* note 34, at 591. In the United States and Mexico, for example, the production of the more potent forms is relatively uncommon, and there appears to be no demand for them. J. ROSEVEAR, POT: A HANDBOOK OF MARIHUANA 31-33 (1967).

[37] Schwarz, *supra* note 34, at 592.

[38] Zunin, *Marijuana: The Drug and the Problem*, 134 MILITARY MED. 104, 106-07 (1969). According to the author, several factors contribute to this phenomenon:

(1) The amount of resin found in the flowering tops markedly decreases as the plants are grown in more temperate areas. It is estimated that the resin content of Indian cannabis is 20%; Mexican 15% or less; that grown in Kentucky 8%; and that found in Wisconsin 6% or less.

(2) The activity of the resin in the female is greatly reduced if fertilized by the male. In this country, because of an inability to distinguish between the two plants, inattention to cultivation and lack of knowledge, the female plants are fertilized.

(3) The resinous content is highest prior to "going to seed" of the female plant. The marijuana in this country has gone to seed prior to harvesting.

(4) The male plant contains little or no resin content. In this country, the male plant is indiscriminately mixed with the female plant in the final preparation.

(5) The most active portion of the plant is the flowering top. In this country,

trate the creation of a standardized dosage in any given experiment and preclude the comparison of the results of independent studies.[39]

In addition to the problems engendered by the great variance in potency and dosage, meaningful marijuana research is also inhibited by differences in means of consumption. Since standardized doses are generally considered impossible if the drug is smoked,[40] most studies, including the La Guardia Report, are based upon oral administration of marijuana to the subjects. Yet smoking is the method of consumption among nearly all American users. Furthermore, standardized dosage is not even assured by the oral method since "little is known about the gastrointestinal absorption of the highly water-soluble cannabinals in man." [41] Finally, "[t]here is considerable indirect evidence from users that the quality of the intoxication is different when marijuana or its preparations are ingested rather than smoked. In particular, ingestion seems to cause more powerful effects . . . ." [42]

2. *Current Medical Knowledge*

It is perhaps best to begin with the medical data concerning the traditional allegations about marijuana.

(*a*) *The Myths.*—First, it is universally accepted among medical

---

preparations of marijuana are composed primarily of leaves, twigs and seeds which are crushed.

(6) The potency of marijuana decreases with time. It is reduced at the end of one year, markedly reduced at the end of two years, and nonexistent at the end of three years. In addition, it keeps better in cold, dry climates. Most of the marijuana in the United States is several months to several years old by the time it has been harvested and has passed through the smuggling operation.

[39] Given the above variations in the plant and in its products and extracts, together with the continuing ignorance of its chemistry, it is not surprising that it is virtually impossible to make direct comparisons between the various studies on the effects of *cannabis* on human beings who are even more individually variable.

Schwarz, *supra* note 34, at 593.

Recently, what is believed to be the active ingredient in marijuana has been isolated and synthesized. However, this substance, denominated tetrahydrocannabinal (THC), is only available for research in very limited quantities. Weil Study 1235. Furthermore, it has not been proven that THC is the sole ingredient contributing to the effects caused by marijuana.

[40] "[M]any pharmacologists dismiss the possibility of giving marihuana by smoking because, they say, the dose cannot be standardized." Weil Study 1235.

[41] *Id.*

[42] *Id.*

authorities that marijuana is not physically habit-forming.[43] Although some researchers have asserted that a psychological dependence may result from continued use of the drug, this hypothesis has not been established and its relevance has been questioned. One authority has noted that "habituation to marihuana is not as strong as to tobacco or to alcohol." [44] Another has commented that "[a] psychological dependence and desire for the drug may occur, but this is inconsistent and is not uncontrolable. . . . Perhaps the dependence is even less than the dependence on cigarettes." [45]

Second, there is no evidence whatsoever that the use of marijuana has a direct relationship to the commission of crime. One commentator has noted that "[d]uring the high the marihuana user may say things he would not ordinarily say, but he generally will not do things that are foreign to his nature. If he is not normally a criminal, he will not commit a crime under the influence of the drug." [46] In fact, it is entirely likely that the characteristic passive reaction to the use of marijuana tends to inhibit criminality. A recent study has shown that juvenile "potheads" tend to be nonaggressive and to stay away from trouble.[47] Similarly, there is no scientific evidence for the proposition that marijuana is an aphrodisiac. It has been suggested to the contrary that the most potent form of cannabis, pure ganja, has the reverse effect, being taken by Indian priests to quell the libido.[48]

Finally, the evidence is at best inconclusive regarding the contention that use of marijuana leads to the use of "hard" narcotics. Some of the early studies claiming to have established a valid connection were scientifically unreliable. One authority has observed in this regard:

---

[43] "There is now an abundance of evidence that marihuana is not an addictive drug. Cessation of its use produces no withdrawal symptoms, nor does a user feel any need to increase the dosage as he becomes accustomed to the drug." Grinspoon, *Marihuana*, 221 Sci. Am. 17, 21 (1969).

[44] *Id.*

[45] Zunin, *supra* note 38, at 108.

[46] Grinspoon, *supra* note 43, at 22.

[47] McGlothlin & West, *The Marihuana Problem: An Overview*, 125 Am. J. Psych. 370, 372-73 (1968). This supports the finding of the La Guardia Report that marijuana is not a direct causal factor in criminal misconduct, but that the "high" leads to sociable attitudes.

[48] The Marihuana Papers 44 (D. Solomon ed. 1966). Since marijuana has a tendency to produce drowsiness, it is difficult to see how it could lead to an act of violent sex. J. Roszevear, *supra* note 36, at 61. *See also* La Guardia Report, in The Marihuana Papers 296-97 (D. Solomon ed. 1966).

> Supposedly scientific studies of this problem have been conducted in the past, such as the one done in a deprived area of a large city where the use of heroin was widespread, and indicating that many users of marijuana went on to the use of more hazardous drugs. I am sure that without previous marijuana, the use of such drugs in that environment would be just as high, and that if such a study were done on a college population, it would be found that the subsequent use of "hard" drugs would be negligible.[49]

Referring to a presidential task force investigation, another authority has commented:

> It is true that the Federal study showed that among heroin users about 50% had had experience with marijuana; the study also found, however, that most of the heroin addicts had been users of alcohol and tobacco. There is no evidence that marijuana is more likely than alcohol or tobacco to lead to the use of narcotics.[50]

On the basis of the available information, most authorities have concluded that there is no scientific basis for the theory that the use of marijuana is a causal factor in the use of "hard" narcotics.[51] In any event, as a matter of common sense, it would appear that the phenomenon in dispute is very complex, including both individual personality features and environmental factors. As one commentator put it, "Several of the studies indicate that the previous statistics have been misleading and exaggerated." Whether or not the proposition can be scientifically established, "there is probably a slightly greater chance that an individual who has used marijuana could go on to opiates, but statistically this is not . . . an important social consideration." [52]

Thus it appears that none of the traditional allegations about marijuana has been scientifically established, that its allegedly addictive qualities have been disproved, and that the overwhelming weight of authority disputes its allegedly crime-producing and stepping stone tendencies. We will now briefly survey the medically recognized effects of the drug, physical, psychomotor and psychological.

[52] Zunin, *supra* note 38, at 108.

(*b*) *Physical Effects.*—The acute physical effects of marijuana are the subject of much debate. Various studies have reached different conclusions. Nearly all authorities, however, are in agreement that the bodily symptoms accompanying the "high" are very slight. The most commonly noted effects are a slight rise in blood pressure, conjunctival vascular congestion, slight elevation in blood sugar, urinary frequency and an increase in pulse rate.[53] In general, these acute symptoms are relatively short-lived, and there are no known lasting physical effects.[54] On the other hand, there is evidence that prolonged smoking could lead to "marijuana bronchitis," and that communal smoking has the tendency to encourage the spread of communicable diseases.

(*c*) *Psychomotor Effects.*—Varying results have also been reported in studies of the acute effects of marijuana upon psychomotor functions. Although the researchers have sometimes found some slight impairment in performance tests,[55] there is apparently no general depressing or stimulating effect on the nervous system and no influence on speech and coordination.[56] In the most recent study, Doctors Weil, Zinburg and Nelson of the Boston University School of Medicine found that marijuana users are able to compensate nearly 100 percent for whatever adverse effects may result on ordinary psychomotor performance.[57]

---

[53] L. Goodman & A. Gilman, The Pharmacological Basis of Therapeutics ch. 16 (3d ed. 1965). Nausea, vomiting and diarrhea have also been reported, but it is felt that these symptoms are mainly the result of oral administration. Grinspoon, *supra* note 43, at 20. Increased appetite and dryness of the mouth are also said to be common.

[54] Usually the reports of chronic ill effects are to be found in Eastern studies of individuals using the stronger *hashish* or pure resinous substances over prolonged periods of time and are complicated by the immeasurable effects of many other social, economic, personality and cultural factors.
Schwarz, *supra* note 34, at 595.

[55] Tests by Robert S. Morrow in the 1930's revealed that even large doses of marijuana did not affect performances on tests of the speed of tapping or the quickness of response to simple stimuli. Grinspoon, *supra* note 43, at 20. "The drug did affect steadiness of the hand and body and the reaction time for complex stimuli." *Id.* The most recent study in this area was done by Andrew Weil, Norman Zinburg and Judith Nelson of the Boston University School of Medicine. Their conclusions were that regular users of marijuana may show some slight degree of impairment in performance tests, but that the aptitude of the subjects may even improve slightly after smoking marijuana. Weil Study 1242. Marijuana-naive subjects tended to show some impairment in performance. *Id.*

[56] N.Y. Times, May 11, 1969, § 6 (Magazine), at 92, col. 2.

[57] We were struck by the difficulty of recognizing when a subject is high unless he tells you that he is . . . . It seems possible to ignore the effects of marihuana on consciousness, to adapt to them, and to control them to a significant degree.
Id.

Such findings suggest that marijuana is not likely to be a causal factor in driving accidents, a hypothesis that is supported by a recent simulated driving test comparing the performance of subjects under the influence of marijuana and alcohol.[58] There seems to be no contention in the medical field that there are any lasting effects from marijuana in the psychomotor area. The Weil study reported that noticeable effects "were diminished between 30 minutes and 1 hour, and they were largely dissipated 3 hours after the end of smoking. No delayed or persistent effects beyond 3 hours were observed or reported." [59]

(*d*) *Psychological Effects.*—The acute psychological effects of the use of marijuana are more complex. At the outset, it can be stated with certainty that "marijuana is definitely distinguishable from other hallucinogenic drugs such as LSD, DMT, mescaline, peyote, and psilocybin. Although it produces some of the same effects, it is far less potent than these other drugs. It does not alter consciousness to nearly so great an extent as they do nor does it lead to increasing tolerance to the drug dosage." [60] Furthermore, the subjective effects of cannabis are dependent upon the personality of the user, his expectations, and the circumstances under which the drug is taken, as well as learning to smoke marijuana properly.[61]

There is general agreement about the pleasurable psychological effects. Users uniformly experience greatly enhanced perception—whether real or delusory—of visual, auditory, taste and touch effects, increased sense of humor or hilarity, feelings of well-being or wonderment, and distorted time and space perceptions.[62] In this connection, it is interesting to note that even the pleasurable phenomena are dependent on individual circumstances, particularly when the drug is taken for the first time. Many, if not most, people do not become "high" on their first exposure to marijuana even if it is smoked correctly.[63] The probable explanation for

[58] *Comparison of the Effects of Marijuana and Alcohol on Simulated Driving Performance*, 164 SCIENCE 851 (1969) (concluding that subjects under a "social marijuana high" showed no significant differences from control subjects in accelerator, brake, signal, steering, and total errors). In addition, "unlike alcohol drinkers, most pot smokers studiously avoid driving while high." J. ROSEVEAR, *supra* note 36, at 135.

[59] Weil Study 1238.

this curious phenomenon is that repeated exposure to marijuana reduces psychological inhibition, as part of, or as a result of, a learning process.[64]

Medical knowledge is most tentative with reference to adverse psychological effects. Recent studies, however, have vehemently disputed an earlier tendency to attribute psychoses and severe panic reactions to marijuana use.[65] As Dr. Weil has noted:

> Because reliable information about the acute effects of marijuana has been as scarce within the medical profession as without, many of these reactions have been misinterpreted and incorrectly treated. For example, simple panic states, which doubtless would be properly diagnosed in other circumstances, are often called "toxic psychoses" when doctors elicit immediate histories of marijuana use.[66]

Medical experts now generally agree that the possibility of depression, panic and psychoses depends entirely on the circumstances of use and the personality of the user.[67] In his most recent study, Dr. Weil concluded that "serious adverse reactions are uncommon in the 'normal' population," [68] but noted three exceptions. First, simple depressive reactions which rarely occur in regular users may occur in novices who approach their initial use ambivalently.[69] Second, the most frequent adverse reaction is apprehension, more often described as anxiety, and sometimes reaching a degree of panic. Again, such reactions are closely related to the attitude of the user and to the social setting.[70] The social setting also influences the frequency of panic reactions, suggesting again that this phenomenon correlates with the degree of reluctance with which people approach initial use of the drug:

---

[64] "The subjective responses of our subjects indicate that they had imagined a marihuana effect to be much more profoundly disorganizing than what they experienced." Weil Study 1241. This subjective control over the effects extended as far as the reporting of no effects when in actuality the subject had received a large dose. *Id.*

[65] Grinspoon, *supra* note 43, at 23-24.

[67] *See, e.g.*, Schwarz, *supra* note 34, at 595; Weil, *supra* note 66.

[68] Weil, *supra* note 66, at 997.

[69] Marihuana depressions I have seen have occurred mainly in obsessive-compulsive persons who are ambivalent about trying the drug or who invested the decision to experience marihuana with great emotional meaning. In interviewing these patients, I have thought that they used marihuana as an excuse for letting themselves be depressed, not that their depressions were psycho-pharmacological.

Id. at 998.

[70] Dr. Weil has stated that "panic reactions occurred most often among novice users of marijuana—frequently older persons who are ambivalent about trying the drug in the first place." N.Y. Times, May 1, 1970, at 18C, col. 2.

> In a community where marijuana has been accepted as a recreational intoxicant, they may be extremely rare (for example, one per cent of all responses to the drug). On the other hand, at a rural Southern college, where experimentation with the drug may represent a much greater degree of social deviance, 25 per cent of persons trying it for the first time may become panicked.[71]

The panicked person normally believes that he is either dying or losing his mind, and simple reassurance will end most such reactions.[72] The reaction normally is short-lived, but it may be prolonged by an attitude encouraging the underlying fears.[73] In short, "panic reactions . . . seem more nonpharmacologic than pharmacologic." [74]

Third, psychotic reactions occur rarely, if at all, in normal users,[75] and occur mainly in persons with a low psychosis threshold or a history of psychosis[76] or hallucinogenic drug experimentation.[77] Even in such cases, marijuana is a precipitant rather than a primary cause of this type of reaction[78] which lasts at most a day or two.[79]

IX. Marijuana Legislation Clashes with Judicial Skepticism and Emerging Values—Piecemeal Judicial Response: 1965-1970

The dramatic increase in marijuana use during the latter 1960's and the consequent increase in prosecution[1] were matters of high public visibility. Judicial response at both the trial and appellate levels was in-

fluenced by a combination of powerful forces, none of which had been present in the preceding years. The 1960's saw a revolution in the law of criminal procedure, and in few areas were police practices more suspect than in the enforcement of the drug laws. The latter part of the decade witnessed widespread dissent against the political and legal systems; this protest milieu gave an added dimension to marijuana use as more and more people smoked, oftentimes overtly, in order to defy a seemingly ignorant law. Faced with this unusual conjunction of widespread political and social eccentricity, the courts—institutional protectors of political deviants—were inevitably pressed into institutional sympathy for social deviants. A third force was the revitalized judicial interest in the value of privacy in a highly automated, technological society; more and more people went to the courts to question long-standing governmental prohibitions against essentially private decisions and acts—homosexuality, abortion, contraception and drugs. Together with the well-publicized medical skepticism about the soundness of the nation's drug laws, particularly those regulating marijuana, these forces moved the courts to scrutinize enforcement practices and consider a new wave of constitutional objections to state and federal marijuana legislation.

A. Multiple Offenses: Untying the Statutory Knots

1. Federal Developments

In the major decision during this period, the United States Supreme Court voided the federal provisions most often employed to prosecute the possessor (buyer) of marijuana. In the first arm of *Leary v. United States*,[2] the Court held that the fifth amendment relieves unregistered buyers of any duty to pay the transfer tax and to file the written order form as required by the Marihuana Tax Act.[3] The Court reasoned that, since filing such a form would expose a buyer to liability under state law, under the occupational tax provisions of the Tax Act, and perhaps under the marijuana provision of the Import and Export Act,[4] the filing

[2] 395 U.S. 6 (1969).

[3] Although *Leary* involved only the concealment and transportation provision, 26 U.S.C. § 4744(a)(2) (1964), the Eighth Circuit has held, correctly, that *Leary* also covers the acquiring provision, § 4744(a)(1), "since a person obviously would have to acquire the marijuana to knowingly transport or conceal it." United States v. Young, 422 F.2d 302, 304 (8th Cir.), *cert. denied*, 398 U.S. 914 (1970).

[4] Because the "danger of incrimination under state law" was "so plain," the Court did not pursue the additional question of a buyer's exposure to liability under the Import and Export Act. 395 U.S. at 16 n.14.

provisions violated the fifth amendment guarantees against self-incrimination. On the other hand, the Court held in a later case that the fifth amendment does not relieve the marijuana seller of the duty to confine his sales to transferees who are willing to comply with the order form requirements.[5] Similarly, the Eighth Circuit recently held[6] that *Leary* does not compel invalidation of Tax Act section 4755(b), which prohibits the interstate transportation of marijuana, because a conviction under that section is not really a conviction for failing to register and pay the occupational tax and, even if it were, registration under section 4753 is not necessarily incriminating as was the written order form requirement struck down in *Leary*.[7]

The second arm of *Leary* reversed the long line of decisions[8] upholding the presumption of knowing concealment of illegal importation arising from possession under section 176a of the Import and Export Act.[9] The Court held that, in light of the ease with which marijuana was domestically cultivated and the number of users, the presumption of knowledge could not rationally be drawn from possession;[10] it could not be said "with substantial assurance that the presumed fact [knowing concealment of illegally imported marijuana] is more likely than not to flow from the proved fact [possession] on which it is made to depend." [11] Although there is authority to the contrary,[12] the Ninth Circuit has held this part of *Leary* retroactive, thereby invalidating all prior section 176a convictions in which the defendant did not admit

[5] Minor v. United States, 396 U.S. 87 (1969).

[6] United States v. Young, 422 F.2d 302 (8th Cir.), *cert. denied*, 398 U.S. 914 (1970).

[7] "Although we need not reach the question, we feel that the Fifth Amendment is not violated by the insubstantial hazards of incrimination posed by § 4753." *Id.* at 306.

[8] See p. 1086 *supra*.

[9] Anticipating the *Leary* decision on the § 176a presumption was United States v. Adams, 293 F. Supp. 776 (S.D.N.Y. 1968).

[10] 395 U.S. at 52-53. Having found the "knowledge" presumption unconstitutional, the Court avoided consideration of the "illegal importation" presumption. *Id.* at 38. The knowledge presumption has also been held invalid as applied to hashish, United States v. Maestri, 424 F.2d 1066 (9th Cir. 1970); *cf.* United States v. Cepelis, 426 F.2d 134 (9th Cir. 1970) (remanded for factual determination on whether *Leary* applies to hashish).

In Turner v. United States, 396 U.S. 398 (1970), the Court upheld the presumption in 21 U.S.C. § 174 (1964) (direct ancestor of § 176a as applied to heroin but declared it irrational as applied to cocaine. It has been held that *Turner* is retroactive. United States v. Vallejo, 312 F. Supp. 244 (S.D.N.Y. 1970).

[11] 395 U.S. at 36.

[12] Rivera-Vargas v. United States, 307 F. Supp. 1075 (D.P.R. 1969).

knowledge and the jury was instructed as to the applicability of the statutory presumption.[13]

A serious dispute remains as to what the Government will have to prove in subsequent prosecutions under section 176a. Assuming that the entire provision does not violate the privilege against self-incrimination,[14] it is likely that the prosecution will have to prove actual knowledge of illegal importation in the future.[15] Since it is highly improbable that such proof will be forthcoming, section 176a has probably been rendered useless as applied to possessors. It should be clear that the entire series of decisions under the Tax Act and section 176a has an air of unreality about them because Congress probably has Article I power directly to prohibit possession and sale of marijuana and has now exercised that power in the Comprehensive Drug Abuse Prevention and Control Act of 1970.[16] This new legislation, although stopping short in some respects, discards many of the fictions perpetuated by earlier legislation. The *Leary* decision was at least partially responsible for forcing Congress to rationalize the federal role in the drug field, particularly with respect to marijuana.

Another manifestation of judicial dissatisfaction with the extreme nature of existing drug legislation is the apparent reversal of the trend of decisions upholding the strict liability of one-time drug offenders, users

---

[13] United States v. Scott, 425 F.2d 55 (9th Cir. 1970). We think the Ninth Circuit is right, at least with respect to convictions secured after marijuana achieved high public visibility in the 1960's. Since the number of people still incarcerated for earlier convictions is minimal, complete retroactive effect is in order. Essential to the *Leary* decision was a determination that the presumption was factually unsupportable; it therefore constituted a material flaw in the fact-finding process and seriously impaired the right to jury trial.

[14] Absent the written order form requirement of the Marihuana Tax Act, we do not see how prosecution under § 176a involves the fifth amendment at all. Neither did the Ninth Circuit. *Id.* at 61.

[15] *See* United States v. Martinez, 425 F.2d 1300 (9th Cir. 1970); McClain v. United States, 417 F.2d 489 (9th Cir. 1969). A mere inference of importation is clearly not enough to sustain a conviction since it would nullify *Leary*. *Cf.* United States v. Ramos, 282 F. Supp. 354 (S.D.N.Y. 1968) (where Government failed to prove possession beyond reasonable doubt, court could not infer knowledge of importation). It is difficult to see how the Government could raise an inference of knowledge without proving actual knowledge. If, however, such can be done, it is clear that the defendant has a right to prove that the marijuana was not imported. United States v. Espinoza, 406 F.2d 733 (2d Cir.), *cert. denied*, 395 U.S. 908 (1969) (retrial ordered for failure of trial judge to allow defendant to prove that marijuana came from California).

[16] Pub. L. No. 91-513 (Oct. 27, 1970). *See also* Leary v. United States, 395 U.S. 6, 54 (1969) ("We are constrained to add that nothing in what we hold today implies any constitutional disability in Congress to deal with the marijuana traffic by other means").

and addicts for failure to register when leaving the country.[17] The Ninth Circuit held the phrase "uses narcotic drugs" unconstitutionally vague.[18] Taking a more direct approach, the Second Circuit found knowledge of the registration requirement to be an element of the crime.[19] Thus construed, the statute precludes any due process challenge to the sufficiency of the notice.[20] Although a self-incrimination issue remains,[21] the Second Circuit's decision removed the most serious defect in the statute, one that had become intolerable as the number of marijuana convictions escalated in the late 1960's.

2. State Developments

The erosion of the archaic federal criminal statutes for marijuana-related offenses has been accompanied by a similar, albeit limited, development on the state level. The major issue in state litigation concerns so-called "drug-proximity" offenses which are generally employed as plea-bargaining tools or to prevent the release of a suspect when evidence was illegally seized or when the evidence is insufficient to secure a conviction under the substantive drug offense. Typical ancillary offenses are loitering in the common areas of a building for the purpose of unlawfully using or possessing any narcotic drug;[22] loitering in public by a user, addict or convicted drug offender without lawful employment;[23] presence in an establishment where narcotic drugs are dispensed;[24] and presence of a user or drug offender in a private place where drugs are kept.[25]

The decisional trend seems to point to the unconstitutional vagueness of simple loitering and vagrancy statutes.[26] Because of the nexus between

---

[17] See p. 1085 *supra*.

[18] Weissman v. United States, 373 F.2d 799 (9th Cir. 1967). Struggling to confine its holding, the court distinguished an apparently contradictory case, United States v. Eramdjian, 155 F. Supp. 914 (S.D. Cal. 1957), on the ground that it involved "addiction" rather than use of narcotic drugs.

[19] United States v. Mancuso, 420 F.2d 556 (2d Cir. 1970).

[20] *See* Lambert v. California, 355 U.S. 225 (1957) (application of city ordinance requiring convicted felons to register within five days after arrival in city where there is no actual notice or knowledge of ordinance is unconstitutional).

[21] The *Mancuso* court did not discuss the issue.

[22] N.Y. Penal Law § 1533(5) (McKinney 1967).

[23] D.C. Code Ann. § 22-3302 (1967).

[24] *Id.* § 22-1515(a).

[25] *Id.* § 33-416(a).

[26] *E.g.*, Wheeler v. Goodman, 306 F. Supp. 58 (W.D.N.C. 1969), *appeal docketed*, 38 U.S.L.W. 3409 (U.S. Apr. 21, 1970) (No. 1273, 1969 Term; renumbered No. 102,

narcotics and crime, however, the courts are struggling to redefine narcotics-proximity statutes to avoid the vagueness objection.[27] It might appear that where "good account" provisions give the arresting police officer too much discretion the statute will fail.[28] On the other hand, courts generally avoid vagueness objections based on lack of notice by reading in knowledge elements wherever necessary.[29] Because of the tenuous relation between marijuana and crime, the courts should construe "narcotics" in such statutes not to include marijuana.

Similar restriction of marijuana-related offenses has been accomplished by holding that charges of possession and sale will not both lie where the only possession is incident to sale,[30] and by tightening the requirements of specificity in the indictment regarding the proscribed parts of the plant.[31]

1970 Term); Lazarus v. Faircloth, 301 F. Supp. 266 (S.D. Fla.) *appeal docketed*, 38 U.S.L.W. 3225 (U.S. Dec. 16, 1969) (No. 630, 1969 Term; renumbered No. 45, 1970 Term; Broughton v. Brewer, 298 F. Supp. 260 (S.D. Ala. 1969).

[27] In People v. Pagnotta, 25 N.Y.2d 333, 253 N.E.2d 202, 305 N.Y.S.2d 484 (1969), the New York Court of Appeals upheld a statute making it illegal to loiter about any "stairway, staircase, hall, roof, elevator, cellar, courtyard, or any passageway of a building for the purpose of unlawfully using or possessing any narcotic drug." The court distinguished the ordinary vagrancy and loitering cases on the ground that the conduct punished in the narcotics vagrancy statute is directly related to the commission of crime *against others:*

> [P]rotection of innocent citizens from drug users is a very crucial problem. As has recently been pointed out by several newspaper articles, in some of our poorer urban areas where drug use is high, innocent citizens are often beaten, robbed and even murdered by drug addicts . . . . It is completely reasonable and proper for the Legislature to protect these citizens from accidentally stumbling into the midst of such miscreants in the common areas of buildings.

Ct. 1968) (possession of seed, residue in

B. Procedural Objections to Enforcement Practices

The law of criminal procedure underwent a major revolution in the 1960's. The Bill of Rights was applied piece by piece to the states through the fourteenth amendment. The Supreme Court focused its concern on protecting the rights of the criminal defendant. The earlier philosophy had been that, so long as the defendant's rights at trial were guaranteed, the Court should not, and did not need to, intrude into the pretrial stages of the criminal process. For a variety of reasons it became clear in the 1960's that in a system where between 75 and 90 percent of all defendants bargain and enter guilty pleas, rights must be assured well before trial if they are to have any real meaning to the average person caught in the net of the criminal process. Thus, step by step the Court began to regulate police practices—search, arrest and interrogation techniques—and the conduct of the early stages of the criminal process. This substantial change in attitude meant that more marijuana defendants could successfully raise procedural objections.

1. Search and Seizure

The most important development for the marijuana offender has been the close judicial scrutiny of police searches as a result of Supreme Court rulings under the fourth amendment. More stringent standards have been established for the police to obtain search warrants,[32] and the proper scope of searches incident to a lawful arrest has been narrowed substantially.[33]

Although courts have refused to exclude any evidence that was in plain sight when seized, such as a bag of marijuana in a school satchel voluntarily opened by a student,[34] or marijuana thrown out of a window by a defendant trying to dispose of it,[35] they have narrowed the per-

pipes and a small package of marijuana); Commonwealth v. Cunningham, 35 Pa. D. & C.2d 527 (O. & T. Allegheny 1964) (possession of marijuana seeds); *cf.* State v. Everidge, 77 N.M. 505, 424 P.2d 787 (1967) (defendant required to raise defense that marijuana possessed was within statutory exception); State v. Mudge, 69 Wash. 2d 861, 420 P.2d 863 (1966) (same).

missible time and area in which a car may be searched.[36] Moreover, the difficult standing problem posed by the requirement that one had to admit possession or ownership of the seized property in order successfully to challenge the search was alleviated in cases involving group arrests by permitting all those on the premises to challenge a given search.[37]

The new requirements for procuring search warrants led to a number of technical defense victories. For example, searches of defendants' residences were successfully challenged in two Montana marijuana cases[38] because the warrants were issued by a justice of the peace, rather than by a district judge, as required by the state law. These holdings were premised on the sanctity of private residences, and they suggest a growing reluctance to countenance "reasonable" warrantless searches, especially of the home. Similarly, Maryland struck down the fruits of a search of defendant's guests and their automobiles on the ground that the permissible search was limited to the areas described in the warrant.[39] An Illinois court has held that property not included in the warrant must be returned to the defendant.[40] This return to a more stringent view of particularity requirements of warrants stands in stark contrast to the willingness of courts to overlook these requirements in the late fifties.[41]

Likewise, courts now scrutinize more closely police claims of probable cause for expanding the area of the search. A California court held that even though defendant was lawfully arrested, search of his luggage in a friend's apartment was justified neither by the friend's consent nor by the officer's having seen the defendant swallow something.[42] The search was especially unjustifiable since the defendant had been arrested in his automobile. In another California case, the presence of peculiar odors did not constitute probable cause for the search of a footlocker.[43]

---

[36] Preston v. United States, 376 U.S. 364 (1964). *See also* Cooper v. California, 386 U.S. 58 (1967). The holdings in both these cases are probably limited by *Chimel*.

[40] People v. Hartfield, 94 Ill. App. 2d 421, 237 N.E.2d 193 (1968).

[41] See pp. 1089-91 *supra*.

[42] People v. Cruz, 61 Cal. 2d 861, 395 P.2d 889, 40 Cal. Rptr. 841 (1964); *accord*, People v. Patton, 264 Cal. App. 2d 637, 70 Cal. Rptr. 484 (Dist. Ct. App. 1968). In *Cruz* the court stated that it was reasonable for the officers to try to dislodge the suspected marijuana from the defendant's mouth.

[43] People v. McGrew, 103 Cal. 3d 404, 462 P.2d 1, 82 Cal. Rptr. 473 (1969), *relying on*

An airline had detained the footlocker since it corresponded to a police description. The officers had smelled the marijuana and then searched the footlocker before sending it on its way and tracing it. The California Supreme Court held that the smell alone was not sufficient cause to search without a warrant.

Despite judicial narrowing of the scope of searches with or without a warrant, the easing of the standing requirements, and the closer scrutiny on the probable cause issue, courts continue to permit police to enter dwellings without knocking or by force where circumstances indicate such action is reasonable and necessary. For example, a California court upheld a marijuana search, even though the police entered without knocking, because the police heard people running around inside yelling, "It's the police," and thought they heard a shot fired.[44] The court held that the statutory knocking requirement was subject to exception when there was danger of destruction of evidence and danger to the police. Closely related to no-knock entry is forcible entry, upheld in an Illinois case[45] where the police broke into the defendant's residence when he did not immediately respond to their knocks. The necessity for forced entry is essentially the same as for unannounced entry, but forced entry adds the danger of causing fright and damage.

Another search area that has not been substantially liberalized is that of the border search. Customs officials have a much more extensive right to search than their police colleagues. Mere suspicion is sufficient to justify a border search.[46] Even though the jurisdiction of customs agents ends once entry into the country is completed, the courts have allowed border guards great discretion in determining what constitutes completed entry. In *Thomas v. United States*,[47] the Fifth Circuit held admissible evidence seized an hour and a half after the appellant had reentered the United States because he was only six blocks from the border. Although there is an inevitable problem of how far the jurisdiction of the customs agent extends, *Thomas* suggests clearly that it is not limited to border crossings.

People v. Marshall, 69 Cal. 2d 51, 442 P.2d 665, 69 Cal. Rptr. 585 (1968) ("'In plain smell,' therefore, is plainly not the equivalent of 'in plain view'").

[45] People v. Hartfield, 94 Ill. App. 2d 421, 237 N.E.2d 193 (1968).

[46] United States v. Glaziou, 402 F.2d 8 (7th Cir. 1968), *cert. denied*, 393 U.S. 1121 (1969); Henderson v. United States, 390 F.2d 805 (9th Cir. 1967).

[47] 372 F.2d 252 (5th Cir. 1967). The customs agents had searched the defendants belongings at the time he had entered the country and had not discovered the marijuana and heroin he possessed. They came into town and searched the defendant when they were notified by an informer that he was carrying the contraband.

2. *Entrapment*

Although the majority opinions in *Sorrells v. United States*[48] and *Sherman v. United States*,[49] remain the leading statements on entrapment, some courts have recently permitted expansion of the defense. In California a defendant may plead not guilty and still raise the entrapment defense in some cases. The court in *People v. Perez* stated:

> To compel a defendant to admit his guilt as a condition of invoking the defense of entrapment would compel him to relieve the prosecution of its burden of proving his guilt beyond a reasonable doubt at the risk of not being able to meet his burden of proving entrapment.[50]

The defendant must, however, still raise the defense at trial to be determined as a matter of fact by the jury.[51] There is no right to raise the defense in a pretrial motion to suppress the evidence.[52] Most courts continue to focus on the moral culpability of the accused[53] in determining whether or not entrapment has been successfully shown. Recent Arkansas[54] and Nevada[55] cases, however, suggest that the courts are in-

[48] 287 U.S. 435 (1932).

[49] 356 U.S. 369 (1958).

[50] 62 Cal. 2d 769, 776, 401 P.2d 934, 938, 44 Cal. Rptr. 326, 330 (1965). The decision overturned a long series of precedents. That all justices concurred is indicative of the sentiment for change. The court required the prosecution to disclose the identity of the informant because he was essential to the defenses of entrapment and lack of knowledge. The decision was immediately implemented in People v. Marsden, 234 Cal. App. 2d 796, 44 Cal. Rptr. 728 (Dist. Ct. App. 1965). There, defendant was repeatedly requested to furnish marijuana to a government agent and finally purchased and gave the agent one marijuana cigarette. The court noted that the case was close to entrapment as a matter of law.

[51] People v. Oatis, 264 Cal. App. 2d 324, 70 Cal. Rptr. 524 (Dist. Ct. App. 1968), *cert. denied*, 393 U.S. 1108 (1969).

[52] State v. Folsom, 463 P.2d 381 (Ore. 1970).

[53] Commonwealth v. Harvard, 253 N.E.2d 346 (Mass. 1969); Glosen v. Sheriff, 451 P.2d 841 (Nev. 1969).

[54] Peters v. State, 450 S.W.2d 276 (Ark. 1970). Here the defendant gave some marijuana free of charge to the agent after repeated requests. The marijuana had been left in the defendant's shop by others. In remanding the case for consideration by the jury whether entrapment existed the court stated:

> Perhaps, neither the persistent solicitation, the use of an alias, the misrepresentation of the purposes for which [the agent] wanted to acquire the marijuana nor the use of friends of appellant for an entree, standing alone, would have been sufficient to raise a fact question as to entrapment, but when taken together along with the total lack of evidence that [the defendant] had possessed or sold marijuana before, there was such an issue.

creasingly concerned about the conduct of law enforcement agents, especially in marijuana cases.

3. Other Prosecution Practices

Several major abuses, although judicially recognized, remain largely uncorrected. Long delay between offense and arrest is common in narcotics offenses because the police desire to expose the full extent of distribution and to maintain a cover for the undercover agent as long as possible. Yet any substantial delay will prejudice the defendant since the prosecution continues to gather evidence while the defendant may forget exact circumstances and possibly exculpating facts. Judicial response has been inconsistent, focusing primarily on the purposefulness of the delay.[56] In light of the recent rejuvenation of the speedy trial requirement by the Supreme Court,[57] there is some hope that this abuse may be corrected.

A more serious abuse with which state and federal prosecutors have been charged is politically-motivated discretionary enforcement.[58] Although the courts can do little to remedy this state of affairs, it forms the basis for one of our basic contentions: The political-social overtones of the marijuana problem may inhibit a rational political and prosecutorial response and at the same time may provoke a protective judicial response. One judge, particularly expert with regard to contemporary drug problems, has acknowledged the partial truth of the charges of political prosecution against hippies, long-hairs and draft-card burning college students.[59] To the extent that other trial and appellate judges recognize

instruction where policeman placed marijuana in defendant's car and then defendant sold it to another officer).

[56] *Compare* Jordan v. United States, 416 F.2d 338 (9th Cir. 1969), *cert. denied*, 397 U.S. 920 (1970) (since three-month delay was not purposeful, defendant must show actual prejudice), *with* Ross v. United States, 349 F.2d 210 (D.C. Cir. 1965) (charges dismissed since seven-month delay found purposeful).

[59] Oliver, *Assessment of Current Legal Practices from the Viewpoint of the Courts*, in DRUGS AND YOUTH 229 (J. Wittenborn ed. 1969). Judge Oliver tried to minimize the seriousness of the problem, however:

> I think that as judge I must be interested in what might appear to be a pattern of discriminatory law enforcement, but I . . . consider much of this talk must be viewed with the same critical eye which most other talk about drug abuse must be viewed.

Id. at 233.

these prosecutorial tendencies, we can expect some judicial compensation either in fact-finding, in sentencing, or in response to substantive challenges to the law. It is our contention, of course, that such judicial reaction has already begun.

C. *Sufficiency of the Evidence*

The ease of identifying marijuana in conjunction with the use of uncorroborated testimony and circumstantial evidence continues to require of the prosecution only a very low burden of proof. Nevertheless, appellate decisions are gradually beginning to tighten these requirements, and active judicial hostility at trial has all but disappeared.

Although the use of uncorroborated testimony to convict continues to be upheld by the courts,[60] an Illinois appellate court has reversed a conviction because of the behavior of the testifying officer.[61] Noting that the officer had repeatedly pressured the defendant to become an informer, the court held that the uncorroborated testimony of this officer was not sufficient to support a conviction. The court did not make clear whether it exercised a weight of the evidence review of the trial judge's fact-finding, or whether it applied an exclusionary evidence rule pursuant to its inherent powers over the administration of criminal justice. Whatever the case, judicial perspective in the clash between marijuana defendant and police officer has clearly shifted.

The amount of marijuana required to uphold a conviction is undergoing substantial change. The California Supreme Court held in *People v. Leal*[62] that to be sufficient for conviction, the amount of narcotics must be enough for sale or consumption, the rule generally applied where the statute does not specify a minimum quantity.[63] In *Eckroth*

[60] *See, e.g.*, Winfield v. State, 248 Ind. 95, 223 N.E.2d 576 (1967).

[61] People v. Quintana, 91 Ill. App. 2d 95, 234 N.E.2d 406 (1968). The court was greatly displeased with the continuing misbehavior of the officer: "[The 5-8 previous arrests and shakedowns] were a high-handed display of police power which completely disregarded the defendant's constitutional rights." *Id.* at 98, 234 N.E.2d at 408.

[62] 64 Cal. 2d 504, 413 P.2d 665, 50 Cal. Rptr. 777 (1966) (heroin).

[63] People v. Villalobos, 245 Cal. App. 2d 561, 54 Cal. Rptr. 60 (Dist. Ct. App. 1966) (50 milligrams insufficient); *see* Tuttle v. State, 410 S.W.2d 780 (Tex. Crim. App. 1967) (63 milligrams sufficient, enough to make a very small cigarette); People v. Hokuf, 245 Cal. App. 2d 394, 53 Cal. Rptr. 828 (Dist. Ct. App. 1966) (reversible error for the court not to instruct the jury that fragments of marijuana cannot support conviction). *But see* Franklin v. State, 8 Md. App. 134, 258 A.2d 767 (1969) (heroin), in which the court upheld a conviction for possession where the defendant went to the hospital with an overdose. Although recognizing that once the drug is inside the body there is no possession because there is no control, the court felt that prior possession and

CONTINUED

5 OF 33

v. State[64] a Florida court ruled that the taking of a drug from a passing pipe is not sufficient to constitute possession where the defendant did not own the pipe, the drug or the premises. Similarly, in a case that received national publicity,[65] the Minnesota Supreme Court held that if the state defines marijuana as a narcotic, it cannot punish possession of what could be native cannabis in amounts too scanty to produce a "narcotic" effect. Accordingly, exiguous traces of the drug found in the crevices of defendant's brief case left in his mistress' car did not constitute an amount sufficient for conviction.[66]

Other problems remain unsolved. Circumstantial evidence continues to link defendants to seized marijuana. Constructive possession was found where the defendant's daughter was the actual possessor,[67] and the fact that marijuana was found where an informer said she had seen defendant smoking it the previous day was sufficient to support the defendant's conviction.[68] There is a split as to whether a conviction can be upheld where the defendant gratuitously brings the buyer and seller together. Massachusetts upheld the conviction for possession where the defendant's only contact with the marijuana was passing it to the state's agent,[69] ruling that the facilitation of the sale added enough to the act of passing to allow the court to find possession. In a similar case, however, a New York court held that there was not present the required involvement or concert of action to uphold a conviction for sale.[70]

Nevertheless, courts have refused conviction on numerous occasions in which the defendant was not linked exclusively with the marijuana that was found,[71] and have generally required an outside linking factor before upholding the possession.[72] However, the element that can tip the

self-administration could be inferred. The decision should do much to discourage addicts from receiving any medical treatment that might expose them to criminal penalties.

[70] People v. Hingerton, 27 App. Div. 2d 754, 277 N.Y.S.2d 754 (1967).

[71] *See, e.g.*, State v. Oare, 249 Ore. 597, 439 P.2d 885 (1968) (one marijuana cigarette found in bathroom with two people, home owner convicted); People v. Van Syoc, 269 Cal. App. 2d 370, 75 Cal. Rptr. 490 (Dist. Ct. App. 1969) (marijuana found on right-hand side of the dashboard in defendant's car while parked in public lot); People v. Evans, 72 Ill. App. 2d 146, 218 N.E.2d 781 (1966) (marijuana found under bar where defendant had been sitting).

[72] State v. Faircloth, 181 Neb. 333, 148 N.W.2d 187 (1967) (defendant had dufflebag

scales in favor of conviction is often unrelated to the possible possession of the marijuana. For example, a California court[73] upheld the finding of possession of marijuana discovered along with a purse the defendants had stolen. The defendants contended that the marijuana was not theirs and must have been in the purse when stolen. That the defendants were thieves probably played more heavily in the conviction than any evidence of their connection with marijuana.

Where marijuana is found on the premises of the individual, possession is presumed, although the courts have read in a defense of ignorance of the presence of the marijuana.[74] Nevertheless, in a New Hampshire case[75] the court upheld a possession conviction premised on the defendant's knowledge of presence of the drug on the premises even though the court apparently believed the defendant's story that it belonged to a third party. Ordinarily there is direct corroborating evidence to indicate the defendant's knowledge.[76]

Along with the gradual thaw on these points in state courts, the late sixties witnessed a total absence of the outrageous judicial participation in inflammatory statements about the dangers of the drug and its users which we saw was typical of the late fifties. To the contrary, the appellate opinions, at least, are replete with skeptical references to the inclusion of marijuana in the narcotics classification.[77]

D. Sanction

Nowhere has judicial disenchantment with the drug laws, especially marijuana, been greater than in the area of punishment. Preference for civil treatment of drug abuse,[78] disgust with severe mandatory sentencing that deprives the judiciary of its traditional function of weigh-

full of marijuana between his legs in automobile); People v. Blunt, 241 Cal. App. 2d 200, 50 Cal. Rptr. 440 (Dist. Ct. App. 1966) (defendant only one who had sat in back of police car where marijuana found).

[74] *See* Commonwealth v. Buckley, 354 Mass. 508, 238 N.E.2d 335 (1968); People v. Mitchell, 51 Misc. 2d 82, 272 N.Y.S.2d 523 (Sup. Ct. 1967). *Contra*, State v. Givens, 74 Wash. 2d 48, 442 P.2d 628 (1968).

[75] State v. Colcord, 109 N.H. 231, 248 A.2d 80 (1968).

[76] The evidence of fragments of marijuana on the defendant often provides this evidence. *See, e.g.*, People v. Slade, 264 Cal. App. 2d 188, 70 Cal. Rptr. 321 (Dist. Ct. App. 1968); People v. Haynes, 253 Cal. App. 2d 1060, 61 Cal. Rptr. 859 (Dist. Ct. App. 1967), *cert. denied*, 392 U.S. 914 (1968); People v. Hurtt, 238 Cal. App. 2d 162, 47 Cal. Rptr. 580 (Dist. Ct. App. 1965).

[77] See 1131-32 *infra*.

[78] *E.g.*, Oliver, *supra* note 59.

ing the culpability of the individual offender,[79] and skepticism about a statutory scheme which catches the user or small scale distributor and misses the major trafficker[80] have all found their way into judicial opinions.

This dissatisfaction with legislative inaction in the area of de-escalating punishment has already begun to provoke remedial[81] judicial action. In a landmark decision[82] receiving national attention,[83] the Supreme Court of New Jersey recently held that any prison sentence imposed for first-offense possession of marijuana for personal use "should be suspended." [84] While the court based its holding on the judiciary's statutory authority to suspend sentences in "the best interests of the public as well as of the defendant," [85] and on the appellate court's power to review for abuse of discretion trial court sentencing decisions, it appears that the true locus of the opinion is the eighth amendment. That is, the court really determined that any prison sentence for first-offense possession of marijuana for personal use is unreasonably excessive. Accordingly, the decision will be discussed in more detail in the following section.[86]

[79] *See, e.g.*, United States v. Kleinzahler, 306 F. Supp. 311 (E.D.N.Y. 1969) (Weinstein, J.); Oliver, *supra* note 59, at 230:

> In most other areas of the law, however, legislatures have freely granted judges the power and discretion within quite flexible limitations, to determine appropriate sentences for all particular defendants before them that may or may not, dependent upon the particular case, include committment to a penal institution. . . . In the field of drug abuse, quite contrary to that experience, mandatory prison sentences apparently reflect a legislative conviction that all drug offenders are so alike that sending all to prison is, in fact, a real solution to what must have been viewed as a relatively simple problem. They also seem to reflect a certainty and righteousness that can hardly be said to be justified by our present scientific knowledge.

[80] For example, in Aguilar v. United States, 363 F.2d 379 (9th Cir. 1966), the court, affirming the smuggling conviction of a Mexican mechanic driving a car containing marijuana back to the United States, noted:

> Here was a young man with a previous clean record, and there was no indication he was a user of narcotics or inside a narcotics ring. Apparently he was a victim of his personal economics. When the law gets no closer than this to the real rascal, one must wonder about the policy of it, although it be beyond our function.

Id. at 381. *See also* Oliver, *supra* note 59, at 233.

[81] What Justice Jackson said about adjudicative mood when the death penalty hangs in the balance is equally appropriate with regard to harsh marijuana penalties:

> When the penalty is death, we, like state judges, are tempted to strain the evidence and even, in close cases, the law in order to give a doubtfully condemned man another chance.

X. The Heart of the Matter—Substantive Constitutional Challenges to the Marijuana Laws: 1965-1970

Perhaps the most significant legal development engendered by the new class of marijuana users and shift in medical opinion is the vigorous wave of substantive constitutional attacks on the marijuana laws launched in 1965. Although the challengers have employed many labels, the essence of their attacks is an insistence on rationality in the legislative process. Contending that marijuana is a harmless euphoriant, the challengers have questioned governmental authority to prohibit its use at all. Arguing that it is no more, and perhaps less, harmful than alcohol and tobacco, the challengers have indicted as irrational the total prohibition of one coupled with permissive regulation of the others. Conversely, the challengers have vigorously attacked the arbitrary inclusion of marijuana in the legislative classification "narcotics" with admittedly harmful opiates and cocaine. Finally, the severity of the punishments imposed for marijuana violations has been attacked as violative of the eighth amendment cruel and unusual punishment clause. A potent weapon in advancing these attacks has been the fact that the state and federal legislatures never conducted meaningful investigation into the effects of the drug, but relied instead on hearsay and emotional pleas.

Although the judiciary has become increasingly sympathetic to these challenges, to date it has left the legislation intact. As we inquire into the reasons for this recalcitrance, the reader should recall the nature of the judicial debate about intoxicants a half century ago. As the scope of the due process and equal protection clauses was substantially broadened over the years, the free-form "pursuit of happiness" and "inherent limitations" approaches were laid on the ash heap of constitutional history. As a result of the incorporation of Bill of Rights guarantees into the fourteenth amendment, there now exist a plethora of more or less "explicit" constitutional limitations upon which the challengers have relied. Analytically, however, the marijuana challengers have asked the courts to fit square pegs into round constitutional holes. The dynamism of recent constitutional interpretation has not yet eroded the obstacles in the challengers' path. But this is not to say that this erosion should not, and will not, eventually occur. In the succeeding pages, we shall evaluate the merits of the various arguments and the adequacy of the judicial responses.

A. The Burden of Justification: The Importance of Having a Presumption on Your Side

The mortar in the wall separating judicial from legislative power is the presumption of constitutionality of legislative action. Although this presumption evaporates where "legislation appears on its face to be within a specific prohibition of the Constitution," [1] or where it affects adversely other fundamental rights,[2] the courts ordinarily will defer to the rationality of legislative proscriptions, classifications and sanctions. When legislation is attacked as irrational, arbitrary or factually groundless, the pertinent questions are whether the judiciary should conduct its own factual inquiry, and how groundless the legislation must be to earn the "arbitrary" or "irrational" designation (or its contextual equivalent).

Because of the placement of the burden of (dis)proof, legislation is not "arbitrary" simply because the legislature did not conduct a fact-finding investigation.[3] When the legislation is attacked, the courts will assume that it was based on the collective knowledge and experience of the legislators. In short, the legislature, as a matter of constitutional law, has no affirmative duty to utilize the trappings of rationality.

Furthermore, legislation is not irrational simply because a factual hypothesis upon which it is premised cannot be proven. The legislature is entitled to guess and act upon the contemporary state of knowledge or ignorance. The generally accepted "facts" about marijuana in the 1920's and 30's, when the drug's possession and use were criminalized, were that it was physically addictive, caused insanity, and gen-

[1] United States v. Carolene Prods. Co., 304 U.S. 144, 152 n.4 (1938).

[2] Gomillion v. Lightfoot, 364 U.S. 339 (1960) (voting rights); United States v. O'Brien, 391 U.S. 367 (1968) (dictum) (free speech).

[3] Although a requirement of fact-finding investigations for all legislation is desirable, judicial enforcement would reward persuasive legislative history and shake the separation of powers doctrine to its very roots. The spectre of judicial surveillance of everyday legislating, albeit by method and not substance, is one not likely to enthuse either legislators or judges.

Counsel for defendants in Commonwealth v. Leis, 355 Mass. 189, 243 N.E.2d 898 (1969), contended that the notable lack of legislative investigation into medical and scientific evidence concerning marijuana "violates certain minimum standards of rationality which must be part of the legislative process." Oteri & Silverglate, *The Pursuit of Pleasure: Constitutional Dimensions of the Marihuana Problem*, 3 Suff. L. Rev. 55, 60 (1968). However, the trial court and the Supreme Judicial Court both responded correctly that the nature of the legislative records was not the issue before the court. The question was whether the facts today are inconsistent with assumptions necessary to the rationality of the legislation. Commonwealth v. Leis, Nos. 28841-2, 28844-5, 28864-5 (Suffolk Super. Ct. 1968), *excerpted in* 3 Suff. L. Rev. 23, 35 (1968) (Tauro, C.J.), *aff'd*, 355 Mass. 189, 243 N.E.2d 898 (1969).

erated crimes of violence. Later, in the 1950's, legislation was premised on the hypothesis that marijuana was the stepping stone to heroin and the other opiates. Since the assumptions could not be conclusively disproved, the legislation was rationally related to the legitimate objectives of preventing crime, pauperism and disease. As the California court in *Ex parte Yun Quong* had noted in 1911 in response to an attack on the early anti-opium laws:

> [B]ut the validity of legislation which would be necessary or proper under a given state of facts *does not depend upon the actual existence of the supposed facts.* It is enough if the law-making body may rationally believe such facts to be established.[4]

Between 1950 and 1965 attacks on the marijuana laws were repelled in this manner since medical inquiry had not yet produced affirmative evidence of irrationality. Challenges to the classification of marijuana as a narcotic were rebuffed either by citing *Navaro* and the other cases first upholding the marijuana laws,[5] or by quoting *Ex parte Yun Quong*.[6]

By 1965, however, the revolution in marijuana use was underway, and independent medical researchers had begun to challenge the venerable assumptions. Armed with an increasing volume of scientific literature in their favor,[7] challengers have assaulted the legislation in court in an effort to prove that "facts judicially known or proved *preclude*" the legislation's rationality.[8] Several trial judges have taken evidence on the physiological, psychological and sociological effects of marijuana,[9] and some appellate courts have suggested that such steps be taken in their respective inferior courts.[10] In Colorado, trial judges have twice declared

that state's marijuana laws unconstitutional on the basis of such evidence, only to be reversed both times.[11] Again and again, the verdict has been the same: Despite the substantial weight of authority regarding the mildness of the drug, enough doubt remains and enough rational men still consider the drug harmful that the courts cannot say the legislation is irrational.[12] Some judges have expressed their own doubts about the accuracy of the factual premises and the wisdom of the legislative judgments pertaining to marijuana,[13] but even they have been constrained to uphold the legislation. At the other extreme, some courts continue to rely on the old myths, considering the question well settled[14] and rebuffing the challengers' attacks with a swish of the robed forearm:

> Clearly, the use of marijuana and other drugs . . . presents a danger to the public safety and welfare of the community since they are clearly related to each other and to the commission of crime.[15]

Many legislators hesitate to revise the marijuana laws drastically, because they feel the data is not yet complete. For the same reason, the courts have been even more reluctant to find that present legislation has no rational basis in fact, a finding made only in the rarest circumstances. Assuming for present purposes that the legislation is entitled to the traditional presumption, we believe that attacks grounded in the due process and equal protection clauses should fail. On the other hand, we are not convinced that challenges grounded in a rationality arm of the eighth amendment prohibition against cruel and unusual punishment are without merit. This argument has the advantage of acknowledging the rationality of criminalization while indicting the severity of the sanction.

1. Due Process and Equal Protection: Rationality of the Classification

The concurrent classification of marijuana as a "narcotic" with the

[14] Robinson v. United States, 327 F.2d 618, 624 (8th Cir. 1964) (Blackmun, J.) ("the boundary line, if any, between narcotics and marijuana is indistinct and . . . statutes and interpreting courts do not give much emphasis to it"); Spence v. Sacks, 173 Ohio St. 419, 420, 183 N.E.2d 363, 364 (1962) ("There is no question that the state had, under its police power, the right to classify cannabis as a narcotic drug."); People v. Glaser, 238 Cal. App. 2d 819, 48 Cal. Rptr. 427 (Dist. Ct. App. 1965), *cert. denied*, 385 U.S. 880 (1966).

[15] People v. Stark, 157 Colo. 59, 66, 400 P.2d 923, 927 (1965).

"hard drugs" and the permissive treatment of alcohol form the basis of the "irrationality" argument. Whether grounded in the minimum substantive content of the due process clause, in the overinclusive and underinclusive aspects of the equal protection clause, or in an independent limitation on the police power, the contention is the same: The legislative classification is not reasonably related to a valid legislative purpose.

The initial inquiry ought to focus on the nature of the state's objective. The first possible objective we will call the "rationality" rationale. The state's aim may be to promote productivity, rationality and participation in social processes, and conversely to prevent the citizen from "turning off" or frustrating his ability to function in socially desirable ways. Under this rationale, prohibition of *all* drug use would be rationally related to the state's objective. Similar treatment of "hard" narcotics and marijuana would be justified, since no distinctions need be drawn between moderate and chronic use or between divergent ancillary social and physical effects. The real issues are whether this is a legitimate objective and whether the permissive treatment of alcohol invalidates the scheme.

As to the first issue, we do not believe that American governmental institutions are empowered to impose the Protestant Ethic upon a free people. Although we will explore this question in some detail below from another perspective,[16] we note for now that opposition to mere *use* of euphoriants has never been the focus of legislative inquiry or the public opinion process in the entire history of drug regulation in this country. As we noted earlier,[17] although total abstension was a peripheral concern of some proponents of Prohibition, that movement was directed primarily at the evils associated with excessive use and commercial distribution. Some judges recently have upheld marijuana legislation simply because marijuana is a "mind-altering drug," [18] but it is unlikely that they perceived the implications of their statements.

As to the second issue, if we assume that rationalism is a legitimate objective of drug legislation, it is a long-standing constitutional principle that the legislature need not "cover the waterfront." If the law-makers determine, as a result of the failure of Prohibition for example, that "regulation" is the only feasible approach to alcohol, that judgment does

[16] See text at notes 132-35 *infra*.

[17] See p. 979 *supra*.

[18] *E.g.*, Raines v. State, 225 So. 2d 330 (Fla. 1969).

not vitiate a prohibitionary approach to other intoxicants. That the legislature acts piecemeal does not make its actions any less "rational."[19]

The state's objective in drug legislation may be to prevent excessive or chronic use on the ground that such use totally destroys the user's social utility and is likely to render him dependent on the state for subsistence. Although this "dependency" rationale is designed immediately to protect each citizen from himself, its mediate aim is the public good. In this respect marijuana prohibition resembles legislation requiring motorcycle users to wear crash helmets.[20] Again, there is some dispute regarding the legitimacy of this objective, a question to which we will return below.

Assuming the validity of the "dependency" rationale, however, the relevant factual inquiry focuses on the respective use patterns and effects of "hard" narcotics, marijuana and alcohol. The challengers contend that it is scientifically established that marijuana is not physically addictive, causes no permanent harm, and that its users do not develop a tolerance to the drug. The irrationality of classifying marijuana with the opiates and cocaine is aggravated, they contend, by the fact that there are six million chronic alcoholics in this country. In response to these arguments, some courts have noted that there is *some evidence* for the proposition that marijuana produces a "serious degree of psychological dependence, that it encourages experimentation with other drugs and that it may lead to addiction of narcotics."[21] Accordingly, since "reasonable men may entertain the belief that the use of [marijuana], once begun, almost inevitably leads to excess, such belief affords a sufficient justification for applying restrictions to these drugs."[22] In addition some courts have noted that there is *some evidence* that the smoking of marijuana may induce acute (albeit temporary) "psychotic breaks" in predisposed individuals.[23]

Although the logic of the stepping stone and psychotic break arguments is suspect in determining valid state interest, we believe that contrary medical findings are still too tentative with respect to the psychological effects of marijuana use to sustain an irrationality challenge under the "dependency" rationale. In addition, the piecemeal principle once

[19] *See, e.g.*, Commonwealth v. Leis, 243 N.E.2d 898, 905 (Mass. 1969).

[20] *See* Borras v. State, 229 So. 2d 244, 246 (Fla. 1969).

[23] Commonwealth v. Leis, 243 N.E.2d 898, 902 (Mass. 1969).

again counters the challengers' underinclusive equal protection argument with respect to alcohol or LSD,[24] allegedly more harmful drugs not classified as "narcotics." To the extent that some courts have searched for differences between alcohol and marijuana to defend directly the legislative scheme, they have usually been on shaky ground. For example, Massachusetts Superior Court Judge Tauro stated in *Commonwealth v. Leis*, after a full factual inquiry on the effects of marijuana:

> The ordinary user of marijuana is quite likely to be a marginally adjusted person who turns to the drug to avoid confrontation with and the resolution of his problems. The majority of alcohol users are well adjusted, productively employed individuals who use alcohol for relaxation and as an incident of other social activities.[25]

Such statements misconstrue prevalent use patterns of both alcohol and marijuana. Moreover, such differentiation is grounded not in the "dependency" rationale but in the dubious "rationality" rationale. Judge Tauro would have been better advised to stick to the piecemeal principle, as have the California intermediate appellate courts.[26]

The third possible objective of marijuana legislation is to prevent harm to others. For four decades, prohibition of marijuana has been based primarily on the "other-regarding" rationale. The relevant factual hypotheses are that marijuana use causes violent crime directly, that it leads to use of hard drugs and thereby causes violent crime indirectly, and that it causes "psychomotor discoordination" and thereby causes accidents by those under its influence.

Contemporary challengers have charged that these assumptions are completely without merit in light of contemporary medical knowledge. Although some courts continue to intone the old myths, relying on police testimony correlating marijuana use and violent crime,[27] others

---

[24] Defendant in People v. McKenzie, 458 P.2d 232 (Colo. 1969), varied the traditional underinclusiveness argument. He contended that the continued classification of marijuana as a "narcotic" drug after a legislative revision in 1968 could not be defended, since LSD, clearly a more harmful drug, was classified as a "dangerous" drug. Possession of LSD was a misdemeanor while possession of marijuana was a felony. Citing its decision in People v. Stark, 157 Colo. 59, 400 P.2d 923 (1965), the Colorado Supreme Court deferred to the unusual classification.

[25] 3 SUFF. L. REV. 23, 31 (1968).

have openly recognized the unsubstantiated character of each of these hypotheses.[28]

Nevertheless, these courts have sustained the legislation because of the continuing uncertainty about the drug's effects.[29] Rather than supporting the hypothesis that marijuana intoxication independently causes violence, the courts have focused on the unpredictable effects of the drug depending on the psychological predisposition of the user. Since there is some evidence that marijuana can be especially volatile when used by despondent, hostile or unstable persons, a prophylactic approach is rational.[30]

Similarly, while recognizing that there is no support for a direct causal link between marijuana use and hard narcotics use, the courts have held that some marijuana users' graduation to more dangerous drugs due to environmental conditions is enough to uphold the legislation.[31] Finally, recognizing that the possibility of reckless use of dangerous instruments while under the influence of marijuana might not ordinarily justify its total prohibition, the courts have relied instead on evidence that there is no scientific means of detecting whether or not a person is under the drug's influence, as there is with alcohol.[32]

Taken individually, each of these justifications leaves something to be desired. First, individuals psychologically predisposed to violent conduct will, in all likelihood, snap under the influence of some other catalyst even if deprived of marijuana. Second, the stepping stone theory is a self-fulfilling prophecy even to the extent that there is a correlation between marijuana use and hard narcotics use. Were it not for prohibitionary marijuana legislation, users of that drug would not come into contact with illegal activity and perhaps consequently with narcotics pushers. Finally, there is persuasive evidence for the proposition that marijuana users are ordinarily rendered immobile and are unlikely to endanger others by driving automobiles.[33]

Oatis, 264 Cal. App. 2d 324, 70 Cal. Rptr. 524 (Dist. Ct. App. 1968), *cert. denied*, 393 U.S. 1108 (1969).

[33] See p. 1105 *supra*.

Taken collectively, however, these hypotheses provide a rational basis for prohibitionary legislation, the objective of which is to prevent harm to others. We conclude that there is not yet sufficient uniformity of medical opinion to overcome any presumption of rationality attaching to marijuana legislation. Those courts directly confronting the issue have responded correctly, regardless of the precise constitutional framework within which they have worked.

2. *Cruel and Unusual Punishment: Rationality of the Sanction*

Since marijuana penalties were drastically increased in the 1950's, the marijuana laws have been attacked repeatedly on the ground that high mandatory minimum sentences without parole or probation are cruel and unusual punishment. The starting point for resolution of this question is the Supreme Court's highly ambiguous decision in 1910 in *Weems v. United States*.[34] The Court struck down a fifteen-year sentence at "hard and painful labor" imposed under Philippine law for falsifying a public document because the sentence was "cruel in its excess of imprisonment" as well as "unusual in its character."[35] The punishment was condemned "both on account *of* . . . [its] degree and kind."[36] Because the incidents of the challenged imprisonment were particularly abhorrent—"a chain at the ankle and wrist of the offender, hard and painful labor, no assistance from friend or relative, no marital authority or parental rights or rights of property"[37]—some courts and commentators believe that *Weems* does not depart from the traditional view that the eighth amendment speaks only to mode of punishment, not to length.[38] Yet some members of the Court have stated that the amendment was directed "against all punishments which by their excessive length or severity are greatly disproportioned to the offenses charged."[39] And the Court in *Weems* stated that the punishments there in question came "under the condemnation of the bill of rights, both on account of their degree and kind."[40] Accordingly, although the jurisprudence of

[40] 217 U.S. at 377.

the eighth amendment is virtually nonexistent, courts and commentators have assumed that the amendment has a proportionality dimension.[41]

The difficult question is the proper standard for testing the constitutionality of allegedly excessive sentences. Although detailed inquiry into the subtleties of this issue is beyond the scope of this Article, the battle is between those who would apply a fringe "decency" test[42] and those who would apply a "rationality" test that essentially extends the minimum substantive content of the due process clause to the relation between crime and punishment.[43] As applied to marijuana legislation, a "decency" inquiry would have been fruitless in the 1950's and 1960's but may yet succeed in the 1970's. Under that test, a punishment is unconstitutional only if "so aberrational as to violate 'standards of decency more or less universally accepted.' " [44] Since the history of marijuana legislation has again and again been characterized by varying degrees of hysteria in differing jurisdictions, there is no available measure of human decency against which to test the action. Moreover, if the legislatures are uniformly harsh, the judicial conscience is not likely to be shocked. However, as increasing numbers of state legislatures and the Congress finally begin to de-escalate the penalties for marijuana offenses, those states that maintain the 1950 punishment levels are likely to find themselves lagging behind "the evolving standards of decency that mark the progress of a maturing society." [45]

One contention that can, and has, been raised in the drug context has been that the penalty must bear a reasonable relation to the seriousness of the offense when compared with the punishments for more serious crimes in the same jurisdiction and for the same crime in other jurisdictions. The evolution of judicial response to this argument in marijuana cases has followed a path consistent with the change in use patterns and in public response.

In the first case raising this cruel and unusual punishment issue, *State v. Thomas*,[46] the Louisiana Supreme Court upheld in 1953 that state's

mandatory minimum sentence of ten years without parole for unlawful possession. The court said that the eighth amendment did not apply to the states and that similar state provisions spoke only to "form or nature of the punishment rather than its severity in respect of duration and amount." [47] Finally, the court noted that, even if *Weems* applied, "[i]n view of the moral degeneration inherent in all aspects of the crime denounced by the Narcotics Act, it cannot be said that the length or severity of the punishment here prescribed is disproportioned to the offense." [48] Five years later, the Texas Supreme Court upheld a life sentence for first offense possession, and stated that the legislature was solely responsible for assessing the permissible limits of punishment and that the jury was solely responsible for affixing sentence in a particular case.[49]

In 1960, the Ninth Circuit in *Gallego v. United States*[50] upheld the provision of the 1956 Narcotic Drugs Import and Export Act imposing a five-year mandatory minimum sentence without suspension, probation or parole for unlawful importation of marijuana. Assuming an excessiveness holding to be implicit in *Weems*, the court noted nevertheless that the penalty was not "so out of proportion to the crime committed that it shocks a balanced sense of justice. At worst," the court continued, "it merely forbids in this kind of case and for good reason the discretionary granting of special benefits which Congress did not have to permit in the first place." [51] The summary treatment of the issue is easily explained by the court's apparent lack of sympathy with marijuana users; it quoted approvingly the moral denouncement delivered in *Thomas*.[52]

Slowly the tide began to turn. A California court recently blanched at upholding the five-year minimum sentence imposed for giving away

[47] *Id.* at 435, 69 So. 2d at 740.

[48] *Id.* In State v. Bellam, 225 La. 445, 73 So. 2d 311 (1954), the court rebuffed a similar challenge to a seven-year sentence without parole for a second offense of possession of marijuana by simply citing *Thomas*.

[49] Garcia v. State, 166 Tex. Crim. 482, 316 S.W.2d 734 (1958). The statute provided that a first offense was punishable by not less than two years nor more than life. The court applied the hands-off principle common to state courts, according to which any sentence within the statutory limits is valid. *See, e.g.*, Perkins v. North Carolina, 234 F. Supp. 333 (W.D.N.C. 1964); Saunders v. State, 208 Tenn. 347, 345 S.W.2d 899 (1961); State v. Jiles, 230 S.C. 148, 94 S.E.2d 891 (1956).

[50] 276 F.2d 914 (9th Cir. 1960).

[51] *Id.* at 918.

[52] *Id.* The Ninth Circuit reaffirmed *Gallego* in Halprin v. United States, 295 F.2d 458 (9th Cir. 1961), and Bettis v. United States, 408 F.2d 563 (9th Cir. 1969).

one marijuana cigarette, especially when the case had entrapment overtones.[53] But in 1967 the defendant in *United States v. Ward*[54] asked the Seventh Circuit to declare unconstitutional, as applied to marijuana, the sentencing provisions of the 1956 Act previously upheld by *Gallego* and subsequent cases. The no parole provision was indicted as inconsistent with current medical knowledge. After quoting at length from the then recently released Report of the President's Commission on Law Enforcement and Administration of Justice and from the Task Force Report on Drug Abuse, the court concluded:

> [T]he progress of scientific research in the whole area of narcotics and drug abuse, during the eleven years since [passage of the 1956 Act] has not resulted in the establishment of scientific knowledge to the extent that would enable us to nullify [section 7237] on constitutional grounds, even if we deemed it appropriate to do so.[55]

Thus appeared the perpetual fate of rationality arguments, whether applied to sanction or to classification. Two years later the Fifth Circuit still found the medical data inconclusive[56] and Massachusetts[57] and California[58] courts both summarily dismissed eighth amendment arguments.

Then, in 1968 the Court of Appeals for the District of Columbia took a significant step. In its decision in *Watson v. United States*[59] (*Watson I*), a three-judge panel in an opinion by Judge Bazelon held that a mandatory ten-year sentence for appellant's third conviction for possession of heroin constituted excessive punishment in violation of the eighth amendment.[60] The significance of *Watson I* was shortlived, however, because

La. 1968) (deprivation of bail pending appeal for person convicted of sale of marijuana to person over twenty-one and sentenced to five year incarceration does not violate eighth amendment).

[59] No. 21,186 (D.C. Cir., Dec. 13, 1968) (panel), *modified*, No. 21,186 (D.C. Cir., July 15, 1970) (en banc). *Watson I* is excerpted in 37 U.S.L.W. 2352 (Dec. 24, 1968) and reprinted in 4 CRIM. L. REP. 3051 (Dec. 25, 1968).

[60] Since the court identified numerous factors germane to its decision, delineation of a precise holding is difficult and the court probably so intended. We would suggest, however, that the court held that the imposition of rigid severe sentences, identified by

upon a rehearing en banc, the court avoided the eighth amendment issue and set aside the sentence on other grounds.[61] In the en banc opinion (*Watson II*), the court does make a strong eighth amendment argument based on *Robinson v. California*.[62] Since this important constitutional point was not fully litigated below, the court did not believe it could adequately rule on the question. Although most of Judge McGowan's opinion in *Watson II* is thus dicta, it does lay the foundation for future overturnings on eighth amendment grounds of possession sentences when applied to addicts.[63]

An additional indication of both the sympathetic attitude of the federal courts and the expanding dimensions of the eighth amendment "excessiveness" argument appears in a recent opinion by Judge Weinstein of the Eastern District of New York. In *United States v. Kleinzahler*,[64] the issue was the applicability of the ameliorative provisions of the Youth Corrections Act[65] to violations of the federal narcotic drug and marijuana laws. Defendant, a college graduate and highly salaried white collar worker, pleaded guilty to acquisition of marijuana without payment of the transfer tax (by any other name, possession for personal use). He was sentenced to a mandatory term of two years' imprisonment, which was suspended, two years' probation and a fine of $1,000. If the Youth

comparison with other offenses and by the absence of sentencing discretion to tailor the penalty to the culpability of the offender, is unreasonable *either* in the context of offenses closely related to if not compelled by disease *or* in the context of victimless crimes.

[61] The court upheld Watson's conviction but remanded for resentencing in light of the Narcotic Rehabilitation Act of 1966. In so doing, the court declared unconstitutional a provision of that Act which exempts addicts with two prior narcotics convictions, holding such a provision to be a denial of equal protection. No. 21,186, at 29 (D.C. Cir., July 15, 1970) (en banc).

[62] 370 U.S. 660 (1962). Judge McGowan noted that

> if *Robinson's* deployment of the Eighth Amendment as a barrier to California's making addiction a crime means anything, it must also mean in all logic that (1) Congress either did not intend to expose the non-trafficking addict possessor to criminal punishment, or (2) its effort to do so is as unavailing constitutionally as that of the California legislature.

No. 21,186, at 19 (D.C. Cir., July 15, 1970) (en banc).

[63] For the future, the addict, whose acquisition and possession of narcotics is solely for his own use and who wishes to defend on these grounds, is surely not at a loss to know how to do so. . . . To the extent that he wishes to assert that the statutes are not to be read as applicable to him . . . [he should] make an alternative claim of the constitutional defectiveness, under *Robinson*, of the statutes as applied to him.

Id. at 21-22.

[64] 306 F. Supp. 311 (E.D.N.Y. 1969).

[65] 18 U.S.C. §§ 4209, 5010(a) (1964).

Corrections Act had applied, he would have been entitled to have the conviction set aside upon successful completion of his period of probation.

The problem was that the Youth Corrections Act was expressly inapplicable to statutes with mandatory penalties. In light of the legislative history of the Narcotics Control Act of 1956, Judge Weinstein felt constrained to hold that the narcotics and marijuana laws imposed mandatory penalties within the meaning of the Youth Corrections Act.[66] He noted, however, that he thought the result absurd.[67] In a passage particularly germane to the constitutional issue and the meaning of *Watson I*, he stated:

> While the result is harsh, it does not appear to rise to the kind of cruel and unusual punishment proscribed by the Constitution, *in light of the possibilities of probation and suspension of sentence here present.* The wisdom or justice of treating those young adults convicted of possession of marijuana in the same way as those convicted of armed bank or mail robbery or those convicted of selling narcotic drugs is doubtful. But revision of the law in this field must be left to Congress.[68]

Unlike Judge Weinstein, however, the Supreme Court of New Jersey was not satisfied with the mere *possibility of suspension* of prison terms meted out to first-offense possessors of marijuana for personal use. In its landmark decision in *State v. Ward*,[69] the supreme court held as a matter of law that prison "sentences for first offenders should be suspended."[70] The court strove manfully to base the decision on its statutory authority to review sentencing suspension decisions for abuse of discretion. However, both the breadth of the holding and its reasoning suggest constitutional underpinnings.

---

[66] Judge Weinstein noted:

> In light of the unique structure and harshness of the penalty provisions of the narcotics and marijuana laws—almost byzantine in their complexity—and previous interpretations of related statutes, it is clear that the penalties are "mandatory" within the meaning of [the Youth Corrections Act].

306 F. Supp. at 315.

[67] *Id.* at 317.

[68] *Id.* (emphasis added).

[69] State v. Ward, No. A-9 (N.J., Oct. 26, 1970). The court affirmed the conviction but modified the sentence. Two justices dissented from the affirmance on the grounds that the defendant did not receive a fair trial. They concurred in the sentencing modification on the grounds that the sentence was "grossly excessive."

[70] *Id.* at 9. Although the court devoted some attention to the defendant's particular record and probation report, *id.* at 7, it did not pretend to limit the decision to the

In the first place, taken on its face, the court's opinion appears to hold that trial court denials of motions to suspend prison sentences for first offenders will always be reversed for abuse of discretion. However, such a "guidance" flies in the face of two basic procedural concepts: the sentencing authority is generally free to impose any penalty within the range permitted by the legislature; and to the extent that an appellate court reviews such judgments, it customarily defers to the proximity of the trial judge and reverses, on a case by case basis, only for gross disregard of the trial record and presentence reports. In effect, the New Jersey Supreme Court determined that where youthful marijuana users are concerned, imprisonment is an excessive sanction even though within the statutory range of alternatives. This is no ordinary decision.

Although the court sloughed over the analytical problem, it did not disguise its rationale. The disturbing number of users, the ambiguous nature of the wrong, and the counterproductive effect of imprisonment each played a part:

> We cannot escape the unhappy fact that our youth have been involved with marihuana in disturbing numbers. That this is so does not palliate the wrong. Nor should we be thought to encourage or condone such conduct. The statute should and will be enforced. But it remains the policy of the law to reform the youthful offender. Sentencing judges should direct the punishments they impose to the goal of reformation. Too severe a punishment will do little towards advancing this goal. Incarceration is a traumatic experience for anyone. The effect must be particularly devastating upon young persons such as the defendant here. A sentence of two to three years in State Prison in a case like this will probably be more detrimental to both the offender and society than some other discipline.[71]

In essence, the court held that incarceration was not a rational sanction for this particular crime.

The sixteen years between *Thomas* on the one hand and *Watson I*, *Kleinzahler* and *Ward* on the other have witnessed a significant expansion of the contours of the eighth amendment and a noticeable change in judicial attitude toward defendants charged with marijuana violations. As constitutional lawyers, we must acknowledge the difficulty of halting a

case at bar. At one point the court stated that it was establishing "guidelines for the sentencing of first offenders who were found guilty of possessing marijuana for their own use." *Id.*

[71] *Id.* at 8.

rationality-excessiveness inquiry, once begun. For this reason, the New Jersey court's end run around the constitutional issue is a defensible approach. In any event, we think that the courts will continue to enter this thicket unless the legislatures reduce marijuana penalties to comport with reality.

B. Should the Burden Be Shifted?—Marijuana and Fundamental Rights

The Supreme Court's 1938 decision in *United States v. Carolene Products Co.*[72] is the most frequently cited authority for the presumption of constitutionality, the implications of which were explored in the preceding section. However, Justice Stone's famous footnote four, tentatively cataloging exceptions to the rule of judicial deference, is the philosophical forebear of contemporary contentions that marijuana legislation cannot be presumed constitutional. Recent constitutional history has been characterized by a new judicial activism in defense of "fundamental" human rights.[73] Footnote four was a tentative attempt to anticipate and rationalize that activism while retreating from the old economic activism and its major vehicle—substantive due process.

Still allergic to the substantive due process label and to any form of judicial review not tied to more or less specific constitutional provisions, the modern Court has utilized the doctrine of incorporation and the once dormant equal protection clause to fill in the contours of footnote four. For some of the Justices, substantive due process is limited, theoretically at least, to the specific guarantees of the first eight amendments, and perhaps their collective penumbra. To others, that phrase has an independent potency, sometimes more, sometimes less, than the Bill of Rights, including rights essential to a concept of ordered liberty. In either event, the "rights" protected must have the trappings of permanence. Frequently, however, pressures of new social developments have led the Court to expand the coverage of the specific provisions through unadulterated, but unlabeled, substantive due process. A similar development is the active judicial enforcement of the mandate of the equal protection clause to legislation involving "suspect classifications" or sensitive subjects. In either case, the Court is called upon to define and separate that "fundamental" area of human conduct, the regulation of

[72] 304 U.S. 144 (1938).

[73] *See generally* A. MASON, THE SUPREME COURT FROM TAFT TO WARREN (1969); Mason, *Judicial Activism: Old and New*, 55 VA. L. REV. 385 (1969).

which must be justified by the government, and that area where legislative action carries the protection of the deferential presumption.

As advocates, the challengers of marijuana legislation must fit their contentions within the current patterns of constitutional pigeon-holing. To cast off the shackles of the stultifying presumption, they must persuade the courts that marijuana use somehow constitutes a fundamental right. Utilized, thus far unsuccessfully, for this purpose have been the eighth amendment, the first amendment free exercise of religion clause and the penumbral right of privacy. Failing with these approaches, the challengers have found in the ninth amendment a "right to get high."

1. The Robinson-Powell Argument

In *Robinson v. California*,[74] clearly a substantive due process decision cloaked in the protective garb of the eighth amendment,[75] the Supreme Court held that the status of being a narcotics addict could not be made a crime. The Court was careful to note in dictum that the state legislatures were still free to punish addicts for possessing drugs.[76] Subsequent courts found this distinction untenable[77] and the Supreme Court addressed it again in its 1968 decision in *Powell v. Texas*.[78]

Powell, a chronic alcoholic, had been convicted for public drunkenness. His conviction was affirmed in three separate opinions. However, five members of the Court, as then constituted, disavowed the *Robinson* dictum. The four dissenting Justices found it "cruel and unusual" to punish an alcoholic "for a condition—being 'in a state of intoxication' in public—which is a characteristic part of the pattern of his disease and which, the trial court found, was not the consequence of appellant's volition but of 'a compulsion symptomatic of the disease of chronic alcoholism.'" [79] Justice White, casting the deciding vote for affirmance, asserted nevertheless that, "[u]nless *Robinson* is to be abandoned, the use of narcotics by an addict must be beyond the reach of the criminal law." [80]

Assuming for present purposes that a majority of the newly-constituted Supreme Court adheres to the principle that the state may not punish conduct performed under direct compulsion of a disease, application of the principle to marijuana use is extremely unlikely.[81] The challengers themselves assert that marijuana has been scientifically proven not to be addictive, either physically or psychologically. They can nevertheless argue that the state may not have its cake and eat it too: The rationality of the legislation rests upon the allegation that marijuana is at least psychologically "addictive," and the state may not now defend the punishment by arguing that it is not addictive. Superficially appealing, this argument must falter for two reasons. First, the state's interest in prohibiting marijuana use *may* rest on deleterious effects unrelated to psychological dependency. Second, defendants invoking the *Robinson-Powell* argument, even if it is applicable, are unlikely ever to prove by clear and convincing evidence, as they must, that they were without "free will" to desist from using marijuana.[82]

2. Free Exercise of Religion

Several major challenges to marijuana legislation, premised on the first amendment, have relied heavily on the California Supreme Court's 1964 decision in *People v. Woody*.[83] Finding that sacramental use of peyote, a hallucinogenic drug, constituted the cornerstone of Peyotism both as symbol and object of worship, the California Supreme Court held that prohibition of possession constituted a direct burden upon the free exercise of the defendant's religion, as practiced by the Native American Church. Since freedom of religious practices is not absolute, however, the court inquired whether the state had shown a "compelling interest" sufficient to justify the infringement.

First, the state could not support its allegations that use of peyote would lead to use of more dangerous drugs or would cause permanent injury to the user.[84] Assuming such a state interest to be legitimate, it was never proven, and could scarcely be labeled compelling. Second,

the conviction in *Powell* because he found nothing in the record to support a finding that Powell had a compulsion to "frequent public places when intoxicated." *Id.*

[81] The contention has already been rejected out of hand in Commonwealth v. Leis, 243 N.E.2d 898, 906 (Mass. 1969), and United States v. Drotar, 416 F.2d 914, 916 (5th Cir. 1969).

[82] *See* Powell v. Texas, 392 U.S. 514, 524-26 (1968).

[83] 61 Cal. 2d 716, 394 P.2d 813, 40 Cal. Rptr. 69 (1964). *Contra*, State v. Big Sheep, 75 Mont. 219, 243 P. 1067 (1926).

[84] 61 Cal. 2d at 722, 394 P.2d at 818, 40 Cal. Rptr. at 74.

the state insisted that fraudulent claims of religious immunity would frustrate enforcement of the state's narcotics laws. Again, the court found that the state had produced no evidence to that effect.[85] Accordingly, since California had not shown that these presumably "compelling" state interests would be frustrated by the immunity, the narcotics statute was unconstitutional as applied to possession of peyote for religious purposes.

The court distinguished *Reynolds v. United States*,[86] where the Supreme Court had ruled that Congress could constitutionally apply to Mormons a prohibition against polygamy. First, said the California court, polygamy was not essential to the practice of Mormonism, as was use of peyote to the practice of Peyotism. Second, the Supreme Court in *Reynolds* viewed polygamy as destructive of basic tenets of a democratic society, as dangerous and repulsive as human sacrifices. The state interest was therefore compelling and unavoidable.

Several defendants in recent marijuana cases, Dr. Timothy Leary among them,[87] have strenuously contended that the first amendment similarly requires immunity for users who seek in good faith the "religious experience" induced by marijuana and other psychedelic substances. Some users incorporated in 1965 the Neo-American Church, claiming a nationwide membership of twenty thousand.[88] According to the tenets of the faith, psychedelic substances, particularly marijuana and LSD, are the "True Host," and it is the religious duty of all members to partake of the sacraments on regular occasions.[89]

Judicial response to the free exercise argument has been uniform only in result. Some courts, including the Fifth Circuit in the *Leary* case, have simply held that passage of a criminal law per se constitutes a compelling state interest overriding any free exercise claims.[90] These courts think *Reynolds* indistinguishable, and cite the following language:

> Laws are made for the government of actions, and while they cannot interfere with mere religious belief and opinions, they may with practices . . . .

[90] 383 F.2d at 860-61. *See also* State v. Ballard, 267 N.C. 599, 602, 148 S.E.2d 565, 568 (1966), *cert. denied*, 386 U.S. 917 (1967).

> . . . To permit . . . [a man to execute his practices because of his religious beliefs] . . . would be to make the professed doctrines of religious belief superior to the law of the land, and in effect permit every citizen to become a law unto himself. Government could exist only in name in such circumstances.[91]

The net result of such an approach is that criminalization of conduct which for some is a required religious practice is presumed constitutional. "Congress," said the Fifth Circuit, "has demonstrated beyond doubt that *it* believes marijuana is an evil in American society and a serious threat to its people." [92] Accordingly, "it [is] not incumbent upon the Government to produce evidence to controvert the testimony of witnesses on the controversial question whether use of the drug is relatively harmless." [93]

Other courts have assumed that the *Woody* interpretation of *Reynolds* is correct, but have found that the Neo-American Church is not a bona fide religion[94] and that personal use of psychedelic drugs, untied to a bona fide organized church, cannot constitute the religious exercise protected by the first amendment.[95] Alternatively, these courts have determined that marijuana use is not essential to religious practice as was peyote in *Woody* and that the compelling interests in prevention of violence and self-destruction are rationally supported by current medical knowledge.[96]

We think the courts have correctly rebuffed the free exercise argument but not for the right reasons. First, we do not agree that *Reynolds* holds all criminal legislation to be outside the balancing test ordinarily employed in free exercise cases.[97] Second, we believe that if marijuana use were essential to the practice of a bona fide religion, it *would* be

[97] Judge Gasch in the *Kuch* case apparently assumed that the customary balancing test would be applicable if the Neo-American Church were a bona fide religion. Before applying the "prevailing doctrine," however, he criticized the Supreme Court:

> No United States District Judge who must act within the confines of a record and available judicial time has the wisdom or means of doing adequately what the cases appear to require. It is to be hoped that there will develop a constitutional doctrine in this field that more closely approximates that contemplated by the framers of the Constitution and that leaves the balancing function in all but obvious cases of clear abuse in the hands of Congress, where it belongs.

Id. at 446.

incumbent on the state to demonstrate that use of the drug would frustrate its interests in preventing violence and individual harm to the user. More than a rational basis would be required. However, we agree with Professor Donald Giannella that the free exercise clause would become dysfunctional were psychedelic philosophy to qualify as a religion.[98] As we will suggest below, there should be some degree of constitutional protection for this allegedly "religious" personal behavior,[99] but severe perversion of the principle embodied in the free exercise clause would occur were it to become a sanctuary for all colorably spiritualistic conduct that otherwise stands condemned.

3. *Right of Privacy*

Any litigant attempting to secure recognition of any right as "fundamental," no matter how remote, will likely cite *Griswold v. Connecticut*.[100] Marijuana advocates are no exception. Like *Robinson*, *Griswold* was essentially a substantive due process decision.[101] In a decision rationalized by Justice Douglas under the rubric of penumbral rights tied to specific guarantees of the Bill of Rights, the Court held that the states were substantively barred from prohibiting the use of birth control devices. Together with *Stanley v. Georgia*,[102] where the Court held that private possession of obscene material may not be punished, *Griswold* serves as the basis for an argument that private possession and use of marijuana, at least in the home, may not be punished.

Because of the "chilling effect" on privacy necessitated by enforcement techniques where crimes are ordinarily committed in private, the *Griswold-Stanley* argument is appealing. The problem, however, is one of limitation. Surely it cannot be contended that private acts cannot ever constitute crimes. The Court specifically refuted this notion in *Stanley:*

> What we have said in no way infringes upon the power of the State or Federal Government to make possession of other items, such as narcotics, firearms, or stolen goods, a crime. Our holding in the present case turns upon the Georgia statute's infringement of fundamental

---

[102] 394 U.S. 557 (1969).

liberties protected by the First and Fourteenth Amendments. No First Amendment rights are involved in most statutes making mere possession criminal.[103]

As precedents and on their own terms, *Griswold* and *Stanley* are not enough to support the proposition that private marijuana possession cannot be punished. "Fundamental" rights other than simple privacy were involved—marital freedom and the "right to receive" [104] written materials. In each case the Court was dealing with isolated problems. In *Griswold*, the Court finally grappled with an issue it had avoided for a decade;[105] the multiplicity of opinions and labels manifest the reason for its reluctance.[106] In *Stanley*, the Court probably took a tentative step toward a revision of the obscenity doctrine. The Court may eventually abandon the notion that obscenity is not constitutionally protected, and may establish instead that it may be prohibited only when it is distributed, displayed, or employed in such a way as to create a nuisance to others.[107] Holding that private possession may not be prohibited may represent the first step along that path.

In any event, so long as the fundamental rights framework is utilized, *Griswold* and *Stanley* do not alone make the challengers' case. State and federal courts confronted with the privacy argument have found it lacking.[108] Within the current matrix of constitutional doctrine, the privacy factor functions as a catalytic rather than an active force. Substantive freedoms that may be qualified in public are absolute in private in the same way that exercise of religious beliefs is a relative freedom while freedom of belief is absolute. Marital and perhaps consensual sexual freedom and intellectual liberty were the substantive

[103] *Id.* at 568 n.11.

[104] *Id.* at 564.

[105] *See, e.g.*, Poe v. Ullman, 367 U.S. 497 (1961); Tileston v. Ullman, 318 U.S. 44 (1943).

[106] The six *Griswold* opinions are particularly notable for the light they shed on each author's conception of his role in the constitutional system. The philosophical parameters of the marijuana problem and the birth control problem are identical. For this reason alone, *Griswold* is essential reading for all advocates seeking to break new constitutional ground.

[107] *See The Supreme Court, 1968 Term*, 83 HARV. L. REV. 147-54 (1969); Comment, *Karalexis v. Byrne and the Regulation of Obscenity: "I Am Curious (Stanley)"*, 56 VA. L. REV. 1205 (1970).

forces in *Griswold* and *Stanley*. In order for privacy to affect the marijuana equation, a right to pursue sensual individuality must pre-exist.

4. The Ninth Amendment—The Forgotten Kitchen Sink

Unable to tie marijuana use to an established "fundamental right," the challengers have resorted to the ninth amendment as a vehicle for defining the necessary protected right. Their advocacy for a "right to get high" [109] or a right "to use one's body as one wishes" [110] is essentially an attempt to equate sensual with intellectual and spiritual freedom. Although there may be some merit in such a contention, its advocates have not yet established a sound constitutional basis. The typical approach is to catalog all civil liberties cases, ignoring the precise constitutional principles involved, and to suggest that rights reserved to the people by the ninth amendment amount to the constitutional equivalent of "personal liberty." [111] Accordingly, any legislation which restricts individual pursuit of happiness must be necessitated by sound state interests.

Obviously the ninth amendment is, in such a context, merely a launching pad for the free-form pursuit of happiness inquiry utilized in the early alcohol Prohibition cases. It surely does not function as an "explicit" constitutional limitation, nor does it suggest a judicial limitation. The challengers scarcely serve their cause well by asking the courts to discard a century and a half of constitutional doctrine as a price for the desired decree.

Even former Justice Goldberg, whose requiem for the ninth amendment in *Griswold* induced the argument, noted that the fundamental rights existing apart from the Bill of Rights must be found in the "traditions and [collective] conscience of our people." [112] In other words, the ninth amendment is simply another way of avoiding the due process label while applying the incorporation doctrine and an expanded version of the traditional historically rooted due process test. "Fundamentality" must have the appearance of permanence. History and perhaps contemporary positive morality provide an acceptable index of permanence.

[112] 381 U.S. at 493, *quoting* Snyder v. Massachusetts, 291 U.S. 97, 105 (1934) (brackets by Goldberg, J.).

Historical inquiry might well reveal a traditional acceptance of the right to become intoxicated so long as others are left alone, and the rash of contrary decisions after 1915 might have constituted temporary constitutional madness. The research reported earlier in this Article provides tentative support for this hypothesis.[113] Further digging into historical sources would appear warranted. At least a palatable constitutional framework would be employed.

Similarly, developing notions of positive morality might provide an acceptable basis for the "right to use one's own body." Laws regarding abortion,[114] nudism,[115] homosexuality[116] and motorcycle crash helmets[117] are already receiving adverse judicial treatment, usually on other grounds. The American Civil Liberties Union plans a continued campaign against these laws and against drug legislation under the "body use" umbrella.[118] Although an extended critique of this approach is beyond the scope of this Article, we do not believe, as a general matter, that the courts are properly advised to keep the legislatures in touch with evolving positive morality, at least while social mores are in a state of transition. Another question would be presented if that evolution had rendered current legislation aberrational, but that is not yet the case with respect to the issues noted above. Abortion, homosexuality and drug abuse are currently being addressed by the public opinion process. In such circumstances, where an articulation of positive morality would be the gravamen of judicial interference, we believe judicial restraint to be in order.

In any event, neither the historical nor the positive morality approach has been utilized and supported by those attacking the marijuana laws. Instead they have been content to cry "fundamental right," "ninth amendment" and "right of privacy," and have expected the courts to go along. Much as we doubt the wisdom of current marijuana legisla-

tion, we think such a facile perversion of constitutional doctrine too large a price to pay for its invalidation.

C. *Another Constitutional Perspective: The Police Power*

All this is not to say, however, that we do not think marijuana legislation to be susceptible to an acceptable constitutional attack. To the contrary, our objections to the usual arguments emanate from a concern for institutional responsibility. So long as the "fundamental rights" perspective is invoked—despite the extant divergent notions of fundamentality—we believe that only extensive historical and philosophical inquiry could and should now persuade a diligent judiciary, conscious of its limited role, that freedom of marijuana use is "essential for the orderly pursuit of happiness by free men." [119] To put it quite simply, the drug revolution is generally perceived as a contemporary phenomenon. When roaming in the vague expanse of substantive due process, however labelled, the courts should continue seeking to root their response in the mandate of history or in some other indicium of the "collective conscience of the people." Fundamentality suggests permanence, and drug use too much resembles a transient social problem to qualify.

At the same time, however, we believe that our central objection to the marijuana laws is of constitutional dimensions. We believe that those laws are irrational. We noted above that if they are entitled to the presumption of rationality, they should stand, at least at the present time. We do *not* think they are entitled to that presumption. We would impose the burden of justification on the state not because any fundamental "right" is affected but because the conduct prohibited is on its face private or self-regarding. Because the police power is designed to promote the *public* health, safety, welfare and morals, it can reach private conduct only if a public detriment is thereby avoided. On the one hand, if the conduct proscribed on its face involves other people or property, the courts must presume that the legislature rationally found an injurious effect. On the other hand, if the conduct proscribed does not prima facie affect others, the state must demonstrate a rational basis in fact.

It should be apparent that this is a modified version of the "inherent limitations" approach popular in the nineteenth century. Unlike the earlier conception, it does not preclude the state from reaching private conduct. Unlike the "rights" framework, it does not impose a heavy

[119] Meyer v. Nebraska, 262 U.S. 390, 399 (1923).

burden on the state to justify legislation affecting the protected right, nor does it burden the courts with the onerous balancing responsibility. It simply shifts to the state the original burden of demonstrating a rational factual nexus between the proscribed private activity and the public weal. If the state can sustain that burden, the inquiry is terminated. This requirement would not represent a significant change in current doctrine. First, it affects only a limited class of situations where the physical and social sciences have not yet established the relevant factual propositions but where the hypotheses regarding public effect that underlie the legislation have no rational basis in current data. In short, given the "no-evidence" situation with respect to prima facie private conduct, the state is not entitled to guess. Moreover, the principle is limited to legislation prohibiting allegedly injurious private conduct, and does not extend to a public policy that seeks to deter such conduct through nonprohibitive regulation or taxation.

It should also be noted that this "inherent limitation" approach, which has lain dormant for half a century, has already begun to forge its way into modern constitutional reasoning, especially on the state level. Particularly relevant are the motorcycle helmet cases,[120] to which we will return later.[121] In a recent case[122] holding unconstitutionally vague a Tennessee statute prohibiting nudist colonies,[123] a concurring[124] member of the three-judge district court located the true parameters of the decision:

---

[120] See note 117 *supra*.

[121] See text at note 131 *infra*.

[122] Roberts v. Clement, 252 F. Supp. 835 (E.D. Tenn. 1966).

[123] The court used an increasingly popular escape valve, holding the terms "nudist colony" and "nudist practices" unconstitutionally vague since, in light of the dictionary definition of "nude" and "nudity," they literally might be construed to "prevent nudism in health clubs, YMCA's school gymnasiums or other recreational systems, and possibly in the home." *Id.* at 843.

[124] Concurring in a separate opinion, Judge Darr correctly noted that "nudism" and "nudist" are distinguishable, grammatically and in common parlance, from "nude" and "nudity," and that it is inconceivable that the statute covers people who are temporarily nude. *Id.* at 846-47. Instead he opined that the statute constituted unwarranted invasion of the rights of privacy and of association of those who wish to engage in the cult of nudism. He employed the ninth amendment and the equal protection clause as well, cataloging all the recent Supreme Court cases speaking to privacy and association to support his holdings. But as we noted earlier, context is extremely important in constitutional decision-making, especially in an area as open-ended as "privacy." The sanctity of the marital relation—under any view of fundamentality—and the structural significance of political association and free expression of ideas are the dispositive overtones in the privacy cases. The "right to privacy" is a dependent concept, and this part of the judge's opinion, standing alone, is unconvincing.

> There is nothing in the record to indicate directly or by inference that any nudist colony or member thereof is the source of any injury whatever to the public welfare, health, or morals. To the contrary, the proof in the record asserts that the prime purpose of the nudist movement is to promote health of the body and mind.
>
> . . . .
>
> There is nothing in the proof whatever to indicate that nudism is other than an idiosyncratic, though innocuous, practice which engenders no harm or danger either to its members or society in general.[125]

It is in this "power" rather than the traditional "rights" framework[126] that statutes involving private consensual sexual conduct, abortion and drug abuse should be tested at both state and federal levels of government. Such an approach was theoretically unnecessary at the federal level until quite recently. Unlike the states, the federal government did not possess plenary police powers; since Congress had only delegated powers, it could not conceivably reach private conduct without exceeding permissible Article I bounds. Both the Harrison Act and the Marihuana Tax Act made the prohibited acts revenue-related to avoid this difficulty. However, it would be foolish to suggest in 1970 that there is no federal police power. The Article I grants of power have now become analytical equivalents of "promotion of public health, safety and morals," and the necessary and proper clause imposes no more than the traditional rational basis in fact requirement. The new Comprehensive Drug Abuse Prevention and Control Act of 1970 illustrates the

---

[125] *Id.* at 850.

[126] We do not pretend that the sought-after principle could not be expressed in terms of a right. Indeed the temptation is great to limit the government to the "other-regarding" rationale and to enunciate a correlative right to pursue happiness as one pleases as long as others are not harmed. *See* Note, *supra* note 109, at 254-55.

The difference in attitude is more significant than the semantic difference. The "power" approach in effect demands of the government, "Why on earth do you want to proscribe the conduct; why do you care?" The "right" approach suggests, "You can't do this unless . . . ."

In a highly complex society where little that we do and consider personal does not potentially affect other persons and the environment, a freewheeling statement of personal freedom is dangerous. For the same reasons that it was unwise to shackle the government between 1890 and 1937 so that it was unable to deal with complex economic problems, it would be foolhardy now to adopt a constitutional framework which might inhibit an attempt to deal with complex environmental and social problems. We subscribe to the contention that the police power is inherently limited but we are wary to overemphasize the nature of this limitation.

disappearance of the early limitations by abandoning the revenue masquerade and reaching drug use directly.[127]

If, under the intrinsic limitation theory or some other rationale, the state and federal governments were called upon to establish a rational scientific basis for marijuana legislation, we believe they would fail.[128] If the governmental objective were to prevent harm to others, they would be able to find no reliable scientific support for the proposition that marijuana use itself leads to violent crime or to use of hard narcotics which in turn leads to crime. Although they could prove that the drug has some adverse effect on psychomotor functions, the relationship between this fact and harm to others through automobile accidents is tenuous at best, especially when compared with alcohol.

If the state's objective were to prevent the user from injuring himself on the ground that he would otherwise become a drain on the state's resources rather than a contributor, the essential scientific hypothesis is that marijuana use "inevitably leads to excess" or to permanent physical or psychological incapacitation and therefore to dependency. Again, however, the government would be unable to establish a rational factual basis for this hypothesis. First, marijuana is not physically addictive and creates no serious psychological dependence, at least not as much as alcohol or tobacco. We do not believe the "addictive" qualities of alcohol are "inevitable" enough to justify prohibition and that the harm engendered by tobacco dependence is too remote to justify prohibition under the "dependency" rationale. Moreover, even if the addictive qualities of hard narcotics justify their prohibition, there is insufficient support for the "stepping stone" hypothesis to sustain marijuana prohibition on that ground.

Second, marijuana users do not run a significant risk of physical or psychological harm. Use of the drug produces no significant acute adverse psychological effects and probably contributes to no chronic ill effects as great as those produced by alcohol or tobacco. Nor would the government be able to establish a significant risk of psychological incapacitation. As to the hypothesis that the drug precipitates "psychotic breaks," the evidence is slight and at best establishes the proposition that the drug is not itself a creative force, perhaps accentuating psychological tendencies already present in predisposed individuals. There is no re-

[127] Pub. L. No. 91-513 (Oct. 27, 1970).

[128] The medical and sociological conclusions used in the following discussion are examined in depth and documented in pt. VIII, *supra*.

...ible evidence that marijuana smoking produces any chronic psycho-...gical ill effects.

Some commentators have urged that the state has no power to protect the individual from his own stupidity and that the dependency rationale is merely a cover for unwarranted paternalism.[129] We are not prepared to go so far as a matter of constitutional law;[130] there may be circumstances where the risk of incapacitation is so substantial that criminal legislation is warranted. In fact, the line between self-regarding harm and societal harm, drawn in the breach by the dependency rationale, is increasingly difficult to draw as society becomes more complex and its members more interdependent. Moreover, whenever the subject conduct is colored by moral considerations, as are drug practices, where that line is drawn is determined not so much by logic or precedent as by the degree to which the society at a given time is willing to tolerate deviance. The difference between social tolerance in 1915 and 1970 is the best possible proof of this proposition. In short, this is not fertile ground for a neutral principle.

At the same time that we reject the general rule, we contend that in many individual cases the state cannot bear its burden of affirmative proof of the risk of incapacitation or other adverse social effect, albeit indirect. Setting aside for a moment the possible moral considerations, we do not think that either marijuana prohibition or the compulsory motorcycle helmet laws[131] can be justified on this basis. However, even if marijuana use is an appropriate matter for criminal legislation, the

---

[130] See note 126 *supra*.

[131] States that have upheld helmet laws have attempted to do so on an "other-regarding" rationale. We believe that such a justification is absurd. Unlike goggle requirements, helmet laws do not increase the motorcyclist's ability to maintain lookout and control. To the contrary; helmets tend to curtail hearing, peripheral vision and comfort. Feeling that persons should be protected whether they care to be or not, courts have fabricated very tenuous arguments to justify these laws.

> It does not tax the intellect to comprehend that loose stones on the highway kicked up by passing vehicles, or fallen objects such as windblown tree branches, against which the operator of a closed vehicle has some protection, could so affect the operator of a motor cycle as to cause him momentarily to lose control and thus become a menace to other vehicles on the highway.

State *ex rel.* Colvin v. Lombardi, 241 A.2d 625, 627 (R.I. 1968). Other courts have not attempted to raise hypotheticals but have merely stated that the law "bears a real and substantial relation to the public health and general welfare and is thus a valid exercise of the police power." Commonwealth v. Howie, 354 Mass. 769, 770, 238 N.E.2d 373, 374, *cert. denied*, 393 U.S. 999 (1968). So too would laws requiring citizens to brush their teeth three times daily.

rationality arm of the eighth amendment should prohibit imprisonment for violation of that legislation, even for five minutes.[132]

Now we come to the heart of the matter. It is the so-called "moral" considerations which we believe truly motivated the preceding generations of legislators responsible for marijuana prohibition. Once the Harrison Act converted narcotics abuse from a medical to a moral problem, marijuana was easily superimposed on the existing framework because of mistaken factual assumptions. At the same time, the undercurrent of American culture opposed to intoxicant use in any form reached the level of positive morality when combined by *criminal law* with the early twentieth century preference for cultural homogeneity. That is, because of the ethnic identity and small number of users, the stamp of illegitimacy successfully made the use of marijuana immoral; at the same time the stamp of illegitimacy had to be withdrawn from alcohol use because the large number of middle-class users were unwilling to comply.

It is because the law created for a half century a positive morality opposed to drug use that the state, defending its laws in court, might now rely on its duty to protect the spiritual and moral well-being of the community. The core of the police power being self protection, the state would adopt Lord Devlin's argument that where societal opposition to certain conduct on moral grounds is so pervasive that its widespread commission would weaken the social fabric and facilitate the breakdown of societal institutions, the society is justified in suppressing that conduct.[133] As applied to marijuana, the law's defense is that marijuana use frustrates productive participation in social, economic and political processes and that its widespread use would bring society grinding to a halt.

Even if we accepted Lord Devlin's justification for the legal enforcement of positive morality, which we do not,[134] it still would not justify marijuana prohibition. In the first place, as we shall note in the concluding section, the moral judgments supporting the early marijuana laws are no longer predominant. Especially at a time when a sizeable segment of society attributes many social ills to a mindless pursuit of material values

---

[132] See text at and following notes 59-71 *supra*.

[133] Sir P. Devlin, The Enforcement of Morals 9-13 (1965).

[134] In H. L. A. Hart's debate with Lord Devlin on this general question, the specific issue being the defensibility of homosexuality laws, we think Hart was victorious. *See* H.L.A. Hart, The Morality of the Criminal Law (1965); Hart, *Social Solidarity and the Enforcement of Morality*, 35 U. Chi. L. Rev. 1 (1967).

and when that society becomes increasingly depersonalized, there is a growing preference for individual search for identity and spiritual renaissance. Second, in light of current use patterns, the effect of marijuana use on productivity and therefore on the social fabric is too speculative to justify criminal sanctions. In fact, the social fabric may suffer greater damage through continued prohibition than from legalization; that is, as the number of deviants continues to increase, the law cannot be successfully enforced and the authority of all law is endangered. As a larger and larger segment of the society ceases to view marijuana use as a moral question (except insofar as it is against the law), marijuana prohibition, like alcohol prohibition before it, cannot be sustained.

In conclusion, we do not believe that a state can sustain its burden of establishing a rational nexus between a person's private use of marijuana and either harm to others or incapacitating harm to himself. Moreover, the state may not legitimately rely on alleged harm to public morals. Public opinion, properly informed, would oppose marijuana no more than it opposes alcohol. And to the extent that marijuana use is inconsistent with prevailing positive morality, compliance with that morality is not a legitimate aim of the criminal law as a matter of political philosophy or constitutional law. As Justice Brandeis eloquently noted in his famous dissent in *Olmstead v. United States:*

> The makers of our Constitution undertook to secure conditions favorable to the pursuit of happiness. They recognized the significance of man's spiritual nature, of his feelings and his intellect. They knew that only a part of the pain, pleasure and satisfaction of life are to be found in material things. They sought to protect Americans in their beliefs, their thoughts, their emotions and their sensations. They conferred, as against the Government, the right to be let alone—the most comprehensive of rights and the right most valued by civilized men.[135]

XI. Legislative Reconsideration: 1965-1970

With the public opinion process in full operation for the first time in the fifty-year history of American marijuana prohibition, great pressure for legislative reform developed at both state and federal levels.

[135] 277 U.S. 438, 478 (1928).

Innumerable public[1] and private[2] organizations have advocated reduction of marijuana penalties; some have urged that the drug be legalized.[3] Several states and the District of Columbia have responded by de-escalating penalties, especially for first offense possession.[4] Unfortunately, however, most of these "reforms" smack of tokenism. On the federal level, the Dodd bill[5] now pending before Congress incorporates many major reforms, but it too remains grounded in many of the old misconceptions and outworn phrases that characterize the earlier legislation.

On the state level, the issue has become stalemated because of growing legislative distaste for student unrest. Consequently, the legislatures have simply reformed the most obnoxious parts of the old laws—the outrageous penalties. Apparently the law-making bodies feel that even an open inquiry into less restrictive legislation would resemble capitulation to another "nonnegotiable demand." The new rationale for this resistance is the possibility that some of the questions unanswered today will be answered tomorrow. As of this writing, the legislatures have stiffened against public opinion in preservation of the status quo.

There are two conspicuous examples of this political retrenchment. In 1968 the Governor of California appointed a blue-ribbon commission to study the state's drug laws. When the news leaked that the commission intended to recommend legalization of marijuana, the commission was forthwith disbanded.[6] Similarly, the National Commission on Reform of Federal Criminal Laws performed the monumental tasks of identifying the governmental interests in drug prohibition and integrating existing drugs into the scheme according to their effects. The Commission classified drugs as dangerous, abusable and restricted on the basis of their potential for harm, requiring an affirmative demonstration of such potential as a precondition for classification. Yet after objectively reviewing the scientific data on marijuana and concluding, "*candidly, we do not know how harmful marijuana is*,"[7] the Commission recom-

mended its inclusion as an abusable drug. Political acceptability is the only possible explanation for this ruse.

In the succeeding pages, we shall briefly analyze the pending federal legislation and the provisions of the recently enacted Virginia law as illustrations of current legislative response, reserving our suggestions for a desirable legislative approach for our concluding section.

A. Virginia Legislative "Reform": Publicity Begets Tokenism

It is fitting that the most objectionable provision contained in Virginia's drug laws, that pertaining to the illegal possession of marijuana, sparked a controversy which eventually culminated in a general reform of the state's entire scheme of drug control in the spring of 1970.

The controversy centered around a twenty-year-old ex-University of Virginia student, Frank P. LaVarre, who, on February 24, 1969, was arrested in a Danville, Virginia, bus station while enroute to Atlanta from Charlottesville, Virginia.[8] In his possession were four plastic containers of marijuana valued at $2,500 plus smaller amounts in a tobacco pouch and a shoe. Refusing to "cooperate" by disclosing the names of all university students whom he knew were using drugs, LaVarre's bond was set at $50,000.

Following a plea of guilty to possession of marijuana, LaVarre was sentenced on July 31, 1969, in the Danville Corporation Court to twenty-five years in the state penitentiary, five years suspended, and fined $500. The sentencing judge admonished him, "Now I want to say to you, young man, that you still have time to mend your ways and make a useful citizen out of yourself." [9] Presumably this meant that under Virginia law LaVarre, "who had never so much as stolen a hubcap," [10] would be eligible for parole in five years.

Although the trial was reported on the front page of the *Richmond Times-Dispatch,* the conscience of the citizens of Virginia was not awakened until several months later following the publication of an article in *Life* magazine,[11] which used the LaVarre case as an illustration of the nation's antiquated and inhumane drug laws. One suspects that

[8] The following account is taken from LIFE, Oct. 31, 1969, at 30-31; N.Y. Times, Jan. 3, 1970, at 14, cols. 1-2; Richmond Times-Dispatch, July 31, 1969, at 1, col. 6; *id.*, Dec. 19, 1969, § B, at 1, cols. 1-2; *id.*, Jan. 3, 1970, at 1, cols. 4-6; *id.*, Jan. 5, 1970, at 12, cols. 1-2 (editorial).

[10] *Id.* at 31.

[11] *Id.*

all this publicity embarrassed the people of Virginia,[12] thus fostering general agreement that marijuana penalties were far too harsh.[13]

Such was clearly the belief of the Governor, who pardoned LaVarre on January 2, 1970, placing him on five years probation. This act was noted nationally[14] and applauded locally.[15] The existing law was criticized and reform was urged.[16]

The General Assembly responded, and a subcommittee of the House General Laws Committee held hearings.[17] At these hearings, both legislators and experts generally agreed that drug laws should be aimed primarily at dealers and should allow more leeway "for youngsters caught following a current fad." [18] Testimony also indicated that many persons arrested were never prosecuted because some Commonwealth's Attorneys felt that even the minimum penalty for unlawful possession was too great.[19] Many of the legislators believed that lighter penalties would encourage more uniform enforcement of the law.

Responding to these and similar pressures, the General Assembly enacted the Drug Control Act,[20] which was signed into law on April 5, 1970. The Act replaces the old Uniform Narcotic Drug Act[21] and is itself a comprehensive narcotic control measure. We shall deal here only with those provisions of the Act pertaining to cannabis sativa. The Act defines as separate substances marijuana and hashish. The former includes all parts of the plant, excluding the resin extracted from any part thereof; the latter is defined to include only such resin.[22] Such drugs may be manufactured and sold only subject to certain restrictions.[23]

The Act further provides for penalties for the unlawful manufacture,

[12] Mention was made of it in the Richmond Times-Dispatch, Dec. 19, 1969, § B, at 1, col. 1; *id.*, Jan. 3, 1970, at 1, col. 1.

[13] In December 1969 the Virginia Commission for Children and Youth recommended that penalties for the possession, use and sale of marijuana be sharply reduced and that the substance not be classified with "hard" drugs such as heroin. *Id.*, Jan. 15, 1970, § C, at 1, col. 7.

[23] *Id.* § 54-524.58:1.

sale and possession of marijuana and hashish. Section 54-524.101 prohibits the knowing or intentional manufacture, sale or possession with intent to sell of a controlled drug, except as authorized under the Act. A conviction for a violation of this provision "may be based solely upon evidence as to the quantity of any controlled drug or drugs unlawfully possessed." [24] The penalty for first violation of this provision is imprisonment in the penitentiary for not less than one nor more than forty years, or a fine of not more than $25,000, or both. A second or subsequent offender is subject to imprisonment for not less than ten years to life, or a fine of up to $50,000 or both.[25]

The Act also prohibits the unlawful possession of marijuana and hashish; possession of hashish carries a more severe penalty than possession of marijuana. The initial conviction of any person illegally possessing marijuana is a misdemeanor punishable by a fine of not more than $1,000, or confinement in jail not to exceed twelve months, or both. Unlawful possession of hashish is designated as a felony carrying a penalty of not less than one nor greater than ten years in the penitentiary or, at the discretion of the jury or the court sitting without a jury, confinement in jail not to exceed twelve months and a fine of up to $5,000. A conviction for a second or subsequent offense involving the unlawful possession of either marijuana or hashish is punishable by imprisonment in the penitentiary for between two and twenty years or, at the discretion of the jury or the court sitting without a jury, confinement in jail up to twelve months and a fine of not more than $10,000.[26] The sale of marijuana or hashish by any person over eighteen to one below that age is punishable by imprisonment in the penitentiary for not less than five nor more than forty years, or a fine of not more than $50,000, or both.[27]

Although the Act has remedied the worst provision under the Virginia drug laws—that governing first offense penalties for the unlawful possession of marijuana—it did little else. The most disturbing aspect of the legislation is its continuation of one classification that includes both cannabis and the "hard" drugs. With the exception noted above, the illegal manufacture, sale (including sale to those under eighteen) and possession of marijuana and hashish are treated with equal severity as violations involving heroin, opium, morphine or cocaine. Only con-

tinuing ignorance about the pharmacological effects of marijuana could explain the failure to declassify. Embarrassed by the LaVarre case and its attendant publicity, Virginia legislators took the smallest possible step. They clearly continue to view the drug as vicious and consider those using it highly culpable.[28]

The legislation has two additional weaknesses even on its own terms. One of the main criticisms of the old law was that it was inflexible; in an obvious attempt to relieve the prosecution of proving intent to sell, the law provided that a person who unlawfully possessed more than 25 grains of the forbidden drug was subject to the most severe penalties.[29] Although the new Act requires an intent to distribute for possession offenses with severe penalties and does not stipulate a presumptive quantity, it too is bound to produce "embarrassing" results, since a conviction may be "based solely upon evidence as to the quantity of any controlled drug or drugs unlawfully possessed."[30] To avoid unjust punishment, such modifying language should be deleted, thus rightly placing upon the state the burden of proving intent to sell beyond a reasonable doubt.

Finally, the sentencing discretion left to the finder of facts has no meaningful bounds. The legislation reflects one of the most abominable conjunctions of mandatory minimum sentences and excessive, discretionary maximums that could have been devised. What can be said of legislative rationality when sale of marijuana is punishable by one to forty years at the whim of the trier of fact?

Similarly, by escalating the penalty drastically between first and second offense possession and retaining a distinction between possession and sale, the legislation reflects a continuing misconception about marijuana use and traffic patterns. Finally, the perpetuated severity of penalties is totally unsupportable under any interpretation of modern medical data. Only if marijuana use caused the user to murder instan-

---

[28] Delegate Walter B. Fidler summed up the argument for relatively light sentences for first offense possession and extremely tough ones for second and subsequent violation:

> This misdemeanor penalty on the first offense will straighten out most of the kids fooling with it . . . make them stop and think . . . scare them. . . .
>
> The ones who are really hooked on it will be back . . . we'll get them on repeat business [and imprison them upon a second offense].

taneously would a second possession offense justify a twenty-year sentence and a first sale offense justify a forty year jail term.

B. The Dodd Bill: Half a Loaf

The House version[31] of the Dodd bill,[32] which had been shepherded through the Senate by Senators Dodd and Hruska in February, finally passed the House of Representatives on September 24, 1970.[33] If a conference version of the Dodd bill is enacted, it will take several small steps toward sanity in the area of narcotics abuse. Beginning with the Narcotics Rehabilitation Act of 1966,[34] Congress began reversing the progressively absurd extensions of the Harrison Act's original conversion of drug abuse from a medical problem to a law-enforcement problem. The 1966 Act included extensive provisions regarding the care and rehabilitation of the narcotics addict.[35] To a lesser degree the Dodd bill continues this trend of viewing drug abuse as a medical problem.[36]

The bill abandons the traditional method of control—taxation—in favor of direct regulation under the interstate commerce clause.[37] Dangerous substances are classified in different schedules according to criteria such as potential for abuse, acceptability for medical use, and degree of safety in use.[38]

The Attorney General, acting on the medical and scientific advice of the Secretary of Health, Education and Welfare, and a special Scientific Advisory Committee created by the law has complete power to remove or reclassify drugs within the four different schedules.[39] Each schedule has its own set of criteria for determining which drugs it should include. The schedules not only classify drugs but also determine, by reference to Title V of the bill, what penalties will be incurred by violators of the laws dealing with drugs of a particular schedule. Marijuana is included within Schedule I and is subject to the most stringent controls, largely on the grounds that it and the other drugs of Schedule I,

like heroin and LSD, have little medical value and a high abuse potential.[40] The law does provide lower maximum penalties for trafficking in nonnarcotic Schedule I and II drugs, such as marijuana, than narcotic drugs—five years and $15,000 instead of twelve years and $25,000.[41] In addition, there is a special provision stating that distribution of a "small amount of marihuana for no remuneration" is punishable by imprisonment for a maximum of one year, a fine of $5,000, or both.[42] Possession offenses are divided into two types: simple possession, which is treated as a misdemeanor regardless of the drug involved,[43] and possession with intent to distribute, which is a felony and treated as a trafficking offense.[44] The bill also provides for controls on import and export[45] and for industry regulation.[46]

With respect to marijuana, the bill finally acknowledges the need for medical research and establishes a Committee on Marihuana to study the drug's pharmacological effects.[47] Second, with respect to drugs generally, and marijuana in particular, the bill reduces the outrageous penalties enacted in the 1950's. It would appear that Congress has finally recognized that severe punishments have little or no deterrent value.[48] The lawmakers may also have abandoned the "stepping stone" notion. The testimony of Dr. Stanley Yolles, former Director of the National Institute of Mental Health, that less than five percent of marijuana smokers go on to hard drugs, was stressed during debate on the bill.[49] The fact that this testimony was not seriously challenged indicates that Congress has finally focused on the possible harm *of marijuana* to the user as the primary rationale for its prohibition.

It is precisely on this point, however, that we find the first major defect in the Dodd bill. Marijuana continues to be classified with hard narcotics as a Schedule I drug, contrary to repeated testimony that marijuana is not a narcotic drug and has little or no harmful effects on the user.[50] Dr. Yolles, although opposed to legalization on the ground that

medical knowledge was too tentative, particularly with regard to the drug's effects on a chronic adolescent user, stated:

> To equate its risk—either to the individual or to society—with the risks inherent in the use of hard narcotics is—on the face of it—merely an effort to defend an indefensible, established position that has no scientific basis.[51]

Our second major objection to the bill is its perpetuation of grossly dissimilar penalties for possession and sale.[52] As we noted above, users and traffickers tend to be the same people, and the professional pusher has little if any place in the distribution of marijuana, as the pattern of hand-to-hand exchange among friends is repeated on college campuses throughout the country. The relative fortuity that law enforcement officers may be able to obtain evidence of intent to sell in some instances of possession does not justify the disparity of penalties. Third, we agree with Senator Hughes that in matters of scheduling and in certain other areas, the Attorney General should not have the power to classify drugs without the permission of the Department of Health, Education and Welfare.[53] The classification of drugs as dangerous substances is a medical-scientific question, not a law enforcement problem. Although the Dodd bill calls for the Attorney General to act with the advice of HEW and the Scientific Advisory Committee, it does not require him to heed that advice.[54] Under the Dodd scheme the law enforcement mentality continues. An amendment, such as the one that was proposed by Senator Hughes during the Senate debate on the bill, allowing the Attorney General to reschedule only on a recommendation by HEW and the Scientific Advisory Committee, would insure that medical and scientific considerations would be definitive. The defeat of that proposal was a serious setback in making this bill a meaningful reform. The House version, however, includes most of the Hughes amendment, making HEW's recommendations binding on medical findings and expressly forbidding the Attorney General from overriding an HEW

recommendation that a drug not be controlled.[55] We can only hope that the House version prevails in conference.

In conjunction with a requirement that HEW have the ultimate control over essentially scientific and medical questions, the Committee on Marihuana which the bill would establish should be composed of individuals chosen by HEW with the advice of the Attorney General, instead of jointly.[56] The function of the Committee would be almost exclusively medical, social and scientific, and as such it should be constituted under the direction of HEW. The subjects of the Committee's research as outlined by the Dodd bill[57] should include a more definite set of matters on which the Committee must report including a specific determination about the real nature of marijuana and the degree of control, if any, required. It is absolutely necessary, given the tremendous public and official concern about marijuana, that we have a definitive statement on the drug as quickly as possible so that an intelligent public policy might finally be designed. Simple ignorance about the drug persists in the United States Congress, despite the overwhelming evidence of the relatively harmless nature of marijuana. Even the bill's sponsor went overboard: "Certain types of marihuana do dreadful things to people . . . . Marihuana is a personality changer. It is a mind destroyer." [58] Senator Dodd supported his statement by the latest sensationalist accounts of marijuana's crime-provoking and incapacitating tendencies—case studies on toxic psychoses suffered by soldiers in Vietnam.[59]

In conclusion, the Dodd bill, when compared with earlier statutes, reflects some of the major changes in the official view of marijuana which took place during the sixties. By 1970 it has been almost universally recognized that the number of users of marijuana has increased tremendously and that harsh penalties, including minimum mandatory sentences, do not deter. Also abandoned is the notion that marijuana is the "stepping stone" to hard drugs. Unfortunately the Dodd bill fails to reflect many other findings. There still persists a strong feeling that marijuana is seriously harmful, evidenced by the bill's classification of marijuana with heroin. Furthermore, the bill's punishment of "traffick-

ers" in marijuana more harshly than possessors reflects a continued misapprehension about the nature of the marijuana trade.[60] However, despite its shortcomings, the Dodd bill, especially through its Committee on Marihuana, leaves open the possibility of substantial changes in the legal status of marijuana in the future.

C. Postscript: The Dodd Bill Becomes the Comprehensive Drug Abuse Prevention and Control Act of 1970

As this Article was going to press, the House version of the Dodd bill was enacted by Congress and signed into law by the President as the Comprehensive Drug Abuse Prevention and Control Act of 1970.[61]

XII. Conclusion: Before the Fall

Many pages ago we promised that the legal history of marijuana prohibition was in itself an interesting story; we hope we have kept that promise. We also suggested that marijuana prohibition would be an appropriate vehicle for study of two broader phenomena—the public policy formation process and the evolution of American cultural values in the twentieth century. Having indulged, insofar as law review style would permit, in the sheer joy of telling a good story, we now turn to the more pretentious purposes of our Article.

A. Public Policy Formation Process

The legal history of marijuana prohibition may reasonably be divided into four phases. The first phase, roughly from 1915 to 1930, witnessed sporadic localized legislation in a substantial number of states criminalizing sale and/or possession of marijuana. This phase followed hard on the heels of nationwide anti-narcotics legislation and coincided almost perfectly with the ascendency of alcohol prohibition. During the second phase, from 1932 to 1937, the drug was suppressed nationally, by every state and by the federal government. The third phase, the decade of the 1950's, was characterized primarily by escalation of the

[60] *See* Joint Legislative Committee for the Revision of the Penal Code, California Legislature, Drugs—Part I: Marihuana (Proposed Tent. Draft & Commentary 1968). Our data indicate that over 20% of the users of marihuana have sold the drug on occasion in small quantity to friends who tacitly agree they will return the favor if the drug becomes available to them in the future.
Id. at 153.

[61] Pub. L. No. 91-513 (Oct. 27, 1970).

penalties. The final phase, beginning around 1965 and still continuing, is characterized by vigorous public debate and deescalation of the penalties, and may eventually result in legalization.

During the first phase, the initial emergence of the anti-marijuana public policy, the public opinion process was inoperative. Since the group of people directly affected was small and inaccessible, the matter attained the lowest possible visibility in the decision-making process.[1] Yet the early marijuana legislation probably comported with latent public opinion, or perhaps even general community consensus, in several respects.

In the first place, the lawmakers assumed that the drug was addictive and that its consumption precipitated crime, pauperism and insanity. Accordingly, public interest in, and desire for, its suppression might well have been considered settled by the earlier anti-narcotics legislation. At the same time, however, there does not appear to have been any interest in substantiating these assumptions. Although primary source materials on the question are scarce and difficult to locate, we have found no indication that the legislators consulted scientific data; instead they relied on sensationalistic police and newspaper identification of marijuana with crime. Naturally these assumptions went unchallenged; the only segment of the public likely to challenge them was small and outside the public opinion process.

From another perspective, however, the true pharmacological effects of the drug may have been immaterial to a decision to suppress it. Since marijuana was an intoxicant consumed only by immigrant Mexicans in the South and West and by ghetto Blacks in the East, the legislators might have accurately reflected a public hostility to the drug wholly without regard to its pharmacological effects. It should be noted in this respect that this first phase of marijuana prohibition occurred simultaneously with the successful thrust of alcohol prohibition. During this period, the legislators might well have assumed that public policy condemned the use of intoxicants in any form.

Moreover, to the extent that alcohol prohibition was motivated, or at least quickened, by ethnic prejudice against the Irish, marijuana prohibition, once proposed, was an inevitable by-product of anti-Mexican

[1] Either a large number of affected persons or high public visibility, and usually both, is a necessary condition for public interest. And, of course, public interest is a necessary condition for the operation of the public opinion process by which the interested segment of the public communicates its opinions or attitudes directly or indirectly to the decision-maker.

feeling. In fact, the ethnic factor might well have been the *primary* force. Since marijuana was so strongly tied to the newly immigrant Mexican minority, and to a lesser degree to urban Blacks, the melting-pot syndrome, so prevalent at this stage of American history, predisposed the issue without regard to the drug's effects. Designed to foster cultural homogeneity, and in particular the Protestant Ethic, marijuana legislation may well have reflected an automatic public antipathy to any deviant tendency of newly immigrant, sometimes despised, minorities.

At the time of its passage, therefore, early marijuana legislation may have fit well in a society assigning moral condemnation to use of narcotics, apparently opposing any consumption of intoxicants, and striving either to suppress or to assimilate deviant minorities. With the repeal of Prohibition, however, the bubble of the anti-intoxicant rationale burst. Too many people who acquiesced in alcohol prohibition to eliminate the abuses of excessive consumption were unwilling to comply with a public policy prohibiting any use at all. Perpetuation or extension of marijuana prohibition in light of this new alignment of public attitudes now depended either on the drug's allegedly insidious effects or on the melting-pot syndrome. Yet, there was still no visible public interest in marijuana, and the courts were moved neither to scrutinize the legislatures' factual suppositions nor to question their motives.

And so it was that by 1931, twenty-two states had enacted prohibitionary marijuana legislation. It was during the ensuing decade—what we have labelled the second phase of this history—that this primarily regional phenomenon twice achieved national proportions. That is not to say, however, that the question even once received national *attention;* in fact, anti-marijuana public policy was established on a national scale even more effortlessly than it had been on the local scale.

The first of these two events was the inclusion of marijuana in the Uniform Narcotic Drug Act, submitted for state adoption by the National Commissioners on Uniform State Laws in 1932. The war against the evils of narcotics had by now become old hat and was waged in this forum by a few doctors interested in establishing uniform obligations and by the newly created Federal Bureau of Narcotics. A low-keyed, uncomplicated drafting process transpired in committee, the basic provisions having been appropriated from the 1927 New York narcotics statute. The final committee draft, including an optional marijuana provision, was rubber-stamped by the Commissioners and subsequently

passed as a uniform afterthought by thirty-five states in the succeeding five years.

The same factual suppositions and ethnic aspersions characterizing the earlier state laws now colored the limited references to marijuana accompanying passage of the Uniform Act. There were two significant differences, however. First, legislative unawareness of marijuana as a separate substance was exacerbated by its inclusion as just another "narcotic" in everyone's new anti-narcotics law. Second, although the Federal Bureau of Narcotics played a superfluous role in the passage of the Uniform Act, it initiated an educational campaign against narcotic drugs, and included marijuana.

Once the Uniform Act had been successfully inscribed on the statute books, the Bureau turned its propaganda arsenal on marijuana alone. Although largely unsuccessful in arousing public interest in the marijuana "problem," the Bureau created *in the Congress* a "felt need" for federal legislation.[2] Again the public opinion process remained dormant while Congress passed still another law, the Marihuana Tax Act—this time to fill a nonexistent enforcement void against the abuse of a drug known only to a small, isolated segment of the population. Once again, the republic's duly authorized decision-makers nonchalantly criminalized possession of a drug without a factual inquiry even though this shortcoming was brought to their attention. The Act was hastily drawn, heard, "debated" and passed.

Thus, by 1937, marijuana had joined heroin, cocaine, morphine and opium in state and federal codes as a prohibited substance. As in 1914, new "stateways" were created and "folkways" gradually followed; users of the "killer weed" joined the despicable "dope fiend" as purveyors of evil in the public mind as well as in the public law.

The 1950's witnessed an explosion of the psychology of fear—repression of political and cultural deviation was the order of the day. It is not surprising, then, that the criminal law orientation toward drug

[2] Differences in intensity of commitment can explain how stateways can create new folkways. For example, the many may have no view at all and be influenced by intense leaders. Such was the case with Congress, and in turn the public in 1937, when the intensely committed Bureau of Narcotics singlehandedly created the Marihuana Tax Act. One scholar of the public opinion process has stated that even where many people have convictions opposed to the law,

> the law may be carried through by a comparatively small body of very earnest men, who produce a disproportionate effect by the heat of their conviction; while the bulk of the people are apathetic and unwilling to support the effort required to overcome a steady passive resistance to the enforcement of the law.

A. LOWELL, PUBLIC OPINION AND POPULAR GOVERNMENT 15 (1926).

use, initiated with regard to narcotics at the turn of the century and to marijuana two decades later, reached full cresendo at the same time.

For the first time in our national history, there was public interest in narcotic drugs. There apparently was an increase in drug abuse in the late forties, and the public mind was ripe for the onslaught of propaganda disseminated by the Bureau of Narcotics. In the paranoid atmosphere of the period, the Bureau's call for harsher penalties was a soothing one. Congress responded with the Boggs Act and many states followed suit.

At the same time, however, the primary rationale for the illegal status of marijuana—the assumption that it was an addictive, debilitating drug—was disproved. In its stead, a new factual premise appeared—that the use of marijuana was a stepping stone to the use of heroin and other "hard" drugs—a rationale that the Bureau had expressly rejected in 1937.[3] Despite medical testimony unequivocally differentiating marijuana from hard narcotics, the legislatures were in no mood to quibble; marijuana's pernicious effects, although once removed, equally warranted escalated penalties. The peak was reached with the passage of the Narcotic Control Act of 1956. This time public interest had disappeared, earlier doubts about the nature of marijuana had subsided, and Congress mindlessly escalated the penalties indiscriminately for narcotics *and* marijuana laws. Several states followed suit, and the courts, both state and federal, unquestioningly administered these harsh laws and sanctioned the dubious techniques by which they were enforced.

Thus, by 1956, possession of marijuana was a felony practically everywhere, and judges were generally precluded from mitigating the long prison terms prescribed by statute. Such legislation had never been supported by authoritative scientific inquiry regarding the pharmacological effects of the drug.

Then it was 1965. As more and more middle-class campus youths experimented with the drug with no apparent ill effects, so did their friends . . . and theirs . . . and so on. By 1970 between ten and fifteen percent of the American middle class had violated the marijuana laws, sometimes overtly.[3] For the first time since the anti-marijuana policy initially appeared, a substantial segment of the public was directly affected. Public interest naturally increased even beyond those immediately affected as the marijuana issue achieved higher visibility. The public opinion process had finally lurched into motion.

[3] See pp. 1096-1100 *supra*.

In calmer times, the authors believe that legislators would not be resisting reconsideration of the marijuana issue to the degree that they have thus far. A significant crosscurrent of public opinion, colored by preference for individuality and privacy, has swept aside many of the public policies which took root in the same soil as twentieth century drug policy. Today while we have expanded government's role in the economy of the nation, we have seen a consistent retreat from the glib paternalism that underlay laws restricting sexual practices among husband and wife, harsh definitions of pornography and the development of specialized courts for juveniles in which the state would, without benefit of established legal procedures, guard and protect the best interest of the child. To a large degree, the federal courts have been the vehicle by which this crosscurrent has affected public policy. Yet, in deference to the political process, the courts have thus far refused to intervene on the marijuana issue.

As the number of deviants continues to increase, fundamental alteration of drug policy, particularly with regard to marijuana, is inevitable. Because of the volatility of the issue and the current overextension of the courts, we believe that such alteration should be achieved in the legislatures. Yet despite an overwhelming volume of scientific criticism of existing law, legislatures have taken only token action. The source of the law is now its defense—ignorance. Even though independent researchers have disproved all of the old assumptions, the status quo is maintained on the ground that the evidence is not yet in on long-range effects of repeated use. A poor basis for a criminal law in any case, this argument is defectively open-ended. Because concerted scientific research is occurring only for the first time, waiting for these conclusions could preserve the status quo for a decade or more, even though no positive evidence supports prohibition.

If the legislative process continues to stall, however, we predict that the judiciary will no longer restrain itself. As some comments and peripheral rulings from the bench have already demonstrated, the courts too have been affected by the changing use patterns, media commentary, and commission and academic recommendations. Although we would prefer that the courts not be forced to enter still another political thicket, we do believe, as illustrated above, that a declaration of unconstitutionality is analytically justifiable.

To summarize, during the two criminalization stages, 1915 to 1937, the public opinion process was not invoked because of the number and

identity of marijuana users. Accordingly, the political decision-makers made incorrect factual assumptions which went unquestioned by the judiciary and the general public. Nevertheless, criminalization probably comported with general community values if those assumptions were made, and even perhaps if they were not.

Apart from its general consistency with community instincts for paternalism and preference for cultural homogeneity, the new law had a significant independent effect. As had been the case with the earlier anti-narcotics laws, the very existence of a criminal law generated a positive morality where none had existed before. In Sumner's terms, the new stateway *did* create a new folkway with respect to marijuana. This could occur with regard to marijuana and not to alcohol precisely because of the wholly different number and character of the users. We conclude that where a deviant group is outside the public opinion process and the dominant group is unfamiliar with their deviant conduct, stateways, in the form of prohibition of such conduct, *can create folkways* because of the presumption of immorality attaching to violation of the criminal law.

So long as the class of users remained constant, the public opinion process remained inoperative, the factual assumptions remained unquestioned (or new ones were advanced to support the law), and the moral judgment fed upon itself. Thus, the 1950's witnessed an incredible escalation of penalties and withdrawal of judicial discretion unmatched at any other time in American jurisprudence.

In the late 1960's, however, the number and social identity of the deviants changed radically. The public opinion process became operative on the marijuana issue for the first time in its history, generating massive scientific inquiry into the drug's effects. As a product of this process, it is at least clear that there is no longer a community consensus in favor of marijuana prohibition. First, the continuing consensus regarding narcotics use has been demonstrated conclusively to be factually inapposite to marijuana. Second, there is a strong crosscurrent of cultural values preferring privacy, individuality and cultural pluralism inconsistent with the value preferences underlying the marijuana laws. Although we will explore the effect of this phenomenon below, it is important to note now the growing legal recognition of these values in related substantive areas like sexual practices and in the rules of criminal procedure.

It is too soon to state with any assurance that the crosscurrent will

become the consensus. The law itself still exerts a continuing influence; many a middle-class parent intones haplessly that marijuana use is against the law and must therefore be bad; indeed, so does the Attorney General of the United States.[4] The current polarization of society has tended to defer final resolution of this value clash and therefore of the marijuana problem.

Nevertheless, we do not believe that the broader social polemics should obscure rational consideration of the marijuana problem. This Article was designed to provide the historical perspective which we believe so material to this consideration; hopefully, an understanding of the origins of the law will set aside some irrelevant issues and permit incisive consideration of the core issues, one of which is the nature of the contemporary value crosscurrent, to which we now turn.

B. Twentieth Century Values and the Marijuana Laws

As we suggested at the outset and again in the preceding discussion of the policy formation process, the history of marijuana regulation presents an ideal case study of the evolution of American cultural values in the twentieth century. Basically it describes an alteration in the individual's sphere of independence in the society.

In a time when the individual's economic and political independence had not yet been suffocated by the weight of massive impersonal institutions, society insisted on conformity to the dominant personal moral code. Because of the blessings of a free economy, economic eccentricity was encouraged in the ideological trappings of the self-made man. Similarly, the political reforms of this period—the initiative, referendum and recall—manifested faith in individual political judgments of every man.

At the same time, however, each individual's fulfillment of his political and economic promise demanded his adherence to the tenets of the Protestant Ethic—hard work and productivity. To insure a continuing march toward political and economic progress, society tightened the reins on personal behavior. Every new immigrant class had to be integrated into the system, to learn the American way. There was no room for "misfits." Society had the *duty* to keep the individual from

[4] "One thing young people should really recognize is the fact that marijuana is illegal, even possession is illegal, and they should realize that their future in society can be damaged severely." Attorney General John N. Mitchell, *quoted in* NEWSWEEK, Sept. 7, 1970, at 22.

falling by the wayside. Thus, the juvenile court movement began in 1899 to reach out early and reform the errant youth; society was his true parent. Similarly, the temperance and anti-narcotics movements, and the later anti-marijuana "movement," were designed to protect the individual, particularly the new immigrant classes, from inhibiting their own capacity to reap the benefits of the American economic and political system.

Naturally, restraints on individuality were not always rationalized in this way. There was a certain self-righteousness about the moral superiority of the American way. Thus, the insistence on assimilation of immigrant ethnic groups was designed not only to stimulate their own success but also to protect the superior, divinely inspired, American way from contamination. For example, as we noted above, many Americans who supported alcohol prohibition were opposed not so much to the drinking of alcohol but rather to the licensed saloon and the political power of the Italian and Irish minorities who used the saloons as the center of their social orders in the new country. In the same way strong ethnic bias against the Chinese on the West Coast was the prime motivation for those states' early anti-opium laws. Likewise in the Southwest the primary impetus for the criminalization of marijuana use was prejudice against the growing Mexican communities in those states. Laws were passed against the Mexicans and "their weed."

The point cannot be understated that much of the "reform" legislation at the turn of the century, including the sumptuary laws, was designed to protect and extend the dominant way of life—that of Protestant, rural, white, Scotch-Irish and English America. That way of life was making the country great, and the succeeding waves of immigrants had to be assimilated as quickly as possible, for they posed a threat to the dominant order. Much of the prohibitionary movement was designed to meet that threat—to root out cultural differences and impose the dominant values. Open prejudice and public ethnic slurs commonly accompanied passage of the drug and liquor laws and other paternal legislation. Similarly, in 1912, Theodore Roosevelt could run for President with "Onward Christian Soldiers" as his campaign song.

Utilizing a police power defined broadly in terms of self-protection, the dominant segment of society sought to protect itself from contamination and to promote homogeneity. Legislatures and reviewing courts focused only on society's interests, not on the "right" of the individual to deviate from the majority's cultural norms; the courts were

essentially closed to assertions of minority rights. Similarly, the criminal process was administered not from the perspective of protecting the "rights" of the criminal defendant but rather of protecting the society against deviance. Thus, during the period of Prohibition enforcement, fourth and fifth amendment rights were consistently ignored.

This, then, was the cultural milieu in which early twentieth century drug legislation took root and the continuing effect of which also fostered the later suppression of marijuana. The society imposed severe restraints on individual personal and social conduct in order both to reap the societal benefits from the individual's supposed economic and political independence and to perpetuate the dominant cultural outlook.

In contemporary society, however, the perspective is quite the reverse. Economic and political institutions have become increasingly omnipotent; the individual is increasingly dependent on the system rather than the system dependent on him. More and more the individual views himself as a cog in the massive, impersonal, technological machine, the gears for which are beyond his grasp. Consequently, a higher value has been placed on personal fulfillment in the noneconomic, nonpolitical sphere; a new emphasis has been placed on personal identity, and the individualized, deinstitutionalized pursuit of happiness. Concurrently, as economic productivity demands less of each individual's time and energy, and the work-week continues to shorten, a leisure value has emerged. The society has less and less economic interest in what the individual does with his leisure time.

Particularly in the last decade, this new value preference has been recognized in laws and judicial decisions recognizing the individual's right to differ—intellectually, spiritually, socially and sensually. A new, sometimes extreme, emphasis is placed on individual privacy; as an incredibly sophisticated technology continually expands society's control over the individual, he is insisting that the wall around his private life be fortified. Similarly, the search for identity has extended to groups of individuals; in stark contrast to the fervent implementation of the melting-pot syndrome fifty years ago is the increasing group awareness in an admittedly pluralistic society. The proliferation of Black and "Chicano" awareness groups and the resurgence of the American Indian testify to the renaissance of group identity and the bankruptcy of the assimilation ideology.

We believe that marijuana prohibition is as inconsistent with this new cultural climate as it was predictable under the old. As illustrated in

related areas, the focus has shifted decidedly from society's interest in protecting itself from deviance to the individual's right to deviate. Laws proscribing deviant forms of private sexual conduct—nudism, homosexuality—are being repealed or invalidated. Laws interfering with familial decision-making—abortion, contraception, miscegenation—are meeting the same fate. Laws rigidly defining the woman's place in the society and restricting her individual pursuit of happiness are under attack. Society's highly paternalistic treatment of adolescents—reflected in the pre-1967 juvenile court system and in the hands-off policy regarding school administration—is being reversed. Society's highly moralistic treatment of narcotics addiction, generated by the Harrison Act in 1914, is being replaced by a more humane medical outlook. Finally, official and unofficial suppression of ethnic and racial differences—and the related prejudice—has been replaced by official encouragement of such differences and suppression of discrimination, both public and private.

In sur[illegible]hen, we believe that values which fostered and sustained the crimina[illegible]ation of marijuana have changed radically in the last decade. In fact, the widespread violation of the marijuana laws is itself proof of that proposition; the users and many nonusers see no possible societal objection to an individual's use of an apparently harmless euphoriant. In the words of Leroy Mitchell, whose combat with the law provides an interesting comment on the modern dangers of the "killer weed," [8]

[8] People v. Mitchell, 244 Cal. App. 2d 176, 52 Cal. Rptr. 884 (Dist. Ct. App. 1966). Advised by Leroy's distraught wife that he smoked marijuana every evening, the police, with her consent, entered the house and arrested Leroy. He was very cooperative with the officers, showing them his hidden supply and his growing plants. Forgiving his wife, Leroy readily admitted using and growing marijuana. At trial, his sole defense was that marijuana was an integral part of his daily life, forming the crux of his religious practice.

> "In the sense that I believe that religion is related to law or constitutionality, I was exercising freedom in my own home to smoke something actually better than tobacco." His religious ritual was, "Get up in the morning and have breakfast, lunch at 12:30 evening meal, say between 6:00 and 7:00 and a pipe of marijuana about 8:00 or 9:00."

Id. at 180-81, 52 Cal. Rptr. at 885.

To Leroy's free exercise claim, the court responded that he had "offered no evidence that his use of marijuana is a religious practice in any sense of that term." *Id.* at 182, 52 Cal. Rptr. at 886. The first amendment protects only institutionalized religion. Poor Leroy. "In defendant's discourse to the jury," the court continued, "he did refer to the Bible and to the practices of some Hindus, but in essence *he was expressing only his own personal philosophy and way of life.*" *Id.* (emphasis added).

In Leroy's defense, we might then ask, why not? Is there no constitutional precept that the state cannot make his "way of life" a crime, much less a felony unless his private

> I have heard the problems of marijuana discussed many times and it has come to my attention that actually the only problem that we are having with marijuana is that young people are being faced with the attitude of criminality . . . .[6]

As we noted above, there is not yet a community consensus on this new value crosscurrent, and there probably will be none until the society becomes depolarized. At the same time, we do predict that the marijuana laws will not long exist in the current climate of changing values *and* increased use among a sizeable segment of the "respectable" public. We should emphasize this latter point. As lawyers by profession, we may tend to focus on and occasionally overestimate the force of the evolution of statutory and case law in changing the legal and social order. For that reason, we note without hesitation that the most potent force for change in the drug laws is the incredible increase in drug use, especially among the middle-class young. No society can long afford to define so large a segment of its population as criminal. It is highly unlikely that this one will continue to do so. This current increase in marijuana use stands in stark contrast to the public attitudes and opinions about drug use which were prevalent as late as 1956. And it is this phenomenon which in turn will hasten a wider community recognition of the emerging values.

Perhaps the single best illustration of the mutual influence of these two factors on public attitudes toward drug use in the last ten years is a recent broadcast commentary on the apprehension of Robert Kennedy, Jr. and R. Sargent Shriver, III, for possession of marijuana. After showing pictures of the boys and their prominent families emerging from a Massachusetts juvenile court, the commentator noted[7] that this case was unusual only in that famous families were involved. He continued that today it is commonplace indeed for parents to accompany their children to court on drug charges. Today a drug charge is "com-

---

pursuit of happiness bears some reasonable relationship in fact to some public evil. Sure, Leroy might have been bugging his wife. But she had recourse to civil remedies. Is the chance that Leroy's social and personal use of marijuana would hurt him or anyone else great enough to warrant a felony conviction? We think not; at least we think the courts should ask.

[6] *Id.* at 180, 52 Cal. Rptr. at 898.

[7] "This case is not unusual; more and more parents across the nation find themselves going to court with their children on drug charges. It's becoming an incident of modern living." Walter Cronkite, CBS Evening News, August 8, 1970.

monplace;" in 1958, it was unthinkably criminal. A later commentator wondered whether we could afford "a whole generation of criminals." [8]

As must be clear by now, we do not think this society will or ought to perpetuate this disastrous situation. Either by nonenforcement, repeal or judicial invalidation, the law will be changed. Throughout the earlier discussion of possible constitutional objections to the marijuana laws we expressed our policy preference for judicial restraint in this area; although existing constitutional doctrines would support a judicial invalidation, we prefer legislative reevaluation. We believe that rational legislative reconsideration would result in partial or total repeal and that this task should be commenced immediately. For that reason we will suggest what we consider the minimal acceptable legislative response and the optimum response.

1. The Premise

Whatever the constitutional mandate, we believe legislators ought to begin as a matter of policy with the assumption that conduct harmful only to the actor is not a legitimate subject for the criminal law. In the first place, notions of blameworthiness, if not immorality, should underlie any criminal statute. Yet contemporary western man increasingly regards as blameworthy only that which directly or indirectly harms others; the presumption ought therefore to be that conduct harmful only to the actor should be deterred through means other than the criminal law.

Second, to the degree that the society continues to render moral judgments regarding purely personal conduct, we do not agree with Lord Devlin that the criminal law is ever the appropriate vehicle for the imposition of the dominant personal moral code. In this day of rampant relativism, imposition on the minority of the dominant personal morality is presumptuous and suspicious.

We subscribe the emergent value preference for individuality and freedom of choice described above and share Justice Brandeis' warning that government is most dangerous when it purports to "help" the individual citizen.[9] In fact, we believe that contemporary society is ill advised to insist on homogeneity of conduct, even where the majority continues to attach moral blame. The danger of regimentation and stul-

[8] CBS Evening News, August 19, 1970. *See also* K. Erickson, Wayward Puritans (1966).

[9] Olmstead v. United States, 277 U.S. 438, 479 (1928) (Brandeis, J., dissenting).

tifying conformity is one of the paramount disutilities of modern technological society. We feel it encumbent on the legislators as designers of the social order to promote the widest possible latitude for private conduct so as to encourage the diversity that fosters the creative element in any productive society.

A third related reason for this policy premise is that the benevolent societal goal of protecting the actor from his own folly, if it should be effectuated at all, can be achieved by means other than the criminal law. Indeed, use of the criminal law for this purpose is generally less effective than other means because of the difficulty of enforcement, which itself is our final rationale for the initial premise. Laws prohibiting purely personal or consensual conduct have an ancillary effect which causes more harm to the social fabric than the mere offensiveness of deviant personal conduct—the inevitable collision of law enforcement techniques with constitutional limitations. Sacred protection of the individual's right to privacy is, to us, a far more noble end than the protection of the individual from his own folly, as defined by the dominant segment of society.

We do not pretend to have settled or even enriched the continuing philosophic debate regarding "crimes without victims." However, since the only rationale remaining for marijuana prohibition is that it is harmful to the user, legislative adoption of our position on this issue would dictate partial or total repeal of existing law. It should be noted that an increasing number of lawyers, philosophers and social scientists have taken this position. We recommend it to the state and federal legislatures.

2. Statutory Recommendations

We offer first a statutory scheme which might be palatable to legislators who still fear that further study will reveal that marijuana use has long-range ill effects. While we do not think this fear justifies perpetuation of the existing statutes, it will justify a scheme which permits those who choose to smoke marijuana to do so but which inhibits spread of the conduct; that is, it simply takes the user of marijuana out of the criminal process.

For this minimal solution, we propose:

a) prohibiting possession of more than four ounces of marijuana unless the defendant can show that it was possessed solely for personal use;

b) prohibiting public use of the drug;

c) proscribing driving or operating any other dangerous machine while under the influence of the drug;

d) proscribing transfer to any one party of more than four ounces of marijuana;

e) prohibiting transfer of any amount to persons below the age of sixteen;

f) punishing all violators as misdemeanants.

The prohibition of possession or sale of more than four ounces of the drug fulfills the possibly justified legislative goal of limiting mass distribution and proselytizing the use of marijuana. We feel that none of the important values of right to privacy or individual freedom are involved when one individual goes beyond his own private use of the drug to proselytize. However, as we have seen above, the realities of the marketplace are such that the average user might sell to friends to support his own use. Our arbitrary choice of four ounces as the cut-off point for the criminal process reflects an assumption, based on current trade practices, that it will keep the small seller out of the criminal process while ensnaring the mass distributor. Of course, this figure should be raised or lowered if prevalent market conditions change.

Two explanatory notes are in order. First, we choose a presumptive amount approach in order to avoid the complexities of affirmative proof of intent to sell and yet to allow some flexibility for the court to release a defendant unjustly trapped by our arbitrary figure. Second, we acknowledge the inconsistency of legalizing possession for personal use and yet criminalizing conduct which must necessarily precede such possession at some point. However, we believe that this inconsistency is justified as an interim measure both by the need to keep users out of the courts and by the salutary effect of keeping most users out of contact with organized dealers through legitimization of some channels of distribution.

Similarly, the provision outlawing public use, driving under the influence and transfer to minors each serve legitimate public interests. These provisions and the penalty provision are each designed to reflect the treatment accorded the alcohol offender.

It should be reiterated that we view the above statutory scheme as a minimal response that protects what might be perceived as legitimate public goals while not infringing the right to privacy. However, some form of legal dissemination of the drug accords philosophically and practically with the logic of the authors' views. To this end we both

predict and urge that each state adopt a regulatory scheme—either the licensing or state monopoly models—to control cultivation, distribution and consumption of marijuana in the same way those states now regulate the use of alcohol. The benefits of such a system, especially if a state monopoly controls cultivation and distribution, are manifold. First, the state can regulate the quantity and the potency of the drug produced. Second, the state can restrict the age and other eligibility of the purchaser. Third, and most important, the state can tax the purchaser providing a valuable source of revenue to the states in a time when lack of revenues is becoming a more and more serious problem. As a corollary, to the limited extent that organized crime is involved in the marijuana trade, any such regulatory scheme would both divert the revenue from the coffers of the Mafioso and eliminate possible contact between the marijuana user and its henchmen.

APPENDIX A*

TABLE I. STATUTORY SCHEMES FOR MARIJUANA PROHIBITION

Jurisdiction	*Distinction between marijuana and other narcotics*	*First offense possession classified as felony*	*Suspended sentences, parole, and probation*
Alabama	Yes	Yes	Only for 1st offense possession
Alaska	Yes	No	Only for 1st offense possession
Arizona	Yes	No	Only for 1st offense possession
Arkansas	No	Yes	Only for 1st offense
California	Yes	No	Only for 1st offense possession
Colorado	No	Yes	No parole
Connecticut	Yes	No	Only for 1st three offenses
Delaware	No	No	Only for 1st offense
Florida	No	Yes	Only for possession and 1st offense sale
Georgia	No	Yes	Only for 1st offense
Hawaii	No	No	Only for 1st offense possession
Idaho	No	Yes	No prohibition
Illinois	No	No	Only for 1st offense possession
Indiana	No	Yes	Only for 1st offense
Iowa	No	No	Only for 1st offense possession
Kansas	No	Yes	No prohibition
Kentucky	No	Yes	Only for 1st offenses, except sale to a minor—no probation
Louisiana	No	Yes	Only for 1st offense possession
Maine	Yes	No	No prohibition
Maryland	No	Yes	Only for possession and 1st offense sale
Massachusetts	No	No	Only for possession and 1st offense sale
Michigan	No	Yes	Only for 1st offense possession
Minnesota	No	Yes	No prohibition

* The data appearing in these tables is current as of June 1970. Since that time, some states, such as New Jersey, Georgia and California, have amended their marijuana laws. It should be noted that, in condensing complicated statutory schemes to tabular form, many of the nuances of these schemes are not reported.

TABLE I. STATUTORY SCHEMES FOR MARIJUANA PROHIBITON—CONTINUED

Jurisdiction	*Distinction between marijuana and other narcotics*	*First offense possession classified as felony*	*Suspended sentences, parole, and probation*
Mississippi	No	Yes	Only for 1st offense possession
Missouri	No	Yes	Only for 1st offense possession
Montana	Yes	Yes	No prohibition
Nebraska	Yes	No	No prohibition
Nevada	No	Yes	Only for possession and 1st offense sale (except by an adult to a minor)
New Hampshire	Yes	No	No prohibition
New Jersey	No	Yes	No prohibition
New Mexico	No	No	Only for 1st offense possession of less than one ounce
New York	No	No	No prohibition
North Carolina	No	No	Only for possession and 1st offense sale (except by an adult to a minor)
North Dakota	Yes	No	No prohibition
Ohio	No	Yes	Sale offenses not probational
Oklahoma	Yes	Yes	No prohibition
Oregon	No	Yes	No prohibition
Pennsylvania	No	Yes	Only for 1st offense
Rhode Island	No	Yes	No probation for sale to a minor
South Carolina	No	Yes	Only for 1st and 2d offenses
South Dakota	Yes	No	Only for 1st offense
Tennessee	No	Yes	Only for 1st offense
Texas	No	Yes	Only for 1st offense
Utah	No	No	Only for possession offenses
Vermont	Yes	No	No prohibition
Virginia	Yes	No	No prohibition
Washington	Yes	No	No prohibition
West Virginia	No	Yes	Only for 1st offense
Wisconsin	Yes	No	Only for 1st offense
Wyoming	No	No	No prohibition
District of Columbia	No	No	No prohibition

TABLE II. PENALTY PROVISIONS FOR MAJOR MARIJUANA OFFENSES

A. POSSESSION

	1st Offense	*2d Offense*	*Subsequent Offense*
Alabama	2-10 yrs./$20,000 maximum	5-20 yrs./$20,000 maximum	10-40 yrs./$20,000 maximum
Alaska	0-1 yr./$1,000 or rehabilitation treatment by state for 1 year	— —	— —
Arizona	0-1 yr. in county jail/$1,000 max. or 1-10 yrs.	2-20 yrs.	5-life

Control of Marihuana, Alcohol, and Tobacco

This chapter traces the legislative histories of marihuana, alcohol, and tobacco.

In the first section, "History of Marihuana Legislation," the origins of the intoxicant use of cannabis in this country during the early 20th century are noted along with the subsequent state and federal statutes enacted prohibiting use, distribution, production and sale.

Proscriptions began appearing on the books after about 1914 and continued through 1971, which brings the reader to the point subsequently covered by the rest of this Appendix.

Early colonial laws regarding alcohol are described in the beginning of the next section, "History of Alcohol Prohibition." From that point in history, the national movements which spread over the next two centuries, culminating in the enactment of National Prohibition from 1920 to 1933, are described.

The various state modes of control which appeared after Repeal are then briefly enumerated along with a discussion of the present state controls over production, distribution, and sale of intoxicating beverages.

The introduction of tobacco cultivation in 1613 in the colony of Virginia opens the third section, "History of Tobacco Regulation." The widespread use of tobacco in the latter 1800's into the first half of the 20th century is traced along with the increasing pressure from groups fearful of tobacco's deleterious effects on health.

Federal sumptuary regulations are outlined along with a discussion of the impact further federal controls might have on the tobacco economy.

History of Marihuana Legislation*

"Marihuana" or Indian hemp, labeled *Cannabis Sativa L.* by Linneas in 1753, has been used for centuries in Asia and Africa for its intoxicant properties. It was cultivated as a source of fiber in North America in the early 17th century. Yet, cannabis was not used as an intoxicant in North America until the late 19th century, and in the United States until the early 20th.

Cannabis use was prevalent in Mexico by 1898. Widely cultivated and growing wild, the drug was readily available for eating, drinking, or smoking, the latter being by far the most common method of ingestion. Soldiers in Pancho Villa's army are reputed to have used the drug freely. The path of the introduction of marihuana smoking for pleasure into the United States was not via Europe, which transmitted the fiber, oil, and medicinal uses of hemp, but via Mexica and the West Indies.

The plant and its intoxicant use in the United States in the first decades of the 20th century encountered a political and social climate which was not particularly conducive to hearty growth. Gradually criminal prohibitions appeared on the statute books of nearly every state where the drug was used.

Well into the thirties, however, marihuana smoking attracted little attention from the national policy and opinion apparatus which was deeply ensnared in drug matters of much wider social impact than the limited, regional use of this new drug.

The "villian" theory of American marihuana prohibition—attributing the drug's illegal status to the Federal Bureau of Narcotics and its longtime head, Harry J. Anslinger—has been particularly popular in recent years.

Although the federal narcotic bureaucracy, with Commissioner Anslinger at the helm, was to become marihuana's leading antagonist in the midthirties, a restrictive public policy toward the drug was well-rooted locally before that time. During the "local" phase of marihuana prohibition, lasting roughly from 1914 to 1931, practically every state west of the Mississippi, except for two, had prohibited use of the drug for non-medical purposes.

The real story of marihuana policy in the United States begins as a series of distinctly local tales.

---

*This section is drawn from the manuscript of *The Marihuana Consensus: A History of American Marihuana Prohibition*, in press 1972, by Professors Charles H. Whitebread II, and Richard J. Bonnie of the University of Virginia Law School.

Marihuana use was a familiar phenomenon in the border towns of Texas and New Mexico after 1910. First to note the use of the drug were El Paso law enforcement officials who quickly secured a local ordinance in 1914 banning sale and possession of the drug. El Paso officials and local representatives of the Customs and Agriculture Departments of the Federal Government agitated for state and federal legislation to combat the "killer weed."

After an official request by the Secretary of Agriculture, the Secretary of the Treasury issued a decision under the Food and Drug Act prohibiting importation of cannabis after 1915 for other than medical purposes.

On the state level in Texas, legislation was slow in coming. Marihuana use was still a local problem in the border towns and it attracted little statewide interest. The Texas Legislature included marihuana when it passed a general narcotics statute in 1919, prohibiting transfer of listed narcotics except for medical purposes (Texas, 1919: 278). In 1923, the statute was tightened to prohibit possession with intent to sell (Texas, 1923: 156–157). The legislature's failure to prohibit simple possession or use reflected an objection to interfering with private conduct.

The degree of public interest in narcotics and marihuana is well-illustrated by the limited newspaper coverage. In its only direct reference to the 1923 marihuana legislation, the *Austin Texas Statesman*, which had given the legislature extensive coverage, stated:

"The McMillan Senate Bill amended the anti-narcotic law so as to make unlawful the possession for the purpose of sale of marihuana or other drugs. Marihuana is a Mexican herb and is said to be sold on the Texas-Mexican border (*Austin Texas Statesman*, 1923.)"

Even more surprising is the fact that the *El Paso Times* did not mention the McMillan bill before or after its passage.

New Mexico in the same year prohibited sale, cultivation and importation of cannabis. Mere possession was not expressly prohibited but anyone found in possession was presumed to have imported the marihuana illegally (New Mexico, 1923: 58–59). The *Santa Fe New Mexican*, hometown newspaper of the bill's sponsor, paid scant attention, noting only that:

"The Santa Fe representative, however, had better luck with his bill to prevent sale of marihuana, cannabis indica, Indian hemp or hashish as it was variously known. This bill was passed without any opposition. Marihuana was brought into local prominence at the penitentiary board's investigation last summer when a convict testified he could get marihuana cigarettes anytime he had a dollar. The drug produces intoxication when chewed or smoked. Marihuana is the name commonly used in the Southwest and Mexico (*Santa Fe New Mexican*, 1923)."

In addition to coming in via Mexico, marihuana was being smuggled in by sailors from Cuba and other points in the Indies via New Orleans. Dr. Frank Gomila, Commissioner of Public Safety of New Orleans, began his campaign for federal legislation which would later bear fruit. He observed that the traffic was quite organized amounting to thousands of kilograms a year:

". . . [T]he custom was to keep [marihuana] in warehouses or storerooms for further distribution. It was sold by the wholesaler to the retailer who in turn put the 'weed' through a process known as 'sweating.' The dried leaves and stems were soaked in sugar water and dried on butcher's brown papers (Gomila and Lambow, 1938: 29)."

According to Dr. Gomila and the newspapers, the demand in New Orleans in the mid-twenties was so great that the "peddlers" were able to become exceptionally prosperous by dividing the market. One had exclusive jurisdiction over the blacks unloading the fruit boats, another over the lobby in a certain hotel, and so forth. It should be noted that marihuana was also available at the local pharmacy without a prescription before 1923 in Texas and 1924 in Louisiana. After that marihuana had to be bought on the street unless the user could successfully forge a prescription.

Different pictures emerge of the marihuana user in El Paso and San Antonio on one hand and New Orleans and Galvestton on the other. In the border towns, he was a Mexican laborer, indolent to some, volatile to others. Local authorities were, by and large, unable to generate any significant public or political interest, although there were no political objections to making the Mexican weed illegal.

In the port cities, however, the marihuana user was a "dope fiend," the basest element of American society. He was a narcotics addict, a pimp, or a gambler; she was a prostitute. In New Orleans, marihuana was simply another narcotic in a city with a major narcotic problem. It was always open to sensationalism.

Even before public attention was excited, however, the prevalence of marihuana use came to the attention of the President of the Louisiana State Board of Health, Dr. Oscar Dowling. On August 21, 1920, he advised the Government of the increasing availability of marihuana, a "powerful narcotic, causing exhilaration, intoxication, delerious hallucinations, and its subsequent action, drowsiness and stupor. . . ." (Jones, 1920).

At the same time, Dr. Dowling wrote to the Surgeon General of the United States, Dr. Hugh Cummings, to advise him of the increasing traffic in morphine, opium, and marihuana, and to seek federal cooperation.

An interesting sidelight of this request for assistance from Washington is that four months later Dr. Dowling was to become embroiled in a bitter battle with the Federal Government over an order to close his pet project, the New Orleans morphine clinics (Dowling, 1920). Ultimately he would lose, and one of the earliest attempts to deal with narcotics addiction would be suppressed for a half-century (Lindesmith, 1967: 135–161).

Very little, however, was done about the marihuana issue until the press seized upon it. In the fall of 1926, the *New Orleans Item* dispatched an army of reporters among the smoking and selling population.

A series of articles published by the more widely circulated *Morning Tribune* (both the *Item* and the *Tribune* were owned by the same publishing company) exposed the immense profits being made and commented upon the volatile effects of the drug upon its "addicts." It was reported that marihuana:

"Numbs the sense, creates wild fancies and has a hypnotic effect upon the user, making his will easily subordinated to that of others."

What emerged from these articles, however, was not a vision of addicts on the streets and pushers on the docks but rather peddlers who lurked on playgrounds seeking to entrap young minds. "Over two hundred children under fourteen are believed to be addicted to the marihuana habit," the paper reported, and "at least 44 schools were definitely being infected" (Gomila and Lambow, 1938:29–31).

Local policy-makers wasted no time. The New Orleans Police Department immediately launched a round-up. They arrested more than 150 persons for violation of a law which had lain dormant for two years (Gomila and Lambow, 1938: 20–31; WCTU, 1928).

Dr. Dowling soon circulated "a warning to parents, guardians, and teachers of children against this menace" (WCTU, 1928: 1). The Women's Christian Temperance Union jumped on the bandwagon, focusing its attacks on the "soft drink" bars which had sprung up all over New Orleans during Prohibition:

"The soft drink stand and the corner drug store have taken the place of the saloon as a social meeting place. Here is where marihuana and liquors can sometimes be bought (WCTU, 1928: 3)."

Beyond these immediate effects, a more substantial impact of the local policy reaction in New Orleans was the formation of a tightly knit coterie of New Orleans law enforcement, public health, and social welfare officials who would carry their campaign to Washington, with ultimate success.

The drug and the practice of smoking it spread during the mid-twenties from the Gulf Coast and border town points-of-entry in two directions—north and west from the border together with its ethnic identity and north and east from New Orleans with its identity as a narcotic and enslaver of youth.

Practically every state west of the Mississippi River prohibited the possession or sale of marihuana during the period 1915 to 1930. Most of them acted by 1930: California (1915), Iowa (1921), Nevada (1923), Washington (1923), Arkansas (1923), Nebraska (1927), and Wyoming (1929).

The Bureau of Immigration records the entry of 590,765 Mexicans during this period, two-thirds of them remaining in Texas, the others settling in states in the Rocky Mountain area, most of them as farm laborers (U.S. Bureau of Immigration, 1915 to 1930).

Whether motivated by outright ethnic prejudice or by simple discriminatory disinterest, the proceedings before state legislators resembled those in Texas in 1923. There was little, if any, public attention and no debate. Pointed references were made to the drug's Mexican origins and sometimes to the criminal conduct which inevitably followed when Mexicans ingested the "killer weed."

The Colorado Legislature first prohibited possession, cultivation and sale of the drug in 1927, the year after the use of marihuana noticeably increased Colorado, 1927: 309). At that time, according to a subsequent newspaper report, the drug was "used almost exclusively . . . by the Mexican population employed in the beet fields" (*Rocky Mountain News*, 1931).

Similarly, in 1929, the Montana Legislature amended its general narcotic law to include marihuana, prohibiting use, sale or possession without a prescription (Montana, 1929: 5). On seven different days from June 24 to February 10, the date of the bill's passage, the *Montana Standard* succinctly noted the progress of the bill through the legislature. The legislature's attitude was characterized in the January 27 issue:

"There was fun in the House Health Committee during the week when the marihuana bill came up for consideration. Marihuana is Mexican opium, a plant used by Mexicans and cultivated for sale by Indians. "When some beet field peon takes a few rares of this stuff," explained Dr. Fred Fulsher of Mineral County, "he thinks he has just been elected President of Mexico so he starts out to execute all his political enemies. I understand that over in Butte where the Mexicans often go for the winter they stage imaginary bullfights in the 'Bower of Roses' or put on tournaments for the favor of 'Spanish rose' after a couple of whiffs of marijuana The Silver Bow and Yellowstone delegations both deplore these international complications." Everybody laughed and the bill was recommended for passage (*Montana Standard*, 1929:3)."

About the same time, Mexican laborers had begun to appear in Idaho and the mayor of Boise remarked:

"The Mexican beet field workers have introduced a new problem—the smoking in cigarette or pipes of marihuana or grifo. Its use is as demoralizing as the use of narcotics. Smoking grifo is quite prevalent along the Oregon Short Line Railroad: and Idaho has no law to cope with the use and spread of this dangerous drug (WCTU, 1928: 3)."

Idaho passed a law in 1927 (Idaho, 1927: 98). By 1931, the Texas Legislature finally got around to prohibiting possession of marihuana. By now alcohol prohibition had withdrawn any philosophical barrier to making possession illegal. The *San Antonio Light* reported that:

"At last the state legislature has taken a definite step toward supression of traffic in a dangerous and insanity-producing narcotic easily compounded of a weed (marihuana) indigenous in this section. This newspaper has urged the passage of prohibitory legislation and is gratified that the solons at Austin have acted, even if tardily, in the suppression of traffic in a drug which makes the addict [read Mexican] frequently a dangerous or homicidal maniac (*San Antonio Light*, 1931)."

In the East, appearance of the practice was not a necessary prerequisite for prohibition. That Maine (1913), Massachusetts (1914), Vermont (1915), and Rhode Island (1918) barred the sale of cannabis without a prescription before 1920 does not indicate that marihuana smoking had appeared there on any significant scale. Rather, in the course of anticipating and implementing the national anti-narcotics policy declared by the Harrison Act in 1914, medical representatives on the drafting committees recommended the inclusion of "another narcotic" to which addicts could resort once the other opiates became difficult to obtain.

The *New York Times* in 1914 described cannabis as a "narcotic [having] practically the same effect as morphine and cocaine," (*New York Times*, 1914:8) and it noted in an editorial that:

"[T]he inclusion of cannabis indica among the drugs to be sold only on prescription is only common sense. Devotees of hashish are now hardly numerous enough here to count, but they are likely to increase as other narcotics become harder to obtain (*New York Times*, 1914:8)"

By 1923, the *New York Times* referred to marihuana as the city's "latest habit-forming drug" when reporting its exhibition at a Women's Club meeting (*New York Times*, 1923: 24). Finally, in 1927, whether responding to an increase in use or to the substitution admonition, the legislature included marihuana in its definition of "habit-forming drugs" in a comprehensive narcotics bill (New York, 1927: 1965).

The situation in Chicago paralleled that in New York until 1927. Large Mexican communities developed in Chicago and Gary, Indiana, during the twenties and marihuana smoking became common in these areas and among journey-

men musicians as well. As in New York, there was little public concern. The New Orleans patern took over around 1927, however, when the attention of local law enforcement officials was suddenly drawn to the Mexicans and their "muggles." One law enforcement official reported that:

"There are about 7,000 Mexicans in Gary, 10,000 in Indian Harbor and 8,000 in South Chicago. . . . The Mexicans depend on the steel mills, railroads, and construction gangs for employment. Many are drifters when slack labor conditions prevail. . . . [T]wenty-five percent of these Mexicans smoke marihuana. In fact, many of them make their living by raising and peddling the drug (Paul: 1929: 4)."

A situation perceived to be so widespread was naturally considered likely to infect the rest of the community. As in New Orleans, reports started to appear that high school students were smoking the weed (Paul, 1929: 1; *Chicago Tribune*, June 3, 1929).

Since there was then neither state nor federal legislation prohibiting sale of marihuana, the local United States attorney declared war armed with an Internal Revenue statute prohibiting production and transfer of "a cigarette substitute" on which tax had not been paid. In June 1929, he raided wholesale houses "believed to have disposed of large quantities of marihuana cigarettes, sold to school pupils and other youthful thrill-seekers." He arrested nine men "most of them Mexicans" (*Chicago Examiner*, June 22, 1929). At the same time, local officials began to use a statute which prohibited transfer of "any cigarette containing any substance deleterious to health" (*Chicago Examiner*, June 19, 1929).

The *Chicago Tribune*, lobbying heavily for anti-marihuana legislation then pending before the Illinois Legislature, reported the day-to-day progress of the enforcement activity (*Chicago Tribune*, July and October, 1929). Every stall in the legislature earned a banner heading such as:

Ban on Hashish Blocked Despite Ravages of Drug

In an article appearing in June, 1929, the paper noted:

"The number of addicts is growing alarmingly according to authorities, because of the ease with which [marihuana] can be obtained. The habit was introduced a dozen years ago by Mexican laborors . . . but it has become widespread among American youths and girls even among school children."

The legislation, however, was killed.

Marihuana prohibition had become widespread. In states where either Mexicans or the drug had appeared, its use was quickly suppressed.

Soon after being apprised of its presence, local lawmakers invoked the criminal law. In New Orleans, Denver, and Chicago the spectre of a doped school population was the cornerstone of the prohibitory effort.

And, during alcohol prohibition, paralleled by the local phase of marihuana prohibition, it was naturally imperative to suppress a drug which frustrated alcohol users might substitute for their customary intoxicant.

THE UNIFORM NARCOTICS DRUG ACT

Following the *ad hoc* local phase of marihuana legislation in the United States was the nationalization phase. During this period marihuana became integrated at both the state and federal levels with the nation's narcotics policy which had been manifested forcefully in Congress' adoption of the Harrison Narcotics Act in 1914.

The Harrison Act, a taxing measure, required registration and payment of an occupational tax by all persons who imported, produced, dealt in, sold or gave away opium, cocaine or their derivatives. The Act required all legitimate handlers of these narcotics to file returns setting forth in detail their use of the drugs.

Since the Act also provided that only legitimate users could register and no one but a registered user could obtain the specified form, any transfer by an illegitimate user was a violation of the Act. For those failing to comply with its registration requirements, the original Harrison Act provided penalties of not more than $2,000 in fines or more than five years imprisonment, or both.

Drafted as a tax law rather than an outright criminal statute, the Act was intended to do indirectly what Congress believed it could not do directly: regulate possession and sale of the opiates. However, because the Act essentially was a revenue-raising measure imposing a tax on transfers of narcotics, it could not effectively prohibit the possession of drugs.

This indirect regulation of narcotics traffic had a number of significant consequences. First, since the Act could not penalize users of addiction directly, there was an immediate need for complementary residual state legislation in order to deal effectively with the drug problem.

Second, the enforcement of the Act was assigned to the Internal Revenue Service in the Treasury Department. The first enforcement agency for the Harrison Act was the Narcotics Division of the Prohibition Unit of the Internal Revenue Service created in 1920 (Schmeckebier, 1920: 43). This division was incorporated in the Prohibition Bureau which was created in 1927 (Act, 1927: 1381).

In 1930, the enforcement of the narcotics laws was severed from the Bureau of Prohibition and established as the separate Bureau of Narcotics in the Treasury Department (Act, 1930: 585). The existence of this separate agency has done as much as any single factor to influence the course of drug regulation from 1930 to 1970 (King, 1953: 736).

Although the impact of the Bureau on the passage of the Uniform Narcotic Drug Act and the Marihuana Tax Act will be explained in detail in subsequent sections, it is important here to note that the existence of a separate bureau having responsibility only for narcotics enforcement and for educating the public on drug problems inevitably led to a particularly pro-centorial view of narcotics addiction and the use and abuse of all drugs.

After the passage of the Harrison Act in 1914, there remained a considerable lack of uniformity regarding the offenses prohibited and the penalties imposed by the several states.

In 1919, the American Medical Association asked the Commissioner of Internal Revenue to call a conference to consider better control of traffic in narcotic drugs. The profession was uncertain of its obligations in the matter because they were faced with an amalgam of conflicting laws. The A.M.A. asked that the wholesale, retail, and manufacturing drug interests be among those attending, along with delegates from the medical profession in each state. The proposal received no official or unofficial response either from the Commissioner of Internal Revenue or the Bureau of Prohibition.

Nevertheless, the American Medical Association, through its own Council on Health and Public Instruction, did hold a conference in early 1922 during which a uniform state narcotic control law was presented. At the November meeting of that conference, there were present 15 representatives of 10 pharmaceutical organizations and two representatives of the medical profession.

The draft of a uniform law was approved unanimously by all present. The American Medical Association set out to codify the draft and to send it for approval to each of the constituent organizations (White, August 3, 1932; Woodward, August 6, 1932). After securing approval, all the associations agreed to pursue enactment first in New York.

The general lack of uniformity in anti-narcotics legislation, the weakness of state enforcement procedures, and the growing hysteria about dope fiends and criminality converged in several requests outside the medical community for a uniform state narcotic law (Anslinger and Tompkins, 1953: 159).

The drafting of the Uniform Narcotic Drug Act must also be viewed against the background of two larger movements: (1) the trend toward the creation and dissemination of uniform state laws by the National Commissioners on Uniform State laws, a group to which each state sent two representatives appointed by the governor; and (2) the general concern in the late 1920's and early 1930's with interstate crime, manifested, for example, by the creation in 1930 of the nearly autonomous Federal Bureau of Investigation. Because the concept of States' rights and narrowly construed federal power was then so powerful, an appeal to the National Commissioners was the inevitable recourse for those pressing for uniform anti-narcotic regulation.

DRAFTING THE UNIFORM ACT

By 1924, the Commissioners had appointed a Committee to draft a uniform narcotic drug act. At the 1925 meeting of Commissioners, the chairman of the Committee reported that he himself had prepared a first tentative draft based on the New York Act, the Washington state legislation, the Harrison Act, and a bill then before the New York Legislature. Presumably this was the one drafted by the A.M.A. Conference after its 1922 meeting.

The chairman noted, however, that Dr. William Woodward, head of the A.M.A.'s Bureau of Legal Medicine and Legislation, with whom he had only recently conferred, had made "some very valuable suggestions." Because the tentative draft had already been printed before these suggestions, he requested that it "not be read but re-committed to the Committee" (*1925 Handbook:* 977–985). This first draft included cannabis in the list of "habit-forming drugs," although all such drugs could be distributed and used for medical purposes (*1925 Handbook:* 978).

A second tentative draft was presented in 1928 and again the draft was not discussed at the conference but recommitted for further study. The second draft was essentially an exact copy of the 1927 New York Statute. It also included cannabis in the class of habit-forming drugs (*1928 Handbook:* 75–78, 323–333).

There was a lack of concern on the part of the Commissioners themselves with the whole narcotics problem between 1924 and 1928. The President of the Conference, introducing Dr. Woodward, said:

"In view of the importance of the act I think it would not be amiss to listen to the Doctor for a few minutes, that he may point out to us why it is imporant. In some of the states we do no recognize the importance because it has not been called to our attention (*1928 Handbook:* 76–77)."

Nor was the Bureau of Prohibition particularly concerned at this time with the cannabis provision. Lack of official concern and interest continued to be the Bureau's attitude toward the second tentative draft (Nutt, June 13, 1929).

Since neither the Commissioners nor federal narcotics officials were particularly concerned about state and local control of narcotics generally, and marihuana in particular, it seems clear that neither was responsible for the inclusion of marihuana in the category of "habit-forming drugs." Rather, it would appear that it was included in the first draft because that had been drawn from the 1923 Washington statute which had listed cannabis.

Insofar as the second draft was a copy of the 1927 New York Act, inclusion of cannabis in this draft is not unusual. Few, if any, of the persons involved in the drafting were concerned about marihuana smoking or even aware of its use.

Two third drafts were submitted, the first in 1929 and the second in 1930. The initial one closely resembled the second tentative draft, and once again it included cannabis in the category of "habit-forming drugs." Again, the growth, distribution, and possession of cannabis was prohibited except for medical purposes.

The nascent Congressional interest in marihuana in 1929 and the Bureau of Prohibition's subsequent resistance to amending, and thereby endangering, the Harrison and Export and Import Acts, caused the Bureau to take full notice of this 1929 third draft. Like its predecessors, however, the initial third draft was recommitted for further study (*1929 Handbook:* 43, 332–346).

The second third tentative draft, submitted in 1930, was the first to remove cannabis from the definition of "habit-forming drugs" and to include only a supplemental provision for dealing with the drug (*1930 Handbook:* 485, 97).

When the Conference of Commissioners met to consider the second third tentative draft, Judge Deering, the Chairman of the Committee on the Uniform Narcotic Drug Act, recommended its recommission for further study because the Committee had not yet had an opportunity to consult the newly created Bureau of Narcotics.

At the time of this conference, August 14, 1930, no one had yet been appointed Commissioner of the Bureau, although Harry J. Anslinger was Acting Commissioner (*1930 Handbook:* 126–127). The Senate confirmed Anslinger's appointment as Commissioner on December 18, 1930.

The Bureau of Narcotics then became actively involved in the drafting process. Commissioner Anslinger was pressing for inclusion of the cannabis provision. He stated that he felt the limited medical use for cannabis was far outweighed by the need to control potential cannabis addiction (Anslinger, July 28, 1930).

Dr. Woodward and the pharmaceutical industry advocated optional inclusion of marihuana on the one hand, and federal narcotics representatives urged not only inclusion but elimination of medical use, on the other.

The fourth tentative draft retained the optional cannabis provision. At a session before the convening of the full Conference of Commissioners from September 9–12, 1931, Commissioner Anslinger and A. L. Tennyson of the Bureau met with Judge Deering to discuss the Bureau's feelings about the fourth tentative draft.

At this time Commissioner Anslinger stated that the Bureau felt strongly that inclusion of cannabis in the state law ought to be mandatory. Moreover, the Bureau urged that the only successful way to deal with the marihuana drug traffic, because of its domestic nature and the easy availability of the weed, was to prohibit the cultivation of the plant altogether and to find some substitute for its limited medical use (Tennyson, September 16, 1931). However, the fourth tentative draft presented to the Conference of Commissioners included the optional marihuana provision. And, the Conference tentatively approved the fourth tentative draft and directed the Committee to prepare a final draft (*1931 Handbook:* 127–128, 390–402).

The American Medical Association played a key role in the drafting process prior to 1931. Their efforts had been largely responsible for consideration of the Uniform Drug Act in the first place. From the beginning in 1925, Dr. William Woodward, the Director of the A.M.A.'s Bureau of Legal Medicine and Legislation, actively assisted in the drafting of the Act and widely circulated the drafts to interested persons for their comments.

It appears, however, that Dr. Woodward's personal style and the preeminent position of the American Medical Association in the drafting process were resented by the two remaining interest groups—the Federal Bureau of Narcotics and the retail and wholesale pharmaceutical associations. The Bureau had been commenting on drafts only *after* they had been drawn by the A.M.A. and did not feel it was playing an active role in the drafting process. The pharmaceutical industry felt that their interests were considered only peripherally and that they had been excluded from the heart of the drafting process.

As a result of the dissent, a conference of interested parties was scheduled before the final draft was to be presented to the Conference of Commissioners.

Present at this preliminary conference on September 15, 1932, were representatives of the Drug Committee, the Federal Bureau of Narcotics, the Department of State, the Public Health Service, the American Medical Association, and delegates from the drug industry and other medically-related industries and organizations. *The final version of the Uniform Narcotic Drug Act was hammered out at this session.* The Bureau was central to the drafting process and Commissioner Anslinger made a major effort to involve the drug manufacturers and the wholesale and retail drug trade in it to protect the Act from possible subsequent political disagreement (Anslinger, August 1, 1932). Finally, the conference agreed on a draft to be presented to the National Conference.

The manufacturers of drug products were strongly opposed to the inclusion of cannabis under any criminal regulatory scheme. Representatives of the industry opposed a mandatory cannabis provision. The final conclusion reached by all the parties present was:

"After considerable comment, it was decided to eliminate Section 12 (Cannabis) and leave it to the Conference of Commissioners as to whether it should be included under the general provisions of the Act (Report of Preliminary Conference, 1932: 23)."

The Bureau was no longer insisting on the mandatory inclusion of an absolute marihuana prohibition; it did not want to risk the opposition of the drug industry to the entire Act.

The fifth tentative draft did, however, include a significant change in form which would have important consequences in the decades to come. Although the marihuana provision remained supplemental to the main body of the Act, any state wishing to regulate the sale and possession of marihuana was instructed simply, to add cannabis to the definition of "narcotic drugs." All the other provisions of the Act would then apply to marihuana as well as to the opiates and cocaine. The Commissioners adopted this form as it had been prepared at the September 15, 1932, preliminary Conference.

The only recorded opposition to the adoption of the final draft came from some Commissioners who objected to tying the Uniform State Law to the terms of the federal Harrison Act. This last obstacle was overcome by the argument that a number of states already had passed such legislation so that the states' rights problem need not stand in the way. The Act was adopted 26 to 3 (*1932 Handbook:* 107).

ENACTMENT OF THE UNIFORM ACT BY THE STATES

After final acceptance of the Uniform Act, the Bureau set to work at once to secure state enactment—including an adequate marihuana provision. A com-

prehensive campaign was undertaken in the press, in legislative chambers, and in any other forum to gain public support for the Uniform Act.

In addition, perceiving the absence of public awareness of marihuana and needing to encourage positive action to overcome the drug's optional status, the Bureau also sought to arouse public interest in marihuana through "an educational campaign describing the drug, its identifications and its evil effects" (Federal Bureau of Narcotics, 1937: 59).

That there was little general knowledge about cannabis is illustrated by the fact that as late as 1934, it was necessary to show marihuana to the New York police so that they could recognize it growing or in dried, smokable form (*New York Times*, 1931:6).

The Bureau's district supervisors and local agents were campaigning actively in the legislatures before which the Act was pending. A press campaign was conducted across the country to gain the support of civic groups and other interested parties. Mr. Anslinger sought editorial support in newspapers (Anslinger, October 22, 1936) and assisted in the drafting of articles for popular magazines (Anslinger, December 23, 1936). To mobolize the Bar, Bureau officials wrote an article for law journals explaining the need for the Uniform Narcotic Drug Act (Anslinger, 1932: 52; Tennyson, 1932: 55).

Despite these efforts, it appears that the Uniform Act had a rough time in state legislatures during its early life. By April 26, 1933, only two states had enacted it in full. As late as March 1935, only 10 states had enacted the Uniform Law.

A number of significant objections had emerged in the state legislatures considering the passage of the Uniform Narcotic Drug Act. First among these was the potential cost to the state of enforcing the Act. Second, there was concern over the number of registrants who would have to be licensed due to the belief that the Uniform Act would require special licensing of doctors, dentists, and veterinarians. Third, the limit on the amount of exempt preparations which could be sold caused a great deal of technical difficulty with the Act. Fourth, many criticized the right of the court to revoke or suspend the license to practice medicine or pharmacy. And finally, there seemed to be widespread misunderstanding of the record-keeping requirements of the Act.

Although these objections were largely administrative, they nevertheless posed what appeared to be serious stumbling blocks to the successful passage of the Uniform Law in all the states.

The combination of public apathy and administrative resistance necessitated a new approach in generating public interest. Beginning in late 1934, Commissioner Anslinger gradually shifted the focus of the FBN's educational campaign away from the inability of federal law enforcement agencies to deal effectively with the local drug problems to the need to cope with the new drug menace—marihuana.

The clearest reflection of the change in Bureau policy is found in two official statements of Commissioner Anslinger, one made in 1933 and the other in 1936.

The 1933 statement explains the need for a Uniform Narcotic Drug Law and emphasizes United States international obligations, the need for more effective coordination in law enforcement, and the impact the law will have on the dangers of morphine, cocaine, and opium addiction (FBN Paper, July 1933). In the later statement, however, more than half of the time is devoted to a discussion of the "worst evil of all," the marihuana problem.

To aid the new approach's objective, Commissioner Anslinger made speeches and contributed articles to journals. The most influential of his effort was "Marihuana—Assassin of Youth" which appeared in the widely circulated *American Magazine* in July 1937 (Anslinger and Cooper, 1937).

The FBN files contain more than 50 letters addressed to the Commissioner which say: "Your article was the first time I ever heard of marihuana."

Among the most effective proponents of the Uniform Act was the Hearst newspaper chain. These papers began editorializing in favor of enactment within days after the Act had been approved in 1932.

The Hearst chain was not alone. A Birmingham, Alabama, paper on August 22, 1935, emphasized the need to control marihuana as a reason for adopting the Act (*Birmingham Age-Herald*, August 22, 1935). A *Washington Post* columnist in September, 1934, devoted three-quarters of his article to marihuana with quotes from Anslinger and Stanley urging adoption of the Uniform Act (*Washington Post*, September 20, 1934).

Other large-city newspapers such as the *Cleveland Plain Dealer* and the *St. Louis Star Times* kept a steady, if intermittent, stream of anti-marihuana articles flowing in the period just before the passage of the Uniform Act in those areas. In Missouri, especially, local concern generated by the extensive coverage in the *Star Times* speedily pushed the legislature to adopt the Uniform Act.

Often it has been supposed on the basis of this increased coverage that the use of marihuana increased around 1935. Since there was some larger design involved, however, a firm conclusion is unwarranted. At the same time, it is possible that use did spread after the publicity campaigns, especially among the young.

Judging from the tremendous expansion in coverage by the *New York Times* beginning in 1935, the evidence supplied by the LaGuardia Commission in its 1944 Report and the leap in enforcement activity, marihuana finally came to New York City in the 1930's, though then probably on a smaller scale than in Denver and the border towns of Texas.

Apart from the press, another influential participant in the marihuana campaign, especially after the Repeal of Prohibition, was the Women's Christian Temperance Union. Although the WCTU had distributed a pamphlet on marihuana as early as 1927, their publication, the *Union Signal*, does not reflect any significant interest either in the Uniform Act or marihuana until 1934. Before that year the "narcotic" receiving the most attention was nicotine. Beginning in 1936, however, the *Union Signal* had a direct line to the FBN national office, and from then on every issue contained material on marihuana (WCTU bound volumes, yearly).

The World Narcotic Defense Association and its head, Richmond P. Hopson, were also involved in the drive for state enactment. They were continually in postal contact with almost every state legislator in the country (WNDA, 1937). The most well-financed group in the campaign, the Association underwrote national broadcasts and distributed a lengthly pamphlet on marihuana in 1936.

The General Federation of Women's Clubs also contributed energetically. The Federation educated its membership about the need for the Uniform Act and about the evils of marihuana in particular. The Chairman of the Federation's department of legislation noted:

"The situation concerning club women particularly is the accessibility of the frightening degenerating marihuana weed, which is rolled in cigarettes . . . and has been playing such havoc with young high school boys and girls (WCTU, 1936: 285.)"

The state and local clubs immediately began to unite local legislators and to conduct educational campaigns for parents, teachers and children (WCTU, 1937: 36; Wood, January 13, 1936). An FBN agent appeared at a New York meeting of the local Federation, with two marihuana plants, They were exhibited at a local flower show:

> Marihuana Plant exhibit at Flower Show of Katrina Trask Garden Club, Tomorrow, 3 P.M. on at the Casino.
>
> This plant is the cause of a dread menace which is being fought by the State Department of Health. Public Invited to Show—25¢ (*Saratogian*, 1936: 5)

Other groups such as the YWCA, the National PTA and the National Councils of Catholic Men and Women were all in touch with the Bureau and were made aware of the Bureau's dual aims of "influencing and creating public opinion in favor of the passage of the Uniform Narcotic Drug Act and awakening the parents of the country to the increasing danger of the use of marihuana. . ." (Anslinger, March 28, 1935).

However, arousing public opinion alone was not the ultimate goal of the campaign. The FBN was interested in the enactment of the Uniform Act along with prohibitory marihuana legislation in all the states.

By early 1935, only 10 states had adopted the Uniform Act. And, three of these states had not included marihuana (Anslinger, March 1, 1935). The Bureau embarked upon its marihuana strategy in 1935, the turning point in state enactment. Whether or not public interest actually existed, public opinion-makers influenced legislative opinion and created a "felt need" for legislation.

Within the next year, 18 more states adopted the Act and every one of them which did not have previous legislation included marihuana (Anslinger, January 13, 1936; WCTU, 1937: 75).

ENACTMENT OF THE MARIHUANA TAX ACT

Despite the public opinion campaign conducted in the early 1930's the general public was largely unaware of the drug, its use, or its alleged effects; only regional interest was aroused.

A change seems to have occurred after 1935. The increased national awareness played a significant role in the decision of the Treasury Department to seek federal legislation. On April 14, 1937, the "Secretary of the Treasury, on behalf of the Commissioner of Narcotics," submitted the "administration proposal to Congress to impose an excise and transfer tax on dealings in marihuana" (Schaller, 1970: 70).

The scheme of the Marihuana Tax Act was threefold: a requirement that all manufacturers, importers, dealers, and practitioners register and pay a special occupational tax; a requirement that all transactions be accomplished through use of written order forms; and the imposition of a tax on all transfers in the amount of $1 per ounce for transfer to registered persons and a prohibitive $100 per ounce for transfers to unregistered persons.

The key departure of the marihuana tax scheme from that of the Harrison Act is the notion of the prohibitive tax. Under the Harrison Act, a person not required to register, that is, a non-medical user, could not legitimately buy or possess narcotics. To the dissenters in the Supreme Court decisions upholding the Act, this clearly demonstrated that Congress motive was to prohibit conduct rather than to raise revenue.

The seemingly bizarre legal formulation of this tax measure was precipitated by the recognized need for the Federal Government to take action forbidden to it under prevailing constitutional doctrine.

Hearings on the proposed marihuana taxation were held before the House Ways and Means Committee. During five mornings of testimony by FBN officials, government witnesses, and industry representatives, the Bureau presented the following four-fold argument: (1) marihuana was a disastrous drug; (2) its use was increasing was alarmingly and had generated public hysteria; (3) state legislation was incapable of meeting the threat posed by the drug, thus, federal action was required; and (4) the government might best act through separate legislation rather than through an amendment to the Harrison Act.

No definite scientific study of the effects of marihuana were presented to Congress to substantiate the position that marihuana was a dangerous drug. No synthesis of available scientific information was submitted nor was there any statement by the Public Health Service. Neither of the government's own public health experts, Assistant Surgeon General, Dr. Walter Treadway, and Dr. Lawrence Kolb, testified, nor did Drs. Walter Bromberg or J. F. Siler who had recently published scientific articles on the effects of cannabis in humans (Siler, et al., 1933: 269–280; Bromberg, 1934).

Instead, the scientific aspects were presented by a law enforcement agency, the FBN:

"Despite the fact that medical men and scientists have disagreed upon the properties of marihuana, and some are inclined to minimize the harmfulness of this drug, the records offer ample evidence that it has a disastrous effect upon many of its users. Recently we have received many reports showing crimes of violence committed by persons while under the influence of marihuana.

"The deleterious, even vicious, qualities of the drug render it highly dangerous to the mind and body upon which it operates to destroy the will, cause one to lose the power of connected thought, producing imaginary delectable situations and gradually weakening the physical powers. Its use frequently leads to insanity.

"I have a statement here, giving an outline of cases reported to the Bureau or in the press, wherein the use of marihuana is connected with revolting crimes (U.S. Congress, 1937: 30)."

Instead of having one of the few researchers who had done any significant research into the effects of cannabis on humans, the Bureau chose a Temple University pharmacologist, Dr. James Munch, whose experience was confined to experimentation of the effects of cannabis on dogs.

The second component of the Bureau's case was the contention that marihuana use had spread alarmingly in recent years, provoking a public outcry. To demonstrate this, the Bureau submitted, for the record, the Gomila article cited earlier, and a 1936 letter from the city editor of the *Alamoosa Daily Courier* (U.S. Congress, 1937: 32–37.) The letter described an attack by a Mexican-American, allegedly under the influence of marihuana, on a girl of his region:

"I wish I could show you what a small marihuana cigaret can do to one of our degenerate Spanish speaking residents. That's why our problem is so great; the greatest percentage of our population is composed of Spanish-speaking persons most of whom are low mentally, because of social and racial conditions (Baskette, September 4, 1936)."

The third component of the Bureau's case was that even though every state now had marihuana legislation, local authorities could not cope with the marihuana menace. To support this proposition editorial pleas from the Washington newspapers were offered along with Bureau testimony that officials of several states had requested federal help.

Senator Brown asked Commissioner Anslinger "to make clear the need for Federal legislation." He continued:

"You say the states have asked you to do that. I presume it is because of the freedom of interstate traffic that the states require the legislation."

Anslinger agreed:

"[W]e have had requests from the states to step in because they claimed it was not growing in that state, but that it was coming in from another state (U.S. Congress, 1937: 16)."

Nothing was presented to support that statement; no letters from local authorities and no investigative reports by FBN agents describing the trafficking apparatus.

The congressmen and senators participating in the hearings accepted the Bureau's argument. In fact, Senator Brown, Chairman of the subcommittee which considered the legislation in the Senate, and Chairman Doughton of the Ways and Means Committee, had been thoroughly briefed by the Bureau in advance of the hearings. There was no probing of the Government witnesses. In fact, the Government made its case in the House in one session, and the next three sessions were devoted to countering the technical objections of the oilseed, birdseed, and hemp industries (U.S. Congress, 1937: 59–65, 67–86).

On the last morning of scheduled hearings, Dr. William C. Woodward appeared on behalf of the AMA to oppose the bill. Dr. Woodward objected to H.R. 6385 because he believed that its ultimate effect would be to so restrict medical use by redtape that any medical use would be impossible. He admitted that there were currently few therapeutic applications but he observed that the bill inhibited further research which might bear fruit. He went even further to imply that the bill was designed with this objective in mind. He noted that if federal legislation was considered necessary, it could be achieved without sacrificing medical usage by simply amending the Harrison Act.

Dr. Woodward's most pointed attack was directed against the assumption that federal legislation was needed to control the marihuana habit. He argued that existing state legislation was more than sufficient if properly enforced and that if lack of coordination was the problem, that was the FBN's fault.

Noting that the FBN already had the authority to "arrange for the exchange of information concerning the use and abuse of narcotic drugs in [the] states and for cooperation in the institution and prosecution of suits . . .," he asserted that the Bureau had not done its job:

"If there is at the present time any weakness in our state laws relating to cannabis or to marihuana, a fair share of the blame, if not all of it, rests on the Secretary of the Treasury and his assistants who have had this duty imposed upon them for 6 and more years (U.S. Congress, 1937: 93)."

Dr. Woodward also contended that the law would be a useless expense to the medical professsion and unenforcible. He noted: "Since marihuana grows so freely, and every landowner was a potential producer, whether wittingly or unwittingly, full enforcement would require inspection of the entire land area of the country, a task which would be unseemly for the Federal Government to undertake" (U.S. Congress, 1937: 94–95).

Finally, Dr. Woodward wondered why, if federal legislation was considered necessary, the Congress did not simply amend the Harrison Act. To the Bureau's argument that such a course would be unconstitutional, he inquired how Treasury's counsel could argue that the present bill was constitutional since the technique was identical. Dr. Woodward's own view was that the amendment of the Harrison Act would be constitutional and that such a course would dispel the professional objections which he raised (U.S. Congress, 1937: 97).

After accusing Dr. Woodward of obstructionism, evasiveness, and bad faith, the Committee did not even thank him for his testimony (U.S. Congress, 1937: 121). When the Senate Finance Committee conducted hearings on the bill, now

styled H.R. 6906, two months later, Dr. Woodward submitted instead a short letter which stated the AMA's reasons for opposing the bill (U.S. Congress, 1937: 33–34).

Both Committees reported the bill favorably despite Woodward's objections. The Ways and Means Report stated:

"Under the influence of this drug the will is destroyed and all power of directing and controlling thought is lost. Inhibitions are released. As a result of these effects, it appeared from testimony produced at the hearings that many violent crimes have been and are being committed by persons under the influence of the drug. Not only is marihuana used by hardened criminals to steel them to commit violent crimes, but it is also being placed in the hands of high school children in the form of marihuana cigarettes by unscrupulous peddlers. Cases were cited at the hearings of school children who have been driven to crime and insanity through the use of the drug. Its continued use results many times in impotency and insanity (U.S. Congress, 1937: 1–2)."

The Marihuana Tax Act passed the House of Representatives very late in the afternoon of a long session on June 14, 1937; the only opposition came from congressmen who had no idea what marihuana was and desired further information before voting (*Congressional Record*, 1937: 5575, 5689). Instead of a detailed analysis they received a statement of one of the members of the Ways and Means Committee which repeated uncritically the lurid criminal acts attributed to marihuana users at the hearings. After less than two pages of debate, the Act passed without a roll call (*Congressional Record*, 1937: 5575).

TIGHTENING THE LAW

After the passage of the Marihuana Tax Act, the FBN began with a four-pronged enforcement policy:

1. Control of cultivation of the plant for legitimate purposes and eradication of wild growth;
2. Pacification of marihuana-sensationalism in the press;
3. Education of the federal judiciary toward strict application of the law; and
4. Allocation of federal enforcement resources toward major trafficking rather than petty possession offenses.

The scope of the plant's growth, the transportability of the seeds, the dormancy of the seeds, and the lack of a highly efficient herbicide militated against a comprehensive eradication program. The cost of such a program would have been substantial even if success were assured. No active effort was undertaken to conduct an acre-by-acre survey of the United States.

The eradication "program" became simply a matter of reaction to routine information—letters from farmers who had identified the plant and discoveries of acreage by law enforcement agents.

As the Bureau's interest in marihuana subsided during the 1940's, so did the effort to eradicate the wild growth. In fact, the Federal Government encouraged the cultivation of hemp during the war, even though an inactive strain had not been developed, because sources of sisal rope had been severed by Japan's occupation of the Philippines. All over the United States, the weed remained plentiful and largely undetected.

After passage of the Act, Commissioner Auslinger directed his agents to discourage local officials from playing up any alleged involvement of marihuana with crime to the press. On April 11, 1938, the Commisioner told his New York District Supervisor that:

"Our present policy is to discourage undue emphasis on marihuana for the reason that in some sections of the country recently press reports have been so exaggerated that interest in the subject has become almost hysterical and we are therefore trying to mold public opinion along more conservative and saner lines (Anslinger, April 11, 1938)."

Immediately following passage of the Act, the FBN also directed an "educational" effort toward the federal judiciary to emphasize the need for severe sentences for marihuana offenders. The Bureau also concentrated on the stifling of suppliers, large interstate traffickers, and smugglers. Small possesion cases were to be left to local authorities.

Several factors, however, served to frustrate this policy. First, marihuana traffic was highly disorganized and there was no national or regional network as such (New York City, 1945). Second, use was still concentrated geographically and socio-economically and was not a major enterprise. Finally, during the war

years, the Bureau abandoned responsibility for most marihuana law enforcement to the states, where the disorganized traffic and regional use could be most effectively controlled. The FBN chose instead to concentrate on the opiates.

After the relative quiet of the war years there was apparently a significant increase in narcotic drug abuse in the late 1940's and the public began to be concerned with the spread of narcotic addiction, particularly among young persons. Congressional furor was aroused by the assertion that the use of marihuana inevitably led to the use of these harder drugs, particularly heroin.

The new legislation came in two waves. In 1951, Congress passed the Boggs Act (Boggs Act, November 2, 1951: 767) which increased penalties for all drug violators. For the first time in federal drug legislation marihuana and the narcotic drugs were lumped together, since the Act provided uniform penalties for the Narcotic Drugs Import and Export Act (Boggs Act, November 2, 1951: 767) and the Marihuana Tax Act (21 U.S.C. 1964). The states followed the federal lead. Then, in 1956, Congress passed the Narcotic Control Act, escalating the penalties still further. Once again the states responded in kind.

The hearings before the Subcommittee of the House Ways and Means Committee and the floor debate indicate that the Boggs Act was motivated by a perceived increase in narcotic use in the period 1948 to 1951 (Kefauver Committee Hearings, 1951 : 240–241 : *New York Times*, 1951).

Representative Boggs, speaking during the Congressional debate on his bill, enunciated a concern which was reflected in many other quarters. After noting that there had been a 24% increase in arrests for narcotic violations between 1949 and 1950 and a 70% increase between 1948 and 1950, Representative Boggs stated:

"The most shocking part about these figures is the fact that there has been an alarming increase in drug addiction among younger persons. In the first six months of 1946, the average age of addicted persons committed . . . at Lexington, Kentucky, was 37.5 years. Only three patients were under the age of 21. During the first six months of 1950, only four years later, the average had dropped to 26.7 years and 766 patients were under the age of 21 . . . (*Congressional Record*, 1951: 8197)."

Representative Boggs and others supported the mandatory minimum sentences for drug peddlers because they felt that some federal judges had been lax in enforcing the narcotic laws (*Congressional Record*, 1951: 8197, 8207, 8211). Public opinion was overwhelming that harsh sentences, including the death penalty for peddling narcotics to minors, would strangle the drug monster then stalking the American youth (Kefauver Committee Hearings, 1951: 430–431).

The Boggs Act was directed in large part at the federal judiciary since a key provision removed judicial discretion in sentencing by providing that upon conviction for a second or subsequent offense the imposition or execution of the sentence could not be suspended nor probation granted.

There had been no concerted lobbying effort by the judicial community during the legislative process; however, James V. Bennett, Director of the U.S. Bureau of Prisons, aroused the judges in the Fifth U.S. Circuit District into eventually recommending the amendment of the law to remove provisions for mandatory minimum sentences (*New Orleans Statesman*, May 28, 1954; *New Orleans Times-Picayune*, May 28, 1954).

Even while the Boggs Act was still pending in Congress, the Bureau of Narcotics encouraged the states to modify their existing narcotic and marihuana legislation to enact "penalties similar to those provided in the Boggs Bill [which] would be of material assistance in the fight against the narcotic traffic" (Federal Bureau of Narcotics, 1950 :6).

Seventeen states and the territory of Alaska responded by passing "little Boggs Acts" by 1953 and 11 other states increased their penalties by 1956. Two of the latter group, Ohio and Louisiana, enacted penalty provisions which were substantially more severe than those passed previously in any jurisdiction (Federal Bureau of Narcotics, 1956 :28).

The Ohio law, approved June 16, 1955, provided a 20 to 40 year sentence for the sale of narcotic drugs. The Louisiana measure, adopted the following year, provided severe prison sentences without parole, probation, or suspension for the illegal sale, possession, or administration of a narcotic drug. The sentences ranged from a five-year minimum to a 99-year maximum (Federal Bureau of Narcotics, 1951 :8).

Underlying the inclusion of marihuana in the scheme of increased penalties was the progression theory. In the Boggs hearings many witnesses testified to the

CONTINUED

6 OF 33

link between marihuana use and ultimate heroin addiction. Commissioner Anslinger, for example, testified:

"The danger is this: Over 50 percent of these young addicts started on marihuana smoking. They started there and graduated to heroin; they took the needle when the thrill of marihuana was gone (Boggs Act Hearings 1951:206)."

Representative Boggs himself summed up the stepping-stone thesis in House floor debate:

"Our younger people usually start on the road which leads to drug addiction by smoking marihuana. They then graduate into narcotic drugs—cocaine, morphine, and heroin. When these younger persons become addicted to the drugs, heroin, for example, which costs from $8 to $15 per day, they very often must embark on careers of crime . . . and prostitution . . . in order to buy the supply which they need (*Congressional Record*, 1951: 8197–8198)."

The stepping-stone theory thus supplanted the older hypotheses which had linked marihuana to addiction, insanity and violent crime.

In a paper filed as an exhibit to the hearings on the Boggs Act, Dr. Harris Isbell, Director of Research at the Public Health Service Hospital in Lexington, Kentucky, stated that marihuana was not physically addictive, although he paid lip service to the psychological dependence hypothesis (Boggs Act Hearings, 1951: 147, 148).

Acknowledging the possibility of "temporary psychosis" in "predisposed individuals," Isbell otherwise disputed the crime and insanity thesis. Before the Kefauver Committee in the Senate he testified that:

"[M]arihuana smokers generally are mildly intoxicated, giggle, laugh, bother no one, and have a good time. They do not stagger or fall, and ordinarily will not attempt to harm anyone.

"It has not been proven that smoking marihuana leads to crimes of violence or to crimes of a sexual nature. Smoking marihuana has no unpleasant aftereffects, no dependence is developed on the drug, and the practice can easily be stopped at any time. In fact, it is probably easier to stop smoking marihuana cigarettes than tobacco cigarettes (Kefauver Committee Hearings, 1951: 119)."

Some observers felt that the narcotics problem had disappeared almost entirely from the national scene after the Boggs Act was passed. Nevertheless, state and federal law enforcement authorities, armed with data suggesting that the strengthening of the drug laws had at least halted the increase in drug use, pressed for further increases in penalties in order to root out the drug menace entirely (Federal Bureau of Narcotics, 1956: 28). Without extended debate or widened public interest, Congress passed the Narcotic Control Drug Act in 1956 (Daniel Committee Hearings, 1955: 57).

There was less attention paid to marihuana during Congressional debate in 1956 than had been the case in 1951. But, the established precedent of classifying marihuana with hard narcotics continued and resulted in a proliferation of marihuana offenses and a further increase in penalties based on the theory that the end of the American narcotics experience could thereby be assured.

However, efficacy of still higher penalties was not uniformly accepted among law enforcement officials; the Deputy Commissioner of the FBN suggested that more severe penalties might press grand juries not to indict and the petty juries not to convict in drug cases. Others rejected this view and felt strongly that more severe penalties were imperative if society was to be rid of its present peddlers and if new entrants into the narcotics business were to be deterred (Good, July 31, 1954).

Among congressmen considering the Bill, there was no dissent from the proposition that harsher penalties were the means to eliminate the illicit use and sale of all drugs (*Congressional Record*, 1956: 10689).

In addition to facilitating enforcement of narcotics laws through a number of ancillary provisions, the Narcotics Control Act of 1956 established the following penalties:

	Minimum sentence
Possession:	
First offense	2 years
Second offense	5 years
Third and subsequent offense	10 years
Fine	$20,000
Sale:	
First offense	5 years
Second offense	10 years
Sale to minor by adult	10 years

Parole or probation were made unavailable to all except first offenders in the possession category (26 USC, 1964).

The Act also created a new offense by prohibiting illegal importation of marihuana. Simple possession was by statute sufficient to convict the possessor of knowingly receiving illegally imported marihuana (21 USC, 1964).

Few legislators recognized that marihuana was in any way different from the physically addictive narcotics. The House Subcommittee on Narcotics, which produced what became the essentials of the 1956 Act, had inserted a footnote in the major heading "Narcotics" which stated in fine print that the term narcotics included marihuana (U.S. Code Cong. and Ad. News, 1956: 3294). Only once during the Congressional debates on the House and Senate versions of the Bill was the subject of marihuana as a separate substance even raised.

Moreover, in a statement reflecting the general acceptance of the stepping-stone concept, Senator Daniel, Chairman of the Senate Subcommittee that investigated the drug problem, described marihuana:

"That is a drug which starts most addicts in the use of drugs. Marihuana, in itself a dangerous drug, can lead to some of the worst crimes committed by those who are addicted to the habit. Evidently, its use leads to the heroin habit and then to the final destruction of the persons addicted (*U.S. Code Cong. & Ad News*, 1956: 3294)."

By the fifties, marihuana had been fully integrated into the narcotics legislation of every state in the Union and of the national government. Possession of the drug, even for one's own use, was a felony everywhere, and the user was subject to long periods of incarceration as punishment for his indulgence.

1960–1970: NEW LEGISLATIVE APPROACH

From the mid-fifties to the mid-sixties, federal activity in marihuana and narcotic law enforcement was relatively stable. The number of offenders apprehended and convicted in both areas remained constant (U.S. Courts, 1956–1964).

However, in the early and mid-sixties a new phenomenon was occurring. Drug abuse began to spread. It no longer confined itself to the ghettos and certain socioeconomic and ethnic groups; the new users were the sons and daughters of the middle class. It began striking home at the average American and became a national, major issue of concern (Rosevear, 1967: 117–131; U.S. Bureau of Narcotics, 1966: 40).

The new middle class use of marihuana induced significant medical inquiry into the nature of the drug and spurred a new legislative approach. One commentator stated:

"Nobody cared when it was a ghetto problem. Marihuana—well, it was used by jazz musicians or the lower class, so you didn't care if they got 2 to 20 years. But when a nice middel-class girl or boy in college gets busted for the same thing, then the whole community sits up and takes notice. And that's the name of the game today. The problem has begun to come home to roost—in all strata of society, in suburbia, in middle-class homes, in the colleges. Suddenly, the punitive, vindictive approach was touching all classes of society. And, now the most exciting thing that's really happening is the change in attitude by the people. Now we have a willingness to examine the problem as to whether it's an experimentation, or an illness rather than 'an evil' (*New York Times*, Feb. 5, 1970: 14)."

Congress initially acted by passage of the Drug Abuse Control Amendments of 1965 (Public Law 89–74, 1965). This legislation established a Bureau of Drug Abuse Control within the Food and Drug Administration and created criminal, misdemeanor penalties for the illegal manufacture and sale of depressant and stimulant drugs and hallucinogens.

The dramatic increase in the use of marihuana and other drugs during the latter 1960's was a matter of high public visibility. In response, President Johnson offered Reorganization Plan No. 1 of 1968 (H. Doc. No. 249, 1968). This reorganization was effective on April 8, 1968 and placed the Federal Bureau of Narcotics (of Treasury) and the Bureau of Drug Abuse Control (of FDA) in the Department of Justice and designated it the Bureau of Narcotics and Dangerous Drugs.

What had been obvious with the passage of the 1965 Drug Amendments became glaring with this reorganization, that is, the tremendous disparity in penalties for violations involving dangerous drugs as opposed to narcotics and marihuana. As a result of increased medical and scientific inquiry, LSD and several other drugs were acknowledged as being more powerful hallucinogens than marihuana.

To compound the disparity, tetrahydrocannabinol (THC), the major active ingredient in marihuana, was placed under controls whereby someone in unauthorized possession of THC was subject to no penalty, but someone in possession of marihuana was subject to a minimum mandatory penalty of two years imprisonment (*Federal Register*, 1968: 14880). Congress then charged the possession penalty, under the Drug Abuse Control Amendments, to a misdemeanor and increased the penalties for sale or manufacture of LSD and the other controlled drugs to up to five years (Public Law 90–639, 1968).

Nevertheless, a great disparity regarding penalties for these substances still existed. The atmosphere for change was ripe. Adding pressure to the situation was the criminalization of increasing numbers of young persons whose sole crime was possession of marihuana for their own use.

In late 1968, the newly formed Bureau of Narcotics and Dangerous Drugs drafted legislation which would nationalize control of the drugs under the Bureau's jurisdiction. The proposal law vested on the commerce clause rather than on the taxing powers.

The change in authority was prophetic because the *Leary* decision, which was handed down by the Supreme Court on May 19, 1969, held that the order form procedure necessary to meet the requirements of the Marihuana Tax Laws, forced an individual to incriminate himself in violation of the Fifth Amendment (*Leary* v. *U.S.*, 1969). Ostensibly, this decision left BNDD with no marihuana possession law and was another factor in evidence of the need for a revision of the law.

This new bill, H.R. 13742, covered the regulation of narcotic drugs, "dangerous drugs" and marihuana. It was transmitted by President Nixon on July 14, 1969.

Emerging from this legislation was an overall balanced scheme of criminal penalties. Minimum mandatory offenses were essentially abolished and the offense of possession of a controlled substance for one's own use was made a misdemeanor. Further, in first-offense, simple possession cases, the court was given the discretion to place a defendant on probation, for up to one year. If, at the end of the probation period, the defendant had not violated any of the conditions of the probation, his conviction could be expunged.

The same misdemeanor penalty and opportunity for first offender treatment was provided for the distribution of a small amount of marihuana for either: (1) no remuneration; or (2) the cost of the drug.

This provision was included in recognition of the large number of such transactions which take place among youth and in recognition of a phenomenon which surfaced as a substantial challenge to the traditional picture of the national marihuana trade. Legislators had formerly stereotyped the "seller" as the vicious criminal pushing his wares for high profit and felt that extraordinarily harsh penalties were justified for sellers (Narcotics Legislation Hearings, 1969: 4).

But several studies showed that the structure of marihuana traffic bore little or no relation to the traditional stereotype. One survey of 204 users found that 44% had sold to friends at least once. Many casual users sold to leave themselves enough profit to cover the amount of their own use (Goode, 1969: 7). Under the new Act, they would not be punished as distributors.

The new legislation also made a distinction between marihuana and narcotic drugs. Marihuana was placed in a category with hallucinogenic drugs and their difference from narcotics was emphasized by the difference in penalties as follows:

	Maximum sentences			
	Marihuana and other non-narcotic controlled substances		Narcotics	
	1st offense	2d offense	1st offense	2d offense
Simple possession: [1]				
Years	1	2	1	2
Dollars	5,000	10,000	5,000	10,000
Unlawful distribution, possession with intent to distribute, manufacture, importation or exportation:				
Years	5	10	15	30
Dollars	15,000	30,000	25,000	50,000

[1] Distribution of small amounts of marihuana for no remuneration is treated the same as simple possession.

The bill was passed by Congress (and signed into law by President Nixon) on October 27, 1970, as the Comprehensive Drug Abuse Prevention and Control Act of 1970.

In conjunction with this new federal law, a uniform state act was drafted by the National Conference of Commissioners on Uniform State Laws and approved by them as the Uniform Controlled Substances Act at their annual conference August 1–7, 1970.

The following statement in the preface of the Act explains its purpose:

"This Uniform Act was drafted to achieve uniformity between the laws of the several States and those of the Federal Government. It has been designed to complement the new federal narcotic and dangerous drug legislation and provide and interlocking trellis of Federal and state law to enable government at all levels to control more effectively the drug abuse problem."

The Uniform Act does not recommend penalties except with respect to possession for one's own use. For such offenses, the Conference recommended that it be treated as a misdemeanor.

To date, 26 states and three territories have adopted the Act in its entirety or in varied form. Currently, 10 to 15 states are considering it.

The most recent chapter in the legal history of marihuana appears in other pages of this Appendix. The appointment of the National Commission on Marihuana and Drug Abuse and the issuance of its Report are themselves significant events from an historical point of view.

FROM DEBATES AND PROCEEDINGS IN THE CONGRESS OF THE UNITED STATES, VOL. II, P. 1500

HOUSE OF REPRESENTATIVES, TUESDAY, MARCH 16, 1790

The engrossed bill making appropriations for the support of Government for the year 1790, was read the third time and passed.

[1] To pull?

A message was received from the President, with a letter and representation from the Supreme Executive Council of Pennsylvania, on the subject of Indian hostilities, committed in the county of Washington, in that State.—Ordered to lie on the table.

A petition from the importers of hemp and the manufacturers of cordage of New York, was read, praying that the duty on hemp imported prior to December, 1790, may be taken off, and a prohibition laid on the importation of foreign cordage.—Referred.

FROM DEBATES AND PROCEEDINGS IN THE CONGRESS OF THE UNITED STATES, 11TH CONGRESS, 1ST AND 2D SESSIONS

HOUSE OF REPRESENTATIVES, WEDNESDAY, JUNE 7, 1809

* * * * * * *

Mr. HOWARD presented a petition of sundry manufacturers of hemp into linen, residing in the State of Kentucky, praying that such additional duties may be imposed by law upon the importation of hemp and coarse linens from foreign countries, as will effectually encourage the manufacture of those articles within the United States, and prevent their introduction into the United States from abroad.—Referred to the Committee of Commerce and Manufactures.

* * * * * * *

AMERICAN MANUFACTURES

The House proceeded to consider the resolution proposed by Mr. BACON, on the thirty-first ultimo, to wit:

Resolved, That the Secretary of the Treasury be directed to prepare and report to this House, at their next session, a plan for the application of such means as are within the power of Congress, for the purpose of protecting and fostering the manufactures of the United States; together with a statement of the several manufacturing establishments which have been commenced, the progress which has been made in them, and the success with which they have been attended; and such other information as in the opinion of the Secretary shall be material in exhibiting a general view of the manufactures of the United States.

Mr. BACON remarked that if the House had any disposition to do anything towards the advancement of manufactures of the country, the proper course would be to call for information on which they could act, as proposed by the resolution. For himself, however desirous to aid manufactures without information on which he could rely, he did not feel himself prepared to act.

Mr. LYON remarked that twenty years ago a similar reference of the subject had been made to the Secretary of the Treasury, and a long report had been received, on which no proceedings were had. And this would be the case with the proposed report. It was intended but to allay by procrastination the little zeal which was now displayed by some members in favor of manufactures. If nothing was done now, he said he should despair of anything ever being done to encourage manufactures; and this motion was evidently intended to give the subject the go-by.

Mr. LYON moved to amend the resolution by striking out the words "at their next session," the time at which the Secretary of the Treasury is directed to report to the House a plan for the encouragement of manufactures; with a view to make the resolution obligatory on the Secretary to report during the present session.

The motion was negatived without a division.

Mr. VAN HORN moved to amend the resolution by striking out all that part requiring the Secretary of the Treasury to report a plan. He stated his reasons to be that he wished not to vote upon a plan reported by any Head of Department, however great confidence he might have in them; for he thought the House were competent themselves to originate a plan. He feared too that some plan might be proposed which would injure the agricultural interest; and the weight of a recommendation from so respectable an authority he well knew. He thought that Congress could themselves, by amending and regulating duties and drawbacks, sufficiently encourage manufacturers, without any specific plan being laid down.

Mr. BACON said it had long ago been decided in this Government that when a call was made for information on the Heads of Departments, it was also within the rules of correct proceeding to require the officer so called upon to prepare and digest a plan on the subject on which information was called for. And he feared no injury which would result from such a course, though much good might.

After some observations from Messrs. QUINCY and DANA, against the amendment, and Mr. BIBB in support of it, Mr. VAN HORN'S motion was negatived, ayes 19.

Mr. KENNEDY having called for the yeas and nays, on the passage of the resolution—

Messrs. GARDENIER and RANDOLPH opposed it at length, on the general ground of the inexpediency of legislative interference for the encouragement of manufactures; each gentleman appearing to consider it as a pledge, or commencement of a system, for fostering manufactures by legislative acts.

Mr. QUINCY supported it, as calling for information on which the House might legislate; as they could not properly legislate on any subject without information.

The question was then taken to agree to the said resolution, as originally proposed, and resolved in the affirmative—yeas 93, nays 38, as follows:

FROM DEBATES AND PROCEEDINGS IN THE CONGRESS OF THE UNITED STATES, 11TH CONGRESS, 3D SESSION

HOUSE OF REPRESENTATIVES, DECEMBER 1810

* * * * * * *

CULTURE OF HEMP

Mr. SHEFFEY remarked that the interruption of commerce to the Baltic had given a spring to the culture of hemp in this country, which would be much relaxed if the commerce should be opened. He was, he said, one of those who had always considered the encouragement of agriculture as one of the first objects of a good Government. He, therefore, proposed, with a view to ascertain how far it was proper to encourage the culture of hemp, to offer a resolution to inquire into the subject. He did not know how far it would be proper to adopt the measure which he contemplated; he was not advised whether the culture in the United States was sufficient for the consumption. If so, he should feel disposed to restrict the importation from abroad. The Committee of Commerce and Manufacturers would be best able to ascertain how far it was proper to protect the culture of our own raw material. He, therefore, submitted the following resolution:

Resolved, That the Committee of Commerce and Manufactures be instructed to inquire into the expediency of encouraging the culture of hemp, by protecting impost duties, or prohibiting the importation of that article into the United States; and that the Committee have leave to report by bill or otherwise.

Mr. MITCHILL said he had no inclination to oppose the passage of the resolution, its object being merely to inquire; and resolutions for inquiry, generally speaking, were those which, of all others, the House ought to pass. He would just mention, however, his perfect conviction that the resources for the supply of this article were ample, and that enough could be raised on the Genessee flats and Wallkill River in the State of New York, to supply the North, and in the State of Kentucky, to supply the South. The interruption of commerce with the Baltic, created an extraordinary price, which was bounty enough for the present. How far it might be necessary to extend the principle during free commerce, he did not say.

The resolution was agreed to without a division.

* * * * * * *

HOUSE OF REPRESENTATIVES, FEBRUARY 1811

* * * * * * *

CULTURE OF HEMP

Mr. NEWTON laid before the House a letter from the Secretary of the Navy to the Committee of Commerce and Manufactures, on the propriety of encouraging

the culture of hemp, by protecting impost duties, or by prohibiting its importation from foreign countries; which was referred to a Committee of the Whole.

The letter is as follows:

NAVY DEPARTMENT, *Jan. 21, 1811.*

SIR: I have had the honor of receiving your letter of the 17th instant.

As to the expediency of encouraging the culture of hemp, by protecting impost duties, or by prohibiting the importation of that article into the United States and its Territories, it is not, I presume, expected of me, to make any observations—as these are subjects appertaining peculiarly to the Treasury Department; and no doubt the Secretary of the Treasury can afford all the information necessary to enable you to form a satisfactory opinion upon them.

Without venturing an opinion upon the expediency of either of these provisions, I will submit for your consideration the following observations relative to the culture and dressing of hemp, &c.

In the essays first made by our countrymen in the culture of hemp, and in dressing it for market, the disadvantages of inexperience were sensibly felt.—Many errors, added to the dissuasives of previous habit, discouraged its culture. Doubts, too, whether the climate or soil of our country was adapted to the raising of hemp, were entertained. But very few, indeed, indulged the expectation that we should ever be able to make hemp equal to that of Russia. Hence, for many years, the culture of this important article progressed slowly; our countrymen, however, stimulated by their characteristic enterprise, and by hopes of ultimate success, persevered in repeated experiments, and have at length acquired that practical information which has corrected many of their first errors, and now enables them to raise hemp in such quantity, and of such quality, as to compensate them amply for their trouble. Still, however, they have not yet acquired that extensive information upon the subject which would assure to them all the advantages arising from the culture of this valuable article.

As to the certainty and profit of a crop of hemp, it is believed that no crop is more certain when sown in ground adapted to it, and to the grower it yields a profit superior to most articles, and exceeded but by few; an acre of ground well ploughed, harrowed, and manured, will yield a thousand pounds of clean hemp, worth, when properly cured and dressed, from $100 to $150—sometimes $200. The labor and necessary buildings required, in the sowing, preserving and preparing for market a crop of hemp, are inconsiderable when compared with some other articles, and especially tobacco, while the profit is greater and the injury done to the soil much less.

From a disposition to encourage the culture of hemp, cordage made of American hemp has been brought into use in our Navy. For standing and running rigging, and indeed for most other purposes, excepting cables, it is found to answer very well, even when made of "dew-rotted" hemp. Of the "water-rotted" hemp, we have not yet been able to procure a sufficient quantity to justify our excluding the use of Russia hemp, especially for cables. American "water-rotted" hemp is no doubt equal in all respects to the best Russia hemp; indeed, I rather incline to think it superior. Upon this point, however, the samples herewith sent will enable you to form an opinion.

No. 1 is a sample of American "water-rotted" hemp grown on Blannerhassett's island.

No. 2 is a sample of Russia hemp, delivered to me by a ropemaker as the *best* kind of Russia. In this, however, I incline to think there must be some mistake, though it is certainly good hemp.

No. 3 is a sample of American "dew-rotted" hemp, grown in Botetourt county, Virginia.

Upon examining these samples, you will, I believe, find the opinion which I have ventured to express with respect to the mode of dressing hemp confirmed in a great measure. The great difference between "water-rotted" and "dew-rotted" hemp, will be obvious to you from such examination.

American "dew-rotted" hemp, being of a dark color, frequently neither broke nor scutched as it ought to be, and brought to market without being properly embaled, does not, in such cases, command a good price in our markets. These are the causes, and this is the effect. The growers of hemp ought not, however, to be discouraged by this circumstance. They should remember that, in removing the cause, the effect will cease; and they may be assured that, if their hemp is properly prepared, it will always command a price equal to the hemp of Russia, probably superior. For my own part, as Secretary of the Navy, I can only say, that in such case I should feel it to be my duty to give a decided preference to hemp of our own growth.

The quantity of hemp raised in our country increases every year, and no doubt exists, that in a very short period of time, enough will be raised to supply every public and private demand for all the purposes to which it is applicable.

The desiderata to be obtained appear to me to be, to persuade our countrymen to relinquish the prevailing pernicious practice of "dew rotting," and to adopt that practice which the experience of other nations has approved, namely, the steeping in water: this done, they will soon find their advantage in the change, and thus a new and powerful impulse will be given to the culture of this valuable article.

In preparing the hemp for breaking, the pernicious practice of what is commonly called "dew rotting," still prevails to a great extent—a practice tedious in its process, partial and unequal in its effects upon the fibre, and destructive of considerable quantities of hemp by the unavoidable exposure of it to the winds, which blow it about and entangle it. Hemp thus prepared is, in some places, strong, in others, weak, and has moreover a dark color—all which materially affect its value.

In hemp there is a viscous, gummy substance, by which the fibres of the bark are bound together and to the body of the plant, and all that is necessary to prepare it for breaking is to dissolve this substance. The experience of other nations has long since decided that this dissolution can best be effected by immersing or steeping the plant in pure, clear, running water, which, in a much shorter period of time than any other system heretofore practised, produces this dissolution over all parts of the plant equally; makes it equally strong in all places, renders it more flexible, gives it a lively bright color, and, what is an object of vast importance, especially as respects durability under water, it will receive and retain a greater portion of tar than when prepared by "dew rotting." It may be here further remarked, that the more clear and pure the stream of water, the brighter will be the color of the hemp.

"Dew rotting" requires many weeks of constant attention; but practical men affirm, that, in a pure warm stream of water, the process of dissolution will frequently be completed in five or six days.

In Russia three weeks are allowed for steeping where the water is not very cold; but if cold, as in rivers and springs, five, and sometimes six weeks are found to be necessary. To ascertain whether the hemp be sufficiently steeped, a head is taken out of the pound, dried, and beat, and if the husk comes off, the hemp is considered as having been sufficiently steeped. It is, then, taken out of the pound and suspended upon sticks placed horizontally for the purpose of drying; after remaining in the open air in this situation about a fortnight, it is removed and put into a kiln, where it is suffered to remain twenty-four hours. It is then ready for breaking, which operation is performed by means of a hand mill; after this is done, the husk is beaten off by striking the heads obliquely with iron and wooden instruments of the shape of a large two-edge knife; finally, it is drawn through a wooden comb, with one row of wide wooden teeth, for the purpose of unravelling and cleaning it.

As to the climate and soil best adapted to the culture of hemp, it may be observed that it is raised both in the frigid and torrid zone, and that any soil, if not wet, may be made to yield hemp, although the richer the soil the better, and a flat country is, for this purpose, to be preferred. On the waters of the Ohio, Mississippi, Susquehanna, Potomac, James river, and other parts of the United States, there is an abundance of land peculiarly adapted to the culture of hemp.

Should you think it expedient to offer any inducements to produce this change in the manner of dressing our hemp, whence would flow such happy effects, permit me to observe, that the only one which, at this time, occurs to me as coming within the range of my official duties to execute, would be an annual appropriation by Congress of a sum of money enabling me to contract for a supply of American hemp and canvass for the use of our Navy. Should this plan be approved, the appropriations should be made in time to admit of contracts being formed prior to the commencement of the season for cropping; and the first appropriation should be made distinct from other appropriations, or it might be added to the estimates for the current year in the first instance. This would involve an appropriation in the first year exceeding the amount required in that year for the expenses of the Navy, but it would be a provision for the ensuing year, and the amount might be deducted from the estimates of the ensuing year. The propriety of this provision will readily occur to you, when I state the fact, that it would not be possible, at this time, to contract for these articles, deliverable in time to be used within the year; they could not be delivered till after the crops of this year shall have been gathered and prepared for market. In the contracts which might thus be made, it would become my duty, in execution of the

object of Congress, to stipulate that the hemp should be steeped in water instead of being exposed to dews; and, upon good security being given, a portion, not exceeding one-fourth or one-third of the amount of each contract, might be advanced. These contracts being judiciously distributed in different parts of the country, and, what would be just, a higher price being given than "dew-rotted" hemp would command, it would not be unreasonable to expect that a spirit of emulation—always useful to public improvements—would be excited, and powerfully assist in exploding present errors and in producing the change in the dressing of hemp; which, in my opinion, would essentially promote individual and national prosperity.

Some few of our countrymen do, at this time, I am told, entertain apprehensions that our markets will be overstocked with American hemp, and that the price will be greatly diminished. This admitted, they have it in their power to prevent the importation of all foreign hemp, by making theirs, in all respects, equal to foreign hemp. This, indeed, in a national view, would be an important point gained. But when it is considered to what a variety of purposes hemp is applicable; that we are at this time greatly dependent upon foreign countries for hemp, for canvass, and linens of various kinds made of hemp; that there exists a spirit of patriotism and of preserving industry ready to be exerted, when fit opportunities shall present, to shake off this dependence; that if more hemp should be raised than will be required for cordage, factories of canvass and linens will necessarily be established. Such apprehensions lose their force, and yield to reflections and anticipations of the most agreeable nature.

A comprehensive view of this subject leads us to cherish the expectation that the United States will, at no very distant period, become exporters of hemp, as they now are of every other description of naval stores and of cotton; and that the individuals who raise it will, like those who raise other naval stores and cotton, experience all the beneficial effects resulting therefrom.

These observations are submitted to you, sir, with all the diffidence which the novelty of the subject naturally excites, and with the hope that they may be useful in aiding your deliberations upon the highly interesting question now under your consideration.

I have the honor to be, &c.

PAUL HAMILTON.

Hon. THOMAS NEWTON, &c.

Mr. LYON, after some preliminary remarks submitted the following resolution:

Resolved, That additional or original duties ought to be laid on the importation of card wire, hemp, lead, and cotton, and upon all manufacturers of which those articles constitute the chief materials.

Mr. EPPES suggested a reference of the resolution to the Committee of the Whole, to whom was referred a bill on the subject of additional duties.

Mr. NEWTON stated that a resolution on the subject of hemp having been referred to the Committee of Commerce and Manufactures, they had applied to the Secretary of the Navy on the subject, from whom a report had been received of considerable interest, which ought to be referred to the same committee.

Mr. LYON's resolution was referred as moved.

* * * * * * *

[From the Washington Post, Mar. 23, 1972]

MARIJUANA PENALTY END SUPPORTED

(By Carl Bernstein)

Al Linden, one of four candidates seeking the Democratic nomination to Congress from Virginia's Eighth District, has called for an end to criminal penalities for the possession of marijuana.

"Let's let the police, the courts and the prisons deal with the real criminals, people who are truly dangerous," Linden said at a press conference at Falls Church Democratic headquarters Monday. "Let's stop breaking down doors to see what people are doing in the privacy of their homes, and let's get . . . the muggers, the rapists, the murderers, the heroin pushers off the streets."

Describing marijuana use as a petty vice, Linden asserted at his press conference that George Washington, whose Mount Vernon home is in the Eighth District, ocassionally smoked home-grown marijuana.

"It is ironic that the Father of our Country . . . would be a criminal under today's unrealistic legislation, for he grew hemp at Mount Vernon," Linden said.

"And our first President's diary, dealing specifically with separating the female plants from the male before pollination, shows that he wasn't harvesting the stuff for rope."

Linden, a personnel consultant, described criminal penalties for marijuana possession as "an out-and-out failure that is costing society far more than the minimal benefits they are said to return."

It is "a national tragedy and a travesty of justice," he said, that "unless current laws are changed nearly 100,000 young people . . . will acquire criminal records this year for simple possession of marijuana."

The candidate added that he does not personally advocate the use of marijuana, "just as I do not advocate the use of alcohol, cigarettes, tranquilizers, caffeine, sleeping pills or any other of the myriad of drugs—many of which cause . . . much greater harm than marijuana."

Linden is one of four Democrats seeking the Democratic nomination for the congressional seat now held by Rep. William L. Scott, a Republican. Scott, whose district encompasses 463,000 residents in Alexandria, Prince William and Fairfax County, is seeking his party's nomination for the U.S. Senate seat now held by Democrat William B. Spong Jr.

Also seeking the Democratic eighth district nomination in a June 13 primary are Fairfax Commonwealth's Attorney Robert F. Horan Jr., Fairfax Supervisor Herbert E. Harris II, and Jim Burch, a management consultant.

[From the Washington Post, Mar. 28, 1972]

GEORGE WASHINGTON AS A HEMP FARMER

Your March 23 story by Carl Bernstein on Virginia Democratic candidate Al Linden's calling for legalization of marijuana performed a public service by giving us a chance to refute Linden's horrendous libel on George Washington.

Seeking historic precedent for his pot position, Linden digs into the personal diary of the Father of Our Country and cites a passage wherein Washington-the-farmer refers to his handling of the hemp crop. Linden says the diary entries "show that he wasn't harvesting the stuff for rope." And he then asserts that George Washington occasionally smoked marijuana.

Here are the verbatim quotations from Volume I of "The Diaries of George Washington, 1748–1799 " (Houghton Mifflin) :

August 7, 1765—"Began to seperate the Male from the Female hemp at D9—rather too late."

August 9—"Abt. 6 oclock put some Hemp in the Rivr. to Rot."

August 15—"The English Hemp i.e. the Hemp from ye English seed was picked at Muddy Hole this day and was ripe."

August 15—"Began to seperate Hemp in the Neck."

August 22—"Put some Hemp into the Water about 6 oclock in the Afternoon—note this Hemp had been pulld the 8th. Inst. and was well dryed and took it out again ye 26th."

September 4—"Began to pull the Seed Hemp—but was not sufficiently ripe."

Hemp is grown both for its seeds and its fiber which makes into rope, twines, carpet thread, sailcloth and coarse sheeting. But it is an annual plant, so one must save seeds from each year's crop for subsequent plantings. Hence Washington's reference to "seed hemp." The seed is also used for bird feed. It makes them sing happily.

If used for its fiber, the hemp is soaked and then beaten with a club to separate the fibers. If used as marijuana, it is dried. Washington's references to putting it in the river to rot clearly indicate he was soaking, not smoking, his pot.

True, there is one reference to the hemp being "well dryed," but this was only in reference to how dry it was before its immersion.

Mount Vernon is located in the Eighth Congressional District, which is the district that Linden wants to represent. Yet his ambition impels him to blacken the name of the Eighth's most illustrious constituent. George Washington is a pothead? Utterly ridiculous. Ask anyone who knew him.

Now, if Linden cares to make a case for heroin, I can steer him to a paragraph from the diary of the father of the Democratic Party, Thomas Jefferson, which refers to "the very serious shortage of good needles." This clearly proves Tom was a mainliner who had probably been turned on by George at the Philadelphia rock festival.

JACK D. DAUM.

Alexandria.

MARIJUANA—THE RIGHT TO TRUTH*

DR. NICHOLAS N. KITTRIE**

THE INTENSIFIED WAR ON MARIJUANA

I remember a few years back, when for the first time I taught the basic course in criminal law at the Law School, raising in class the question of criminality and the causes of crime. Some students suggested it was the social environment that breeds criminals, "the underprivileged deprivations and the social compulsion to imitate criminality in the peer group." A few students suggested heredity as a cause: envy, greed, uncontrolled drives and innate aggressiveness. We had Marxists in the group. They pointed to capitalism's insistence upon competition and material gains as accentuating the selfish streak in man, making him even more callous to his fellow man.

It was at that time that one of the women students, a young lady who had been holding her own in the predominantly male class, offered yet a different approach. "We often have crime," she said, "because there are laws. If we had fewer laws, if we were less regulative and more tolerant—we would have less crime."

At first blush the observation seemed almost irreverent and produced little response. But as the course in criminal law progressed through the semester, the participants were increasingly coming to realize that crime is not only a function of heredity and environment, but also a product of law-making. The more you regulate human conduct, the more fertile becomes the field for law breakers.

All this came to mind recently as I was reading about the nine cadets of the Coast Guard Academy, including four varsity athletes, who resigned after being charged with smoking marijuana in their rooms.[1] The cadets were given the choice of resigning or being dismissed. One academy officer noted that seven of the cadets were seniors and that the group included "some of our best students and

---

* Based on Paper Delivered at the Fourth Law-Psychiatry Institute of the William S. Hall Psychiatric Institute of the South Carolina Department of Mental Health and the School of Law of the University of South Carolina, March 13, 1970.

1. The New York Times, March 25, 1970, at 50, col. 4.

athletes."Rear Admiral Arthur B. Engel, the superintendent, agreed: "They weren't bad kids," he stated. "This is just a sign of the times."

The story of nine cadets, whose whole life was disrupted for one deviant act in the privacy of their quarters, was difficult to digest. The charge suddenly seemed so remote and irrelevant; almost like an accusation of witchcraft. Slowly, as I was still staring at the paper, all these words were beginning to fall into some new order. If the kids are not bad, I thought, is it only the law that makes them criminals?

My concern about the marijuana laws kept growing as press coverage of marijuana use and abuse increased. One recent public drive against marijuana was disclosed in a news story dated March 10, 1970,[2] reporting a United States grant to the Mexican government in the amount of $1 million for planes, helicopters, communications systems and equipment for the "remote sensing" of marijuana—all designed to assist the Mexican efforts at curbing the flow of marijuana across the United States border.

In the face of this escalated war on marijuana, with the typical American emphasis upon "hardware," I felt an urgent need to look at the historical, social and medical data underpinning this effort.

The Right to Marijuana?

A few days later I participated in a symposium on marijuana sponsored by the School of Law of the University of South Carolina. My assigned topic was "Marijuana—The Right to Its Use." Billing my paper in this titillating manner was apparently designed to appeal to the audience's prurient interest in pot. It was intended also to suggest marijuana's affinity to a broader class of newly asserted legal rights to privacy: the right to use contraceptives, to have an abortion, to view pornography and to engage in consensual homosexuality.

It was only five years ago, that the United States Supreme Court gave recognition to the constitutional "right to privacy" in the *Griswold* case[3]—striking down the Connecticut statute punishing the prescription and use of contraceptives. (Similarly, a federal court recently struck down Wisconsin's prohibition of abortions as unconstitutional, on the ground that "a woman's right to refuse to

2. The Washington Post, March 10, 1970, § A, at 4, col. 6.
3. Griswold v. Connecticut, 381 U.S. 479 (1965).

carry an embryo during the early months of pregnancy may not be invaded by the state.")[4] Yet the original credit for the privacy right must go to Justice Brandeis who described it at the turn of this century as the individual's right to be let alone as long as he was posing no direct danger to the life, limbs or property of another human being.[5]

How far an individual may go in asserting his right to live and act differently from accepted social norms—is a most fascinating question in a democratic society. At a recent Washington, D.C. symposium on narcotics I heard one of my colleagues, Joseph S. Oteri of Boston, assert that constitutionally it was none of the state's business what one does with his own body or health—as long as others don't get hurt. I am certainly not willing to go that far. I have serious doubts about the claim that society has no right to intervene when one choses to immolate himself, starve himself or amputate his own limbs.

But I do not believe that a discussion of marijuana need to be that inextricably tied up with the more complex question of man's entitlement to total liberty over the disposition of his body and personality. Instead, I believe that the social and legal status of marijuana can be resolved on a different level of discussion, where not constitutional theories, but plain facts are allowed to formulate conclusions. What I am suggesting is that a more rational resolution of the marijuana issue could take place if we merely stopped long enough for an honest appraisal of known facts, which have long gone unnoticed in the national political game surrounding marijuana.

I therefore prefer to discuss not man's absolute right to seek artificial euphorias or to withdraw from society, but the more limited question of the citizens' right to sensible, responsible, reasonable and truthful legislation.

THE INTRANSIGENT LAW

The state marijuana laws came into being in the early nineteen thirties. It was only in 1937 that the federal narcotics law was extended to include marijuana (which is known scientifically as *cannabis sativa* and colloquially as "weed," "reefer," "hay," "Mary Jane" and

4. The Washington Post, March 7, 1970, § A, at 5, col. 1.

5. Warren and Brandeis, *The Right to Privacy*, 4 HARVARD L. REV. 193 (1890); Olmstead v. United States, 277 U.S. 438 (1928).

"pot"). Marijuana is now prohibited by both state and federal laws. A survey of current state laws, placed in the Congressional Record[6] on January 20, 1970, by United States Senator Charles McC. Mathias, Republican of Maryland, testifies to the fundamental unreasonableness of our laws.

The analysis reports that 39 states draw no distinction in their laws between marijuana and the other "harder" addictive, and more dangerous narcotics. Consequently, such diverse states as Colorado, Florida, Georgia, Maryland, Ohio, Hawaii and South Carolina group marijuana and heroin in the same class and subject them to identical sanctions. Similarly, twenty states, as different as Arkansas, Minnesota, New Jersey and West Virginia, apply the same penalites to the experimental, one-time user and possessor of marijuana and any other drug, as to offenders charged with their sale and exploitation.

In Alabama, for example, a juvenile first charged with possession of marijuana is subject to imprisonment for 5 to 20 years and a 10 to 40 year sentence for subsequent offenses. A first marijuana offense in Maryland brings 2 to 5 years imprisonment and fine of not more than $1,000; the second offense is punishable by 5 to 10 years and a $2,000 fine, and subsequent convictions bring 10 to 20 years imprisonment and a $3,000 fine.

Yet the commercial pusher and exploiter of harder narcotics, including heroin and cocaine, is subject to no stricter penalties in these states.

Although the penalties prescribed for the possession and sale of marijuana are unusually severe, most states leave it within the discretion of the courts to impose lesser sentences, especially for first offenses involving possession only. Forty-eight states thus allow suspended sentences and probation for first offenses of possessing marijuana.

The federal laws are similar to the states' statutes in that they make no distinction between marijuana and harder narcotics, providing punishments ranging from 2 to 10 years imprisonment for the first offense to 10 to 40 years in prison for third offenders. Moreover, federal laws provide mandatory minimum sentences for

6. 116 CONG. REC. §§ 240-245 (daily ed. Jan. 20, 1970).

violations and prohibit the mitigation of punishment through suspended sentences, probation or parole.[7]

THE RECENT NEWS OF MARIJUANA

It is implicit in this harsh federal and state regulation of marijuana that its use poses a serious danger to the public health and safety. Yet it has been repeatedly pointed out, and by authoritative sources, that the regulation of pot as a narcotic is sheer historical accident or error.

Dr. Stanley Yolles, former director of the National Institute of Mental Health, (N.I.M.H.), testified recently before the House subcommittee on Public Health and Welfare that to equate the risks of marijuana—to either the individual or to society—with the risks of hard narcotics "is neither medically nor legally defensible."[8] It has long been known that marijuana is not an addictive narcotic: it neither causes physical dependance nor does it develop a dosage tolerance requiring increased consumption in order to maintain its pleasurable effects. It is no more difficult to give up marijuana than to stop smoking. Yet marijuana's listing as a narcotic under the law persists.

To the Congressional committee having a new look at the law, the chief of the N.I.M.H. presented a table listing fables and facts regarding marijuana. In response to the assertion that marijuana leads to increase in sexual activity the official answer is that this substance "has no aphrodisiac property." Speaking to the fear that marijuana causes violence and crime, the answer is that "persons under the influence of marijuana tend to be passive."[9] (Indeed, marijuana has been found to calm mice that have been made aggressive by isolation, and it has been suggested that it might protect some people from psychosis and melancholia.)[10] More emphatic yet has been the Medical Society of the County of New York which stated flatly that there is no evidence of the causal connection between marijuana use and crimes of violence in this country.[11]

11. NEW YORK MEDICINE, May 5, 1966, at 3.

Others assert that sometimes a crime may be committed by a person while under the influence of marijuana. Any drug which relaxes one's day-to-day inhibitions may provide an outlet for the user's pent-up personality.[12] Yet with regard to marijuana this release of inhibition is reported to result in verbal rather than behavioral expressions.[13]

To the allegation that marijuana use is medically harmful, the answer is that the effects of long-term use are unknown; and to the warning that marijuana use may lead to heroin, the clear N.I.M.H. reply is that "we know of nothing in the nature of marijuana that predisposed to heroin abuse."[14] Recent research by the Bureau of Motor Vehicles of the State of Washington, has demonstrated further that self control and coordination of drivers are much less affected by marijuana than by alcohol.[15]

Most dramatic have been the findings last year of a British government advisory committee on drugs which concluded that smoking marijuana appeared to be no more harmful—and in some ways, less harmful—than drinking liquor.[16]

After nearly two years of study, the 12-member group said flatly that "the long-term consumption of marijuana in moderate doses has no harmful effects."[16.1] No evidence was found by the committee that marijuana makes the body crave even stronger drugs or that it causes violent crime or aggressive behavior. The evidence of a link with violent crime, the group concluded, "is far stronger with alcohol than with the smoking of *cannabis*."[16.2]

The Ignored History

This recent news of marijuana is indeed not new. The fact is that we have been ignoring very similar information which has long been available. (For example, an intensive study conducted in the 1930's by a committee appointed by New York Mayor Fiorello La Guardia found no mental or physical decline in a group of chronic users who

had averaged about seven marijuana cigarettes a day over a period of eight years.)[17] The resultant American lapse into the dark ages of marijuana is one more proof of the proverb that those who ignore history are condemned to repeat it.

The recent re-issue in the United States of the 1893-94 Report of the Indian Hemp Drugs Commission provides a full documentation of our historical neglect.[18] It demonstrates how thorough was the information available in 1894 regarding marijuana—the product of *cannabis sativa*, the Indian Hemp plant—and how carelessly the United States Congress acted some forty years later in making marijuana illegal.

One day in 1893 a member of the British Parliament rose to inquire whether the Secretary of State for India would instruct the Government of India to create a commission of experts to inquire into, and report on, the cultivation of, and trade in, all preparations of hemp drugs, "the effect of their consumption upon the social and moral condition of the people, and the desirability of prohibiting its growth and sale . . . ."[19] The Secretary of State promptly complied. The resultant study and report were instrumental in the decision not to outlaw the drug.

To this day, the Indian Hemp Commission Report remains the most thorough collection of information on marijuana. The resolution setting up the Commission contained a broad mandate for fact finding not only regarding the effects of the drug, its cultivation and preparation but also several especially relevant issues for today's setting: (1) the possibilities of controlling drug abuse by licensing, taxation or other non-criminal methods; (2) "the danger lest prohibition or restrictive measures . . . may give rise to serious discontent and be resented by the people . . ." and (3) "the probability or possibility that if the use of hemp drugs is prohibited, those who would otherwise continue to use them may be driven to have recourse to alcohol or to other stimulants or narcotics which may be more deleterious."[20]

18. MARIJUANA, REPORT OF THE INDIAN HEMP DRUGS COMMISSION, (The Jefferson Law Book Co., 1969).

19. 9 PARL. DEB., H.C. (4th Ser.) 822 (1893).

20. MARIJUANA, REPORT OF INDIAN HEMP DRUGS COMMISSION 3 (The Jefferson Law Book Co., 1969).

After receiving evidence from 1,193 witnesses, including 335 medical practitioners, and scrutinizing numerous courts and mental hospital records in British India, the Commission published its report with six accompanying volumes of appendices totalling 3,000 pages. These deal carefully and intelligently not only with the history and effects of marijuana but also with the social costs and likely side effects of its criminalization.

In the traditional fashion of British Royal Commissions, the hemp group set out to find detailed answers to many questions which remain relevant to this day. In a craftsman-like manner it sought to determine not only the immediate effects of marijuana use on the consumer (a. is it refreshing? b. does it produce intoxication? c. does it create an appetite? d. how long does the effect last?) but also the medical and social after-effects (a. does it impair the constitution in any way? b. does it cause dysentery, bronchitis, or asthma? c. does it impair the moral sense or induce laziness or habits of immorality or debauchery?). Seeking knowledge, the Commission overlooked little that might be of current interest. It inquired whether these drugs are useful as aphrodisiacs, whether they tend to produce impotence and whether they are used by criminals to fortify themselves to commit premeditated crimes.

The Hemp Commission not only solicited information about the alleged connection between marijuana use, crime and mental illness, but also attempted to determine whether there was any causal connection between the three. There was no denying that people who smoke marijuana might commit violent and aggressive acts or become insane—just as people who smoke cigarettes or drink alcohol may, and for that matter, even those who indulge in neither. Possibly, marijuana users may even be more prominently obvious in the ranks of crime or mental illness—but is this attributable to the consumption of "pot" or to some other innate personal or social characteristics of which drug consumption itself is a manifestation?

The Cost-Benefit Analysis of Criminalization

Reaching the conclusion that the allegations of a connection between marijuana and crime were unsupported, the Commission noted that "preconceived notions based on rumor and tradition tend to

preserve the impression" of causality.[21] The Commission concluded further—and no research to date had cast any doubt upon this conclusion—that the moderate use of marijuana usually relieves anxieties and produces no adverse effects upon the character of the consumer.

Excessive consumption, on the other hand, is likely both to indicate and to intensify moral weakness or depravity. But with respect to his conduct in society, however, even the excessive consumer of hemp drugs is ordinarily inoffensive. "His excesses may indeed bring him to degraded poverty which may lead him to dishonest practices . . . [b]ut for all practical purposes it may be laid down that there is little or no connection between the use of hemp drugs and crime."[22]

Similarly negative was the Commission's conclusion regarding the relation between marijuana and mental illness. The acute toxic reaction of pot smoking is equivalent to the state of alcoholic intoxication, but it rarely leads to a lasting psychosis.

John Kaplan, professor of law at Stanford University, in a recent introduction to a new reprint of the Indian Hemp Drugs Commission report notes that the most important conclusions of the document relate to the adverse social effects that were likely to be produced by the outlawing of marijuana. The Commission was much concerned with the problems of enforcing marijuana prohibitions—"the fact that since there is no victim to complain about this type of offense, the police will necessarily have to proceed by using informers and invading the citizens' privacy."[23]

The Commission worried also about the public resentment that inevitably was to result from an attempt to use criminal sanctions in order to enforce consensual moral offenses and also the adverse attitude towards law likely to be "caused by any law which turns a sizable percentage of the population into criminals—whether or not they are apprehended."[24]

The Commission found no evidence or hypothesis to support the suspicion that marijuana was a stepping stone to opiate use. On the

22. *Id.* at 264.
23. *Id.* at xiii (introduction).
24. *Id.*

other hand, it gave serious credence to another fear that if marijuana were to be made illegal, a substantial number of its users might turn to more harmful drugs. One of these drugs was considered to be alcohol.

The 1937 Noble Experiment

The United States Congress in 1937 demonstrated most dramatically the difference in governmental processes between Britain and its new world descendant. In a total reversal of the impartiality of the Indian fact-finding process, the American Congress relied most heavily upon the self-serving testimony of the Bureau of Narcotics in order to extend the Bureau's then existing narcotic jurisdiction to include marijuana. The Hemp Commission Report was not once mentioned as a worthy resource for determining the effects of marijuana on a large population of users. The only reference to this most exhaustive document on the topic was its inclusion without comment in a long bibliography submitted to Congress by the Bureau of Narcotics.

Contrasted with the Hemp Drug Commission's 1,193 witnesses, the United States Congressional inquiry into the need to outlaw marijuana was much more limited. The committee hearings in the House of Representatives consumed parts of five days. Of the twelve witnesses heard, three represented the hemp seed industry. Four others represented the United States Treasury Department which was proposing the law. The United States Senate Committee required less than two hours for its decision. Of seven witnesses heard, five represented the hemp seed industry.

Henry Anslinger, Director of the Bureau of Narcotics, was the chief spokesman urging the passage of the new bill and even though only five years had passed since the repeal of prohibition, there was little concern for this new venturing into moral legislation.

Professor John Kaplan has ironically pointed out that the major concern of Congress was not to determine the justification for the proposed outlawing of marijuana, but rather how to do so while at the same time protecting the paint manufacturer who used the oil of the hemp plant, the producers of birdseed to use hemp seeds as prime ingredients and diverse other legitimate businessment who required these products.[25]

25. Statement of Ralph Lozier, General Counsel, National Institute of Oilseed Products, *Hearings on H.R. 6385, before the House Comm. on Ways and Means*, 75th Cong., 1st Sess., at 59 (1937).

Congress did have the benefit of testimony by Dr. William C. Woodward, Legislative Counsel of the American Medical Association, who asserted that there was no evidence to support the need for the porposed federal legislation and furthermore that the new law would likely prove even more unenforceable than the existing Harrison Narcotics Act.[26] But even this limited suggestion of dissent on the issue of marijuana criminalization was denounced as typical of the conservative American Medical Association's opposition to all new deal laws.

The major plea of the Bureau of Narcotics was that marijuana should be outlawed because of its two adverse effects: first, it induced its users to commit violent crimes, and second, it produced insanity. The Commissioner of Narcotics did however disavow the most common reason currently given for the prohibition of marijuana—that it provides a stepping stone for heroin or cocaine use and that its users graduate to harder narcotics.

> Congressman Dingell: I am just wondering whether marijuana addict graduates into heroin, or opium, or a cocaine user.
>
> Mr. Anslinger: No Sir, I have not heard of a case of that kind. I think it is an entirely different class. The Marijuana addict does not go in that direction.[27]

To support the claim of marijuana's propensity to cause crime and insanity, Mr. Anslinger had no independent research findings or reports equivalent to the unbiased Indian Hemp Commission. Instead, he relied on history, diverse supporting newspaper editorials and several letters from law enforcement officials and others. The scientific reliability of the Anslinger testimony is typified by his assertion that "in Persia, a thousand years before Christ, there was a religious and military order . . . called the Assassins, and they derived their name from the drug called hashish which is now known . . . as marijuana . . . they were known for their acts of cruelty . . ."[28] The Government's chief witness was thus at least two thousand years off-base in his dating of the assassins—who came into being in 1090 A.D.

The overall tone of the Congressional inquiry is illustrated by several exchanges between witness Anslinger and his senatorial questioners.

> Senator Davis: How many cigarettes would you have to smoke before you got this vicious mental attitude toward your neighbor?
> Mr. Anslinger: I believe in some cases one cigarette might develop a homicidal mania, probably kill his brother . . . . Probably some people could smoke five before it takes effect, but the experts agree that the continued use leads to insanity. There are many cases of insanity.
>
> ****
>
> Senator Davis (viewing a photograph of an alleged murder victim presented by Mr. Anslinger): Was there in this case a blood or skin disease caused by marijuana?
> Mr. Anslinger: No. This is a photograph of the murdered man.
> Senator: It shows the fury of the murderer.
> Senator Brown: That is terrible.[29]

Moreover, it was the position of the assistant general counsel of the Treasury Department, C. M. Hester, that as long as the marijuana law proclaimed to be a tax measure, its validity would be upheld by the courts without any other evidence: "if on the face of the bill it appears to be a revenue bill, the courts will not inquire into any other motives that the Congress may have . . . ."[30]

It was on this meager evidence that the 1937 marijuana act was ushered in. "[T]he Congressional Hearings, is valuable reading even for those relatively few in our society who are uninterested in the drug problem since the stark contrast between the way the American and British governments went about deciding whether to criminalize marijuana is an object lesson in the right way and the wrong way to approach just about any legislative problem."[31]

Whence To?

The Marijuana Tax Act of 1937, by and large little modified, has had a life-span considerably longer than that of prohibition. Yet its popularity has not much improved with time. Dr. Yolles' recent testimony before the House Subcommittee on Public Health and Welfare claims that from collegiate studies and other sources it can be estimated that the number of people who have smoked marijuana at least once is somewhere between 8 and 12 million, and it may be closer to 20 million.[32]

---

29. *Hearings on H.R. 6906, before the Subcommittee of the Senate Comm. on Finance*, 75th Cong., 1st Sess., at 11, 14 (1937).
30. *Id.*
31. *Supra* note 18, at vi (introduction).
32. Yolles, *supra* note 8, at 21.

Reportedly, about sixty five percent of those who have smoked marijuana are experimenting users who subsequently discontinue its use. Some twenty five percent become social users who smoke marijuana on occasion, usually in group settings. Only ten percent are classified as chronic users who devote significant time to obtaining and using the drug.[33]

The use of marijuana is most common in depressed urban areas, on one hand, and in academic and artistic communities, on the other. Recent reports of widespread use on campuses claim that twenty percent or more of the college population has been exposed to it. Relatively inexpensive, compared with heroin, marijuana is easily accessible to large numbers of grownups and youths. The Chicago police reported in 1966 that the local price for a single cigarette ranged between 50 and 75 cents. Lower prices were reported nearer to the Mexican border. With inflation and stricter enforcement—prices have gone up.

Several recent research studies have failed to cover new and more ominous data regarding possible long range effects of marijuana. While direct evidence of a causal relation between marijuana and crime remains lacking—and it is doubtful that a rational connection will ever be supplied—it is being pointed out that as an intoxicant the drug produces changes in human consciousness and therefore requires similar supervision to that accorded to alcohol. Driving under the influence of marijuana is thus hazardous and instances of panic, depression and psychotic states have been reported, though infrequently, by consumers.

Only the new widespread use of marijuana in the United States is finally producing the intensive clinical and community inquiries which should have been undertaken prior to the 1937 law. The National Institute of Mental Health reports that marijuana—not surprisingly for an intoxicant—has been found to interfere with the thinking process and with recent memory. It weakens the concentration power and slightly retards speech. Instead of stimulating conviviality it can stimulate anxieties and guilty feelings and develop introversion.

But while it appears that the pleasurable effects of marijuana may

33. NARCOTICS, LSD, MARIJUANA AND OTHER DANGEROUS DRUGS, RECENT RESEARCH 7 (N.I.M.H., Pub. 1961, Oct. 1969).

at times be countered by feelings of discomfort, dizziness and sluggishness, the long-term effects still remain uncertain. The most adverse recent report is that "There is a growing body of evidence that the continuing user, or 'pothead', becomes so involved in the process of securing and using the drug that his drive and motivation toward any other activities are impaired. Additionally, since the drug appears to attract youngsters who already have emotional problems, it may aggravate those conditions . . ."[34] Yet in the final analysis all that this suggests is that excessive involvement with the drug—much as any other excess including sex, alcohol or overweight—is likely to interfere with a healthy and balanced life and personal growth.

It is in the face of this still uncertain and bland record or marijuana as a personal and social threat that the justification for its criminalization and its subsequent channelling into underworld markets and profits must be tested. Indeed, it is this very criminalization which may contribute to one of marijuana's manifested ills: the fact that the difficult process of securing and using the drug may impair one's drive and motivation toward other activities. Certainly no one has ever seriously charged that the process of securing and using tobacco in an open society has a significant effect upon the smoker's role in the community. Yet in a prisoner of war camp or among reformatory inmates, access to prohibited or stringently supplied cigarettes may become a major pre-occupation.

In 1937, before the Senate subcommittee considering the outlawing of marijuana, the representative of the American Medical Association questioned the validity of criminal sanctions in curing vices. Once a given substance is prohibited, substitutes always spring forth. A narcotic officer in Egypt thus reportedly recounted how people were using tea for the purpose of getting a jab, by "boiling that tea, day after day, and day after day, until they got a hyperconcentrated extract, and then sitting up all night to drink it, and spending their money for tea, rendering themselves unfit and unable to work."[35]

Inherent in a democratic society is a commitment to as much social diversity and pluralism as can be tolerated without direct harm to others. Implicit in this commitment is the requirement that governmental regulations be reasonably imposed and be supported by

34. Yolles, *supra* note 8, at 22.
35. Woodward, Statement, in Senate Hearings, *supra* note 29 at 96.

a compellingly demonstrated need. The test should not be: why not governmental restrictions upon the individual? The democratic requirement instead, must be no criminalization without responsible proof.

The case for the total outlawing marijuana falls much too short of this standard. I have no doubt that with present knowledge as compelling a case could be made for outlawing the consumption of alcohol or the sale and smoking of cigarettes as could be made against marijuana.

A reporter for the South Carolina press asked me: "We know that liquor and tobacco are vices. We have nevertheless tolerated them in this country. But why should we expand the list of tolerated vices when we know that none of these is particularly beneficial?" The answer must be based on diverse considerations. Honesty requires that we admit to our youth that marijuana is no more dangerous than adult vices. Realism requires that we admit that the total abolition of vices is unlikely unless we order a society of intolerable conformity. Pragmatism requires rational priorities in our search for law and order—certainly the control of such dangerous crimes as murder, robbery and rape justifies a greater police effort than the suppression of vices, which now requires an inordinate amount of money and manpower.

As the history of prohibition has hopefully demonstrated the best route to greater public health and welfare does not necessarily travel through the territories of criminal justice. There are other avenues for social and behavioral influence, control and engineering—with a lesser price tag in terms of costs to individual liberty and social diversity.

Viewing the evidence in its totality, the conclusions that one must inescapably draw today with regard to marijuana are not much different from the conclusions reached in the Report of the Indian Hemp Drugs Commission of 1893-94.

Total legal prohibition of the cultivation, manufacture, sale or use of marijuana is neither justified nor expedient on the basis of existing knowledge. This conclusion must rest not only on the lack of ascertained ill effects, but also upon the prevalence of the habit, the social feelings on the subject and the possibility of driving the consumers to more deleterious stimulants or narcotics.

Since marijuana is an intoxicant and its excessive use is likely to produce adverse effects somewhat similar to those of alcohol and

tobacco, a public policy must be developed to restrain and restrict its use—aimed at the suppression of excessive use and at keeping the moderate use within confined limits, such as limiting it to adults.

The most proper and effective means for attaining such a social program would be mainly non-criminal measures. Needed instead is a system which utilizes appropriate taxation, requires that cultivation be under government licensing, and imposes careful licensing for both wholesale and retail sales. To further curtail the underworld trade, the unlicensed grower and seller should be subject to even stricter penalties.

Once the profit bottom has been knocked out from under the illicit marijuana market, public health and welfare measures designed to educate consumers against excesses would be commenced. Parental influence could be as readily exercised with regard to marijuana as it is used in connection with the other vices of adulthood. And for the adult who despite all knowledge and education prefers to seek out his artificial euphoria, there ought to be the liberty to smoke pot and pay for the consequences—if any are discovered—much as the cigarette smoker is given the opportunity to test out his chances against lung cancer.

This is neither a recommendation nor a plea for indulgence in marijuana. I certainly would not urge any person to smoke tobacco, drink alcohol or use other drugs—whether tranquilizers, pep-up or sleeping pills. For my minor children I shall continue to exercise my parental responsibility: in telling them what is right and tolerable within the family circle and what is not. Equally, I believe it is the duty of the mass media to continue reporting the updated facts regarding alcohol, tobacco and drugs.[36] But laws which turn into criminals some twenty million Americans, for the use of a substance the chemical qualities of which are comparatively mild—are a national mistake.

Some will persist: you are merely giving in to the pressures of youth for the legitimization of one more vice. I must respond that if pressure for change is to be resisted it must be so only in those areas where change is not justified. As adults we must not allow marijuana to become a test case for adult ignorance, inconsistency and arbitrariness.

---

36. In his 1937 opposition to the federal marijuana law, the representative of the A.M.A. noted: "Newspaper expolitation of the habit has done more to increase it than anything else." Woodward, *Id.* at 118.

[From Stash Capsules, Vol. 8, No. 3, Mar. 1976]

MARIHUANA AS MEDICINE: AN HISTORICAL PERSPECTIVE

Within the last few years, scientists have generated a number of experimental studies investigating the potential therapeutic uses of marijuana. This research is not so much innovative research, as an attempt to systematically study some of the early claims about the medicinal properties of cannabis. We tend to forget that cannabis has been used for centuries as a medicine in the non-Western world and that it was used extensively by physicians in Europe and the United States during the late 1800's. The focus of this *Capsules* is the early Western uses of marijuana.

Some examples suggest the diverse uses cannabis found in early non-Western medicine. In 200 A.D. the use of cannabis as an analgesic was described by a Chinese physician Hoa-tho (Mikuriya 1969). Another early reference to the analgesic properties of cannabis comes from the *Herbal of Dioscordies*, written around the first century A.D.

"Cannabis (some call it Cannabium, some Schoenostrophon, some Asterion, Ye Romans Cannabis) is a plant of much use in this life for ye twisting of very strong ropes, it bears leaves like to the Ash, of a bad scent, long stalks, empty, a round seed, which being eaten of much doth quench geniture, but being juiced when it is green is good for pains of the ears."

Other accounts of medical utilization of cannabis may be found in Indian medical literature. According to one source, cannabis was used as an anesthetic in ancient Indian surgery (Kabelik, Drejei, Santavy 1960). It was also used extensively in religious ceremonies. The following reference is made to cannabis in the Hindu scriptures (Snyder 1970):

"To the Hindu, the hemp plant is holy. A guardian lives in bhang . . . Bhang is the joy giver, the sky flier, the heavenly guide, the poor man's heaven, the soother of grief . . . No god or man is as good as the religious drinker of bhang. The students of the scriptures of Benares are given bhang before they sit to study. At Benares, Ujjain, and other holy places, yogis take deep draughts of bhang that they may center their thoughts on the Eternal . . . By the help of bhang, ascetics pass days without food or drink. The supporting power of bhang has brought many a Hindu family safe through the miseries of famine."

Knowledge about the properties of cannabis did not become widespread in the Near and Middle East until after the fifth century A.D., when travelers, traders and adventurers began to carry knowledge of the drug westward to Persia and Arabia. In *Mekhsanul Aldawiya*, which is an Arabic book on materia medica, one finds the following entry under cannabis indica:

"The leaves of the plant make a good snuff for deterging the brain, the juice of the leaves applied to the head as a wash remove dandruff and vermin; drops of juice thrown into the ear allay pain and destroy worms and insects. It checks diarrhea, is useful in gonorrhea, restrains seminal secretions and is diuretic. The bark has a similar effect. The powder is recommended as an external application to fresh wounds and sores . . ."

In Africa, cannabis has also been used for centuries in medicine. For example, in Southern Rhodesia, the plant has been recommended as a remedy for malaria, black water fever, dysentery, blood poisoning and wart medicine. In addition cannabis has been frequently used to help relieve labor pains. The National Commission on Marihuana and Drug Abuse (1972) also reports that marijuana was used in African countries to restore appetite, relieve pain of hemorrhoids, treat tetanus, hydrophobia, delirium tremens, infantile convulsions, neuralgia, rheumatism, hay fever, asthma and skin diseases.

According to Kabelik, Krejei, and Santavy (1960) cannabis has also been used extensively in Latin American folk medicine. For example, in Argentina, cannabis has been considered a panacea for tetanus, swelling of the liver, gonorrhoea, sterility, impotence, abortion, tuberculosis of the lungs and asthma. Kabelik *et al*, wrote "Even the root bark has been collected in spring and employed as tonic for the treatment of dysentery and gastralgia, either pulverized or in forms of decoctions. The root when ground and applied to burns is said to relieve pain. Oil from the seeds has been frequently used in the treatment of cancer."

Until the middle of the 19th century, medical uses of marijuana were practically unknown in Western medicine. However between 1850 and 1937, a large number of Europeans and Americans prescribed cannabis indica for different ills. For example, Grinspoon (1972) reports that in the period from 1840 to 1900, over 100 articles were published, all recommending cannabis for various ailments and discomforts.

In the 19th century, cannabis was introduced into the Western medical awareness by two pathways. First the British colonization of India brought a number of English physicians into contact not only with the uses of hemp as cordage and textile, but also with its medicinal properties. One of these was Dr. W. B. O'Shaugnessy, who studied the botanical nature of the plant, described its various popular preparations and reviewed the historical literature. In addition he experimented with the drug in numerous animals and then used it on a select group of patients suffering from rabies, rheumatism, epilepsy and tetanus. In an 1842 paper he describes the ameliorative effects of marijuana extract on infantile convulsions, hydrophobia and lockjaw. He also notes that moderate doses of the drug stimulate the appetite.

Cannabis was also introduced into Western medicine through France. During the Napoleonic campaigns, particularly in Egypt, the drug reappeared on the scientific scene. In 1810 Rouyer, an apothecary to the Napoleonic troops, published a paper that started a small trend of French literature on the drug. Later French interest was fostered by Dr. Jacques Moreau de Tours, a physician at Bicetre. This French doctor learned of cannabis during a visit to Egypt in 1837 and believed that the drug could be used therapeutically to manage the emotionally disturbed Moreau de Tours' 1845 book, *Du Hachish et de l'Alienation Mentale: Etudes Psychologiques*, along with O'Shaugnessy's writings introduced the therapeutic use of cannabis to Western medicine.

TREATMENT OF THE MENTALLY ILL

Carlson (1974) comments that the introduction of reserpine and chlorpromazine into clinical psychiatry early in the 1950's led many writers to herald the age of tranquilizers, if not tranquility. However, he also notes that "it is an error to think drugs have only recently played a role in the treatment of emotional problems." For example, George Beard (1880), an eminent American neuropsychiatrist praised one psychotropic drug:

Another remedy that perhaps will become, if it is not already, one of the major divinities of neurology is cannabis indica. This remedy has the reputation of untrustworthiness and unreliability, both of preparation and action. This reputation is very fortunately losing. I find that for some conditions cannabis indica is one of the most reliable and valuable of remedies.

One psychiatric complaint that marijuana was recommended for was insomnia. Gray (1860) wrote that cannabis quieted more and was less stupifying than opium. Cannabis gave a "more natural and refreshing sleep", that was allegedly close to the sleep induced by hyoscyamine. In the same year, Dr. R. R. McMeens, reporting about the Committee on Cannabis Indica of the Ohio State Medical Society, reviewed the symptoms and conditions for which hemp was found useful; among these was insomnia.

Similarly, Reynolds (1890) reports on his 39 years of clinical experience with cannabis. He claimed to have found it useful as a nocturnal sedative in senile insomna, writing "in this class of cases, I have found nothing comparable in utility to a moderate dose of hemp." He also notes that it is effective for months, even years, without requiring higher dosages. As late as 1924, there is another reference to marijuana's sleep-inducing properties. In Charles Sajous' *Analytic Cyclopedia of Practical Medicine* (1924) Indian hemp is said to be useful for insomnia due to nervous exhaustion, although it is somewhat of an uncertain remedy. The cyclopedia also notes that the drug has been found to be useful in the treatment of senile insomnia.

Numerous psychiatrists recommended cannabis for the treatment of mania and melancholia. Moreau de Tours (1845) for example, wrote:

One of the effects of hashish that struck me most forcibly and which generally gets the most attention is that manic excitement always accompanied by a

feeling of gaiety and joy inconceivable to those who have not experienced it. I saw it as a means of effectively combatting the fixed ideas of depressives, of disrupting the chains of their ideas and of unfocusing their attention on such and such a subject. It was perhaps of no less appropriate to arouse the drowsy intelligence of mute psychotics or even to return a little energy and resiliency to the demented.

Moreau de Tours reports that he administered hashish in gradually larger doses to demented, depressive, mute psychotics and manic patients. The only success he had was in the cases of manic patients, which are persons, according to Moreau de Tours, who exhibit a form of "delirium which is strikingly similar to the effects of hashish." He concluded:

"Unfortunately, I have only a few cases to present and I am not ready to assert that the cases can justify an opinion concerning the effectiveness of extract of Indian hemp upon a specific mental illness. I believe, I know as well as anyone the cogent reasons for not drawing precise conclusions. I report them here only to call attention to the prophylactic action of a substance that could offer valuable therapeutic resources."

Other writers also reported their impressions about the effects of cannabis on the treatment of mania. For example, Gray (1860) reported using marijuana successfully in religious mania. On the other hand Reynolds (1890) called it "worse than useless" in such treatments. C. W. Suckling (1891), a professor of medicine at Birmingham, England thought that cannabis deserved a "better report than it had obtained." He found it useful in certain cases of mental confusion brought on by a moral shock such as illness of a close relative. He reported that this particular condition occurred more often in women and that he cured several cases within a fortnight.

With widespread reports of the pleasant and cheerful effects of cannabis, it was inevitable that cannabis be used in the treatment of melancholia. Brigham (1846) found that cannabis "caused an exhiliration of spirits for a short time in melancholics but that it had not lasting effect." Most writers seemed to agree that it was useful only sometimes (Carlson 1974).

The neurological profession also found a use for marijuana in its practice during the last half of the 19th century. Neurologists saw many patients who did not require hospitalization but who had a myriad of complaints often with an emotional or psychophysiological origin. Cannabis was used in the treatment of this newly diagnosed condition of neurasthenia which was accompanied by marked fatigue and various physical complaints.

TREATMENT OF LOSS OF APPETITE

One of the many drug effects which has achieved a certain amount of notriety among marihuana users is appetite stimulation. As early as 300 A.D., cannabis was recommended in India for persons suffering from loss of appetite. One study by Siler *et al.* (1933) of soldiers in Panama, indicated that all the persons interviewed felt hungry after smoking marijuana. There was, however, no data in the paper. After reviewing the early literature on the effects of cannabis on hunger, Abel (1975) concludes:

"In summary the general impression from the early clinical and anecdotal literature is that cannabis and its homologs stimulate the desire for food in humans. However, it should also be noted that in nearly all of the instances in which cannabis was studied clinically in this manner, the observations were conducted under conditions which would not be acceptable by present day scientific observations."

TREATMENT OF MIGRAINE HEADACHES

Dr. Reynolds (1890) wrote about the benefits of cannabis in the treatment of headaches: "Very many victims of this malady (migraines) have for years kept their sufferings in abeyance by taking hemp at the moment of threatening or onset of attack."

In 1887, an article in the *Journal of the American Medical Association* by Mackenzie suggests that if continued for some time cannabis is the most valuable remedy there is for the treatment of persistent headache. Also Osler and McCrae's *Principles and Practice of Medicine* (1916) states that cannabis is probably the most satisfactory remedy in the treatment of migraine headaches.

TREATMENT OF PAIN

The early literature also makes numerous references to the general analgesic and anesthetic properties of cannabis. McMeens, in a report on the Committee on Cannabis Indica (1860), cites a Dr. Fronmueller of Furth, Ohio who summarized his experience with hemp before the committee:

"I have used hemp many hundred times to relieve local pain of an inflammatory as well as neuralgic nature and judging from these experiments I have to assign to the Indian hemp a place among the so called hypnotic medicines next to opium; its effects are less intense and the secretions are not so much suppressed by it. Digestion is not disturbed, the appetite rather increased; sickness of the stomach is seldom induced, congestion never. Hemp may consequently be employed for inflammatory conditions. It disturbs the expectoration far less than opium; the nervous system is also not so much affected. The whole effect of hemp being less violent and producing a more natural sleep without interfering with the actions of the internal organs, it is certainly often preferable to opium, although it is not equal to that drug in strength and reliability. An alternating course of opium and Indian hemp seems particularly adapted to those cases where opium alone fails in producing the desired effect."

Hare (1887) also noted the drug's usefulness in topical analgesia, particularly with respect to the mucous membrane of the tongue. Dentists until about 1937 took advantage of this property of cannabis. According to Sajous' *Analytic Cyclopedia of Practical Medicine* (1924) to relieve dental pain, the physician should dilute the tincture of marihuana with three to five parts alcohol and then introduce it into the tooth cavity with a bit of cotton.

Another medical writer, Mattison (1891), gave his endorsement of cannabis indica as an anodyne and hypnotic:

"With a wish for speedy effect, it is so easy to use that modern mischief-maker hypodermic morphia, that they (young physicians) are prone to forget remote results of incautious opiate giving. Would that the wisdom which has come to their professional fathers though, it may be a hapless experience, might serve them to steer clear of narcotic shoals on which many a patient has gone awreck.

"Indian hemp is not here lauded as a specific. It will, at times, fail. So do other drugs. But the many cases in which it acts well entitle it to a large and lasting confidence. My experience warrants this statement; cannabis indica is often a safe and successful anodyne and hypnotic."

Throughout the 1900's references were made to the pain-relieving properties of cannabis. Mercer and Tiffin (1901) recommended that cannabis be used in cases where opium would prove objectionable. They describe the effects in the following manner:

"The breathing becomes regular, the pulse and skin remain normal; there is no arrest of secretions nor loss of appetite under its influence and while it does not arrest pain it has a special power over spasmodic pain."

Sajous' *Analytic Cyclopedia of Practical Medicine* (1924) also recommended cannabis as an analgesic. It was recommended for a variety of pains including headaches, eyestrain, menopause, brain tumors and uremia. "It is especially useful in pain due to direct involvement of the nerves rather than in the pain associated with inflammatory conditions in general."

As late as 1935 there was an article in the prestigious *Journal of the American Medical Association* describing the effects of cannabis during labor. The unsigned article suggested:

"The sensation of pain is distinctly lessened or entirely absent and the sense of touch is less acute than normally. Hence a woman in labor may have a more or less painless labor. If a sufficient amount of the drug is taken, the patient may fall into a tranquil sleep from which she will awaken refreshed. . . . As far as is known, a baby born of a mother intoxicated with cannabis will not be abnormal in any way."

The article goes on to suggest, however, that a requisite for the successful use of marihuana in labor is previous experience with the drug.

"The Africans (who frequently use marihuana in labor) no doubt use the drug at other times and accordingly are not as likely to be distressed by the occassionally terrifying phases of the episode. Also some experience is needed in order to regulate the dose when used in this way."

Walton (1938) suggests some reasons for the popularity of the hemp drugs as pain killers. Chloral hydrate was not introduced until 1869 and was followed in the next 30 years by paraldehyde, and the barbitals. Antipyrine and acetanilide, the first of their group of analgesics, were introduced about 1884. In other words, in the late 1800's the major drugs used for general sedative and analgesic purposes were morphine derivatives. Because their disadvantages were well known and because the other drugs were not widely available, cannabis was frequently used. For example, Walton writes:

"In fact, the most attractive feature of the hemp narcotics was probably the fact that they did not exhibit certain of the notorious disadvantages of the opiates. The hemp narcotics do not constipate at all, they more often increase than decrease the appetite, they do not particularly depress the respiratory center even in large doses, they rarely or never cause puritus or cutaneous eruptions and more important the liability of developing addiction is much less than with the opiates."

The Demise of Cannabis as a Medicine

By 1938, cannabis had fallen into disfavor with the medical profession. The passage of the 1937 Marihuana Tax Act meant that eventually most physicians completely abandoned marihuana as a medicinal drug. The disadvantages of the drug were such that when aspirin, barbiturates and the synthetic analgesics and sedatives became available the medical use of cannabis indica faded.

One disadvantage of marijuana was that it could not be injected into the blood stream because of poor water solubility. Further, when marijuana is ingested by mouth its effect is very slow, so that the peak takes two to four hours to attain. In addition, the effects are hard to predict for a given dose. This was due in part to lack of control over the potency of preparations sold to and by pharmacists. There is evidence that the concentration of 300 odd cannabinoids in cannabis varies as a function of temperature, water, soil conditions and the genetic strain of the plant. Also there is considerable individual variation in reactions to marijuana. Finally, Hollister (1971) points out that doses high enough to produce a marked hypnotic effect are almost always accompanied by some degree of psychotomimetic-like perceptual disorders which many patients might find disagreeable. This disadvantage was noted by the physician recommending the use of marijuana in labor.

The physicians practicing in the 1800's and early 1900's were aware of these disadvantages. For example, Reynolds (1890) suggested the following cautions should be observed when administering marijuana:

The dose should be given in minimum quantity, repeated in not less than four or six hours and gradually increased by one drop every third or fourth day, until either relief is obtained or the drug is proved, in such case to be useless. With these precautions, I have never met with any toxic effects and have rarely failed to find a comparatively short time either the value or the uselessness of the drug.

Currently, there has been a renewed interest in the potential therapeutic benefits of cannabis. There are certain advantages that this drug has over substances such as analgesics, sedatives and hypnotics. First, the prolonged use of cannabis does not lead to the development of physical dependence. In addition, there is a minimal development of tolerance to cannabis products. Finally, cannabis products have exceedingly low toxicity levels. Mikuriya (1969) reports that the oral dose required to kill a mouse has been found to be about 40,000 times the dose required to produce typical symptoms of intoxication in man. Finally cannabis produces no disturbance of vegetative functioning, while the opiates inhibit the gastrointestinal tract, the flow of bile and the coughing reflex. In addition, a recent article (1973) in the *Journal of Anesthesiology* points out:

With current availability of pure synthetic cannabinoids, water soluble crystalline derivatives, highly active homologs and distinctly related benzopyrans and with the availability of more precise methods of pharmacologic study in animals and man, the earlier problems of identifying or discovering new therapeutic applications are being overcome.

In the last few years, scientific methods have been systematically applied to the study of the possible uses of cannabis in medicine. Although the findings are tentative, there is some evidence that the early clinical recommendations are being partly validated in the laboratory.

Man and Marijuana

RICHARD E. SCHULTES

Strange things often happen to plants after a long and intimate association with man: they travel around the world; they grow in unusual and sometimes inhospitable soils and environments; and they often hybridize. They may escape cultivation and become weeds, or they may be altered by selection for characteristics associated with specific uses. These interacting forces frequently result in an organism greatly changed from its wild progenitor. To unravel and understand such changes, the biology and economic history of these plants must be considered together. Consequently, the investigation of the biological evolution of a cultivated plant and the evolution of its uses cannot be divorced from a study of the natural forces that may have shaped its new and perhaps unnatural role.

A prime example of this interplay between man and his useful plants is the relationship between man and *Cannabis*, known in the United States, according to its use, as hemp or marijuana. Marijuana has been around for thousands of years and has earned deep respect in many different societies. Botanists have usually considered *Cannabis* a single species, *C. sativa*, but recent research indicates that there may well be several species. The present biological variability of the genus may be traced in part to the complicated history of its various uses.

Cannabis has long been cultivated for five principal purposes: for hempen fibers; for its oil; for its achenes, or "seeds," which man has consumed as a food; for its narcotic properties; and as a therapeutic agent in folk medicine and modern pharmacopoeias.

Despite its long history as one of the major crop plants and its utilization by millions of people in many parts of the world, *Cannabis* is still characterized more by what is not known about its biology than by what is known. This lack of knowledge creates serious obstacles to an understanding of the moral, social, and legal aspects of its contemporary use or abuse and is the basis of many contradictions in the botanical, chemical, medical, and pharmaceutical literature.

There is no way of knowing which use of *Cannabis* represents the earliest. Plant uses normally proceed from the simpler to the more complex. Early man could hardly have missed seeing fibers exposed in naturally retted stems, and the production of hemp goes far back in the archeological record. *Cannabis* is probably man's oldest cultivated source of fiber and the first to have spread so widely. Remains of hempen fibers have been found in several of the earliest centers of civilization.

Curious stone beaters and crude tools for pounding hemp, as well as pottery in which impressions of cords were baked, have been discovered at an ancient riverside fishing site in Taiwan. There is evidence from several localities in China and Chinese Turkestan that nearly 5,000 years ago Neolithic man made thread and rope from hemp. In fact, the oldest known name of *Cannabis* is the Chinese *ta-ma*, which originally meant hemp. The character for the word represents plants growing near a house and would seem to indicate that the earliest and most important use of hemp in China was as a source of fiber. The Chinese believe that the legendary emperor Shen Nung, patron of medicine and inventor of agriculture, first taught cultivation of hemp in the twenty-eighth century B.C. Hempen fabrics have been excavated from sites in Turkey dated to the

late eighth century B.C., older than the Taiwan finds, and an Egyptian tomb of between 3,000 and 4,000 years of age has yielded specimens of fabric thought to be hemp.

Ancient sites in the Altai Mountains of central Asia have provided remains of clothing made of hempen fibers. In 500 B.C. the Greek historian Herodotus stated that the Scythians, who originated in this mountainous area, grew hemp for its fiber and that the Thracians made garments of hemp that closely resembled linen.

Cannabis arrived as a fiber plant in Europe from the north, not from the south. The Greeks and Romans of classical times did not cultivate it, although it had arrived in Europe from Asiatic regions to the east before the Christian era. Fiber for ropes and sails was apparently imported into Sicily from Gaul as early as the third century B.C., and the Roman writer Lucilius mentioned the plant in 120 B.C. There is little evidence that *Cannabis* was cultivated as a major crop in western Europe before the Christian era. In the first century A.D., the Roman historian Pliny the Elder detailed the preparation and grades of hempen fibers, and hempen rope has been recovered in England from the site of a Roman fort dated A.D. 140-180, suggesting its introduction by the Romans from Gaul. Pollen studies have shown that there was a continuously increasing cultivation of hemp in England from the early Anglo-Saxon period into late Saxon and Norman times, from about 400 to 1100. Whether Viking sailors used hemp is not certain, but hempen fabrics and fishing lines have been retrieved from Viking graves in Norway, and the plant was grown in Iceland in the early Middle Ages.

In medieval England Henry VIII required English farmers to plant hemp, and in Elizabethan times England's maritime supremacy created such demand for the fiber that it was always in short supply, thus encouraging the cultivation of *Cannabis* in the New World. It was first introduced to North America apparently at Port Royal, Canada, in 1606. In Virginia the first crop of hemp was planted in 1611, and the Pilgrims brought it to Plymouth in 1632. Hemp was exported to England by the colonies, and in pre-Revolutionary America the fiber was used in making clothing.

There were undoubtedly a number of independent introductions of hemp into the Spanish and Portuguese colonies of the New World. *Cannabis* was known in Chile as early as 1545, and seeds were sent from Spain to Peru in 1554, but it never became a major crop.

The fiber became increasingly important in the United States. Extensive hemp plantations, centered around Kentucky, enjoyed prosperity until the middle of the last century, when disruption during the Civil War and rising labor costs killed the industry. By the 1870s, little hemp was being commercially produced in this country, but *Cannabis* seeds had spread from the abandoned plantations. The plant is now found as a weed mainly in the north-central area and the Middle Atlantic and New England states. Today hempen fiber is produced mainly in Russia and Poland, although the finest quality comes from Spain and Italy.

While the production of hemp represents one of the earliest uses of *Cannabis*, it is possible that consumption of the roasted achenes for food occurred even earlier. The ripened achenes are extremely nutritious and have undoubtedly been ingested as a fat-rich food by many peoples, especially in times of famine.

Archeologists have found hemp achenes in a receptacle excavated near Berlin, Germany, dated, with some reservation, at about 500 B.C. Since the mature achenes are devoid of the intoxicating principles, this find would seem to suggest their use as a food or their burial as a source of nourishment for the dead.

Sometimes eaten in eastern Europe, hemp is today cultivated for its seeds, especially in the Ukraine and Manchuria. In the United States hemp seeds are valued as a feed ingredient for birds and poultry.

It is as a substitute for linseed oil in the paint and varnish industry, in soap making, and as a lubricant that hemp seed oil has been chiefly used. The achenes contain from 19 to 35 percent of a drying oil, a greenish yellow fluid, which is also used for emulsions in pharmacy. In many areas of Russia peasants burn hemp oil in lamps to light their homes, but there is little evidence that oil production represents an early or widespread folk use of the plant.

Today it is seldom realized that, from the earliest periods of primitive cultures to modern times, hemp has been one of the world's major medicinal plants. Furthermore, many contemporary investigators believe that in the future wholly new therapeutic agents will come from *Cannabis* or from some of its chemical constituents.

The medicinal value of hemp--often, of course, closely related to its psychoactive properties--is perhaps its most significant, and was possibly even its earliest, role in cultural history. The oldest known record of *Cannabis* as a medicine goes back 5,000 years to Shen Nung, who prescribed hemp for malaria, beriberi, constipation, rheumatic pains, absentmindedness, and female disorders; an ancient Chinese physician, Hoa-Gho, recommended a mixture of hemp resin and wine to deaden pain during surgery.

In Indian mythology, hemp was a gift of the gods; its medicinal virtues lowered fevers, fostered sleep, relieved dysentery, and cured sundry other ills; it also stimulated the appetite, prolonged life, quickened the mind, and improved the judgment. In ancient India especially, the true medicinal use of *Cannabis* was closely associated with its magico-religious functions. As in many cultures, narcotics or hallucinogens represented the medicines par excellence, assuming, because of their psychoactive power, a far more important role than the merely physically active medicines. The several systems of Indian medicine valued hemp. The medical work *Sushruta*, for example, recommended hemp as an antiphlegmatic, as a treatment for catarrh accompanied by diarrhea, and even as a cure for leprosy. The *Bhavaprakasha*, written about A.D. 1600, termed the drug antiphlegmatic, digestive, bile affecting, pungent, and astringent and recommended it to arouse the appetite, improve the digestion, and heighten the power of the voice. At one time or other, Indian medicine ascribed curative properties for almost all ills to hemp; it was reputed to control dandruff and relieve headaches, mania, insomnia, gonorrhea, whooping cough, earaches, and consumption. *Cannabis* is still widely used in Indian medicine.

As hemp spread, its fame as a panacea spread with it. When it penetrated Africa, it became in some areas the preferred drug for treating malaria, dysentery, anthrax, and tropical fevers. Across Africa today, the most varied medicinal

properties are ascribed to hemp. The Mfengu and Hottentots, for example, value the plant for snakebite; before childbirth Sotho women partially stupefy themselves by smoking the plant.

Even though *Cannabis* was used for a greater variety of medical purposes in India, it was in medieval Europe that it assumed most importance in both folk and "professional" medicine. Many of these European uses vary greatly from the Indian uses and can be traced directly to such early classical physician-writers as Dioscorides and Galen. Medieval herbals usually classified hemp as "hot and dry in the third degree." They distinguished the cultivated ("manured hempe") from the weedy ("bastard hempe") plant.

Little use was apparently made of bastard hempe, except as a remedy "against nodes and wennes and other hard tumours." Manured hempe, on the other hand, had a host of therapeutic applications. Boiled in milk, the achene was thought to alleviate a hot, dry cough. Crushed in white wine, it was held to relieve symptoms of jaundice. Fed to hens, the achenes were credited with increasing egg laying.

The medieval herbalists cautioned, however, that excessive use of hemp might bring on sterility. Parkinson, for example, stated in 1640 that "the seed . . . consumeth wind, and by much use thereof, doth disperse it so much that it dryeth up the naturall seed of procreation," while in 1619, Dodoens asserted that "it drieth up . . . the saede of generation" in men "and the milke of women's breasts."

Although not precisely a therapeutic use, it is worth noting the sixteenth-century report that a decoction of hemp "poured into the holes of earthwormes will draw them forth, and that fishermen and anglers have used this feate to get wormes to baite their hooks." This curious use acquires added interest in view of the suggestion that in some Asiatic localities early man may have valued hemp as a fish-stupefying plant, a use that may have led to its domestication.

In spite of the plant's long role in medieval medicine, modern European and American medicine did not become seriously interested in the medicinal potentialities of *Cannabis* until the nineteenth century. During the last half of the century, more than a hundred articles on hemp appeared in medical journals. The principal effects of *Cannabis*, except for minor local irritant activity, concern the higher nerve centers. Consequently, in modern medicine the drug has been employed mainly as an analgesic, as a relief for insomnia and to calm nervous restlessness. It usually takes the form of a tincture. It has also had limited use in inducing a euphoric condition helpful in reducing the pain of migraine headaches. Recently, hemp preparations have been shown to have antibacterial activity.

Cannabis is a difficult drug to use, since individual doses can be determined only by continued administration in increasing amounts until a desired effect is experienced. The most serious handicap in using hemp is difficulty in standardizing it, that is, the lack of certainty about the potency of the preparations.

At the present time, preparations of *Cannabis* are not available. It was included in the United States Pharmacopoeia and the National Formulary until 1937, but has been dropped from these American, as well as from most European, lists of official drugs.

Hemp's value in folk medicine was obviously associated closely with discovery of its euphoric and hallucinogenic properties, and knowledge of the narcotic effects of *Cannabis* may date almost as far back as its discovery as a fiber. Beset by hunger, early man experimented with all plant materials that he could chew. He could not have avoided discovering the intoxicating properties of *Cannabis*, for in his quest for the nutritious seeds and oil, he certainly ate the sticky tops of the plant, the most narcotic part. The euphoric, ecstatic, and hallucinatory aspects of the intoxication may have introduced him to an otherworldly plane from which emerged religious beliefs, perhaps even the concept of deity. The plant became accepted as a special gift of the gods, a sacred medium for communion with the spiritual world. And such it has remained in some cultures to the present.

While today *Cannabis* represents one of the most widely disseminated hallucinogens, its use as a narcotic, except in localized parts of Asia, seems to be relatively recent. As early as 5,000 years ago, Shen Nung, recommending hemp as a medicine, recognized its narcotic properties. One of its Chinese names meant "liberator of sin," indicating early condemnation of its use as an intoxicant. Eventually, however, its euphoric effects were accepted in China, as evidenced by a later name meaning "delight giver." A fourth-century report asserts that eating hemp causes the user to see spirits, and several hundred years later the Chinese were taking *Cannabis* for "the enjoyment of life."

The barbarian hordes of central Asia who lived west of China knew of the intoxicating properties of hemp. It was undoubtedly these nomadic tribes that spread the narcotic use of the plant. Among these people were the Scythians, who wandered widely in central Asia and southeast Europe, from the Altai Mountains to the Black Sea. There is evidence that they had a profound cultural influence on early Greece and eastern Europe.

Five hundred years before Christ, Herodotus described the Scythian use of *Cannabis:* "They make a booth by fixing in the ground three sticks inclined towards one another, and stretching around them woollen felts which they arrange so as to fit as close as possible: inside the booth a dish is placed upon the ground into which they put a number of red hot stones and then add some hemp seed. . .immediately it smokes, and gives out such a vapour as no Grecian vapour-bath can exceed; the Scyths, delighted, shout for joy. . . ."

Recent archeological finds in the Altai Mountains have validated this curious report. Frozen Scythian tombs dated 500 to 300 B.C. have yielded a miniature, tripodlike tent over a copper censer--a contrivance for the inhalation of *Cannabis* vapors. Hempen clothing and the remains of *Cannabis* achenes were also found at the site.

All classes of Hindus now consume *Cannabis* in such preparations as bhang, a decoction made from powdered hemp fermented in milk or water, and ganja, the form in which it is usually smoked. But the plant may not have been widely used as a narcotic until a relatively late date in India. Indian society, as can be adduced from oral folklore, often condemned the secular use of hemp. There are references stating that one's learning is diminished with the use of *Cannabis* and that he who smokes ganja forgets even his own father's name.

Hemp was one of the most sacred plants in India.

61-801 O - 77 - 39

Knowledge of its psychoactive effects seem to go far back in history, as suggested by the deep mythological and spiritual beliefs about the plant. In ancient India, bhang was so sacred that it was reputed to deter evil, bring luck, and cleanse the user of sin. Harm and disaster visited those who trod upon the holy leaves of the hemp plant, and the most sacred oaths were taken on the hemp leaf.

The favorite drink of Indra, god of the firmament, was prepared from *Cannabis*. The Hindu god Siva taught that the word *bhungi* must be chanted prayerfully over and over at the time of sowing, weeding, watering, and harvesting the holy plant.

Thirty-five hundred years ago, the *Rig Veda* extolled the spiritual use of the narcotic god-plant soma, the identity of which has remained a deep mystery until recently. There was some suspicion that soma could be *Cannabis*, but recent studies by R. Gordon Wasson have identified it as the hallucinogenic mushroom *Amanita muscaria*.

Folklore holds that during the reign of Khusru (A.D. 531-79) the narcotic use of hemp was introduced to Persia by a pilgrim from India.The Assyrians, however, did employ hemp as an incense in the first millennium B.C., an indication that they may have used the drug for intoxication.

Knowledge and use of the inebriating properties eventually spread across Asia Minor. One of the enigmas of historical botany in this part of the world lies in the apparent absence of any direct mention of *Cannabis* or its products in the Bible. There are, however, several obscure passages in the Old Testament that have been interpreted as possible references to the intoxicating effects of hashish, the pressed, pure resin from the flowering tops of female plants.

Although at first prohibited among Islamic peoples, hashish spread widely. In 1378, the Emir Soudaun Sheikhouni tried to extirpate the plant from Arabian territory and imposed harsh punishments for the eating of hemp, but his efforts were in vain. As early as 1271, the use of hashish was so well known that Marco Polo described its consumption among the secret order of Hashashins, who used the narcotic to experience the rewards in store for them in the afterlife. Under the leadership of Hasan-Ibn-Sabbah, a Persian nobleman, this group of fanatics was dedicated--even to the point of committing murder--to the spread of an agnostic religious philosophy. Some philologists believe that the word *assassin* came into European languages from the Arabic *hashashin*, "eaters of hashish."

Although *Cannabis* was recommended as a medicine in classical Greece and Rome, its purposeful use as an intoxicant was apparently rare. By the first century A.D., however, the Romans customarily ate cakes containing hemp, which, according to Galen, were taken to promote hilarity but which, in excess, produced torpor.

Cannabis extended widely into Africa, partly under the pressures of Islamic influence. But the use of hemp far transcends Mohammedan areas and is found in primitive native cultures in such ingrained social and religious contexts that its arrival clearly predated that of Islam. In the Zambezi Valley, for example, there was an ancient tribal ceremony in which the participants inhaled the vapors from a pile of smoldering hemp; later, reed tubes and a variety of pipes were used, and the plant material was burned on an altar. The Kasai tribes of the Congo have revived the Riamba cult, a sect in which hemp, replacing ancient fetishes and symbols, became a god, a protector against physical and spiritual harm. Treaties and business transactions are sealed with puffs of smoke from a yard-long calabash pipe. In many parts of East Africa, especially near Lake Victoria, hemp-smoking and hashish-snuffing cults exist, and the plant is cultivated on a grand scale for its narcotic use. In southern Africa, the Hottentots, Bushmen, and Kaffirs customarily inhale the smoke of *Cannabis*, either burned free on the ground or in special pipes of horn and calabash.

Hemp has spread to many areas of the New World inhabited by large aboriginal groups, but the plant seems not to have penetrated significantly into native American religious life and beliefs. This may be because of the great number of native hallucinogens already firmly established in their magico-religious practices. Sixty years ago, when Mexican laborers introduced the smoking of marijuana, it spread across the south, and by the 1920s it was firmly established in new Orleans. In those early years, its use was confined mainly to the poor, especially to minority groups. The spread of the custom has resulted in a still unresolved controversy, despite the enactment, in 1937, of the Marijuana Tax Act, which made it illegal to grow or possess *C. sativa*.

What lies ahead for the man-hemp association? Certainly, the relationship will continue. There can be no doubt that a plant that has been in partnership with man since the beginnings of agricultural efforts, that has served man in so many ways, and that, under the searchlight of modern chemical study, has yielded many new and interesting compounds will continue to be a part of man's economy. It would be a luxury that we could ill afford if we allowed prejudices, resulting from the abuse of *Cannabis*, to deter scientists from learning as much as possible about this ancient and mysterious plant.

CONTEMPORARY PROBLEMS OF DRUG ABUSE: A NATIONAL SYMPOSIUM FOR LAW AND MEDICAL STUDENTS 787

IV. SUNDAY MORNING

[The panel discussion was preceded by a presentation of the motion picture *Reefer Madness*]

A. Legislative Process and Social Reform: Marihuana Reconsidered

MR. LEVIN: Ladies and gentlemen, the subject of this morning's panel discussion is Legislative Process and Social Reform: Mari-

huana Reconsidered. We are fortunate to have an attorney who is one of Philadelphia's foremost defense lawyers in drug abuse cases and is counsel to the Governor of Pennsylvania's Council on Drug and Alcohol Abuse to preside over this panel. It is my pleasure to introduce Mr. Richard Atkins.

MR. RICHARD ATKINS: We are going to examine the legislative process and the changes in medical, legal, and political thought that led to the development of the marihuana and other associated laws.

I think it is appropriate, before I introduce our first speaker, to give you an example to show that the movie we just saw was typical of the mid and late 1930's. An article entitled, *Marihuana, Assassin of Youth,* by Harry J. Anslinger, the U.S. Commissioner of Narcotics, appeared in the February 1938 edition of *Reader's Digest.* In the article, Mr. Anslinger described all the people who had killed their mothers, fathers and others while under the influence of marihuana; the mother who complained about her daughter's death as a result of marihuana addiction; and how people will crawl on the floor and bark like a dog, etc., all as a result of marihuana use.

Even more unbelievable was a book from the late 1930's called *On the Trail of Marihuana, the Weed of Madness* by Earle and Robert Rowell, two opponents of liquor and cigarettes, who had, at that time, turned their attention to marihuana. They published what was then considered by many to be the latest authority on marihuana. In the book, they said:

> We now know that marihuana (1) destroys the will-power, making a jellyfish of the user — he cannot say no; (2) eliminates the line between right and wrong and substitutes one's own worst desires or the base suggestions of others as the standard of right. Above all, it leads to crime and fills the victim with an irrepressible urge to violence. It incites him to revolting immorality, including rape and murder, and finally it causes insanity as a speciality.
>
> We saw that the subject in the earlier stages of marihuana use could be compared to a coiled rattlesnake, something that may turn dangerous in a split second. In the latter stages, he is completely a madman on the loose. Actually, he is temporarily insane. Although there are no real brain lesions as in insanity, there is an artificial insanity which in all other characteristics resembles the manifestations of genuine insanity. The marihuana addict may run amuck and wreak havoc. There is absolutely no predicting the results but of one thing you can be sure: He is not a safe person to be near under such a condition.

In another section they said:

> 'Kill, kill,' cries the native of Malay as he dashes down the street with a dagger in his hands, maddened by hashish. Under its influence, the crazed user develops the urge to kill just for the sake of killing. Destruction is the keynote and homicide the polestar guiding him in his maniacal acts. There is born a sadistic lust to kill for murder's own sake. Marihuana is rightly called the killer drug.

That was the attitude in the mid 1930's. We will try to trace all of the types of influences that went into the laws — the influences of the physicians, the medical societies, the lawyers, the legal societies, and politics.

I think it is very appropriate for us to start with Dr. Lester Grinspoon. Dr. Grinspoon is considered by many to be the foremost medical authority on marihuana in the United States. He is the author of *Marihuana Reconsidered* and is an Associate Professor of Psychiatry at Harvard Medical School. I think that he certainly needs no further introduction.

DR. LESTER GRINSPOON: Thank you, Dick. I think the program committee has done somewhat of an injustice putting us on after *Reefer Madness*. That makes it more difficult to present a dull, tedious, serious paper on the subject, but I beg your indulgence.

There now appears to be little doubt that among the commonly used psychoactive drugs, the amphetamines have a formidable potential for harm, psychological, physical and social. It is clear that while they may be used, particularly in small doses over limited periods of time, without creating dependency, their use imposes the risk of severe dependency on many, and outright addiction on some. Animal data indicates that their chronic high-dose use may lead to cell damage in several organs, including the brain. In humans, chronic high-dose use often leads to short- and sometimes long-term psychoses. Even brief episodic exposure to moderate to high doses involves a significant degree of risk with respect to some physical disorders (*e.g.* cerebral hemorrhage) and psychoses. Furthermore, while it has not been conclusively established, there is a high degree of suspicion that prolonged high-dose use may lead, in some, to a global deterioration of mental functioning. There is, however, no doubt that the amphetamine abuser is more likely to become involved in destructive, often violent and impulsive, antisocial behavior.

There is a curious, albeit not perfect, mirror image relationship between some aspects of cannabis and the amphetamines. Marihuana is not an addicting drug, and there are no serious sequelae upon cessation of chronic use; speed is addicting, and there is a withdrawal

syndrome which often includes severe depression. While there is no convincing evidence that cannabis damages tissue, amphetamines appear to have that capacity; while there are no well documented cases of death from marihuana, it is becoming increasingly clear that speed can indeed kill. Pot is not criminogenic and, in fact, being high on this drug probably diminishes the likelihood that a person may become engaged in violence and crime; just the opposite is the case with amphetamines. Cannabis in very large (usually ingested) doses is capable of producing toxic psychoses and in smaller smoked doses may rarely precipitate functional psychoses in individuals who are already vulnerable to psychoses, that is, people whose psychosis might be precipitated by such events as an alcoholic debauch, an automobile accident, a surgical procedure, or a severe loss. It has been demonstrated that a psychosis which is all but indistinguishable from a schizophrenic reaction can be induced with amphetamines in "normal" subjects in the laboratory and paranoid reactions are not uncommon among speed freaks on the street. Speed quite clearly leads to the use of other psychoactive drugs; cannabis does not.

This is not to say that cannabis is a harmless drug; quite obviously it is not. Some people experience adverse reactions and some of the factors which seem to play a part in that are individual susceptibility, dose (particularly high doses of ingested cannabis), and unfavorable set and settings. However, the risk involved in using marihuana, excluding those which derive from its legal status, are of a different magnitude from those which arise from the psychopharmacologic properties of amphetamines. In fact, the widely believed, largely mythological dangers of cannabis comprise a shoe which more nearly fits the amphetamines. Yet, the astonishing fact is that there has been an enormous concern and near hysterical outcry over the use of marihuana, while attitudes — public, governmental and medical — toward the use of amphetamines have generally ranged from actual enthusiasm to complacency and, only recently, some degree of concern.

To attempt to understand how attitudes toward these two classes of psychoactive agents became so divergent and so divorced from their actual relative potentials for harm, it may be instructive to review some aspects of what may be referred to as the social histories of these two drugs. Cannabis has an ancient history as a medicinal agent; its first recorded use is to be found in the *Herbal,* an ancient equivalent of the United States *Pharmacopoeia,* written about 400 to 500 B.C. (It is often, and probably erroneously, dated at 2737 B.C.). But its entry into Western medicine occurred in 1839 when W. B. O'Shaughnessy, a 30-year-old assistant surgeon and professor of chemistry in the

Medical College of Calcutta, reported on his experiments in treating patients with rabies, rheumatism, epilepsy, and tetanus with tincture of hemp. He found it to be an effective analgesic and to have impressive anticonvulsant and muscle relaxing properties. Stimulated by O'Shaughnessy's report, a number of Western physicians proceeded to explore the clinical possibilities of cannabis, and, within the next few decades, scores of papers on the medical usefulness of cannabis were to be found in the medical literature. Before long, it was fairly widely used in the United States in the treatment of a variety of ailments, many of which were symptomatically benefited, particularly by its analgesic and soporific effects. Several major limitations on its usefulness were imposed by the facts that it was not soluble in water and, therefore, could not be given parenterally, and that cannabis indica (the alcoholic tincture of cannabis, the form in which it was dispensed as a medicine) was notoriously unstable and, physicians therefore, could never be certain of dosage. Its uses as an analgesic began to be superseded by the opiates which were being used increasingly in the United States in the second half of the 19th century. When the hypodermic syringe was introduced from England in 1856 that use was accelerated, for the water-soluble opiates could be conveniently administered parenterally with predictable and rapid relief of pain. In fact, their use for the relief of pain became so widespread during the Civil War that opiate addiction became known as the "soldier's disease." With the development of synthetic analgesics such as aspirin, and synthetic hynotics such as chloral hydrate and barbiturates, physicians lost interest in cannabis indica for its analgesic and hypnotic properties, for it was far less stable and, primarily for that reason, less reliable than the synthetics. Thus, in the early decades of the 20th century its use as a medicine declined rapidly and its death knell was sounded with the passage of the 1937 Marihuana Tax Act.[29]

Curiously, during the heyday of its use, in America, as a medicine, there was only a very narrow appreciation of the fact that cannabis could be used as an intoxicant. Those who were aware of this property were largely intellectual and literary-minded readers of those writers of the French Romantic movement who together comprised the mid-nineteenth century Le Club des Haschischins. The two most important, where cannabis is concerned, were Theophile Gautier and Charles Baudelaire. Their effusive accounts were very influential, even though Gautier was describing the toxic psychosis induced by the very large doses of hashish he ingested, and even though there is considerable question as to whether what Baudelaire wrote about

29. Act of Aug. 2, 1937, ch. 553, 50 Stat. 551.

as hashish experiences were not, in fact, more truly Thomas De Quincey influenced accounts of the effects of chronic use of laudanum (a mixture of opium and alcohol) on his very fertile and highly imaginative mind. The American counterpart to these authors was Fitz Hugh Ludlow, whose book *The Hasheesh Eater: Being Passages from the Life of a Pythagorean* was published in 1857. While, as with Baudelaire, there is some question as to how uncontaminated with De Quincey the descriptions provided by Ludlow are, there can be no doubt, that his book was a success and excited the interest of intellectuals although apparently not to the point where large numbers of them were turning on with cannabis. One way in which Ludlow differed from his European colleagues was that while they generally used hashish as the source of the drug, his was generally obtained from his "friendly apothecary" in the form of "Tilden's Extract" or some other brand of cannabis indica.

The writings of Fitz Hugh Ludlow were distinctive in that they provided one of the few connections in the American public mind (and a narrow segment of it at that) between cannabis the medicine and cannabis the intoxicant. Furthermore, to the extent that general knowledge of the relationship between the medicine and the euphoriant existed at all, it had all but vanished during the half century that passed before cannabis in a different form (what we now know as marihuana, grass, dope, pot — the dried leaves and flowering tops of the Cannabis sativa plant) began to come into this country from below the southern border.

A good deal of mystery surrounds the story of the "reefer's" debut in the United States. It is generally assumed that in the early decades of this century the custom of smoking the weed in cigarette form traveled with groups of itinerant Mexican workers across the Texas border into the southwestern and southern states. In 1910 the reefer began attracting some slight attention in New Orleans. By 1926, according to R. P. Walton, who studies the problem "on location," the city was wet with the habit. Supplies of marihuana came occasionally from Texas and more often by boat from Havana, Tampico, and Vera Cruz. Using New Orleans as a distributing center for the intoxicant, enterprising sailors became traffickers. The dried plant leaves were shipped from New Orleans up the Mississippi to various river ports and thence cross-country to large cities. It is said that by 1930 there was not one major American city which did not have a few marihuana smokers among its ranks.

In its early American years the reefer did not cause a great deal of consternation. However, as it became more popular among Mexican-

Americans and a favorite of Blacks, particularly jazz musicians in urban centers, and awareness of this use among these minority groups became more widespread, marihuana use began to arouse concern. In Louisiana, the *New Orleans Item* pointed a critical finger at the "moota" and hostilely claimed that the habit seemed to be most widespread among groups of foreign extraction. Clearly, the early fury aroused by marihuana can largely be attributed to the fact that it was introduced by Spanish speaking people and Blacks and that it was, therefore, considered an alien and un-American drug which was a particularly dangerous and degenerate intoxicant. Reflections of this increasingly widespread attitude were occasionally to be found even in the medical literature. In 1931, the *New Orleans Medical and Surgical Journal* stated that:

> The debasing and baneful influence of hashish and opium is not restricted to individuals but has manifested itself in nations and races as well. The dominant race and most enlightened countries are alcoholic, whilst the races and nations addicted to hemp and opium, some of which once attained to heights of culture and civilization have deteriorated both mentally and physically.

In 1930, less than 2 years before the Benzedrine inhaler first became available to the public, the Federal Bureau of Narcotics was founded. The bureau under the leadership of its first director, H. J. Anslinger, undertook an "educational program" which must be some sort of landmark for its success in converting the general lack of concern with and ignorance about marihuana to widespread alarm and misinformation. In the year of the bureau's founding, only 16 states had laws prohibiting the use of marihuana. By 1937, the year it succeeded in getting the congress to adopt the Marihuana Tax Act,[30] nearly every state had adopted legislation outlawing marihuana. The lay press, with the help of the bureau, contributed to the campaign with its frequent publication of alarmist stories of violent behavior, usually of a sexual nature, which they asserted all but invariably resulted from use of the weed. By 1950 the bureau, which had theretofore denied that the use of marihuana led to the use of opiates, embraced the so-called "stepping-stone hypothesis" which was to become the major argument against liberalization of the marihuana laws. A number of articles appeared in the early 1950's in support of that contention. The authors of the articles offered no supporting data; apparently they realized that the mass media audience had been sufficiently propagandized to accept the "stepping stone" theory as self-

30. *Id.*

evident. Had they presented what little data was available — for example, the rise in cannabis use was simultaneous with a leveling off or even a declining rate of opiate addiction over the preceding twenty years — they would have done little to support their claims.

At about the same time the American Medical Association was undergoing a remarkable shift in attitude toward cannabis. Prior to the passage of the 1937 Marihuana Tax Act, the American medical establishment had been quite interested in, and knowledgeable about, cannabis as a medicine, and had been sensible about its capacity for abuse. The change in attitude was symbolized by the fact that the only seriously dissident voice heard during the hearings before the House Ways and Means Committee which preceded passage of the act was that of Dr. W. C. Woodward, Legislative Counsel for the American Medical Association. While he acknowledged a limited medical use for cannabis, he attempted to persuade the congressmen to initiate less restrictive legislation because of the possibility "that future investigators may show that there are substantial uses for cannabis." Dr. Woodward then went on to attack the evidence proffered by the Treasury Department on the "marihuana problem," particularly the claim that it was addicting, that it led to crime, and that its use was widespread among children. With the completion of his initial statement, the committee began questioning Dr. Woodward in a most hostile fashion concerning his educational background, his relationship to the American Medical Association, and his views on the medical legislation of the previous 15 years. Mr. Dingell chided Dr. Woodward: "The medical profession should be doing its utmost to aid in the suppression of this curse that is eating the very vitals of the Nation . . . . Are you not simply piqued because you were not consulted in the drafting of the bill?" Dr. Woodward was told that he was trying to throw obstacles in the federal government's way and, of course, none of his testimony was harkened to.

The House hearings were concluded without any substantial changes in the proposed bill, and the Senate hearings were conducted in a similar way. The bill became law on October 1, 1937, and, in its wake, many state laws, just as punitive and hastily conceived, were legislated. While its clinical use was already declining somewhat in the earlier part of this century, primarily because of the introduction of synthetic hypnotics and analgesics, the difficulties imposed on its use by the Tax Act completed the medical demise of cannabis, and it was removed from the *United States Pharmacopoeia* and *National Formulary* in 1941. While, as previously mentioned, there had never been much of a public consciousness of the relationship between can-

nabis the medicine and marihuana the weed-like intoxicant that Blacks and Spanish-speaking people used, the dropping of cannabis from the listings of legitimate medicines set the stage for the ignorance of doctors and for the change in their attitudes toward cannabis over the next 30 years. In protesting the impending 1937 Marihuana Tax Act legislation, members of the Committee of Legislative Activities of the American Medical Association, wrote "Cannabis at the present time is slightly used for medicinal purposes, but it would seem worthwhile to maintain its status as a medicinal agent for such purposes as it now has. There is a possibility that a restudy of the drug by modern means may show other advantages to be derived from its medicinal use." Thirty years later a *Journal of the American Medical Association* position paper, written by men who have apparently had little, if any, experience with the use of cannabis drugs and apparently as little familiarity with the medical literature asserted: "Cannabis (marihuana) *has no known use in medical practice in most countries* of the world, including the United States."

This remarkable transformation of attitude toward cannabis is illustrated in the changing editorial policy of the American Medical Association. In September 1942, the *American Journal of Psychiatry* published a paper by Drs. S. Allentuck and K. M. Bowman entitled *The Psychiatric Aspects of Marihuana Intoxication* in which they asserted, among other things, that habituation to cannabis is not as strong as to tobacco or alcohol. Their report grew out of the studies they had carried out under the auspices of the La Guardia committee. The *Journal of the American Medical Association* subsequently published (in December 1942) a reasoned, informative editorial on their work which was described as "a careful study." In reviewing the major findings of the study, the editorial proceeded to mention some possible therapeutic uses that might be made of the drug's properties. Those mentioned were the treatment of depression, the treatment of loss of appetite, and the possible treatment of addicts to opiate derivatives. However, following the *Journal's* publication of letters from H. J. Anslinger (January 1943) and R. J. Bouquet, Expert on the Narcotics Commission of the League of Nations (April 1944), both of which denounced the La Guardia Report, the American Medical Association made an extraordinary about-face and joined the Federal Bureau of Narcotics in the denunciation of the report. The switch was heralded by an editorial which appeared in the *Journal of the American Medical Association* in April 1945:

> For many years medical scientists have considered cannabis a dangerous drug. Nevertheless, a book called "Marihuana Prob-

> lems" by the New York City Mayor's Committee on Marihuana submits an analysis by seventeen doctors of tests on 77 prisoners and, on this narrow and thoroughly unscientific foundation, draws sweeping and inadequate conclusions which minimize the harmfulness of marihuana. Already the book has done harm. . . . The book states unqualifiedly to the public that the use of this narcotic does not lead to physical, mental or moral degeneration and that permanent deleterious effects from its continued use were not observed on 77 prisoners. This statement has already done great damage to the cause of law enforcement. Public officials will do well to disregard this unscientific, uncritical study, and continue to regard marihuana as a menace wherever it is purveyed.

With this editorial the *Journal of the American Medical Association,* in the words of A. S. deRopp,

> abandoned its customary restraint and voiced its editorial wrath in scolding tones. So fierce was the editorial that one might suppose that the learned members of the mayor's committee . . . had formed some unhallowed league with the "tea-pad" proprietors to undermine the city's health by deliberately misrepresenting the facts about marihuana.

Over the past 25 years the American Medical Association has been steadfast in maintaining a position on marihuana closely allied to that of the Federal Bureau of Narcotics. A great deal of misinformation and fear-generating mythology has come to surround this drug, and, judging by the published statements of the Council on Mental Health of the American Medical Association, the medical community has been both a victim and an agent of this unfortunate process. This position is reflected in the editorial policy of the *Journal of the American Medical Association* which apparently "disregards" as "unscientific" and "uncritical" any study that does not demonstrate marihuana to be "a menace wherever it is purveyed." Thus the *Journal* has over recent years, with respect to cannabis, departed from the policy of accepting papers solely on the basis of criteria of medical importance and scientific soundness; clearly it has consistently accepted papers, one which from a scientific point of view have been of questionable worth but which tend to confirm the American Medical Association's view of marihuana as a great menace, and rejected those, regardless of scientific merit, which presented data and results which contradicted this view.

Thus the medical establishment's view of cannabis has over the course of little more than a century come full turn. The same drug that had excited physicians' interest in 1839 and become a respected

and much used therapeutic tool during the remaining decades of the 19th century had increasingly, from the 1940's on, come to be regarded by American medicine with the same bias, fear and ignorance as by the Federal Bureau of Narcotics. By the 1960's the American Medical Association had completely denied the medical heritage and potential of cannabis and its only interest in it appeared to be in providing quasi-scientific underpinnings to some of the now widely held myths.

Amphetamine, on the other hand, came into being as a medicine and has for most of its short history enjoyed the unequivocal enthusiasm of the pharmaceutical industry and the medical profession. Only in the past several years has the medical establishment begun to be concerned about the consequences of its romance with the amphetamines. Let us briefly review the history of this class of psychoactive agents in the United States.

In 1887, the German pharmacologist, L. Edeleano, first synthesized the drug which would eventually become famous as "Benzedrine," but he was uninterested in exploring its pharmacological properties and put this extraordinary stimulant back on the shelf. Not until 1910, did G. Barger and Sir H. H. Dale investigate the effects on experimental animals of this and a series of closely related chemical compounds, which they called "sympathomimetic amines." However, no one in America or England grasped the implications of their findings for another 17 years, when Gordon Alles who was looking for a synthetic amine substitute for epherdrine concluded that the most effective such substitute was the original amphetamine synthesized by Edeleano. Because of his willingness to use himself as a human guinea pig, Alles not only discovered, very quickly, that amphetamine was active whether inhaled or taken orally, but also found that "Benzedrine" was surpassed by its dextro isomer (later known as Dexedrine) in its ability to alleviate fatigue, increase or intensify his alertness, and make him feel euphorically confident even when it kept him awake long into the night.

When F. P. Nabenhauer, the chief chemist at the drug house of Smith, Kline & French, found out about Alles' work he began to experiment with various commercial applications of amphetamine in conjunction with his firm's patented inhaling device. Realizing what a potential bonanza this "new" class of synthetic "ephedrine substitute" represented, the executives at Smith, Kline & French persuaded Alles to sell them all his patent rights, and in 1932 their "Benzedrine" inhaler was first made available to the public by non-prescription, over-the-counter sale in drug stores across the country. The American Medical Association issued a mild parenthetical warning note in which

it cautioned that "continued over-dosage" might cause "restlessness and sleeplessness," but, at the same time, assured physicians that "no serious reactions have been observed." In late 1937, the American Medical Association approved the new drug in tablet form, recognizing it as an acceptable therapeutic medication for the treatment of narcolepsy and postencephalitic parkinsonism. The American Medical Association further stated that "Benzedrine" was "useful" in the treatment of "certain depressive psychopathic conditions," and even that persons "under the strict supervision of a physician" could take amphetamine in order to capture "a sense of increased energy or capacity for work, or a feeling of exhilaration."

Complementing the enthusiastic over-prescribing of amphetamines by physicians is the fact that since the 1930's there have been ways in which the public could procure these euphoriants with little or no assistance or interference from organized medicine, the Food and Drug Administration, or any state or federal drug abuse control authorities. First, of course, there were the inhalers. Although Smith, Kline & French held the patent on the "Benzedrine" inhaler until 1950, other drug companies quickly realized that they could sell their own imitations without fear of patent-infringement suit, because "Benzedrine" was only one of an almost unlimited variety of equally stimulating, euphorigenic, and toxic amphetamine congeners. By the end of World War II, there were at least seven different inhalers on the market containing large amounts of these drugs, and all of them could be purchased at drug or grocery stores without a prescription. All of these products were very easy to break open, and the number of different techniques of ingestion was limited only by the ingenuity of the abusers. Although dissolving the fillers in alcohol or coffee produced the desired effects, a much stronger kick could be obtained by chewing these bits of cotton, or simply swallowing them whole.

While the inhalers introduced millions of young people to the amphetamines, most users found that it was just as easy to procure the pills. In the first three years after "Benzedrine" was introduced in tablet form, sales rose to over 50 million units. The outbreak of World War II gave perhaps the greatest impetus to date to both the legal, medically authorized use and the illegal, black market abuse of these drugs. When German Panzer troops invaded Poland, obliterated Warsaw, and turned west to rush through Belgium and France, they were taking large doses of methamphetamine to eliminate fatigue and maintain physical endurance. But the German Army was by no means the only large-scale consumer of amphetamines during World

War II; Japanese warriors and factory workers used as much or more. Nor was use of these stimulants limited to the Axis powers. According to British war statistics, 72 million standard dose amphetamine tablets were distributed to the British Armed Forces alone. Although the United States Armed Forces did not authorize the issue of amphetamines on a regular basis until the Korean "conflict," "Benzedrine" was used extensively by Army Air Corps personnel stationed in England, and it was an open secret that many pilots were engaged in a mammoth bootlegging operation. Amphetamines were also easily obtainable from military medical officers and aides. If only 10 per cent of the American fighting men ever used amphetamines during this war, over 1.5 million men returned to the country in 1945 with some first-hand knowledge of the effects of these drugs. Indeed, in recent years, the Armed Forces have constituted a veritable breeding ground for the abuse of all kinds of drugs, and especially the amphetamines.

In recent years amphetamine prescriptions have accounted for between 6 to 10 per cent of all prescriptions for *any* drugs, including non-pharmaceuticals like penicillin, and a group of researchers in California have recently reported that at least one out of every five adults *admits* to long-term or habitual use of amphetamines. By 1946, Smith, Kline & French had been so successful in its amphetamine promotion campaign that a paper by W. R. Bett listed 39 generally accepted "clinical uses" for the drug, including treatments of schizophrenia, morphine and codeine addictions, "nicotinism" (tobacco smoking), heart block, head injuries, infantile cerebral palsy, irradiation sickness, and hypotension. Bett, who further recommended the drug for ailments like sea sickness, persisted hiccup, and even "caffeine mania," was only one of a huge number of physicians who regarded amphetamines as "versatile remedies" which were second only to a few other extraordinary drugs like aspirin in terms of the scope, efficacy, and safety of their effects.

Today, even though the Food and Drug Administration officially recognizes only "short-term appetite reduction," narcolepsy, some types of parkinsonism, and certain "behavioral" disorders in hyperkinetic young children as valid "therapeutic indications" for the amphetamines, the federal agency has no real power to limit the drug industry's advertising claims, and amphetamines continue to be prescribed by many physicians for nearly as many different reasons as Bett mentioned.

By 1958 the annual legal United States production of amphetamines had risen to 75,000 pounds, or 3.5 billion tablets — enough to supply every man, woman, and child with about 20 standard (5 mg)

doses. Less than 10 years later, the drug industry *admitted* it was pouring out 160,000 pounds — about 8 billion amphetamine tablets — per year, or enough for 35 to 50 pills for every living American. By 1970 *reported* legal amphetamine production had risen to over 10 billion tablets and in 1971 it rose again to over 12 billion.

While the national media, particularly in the late 1930's and early 1940's, were giving amphetamine a tremendous amount of publicity, even referring to the new drug as "poisonous," this did nothing to discourage use. Quite to the contrary, the numerous references to these "brain," "pep," and "superman" pills in popular press "news" stories and feature articles, even when ostensibly phrased as warnings, acted mainly to arouse the curiosity and interest of the American people. But the most important factor was the quick and amazingly enthusiastic reception accorded these inhalers and pills by the medical profession. The American Medical Association was especially influential in reinforcing the general impression that this was indeed a new wonder drug.

Public attitudes toward the amphetamines were initially, and for many years, either positive, neutral, or merely humorous, and the people who used them did not, in the tremendous majority of cases, fit into any traditional stereotypes of "dope fiends." As long as the medical community was willing to accept the manufacturers' claims, no one was going to question why in 1932 practically any new psychoactive "medicine" could be marketed without any proof of either safety or efficacy. Nor did the American Medical Association, the Food and Drug Administration, or the Federal Bureau of Narcotics have any legal or sub-legal authority to deny a drug company the right to sell practically any chemical not specifically forbidden by the Harrison Act of 1914.[31] All the Food and Drug Administration could do was recommend appropriate therapeutic indications; it had absolutely no power to limit or warn against consumer purchasing of drugs for which prescriptions were not required. Furthermore, the amphetamines clearly demonstrated the ease with which drug manufacturers could expand claims for their products and advertise their usefulness in an unlimited range of areas. Some drug firms obtained patents for their amphetamine congeners and combinations on the basis of these drugs' alleged "antidepressant" actions, and then expanded their advertising claims to include the "treatment" of conditions as disparate as obesity, alcoholism, enuresis, and so on; others took different tacks, starting from the claim that their product was "uniquely effective" in the treatment of obesity, but employing the same basic tactics.

31. Act of Dec. 17, 1914, ch. 1, 38 Stat. 785.

Thus in the mid 1930's, while marihuana was beginning to be brought to the public's attention through vilification, as a menace capable of wreaking great havoc, amphetamine was introduced and then promoted as perhaps the earliest technology-derived exemplar of better living through chemistry. Marihuana, having long since lost what little public awareness it once had as a medicine, was now identified with Spanish-speaking and black people. In view of the widespread bigotry and the attitudes towards and beliefs about these minority peoples which then existed, the mythology which grew up around marihuana is not surprising. Perhaps through the unconscious process of displacement it became particularly easy for people to believe that the drug of the Blacks and the Spanish-speaking must have something to do with crime, violence, sexual excess, addiction, personality deterioration, amotivation, etc. By the same token, to the extent that this kind of bigotry is still a vital force in the United States today we would expect that it would be difficult, despite the increasingly widespread dissemination of eviden to the contrary, for people to give up these false beliefs; this certainly appears to be the case. On the other hand, there are some facets of amphetamines and their history which may have made it more difficult for people to perceive them as more harmful than they are generally thought to be. They are, after all, products of modern technology and like many other such products this fact, at least until very recently among a growing number of consumer skeptics, lent them a certain degree of legitimacy. Furthermore, whenever one picks up a trade journal in a doctor's office he sees impressive, multicolor advertisements for the many amphetamine congeners. Perhaps most important, the crucial link in the selling of this drug (with respect to "legitimate" distribution) is the physician. The drug companies do not direct their enormous advertising campaigns to the consumer, but, because the various amphetamines are prescription drugs, the doctors are the recipients of countless pieces of promotional mail, medical journals are peppered with advertisements, and there are even outright gifts. When the doctor recommends a drug, he confers on it a great deal of legitimacy — so much so that the psychoactive agents that doctors recommend are medicines, not "drugs." What is more, beyond the fact that he is a physician and, therefore, an expert on drugs, the doctor is a figure in whom people have great trust. A recent public survey conducted by psychologists at the University of Connecticut listed 20 major occupations and asked participants to rate each from the standpoint of truthfulness, competence, and altruism; physicians came out on top with clergymen second.

61-801 O - 77 - 40

(Car salesmen were rated last, just one place behind politicians who were 19th.) To the extent that the doctor has been an unwitting pusher of this drug, he has also been a most trusted one.

Finally, cultural factors also appear to play an important role in the perpetuation of the mirror-image relationship that exists with regard to general views, attitudes, and beliefs about cannabis and amphetamine. Societies and cultures have certain norms for acceptable behavior and performance and tend to sanction, for social use, those drugs whose psychopharmacological properties are in accord with these norms. Cannabis has been accepted for centuries among the Brahmins in India whose cultural background and religious teaching support introspection, meditation, and bodily passivity while eschewing the life of action and individual achievement. Clearly this more introspective, meditative, nonaggressive stereotype associated with marihuana goes against the Western cultural mainstream, perhaps particularly in the United States. The West, with its emphasis on achievement, activity, efficiency, speed, and aggressiveness finds amphetamine much more culturally compatible than cannabis. Beyond this very general way in which the psychopharmacologic properties of amphetamines make it fit so neatly to the fast-moving American culture template, there are some specific societal values and goals whose achievement is commonly thought to be abetted through the use of this drug. Thus, the many Americans who have been propagandized into placing great value on being energetic, confident, vitally dynamic, and very thin are particularly susceptible to the lure of a drug with a grossly unappreciated potential for harm.

MR. ATKINS: Thank you, Dr. Grinspoon. We will now hear from Mr. John Finlator. Mr. Finlator is presently a private consultant on drug abuse problems and the author of a book, *Nark,* which will be published in the fall. That is an appropriate title. Mr. Finlator worked for a number of years with various federal law enforcement agencies, and most recently was the Deputy Director of the Federal Bureau of Narcotics and Dangerous Drugs. I think it would be most appropriate for him to comment on the changing attitude of the Federal Bureau of Narcotics, and possibly on his own changing attitude as an individual concerned with law enforcement.

MR. JOHN FINLATOR: Thank you very much. I was going to tell you about the evils of marihuana but I was preempted by the film. I was going to tell you a little about the Bureau, but I was preempted by Dr. Grinspoon on that. So, I think I will take about sex if it is all right with you.

Mr. Raymond Shafer, who was head of the Marihuana and Drug Abuse Commission, tells a story that he says is true. I do not know if it is, but I would like to pass it along to you. He tells about one nice spring morning at Camp LeJeune when this lady Marine got up — I guess I should now call her a Ms. Marine. It was a beautiful day. She walked out through the woods, through the trees and shrubbery, and saw a little lake. She decided that she would take a bath in the altogether, which she promptly decided to do. She took her clothes off, dropped them on the edge of the water and was playing around like a little mermaid when all of a sudden she heard a strong male voice give a command and all the trees and bushes walked away, leaving just one Marine standing there by her clothes. She started to stand up but quickly got back into the water. She said, "Sir."

"Yes, ma'am."

"Will you get the hell out of here?"

He said, "No, ma'am."

By this time, she knew she was in trouble and so she fished around in the water and finally found a dishpan. She pulled it up, stood up with it in front of her and said, "I'm so mad. Do you know what I am thinking?"

He said, "Yes, ma'am, you think there is a bottom in that dishpan, don't you?"

Seriously, I recommend Dr. Grinspoon's book, *Marihuana Reconsidered* to you. For those of you who have not looked at it, it is the most scholarly work I have read which discusses the medical side of marihuana, and my reading in the area has been considerable. There is a "companion piece" by John Kaplan, Professor of Law at Stanford University, called *Marihuana, the New Prohibition*. From both the legal and the medical points of view, these are two of the most outstanding works I have seen.

Professor Kaplan studied the members of the football team at Stanford University and their drug use. He found that 73 per cent of the football team that beat Ohio State in the Rose Bowl 3 or 4 years ago had used marihuana at one time or another. As a matter of fact, he found there was more marihuana use by members of the first team than by those who sat on the bench, but he did not know what the correlation was between the two.

I talked to Professor Kaplan about that one day and asked, "How in hell did that team ever beat Ohio State University?" He replied, "I do not know, but I suspect that somebody ought to study the drug usage of that particular football team."

Most of you know the problems that the Bureau I at one time represented has had, and the stance that it took. I am not going to discuss that except to say that most of it was born in ignorance. The Bureau did what it did because you let it happen; because the medical profession and the scientific community let it happen. It was a wide open field — they grabbed the ball and ran with it.

We all know the story and history of marihuana, so I will not go into that, but even at the hearings on the Marihuana Tax Act,[32] Congressman Snell asked what the bill was about and Sam Rayburn said that it had something to do with something called marihuana, which he believed was a narcotic of some kind.

At that time, Harry Anslinger had become Commissioner of Narcotics and had already made his stamp on the world. He bulled through the stories about marihuana. You have heard some of them today and I could quote them by the millions. They were not all his fault. As Dr. Musto tells you in his book, the administration itself actually pushed the horrors of marihuana. Harry Anslinger was the man with the charisma, the personality, the ringmaster, the clown. He was the one who could speak, and speak he did; he just overwhelmed the House and the Senate on every bill that considered marihuana and in nice, sweet, docile compliance they did what he said. The scientific world never spoke up, nor did the medical or legal professions with the exception of that poor little guy, Dr. Woodward, of whom Dr. Grinspoon reminded us, who went to Washington and was berated because Harry Anslinger passed the word, "Kill him." That was the kind of man we had running the Bureau at that time.

Marihuana, however, is not really our worst problem. Our worst problem is something that the President's Commission has just told us about — alcohol. Dr. Joel Fort, who is on the program, has a new book called *Alcohol, America's Biggest Drug Problem*. But alcohol does not bother us anymore, although it should. We have settled that one. We have gone through alcohol prohibition and no one really gives a damn about that problem anymore.

The first national legislation to regulate narcotic distribution was the Act of 1909,[33] which was an act that prohibited the importation and use of opium. It was very ineffective. There was no way to enforce it. It just floundered around and nothing happened.

In 1914, we became even more concerned about the narcotic problem and passed the Harrison Act.[34] It provided for fines up to

32. Act of Aug. 2, 1937, ch. 553, 50 Stat. 551.
33. Act of Feb. 9, 1909, ch. 100, 35 Stat. 614.
34. Act of Dec. 17, 1914, ch. 1, 38 Stat. 785.

$2,000 and 5 years in jail, but was unenforceable, although they tried to enforce it with the Narcotic Division, which was in the Prohibition Unit of what was then the IRS.

By 1930, though, we had severed that little unit and created something called the Federal Bureau of Narcotics. That was when the hard push against marihuana began. Actually, the effort was not all at the federal level. At one time 31 states had laws against marihuana before there was any federal law concerning it. Some of the reasons for the drive against marihuana have been explained by Dr. Grinspoon — racial prejudice and the fear that it was addictive. The stories that came out of the Geneva Convention of 1925 had their effects on the states, but it was the Bureau that took up the cudgel and really made marihuana the killer weed. When those words were coming from our federal government they became important; it was out of the mouth of the Great White Father — when he said something, people believed it.

As a matter of fact, close to 80 per cent of the people believe that crap right now. Mr. Nixon knows that and that is why he acts as he does.

The Narcotics Control Act of 1956[35] imposed stronger penalty structures on narcotics and included marihuana within its coverage. Again, there was no opposition from the medical profession, the scientific world, nor the legal profession. It just rolled through.

Then in the 1960's, marihuana became the thing. The Bureau still fought hard against it, but something else happened — the law enforcement bureau of the Food and Drug Administration, HEW, called the Bureau of Drug Abuse Control (BDAC), of which I was named director was established. We took a rather soft line on marihuana. We did not think that it was that bad, and we realized that there were many other things that were much worse. That position got me into a lot of trouble. However, in 1968, we amalgamated the old FBN and BDAC and put them into the President's Bureau of Narcotics and Dangerous Drugs. The "merger" resulted in a change of attitude. In one of the bureaus we had a chief medical officer, we had a staff of pharmacologists and scientists. They had an effect upon the new Bureau, so by the time we got past the Controlled Substances Act of 1970,[36] the Bureau itself had proposed lessening the penalties on first-time marihuana offenses. That was not enough for many people but the proposal did come from a law enforcement bureau — something they would have considered strange had they considered it.

35. Narcotics Control Act of 1956, ch. 629, 70 Stat. 567.
36. 21 U.S.C. § 801 (1970).

So, today we see that the Bureau has changed to the extent that it spends very little time or manpower on the marihuana problem. The Bureau is still officially against it and the laws are still against it, but a real metamorphosis has taken place. That is where we are today, sir.

MR. ATKINS: Thank you. Since we are running behind in time, I will quickly introduce our next speaker, Mr. Keith Stroup, an attorney. Some of you may have read a feature article on him several weeks ago in *The New York Times Magazine*. He is the founder and now the Executive Director of the National Organization for the Reform of Marihuana Laws (NORML). Keith will give us a few comments on some of the legal changes in, and some of the political influence on, the marihuana laws.

MR. R. KEITH STROUP: Thank you.

It is important to understand that the marihuana issue is not, in fact, a smoker's issue. At NORML we spend a lot of time trying to impress that on people. The fact is that people in this country now smoke marihuana in great numbers as a matter of personal choice. We, in the panel today, have pretty well established that the laws are wrong. They originated in prejudice and ignorance, but we still have them, and they exist on the federal level. There are 26 million Americans who have smoked marihuana at least once and there are 13 million who consider themselves regular smokers. That means that 16 per cent of the adult population in this country break the law. Sixty-seven per cent of all college students have smoked marihuana — that is two out of three. There are 280,000 retail "dealers" in this country, all of whom are outlaws. They import approximately 4 tons of marihuana everyday. An estimated 13 per cent of it is confiscated and 87 per cent gets through to the consumer.

It is estimated that there were 226,000 marihuana-related arrests in this country last year, over a quarter of a million, and yet, we hear the police tell us confidently (and as was just indicated, at least, at the federal level) that the emphasis is no longer on marihuana. The police often tell us that they are only after the pusher, not the user, yet the statistics do not back that up. Of those 226,000 arrests, most of which were on a state level, 93 per cent were for possession and use, while only 7 per cent were for sale. Of those arrests that were for possession and use, two thirds were for possession of less than 1 ounce — hardly what I would consider a big dealer.

The State of Texas still has a law that permits from 2 years to life in prison for simple possession of even the smallest amount of

marihuana. In Texas right now there are over 700 people locked up for possession and use of marihuana with the average length of sentence 9½ years. If you will think about that, you will agree that it is incredibly shocking. Those people have done nothing that most of you have not done, that I have not done, and that 15 per cent of our adult population does not do now; but they were caught and, more than that, they were caught in the wrong place.

We are trying to get the government to understand that once there is a significant, although minority, portion of your population that is determined to use a drug like marihuana as a recreational drug, and once it has been established that marihuana does not present any significant threat to the society as a whole, or to the individual user, the government's role should be the same as it is with other "legal" drugs — to minimize the potential for abuse. That is really what we should be talking about. The government's role is not to lock up people who differ in their choice of drugs, whether they choose alcohol or marihuana.

As I said, the government's role should be to minimize the potential for abuse and I think that there are two areas in which it can contribute to that. One is the age area. There is no doubt that a lot of people 13, 14, 15 years old, get marihuana and smoke it. Even Dr. Grinspoon and others who have come out strongly in favor of legalizing marihuana agree that that is a potential for hazard that we should not permit. The Canadian Commission, which was the equivalent of our National Commission on Marihuana and Drug Abuse recommended, in its report, the decriminalization of marihuana in Canada and indicated that the only area of concern they had was adolescent use and abuse. It is not that marihuana is particularly harmful to the adolescent who occasionally gets it; it is rather that the adolescent does not necessarily have the maturity to know when or to what extent to use it, and may end up basing his life on marihuana or other drugs and may not develop, as I have heard Dr. Grinspoon say, his coping mechanisms. The only way you can control that sort of problem is through a regulatory system, some form of governmental regulation over the distribution which would require that a person be a certain age, probably 18, before he could get it.

We know the "alcohol age" doesn't work perfectly — most of us managed to get alcohol before we were 18 or 21. However, such regulation does have the effect of creating a policy of social discouragement. Most older Americans do not understand that it is more difficult today for adolescents to get alcohol than it is for them to get marihuana.

The second area in which the government can validly act to curb the potential for abuse is with adulteration. While it may not yet be a major problem — and I hope it does not develop into one — there are indications that some marihuana grown, say in Kansas, may not be very strong and sometimes is adulterated with much more potentially harmful drugs such as the hallucinogens, acid NBA, and strychnine. The person who has decided to smoke marihuana should not have to take the added risk of not knowing what has been added to it. Clearly, the government should realize that it is not in its interest to have a marihuana consumer playing a grabbag game. When you buy marihuana, testing it before you buy by smoking a joint, your decision to buy is, assumedly, based on whether or not you think it is good, whether or not you get high from smoking the joint. The consumer has no way of knowing whether he is getting high from good marihuana, or whether it is weak marihuana that has had LSD added to it. The government must understand that we are only going to be able to control adulteration and will only have any impact on adolescent drug use by having some system of distribution other than the black market.

However, that would mean some form of legalization, and legalization, in the public mind, has numerous bad connotations. It means no control and often means commercialization, although it does not necessarily have to result in either. Legalization does not mean that the cigarette companies will automatically enter the market and make millions of dollars.

The point is that, at this time, we need to minimize the areas in which the potential for abuse is greatest.

I would like, now, to read the end of a statement that I had prepared because I think that it is appropriate.

It would be impossible to read the proposals which President Nixon recently made concerning drugs, including mandatory life sentences, selective use of the death penalty, and a general overall reliance on the deterrent effect of criminal penalties to combat all unwanted drug use without thinking back to the drug legislation passed in the 1930's. In particular, the President's willingness to ignore the many excellent studies which have been made available to him, including the results of the National Commission on Marihuana and Drug Abuse, and to cling to his long-standing reliance on the criminal approach for use and even possession of marihuana, is reminiscent of the 1930's.

If the Congress and the state legislatures were to consider marihuana prohibition today, with no prior history of emotionalism and prejudice, I believe that not a single one would prohibit its use with

criminal sanctions. Most would probably discourage its use, regulate its distribution and sale, control purity to avoid problems of adulteration, and add a tax as a means of raising needed revenues. Those were precisely the recommendations of the new comprehensive report by the Consumers Union in *Licit and Illicit Drugs*.

Today, we seem to be at a social impasse. Everyone is willing to say we were wrong in the 1930's, that we overestimated marihuana's potential for harm, and that we probably legislated out of ignorance. Yet, marihuana prohibition continues out of a general fear that public misinformation and morality are rooted so deeply as to spell political defeat for anyone who would challenge it.

At NORML we perceive our job as principally twofold. On one hand, we spend as much time as possible with legislators and their staffs in an attempt to be sure that they are well informed about marihuana and its potential effects on the user. We want to be sure that whatever stand they take, albeit shaped by the politics of reality, is an informed stand.

On the other hand, a major portion of our work has to do with public re-education. We must demonstrate to the elected officials that significant segments of the population have changed their mind about marihuana prohibition and are now willing to experiment with a non-criminal approach. In a country as big as this, that necessarily requires the involvement of opinion-makers, both individually and institutionally. It is obviously impossible to personally discuss the issues with over 200 million people. We are all busy and all have a myriad of issues fighting for our attention.

For most people, the marihuana laws simply do not merit high enough priority to permit firsthand investigation, so they look for signposts, for indications that they can use to form their personal position. That is where you can be of great help.

As Dr. Grinspoon has excellently documented in his paper and his book, *Marihuana Reconsidered*, the American Medical Association has been particularly at fault in the continuation of an ill-advised drug policy in this country. After its lonely opposition to the earlier legislative efforts, the AMA quickly fell in line, and up to the present time has supported the status quo. It would appear that their interest in the marihuana issue has been limited to the periodic publication of articles purporting to show the harmful effects of its use. Last year, after the governing board of the AMA recommended a policy which would have endorsed the Marihuana Commission's recommendations, the AMA House of Delegates refused to adopt it. They backed off,

opting instead for a statement in vague terms which seemed to approve the use of misdemeanor penalties.

A misdemeanor in this country permits one year in jail and/or a $1,000 fine. If you have any idea of the conditions of our jails and of the natural consequences of spending a year locked up, you will understand that that is no light penalty. Certainly, it is progress, better than life imprisonment, which is still the maximum permissible sentence for possession of marihuana in Texas, but the person who goes to jail in this country, even for a year, may find the truly dangerous drugs more available there than on the street. He will likely be subjected to homosexual attack, and will surely leave his prison experience with considerable alienation and bitterness for the system which unfairly defined him as a criminal. For what reason? What has he done that is so harmful that we cage him like an animal? Who are we helping by making him a criminal? Obviously, we are only exacerbating the situation. So this year at the AMA convention, let us support a resolution endorsing decriminalization. It can be done if you want to make it a big enough issue. The medical evidence is so conclusive and the evils of unnecessarily criminalizing people so obvious that the AMA can no longer refuse to act.

The same applies to the ABA. It appears that 1972 was the first year that the ABA has ever taken a stand of any kind concerning mirahuana prohibition. Since most legislators are lawyers, it is incredible that the bar association has chosen to ignore the issue so long. Despite the recommendations of two separate committees that the ABA endorse decriminalization, the House of Delegates like the AMA, backed off at their convention. Apparently not wanting to appear to be acting in haste, they offered a resolution that condemned excessive penalties but clearly left open the possibility of misdemeanor sanctions. I challenge the law students here to make sure that that does not happen this summer at the next annual ABA meeting.

Let us get decriminalization endorsements this year from both groups. We at NORML are available to work with you, we can help you, we can equip you with the facts to make a convincing argument for the need to decriminalize the personal use of marihuana.

Our government has a policy of discouraging all recreational drug use. That includes alcohol, tobacco, and marihuana. We concur in this policy and we are willing to work hand in hand with the government toward that goal. But the campaign should be honest, it should be factual, and it should avoid the mythology of the 1930's. Most importantly, it should altogether avoid the use of criminal pen-

alties for those who, despite our advice to the contrary, continue to smoke marihuana.

We must continue research into the potential ill effects of long-term marihuana use. If there is anything harmful about marihuana, certainly we smokers want to know. We should warn the consumer of the potential harm, as we now do with cigarettes, but, while we are warning we should stop making criminals out of those who simply ignore our advice.

There is still much debate about how we should handle legal marihuana, whether it should be available through liquor stores, whether private companies should be allowed to sell it, what type of government controls should be imposed, etc. Of course, there is a need for more study in many of these areas, but, in the meantime, let us stop focusing our law enforcement efforts on the users. Twenty-six million Americans have now tried marihuana, including two-thirds of the nation's college students; 13 million use it regularly — it is time we changed the laws.

MR. ATKINS: During the past year or so, I had the opportunity to work with the Pennsylvania Legislature. At first, I was involved with testimony taken before the House committees. The committees started working towards a full revision of the laws about three and a half years ago. I remember some people who, at that time, recommended that marihuana should be legalized, but I also remember getting telephone calls from people, such as one particular woman, who called me and then called the attorney general and said that she thought that the death penalty should be imposed on people who were arrested on marihuana charges. What was most remarkable and frightening was that the woman did not even care if the person had a trial, mere arrest was enough.

Faced with such pressures from all sides, the House first came up with one bill, then the Senate, and then the Conference Committee. There were many proposals that were considered, with the final result that the possession of a "small" amount of marihuana was unanimously declared a misdemeanor with a maximum of 30 days' imprisonment, whether it involved first or second or multiple arrests. That was a significant change from the prior 5 year maximum. The legislators realized that in college and high school settings, most users of marihuana occasionally distribute it to friends or that one person may purchase it one time and another the next. Since that casual delivery, without remuneration, was the equivalent of possession, the 30 day penalty was also applied to possession with intent to deliver a small

amount, and for delivery of a small amount without remuneration. That contrasts with the previous penalty which was 20 years for the first offense and mandatory life for a third offense.

The legislature then considered the quantity that should be considered a "small" amount. It had to be an amount which would be appropriate for the entire state, and while it was felt that in Philadelphia 3 to 6 ounces, or even half a pound might be considered "small," some of the representatives felt that, in other areas of the state, one or two joints would be a small amount. It was finally determined that approximately an ounce would be a proper amount to consider "small" throughout the Commonwealth. Some questioned what would happen if someone unwillingly purchased an ounce and got a gram or so more. The legislature, therefore, declared that instead of 28.375 grams as the limit of a "small" amount, the limit should be set at 30 grams to protect the purchaser. Similarly, when it was determined, after listening to all the evidence, that hashish was approximately three to five times as potent and approximately four times as expensive, a quarter of an ounce was set as the "small" amount limit for it. Instead of setting that limit at 7.205 grams, it was set at 8 grams — again to protect someone who might purchase slightly more than the true "small" amount.

Another area of concern was the position marihuana should occupy on the schedule of controlled drugs. The original bills gave the Drug, Device and Cosmetics Board and the Secretary of Health the power, once a drug was scheduled, to reschedule it from the higher, more tightly controlled schedules or to remove the penalties entirely — remove it from control, based on the scientific and other evidence. The members of the House decided that was inappropriate and the power of removal from complete control was retained by the legislature. The compromise finally reached on all substances was that they can be changed from schedule to schedule by the Secretary and the Board, but that all penalties and all control can be removed only by the Legislature.

Finally, I want to say that if I am asked whether marihuana will ever be legalized in this state or elsewhere, I would say that it will not depend, that much, on chemical and scientific studies as to its harmfulness. It was clear to me that, in 1972, in Pennsylvania, it was public opinion that demanded that marihuana possession be reduced to a misdemeanor. The legislators received a great deal of pressure from their constituents because sons, daughters, and friends were getting involved.

A few years from now, if the Legislature reconsiders, I believe that, even if all the tests show that marihuana is relatively benign and very safe, even in its long-term effect, if the majority of the people, at that time, think that it should not be legalized, it will not be legalized. If, in a few years, there are studies which show that marihuana is very dangerous, but the majority of people are smoking it or are sympathetic to its use, then it will become legal. The legislative process is partly political, partly social, and certainly not all scientific.

B. General Discussion

MR. ATKINS: We now have time for a few questions.

PARTICIPANT: I would like to ask Mr. Stroup what NORML is doing in terms of influencing public opinion, especially with regard to the media.

MR. STROUP: There is a prejudice in the media against legalization because of the control of older people who went through thirty-five years of indoctrination and who are frightened by it. We find that numerous times people are afraid to allow us to present our views because they assume that we are screaming radicals who will wreak havoc on their program. What we try to do to offset that impression is to explain that the issue has very little, if anything, to do with smoking marihuana; it has to do with people's freedom. We are generally finding that there is a second reaction. The media is fascinated by the subject of marihuana and there are times when we have been allowed to explain the process in which we are involved. I think that there are times that the issue may be given more media play than it deserves because of that fascination.

I know it may surprise you, but the truth is that state legislators are not generally ignorant about marihuana. They have staffs, they read books, and they know now that marihuana does not present a significant threat. But is it not an issue like Vietnam and they are not going to make or break their careers over the marihuana law. So, while privately, both in Washington and on the state level, they will assure you that they understand and would be delighted if they could remove criminal penalties altogether, the fact is that until we can demonstrate to them that such a stand will not throw them out of office, most will not have the courage to act. Javits and Hughes, on the federal level, are obvious exceptions.

I suspect that the manner in which public opinion will be best affected is by working through groups like the Jaycees. We have a

group in Dallas, Texas, called Concerned Parents for Marihuana Reform. They represent parents of kids who have been arrested and some still have kids in jail. These are people who are not generally involved in the political system. But, when the suburban housewife goes down and talks to the Governor of Texas about her son who is locked up for 23 years in a Dallas jail, he listens, and much more so than he does to us.

Specifically, the answer to your media question is that we have not been able to bring suit against the FCC because we honestly do not feel that we have a case to make at this point. We did file a protest with the FCC when they covered something Nixon said about marihuana and we wanted equal time. They documented, convincingly to me, that marihuana had been given quite a bit of time on the evening news.

PARTICIPANT: I have a question for Mr. Finlator. Yesterday you spoke to Mr. Sonnenreich about methaqualone, which is becoming the new marihuana in terms of abuse. He said that last Thursday a recommendation to control that substance was submitted to the BNDD. I asked how long he thought that process would take and when the drug would be controlled. He replied that it would take 3 to 6 months. It seems clear that the bureaucracy in Washington is extremely prone to pressures from the pharmaceutical industry. I wonder what the procedure of study is and why it is that when the dangers have been known for at least a year, there is still no pressure being applied to control the use, etc., of the drug.

MR. FINLATOR: The reasons are many. First, the government has to determine that the drug is abused. One cannot say so just because that is read in the news. The point must be proved. Once that is done, then a hearing must be held. The manufacturers can come in and object to any proposal. If they do, then the BNDD has to get the permission or advice of the Secretary of Health, Education and Welfare (HEW), and sometimes it takes time for those two organizations to come to an agreement. When they do, the drug is placed on the schedule. Sometimes they can move pretty fast, and I think that they are going to move pretty fast on this one.

I hate to give you an evasive answer like that but it is a long process. Each step has to be taken before the next one, and very often there are arguments between the scientific side of the government, HEW, and the enforcement side — the Justice Department.

MR. ATKINS: I think there is full agreement on the federal level on methaqualone. The BNDD has just recommended, very strongly, that it be scheduled as a controlled substance.

In Pennsylvania, in January the Drug, Device and Cosmetic Board met and recommended that methaqualone be scheduled as a controlled substance and it looks as though, in Pennsylvania, it may, and probably will be, controlled in the next few weeks. There has been an all-out effort to have the serious potential for abuse of methaqualone recognized.

PARTICIPANT: I have a question for Dr. Grinspoon and Mr. Finlator. In view of what Dr. Grinspoon said about the wisdom of the AMA and what Mr. Finlator said about the rate of motion of most of the federal government, I would like to know what steps they would recommend for the regulation of drugs — how they would evaluate and regulate drugs in a wiser way.

DR. GRINSPOON: That is an enormous question and one, of course, with which we are all struggling. As far as the AMA part of the problem is concerned, I tried to point out how the AMA has been remiss in its approach. It strikes me that the AMA has allowed itself to be used as an instrument to provide a kind of quasi-scientific rationale for various attempts at moral hegemony. The literature on masturbation at the turn of this century, when there was a great moral concern about that "evil" practice, indicated that a person who masturbated would shrink his brain, would become demotivated, and would have sexual difficulties. Clearly physicians allowed themselves to be used in a moral issue. Similarly, I think that has happened with regard to marihuana. As I say, there are other motivations for the AMA's approach to such other drugs as amphetamines.

Generally, I would recommend a total ban on the advertising of all drugs as one step towards a more rational approach to the use of drugs. I am concerned that we are providing a kind of drug "education" to everybody in this country which, unfortunately, is a kind of education in which we tell youngsters who watch the television (some surveys indicate that children watch television more hours than they go to school) and see pills go into a little plastic man, that their problems, whatever they may be, get solved through drugs.

I am interested in control and decriminalization of marihuana, legal availability with control, but I would certainly not allow the tobacco or alcohol industries to become involved. I would rather marihuana simply be not advertised and not promoted.

MR. FINLATOR: I would like to answer your question, if I can, by really avoiding it. I do not want to make it too easy for the government to put things under its control. I think we have too much control already. Let me give you a good example, if I may. Most of you will remember the banana peel bit in 1966 or 1967 when we got stories from the West Coast that you could take a banana peel, scrape it, do certain things with it, and smoke it and, man, you had a real high. The AP and UPI picked the story up, and it went all over the nation. I was head of the Bureau of Drug Abuse at the time. We bought 30 pounds of bananas, brought them into the laboratory, cooked them, steamed them, and smoked them. We did everything we could to those things for about 60 days, trying to arrive at a real conclusion. When we finally came to the real conclusion, the put-on was all over. We put out a nice press release which nobody picked up.

I think it should remain difficult to put drugs under control and I hope it will remain that way.

MR. ATKINS: We are beyond our time and I think this is a good place for us to conclude. Thank you, very much.

THE EVOLUTION OF FEDERAL DRUG CONTROL LEGISLATION†

5. Import and Export Penalties
D. Interrelationships Between Penalty Provisions

CONCLUSION

The federal government entered the field of drug control in response to the growing incidence of addiction in the United States at the turn of the 20th century. The reasons for the increased number of addicts are not hard to find. First, morphine was freely dispensed to the wounded during the Civil War. It was estimated at the time that thousands of veterans were becoming addicted to the drug,[1] and after the war began to pass on the "pleasures" of morphine to friends and relatives. Second, opium smoking was quite popular among Chinese immigrants imported to help build the American railroads.[2] As they settled in the Western states, the practice began to spread beyond their ranks.[3] Third, in 1898 heroin was introduced to the medical world as the cure for morphine addiction.[4] Far from being a cure, however, heroin was soon found to cause even greater problems of addiction. Fourth and most important, opium and cocaine were common ingredients in various patented medicines and sodas which were marketed widely throughout the country prior to the early 1900's.[5]

The actual number of addicts at the turn of the century is a subject of debate. The first reported attempt to determine the extent of drug addiction in the United States was undertaken in 1878 by O. Marshall. In a report entitled "The Opium Habit in Michigan," Marshall estimated that there were 7,763 drug addicts in the state.[6] Six years later, J. M. Hull estimated that there were 5,732 addicts in Iowa.[7] If these figures reflected a national pattern, there were approximately 180,000 to 250,000 addicts in the country at that time. A Vermont study in 1900 indicated that approximately 3,300,000 doses of opium were sold monthly, enough to supply each Vermont adult, with 1½ doses per day.[8]

Early studies in the twentieth century showed no appreciable decrease in addiction. In 1913, Dr. Charles Perry conducted an exhaustive study of

drug addiction in Jacksonville, Florida. His report indicated that 541 persons, or .81 percent, of the city's population used opium in one form or another.[9] If Perry's sample in Jacksonville was representative of the rest of the country, there would have been approximately 782,118 addicts in the country in 1913—a staggering figure to say the least. Perhaps the most comprehensive early study, however—that done in 1924 for the United States Public Health Service by Laurence Kolb and A.G. Du Metz—estimated that the addict population of the United States "never exceeded 246,000."[10]

Although these various reports disagreed on the actual number of addicts, they all seemed to agree on one point—drug addiction was a widespread phenomenon in the United States. This fact soon became apparent to the Congress and led to the passage of Federal laws aimed at controlling the drug problem.

In order to trace the development of Federal drug control legislation this paper will divide the topic into five parts:

> Part I will treat pre-1970 Federal legislation dealing with narcotic drugs;
> Part II will focus on pre-1970 legislation dealing with non-narcotic dangerous drugs, such as barbiturates and amphetamines;
> Part III will discuss the Controlled Dangerous Substances Act of 1970;
> Part IV will outline the structure of the Special Action Office for Drug Abuse Prevention and the Office of Drug Abuse Law Enforcement;
> Part V will present separately an historical treatment of Federal penalties for drug offenses.

PART I—*Federal Regulation of Narcotic Drugs Prior to 1970*

A. Federal Narcotic Legislation to 1922

1. *Opium Tariff Statutes*

The earliest mention of opium (or for that matter, any narcotic drug) in Federal legislation appears in the Tariff Act of 1832.[11] The Act—exempting opium from all import duties—attempted neither to interdict the flow of drugs nor produce substantial revenue. Ten years later in 1842, however, the narcotic was placed on the tariff lists for the first time and a duty of

11. Ch. 227, § 3, 4 Stat. 590 (1832).

seventy-five cents per pound was levied on all imported opium.[12] In 1862, morphine was added to the tariff list and taxed at the rate of two dollars per pound.[13] The tariff rates on medicinal or raw opium and morphine fluctuated throughout the nineteenth century. Raw opium even reappeared on the duty free list in 1890.[14] This use of imported opium as a source of governmental revenue was consistent with the flourishing international opium traffic of the nineteenth century. British traffic in opium had led to the Opium Wars with China and generated a series of diplomatic concessions extorted from the Chinese, concessions which assured continuance of the lucrative opium trade.[15] For example, in an 1858 treaty between China and the United States, China agreed to remove opium from its list of contraband items, permitting American merchants to sell the drug at various Chinese ports.[16] With opium traffic so open and obvious, it was not surprising that the United States government should view opium as nothing more than another imported item to be taxed.

Smoking opium, however, was singled out for special treatment during this earliest period of federal concern. As previously mentioned, smoking opium was first associated with the Chinese immigrant but gradually, as the practice spread, it became a national concern. The response was an eighty per cent ad valorem tax on all imported smoking opium.[17] In succeeding years, it continued to be taxed at ever increasing rates, reflecting the growing fear with which the practice was regarded.[18] The magnitude of the problem is suggested by one commentator who observed that between 1860 and 1913 approximately $27 million in revenue was collected from import duties on smoking opium alone.[19]

2. *Pure Food and Drug Act*

A second and quite different theme in federal narcotic drug control appeared

12. Ch. 270, § 8, 5 Stot. 548 at 558 (1842).
13. Ch. 163, § 5, 12 Stat. 543 at 548 (1862).
14. Ch. 1244, 26 Stat. 567 at 608 (1890).
15. J. FAIRBANK, TRADE AND DIPLOMACY ON THE CHINA COAST: THE OPENING OF THE TREATY PORTS 1842-1854 151 (1953).
16. Convention with China, November 8, 1858. 12 Stat. 1069 (1858). Opium had been considered contraband under an earlier treaty between the United States and China. Treaty with China, July 3, 1844, 8 Stat. 592, 599, 605 (1844).
17. Ch. 163, § 5, 12 Stat. 543 at 548 (1862).
18. From 1864 to 1890 the tax on smoking opium rose from two dollars and fifty cents per pound to twelve dollars per pound. Ch. 171, § 11, 13 Stat. 202 at 212 (1864); ch. 255, Sec. 21, 16 Stat. at 265 (1870); ch. 121, § 2502, 22 Stat. 488 at 495 (1883); ch. 1244, 26 Stat. 567 at 569 (1890). In 1897, however, the tax on smoking opium was reduced to $6 a pound. Ch. 11, 30 Stat. 153 (1897). Note also that, at the time the tax on smoking opium was twelve dollars per pound, raw opium (now called medicinal opium) appeared on the duty free list. *Id.* at 608.
19. W. ELDRIDGE, NARCOTICS AND THE LAW: A CRITIQUE OF THE AMERICAN EXPERIMENT IN NARCOTIC DRUG CONTROL 8 (1961).

on the scene in 1906.[20] It came in response to a growing national concern with the use of patent medicines. These commodities—heavily laced with opium, morphine and cocaine—were widely sold throughout the country and served as familiar preparations for such ailments as headaches, menstrual pains, cold symptoms, alcoholism, and general fatigue. What resulted from the heavy dependence on such patented medicines was a widespread pattern of national addiction. The federal response conceived of the patent medicine problem as one of consumer deception. Thus, to control the trade in these medicines, Congress enacted labelling regulations in 1906, the idea being that an informed consumer could protect himself if he chose to do so.

The Pure Food and Drug Act of 1906 prohibited the interstate shipment of misbranded or adulterated food and drugs.[21] An article of food or drugs was considered to be misbranded if it contained any alcohol, morphine, cocaine, heroin, or any derivatives or preparations of these substances where such ingredients were not clearly marked on the label. Similarly, confectionaries were considered to be adulterated if they contained any narcotic drug as an ingredient. The Act also provided that food would be considered adulterated if it contained any added poisonous or deleterious ingredients which might be injurious to health. By requiring labelling of medicines which contained opium and cocaine, and by prohibiting outright the interstate shipment of food containing deleterious substances, the Act exposed to public view the dangerous and addictive capacities of non-prescription medicines and sodas being marketed in the country. It should be noted, however, that this legislation was entirely consistent with a legitimate domestic traffic in opium, morphine, heroin, and cocaine. Indeed, heroin was sold by one pharmaceutical company under the heroin trade name and widely touted; morphine could be purchased over the counter along with opium or cocaine.[22] While the Pure Food and Drug Act alerted consumers to the presence of narcotic drugs in various products, the sales of these drugs continued to flourish. For example, a 1910 pharmaceutical journal reported that one drug store earned a profit of $60 a day from sales of cocaine alone.[23]

---

20. At one earlier point, the narcotics menace seemed to be viewed as an educational problem by the federal government. In 1886, a law was enacted to include the study of narcotics in the curriculum of federal schools. Ch. 362, 24 Stat. 69 (1886).

21. Ch. 3915, 34 Stat. 768 (1906). Many states had adopted narcotic control laws prior to the federal government. This article does not attempt to study these various state regulations. For a good synopsis of early state drug legislation, *see* U.S. Treasury Department, State Laws Relating to the Control of Narcotic Drugs and the Treatment of Drug Addiction (1931).

22. *See* Cabinet Committee on International Narcotics Control, World Opium Survey 1972, at 2. For an early report of how easily cocaine could be purchased, *see* 75 Am. J. Pharm. 474, 486 (1903).

23. 81 Am. J. Pharm. 35 (1910).

3. *Import and Export Regulations*

In 1909 the federal government shifted from its earlier pattern of taxing opium to outright suppression of the traffic in the drug. In response to the Shanghai Opium Conference in 1909, the United States banned the importation of all smoking opium and restricted the importation of all other opium except for limited amounts authorized by the Secretary of the Treasury for medical purposes.[24] This had the effect of closing the United States ports of entry to the legal flow of opium except in controlled quantities for regulated purposes. Since the Act also forbade any person from receiving or selling illegally imported opium knowing it to be illegally imported, the Act represented the first serious federal attempt to use the criminal law to curtail domestic trafficking in opium.

Five years later, the United States took a second major step in the border control of opium traffic when it set controls on the export of opium. With these controls, Congress effectively took the United States out of the international drug traffic by prohibiting the use of its ports for either the import or export of opium and other harmful drugs. Controls on export, like the earlier controls on import, came in response to international pressures. At the Hague International Opium Conference in 1912, the signatory powers, including the United States, had agreed to place various restrictions on prepared opium, cocaine, and morphine—one of these restrictions was to align export controls with the import controls of other nations.[25] Consequently, Congress enacted the Narcotic Drug Export Act,[26] absolutely prohibiting any smoking opium from being admitted into the United States for transshipment to another country and, more importantly, banning the export of cocaine and opium—other than smoking opium, the export of which was absolutely forbidden—to any country which did not regulate the importation of these drugs. On the very same day that it passed the Narcotic Drug Export Act, Congress also adopted a statute which levied a prohibitive tax of $300 per pound on all opium manufactured in the United States for smoking purposes.[27] Thus, Congress had now forbidden the import or export of smoking

24. Ch. 100, 35 Stat. 614 (1909). Early attempts at combatting drug addiction in the United States were doubtlessly influenced by the American experiences handling the drug situation in the Philippines. After the Spanish-American War of 1898, the United States took control of the Islands and faced a growing drug epidemic. For a brief discussion of the American experiences with the drug situation in the Philippines, *see* KING, *supra* note 2, at 10-14.

25. International Opium Convention, The Hague, Jan. 23, 1912. 38 Stat. 1912 (1915). On the early international opium conferences, *see* W. WILLOUGHBY, OPIUM AS AN INTERNATIONAL PROBLEM, THE GENEVA CONFERENCE (1925).

26. Ch. 9, 38 Stat. 275 (1914).

27. Ch. 10, 38 Stat. 277 (1914).

opium, heavily taxed its domestic manufacture, and severely restricted the import of other forms of opium.

4. *Harrison Act*

With the Harrison Act the federal government interjected itself decisively into the domestic traffic in narcotic drugs.[28] This statute was by far the most significant of all the early federal drug control laws, setting the main lines for domestic narcotic control and regulation which persisted until 1970. The thrust of the Harrison Act was twofold. First the Act sought to expose to federal surveillance the legal traffic in narcotics from its point of entry or manufacture to its point of consumption. Second, the Act provided criminal penalties for any trafficking in narcotics outside the legally established patterns. The stage was thus set for the regulation of the legal narcotic flow and the suppression of the illegal flow.

To achieve such broad purposes, the actual legislative scheme of the Harrison Act might be considered cumbersome to say the least. Congress chose to assert jurisdiction through its revenue powers rather than through its power to regulate interstate commerce. This rather curious approach was justified, however, since in 1914 the interstate commerce clause was still read rather restrictively by the courts. In all probability, that clause would not have supported any congressional controls over local drug manufacturers or distributors.[29] Of course, Congress' decision to use its revenue powers placed the domestic control of narcotics in the hands of the Internal Revenue Service, then deeply involved in the enforcement of the newly created federal income tax, and later the Prohibition laws. Contrary to certain state patterns of narcotic control, this placed enforcement of the Harrison Act in the hands of a special enforcement unit rather than in the hands of general law enforcement officers.

By its terms, the Harrison Act required registration with the local Internal Revenue Collector and payment of a special occupational tax by every person, with certain exceptions, who produced, imported, manufactured, compounded, dealt in, dispensed, sold, distributed, or gave away opium or coca leaves or any compound or preparation of these drugs.[30] The Act also stipu-

28. Ch. 1, 38 Stat. 785 (1914).

29. Manufacturing was considered a subject for local rather than national regulation. *See, e.g.*, Kidd v. Pearson, 128 U.S. 1 (1888); Parker v. Brown, 317 U.S. 341 (1943). The constitutionality of the Harrison Act was upheld in United States v. Doremus, 249 U.S. 86 (1919).

30. The Harrison Act did not apply to the sale, distribution or possession of preparations containing minimal amounts of narcotic drugs, *i.e.* less two grains of opium, ⅛ of a grain of heroin. Ch. 1, § 6, 38 Stat. 785 (1914).

lated that any sale, exchange, or transfer of these drugs must be pursuant to the *written order* of the person to whom the drugs were to be transferred. Written orders could only be executed on forms specially provided by the Commissioner of Internal Revenue and the forms themselves could only be purchased by a registered person. Everyone in the drug distribution system was subject to stringent record-keeping. Finally, it was unlawful for any unregistered or unpaid person to possess or control any restricted drug; such possession or control was presumptive evidence of failure to register and pay the occupational tax.

The Harrison Act was amended in 1919 by increasing the rate of the annual occupational tax and by imposing a new commodity tax of one cent per ounce on all opium or coca leaves produced in or imported into the United States.[31] This commodity tax was in addition to any existing import duties. The 1919 amendments made it unlawful for any person to purchase, sell, dispense or distribute any of the aforementioned drugs or their compounds except in the original stamped packages or from the original stamped packages. The absence of appropriate tax-paid stamps became prima facie evidence of a violation of the Harrison Act.

From the viewpoint of federal law enforcement officers, there was one glaring gap in the coverage of the Harrison Act—the medical profession. Section 2 of the Act specifically exempted from its coverage the dispensing or distribution of drugs "to a patient by a physician . . . in the course of his professional practice only."[32] With narcotics tightly regulated, the physician represented the sole legitimate source of supply open to the addict. For the unscrupulous doctor, this presented a lucrative opportunity to push drugs legitimately under the guise of practicing medicine. Huge profits could be made. The "script doctor," as he came to be called, became a prime concern of the early Internal Revenue Service personnel charged with enforcement of the Harrison Act. For the responsible physician, the Harrison exemption was not a source of new income; if anything, it was a source of unexpected problems. As long as an addict was not confined to a hospital for treatment, a doctor could minister to him in one of two ways—either by personally administering the drug to the addict in his office or by prescribing the drug for the addict to administer to himself at home. If he treated the addict in his office, the physician could minimize possible drug diversion into the illicit market but at the expense of turning his office into a drug clinic with long lines of addicts awaiting treatment.[33] If he prescribed drugs for self admin-

33. *See* LINDESMITH, THE ADDICT AND THE LAW 142 (1965) [hereinafter cited as

istration, the doctor created serious problems of illegal diversion. The dilemma was real and with no apparent solution. Because of the possibility of diversion, law enforcement officials soon began to move to curtail the medical profession's freedom to prescribe narcotics in the treatment of addicts. The unfortunate consequence of this policy was to drive from the field of drug treatment not only the unethical "script doctor" but the legitimate doctor as well.

At the outset, the Harrison Act was not interpreted as interfering with the physician's medical treatment of the addict, whether by prescription or otherwise. Thus, for example, providing an addict with morphine in the treatment of his addiction was considered valid medical treatment to the extent that it suppressed and alleviated withdrawal symptoms. In 1919, however, with the Supreme Court's decision in *Webb v. United States*,[34] a series of cases maintained otherwise. Although Webb was a "script doctor," the Court was asked to decide whether a practicing physician's order for morphine was exempt as a physician's prescription within the meaning of section 2 where the order was not in the course of professional treatment in an attempt to cure the addict but solely to keep the addict comfortable by maintaining his customary use? The Court said no:

> [T]o call such an order for the use of morphine a physician's prescription would be so plain a perversion of meaning that no discussion of the subject is required.[35]

One year later, in *Jin Fuey Moy v. United States*,[36] the Supreme Court was faced with another case involving a "script doctor." In elaborating on its holding in *Webb*, the Court stated that the Harrison Act's immunity for physicians dispensing or distributing drugs in the course of their professional practice did not

> include a sale to a dealer or a distribution intended to cater to the appetite or satisfy the craving of one addicted to the use of the drug. A "prescription" issued for either of the latter purposes protects neither the physician who issues it, nor the dealer who knowingly accepts and fills it.[37]

The most controversial decision in this area, however, was neither *Webb*

nor *Jin Fuey Moy*, but *United States v. Behrman*,[38] decided in 1922. Behrman, a physician like Webb and Jin Fuey Moy, dispensed drugs indiscriminately. *At one time*, for instance, he had given an addict prescriptions for 150 grains of heroin, 360 grains of morphine and 210 grains of cocaine.[39] The Government, however, grounded its indictment on a holding that "prescribing drugs for an addict was a crime regardless of the physician's intent in the matter."[40] Although the Supreme Court stressed the large amount of the drugs dispensed by Behrman, the decision could be read by nervous physicians as prohibiting all doctors from prescribing, in good faith, even small quantities of narcotics for self-administration in an attempt to treat an addict. After *Behrman*, it seemed that a physician could only prescribe narcotics for conditions such as ulcers or cancer, but not for relief of addiction itself.[41]

The *Behrman* holding was soon tested in *Linder v. United States*.[42] Dr. Linder had personally dispensed to one of his patients one tablet of morphine and three tablets of cocaine. Limiting the *Behrman* rationale, the Court stated:

> [The Harrison Act] says nothing of 'addicts' and does not undertake to prescribe methods for their medical treatment. They are diseased and proper subjects for such treatment, and we cannot possibly conclude that a physician acted improperly or unwisely or for other than medical purposes solely because he has dispensed to one of them, in the ordinary course and in good faith, four small tablets of morphine or cocaine for relief of conditions incident to addiction.[43]

The Court further asserted that *Behrman* could not be interpreted as precluding a physician, acting in good faith and according to fair medical standards, from ever giving an addict moderate amounts of drugs for self-administration in order to relieve the conditions incident to addiction.

Although the language in *Linder* could be read to repudiate *Behrman*, doctors were genuinely afraid to treat addicts. This fear increased as lower federal courts seemingly disregarded the clear intent of the *Linder* rationale.[44] Now the addict could no longer turn to the medical profession for help: he was forced to turn to a new source of supply—the growing illicit

drug market. As Rufus King remarks: "The addict-patient vanished; the addict-criminal emerged in his place."[45]

On the whole the Harrison Act has been criticized as an unenlightened approach to a difficult social problem. One European commentator summarized the situation in this way:

> The Harrison Narcotic Law was passed in 1914 by the Federal Government of the United States with general popular approval. It placed severe restrictions upon the sale of narcotics and upon the medical profession, and necessitated the appointment of a whole army of officials. In consequence of this stringent law a vast clandestine commerce in narcotics has grown up in that country. The small bulk of these drugs renders the evasion of the law comparatively easy, and the country is overrun by an army of peddlers who extort exorbitant prices from their hapless victims. It appears that not only has the Harrison Law failed to diminish the number of drug takers—some contend, indeed, that it has increased their numbers—but, far from bettering the lot of the opiate addict, it has actually worsened it; for without curtailing the supply of the drug it has sent up the price tenfold, and this has had the effect of impoverishing the poorer class of addicts and reducing them to a condition of such abject misery as to render them incapable of gaining an honest livelihood.[46]

5. *The Narcotic Drug Import and Export Act*

In 1922, Congress passed the Narcotic Drug Import and Export Act[47] which continued the existing ban on opium importation while adding cocaine to the list of drugs which were forbidden entry into the country. Limited amounts of crude opium and coca leaves, however, were permitted to be imported for medical and other legitimate needs. It is interesting to note that, for the first time, all restricted drugs were classified under the generic category of "narcotic drugs." A Federal Narcotics Control Board (composed of three Cabinet members) was created to administer various provisions of the Act. For instance, the Board was empowered to determine exactly what amounts of crude opium and coca leaves were needed to be imported for legitimate and medical purposes.[48]

1924 saw one important amendment to the Act. Although a certain amount of crude opium could be legally imported for medical or other legiti-

mate uses, Congress now prohibited the importation of any crude opium for the purposes of manufacturing heroin.[49]

There is one provision of the Narcotic Drugs Import and Export Act, however, which merits close scrutiny. Under the Act, possession of narcotics gave rise to a two-fold statutory presumption—namely, that the narcotics were illegally imported and that the defendant had knowledge of their illegal importation.[50] This presumption has been the subject of a vast amount of litigation, culminating in the recent cases of *Leary v. United States*[51] dealing with its applicability to marihuana, and *Turner v. United States*,[52] dealing with its applicability to heroin and cocaine.

In *Leary*, the Supreme Court refused to reach the question of the validity of the inference but held unconstitutional that part of the presumption which related to defendant's knowledge of illegal importation. The Court reasoned that inasmuch as some of the marihuana consumed in the United States is domestically grown, it would be no more than speculation to say that even a majority of possessors knew the source of their marihuana.[53] Consequently, absent proof that the particular possessor had actual knowledge of illegal importation, the statutory presumption was not sufficient to uphold a conviction. In effect, the Court found no rational connection between the fact proved—possession—and the fact to be presumed—knowledge of illegal importation.

In *Turner*, the Court upheld the entire presumption as applied to heroin but declared it unconstitutional as applied to cocaine. As for heroin, the overwhelming evidence showed that heroin consumed in the United States is illegally imported and that anyone in possession of such heroin is aware of the "high probability" that it had originated in a foreign country.[54] In the case of cocaine, on the other hand, it was determined that more cocaine is lawfully produced in this country than is smuggled into the country.[55] Hence, the Court could not be sure whether the cocaine that the defendant possessed came from abroad or that the defendant knew of its illegal importation. In such a situation, the presumption of illegal importation could not be applied.

B. *Federal Narcotic Legislation From 1922 to 1970*

1. *Porter Act of 1929*

By the late twenties, the federal government was faced with a new problem—large numbers of addicts in its prison system. As the patterns of addiction grew and became associated with domestic crime, it was perhaps inevitable that the addict population in prisons would increase. Congress responded to the problem by enacting the Porter Act in 1929.[56] The Act established two United States Narcotic Farms designed to provide care and treatment of convicted addicts. The first was opened in Lexington, Kentucky in 1935; the second at Fort Worth, Texas in 1938.

2. *The Federal Bureau of Narcotics*

The growing narcotic problem also led to the emergence of a new federal agency within the Treasury Department. Enforcement of the Harrison Act of 1914 was entrusted to the narcotics division of the prohibition unit of the Internal Revenue Service.[57] In 1927 this division was incorporated into the newly created Prohibition Bureau of the Treasury Department.[58] In 1930 law enforcement in the federal narcotics field was further developed and consolidated into its own separate agency, the Federal Bureau of Narcotics.[59] Of equal importance with the establishment of the agency was the appointment of Harry J. Anslinger as the new agency's first commissioner. Anslinger had risen through the diplomatic service and established himself later at the Department of the Treasury as Assistant Commissioner of Prohibition.[60] With the establishment of the Bureau of Narcotics, Anslinger shifted his main concern from prohibition to narcotic law enforcement. Under his vigorous leadership the Bureau of Narcotics was shaped and developed into a powerful law enforcement agency.

3. *Informers Act of 1930*

While the Harrison Act was cast in terms of a regulatory statute designed to publicly expose the legitimate narcotic drug flow on the domestic scene, its collateral and less obvious goal was to interdict the domestic flow of illegal narcotics. This latter purpose obviously led to heavy criminal law enforce-

60. *See* KING 70.

ment work. To facilitate this effort the Commissioner of Narcotics was empowered by Congress in 1930 to pay informers for information concerning violations of the drug laws.[61]

4. Marihuana Tax Act

Although early federal legislation was mainly concerned with controlling opium and cocaine, a new "drug menace" had appeared by the 1930's—that "menace" was marihuana.[62] In 1937, under the prodding of the newly created Federal Bureau of Narcotics, Congress passed the Marihuana Tax Act—which was similar, in many respects, to the Harrison Act.[63] The Marihuana Tax Act required those in the chain of marihuana distribution to register and pay an occupational tax. A commodity tax of $1.00 per ounce was levied on transfers of marihuana to persons registered under the Act. Unlike the Harrison Act where transfers could only be made to registered persons, the Marihuana Tax Act allowed transfers to non-registered persons but provided ample deterrents to such transfers by a prohibitive tax of $100 an ounce. To effect a legal transfer both registered and non-registered persons were required to file special order forms. Increasing federal control over marihuana distribution even further, various reports and record-keeping requirements were mandated. In short, Congress placed virtually identical controls over marihuana as over the narcotic drugs.

5. Vehicle Seizure Act of 1939

Like the Informers Act of 1930, the Vehicle Seizure Act of 1939[64] attested to the continuing efforts of the Bureau of Narcotics to extend its control over the growing black market in illegal drugs. By its terms, the Act made it unlawful to transport, carry, or convey any contraband article in, upon, or by means of any vessel, vehicle, or aircraft. A contraband article was defined as any narcotic drug which has been or is possessed with intent to sell or offer for sale in violation of the law, or which is sold in violation of the law, or which does not bear appropriate tax paid Internal Revenue Stamps. Any vessel, vehicle, or aircraft (with certain exceptions) which has been or is being used in violation of the Act was subject to seizure and forfeiture.

6. Opium Poppy Control Act

The outbreak of World War II disrupted the flow of opium to the United

64. Ch. 618, 53 Stat. 1291 (1939).

States. There were those who decided that profit could be made by growing the opium poppy domestically—ostensibly to provide necessary opium for medical needs. A 1942 Act, however, prohibited any person who was not the holder of a license authorizing him to produce the opium poppy, duly issued by the Secretary of the Treasury, to produce or attempt to produce such poppies.[65] The Secretary, it should be noted, has never issued such a license.[66]

7. Drug Legislation of 1946

The increased availability of *synthetic* opiates—such as methadone—led Congress to bring these drugs within the ambit of federal controls in 1946.[67] Specifically, any drug which was found to have an addiction forming or addiction sustaining potential similar to morphine or cocaine came within the purview of the federal statutes governing natural opium.

8. Increased Penalties—1951 and 1956

The unintended effect of the Harrison Act and its subsequent enforcement was the closing of legitimate sources of supply to the addict, resulting in the rise to a flourishing black market in illegal drugs. With the repeal of Prohibition, organized crime in turn became more involved with the illegal distribution of drugs. The inevitable result was an expanding drug problem. The years between 1946 and 1960 were times of a rising drug trade in the United States and, equally important, times of growing fears regarding the drug problem.[68]

Not the least of these fears was that drug use was reaching epidemic proportions among minors. In 1951, for example, a Special Senate Committee on Organized Crime became concerned with the increasing number of drug addicts among young people. The Committee found that, in 1946, only three percent of the patient-addicts at the United States Public Health Service Hospital at Lexington, Kentucky, were below the age of 21, while just five years later the percentage had increased to eighteen percent.[69] Congress responded with the escalation of penalties for narcotic violations, first in 1951[70] under the vigorous leadership of Congressman Hale Boggs, and again in 1956.[71]

65. Ch. 720, 56 Stat. 1045 (1942).
66. H. ANSLINGER & W. TOMPKINS, THE TRAFFIC IN NARCOTICS 137 (1953).
67. Ch. 81, 60 Stat. 38 (1946).
68. *See* Note, *Narcotics Regulation*, 62 YALE L. REV. 751 and n.1 (1953).
69. SEN. REP. No. 725, 82d Cong., 1st Sess. 27 (1951).
70. Ch. 66, 65 Stat. 767 (1951).
71. Ch. 629, 70 Stat. 567 (1956).

The Harrison Act and subsequent statutes established the basic approach to drug control by the federal government. The legislation of the 1950's did not alter that approach. What prompted this legislation was the belief that tougher penalties would deter involvement in the traffic by severely punishing those who did not heed the warning. To this end, penalties were sharply increased. Mandatory minimum sentences were instituted to prevent "soft" judges from ameliorating the harshness of these strictures. In addition, a drug offender's right to a suspended sentence or probation was curtailed. These statutes will be discussed in greater detail in Part V of this article.

9. Narcotics Manufacturing Act

In 1960 the federal government once again broke new ground in the field of narcotics control. For approximately forty years, the United States had closed its ports of entry to the import and export of narcotic drugs and then regulated and controlled the internal distribution processes with the Harrison Act. However, the Act exercised no direct control over the quantities of narcotic drugs legally manufactured within the country itself. The Narcotic Manufacturing Act of 1960 sought to remedy this.[72] Under this Act the Secretary of the Treasury was empowered to license manufacturers of narcotic drugs and to set an individual quota for each drug classification. The Government could not be assured that only those quantities of narcotic drugs actually required for legitimate needs would be domestically manufactured.

This Act was significant in another respect. Before 1960, licensing was always viewed as a peculiarly local concern left to the several states.[73] Now Congress asserted jurisdiction over licensing and, interestingly enough, based its power—at least in part—on the interstate commerce clause, an approach which had been rejected in 1914 when the Harrison Act was enacted. The cumbersome fiction of a tax statute to justify local control over drug distribution was no longer needed.

10. Narcotic Addict Rehabilitation Act of 1966 (NARA)

Still more new ground was broken with the Narcotic Addict Rehabilitation Act of 1966.[74] This Act, patterned on state legislation found in California[75] and New York,[76] was based on two existing approaches to drug rehabilitative

treatment. The first, embodied in the Porter Act of 1929, had led to the creation of federal hospitals at Lexington and Fort Worth as places for confinement and treatment of the addict-criminal. The second was the long-standing concept that the mentally ill, the alcoholic, and the addict could be legally confined and treated even in the absence of overt criminal behavior. NARA was designed to funnel accused and convicted criminals out of the court and prison systems and into rehabilitative confinement. Even where no overt criminal conduct was involved, the Act provided rehabilitative confinement for addicts who voluntarily committed themselves or who were involuntarily committed by relatives.

PART II—*Federal Regulation of Dangerous Drugs Prior to 1970*

Dangerous drugs are not to be confused with narcotic drugs which have been previously discussed in Part I. Dangerous drugs include basically three categories of drugs—depressants [including barbituates and tranquillizers], stimulants, and hallucinogens.

When compared to narcotics, dangerous drugs became subject to federal regulation rather late in time. It was not until 1965—with the amendments to the Federal Food, Drug and Cosmetic Act—that Congress imposed controls on the distribution of these drugs comparable to those in the Harrison Act.[77] Before this time, individuals who unlawfully dispensed dangerous drugs could only be prosecuted through certain misbranding provisions of the Food, Drug and Cosmetic Act.[78]

The 1965 amendments cover all dangerous drugs—whether in interstate or intrastate commerce. Unlike the Harrison Act which was based on federal taxing powers, Congress justified intrastate regulation of dangerous drugs on interstate commerce theories. In the findings and declaration preceding the amendments, one finds the following language:

> The Congress hereby finds and declares that there is a widespread illicit traffic in depressant and stimulant drugs moving in or otherwise affecting interstate commerce; that the use of such drugs, when not under the supervision of a licensed practitioner, often endangers safety on the highway (without distinction of interstate and intrastate traffic thereon) and otherwise has become a threat to the

77. Drug Abuse Control Amendments of 1965, Pub. L. No. 89-74, 79 Stat. 226 (1965). For an excellent general discussion of these amendments, *see* Rosenthal, *Dangerous Drug Legislation in the United States*, 45 TEX. L. REV. 1037 (1967) [hereinafter cited as Rosenthal].

78. 21 U.S.C. §§ 331, 352, 355 (1970). Rosenthal, *supra* note 77, at 1051 n.86. The government was required to prove "that the drug was introduced or received into interstate commerce, delivered for introduction into interstate commerce or misbranded in interstate commerce." *Id.* This is no longer necessary under the 1965 amendments since they apply to drugs in interstate commerce.

> public health and safety, making additional regulation of such drugs necessary regardless of the intrastate or interstate origins of such drugs; . . .[79]

For purposes of discussion, the 1965 amendment can be conveniently outlined in the following fashion:

A. Definition of Dangerous Drugs

The amendments categorize dangerous drugs as either depressants or stimulants. Depressant drugs include all drugs containing "any quantity of barbituric acid or any of the salts of barbituric acid" (a definition which does not encompass many common tranquilizers); stimulant drugs are those containing "any quantity of amphetamine, any of its optical isomers, or any salt of amphetamine."[80] The definition of a depressant or stimulant drug, however, includes the following significant language:

> any drug which contains any quantity which the Secretary, after investigation, has found to have, and by regulation designates as having, a potential for abuse because of its depressant or stimulant effect on the central nervous system or its hallucinogenic effect. . . .[81]

This language is the authority for controlling hallucinogens and nonbarbituric tranquilizers under the amendments. The Secretary of Health, Education, and Welfare is granted discretion to exempt certain drugs from the coverage of the amendments.

B. Acts Forbidden

With certain exceptions the 1965 amendments forbade the manufacture of depressant or stimulant drugs.[82] Permitted to manufacture, however, were manufacturers who were properly registered and who produced drugs for use in research, teaching, medicine or for chemical analysis.[83] Sales were prohibited except by those legitimately in the chain of distribution and only in the ordinary and authorized course of their business. Finally, possession (a) other than for personal use of the possessor or a member of his household or (b) for administration to an animal owned by him or by a member of his household, was forbidden.[84]

84. *See generally* Pub. L. No. 89-74, § 3b; Rosenthal 1057-57. In 1968 possession of dangerous drugs for personal use was made a crime. Pub. L. No. 90-639, 82 Stat. 1361 (1968). This change in the law was largely occasioned by the growing use of LSD.

C. *Registration, Records and Enforcement*

The federal law was changed in 1962 to prescribe annual registration with the Food and Drug Administration for those manufacturing *any* drug, no matter what its type or character.[85] The 1965 amendments, however, further required manufacturers to include in their registrations whether they were manufacturing or processing any dangerous drugs.[86] In addition, the amendments demanded registration for wholesale distributors of dangerous drugs.[87] With certain exceptions, however, pharmacies, hospitals, clinics, and physicians did not have to register.

Registration was not the only requirement of the 1965 amendments. Individuals who manufactured or disposed of dangerous drugs had to prepare a record of each drug on hand when the amendments went into effect and continue to keep future records of the manufacture and handling of such drugs. These files were subject to inspection and copying by the appropriate officials of the Food and Drug Administration.[88] Again, with certain exceptions, licensed physicians were exempted from all record-keeping provisions contained in the amendments.

It is interesting that enforcement of the dangerous drug laws was first placed in the hands of the Food and Drug Administration in the Department of Health, Education, and Welfare—an agency responsible for the general health and not particularly involved with law enforcement. In 1968, however, jurisdiction over dangerous drugs was transferred from the FDA to the Justice Department.[89]

These amendments were the final piece of legislation which preceded the Comprehensive Drug Abuse Prevention and Control Act of 1970, with Title II of that Act otherwise known as the Controlled Substances Act.

PART III—*The Controlled Substances Act of 1970*

The Comprehensive Drug Abuse Prevention and Control Act of 1970[90] repealed almost all prior federal drug legislation and created a new and comprehensive scheme for federal drug control. For the first time, one statute governed both narcotics and dangerous drugs. Enforcement of all drug laws was placed in the hands of the Bureau of Narcotics and Dangerous Drugs (BNDD)—an agency created in the Justice Department in 1968 to combine

85. Drug Amendments of 1962, Pub. L. No. 87-781, Title III, § 302, 76 Stat. 780 at 795 (1962), 21 U.S.C. § 360(b) (1970); Rosenthal 1055.
86. Pub. L. No. 89-74, § 4. Rosenthal 1056.
87. Rosenthal 1056.

the enforcement powers of the Bureau of Narcotics in the Department of Treasury and the Drug Abuse Control Bureau of the FDA in the Department of Health, Education, and Welfare.[91] Although the 1970 Act totally revamped the existing pattern of drug control, a great deal was borrowed from prior legislation—a fact that will become apparent as the provisions of the Act and the federal regulations implementing it are analyzed.

A. Jurisdiction to Legislate

As had been forecast by the Narcotics Manufacturing Act of 1960 and the 1965 amendments to the Federal Food, Drug and Cosmetic Act, authorization for the new legislation was found in the interstate commerce clause and not in Congress' power to collect revenue. The cumbersome system of taxes established by the Harrison Act and the Marihuana Tax Act was thus abrogated.

B. Controlled Substances

The Act establishes five schedules of controlled substances which include all of the substances previously defined as either narcotic or dangerous drugs.[92] Because the schedule I substances have a high potential for abuse, have no currently accepted medical use for treatment in the United States, and cannot be used safely even under medical supervision, they are subject to rigid controls. Drugs in schedule I include certain opium derivatives—such as heroin and hallucinogens—such as LSD, marihuana, and mescaline. Schedule II substances are also rigidly controlled since they too have a high potential for abuse and may lead to severe psychological and physical dependence. Unlike schedule I substances, however, they do have a currently accepted medical use in this country. In this schedule are included, among others, the synthetic opiates such as methadone, the opium poppy and poppy straw, coca leaves, and their derivatives, and any injectable liquid containing methamphetamine.

Substances in schedule III have a potential for abuse less than the substances in the first two schedules and a currently accepted use in medical treatment. Abuse may lead only to moderate or low physical dependence or high psychological dependence. This schedule includes stimulants, depressants, nalorphine, and substances containing certain limited quantities of specific narcotic drugs.

Schedule IV substances also have a currently accepted medical use for

91. Reorganization Plan No. 1 of 1968, 28 U.S.C. § 509 (1970).
92. 21 U.S.C. § 812 (1970).

treatment, but they have a low potential for abuse in comparison to those substances in schedule III. That is not to say that the use of schedule IV substances cannot lead to limited physical or psychological dependence. Schedule IV contains such drugs as phenobarbitol and chloral hydrate.

Schedule V substances, like substances in the prior three schedules, have a currently accepted medical use for treatment in the United States; but when compared to any of these other substances, those in schedule V have an even lower potential for abuse. This schedule consists of substances which, even though they may contain small quantities of specific narcotics, also contain enough non-narcotic medicinal ingredients to confer upon the compound or mixture valuable medicinal qualities other than those possessed by the narcotic content alone. Thus, paregoric or cough medicines containing small amounts of codeine would presumably be considered a schedule V controlled substance.

The 1970 Act also includes detailed criteria for the classification of controlled substances into schedules. It gives the Attorney General rule-making power to add a substance to a schedule or transfer substances between schedules if, after making the appropriate findings prescribed for each schedule, he determines that any substance has the requisite potential for abuse.[93] Conversely, the Attorney General may remove a drug from all schedules if his findings do not warrant inclusion of the drug in any of the five schedules. Proceedings to make such determinations may be initiated by the Attorney General on his own motion, at the request of the Secretary of HEW or on the petition of any interested party.

Before initiating such proceedings, however, the Attorney General must request scientific and medical evaluations and recommendations from the Secretary of HEW. The Secretary will recommend whether or not the substance should be controlled, and, if so, in what schedule it should be included. In making his decision, the Secretary will consider, among other things, the state of current scientific knowledge regarding the drug, scientific evidence of its pharmacological effects, the risks to the public health, and its psychic or physiological dependence potential. Although the ultimate decision on control lies with the Attorney General, he is bound by the findings of the Secretary of HEW. For instance, if the Secretary recommends that a substance not be controlled, the Attorney General may not control it.

The above described procedure is slightly modified when United States international obligations existing on the effective day of the Act require that a substance be controlled. In that case, the Attorney General may control a

93. 21 U.S.C. § 811 (1970).

substance under any schedule he deems appropriate without first consulting the Secretary of HEW.

Before concluding this discussion, two final points should be mentioned. First, the Secretary of HEW must inform the Attorney General whenever a new drug application for a stimulant, depressant, or hallucinogenic drug is presented and the drug appears to have an abuse potential. Second, although the distinctions between narcotic and dangerous drugs have been somewhat blurred by the 1970 Act, certain of its provisions continue to distinguish between them, resulting in the need to define a "narcotic drug." Unfortunately, the definition provided by the Act is not sound from a pharmacological viewpoint. It encompasses not only true narcotics such as opium and its derivatives, but also cocaine, a drug which cannot be classed as a narcotic under any medical definition of that term.[94]

C. *Requirements for Individual Registrants*

Although registration requirements may sometimes be waived, those who manufacture, distribute or dispense substances controlled by the Act must register annually with the Bureau of Narcotics and Dangerous Drugs in accordance with the regulations of that agency.[95]

A separate registration must be filed for each principal place of business or professional practice where the applicant manufactures, distributes, or dispenses controlled substances. To assure proper registration, the BNDD is empowered to conduct administrative inspections of the "controlled premises"—the physical plant of a registrant or applicant—to see that the statutory standards are being met. The Bureau may also conduct investigations to verify or copy various records required to be kept by the Act. In most cases, an administrative warrant is required.[96]

In certain respects, however, the provisions of the Act differ slightly with regard to manufacturers, distributors and dispensers. Accordingly, each category of registrant must be separately analyzed.

1. *Manufacturers*

The 1970 Act repealed the Narcotics Manufacturing Act of 1960, which pre-

94. A narcotic drug is defined, at least pharmacologically, as one that depresses the central nervous system producing stupor, insensibility or sleep. Upton, *Narcotics and Other Drugs Susceptible to Abuse and Their Regulation*, 10 N.H.B.J. 264, 265 (1968). Cocaine is a stimulant, not a depressant.

95. 21 U.S.C. §§ 821-24 (1970). The Attorney General delegated his authority under the Act to the Bureau of Narcotics and Dangerous Drugs. BNDD acts under the general supervision of the Attorney General, however, see 28 C.F.R. Sec. 0.100. Procedure governing the registration of manufacturers, distributors and dispensers of controlled substances are set forth in 21 C.F.R. Part 301.

96. 21 U.S.C. § 880 (1970).

viously governed the licensing of manufacturers and the setting of manufacturing quotas. According to the 1970 Act, the term "manufacture" means:

> . . . the production, preparation, propagation, compounding, or processing of a drug or other substance, either directly or indirectly or by extraction from substances of natural origin, or independently by means of chemical synthesis . . . and includes the packaging or repackaging of such substance or labeling or re-labeling of its container; except that such term does not include the preparation, compounding, packaging or labeling of a drug or other substance in conformity with applicable state or local law by a practitioner as an incident to his administration or dispensing of such drug or substance in the course of his professional practice.[97]

With respect to controlled substances in schedules I and II, BNDD will register a manufacturer-applicant only if it finds that registration is *consistent* with both the public interest and any international obligations of the United States. In determining the public interest, certain factors must be considered, among which are.

> a) the maintenance of effective controls against diversion of controlled substances by limiting the importation and bulk manufacture of these substances to the number of establishments which can produce an adequate supply for legitimate medical, scientific, research, and industrial purposes;
> b) an applicant's prior conviction record under federal and state drug laws; and.
> c) an applicant's past experience in the manufacture of controlled substances.

Registration requirements for the manufacture of substances in schedules III, IV and V are somewhat less stringent. These manufacturers will be registered *unless* it is determined that it would be *inconsistent* with the public interest. This places the burden of proof with respect to the public interest on the applicant who wishes to manufacture controlled substances in schedules I or II, but shifts the burden to BNDD with respect to applicants who wish to manufacture substances in the last three schedules.

In addition to meeting stringent registration requirements, manufacturers of substances in schedules I and II must obtain an individual production quota before they can manufacture.[98] Each year BNDD determines the total quantity of each basic class of schedules I and II substances required to be manufactured in order to provide for estimated domestic, export, and reserve needs. Based on this overall production quota, individual production quotas are set so that the aggregate of individual quotas will not exceed

97. 21 U.S.C. § 802(14) (1970).
98. 21 U.S.C. § 825 (1970). For detailed requirements, *see* 21 C.F.R. Part 303.

the total amount of the substances needed annually. The Act specifies the requisite factors which BNDD should consider in setting individual quotas. Quotas are not required for substances in schedules III, IV and V.

Once he is registered and, if necessary, has received his manufacturing quota, the Act requires that a manufacturer make a biennial inventory of his stock of controlled substances on hand. Additionally, every registrant must currently maintain a complete and accurate record of each controlled substance manufactured, received, sold, delivered, or otherwise disposed of by him. All such inventories or other records must be kept available for two years for copying and inspection by BNDD officials. In the case of controlled substances which are also narcotics, the records must be kept separate from all other records; in the case of non-narcotic controlled substances, the records need not be separate but must be in such form that information is readily retrievable from the ordinary business records of the registrant. Finally, manufacturers are required to make periodic reports to BNDD of every sale, delivery, or other disposal of any controlled substance.[99]

2. *Distributors*

According to the Act, the term "distribute" means the delivery of a controlled substance, other than by dispensing or administering.[100] Distributors are thus to be considered as wholesalers of controlled substances.

The requirements for registration are essentially those for manufacturers of schedules III, IV and V controlled substances. With respect to a distributor of any controlled substance, BNDD will register him unless the agency determines that the registration is *inconsistent* with the public interest.

Once registered, a distributor may not distribute a controlled substance in a commercial container unless such container bears a label with the proper identifying symbol.[101] A different symbol is required for each *schedule* of controlled substances. In addition, if a substance is included in schedules II, III or IV, the label must contain a clear concise warning that it is a crime to transfer the drug to any other person. With exceptions, distributions of controlled substances in schedules I and II may only be lawfully made pursuant to the written order of the person to whom the substance is distributed.[102] The written order must be on a form provided by BNDD and can only be issued to persons validly registered (or exempt from regis-

99. 21 U.S.C. § 827 (1970). 21 C.F.R. Part 304 sets the detailed requirements for records, reports and inventories.
100. 21 U.S.C. § 802(11) (1970).
101. 21 U.S.C. § 825 (1970).
102. 21 U.S.C. § 828 (1970).

tration) under the Act. Like the Harrison Act before it, the 1970 Act envisions a distribution system which is regulated by BNDD at every step.

By and large, a distributor must take biennial inventories and keep adequate records just as the manufacturer. His reporting requirements are slightly less burdensome, however. He is required to make periodic reports only with respect to narcotic controlled substances and not with respect to all controlled substances.

3. *Dispensers*

The 1970 Act also applies to those who dispense controlled substances. The term "dispense" means:

> . . . to deliver a controlled substance to an ultimate user or research subject by or pursuant to the lawful order of a practitioner, including the prescribing and administering of a controlled substance and the packaging, labeling or compounding necessary to prepare the substance for such delivery.[103]

In effect, dispensers are the retailers of controlled substances.

As with distributors and manufacturers, each dispenser of controlled substances must annually register with BNDD. The four largest groups of dispensers or practitioners, as they are called, are physicians, pharmacists, researchers, and hospitals.

In order to dispense or conduct research with controlled substances in schedules II, III, IV and V, practitioners will be registered if they are authorized to dispense or conduct research under the laws of the state in which they practice.[104] As for research with schedule I controlled substances, an application must be referred to the Secretary of HEW who determines (a) the qualifications and competency of each research applicant and (b) the merits of each research proposal. Even if the Secretary of HEW approves, BNDD may deny the request for specified reasons.[105] Pharmacies—as distinguished from pharmacists—engaged in commercial activities, must be registered to dispense controlled substances in schedules II to V if they are authorized to dispense under state law. Each location must be registered separately, except that a practitioner need not obtain a registration for an

---

103. 21 U.S.C. § 802(10) (1970).
104. 21 U.S.C. § 823(f) (1970).
105. Even though drug abuse is a centuries old problem, there is a serious lack of information about how drugs work and their long term effects on the body. In the past there have been strong federal policies against certain types of research. *See* DEALING WITH DRUG ABUSE, A REPORT TO THE FORD FOUNDATION 14-15 (1972). In the past there has been little federal money spent on drug research, *see id.* at 13. There are recent indications, however, that the federal government is encouraging increased drug research.

office at which he does not dispense or administer controlled substances, but where he only prescribes them and where no supplies of these substances are kept.[106]

Like manufacturers and distributors, dispensers have the obligation to make biennial inventories and keep continuing records of all controlled substances received, sold, delivered, or otherwise disposed of. There are various exceptions to this rule, however, one of which will be discussed here.[107] Under the Harrison Act, a physician was required to keep records of narcotic drugs dispensed showing the amount dispensed, the date, and the person to whom the drugs were dispensed. The physician did not have to keep these records with respect to drugs dispensed to a patient whom he "personally attended."[108] The new law substantially changes these rules. With respect to narcotic drugs in schedules II, III, IV and V, a practitioner need not keep records if he prescribes or administers such drugs in the lawful course of his professional practice.[109] What is significant about the section is the use of the words "in the lawful course of his professional practice." This is the same type of ambiguous language used in the Harrison Act as a qualification of physicians' exemptions from using the special order forms and which led to the *Webb-Linder* line of cases.[110] Whether the 1970 Act exemption will cause an equal amount of litigation remains to be seen. It should be noted that the section does not grant an exemption for dispensing schedule I substances or for anything other than prescribing or administering narcotic substances in schedules II, III, IV or V. Thus, a pharmacist who fills a prescription for such drugs must keep adequate records.

Finally, dispensers, unlike manufacturers and distributors, are not required to make periodic reports to BNDD. Except in an emergency or when dispensed by a doctor, the Act also requires that no schedule II controlled substance which is a prescription drug may be dispensed without the doctor's

106. 21 C.F.R. 301.23(h)(3).
107. 21 U.S.C. § 827(c) (1970). *See also* 21 C.F.R. Part 304.
108. Ch. 1, § 2(a), 38 Stat. 785 (1914).
109. Under the new law, it would seem that there is no requirement for methadone maintenance programs to maintain records of the amount of the drug dispensed and the recipients of the drug, since the methadone would be administered in the lawful course of medical practice. An argument could be made, however, that records might have to be kept if the methadone is given to the patient for self-administration—such treatment might not be considered "prescribing or administering" methadone under the meaning of the Act. *See* Whitford, *The Physician, The Law, and The Drug Abuser*, 119 U. PA. L. REV. 933, 956 and n.96 (1971). In any event, the Food and Drug Administration separately requires methadone maintenance programs to maintain records on patients treated in order to be allowed to use methadone, a drug which has not yet been approved as fully safe and effective. *Id.* at 954-57.
110. *See* discussion *supra*, and accompanying text.

7 OF 33

written order.[111] Schedules III and IV substances may be dispensed pursuant to either oral or written prescriptions.

D. Import and Export

Title III of the 1970 Act—known as the Controlled Substances Import and Export Act—deals with the export and import of controlled substances.[112] Prior federal law, including the Narcotic Drug Import and Export Act of 1922, prohibited the importation of narcotics such as opium and coca leaves except for limited amounts needed for medical or scientific uses. The new Act forbids the importation of all substances in schedules I and II and narcotic drugs in schedules III, IV and V. The Attorney General, however, may allow the importation of such amounts of crude opium and coca leaves as he finds necessary to provide for the medical, scientific and other legitimate needs of the country. In an emergency when domestic supplies are found inadequate or when there is inadequate competition among domestic manufacturers, the Attorney General may also permit the importation of other prohibited drugs if he finds it necessary to provide for the country's legitimate needs. Crude opium, may not, however, be imported for the manufacture of heroin.

To import a non-narcotic controlled substance in schedules III, IV and V, it must be shown that the drug is imported for a legitimate purpose and pursuant to various requirements prescribed by BNDD.

The export of a narcotic drug in schedules I, II, III and IV is forbidden unless the destination country is a party to certain international conventions on narcotics, maintains a system to control narcotics importation which is deemed adequate by BNDD, the person to whom the narcotic is delivered is licensed by the country of importation, and a proper export permit has been issued.[113] Similarly, BNDD must be satisfied that the narcotic drug is to be applied to medical or scientific uses within the country of import or that there is an actual medical or scientific need for the drug in that country. The statutory provisions governing the export of non-narcotic substances and the transshipment of all controlled substances are less rigid than the export restrictions placed on the export of narcotics.

As in Title II, there are annual registration requirements for importers and exporters.[114] With respect to controlled substances in schedules I or II, an

111. 21 U.S.C. § 829 (1970). *See also* 21 C.F.R. Part 306.
112. 21 U.S.C. § 951 (1970). The authority and functions of the Attorney General under Title III were delegated to the Director of BNDD under the Attorney General's supervision. 21 C.F.R. Sec. 0.100. Regulations are to be found in 21 C.F.R. Part 312.
113. 21 U.S.C. § 953 (1970).
114. 21 U.S.C. §§ 957-58 (1970).

importer or exporter will be registered if such registration is *consistent* with the public interest and with the international obligations of the United States. Such registration, however, only authorizes import or export of the substances specified in the registration. Alternatively, an importer of a controlled substance in schedules III, IV, or V or an exporter of a controlled substance in schedules III or IV will be registered unless it is *inconsistent* with the public interest. As with manufacturers, distributors, and dispensers under Title II, separate registration is required for each principal place of business where the applicant imports or exports controlled substances.

Title III makes it unlawful for a person to manufacture or distribute a schedule I or II substance with the intent or knowledge that it will be illegally imported into the United States.[115] This provision is intended to reach those who manufacture or distribute these substances outside the United States intending that they ultimately reach the United States. The United States District Court at the point of the offender's entry into the United States has jurisdiction to hear the case.

PART IV—*Special Action Office for Drug Abuse Prevention and Office for Drug Abuse Law Enforcement*

On June 17, 1971, by Executive Order,[116] President Nixon established, in the Executive Office of the President, the Special Action Office for Drug Abuse Prevention, the Director of which was to be his official representative in matters concerning drug abuse prevention. In March of 1972, Congress gave the Special Action Office for Drug Abuse Prevention a statutory existence and expanded the responsibilities of its Director, Dr. Jerome H. Jaffe.[117]

A. Special Action Office for Drug Abuse Prevention (SAODAP)

The Special Action Office for Drug Abuse Prevention[118] is given jurisdiction over all federal programs in the area of drug *abuse*—as distinct from drug *traffic*—prevention. Drug abuse prevention includes programs relating to education, training, treatment, rehabilitation, and research in the field of drug abuse, while drug traffic prevention covers law enforcement activities and diplomatic or international efforts relating to drug traffic. Thus, since the Bureau of Narcotics and Dangerous Drugs primarily enforces federal drug laws, these law enforcement functions are not under the jurisdiction of

115. 21 U.S.C. § 959 (1970).
116. Exec. Order No. 11,599, June 17, 1971.
117. Drug Abuse Office and Treatment Act of 1972. Pub. L. No. 92-255, 86 Stat. 65.
118. *See id.*, Title II, §§ 201-255.

the Special Action Office. BNDD's educational materials, however, are subject to the control of the Special Action Office.

Within the field of drug abuse prevention, the Special Action Office is charged with (a) focusing the comprehensive resources of the federal government on drug abuse with the immediate objective of significantly reducing the incidence of drug abuse within the shortest period of time; and (b) developing a comprehensive, coordinated strategy to combat drug abuse. One of its main tasks will be to eliminate duplication, overlap, or conflict among federal drug abuse programs and ensure that all federal drug abuse laws, guidelines, regulations, and standards are consistent with each other and with overall national policy. Congress has given the Special Action Office three years in which to accomplish its mission. As of June 30, 1975, the Office is abolished unless, of course, its life is extended by Congress. By that time, it is hoped, the separate federal agencies will be able to proceed in concert in the field of drug abuse prevention.

B. Functions of the Director of the Special Action Office for Drug Abuse Prevention

The Director of the Special Action Office for Drug Abuse Prevention is appointed by the President with the advice and consent of the Senate. The main responsibilities of the Director are briefly summarized below:[119]

1. The Director establishes the overall planning and policy objectives for federal drug abuse prevention efforts. He reviews all existing guidelines, regulations, procedures and criteria of federal agencies to insure that they are consistent with his policies, priorities and objectives. If necessary, the Director may recommend that an agency effect changes in its organization, management and personnel.

2. The Director reviews all federal laws relating to health, education, and welfare and assures that the agencies who administer these laws view drug abuse as a health problem.

3. The Director may review implementation plans and budget requests of any federal agency for all federal drug abuse programs. He also has the power to place someone from his office or from some other federal agency in any federal drug abuse program for a short period of time to evaluate the performance of that program.

4. The Director is to encourage certain research and to create, develop and test:

   i. non-addictive synthetic analgesics to replace opium and its derivatives in medical use;

119. *See generally, id.* §§ 221-223.

ii. long-lasting non-addictive blocking or antagonistic drugs or other pharmacological substances for the treatment of heroin addiction; and
iii. detoxification agents which, when administered, will ease the physical effects of withdrawal from heroin addiction.

5. The Director may make recommendations to the President in connection with any federal *drug traffic program*. One of the Assistant Directors of the Special Action Office is to maintain liaison with respect to all federal drug traffic programs.

6. Before any controlled substance is transferred, added, or removed from any of the schedules under the Controlled Substances Act of 1970, the Attorney General must notify the Director. Similarly, the Secretary of HEW must notify the Director, as well as the Attorney General, of any new drug applications which may pose a potential for abuse.[120]

7. The Director is to give technical assistance to state and local agencies in the field of drug abuse, to maintain a clearinghouse for all information on drug abuse, and to draft model legislation for state and local purposes.

8. The Director must report to the President annually, specifying the objectives, activities, and accomplishments of the Special Action Office and accounting for all funds expended.

In carrying out his various responsibilities and functions, the Director has the authority to make grants and contracts with federal departments and agencies and with non-profit private agencies.[121] Similarly, the 1972 Act establishes a National Advisory Council for Drug Abuse to make recommendations to the Director with respect to overall planning and policy and the objectives and priorities of federal drug abuse prevention functions.[122] The Council is composed of the Secretaries of HEW and Defense, the Administrator of Veterans' Affairs and twelve individuals appointed by the President.

C. Relation to HEW

In addition to creating the Special Action Office, the 1972 Act has important consequences for various programs administered by the Secretary of HEW.[123] For instance, the Secretary:

1. may not approve an application for a community mental health center grant unless the application provides for a treatment and rehabilitation program for drug addicts where such a program is feasible and needed;

---

120. *Id.* § 209.
121. *Id.* § 210.
122. *Id.* §§ 251-255.
123. *Id.* Title IV §§ 401-413.

2. must require that drug treatment and rehabilitation programs be established in appropriate Public Health Service facilities unless he determines that there is not a sufficient need for such a program in a particular institution;

3. is authorized to suspend Federal support to any private or public hospital which refuses to treat a drug abuser in need of emergency medical help;

4. is authorized to make grants to states which submit plans for establishing and coordinating projects for the development of more effective drug abuse prevention methods in the state; and

5. is authorized to make similar grants to public and private non-profit organizations to carry on training, education, research or rehabilitation programs in the field of drug abuse. In addition to his existing responsibilities, the 1972 Act confers additional drug abuse prevention responsibilities on the Secretary of HEW, such as operating an information center for drug abuse matters, publishing statistical data on drug abuse, etc. To assist the Secretary in carrying out his duties, the National Advisory Council on Drug Abuse makes recommendations to the Secretary on matters pertaining to drug abuse. Finally, effective December 31, 1974, the Act establishes, in the National Institute of Mental Health, a National Institute on Drug Abuse to administer the various HEW programs concerned with drug abuse prevention.[124]

Two final aspects of the 1972 Act are worth mentioning. First, in order to coordinate long term federal strategy in the areas of both drug abuse and drug traffic prevention, the Act establishes a high level Strategy Council comprised of the Director of the Special Action Office, the Attorney General, the Secretaries of State, HEW, and Defense, the Administrator of Veterans' Affairs, and other officials as the President may deem appropriate. Second, the 1972 Act recognizes the importance of the confidentiality of patients' records. Thus, records of the identity, diagnois, prognosis, or treatment of a patient kept in connection with any drug abuse prevention function authorized or assisted under the provisions of the 1972 Act or any act amended by it must be kept confidential.[125]

D. Office for Drug Abuse Law Enforcement (ODALE)

On February 1, 1972 by Executive Order President Nixon created a new office within the Department of Justice to coordinate the drug law enforcement efforts of the federal government.[126] In a sense, the new office was the

124. *Id.* Title III §§ 301-305.
125. *Id.* Title IV § 408.
126. Exec. Order No. 11,641, February 1, 1972.

counterpart on the law enforcement side of the Special Action Office for Drug Abuse Prevention. Myles J. Ambrose, former Commissioner of Customs, was appointed Director with a title of Special Assistant Attorney General.

By the terms of the Executive Order, the Director of the Office will advise the President on all matters relating to the more effective federal enforcement of laws relating to illegal drug traffic and on methods by which the federal government can assist state and local governments in strengthening the enforcement of their laws relating to illegal drug traffic. The Director is also mandated to recommend plans, programs, legislation, techniques, and other measures to maximize the country's war on drugs. Specifically, the Director is empowered to develop a concentrated law enforcement program in the federal government and cooperate with state and local governments in enforcing their drug laws.

In operation, the Office of Drug Abuse Law Enforcement has concentrated its efforts at the street level drug trade.[127] Before ODALE, there was little federal participation in enforcing drug laws against the ordinary street pusher. Under Mr. Ambrose's leadership, however, a nationwide network of prosecutors, investigators, and special grand juries has been created to assist state and local authorities in detecting, arresting, and convicting "hard drug" pushers. Presently the Office is operating in at least 33 cities throughout the country.

PART V—*Historical Development and Present Status of Federal Drug Penalty Provisions*

Over the past sixty years, Congress has constantly reacted to statistics showing increased drug abuse in America by increasing penalties for drug offenders. A review of the federal penalty provisions will show that the escalation has been consistent and, at times, even dramatic.[128]

A. Pre-1970 Narcotic Penalties

1. *Early Pattern*

Prior to 1951, there were basically two patterns of penalties depending on the act violated. For convenience, the two patterns can be called import-export penalties and Harrison Act penalties.

a) *Import-Export Penalties*: When the importation of opium was pro-

127. N.Y. Times, January 29, 1972, p.1.

128. *See* DEALING AND DRUG ABUSE, A REPORT TO THE FORD FOUNDATION, 300-328 for a discussion of federal expenditures on drug abuse control.

hibited in 1909, the offender was subject to fines "not exceeding five thousand dollars nor less than fifty dollars, or by imprisonment for any time not exceeding two years or both."[129] An identical provision was contained in the 1914 Narcotic Drug Export Act.[130] By 1922, there had been a dramatic increase in import penalties. For violations of the import provisions of the Narcotic Drug Import and Export Act, the penalty was a fine of not more than five thousand dollars *and* imprisonment for not more than ten years.[131] Where prior drug laws had cast penalties in the alternative, either a fine or imprisonment or both, this Act mandated *both* a fine *and* a prison term. The penalties for illegal *export*, however, were not increased.

b) *Harrison Act Penalties*: When it was enacted in 1914, violators of the Harrison Act were subject to a fine of not more than two thousand dollars *or* imprisonment for not more than five years or both.[132] Identical penalties were provided for violations of the Marihuana Tax Act of 1937.[133]

2. *Unified Penalties of 1951*

In 1951, however, Congress totally revamped the then-existing penalty structure under prodding from the Bureau of Narcotics.[134] First of all, penalties for all drug offenses were made uniform, no matter how trivial or serious the offense. Thus, the penalties for failing to register as a drug distributor or for illegally importing drugs were made identical. Second, the severity of the penalties themselves was increased by requiring *mandatory* minimum prison terms and by lengthening the possible maximum sentence. A first offense entailed a fine of not more than two thousand dollars *and* a prison term of not less than two nor more than five years. For a second offense, the fine remained the same but the prison term jumped to not less than five nor more than ten years. For a third or subsequent offense, the prison term was increased to not less than ten nor more than twenty years. Of equal significance was a provision which denied both a suspended sentence and any form of probation to a second or subsequent offender.

3. *Ammendments of 1956*

By 1956, Congress had grown dissatisfied with its handiwork of five years

129. Ch. 100, § 2, 35 Stat. 614 (1909).
130. Ch. 9, § 7, 38 Stat. 275 (1914).
131. Ch. 202, § 2(c), 42 Stat. 596 (1922).
132. Ch. 1, § 9, 38 Stat. 785 (1914).
133. Ch. 553, § 12, 50 Stat. 551 (1937).
134. Ch. 666, §§ 1, 2, 3, 4, 65 Stat. 767 (1951).

before and decided to increase penalties yet again.[135] At least this time Congress did differentiate between serious drug offenses and those less serious in nature. For illegally importing narcotics or for transferring them without the required order form, the prison term was now set at not less than five nor more than twenty years for a first offense; and at not less than ten nor more than forty years for a second or subsequent offense. The possible fine for first or second offenses was raised to twenty thousand dollars. Penalities for sales of drugs to minors were set even higher; indeed, for a sale of illegally imported heroin to a minor, there was a possibility of the death penalty. Consistent with the increased severity of these penalties, Congress denied the right to a suspended sentence, probation, or parole to even the first offender convicted of a serious drug offense.

Even for less serious drug offenses, such as failing to register and pay the occupational tax, Congress increased existing penalties, although, in doing so, it did not set them as high as for illegal importation or similar offenses. Thus, for a first offense, the penalty was set at a prison term of not less than two nor more than ten years and a fine of not more than twenty thousand dollars. For a second offense, the prison sentence jumped to not less than five nor more than twenty years; and for a third or subsequent offense, to not less than ten nor more than forty years. A suspended sentence, probation and parole, however, were still available to the first offender convicted of these less serious offenses.

B. Pre-1970 Dangerous Drug Penalties

As mentioned above, depressant, stimulant, and hallucinogenic drugs were regulated by the 1965 amendments to the Federal Food, Drug and Cosmetic Act and not by the narcotic laws.[136] First offenders were punishable by imprisonment for not more than one year, or a fine of not more than one thousand dollars or both. For a second offense, the penalty was increased to not more than three years or a fine of not more than ten thousand dollars or both.[137] Stiffer penalties, however, were provided for selling dangerous drugs to persons under twenty-one years of age. In such cases, the penalty was a prison term of not more than two years or a fine of not more than five thousand dollars or both.

Just as in the case of narcotic drugs, however, Congress became dissatisfied with these penalties and enacted tougher ones three years later in

135. Ch. 629, § 103, 70 Stat. 567 (1956).
136. Pub. L. No. 89-74, § 7, 79 Stat. 226 (1965).
137. Ch. 675, § 303(a), 52 Stat. 1043 (1938). For a full discussion of the penalty provisions of these 1965 amendments, *see* Rosenthal, *supra* note 77 at 1058.

1968.[138] The unlawful manufacture, sale or possession with intent to sell of a dangerous drug was made punishable by up to five years in jail, a fine of up to ten thousand dollars, or both. For selling to someone under twenty-one, the penalty was set higher—imprisonment for not more than ten years, a fine of not more than fifteen thousand dollars, or both. It must be said, however, that Congress did not set mandatory minimum sentences as it did for narcotic violations, nor did Congress deny an offender eligibility for a suspended sentence or probation.

C. *Present Penalty Provisions for Narcotics and Dangerous Drug Offenses*

The penalty provisions of the Controlled Substances Act of 1970 are complex and variegated, not lending themselves to easy analysis. Five different categories of penalties need be considered.

1. *Unlawful Manufacture, Trafficking and Similar Offenses*[139]

The 1970 Act imposes identical punishment for illegally manufacturing, distributing, dispensing, possessing with intent to manufacture, distribute or dispense, or attempting or conspiring to do any of these acts. The severity of the penalties, however, depends on the type of controlled substance involved.

a) In the case of a controlled substance in schedules I or II which is also a narcotic drug, the person is subject to a jail sentence of up to fifteen years, a fine of not more than twenty-five thousand dollars, or both. Any prison term imposed must be accompanied by a special parole term of at least three years in addition to a prison term. If, for any reason, parole is revoked, the original term of imprisonment is increased by the period of the special parole term.

b) In the case of a controlled substance in schedules I or II which is not a narcotic drug, or a controlled substance in schedule III, the person is subject to a prison term of not more than five years, a fine of not more than fifteen thousand dollars, or both. A special parole term of at least two years is also imposed.

c) In the case of a controlled substance in schedule IV, the prison term is lowered further still to not more than three years; the fine, to not more

138. Act of Oct. 24, 1968, Pub. L. No. 90-639, § 3, 82 Stat. 1361.

139. 21 U.S.C. § 841 (1970). It should be noted that the 1970 Controlled Substances Act permits search warrants to be served at any time of the day or night if the judge or United States magistrate issuing the warrant is satisfied that there is probable cause to believe that grounds exist for the warrant and for its service at such time. A judge or United States marshal may include a "no-knock" provision in the warrant. 21 U.S.C. § 879(a) and (b) (1970).

than ten thousand dollars. The special parole term is decreased to at least one year.

d) In the case of a controlled substance in schedule V, the prison term is lowered to not more than one year; the fine, to not more than five thousand dollars. No special parole term is imposed.

In each of these categories, the prison sentence, fine, and special parole term are doubled for a second offender. Penalties are also doubled for anyone eighteen years or older who distributes a controlled substance to someone under twenty-one.

These general penalty provisions applicable to manufacturing and trafficking offenses admit of many exceptions. These exceptions, however, fall into two basic categories. One scales down the criminal penalties; the other substitutes civil for criminal penalties.

The first category includes such offenses as: 1) a registrant's knowing and intentional distribution of a controlled substance in schedules I or II in the course of his legitimate business without a proper order form; 2) the use of a fictitious or revoked registration number; 3) the acquisition of a controlled substance by fraud, forgery, or misrepresentation; and 4) the use of the mails, telephone, radio, and all other means of communication to commit or to facilitate the commission of a felony under the Act.[140] For such offenses, the penalty is imprisonment for not more than four years, a fine of not more than thirty thousand dollars, or both. There is no special parole term imposed. For a second offense, the fine and jail term are doubled.

Only civil penalties are provided for the second group of offenses—offenses which are considered only minor infractions of the 1970 Act.[141] Thus, for a registrant who manufactures a controlled substance in schedules I or II which is either not expressly authorized by his registration or is in excess of his assigned manufacturing quota, the penalty is a fine of not more than twenty-five thousand dollars. The same penalty is provided for someone who removes or obliterates required symbols or labels on packages or who fails to keep, make, or furnish any record or report required by the Act. However, if any of these offenses (for which a civil penalty is provided) is committed knowingly or after a prior offense against the drug laws, the person convicted becomes liable for imprisonment as well as for a fine.

2. *Unlawful Possession*[142]

For unlawful possession of a controlled substance in any one of the five

140. 21 U.S.C. § 843 (1970).
141. 21 U.S.C. § 842 (1970).
142. 21 U.S.C. § 844 (1970). It should be noted that any person who distributes a

schedules the punishment is a prison term of not more than one year, a fine of not more than five thousand dollars, or both. Penalties double for a second offense.

A special procedure is available to the first offender. Where the offense is his first, the court is empowered to defer further legal proceedings and place the offender on probation. If he does not violate the conditions of his probation, the court will discharge the offender and dismiss the proceedings against him.

3. Continuing Criminal Enterprise[143]

For a person who engages in a continuing criminal enterprise, the 1970 Act changes its pattern somewhat, requiring (a) that a *mandatory* minimum sentence of ten years be imposed (life imprisonment is the maximum); (b) that a fine of not more than one hundred thousand dollars be assessed; (c) that a suspended sentence or probation not be granted; and, finally (d) that any profits garnered in the enterprise be forfeited to the United States. A person is considered to be engaged in a continuing criminal enterprise if he (a) commits a felony which is part of a continuing series of drug offenses; (b) acts in concert with at least five other persons to commit these offenses; (c) commands some organizational or supervisory position with respect to the group; and (d) obtains substantial income from the enterprise. The provision is clearly aimed at the importer and the high level dealer who commands a drug distribution network.

4. Dangerous Special Drug Offender

Special penalties are also singled out for the so-called "dangerous special drug offender."[144] A defendant who is over twenty-one years of age and has been convicted but not yet sentenced for a drug felony can be declared a dangerous special drug offender in a separate judicial hearing prior to sentencing. If he is determined to be such a dangerous special drug offender by a preponderance of the evidence, the court shall sentence the defendant to imprisonment for an appropriate term not to exceed twenty-five years and not disproportionate in severity to the maximum term otherwise authorized by law for the felony which he committed. In other words, for the sake of protecting the public from further criminal conduct, the period of confinement imposed on a dangerous drug offender can exceed the period of con-

---

small amount of marihuana for no remuneration shall be punished under § 844 and not under § 841, 21 U.S.C. § 841(b)4 (1970).

143. 21 U.S.C. § 848 (1970).

144. 21 U.S.C. § 849 (1970).

finement otherwise provided for the particular offense committed. In order to be classified as a dangerous special drug offender, the defendant must meet certain statutory requirements: (a) the defendant must have been previously convicted in a state or federal court of two or more offenses involving dealing in controlled substances—offenses which were committed at different times but each punishable by more than one year in jail; (b) the defendant must have been imprisoned for one of these prior offenses and less than five years must have elapsed between the present felony and his release from prison or the commission of a prior drug offense; (c) the defendant must have committed the present felony as part of a criminal pattern of dealing in controlled substances which constitutes a substantial source of his income; (d) the defendant must have committed his present offense as part of a conspiracy with at least three other persons to engage in a pattern of dealing in controlled substances, and the defendant must have agreed to initiate, organize, plan, finance, direct, manage, gove or receive a bribe, or use force in connection with such dealing.

5. Import and Export Penalties[145]

As in the case of unlawful manufacture, the penalties for unlawful import or export of controlled substances depends on the nature of the substance involved. Thus, if a narcotic drug in schedules I or II is illegally imported or exported, the penalty is severe—a prison term of not more than fifteen years, a fine of not more than twenty-five thousand dollars, or both. A special parole term of at least three years is also imposed. The penalties for illegal import of a controlled substance other than a narcotic drug in schedules I or II is imprisonment for not more than five years, a fine of not more than fifteen thousand dollars, or both. A special parole term is also imposed but the length of the term is determined by the type of controlled substance involved.

For a second offense, the statute generally provides double the penalty. Attempts and conspiracies are treated as if the offense attempted or planned had been committed. Finally, the 1970 Act provides civil penalties for transhipment of controlled substances to another country unless such offense was knowingly and intentionally committed, in which event criminal penalties are provided.

D. Interrelationship Between Penalty Provisions

For purposes of analysis, this article has separated penalties into varying categories, such as penalties for illegal importation, for illegal manufacture,

145. 21 U.S.C. §§ 960-963 (1970).

for possession, etc. From this it should not be inferred that these categories are separate and distinct. Quite the contrary. Any single offense against the drug laws as often as not involves multiple violations. Take, for example, someone arrested for illegally selling heroin.

1. Under the Harrison Act, there would have been an automatic three-count indictment, charging the defendant with the following violations: (1) selling narcotic drugs not in the original stamped package or from the original stamped package;[146] (2) selling narcotic drugs without the proper written order form;[147] and (3) selling illegally imported heroin, knowing it to have been illegally imported.[148] Possession of a narcotic drug at any time created a presumption that the drug had been illegally imported and the defendant had knowledge of the illegal importation.

2. Under the Controlled Substances Act of 1970, there is a two-count indictment, charging possession with intent to distribute a controlled substance and illegal distribution of a controlled substance.

Although beyond the scope of this paper, interesting comparisons can be drawn between the penalty provisions under the Harrison Act as amended in 1951 and 1956 and the new Controlled Substances Act of 1970. Under the old law a minimum mandatory prison sentence was imposed, while under present law there is generally no minimum required sentence. It would seem that the prosecutor was in a stronger bargaining position under the old law than he is now. Since the 1956 amendments to the Harrison Act imposed harsher mandatory sentences for some offenses than for others, the prosecutor could threaten an offender with the more serious charge unless he cooperated. Under the present law, the prosecutor can never be sure what penalty will be meted out by a judge. As a result, the federal drug offender today may be less disposed to plea bargain and more prone to take the risks incident to a full trial.

Conclusion

Until the turn of the century the basic federal attitude toward the distribution and use of narcotics by the general public was permissive. Narcotic substances and their use were regarded as a matter of personal choice not requiring the intervention of the federal government. This attitude was not inconsistent with a recognition that narcotics were far more dangerous than routine household items and that those who used them might be subject, per-

146. Act of Aug. 31, 1954, ch. 1147, §§ 6-7, 68 Stat. 1003.
147. Act of Aug. 31, 1954, ch. 1147, § 8, 68 Stat. 1004.
148. Act of Nov. 2, 1951, ch. 666, § (c), 65 Stat. 767.

haps, to moral censure. This general approach was dominant until well into the 1900's.

After the turn of the century there was a shift from a posture of permissiveness to one of repression which was characterized by a federal effort to proscribe the distribution and use of narcotics except within narrow and tightly controlled channels for recognized medical purposes. This approach developed slowly. First, there were the ever increasing tariffs on imported smoking opium, then the outright ban on all imported opium not needed for medical uses, and, finally, there were the regulatory provisions of the Harrison Act, effectively forcing the addict to turn not to the medical profession but to the illicit drug market for his daily supply. This black market became the mechanism by which drugs were distributed in the world of the drug user. Attempts by law enforcement agents to control this market have led to even more repressive federal regulation. Penalties were escalated, informers paid, vehicles seized. When these tactics showed little apparent success, suspicion grew that perhaps it was the local law enforcement systems which were partly to blame. There was talk of "soft judges" who misguidedly coddled criminals. This led to mandatory minimum sentences, thus preventing judges from ameliorating the harshness of the penalties. Most recently, federal agents, in such programs as ODALE, have begun to work directly with local police to combat distribution of drugs at the street level. The end result of this process is a comprehensive federal criminal statute limiting the use of controlled substances and significant federal intervention through the BNDD and ODALE at every level of international, national and local drug distribution.[149]

---

149. Still a third federal approach can be termed "medical," for want of a better word. It has not been developed in this article which is designed to focus on federal control of the distribution and use of drugs rather than on the rehabilitation of the addict. This third federal approach categorizes the drug addict not as a criminal but as a patient and looks not to his imprisonment but to his treatment. One of the earliest efforts along these lines was the use of narcotics by the medical profession to treat the addict. This led, in the wake of the Harrison Act, to the creation of the clinics of the 1920's and the dispensation by private physicians of morphine, heroin and cocaine to the drug addict. These early efforts were short-lived due to the vigorous use of the Harrison Act by federal drug enforcement personnel. The same theme emerged again, however, some forty years later, in 1963, with the work of Doctors Dole and Nyswander. In this instance the narcotic substance was methadone but the medical concern was the same, *i.e.*, the use of a narcotic substance to treat the addict. Methadone treatment did not meet the fate of the clinics of the 1920's. Perhaps sobered by years of enforcement of the Harrison Act in the face of an ever-growing drug problem, methadone was accepted on an experimental basis. It rapidly became an important federal concern and found support in federal monies allocated under the NARA program of 1966 and later legislation. Its use is still technically "experimental" but it remains a strong national theme and is conceived by many as viable federal alternative to the use of the criminal law.

Another form of this medical approach has been to categorize drug addiction as a

Assessing the success of the repressive or drug suppression approach to the drug problem is not the object of this article which seeks only to describe. One observation, however, may be made by way of clarification. The use of criminal law sanctions in the suppression of narcotics operates in at least three different ways. For some, the presence of the law is enough to inhibit use of the interdicted item. The use of drugs is a crime and for many, indeed for most, that is enough.

A second effect of the law is to make drugs hard to obtain. The practical consequence of this is that drugs are not readily available—thereby reducing the possibilities of their use wholly apart from any moral or civic attitudes regarding either the law or the use of drugs. Here again the law succeeds.

The troublesome area of the law's operation is in its application to those in the drug subculture itself. In this area federal drug control legislation presents itself as an effort to prevent individuals who are strongly motivated and determined from buying and selling narcotics. Here the federal drug control legislation operates in much the same way as did prohibition legislation. The test of the effectiveness of the effort is only in part the law itself. Far more important are the national attitudes and infrastructures which apply the law to the problem—the police, the courts, the prisons. It is here that problems multiply, results discourage, and the urge to reassess takes its stand.

---

type of character disorder. So conceived the drug addict found a place with the mental case and the alcoholic, all incapable of caring for themselves. This concept led to the authorization of Lexington and Fort Worth in 1929 and later came to full flower in the commitment provisions of the NARA of 1966. This same character disorder theme finds expression in the various therapeutic communities such as Synanon or Phoenix House, designed to get the addict to work through his "problem" in a supportive but drug free environment. This approach has also found federal support through the funding provisions of the NARA act of 1966 and later legislation.

THE MARIJUANA MERRY-GO-ROUND

MERLYN D. MOORE

The author is associate professor at the Institute of Contemporary Corrections and the Behavioral Sciences of Sam Houston State University, a position he has held since 1972. He is also project coordinator of the Police Human Relations and Community Relations Series Grant for the Texas Commission on Law Enforcement Standards and Education. He holds degrees of M.S. (1970) and Ph.D. (1972) from Michigan State University, and a B.A. (1964) in police administration and political science from Indiana University. He has served in several capacities in Naval intelligence operations and projects.

The March 1975 issue of *The Police Chief* contains a "Position Paper on Marijuana," in which its author, Chief E.M. Davis of the Los Angeles Police Department suggested that:

> Decriminalization of marijuana is tantamount to abandonment of our citizens, particularly our youth, to psychological, physiological and sociological destruction.[1]

The author's position was to retain existing marijuana statutes based upon his experience as a big-city police chief and after a review of research on marijuana.

It is the intention of the paper to present a different perspective by identifying the issues in a rational, reasonable context, rejecting the emotionalism and misinformation that have guided how some people have come to regard this drug as the "killer weed." If our focus is on youth and our prime beneficiary is society, how can we expect the millions of marijuana users or potential users in our society to put any faith in our criminal justice system or in the scientific community when the enforcement point of view is largely made up of emotion and much of the scientific evidence is used primarily as a support of our existing, hypocritical laws?

THE ENFORCEMENT QUESTION

Over the last 60 years, drug abuse has been primarily a law enforcement problem in the United States. Whether it ever should have been, or whether it should now be, has been a subject of hot debate in this country for most of this century. The reality is that as long as the use of drugs, and more specifically marijuana, is either covered by criminal law, civil statutes, or no law at all, policemen, physicians and others need to be involved. This belief suggests there is no simple solution—legal, medical or social—to drug abuse in our society. To pretend there is ignores facts, denies history, and further misleads a frightened and confused society.

Unfortunately, law enforcement has all too often independently opted for the simple solution—retaining the marijuana laws as they stand today. The justification for this consists largely of billowing statistics on numbers of drug arrests, questionable calculations of the street value of such seizures and dramatized stories of crackdowns on distributors and traffickers. This is indeed unfortunate when in the last 10 years society has shown in numerous polls a steadily increasing tendency to favor elimination or reduction of penalties for possession of marijuana. Nevertheless, more persons are being arrested for marijuana possession than ever before. In 1965 the number of persons arrested on marijuana charges was 18,185; in 1970 it was 188,682; and in 1973, when it made up 67 percent of all drug arrests, it was 420,700, an increase of 31 percent over the previous year's figure and more than double the number five years ago.[2]

But what do these data really mean? If the enforcement aspects are so successful, why do drugs remain so plentiful, and why does supply hardly ever seem to run more than a step or two behind demand? What this data should reflect is how applications of uneven, unjust laws contribute to the erosion of respect for all laws. The lifelong stigma of criminal sentences is a punishment out of all proportion in respect to personal use of marijuana and this stigma exerts more social damage than the "crime" it was meant to deter. Each day in the United States, society indulges

[1] Ed Davis, "Marijuana: A Position Paper," *The Police Chief*, March 1975, pp. 34-35.

[2] "News and Notes," *Crime and Delinquency*, 21, (April 1975), p. 187.

itself in just this kind of abuse. Last year about 420,000 people in the United States were arrested for marijuana violations. How many of these were forced into contact with the criminal law for simple possession? This writer's subjective feeling is, "too many."

In addition, the rationale for advocating legal deterrents to drug use suggests that the more easily accessible a drug becomes, the more freely people will use it, and the more often they will run into problems. For example, in testifying late last year before a Senate subcommittee on narcotics, Dr. Robert S. Dupont, director of the White House's Special Action Office for Drug Abuse Prevention, said that there is evidence that marijuana is harmful and that the removal of penalties would lead many persons incorrectly to conclude that the drug is safe. Though a prison sentence for marijuana is wrong, he said, the existing law making marijuana possession illegal "is c early a deterrent to large numbers of potential users."

The writer concurs with the point made by *The Con umers Union Report—Licit and Illicit Drugs* in 1 /72. As Consumers Union pointed out, no drug is safe or harmless to all people at all dosage levels or under all conditions of use. But we may be missing the point. Consumers Union and others are not recommending decriminalization or legalization solely on the belief that marijuana is "safe" or "harmless." Their philosophy arises out of the conviction that an orderly system of legal distribution and licit use will have many advantages for both users and nonusers over the present marijuana black market. In particular it will separate the channels of marijuana distribution from heroin channels and from the channels of distribution of other illicit drugs, thereby limiting the exposure of marijuana users to other illicit drugs, a factor not recognized by many of today's "hold the line" advocates. Even more important, if our focus is truly on youth, it will end the criminalization and alienation of young people and the damage done to them by arrest, conviction, and imprisonment for marijuana offenses.

Dr. Jerome H. Jaffee, a predecessor of Dr. Dupont, also testifying before the Senate subcommittee on narcotics, said there was no longer any justification for imprisonment for marijuana use. He went on to suggest the law serves to clutter the courts, divert the police from more important responsibilities, and enrich the legal profession. But, agreeing with Dr. Dupont, he added that the liberalization of marijuana laws would be interpreted by many as a sign that marijuana was safe, with a consequent increase in use.

Finally, in following this line of reasoning, a *Reader's Digest* article last October on "The Great Debate over 'Victimless' Crimes," interpreted the case against a change in our existing marijuana laws as follows:

> If the weed has such overwhelming popular appeal—and the National Commission on Marijuana Drug Abuse reported two years ago that 24 million Americans had used it at least once despite the legal hazards—what can we expect when the bars are lifted? Certainly millions more are likely to experiment . . .[3]

If a legal deterrent could suppress this use, then the above-stated rationale would remain intact and supportable. But in the case of marijuana, this deterrent effect has never materialized. And the notion that liberalizing the law would vastly increase marijuana usage has recently been rebutted by the Oregon decriminalization experience.[4]

Concerning the deterrent strategy, there is considerable evidence that "get tough" criminal laws and policies do not curb drug abuse, including marijuana use. The most recent example of which is the New York Drug Law. On September 1, 1973, a law went into effect in New York State which became the harshest drug law in any state of the nation. The law was based on former Governor Nelson Rockefeller's contention that illegal drug use and related crime in New York State (and particularly New York City) had reached such epidemic proportions that nothing less than stricter controls could reduce the problem. Recent research findings on the New York experience suggests the law is not deterring New Yorkers from using and selling drugs, including marijuana.[5] This view is strongly supported by the present New York governor in the February 5, 1975, issue of *Narcotics Control Digest*. Governor Hugh Carey reiterated the theme of what he

[5] Lawrence D'Amore, "An Empirical Study of New York State's 1973 Drug Law Through Police Attitudes and Impact Analysis," unpublished master's thesis, Sam Houston State University, 1975.

had said during his 1974 gubernatorial campaign, that the state's drug laws had to be revamped because "the law doesn't seem to be working and because it is not being enforced." [6]

Indeed, vigorous enforcement of marijuana possession laws may eventually make marijuana more generally available and encourage use, as Edward Brecher and the editors of *Consumer Reports* demonstrated in their report, *Licit and Illicit Drugs*, [7] and as has been confirmed by more recent evidence. [8] A related development is the possible negative side effects that occur from over-reliance on the criminal justice system to handle what is a broadly-based social phenomenon. Vigorous enforcement can raise the price because the publicity increases availability when rising prices attract additional entrepreneurs. The result may be an increase in the consumption of other, more dangerous drugs or the potential development of clandestine synthesis of THC (tetrahydrocannabinal, the active chemical ingredient in marijuana). A passage in a Drug Abuse Council pamphlet, entitled "A Perspective on 'Get Tough' Drug Control Laws," expresses a similar view:

> By enacting sweeping laws we often hope to reduce the supply of specific drugs. However, one unintentional effect of such a policy may be to lead drug users to use other, potentially more harmful drugs.
>
> The experience in this country has repeatedly taught us this principle.
>
> When we prohibited alcohol from being legally manufactured, massive increases took place in the use of illegally manufactured—more dangerous—alcohol. In Vietnam, when the Army effectively clamped down on marijuana use among soldiers, the nature of the demand for drugs was not affected, the reasons for using drug didn't change. The Drug Abuse Council supported eminent Harvard psychiatrist Dr. Norman Zinberg, in his travels in Vietnam, where he observed that the soldiers turned to another easily purchased, easily concealed substance —heroin.
>
> This does not imply that use of alcohol or marijuana was "good" or to be encouraged. It is rather to serve caution. We sought to control supply without effectively addressing demand—and what we got was much worse than what we had—and it wasn't what we expected. [9]

In regard to the notion that there would be a vast increase in the use of "pot" in the absence of arrests and criminal penalties, Oregon's decriminalization experience suggests the contrary. Oregon was the first state to act on the National Commission on Marijuana and Drug Abuse's recommendation to decriminalize the possession of marijuana for personal use. In October 1973, Oregon abolished criminal penalties for the possession of small amounts (one ounce or less) of marijuana, substituting civil penalties carrying a maximum fine of $100 but no jail term or criminal record. Violators are ticketed by police rather than formally arrested, and the courts have generally settled on a $25 fine. There is no recidivism provision; that is, like a parking ticket, the fine doesn't increase with multiple offenses.

To assess what changes have occurred in marijuana usage in Oregon during the first year of the new law, the Drug Abuse Council of Washington, D.C., was commissioned to do a survey consisting of personal interviews with 802 respondents—a cross-section of Oregon residents aged 18 and over and representing a balanced sample of the state's population.

Although the new law had been in operation for over a year, it appeared that there was no significant increase in marijuana use. Only 72 respondents (9 percent) reported currently using marijuana, and almost all of them reported that they had begun using marijuana before decriminalization. In fact, only four respondents (0.5 percent) reported that they had started smoking following decriminalization. Indeed, a large number (40 percent) of current users reported a decrease in use during the last year. Only 5 percent said they were smoking more. As Consumers Union recently noted: "This is certainly not the

'marijuana explosion' predicted by opponents of decriminalization."[10]

The aforementioned survey indicated lack of interest (53 percent) and possible health dangers (23 percent) as the reasons most frequently cited for not using marijuana. The possibility of legal prosecution (4 percent) and the lack of marijuana availability (2 percent) rank low as reasons for not currently using marijuana. In short, most respondents who were not smoking marijuana a year after decriminalization had enough persuasive reasons for refraining without the need to buttress their decisions with fear of criminal penalties.

J. Pat Horton, district attorney for the Eugene, Oregon, area, in a recent address to the third annual National Organization for the Reform of Marijuana Laws (NORML) convention, stated that decriminalization in Oregon has produced a comfortable transition with a widespread acceptance by the electorate. In a word, it is a success.

The prosecutor also made these significant points: (1) before decriminalization, police were spending a disproportionate amount of time chasing pot smokers who are an "easy arrest," and the change in laws has given them more time to pursue violent crimes and thus better serve the community; (2) one-third of the total number of cases awaiting trial have been removed from the docket, and the jail population is now made up of felons rather than young people whose marijuana-smoking "crime" was victimless; (3) the change in pot laws has removed the threat of a criminal arrest record that would affect a young person's future, preventing him from entering several of the professions, such as law or teaching. District Attorney Horton concludes by saying that "acceptance of the new legislation in Oregon has been overwhelmingly positive, not only with the young people, but especially among middle-aged people who have children in grade, junior, or the high school level."

It seems clear that marijuana has been established as the recreational drug of choice by a significant number of Americans, and that its prohibition has had little effect upon its availability and use. Other states should make a careful appraisal of what has happened in Oregon since decriminalization and consider moving in the same direction, as has been done in Alaska, California, Colorado, Maine and Ohio and as may soon be done in Minnesota, Hawaii, New York and the District of Columbia.

The Oregon experiment is also crucial to the federal position, since Dr. Dupont, chief White House spokesman on drugs, when addressing the NORML convention, told them the government wanted hard facts and results before following the Oregon lead with federal marijuana laws. Oregon's experience with the practical results of decriminalization suggests a federal consideration as well.

Marijuana decriminalization (the removal of all criminal penalties for marijuana possession and personal use) has been recommended by a number of national organizations besides Consumers Union. These other organizations include: American Bar Association, American Public Health Association, Governing Board of the American Medical Association, National Advisory Commission on Criminal Justice Standard and Goals, National Commission on Marijuana and Drug Abuse (The Shafer Commission), National Conference of Commissioners on Uniform State Law, National Council of Churches, and National Education Association.

Actually, Consumers Union recommends legalization, whereby the cultivation, processing, and orderly marketing of marijuana, subject to appropriate regulations, would be legalized. This would prevent the legal dilemma where purchase of a certain substance is noncriminal but sale of the same substance is a criminal offense. How can it be permissible to receive what is not permissible to give? As was recently noted in *Crime and Delinquency:*

> Last year a prostitute arrested and convicted in Albuquerque was defended by an American Civil Liberties Union lawyer who filed a motion for dismissal of the charges on the grounds that local police applied the law unequally: they arrested her but not her customers. On December 6, the jury, composed of six women and six men, returned to the court, after several hours of deliberation, with a six-to-six decision, and told the judge they were unable to reach agreement on whether men should be arrested for patronizing prostitutes. The judge declared a mistrial, and the district attorney's office indicated that the charges against the defendant would not be filed again. [11]

THE HEALTH QUESTION

Over the past few years, a number of government reports, medical studies and newspaper stories have appeared concerning marijuana. They have been contradictory, argumentative, indecisive and, on the whole, provide little assistance in formulating rational decisions. This is partially the fault of scientists and a society that expects so much of science. It is simply not reasonable to expect one definitive answer to all inquiries that would categorically label marijuana "good" or "bad." As Richard Christie noted in a recent issue of *New Times:*

> All drugs are damaging and lethal in sufficient amounts; aspirin, for example, causes massive bleeding from the intestines, irreversible kidney damage and toxic psychosis. [12]

Christie suggests that, used in moderation, marijuana will not make one impotent, damage one's memory, or kill. In fact, he explains, marijuana has many positive medical properties and, if further research is encouraged, might prove to be a wonder drug of the future.

The literature has consistently demonstrated that drugs are neither "good" nor "bad" but derive their values from individual and societal use and misuse. When it comes to marijuana, science is being compromised and scientists are seen as a suspect quasipolitical group. Many scientists have precipitated the controversy over marijuana by joining camps, by becoming missionaries for a cause, by seeking to con the public by outshouting the opposition. (And misconceptions about marijuana seem to be the loudest school of though on the subject today.) Naturally, research which implies that marijuana is "good" or "bad" deserves further study, but it should be noted that virtually all research to date has been based on finding harm. Dr. Thomas E. Bryant, president of the Washington-based Drug Abuse Council, noted the fallacy in this approach:

> We have sought to avoid our responsibility to suggest reasonable and rational approaches to the use of marijuana, waiting for positive proof of health hazard to bolster society's preconceived notions. I believe this is unwise.
>
> We possess biomedical proof that alcohol—the misuse and abuse of it—can injure the human liver, the brain, the kidney, the body's resistance to disease. But we do not jail those who simply use alcohol. We do not confuse potential health hazard with criminality. We attempt to educate people as to potential risks. [13]

An example that might strike closer to home for most people concerns the hot dog. Information reveals that deaths have been reported from sodium nitrite residue in food. Sodium nitrite, it should noted, is a color fixative found in nearly all hot dogs. The U.S. Food and Drug Administration has given top priority to the testing of sodium nitrite for cancer-causing effects and for mutagenic, teratogenic, subacute and reproductive effects. What if the research reports harm? Will our prison populations be increased with numerous life-long hot dog eaters?

Nevertheless, the mounting evidence that marijuana is not a benign weed has become a compelling argument for many against any change in the existing marijuana laws. [14] However, much of this evidence has been manipulated to support the current legal status and classification of marijuana. Let's review those scientific findings discussed in the March issue of *The Police Chief* that disclosed "the dire consequences of even infrequent marijuana use." The author of the article suggested that marijuana "has been shown to disintegrate mental and physiological functions, making the marijuana user's behavior and health undeniable social concerns, [16] even though commissions in 1894 (The Indian Hemp Drugs Commission Reports), 1931 (The Panama Canal Zone Military Investigations), 1944 (The La Guardia Committee Report), 1968 (The Baroness Woolton Reports), and the contemporary Le

[16] Davis, p. 35.

Dain Commission in Canada and the United States National Commission on Marijuana and Drug Abuse substantially agree that the "experimental," "intermittent," or "moderate" use of marijuana has not proven to be injurious physically or psychologically to the human body.

The first research noted by Chief Davis was the 1971 report by Dr. Harold Kolansky and William T. Moore in which they concluded:

> It is our impression that our study demonstrates the possibility that moderate to heavy use of marijuana in adolescents and young people without predisposition to psychotic illness may lead to ego decompensation ranging from mild ego disturbance to psychosis. [17]

Kolansky and Moore are convinced the chronic smoking of marijuana produces that pattern of behavior known as the "amotivational syndrome" and suggest the implications of organic brain damage.

The allegations of an "amotivational syndrome" and of brain damage are challenged by University of Pennsylvania scientists and U.C.L.A. scientists. [18] A team of researchers headed by Dr. Igor Grant at the University of Pennsylvania administered a battery of the most sensitive neuropsychological tests now available and numerous measures specifically designed to reveal brain damage to 29 marijuana smokers and 29 non-smokers. They found essentially no difference between the two test groups.

Dr. Norman Q. Brill and his associates at the UCLA School of Medicine conducted a longitudinal study (1970-1972) on six groups of students: those who had never smoked marijuana; those who began smoking during the study; those who increased use during the study; those whose usage remained stable throughout the study; those who decreased use; and those who had quit marijuana altogether. This team of researchers checked college grades and other factors for evidence of the "amotivational syndrome" or brain damage. They concluded that "the dire consequences that were predicted have not materialized."

[18] For a discussion of these studies, refer to *Consumer Reports*, March, 1975, pp. 143-149.

Also quoted in the Davis article is the 1973 book, *Marijuana: Deceptive Weed* by Dr. Gabriel Nahas:

> The most serious vascular complications allegedly associated with the smoking of cannibis extracts has been described as progressive obliterative arterial inflamation of the lower extremities of young males who were heavy smokers. [19]

Unfortunately, many feel Dr. Nahas is not the best source to cite in proof of anything. For years he has crusaded against marijuana, and has tended to accept uncritically almost any anti-marijuana claims that support the position that persons who use it should go to jail. His 1973 book has been denounced in the scientific community as distorted, inaccurate propaganda. In a review of the book by Barry Liskow, M.D., in the *Journal of the American Medical Association*, it was noted that:

> To support his essentially moralistic viewpoint that marijuana is evil, examples of biased selection and interpretation of studies and omissions of facts abound in every chapter . . . so much of the volume is distorted that one must know the marijuana literature in order to judge the accuracy of each statement. [20]

More recently, Dr. Nahas has been criticized for his finding that smoking marijuana lowers the body's immunity to disease. Dr. Nahas' methodology and his dramatic manner of releasing the findings to the public prior to its review by the scientific community have been severely criticized and suggest the possibility that an unacceptable degree of bias was present during the research. Similar research replicated by others does not concur with the Nahas findings. [21]

Another work cited by Chief Davis was that conducted by Dr. Morton Stenchever of the University of Utah College of Medicine in which it was concluded that smoking marijuana increases the likelihood of birth defects and of

[19] Gabriel G. Nahas, OBE, M.D., Ph.D., "Marijuana: Toxicity, Tolerance, and Therapeutic Efficiency," based on *Marijuana—Deceptive Weed*, (New York: Raven Press, 1973) p. 112.

[20] Barry Liskow, M.D., *Journal of the American Medical Association*, April 30, 1973, p. 631.

[21] Brecher, et al, *Consumer Reports*, March 1975, p. 148.

hereditary diseases. It should be noted that the Stenchever report is being heavily challenged by contradictory evidence. In fact, the "box score" on studies of chromosome damage from marijuana is now 1:5:1; that is, there is one study (Dr. Stenchever's) "for" marijuana use being related to chromosome breakage, five studies "neutral" in finding no relationship in humans, and one study (the Jamaica Study) using the quivalent of 27 joints of American-grade marijuana a day for an average of 17 years finding a lower rate of chromosome damage in users than in a matched group of nonusers. [22]

Edward Brecher and the editors of *Consumer Reports* suggest an interesting thought:

> Out of all of those many studies (and others not reviewed here), a general pattern is beginning to emerge. When a research finding can be readily checked—either by repeating the experiment or by devising a better one—an allegation of adverse marijuana effects is relatively short-lived. No damage is found—and after a time the allegation is dropped (often to be replaced by allegations of some other kind of damage due to marijuana.) [23]

After reviewing the medical research cited by Chief Davis, a comment is in order. The research studies should not be rejected out of hand; they simply should be greeted with cautious skepticism until the research can be replicated by researchers whose personal commitments and methodological soundness are less likely to influence the outcome of their experiments. Marijuana should not be considered "harmless," but those who use it should not be subjected to criminal penalties. Prison is a proven health hazard.

CONCLUDING REMARKS

It has become readily apparent that along with the passage of time comes an increase in drug abuse. As a deeply concerned society we have attempted to stop the epidemic in order to prevent future Americans from becoming hopelessly lost to drugs. Laws and the criminal justice system have been our primary vehicle to accomplish this end. However, it is becoming more apparent that the debilitating effect of laws is, at times, more detrimental to the individual than the drugs themselves. [24] This has been especially noted in the case of marijuana, in light of the constant debate over its inherent harm. Yet marijuana is included on most lists of restricted substances. New York, for example, lists the possession of more than one-quarter ounce of marijuana as a felony, punishable by up to seven years incarceration.

Since "clear and present danger" has not formed the basis for making marijuana illegal, then what has? Deterrence, morality, and health have all been given as arguments, but these arguments have of late received little support. Much of the research on marijuana is an excellent example of a frantic attempt to attach some harm to the plant in order to shore up some gaping holes in our intent to protect the victim. Have we not, in fact, dealt the victim a double blow, by subjecting him to twice as much misery, all in the name of humanitarianism? In the case of marijuana, how do we justify the thousands upon thousands who are being run through the criminal justice system yearly, subjected to its negative ramifications?

While Americans sit back and pretend to be oblivious to time, the assembly line continues. However, it is becoming alarmingly clear that we can no longer wait for future proof and support for our present policy. We have to act now, before the system and society suffer irreversible damage. We have to take another hard look and change our direction.

The Oregon and New York experiences afford just that opportunity. They provide excellent models that may be able to support one point of view or the other on the effect of laws on subsequent behavior, for the law cannot be either far ahead nor lag far behind the moral dictates of its society. [25] This is not only important now, but necessary to guide out future policy—that is, if our intention is to develop a viable solution to the drug problem and not to maintain the status quo as a monument to tenacity.

BUREAUCRACY AND MORALITY: AN ORGANIZATIONAL PERSPECTIVE ON A MORAL CRUSADE*

DONALD T. DICKSON
University of Michigan

Utilizing an organizational perspective, the impact of the Narcotics Bureau upon the enactment and expansion of narcotics legislation is examined as part of a larger discussion of the importance of bureaucratic and environmental factors in determining the course of moral crusades and social movements. While there is no attempt to refute Becker's "moral entrepreneur" explanation of the Marihuana Tax Act, certain inconsistencies and apparent misinterpretations are pointed out, and an alternative explanation is explored. It is argued that similar to the earlier expansion of narcotics legislation, the Marihuana Tax Act was the result of a bureaucratic response to environmental pressure--that the Narcotics Bureau, faced with a non-supportive environment and a decreasing budgetary appropriation that threatened its survival, generated a crusade against marihuana use which resulted in the passage of the act and the alteration of a societal value.

The occurrence of a moral commitment within a bureaucratic setting is not an uncommon phenomenon, especially in our federal bureaucratic system. Examples abound, including the Federal Bureau of Investigation, the Bureau of Narcotics, the Selective Service System, the Central Intelligence Agency, the Internal Revenue Service, and--on a different scale-- the Departments of State and Justice. In fact, one could argue that some sort of moral commitment is necessary for the effective functioning of any bureaucratic body. Usually this moral commitment is termed an "ideology" and is translated into goals for the bureaucracy. Anthony Downs suggests four uses for an ideology: 1) to influence outsiders to support the bureau or at least not attack it; 2) to develop a goal consensus among the bureau members; 3) to facilitate a selective recruitment of staff, that is, to attract those who will support and further the goals of the bureau and repel those who would detract from those goals; and 4) to provide an alternative

* The author gratefully acknowledges the assistance of Professors John Lofland and Leon Mayhew for both their encouragement and their critical comments on previous drafts, and of Professor Albert J. Reiss, Jr., whose several suggestions strengthened the focus of the paper.

in decision making where other choice criteria are impractical or ambiguous.[1]

While most if not all bureaucracies attempt to maintain this moral commitment or ideology for the above mentioned reasons, some go further and initiate moral crusades, whereby they attempt to instill this commitment into groups and individuals outside their bureaus. The Narcotics Bureau in its efforts to mold public and congressional opinion against drug use is one bureaucratic example, the F.B.I. in its anti-subversive and anti-communist crusades another.[2] The question then becomes, under what conditions does this transference of ideology from the bureaucracy to its environment or specific groups within its environment take place? Howard S. Becker supplies one answer to this, suggesting that this is the work of a "moral entrepreneur," either in the role of a crusading reformer or a rule enforcer.[3] In either role, the moral entrepreneur as an individual takes the initiative and generates a "moral enterprise."

This explanation has appeal. It is reminiscent of Weber's charismatic leader, and can be used to account for the genesis of most moral crusades and entire social movements. Further, it is very difficult to refute. A complete refutation would not only have to indicate an alternative, but also demonstrate that the bureaucratic leader is not a "moral entrepreneur"—is not a major factor in this transference of ideology. The purpose of this paper is to accomplish the former only—to provide an equally if not more persuasive alternative based upon organizational research and theory. The difficulty in separating the two approaches is similar to the historian's dilemma of whether the historical incident makes the man great or the great man makes the historical incident. Here the question becomes: does the moral crusader create the morally committed bureaucracy or is he a product of that bureaucracy?

The difference between the moral entrepreneur situation and a situation wherein the moral crusade results primarily from a bureaucratic response to environmental factors, is that in the latter instance moral considerations are secondary to bureaucratic survival and growth, while in the former instance moral considerations are primary. Further, the end results of either of these crusades may vary considerably since each is in response to different stimuli. Other conditions being equal, the bureaucratic crusade will continue only as long as bureaucratic considerations dictate, while the moral crusade will continue as long as the individual moral crusader's zealotry requires.

In this paper, the work of the Bureau of Narcotics and its former commissioner, Harry J. Anslinger, are examined in light of Becker's conclusion that Anslinger was a moral entrepreneur who led his Bureau on a moral crusade against the use of marihuana, culminating in an Anslinger-instigated publicity campaign that persuaded first the general public and then Congress that marihuana use was a vicious habit that should be outlawed and severely penalized.[4] Given the short time span Becker chose and his individualized focus, this seems to be a logical explanation of the Bureau's efforts. Given a broader organizational perspective,

[1] Anthony Downs, *Inside Bureaucracy*, Boston: Little, Brown, 1967.

[2] Fred J. Cook, *The FBI Nobody Knows*, New York: Macmillan, 1964.

[3] Howard S. Becker, *The Outsiders: Studies in the Sociology of Deviance*, New York: Free Press, 1963, esp. pp. 147-163.

[4] Becker, *op. cit.*, pp. 135-146.

however, the passage of the Marihuana Tax Act and the Bureau's part in that passage appear to be only one phase of a larger organizational process, that of environmental change. Using this focus it is necessary first to examine briefly the relationships between organizations and their environments with special emphasis on adaptation and to discuss a special case of these organizations, the public bureaucracy. The results of this analysis are then applied to the Narcotics Bureau and narcotics legislation in conjunction with an examination of Becker's findings. Finally, the implications of this analysis are examined.

Organizations and Environments

One on-going problem an organization must cope with is its relationship with its environment.[5] For the incipient organization this means an initial decision as to the type of relationship it desires to establish with its environment, an assessment of the type of relationship it is able to establish, and the working-out of some acceptable compromise between the two. For the established organization, this means maintaining this relationship either through normal boundary defenses or through other means, or establishing a more favorable one. The consequences of these—decision, assessment, and compromise—for the organization are far reaching; for if the organization wishes to grow and expand or even continue to exist, it must come to terms with its environment, and where necessary insure acceptance by it. No doubt a few organizations with substantial resources may exist for some time in a hostile environment, but the more normal case seems to be that an organization must at least establish an environmentally neutral relationship if not an environmentally supportive one.

Of course when the organization is in its incipient stages, the problems are magnified. Environmental support is more necessary, environmental hostility more of a threat to survival. Usually the organization will adapt to the demands of the environment, but occasionally Starbuck's observation, "Adaptation is an obvious precondition of survival,"[6] is ignored and the organization either chooses to attempt to alter these demands, or chooses to ignore them. Not uncommonly such a decision results in drastic consequences for the organization. The Women's Christian Temperance Union failed in its efforts to gain wide acceptance for its programs and has only been able to continue with its operations severely curtailed. The counseling organization at Western Electric that grew out of the Hawthorne Studies felt it could not function properly if it adapted to the requirements of the larger organization and was eventually discontinued, though adaptation was part of a more complex problem.[7]

An organization may attempt to alter the demands of its environment when such an attempt would not draw too

[5] See especially Peter M. Blau and W. Richard Scott, *Formal Organizations: A Comparative Approach*, San Francisco: Chandler, 1962, pp. 222-254; William H. Starbuck, "Organizational Growth and Development," in James G. March, editor, *Handbook of Organizations*, Chicago: Rand McNally, 1965, pp. 450-533; and Phillip Selznick, *TVA and the Grass Roots: A Case Study in the Sociology of Formal Organizations*, Berkeley: U. of California, 1949.

heavily upon the organization's resources, or when the alternative, adaptation to the environment, would mean a substantial loss to the organization or perhaps dissolution. Selznick's study of the TVA and Clark's study of adult education in California are examples of organizations which chose to try to alter their environments rather than adapt to them.[8] In Selznick's case, the organization itself was altered through these efforts. Clark argues that a number of organizations undergoing a similar value transformation may alter the values of the society in which they exist. He focuses on what he calls "precarious values" and discusses under what conditions these may be changed.

It is clear then that some attempts to alter the environment succeed and others fail. Why is this so? An organization's environment may be very simple or highly complex, but in general every environment when viewed as a system will contain the following elements: 1) pragmatic day-to-day decisions categorized as policies or practices; 2) long-range goals; 3) a clearly defined normative system; and 4) a generalized value system.[9]

If placed in a hierarchy in this order, each succeeding category would influence its predecessors. That is, values in the environment are in part the basis of the other three, norms influence both goals and policies and practices, and so forth. Further, any member of any category may be strongly or weakly held. Some of the reasons for weakness are outlined by Clark—that is, not legitimated, undefined, or not widely accepted.[10]

Any organization that chooses to alter its environment will have to make a decision as to where along the hierarchy to focus its efforts. Attempts to alter some policy of an environmental element may be more successful and less costly than attempts to alter some value of an environment, but the latter might result in a long-term change while the former might be the more unstable—since the goals, norms, and values underlying it were not changed. A change in the value system, where possible, would eventually result in changes throughout the system.

Organizational attempts at environmental change will depend upon a number of factors:

(a) The necessity for change—is environmental change a prerequisite for organizational survival, or is it not necessary but merely desirable?

(b) The amount of resources available—can the organization afford to attempt the change effort?

(c) The size and complexity of the environment—would change be necessary in only a small element in the environment, or would a whole complex of elements need to be altered?

(d) The extent to which change must take place—is it necessary to change only some environmental policy or practice, or is it necessary to totally revamp the environmental structure from values on down?

(e) Is the policy, goal, norm, or value to be changed, strongly or weakly held—is it firmly entrenched and legitimated, or is it "precarious?"

---

[9] Adapted from Talcott Parsons, "An Outline of the Social System," in Talcott Parsons, Edward Shils, Kasper D. Nagele, and Jesse N. Pitts, editors, *Theories of Society: Foundations of Modern Sociological Theory*, New York: Free Press, Vol. I, pp. 30-79.

[10] Clark, *op. cit.*, pp. 328-329.

It is clear, then, that when one is talking about organizations changing their environment, one should make explicit what elements in the environment are being focused upon, how extensively they are being changed, and how strongly held they were to begin with. Clark's adult education study was concerned with weakly-held values. The W.C.T.U. as discussed by Gusfield was concerned with strongly-held values and this may in some degree account for its failure.[11] In his discussion of the Marihuana Tax Act as a "moral enterprise," Becker was concerned with a weakly-held value, as will be shown, though he did not discuss it in these terms.

A Case Study: The U.S. Bureau of Narcotics

The Bureau as a Public Bureaucracy

This case study will be limited to an analysis of the policies of the Narcotics Bureau and the effects of these policies on salient elements of its environment. This approach is preferable to a more general organizational analysis of the Bureau—examining its structure, recruitment, boundary defenses, and myriad environmental transactions—because in these respects the Bureau is not unlike most other governmental bureaucracies. Further, in its efforts to mold public opinion in support of its policies, it is not unlike many organizations, especially those with a moral commitment. The W.C.T.U. carried on the same sort of campaign—including propaganda, attacks on its critics, and legislative lobbying. What makes the Bureau unique from many other organizations which have tried to influence their environments is that the campaign was and is carried out by a governmental organ.

Several ramifications of this difference are immediately apparent. There is the element of legitimation. The public is far more likely to accept the pronouncements of a federal department than a voluntary private organization. There is the element of propaganda development. Due to its public nature, a federal department is more skilled in dealing with the public and in preparing propaganda for public consumption. There is the element of communication. A federal organization has far more means available for the dissemination of the information than a private one—by press releases, publications, or lectures and speeches—and it is likely to have representatives based in major population centers to disseminate the information. There is the element of coercion. A federal department can bring a wide range of pressures to bear on its critics.

Finally, at a different level, a federal bureau differs in the area of survival. Private organizations have considerable control over their future. They may decide to expand, continue as before, disband, merge, alter their aims, or reduce their activities. The attitude of their environments will have great bearing on this decision, to be sure, but the final decision rests with the organization. A federal department may go through any of the above stages, but frequently the final decision does not rest within the department but with the congressional, executive, or judicial body that created it. A bureau created by congressional enactment will continue to be unaltered except by internal decision only as long as Congress can be convinced that there is no need to

[11] Joseph R. Gusfield, *Symbolic Crusade: Status Politics and the American Temperance Movement*, Urbana: U. of Illinois, 1963.

alter it. Although there may be some question of degree, there is no question that public opinion will be a major factor in the congressional decision.

Therefore the federal department must convince the public and Congress: 1) that it serves a useful, or if possible, a necessary function; and 2) that it is uniquely qualified to do so. The less the department is sure of its future status, the more it will try to convince Congress and the public of these.

Background to Environmental Change: The Emergence and Development of the Bureau

In the late nineteenth and early twentieth centuries, narcotics were widely available: through doctors who indiscriminately prescribed morphine and later heroin as pain killers, through druggists who sold them openly, or through a wide variety of patent medicines.

> The public . . . (in the early twentieth century) had an altogether different conception of drug addiction from that which prevails today. The habit was not approved, but neither was it regarded as criminal or monstrous. It was usually looked upon as a vice or personal misfortune, or much as alcoholism is viewed today. Narcotics users were pitied rather than loathed as criminals or degenerates . . . .[12]

In 1914 Congress through the passage of the Harrison Act attempted to exert some control over the narcotics traffic. This act remains today the cornerstone of narcotics legislation. Rather than eliminate the use of narcotic drugs, the act was passed in order to honor a previous international obligation stemming from the Hague Convention of 1912, and to control the criminal encroachments into the drug trade. Nowhere in the act is there direct reference to addicts or addiction.

> Its ostensible purport appeared to be simply to make the entire process of drug distribution within the country a matter of record. The nominal excise tax (one cent per ounce), the requirement that persons and firms handling drugs register and pay fees, all seemed designed to accomplish this purpose. There is no indication of a legislative intention to deny addicts access to legal drugs or to interfere in any way with medical practices in this area.[13]

Medical practices were specifically exempted:

> Nothing contained in this section . . . shall . . . apply . . . [to the dispensing or distribution of any drugs mentioned . . . to a patient by a physician, dentist, or veterinary surgeon registered under section 4722 in the course of his professional practice only.[14]

Thus, the act did not make addiction illegal. All it required was that addicts should obtain drugs from registered physicians who made a record of the transaction.

A narcotics division was created in the Internal Revenue Bureau of the Treasury Department to collect revenue and enforce the Harrison Act. In 1920 it merged into the Prohibition Unit of that department and upon its creation in 1927 into the Prohibition Bureau. In 1930 the Bureau of Narcotics was

formed as a separate Bureau in the Treasury Department.

Legitimation: The Process of Changing an Environment

After 1914 the powers of the Narcotics Division were clear and limited: to enforce registration and record-keeping, violation of which could result in imprisonment for up to ten years, and to supervise revenue collection. The large number of addicts who secured their drugs from physicians were excluded from the Division's jurisdiction. The public's attitude toward drug use had not changed much with the passage of the Act—there was some opposition to drug use, some support of it, and a great many who did not care one way or the other. In fact, the Harrison Act was passed with very little publicity or news coverage.'[15]

Thus at this time the Narcotics Division was faced with a severely restricted scope of operations. Acceptance of the legislation as envisioned by Congress would mean that the Division would at best continue as a marginal operation with limited enforcement duties. Given the normal, well-documented bureaucratic tendency toward growth and expansion, and given the fact that the Division was a public bureaucracy and needed to justify its operations and usefulness before Congress, it would seem that increased power and jurisdiction in the area of drug control would be a desirable and, in fact, necessary goal. Adaptation to the Harrison Act limitations would preclude attainment of this goal. Operating under a legislative mandate, the logical alternative to adaptation would be to persuade the Congress and public that expansion was necessary and to extend the provisions of the Harrison Act.

Also at this point, the public's attitude toward narcotics use could be characterized as only slightly opposed. Faced with a situation where adaptation to the existing legislation was bureaucratically unfeasible, where expansion was desirable, and where environmental support—from both Congress and the public—was necessary for continued existence, the Division launched a two-pronged campaign: 1) a barrage of reports and newspaper articles which generated a substantial public outcry against narcotics use, and 2) a series of Division-sponsored test cases in the courts which resulted in a reinterpretation of the Harrison Act and substantially broadened powers for the Narcotics Division.[16] Thus the Division attained its goals by altering a weakly-held public value regarding narcotics use from neutrality or slight opposition to strong opposition, and by persuading the courts that it should have increased powers.[17]

Though the resources of the Division were limited, it was able to accomplish its goals because it was a public bureaucracy and as such had the aforementioned advantages which arise from that status. Since the ability to develop

[15] The *New York Times Index* for 1914 lists only two brief articles on the federal legislation, one in June and one in August when the Senate adopted the Act. It should be noted that there was also discussion of a broadened New York State narcotics act and articles publicizing the arrest of violators of an earlier New York statute at that time.

[16] King, *op. cit.*, pp. 737-748; Lindesmith, *The Addict . . .*, pp. 5-11.

[17] In focusing on judicial expansion of existing legislation rather than on further Congressional action, the Division was able to avoid the lobbies of doctors and pharmacists who strongly opposed the Harrison Act in the first place and who successfully lobbied for the medical exception. See the *New York Times*, June 28, 1914, Sec. II, p. 5.

propaganda and the means to communicate it were inherent in this status, as was the propensity by the public to accept this propaganda, environmental support could be generated with less resource expenditure. Further, the Division as a public bureaucracy would be assumed to have a familiarity with governmental processes not only in its own executive branch, but also in the congressional and judicial branches as well. This built-in expertise necessary for the Division's expansion might be quite costly in time and resources for the private bureaucracy but again was inherent in the Division's status.

One typical example of the public campaign was a report cited and relied upon by the Narcotics Division for some years. It is an interesting combination of truth, speculation, and fiction, a mix which the Division and the Bureau which succeeded it found to be an effective public persuader for many years. In a report dated June, 1919, a committee appointed by the Treasury Department to study narcotics reported *inter alia* that there were 237,665 addicts in the United States treated by physicians (based upon a 30 percent response by physicians queried), that there were over one million addicts in the country in 1919 (a figure based upon a compromise between projections based on the percentage of addicts in Jacksonville, Florida in 1913 and New York City in 1918), that there was extensive addiction among children, that narcotics were harmful to health and morals, and that they were directly connected with crime and abject poverty. Among the physical effects noted were insanity; diseased lungs, hearts, and kidneys; rotting of the skin; and sterility.[18]

[18] U.S. Treasury Department, *Report of Special Committee to Investigate the Traffic in Narcotic Drugs* (April 15, 1919).

This "scholarly report" is an interesting example of the propaganda effort, for it appears to the casual reader to be credible (especially given its source), and contains charges which seem to be designed to generate widespread public disgust toward narcotics users and support for the Division and its efforts. Many of the same charges were applied to marihuana when the Bureau campaigned against its use.

While the Division was carrying out its public campaign, it was also busy in the courts. Between 1918 and 1921 the Narcotics Division won three important cases in the Supreme Court and persuaded the Court, essentially, to delete the medical exception from the Harrison Act thereby broadening its position as an enforcement agency. In the first case, *Webb v. United States*,[19] the court held that a physician could not supply narcotics to an addict unless he was attempting to cure him and in so doing made illegal the work of a large number of physicians who were supplying addicts with drugs under the registration procedures of the Harrison Act. This decision was supported in the two following cases: *Jin Fuey Moy v. United States*[20] and *United States v. Behrman*.[21] In *Behrman*, it was held that physicians could not even supply drugs to addicts in an attempt to cure them. The medical exception was nullified. The cases were skillfully chosen and presented to the court. Each was a flagrant abuse of the statute—in *Webb*, the physician's professional practice seemed to be limited to supplying narcotics to whoever wanted them. In the other two cases, the physicians supplied huge amounts of drugs over short periods of time to a small number of patients—patently for resale at a later

[19] 249 *U.S.* 96 (1918).
[20] 254 *U.S.* 189 (1920)
[21] 258 *U.S.* 280 (1921).

time. Yet the Division did not argue for and the court did not rule on the cases as violations of the statute as it was intended, but instead regarded all of these as normal professional practices by physicians and held that, as such, they were illegal.

Three years after *Behrman*, the court somewhat reversed itself in *Linder v. United States*.[22] Here the doctor supplied a small dosage to a patient who was a government informer. The court rejected the government's case in a unanimous opinion, holding:

> The enactment under consideration . . . says nothing of "addicts" and does not undertake to prescribe methods for their medical treatment, and we cannot possibly conclude that a physician acted improperly or unwisely or for other than medical purposes solely because he has dispensed to one of them, in the ordinary course and in good faith, four small tablets of morphine or cocaine for relief of condition incident to addiction.[23]

The court went on to warn the Division:

> Federal power is delegated, and its prescribed limits must not be transcended even though the ends seem desirable. The unfortunate condition of the recipient certainly created no reasonable probability that she would sell or otherwise dispose of the few tablets entrusted to her and we cannot say that by so dispensing them the doctor necessarily transcended the limits of that professional conduct with which Congress never intended to interfere.[24]

Though *Linder* might have reintroduced doctors into the area, the Narcotics Division successfully prevented this by refusing to recognize *Linder* in its regulations, thus creating a situation where few would accept the risks involved in testing the doctrine, and by launching an all-out campaign against doctors—closing the remaining narcotics clinics, imprisoning rebellious doctors, and publicizing records and convictions of physician addicts.[25]

Rufus King comments on this period of growth:

> In sum, the Narcotics Division succeeded in creating a very large criminal class for itself to police . . . instead of the very small one Congress has intended.[26]

The success of this campaign was reflected not only in the increased number of potential criminals, but in financial growth as well. Between 1918 and 1925, the Bureau's budgetary appropriations increased from $325,000 to $1,329,440, a rise of over 400 percent.[27]

The Marihuana Tax Act of 1937: A Bureaucratic Response

There are many other examples of efforts by the Bureau to create and maintain a friendly and supportive environment—through other publicity campaigns, through lobbying in Congress, and through continued and diligent attacks upon and harassments of its critics—which have been amply chronicled by others, although not as part of an organizational process.[28]

[25] King, *op. cit.*, pp. 744-745; "Note: Narcotics Regulation . . .," pp. 784-787. The Bureau's yearly report *Traffic in Opium and Other Dangerous Drugs* carries numerous reports of addiction among physicians during this period. See also Lindesmith, *The Addict . . .*, pp. 135-161.

[26] King, *op cit.*, p. 738.

[27] See Table 1. During this period, two pieces of legislation were enacted that affected the Bureau's scope of operation: The Revenue Act of 1918, and the Narcotic Drug Import and Export Act of 1922.

[28] Along with the works of Lindesmith and King above, see the Bureau's publication, *Comments on Narcotic Drugs* (undated), the Bureau's reply to the A.B.A. — A.M.A. committee interim report "Narcotic

The Bureau's efforts to induce passage of the Marihuana Tax Act deserve special mention, however, in light of Becker's finding that the legislation was the result of what he terms a "moral enterprise."[29] Becker concludes that Narcotics Commissioner Anslinger and his Bureau were the motive forces behind the original 1937 legislation and the increasingly severe penalties which have since been imposed. This is readily conceded.[30] But he argues that the motivation behind this desire for the marihuana legislation was a moral one. He presents a picture of a society totally indifferent to the use of marihuana until Anslinger, in the role of a moral entrepreneur, "blows the whistle" on marihuana smoking. Again, it is conceded that Commissioner Anslinger throughout his long career with the Narcotics Bureau has opposed drug and narcotics use on moral grounds. This theme runs consistently through his writings.[31] What Becker ignores is that Anslinger was also a bureaucrat and thus responsive to bureaucratic pressures and demands as well. The distinction between these roles is difficult to make but it is fundamental in analyzing the legislation.

To understand whether the marihuana legislation was to a large degree the result of bureaucratic processes similar to the Bureau's expansion after the Harrison Act or whether it was instead the result of an individual's moral crusade, it is necessary to focus not only on the individual, as Becker has done, but upon the Bureau and its environment during this period. Through this method, certain parallels with the post-Harrison Act period become evident.

The Marihuana Tax Act which imposed a prohibitively costly tax on the sale of marihuana was passed by both houses of Congress with practically no debate[32] and signed into law on Au-

---

Drugs." This publication was described by DeMott as "perhaps the crudest publication yet produced by a government agency . . ." and was later taken out of print. Benjamin DeMott, "The Great Narcotics Muddle," *Harpers Magazine*, March, 1962, p. 53. For a vivid account of the Bureau's methods with its critics, see Lindesmith, *The Addict . . .*, pp. 242-268.

[29] Becker, *op. cit.*, p. 135.

[30] It seems clear from examining periodicals, newspapers, and the *Congressional Record* that the Bureau was primarily responsible for the passage of the act, though Becker's almost exclusive reliance on the claims of the Bureau in its official publication *Traffic in Opium and Other Dangerous Drugs* does not seem warranted given the previously discussed tendency of a public bureaucracy to emphasize its necessity and successful functioning.

[31] See especially Harry Anslinger and Will Osborne, *The Murderers: The Story of the Narcotic Gang*, New York: Farrar, Straus, 1961, Chap. 1; and also the other writings of the Commissioner, among them: Harry Anslinger and William F. Tompkins, *The Traffic in Narcotics*, New York: Funk and Wagnalls, 1953; and Harry Anslinger and J. Gregory, *The Protectors: The Heroic Story of the Narcotic Agents, Citizens and Officials in Their Unending, Unsung Battle Against Organized Crime in America*, New York: Farrar, Straus, 1964.

[32] This is not unusual in the area of moral legislation, as Becker points out. Furthermore, unlike non-criminal legislation where the losing party still has a variety of remedies available to challenge the law, few remedies are available to those who are legislated against in criminal areas. Legitimate lobbies cannot be formed and test cases are dangerous.

However, Becker gives the impression that the only opposition to the marihuana legislation came from hemp growers, and that no one argued for the marihuana users (*Outsiders*, pp. 144-145). This is erroneous. The legislative counsel for the A.M.A., Dr. William C. Woodward, challenged the Bureau's conclusions that marihuana use was harmful to health and widespread among children, and demanded evi-

gust 2, 1937. While Becker seems to argue that the Bureau generated a great public outcry against marihuana use prior to the passage of the Act, his data supporting this argument are misleading if not erroneously interpreted.[83] While marihuana use seems to have increased since the early 1930's, there appears to have been little public concern expressed in the news media, even in 1937. Few magazine articles were written about the subject, and if the *New York Times* is any indication, newspaper coverage was also slight.[84] The final presidential signing of the act received minimal coverage from the *Times*.[85] In short, rather than the Bureau-generated public turmoil that Becker indicates, it seems that public awareness of the problem, as well as public opposition to it, was slight.

While it cannot be shown conclusively that the Marihuana Tax Act was the result of a bureaucratic response to environmental conditions, similarities between this period and the post-Harrison Act period are evident. Marihuana opposition, like narcotics opposition before, appears to have resulted from a weakly held value. In both situations, publicity campaigns were launched. In both cases, one through the courts and one through Congress, efforts were exerted to expand the power of the Bureau. In both cases, there were substantial numbers of potential criminals who could be incorporated into the Bureau's jurisdiction.

Perhaps more convincing than similarities are the budgetary appropriations for the Bureau from 1915 to 1944 presented in Table 1. In 1932, when the Bureau's appropriations were approaching an all time high, the Bureau stated:

> The present constitutional limitations would seem to require control measures directed against the intrastate traffic of Indian hemp (marihuana) to be adopted by the several State governments rather than by the Federal Government, and the policy has been to urge the State authorities generally to provide the necessary

---

dence to support these assertions. While he was not representing the marihuana users, he was certainly arguing their case and questioning the need for the legislation. See *Taxation of Marihuana*, Hearings Before the Committee on Ways and Means of the House of Representatives, 75th Congress, 1st Session, on H.R. 6385, April 27-30 and May 4, 1937, esp. p. 92. It should be noted that this opposition was ignored by the committee members.

[83] Becker's data consist of a survey of the *Readers Guide to Periodical Literature*, in which he found that no magazine articles appeared before July, 1935; four appeared between July, 1935 and June, 1937; and 17 between July, 1937 and June, 1939 (*Outsiders*, p. 141). While this is correct, it is misleading due to the time intervals used. The four articles in the second period all appeared before 1937, no articles appeared in the five months preceding the House committee hearings on the act in late April and early May, one appeared in July, 1937, and the rest appeared after the bill was signed into law on August 2, 1937. In short, of the articles which Becker asserts provided the impetus to Congressional action, only one appeared in the seven months of 1937 before the marihuana bill was signed into law.

[84] A survey of the *New York Times Index* shows: one article discussed marihuana in 1936 and eight discussed the subject between January and August 1937. There were no articles about or coverage of any of the Congressional hearings. Contrary to Becker's assertion, perhaps the most significant thing about this period was the lack of publicity involved.

[85] The total coverage by the *New York Times* consisted of a four line AP dispatch near the bottom of page four, titled "Signs Bill to Curb Marihuana" and reading in its entirety: "President Roosevelt signed today a bill to curb traffic in the narcotic, marihuana, through heavy taxes on transactions." (August 3, 1937.)

TABLE 1
BUDGETARY APPROPRIATIONS FOR THE U.S. NARCOTICS BUREAU (1915-1944)*

Year**	Total Appropriation
1915	$ 292,000
1916	300,000
1917	325,000
1918	750,000
1919	750,000
1920	750,000
1921	750,000
1922	750,000
1923	750,000
1924	1,250,000
1925	1,329,440
1926	1,329,440
1927	1,329,440
1928	1,329,440
1929	1,350,440
1930	1,411,260
1931	1,611,260
1932	1,708,528
1933	1,525,000
1934	1,400,000
1935	1,244,899
1936	1,249,470
1937	1,275,000
1938	1,267,000
1939	1,267,600
1940	1,306,700
1941	1,303,280
1942	1,283,975
1943	1,289,060
1944	1,150,000

* Source: Appropriations Committee, U.S. Senate, *Appropriations, New Offices, etc., Statements Showing Appropriations Made, New Offices Created, etc.*, 1915-1923; U.S. Bureau of the Budget, *The Budget of the United States Government*, Washington: Government Printing Office, 1923-1945.

** Fiscal year the appropriation was made. Each sum was appropriated for the following fiscal year.

> legislation, with supporting enforcement activity, to prohibit the traffic except for bona fide medical purposes. The proposed uniform State narcotic law . . . with optional text applying to restriction of traffic in Indian hemp, has been recommended as an adequate law to accomplish the desired purpose.[86]

At this time, according to the Bureau, sixteen states had enacted legislation in which "the sale or possession (of marihuana) is prohibited except for medical purposes."[87] One year later, 18 more states had enacted the desired legislation, and by 1936, it appears that the Bureau's policy had succeeded completely for all 48 states had enacted legislation which governed the sale or possession of marihuana.[88]

Despite this apparent success and despite former questions concerning the constitutionality of the measure, the Bureau in 1937 pressed for the enactment of the federal marihuana act. For Anslinger, the moral entrepreneur, 1936 should have been a year of victory. In every state the marihuana menace was subjected to statutory control.[89] But for Anslinger, the bureaucrat, 1936 seems to have been another year of defeat. His budgetary appropriation remained near a low point that had not been seen in over a decade, which to some extent reflected the general economic conditions of the time. His request for fiscal 1933 had been cut $100,000 below the general Treasury Department reduction for all bureaus.[90] In succeeding years,

[86] U.S. Bureau of Narcotics, *Traffic in Opium and Other Dangerous Drugs For the Year Ending December 31, 1932*, Washington: Government Printing Office, p. 43.

[87] *Ibid.*, p. 43.

[88] U.S. Bureau of Narcotics, *Traffic in Opium and Other Dangerous Drugs . . .*, Washington: Government Printing Office, 1932-1936.

[89] It can be argued that a federal measure was still necessary because: 1) state legislation was poorly drawn, or 2) state enforcement was inadequate. The former is doubtful since by 1937, 39 states (as compared to four in 1933) had enacted the Uniform Narcotic Drug Act, the very legislation the Bureau felt would best control marihuana use. The latter situation, even if true, could have been rectified by means other than federal legislation.

[90] *Hearings Before the Subcommittee of the House Committee on Appropriations,*

reductions in actual operating expenses were greater than those reflected in Table 1, for varying sums were deducted from the appropriations and held in a general trust fund as part of the government's anti-depression program. The Bureau's actual operating funds remained at about one million dollars from fiscal 1934 to fiscal 1936.[41] In his appearances before the House Subcommittee of the Committee on Appropriations that considered the Treasury Department budget, Anslinger repeatedly warned that the limited budget was curtailing his enforcement activities.[42] By 1936, his budget had decreased over $450,000 from its high four years before, a fall of almost 26 percent.

Again in 1937 Anslinger, the moralist, would be expected first to convince the general public that marihuana use was evil and immoral, while Anslinger, the bureaucrat, would be more concerned with attaining passage of legislation which would increase the Bureau's powers and then proceed to generate environmental support for these powers. In fact, the latter occcurred. The great bulk of Bureau-inspired publicity came after the passage of the act, not before.[43]

Faced with a steadily decreasing budget, the Bureau responded as any organization so threatened might react: it tried to appear more necessary, and it tried to increase its scope of operations. As a result of this response, the Marihuana Tax Act of 1937 was passed.[44] Whether the Bureau's efforts were entirely successful is questionable. One beneficial result for the Bureau was that violations and seizures under the Marihuana Tax Act contributed substantially to the Bureau's totals, which had been declining for some time. (When arrests, convictions, and seizures were on the increase, these were faithfully reported to the House Subcommittee as evidence of the Bureau's effective use of funds.) In 1938, the first full year under the Marihuana Tax Act, one out of every four federal drug and narcotic convictions was for a marihuana violation.[45]

Financially, the enterprise was less

72nd Congress, 1st Session, in charge of the Treasury Department Appropriations Bill for 1933, January 14, 1932, pp. 375-393.

[41] *Hearings Before the Subcommittee of the House Committee on Appropriations, op. cit.*, for fiscal 1934: 72nd Congress, 2nd Session, November 23, 1932, pp. 171-180; for fiscal 1935. 73rd Congress, 2nd Session, December 18, 1933, pp. 178-198; for fiscal 1936: 74th Congress, 1st Session, December 17, 1934, pp. 201-225.

[42] Thus in the hearing for the 1935 appropriation:

> Mr. Arnold: How are you getting by with that $1,000,000 after those deductions?
>
> Comm. Anslinger: I am getting by, but I have had to cut back enforcement activities so sharply that it has reached a point where I think it has been harmful . . . (1935 Hearings, *op. cit.*, p. 189).

In his opening statement at the hearing for the 1936 appropriation, Anslinger stated "Mr. Chairman, and distinguished members of the committee, during the past fiscal year we have been operating under a very restricted appropriation. Our enforcement did not fall off too much although it did suffer somewhat." (1936 Hearings, *op. cit.*, p. 201). A decrease in seizures and fines levied was attributed to the limited budget, *ibid.*, pp. 213 214.

[43] See footnote 32.

[44] While Commissioner Anslinger as leader of this bureaucratic response might be characterized as a "bureaucratic entrepreneur," such characterization would be misleading, for similar to Becker's characterization it still simplifies the problem by emphasizing the individual's importance rather than that of the Bureau and its environment.

[45] U.S. Bureau of Narcotics, *Traffic in Opium and Other Dangerous Drugs For the Year Ending December 31, 1938*, Washington: Government Printing Office, pp. 77-79.

successful. Though the budgetary decline was halted, expected increases for enforcing the new legislation did not immediately materialize. Anslinger pointed out this problem in a 1937 subcommittee hearing in connection with the fiscal 1939 appropriation:

> Comm. Anslinger: We took on the administration of the marihuana law and did not get any increase for that purpose. The way we are running we may have to request a deficiency of $100,000 at the end of the year; but I sincerely hope you will not see me here for a deficit. Beginning the first of the year, Mr. Chairman, I shall control all travel out of Washington. That is a hard job. I have to do that to make up some of this money. We went ahead at high speed and broke up ten big distributing rings, and now we find ourselves in the hole financially.
>
> Mr. Ludlow: You have to find some way to recoup?
>
> Comm. Anslinger: Yes; and keep the enforcement of the Marihuana Act going. Not a dollar has been appropriated in connection with the enforcement of the Marihuana law. We have taken on the work in connection with the Marihuana Act in addition to our other duties.[46]

While the Bureau's budgetary appropriations since that time have in general increased, the period of the late 1930's and early 1940's, where increases might be expected to be the largest, was a period of small advances and then a gradual decline. Of course the major factor in that period was the massive redirection of funds from non-military areas, and thus these figures do not accurately reflect the Bureau's enterprise.

In conclusion, it should be reiterated that this paper does not presume to refute the moral entrepreneur approach —for in many instances it is a valid and useful means of analysis—but rather it attempts to demonstrate an alternative explanation that may frequently be appropriate. It would be either naive or presumptuous to deny that some combination of both moral and bureaucratic factors exist in any given crusade. The problem for analysis is to determine the relative importance of each, and the consequences stemming from a particular combination. The utility of the organizational approach lies in that it can be extended to other similar moral crusades or to entire social movements, where the emphasis so far has been on the work of individual crusaders rather than on the organizations and their environments. Further, to the extent these movements follow the general societal pattern and become increasingly complex, organized, and bureaucratic, the organizational approach will become even more important in analysis and prediction.

---

[46] *Hearings Before the Subcommittee of the House Committee on Appropriations, 75th Congress*, 3rd Session, in charge of the Treasury Department Appropriations Bill for 1939, December 14, 1937, p. 380.

THE sprawled body of a young girl lay crushed on the sidewalk the other day after a plunge from the fifth story of a Chicago apartment house. Everyone called it suicide, but actually it was murder. The killer was a narcotic known to America as marijuana, and to history as hashish. It is a narcotic used in the form of cigarettes, comparatively new to the United States and as dangerous as a coiled rattlesnake.

How many murders, suicides, robberies, criminal assaults, holdups, burglaries, and deeds of maniacal insanity it causes each year, especially among the young, can be only conjectured. The sweeping march of its addiction has been so insidious that, in numerous communities, it thrives almost unmolested, largely because of official ignorance of its effects.

Here indeed is the unknown quantity among narcotics. No one can predict its effect. No one knows, when he places a marijuana cigarette to his lips, whether he will become a philosopher, a joyous reveler in a musical heaven, a mad insensate, a calm philosopher, or a murderer.

That youth has been selected by the peddlers of this poison as an especially fertile field makes it a problem of serious concern to every man and woman in America.

THERE was the young girl, for instance, who leaped to her death. Her story is typical. Some time before, this girl, like others of her age who attend our high schools, had heard the whispering of a secret which has gone the rounds of American youth. It promised a new thrill, the smoking of a type of cigarette which contained a "real kick." According to the whispers, this cigarette could accomplish wonderful reactions and with no harmful aftereffects. So the adventurous girl and a group of her friends gathered in an apartment, thrilled with the idea of doing "something different" in which there was "no harm." Then a friend produced a few cigarettes of the loosely rolled "homemade" type. They were passed from one to another of the young people, each taking a few puffs.

The results were weird. Some of the party went into paroxysms of laughter; every remark, no matter how silly, seemed excruciatingly funny. Others of mediocre musical ability became almost expert; the piano dinned constantly. Still others found themselves discussing weighty problems of youth with remarkable clarity. As one youngster expressed it, he "could see through stone walls." The girl danced without fatigue, and the night of unexplainable exhilaration seemed to stretch out as though it were a year long. Time, conscience, or consequences became too trivial for consideration.

Other parties followed, in which inhibitions vanished, conventional barriers departed, all at the command of this strange cigarette with its ropy, resinous odor. Finally there came a gathering at a time when the girl was behind in her studies and greatly worried. With every puff of the smoke the feeling of despondency lessened. Everything was going to be all right—at last. The girl was "floating" now, a term given to marijuana intoxication. Suddenly, in the midst of laughter and dancing, she thought of her school problems. Instantly they were solved. Without hesitancy she walked to a window and leaped to her death. Thus can marijuana "solve" one's difficulties.

The cigarettes may have been sold by a hot tamale vendor or by a street peddler, or in a dance hall or over a lunch counter, or even from sources much nearer to the customer. The police of a Midwestern city recently accused a school janitor of having conspired with four other men, not only to peddle cigarettes to children, but even to furnish apartments where smoking parties might be held.

A Chicago mother, watching her daughter die as an indirect result of marijuana addiction, told officers that at least fifty of the girl's young friends were slaves to the narcotic. This means fifty unpredictables. They may cease its use; that is not so difficult as with some narcotics. They may continue addiction until they deteriorate mentally and become insane. Or they may turn to violent forms of crime, to suicide or to murder. Marijuana gives few warnings

of what it intends to do to the human brain.

THE menace of marijuana addiction is comparatively new to America. In 1931, the marijuana file of the United States Narcotic Bureau was less than two inches thick, while today the reports crowd many large cabinets. Marijuana is a weed of the Indian hemp family, known in Asia as *Cannabis Indica* and in America as *Cannabis Sativa*. Almost everyone who has spent much time in rural communities has seen it, for it is cultivated in practically every state. Growing plants by the thousands were destroyed by law-enforcement officers last year in Texas, New York, New Jersey, Mississippi, Michigan, Maryland, Louisiana, Illinois, and the attack on the weed is only beginning.

It was an unprovoked crime some years ago which brought the first realization that the age-old drug had gained a foothold in America. An entire family was murdered by a youthful addict in Florida. When officers arrived at the home they found the youth staggering about in a human slaughterhouse. With an ax he had killed his father, his mother, two brothers, and a sister. He seemed to be in a daze.

"I've had a terrible dream," he said. "People tried to hack off my arms!"

"Who were they?" an officer asked.

"I don't know. Maybe one was my uncle. They slashed me with knives and I saw blood dripping from an ax."

He had no recollection of having committed the multiple crime. The officers knew him ordinarily as a sane, rather quiet young man; now he was pitifully crazed. They sought the reason. The boy said he had been in the habit of smoking something which youthful friends called "muggles," a childish name for marijuana.

Since that tragedy there has been a race between the spread of marijuana and its suppression. Unhappily, so far, marijuana has won by many lengths. The years 1935 and 1936 saw its most rapid growth in traffic. But at least we now know what we are facing. We know its history, its effects, and its potential victims. Perhaps with the spread of this knowledge the public may be aroused sufficiently to conquer the menace. Every parent owes it to his children to tell them of the terrible effects of marijuana to offset the enticing "private information" which these youths may have received. There must be constant enforcement and equally constant education against this enemy, which has a record of murder and terror running through the centuries.

THE weed was known to the ancient Greeks and it is mentioned in Homer's *Odyssey*. Homer wrote that it made men forget their homes and turned them into swine. Ancient Egyptians used it. In the year 1090, there was founded in Persia the religious and military order of the Assassins, whose history is one of cruelty, barbarity, and murder, and for good reason. The members were confirmed users of hashish, or marijuana, and it is from the Arabic "*hashshashin*" that we have the English word "assassin." Even the term "running amok" relates to the drug, for the expression has been used to describe natives of the Malay Peninsula who, under the influence of hashish, engage in violent and bloody deeds.

Marijuana was introduced into the United States from Mexico, and swept across America with incredible speed.

It began with the whispering of vendors in the Southwest that marijuana would perform miracles for those who smoked it, giving them a feeling of physical strength and mental power, stimulation of the imagination, the ability to be "the life of the party." The peddlers preached also of the weed's capabilities as a "love potion." Youth, always adventurous, began to look into these claims and found some of them true, not knowing that this was only half the story. They were not told that addicts may often develop a delirious rage during which they are temporarily and violently insane; that this insanity may take the form of a desire for self-destruction or a persecution complex to be satisfied only by the commission of some heinous crime.

IT WOULD be well for law-enforcement officers everywhere to search for marijuana behind cases of criminal and sex assault. During the last year a young male addict was hanged in Baltimore for criminal assault on a ten-year-old girl. His defense was that he was temporarily insane from smoking marijuana. In Alamosa, Colo., a degenerate brutally attacked a young girl while under the influence of the drug. In Chicago, two marijuana-smoking boys murdered a policeman.

In at least two dozen other comparatively recent cases of murder or degenerate sex attacks, many of them committed by youths, marijuana proved to be a contributing cause. Perhaps you remember the young desperado in Michigan who, a few months ago, caused a reign of terror by his career of burglaries and holdups,

61-801 O - 77 - 45

MARIJUANA

Assassin of Youth

Marijuana, a stalk of which is shown above, is contributing to our alarming wave of sex crime, according to many police officials. The weed can be easily recognized by its seven-bladed, saw-tooth leaves. It grows in stalks from 3 to 8 feet high

finally to be sent to prison for life after kidnapping a Michigan state policeman, killing him, then handcuffing him to the post of a rural mailbox. This young bandit was a marijuana fiend.

A sixteen-year-old boy was arrested in California for burglary. Under the influence of marijuana he had stolen a revolver and was on the way to stage a holdup when apprehended. Then there was the nineteen-year-old addict in Columbus, Ohio, who, when police responded to a disturbance complaint, opened fire upon an officer, wounding him three times, and was himself killed by the returning fire of the police. In Ohio a gang of seven young men, all less than twenty years old, had been caught after a series of 35 holdups. An officer asked them where they got their incentive.

"We only work when we're high on 'tea,'" one explained.

"On what?"

"On tea. Oh, there are lots of names for it. Some people call it 'mu' or 'muggles' or 'Mary Weaver' or 'moocah' or 'weed' or 'reefers'—there's a million names for it."

"All of which mean marijuana?"

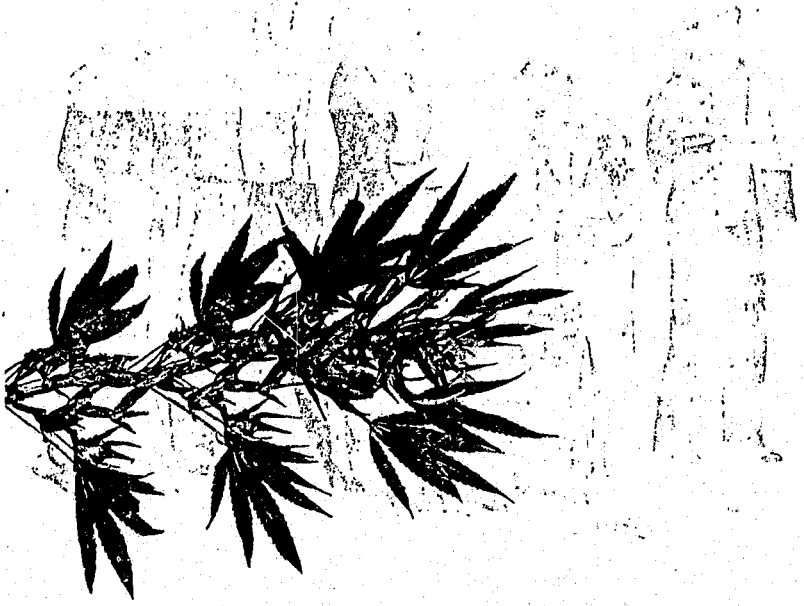
"Sure. Us kids got on to it in high school three or four years ago; there must have been twenty-five or thirty of us who started smoking it. The stuff was cheaper then; you could buy a whole tobacco tin of it for fifty cents. Now these peddlers will charge you all they can get, depending on how shaky you are. Usually though, it's two cigarettes for a quarter."

This boy's casual story of procurement of the drug was typical of conditions in many cities in America. He told of buying the cigarettes in dance halls, from the owners of small hamburger joints, from peddlers who appeared near high schools at dismissal time. Then there were the "booth joints" or Bar-B-Q stands, where one might obtain a cigarette and a sandwich for a quarter, and there were the shabby apartments of women who provided not only the cigarettes but rooms in which girls and boys might smoke them.

"But after you get the habit," the boy added, "you don't bother much about finding a place to smoke. I've seen as many as three or four high-school kids jam into a telephone booth and take a few drags."

The officer questioned him about the gang's crimes: "Remember that filling-station attendant you robbed—how you threatened to beat his brains out?"

The youth thought hard. "I've got a sort of hazy recollection," he answered.



A weed that grows wild throughout the country is making dope addicts of thousands of young people

BY H. J. ANSLINGER

U. S. Commissioner of Narcotics

WITH COURTNEY RYLEY COOPER

"I'm not trying to say I wasn't there, you understand. The trouble is, with all my gang, we can't remember exactly what we've done or said. When you get to 'floating,' it's hard to keep track of things."

From the other youthful members of the gang the officer could get little information. They confessed the robberies as one would vaguely remember bad dreams.

"If I had killed somebody on one of those jobs, I'd never have known it," explained one youth. "Sometimes it was over before I realized that I'd even been out of my room."

THEREIN lies much of the cruelty of marijuana, especially in its attack upon youth. The young, immature brain is a thing of impulses, upon which the "unknown quantity" of the drug acts as an almost overpowering stimulant. There are numerous cases on record like that of an Atlanta boy who robbed his father's safe of thousands of dollars in jewelry and cash. Of high-school age, this boy apparently had been headed for an honest, successful career. Gradually, however, his father noticed a change in him. Spells of shakiness and nervousness would be succeeded by periods when the boy would assume a grandiose manner and engage in excessive, senseless laughter, extravagant conversation, and wildly impulsive actions. When these actions finally resulted in robbery the father went at his son's problem in earnest—and found the cause of it a marijuana peddler who catered to school children. The peddler was arrested.

It is this useless destruction of youth which is so heartbreaking to all of us who labor in the field of narcotic suppression. No one can predict what may happen after the smoking of the weed. I am reminded of a Los Angeles case in which a boy of seventeen killed a policeman. They had been great friends. Patrolling his beat, the officer often stopped to talk to the young fellow, to advise him. But one day the boy surged toward the patrolman with a gun in his hand; there was a blaze of yellowish flame, and the officer fell dead.

"Why did you kill him?" the youth was asked.

"I don't know," he sobbed. "He was good to me. I was high on reefers. Sud-

denly I decided to shoot him."

In a small Ohio town, a few months ago, a fifteen-year-old boy was found wandering the streets, mentally deranged by marijuana. Officers learned that he had obtained the dope at a garage.

"Are any other school kids getting cigarettes there?" he was asked.

"Sure. I know fifteen or twenty, maybe more. I'm only counting my friends."

The garage was raided. Three men were arrested and 18 pounds of marijuana seized.

"We'd been figuring on quitting the racket," one of the dopesters told the arresting officer. "These kids had us scared. After we'd gotten 'em on the weed, it looked like easy money for a while. Then they kept wanting more and more of it, and if we didn't have it for 'em, they'd get tough. Along toward the last, we were scared that one of 'em would get high and kill us all. There wasn't any fun in it."

Not long ago a fifteen-year-old girl ran away from her home in Muskegon, Mich., to be arrested later in company with five young men in a Detroit marijuana den. A man and his wife ran the place. How many children had smoked there will never be known. There were 60 cigarettes on hand, enough fodder for 60 murders.

A newspaper in St. Louis reported after an investigation this year that it had discovered marijuana "dens," all frequented by children of high-school age. The same sort of story came from Missouri, Ohio, Louisiana, Colorado—in fact, from coast to coast.

In Birmingham, Ala., a hot-tamale salesman had pushed his cart about town for five years, and for a large part of that time he had been peddling marijuana cigarettes to students of a downtown high school. His stock of the weed, he said, came from Texas and consisted, when he was captured, of enough marijuana to manufacture hundreds of cigarettes.

In New Orleans, of 437 persons of varying ages arrested for a wide range of crimes, 125 were addicts. Of 37 murderers, 17 used marijuana, and of 193 convicted thieves, 34 were "on the weed."

ONE of the first places in which marijuana found a ready welcome was in a closely congested section of New York. Among those who first introduced it there were musicians, who had brought the habit northward with the surge of "hot" music demanding players of exceptional ability, especially in improvisation. Along the Mexican border and in seaport cities it had been known for some time that the musician who desired to get the "hottest" effects from his playing often turned to marijuana for aid.

One reason was that marijuana has a strangely exhilarating effect upon the musical sensibilities (Indian hemp has long been used as a component of "singing seed" for canary birds). Another reason was that strange quality of marijuana which makes a rubber band out of time, stretching it to unbelievable lengths. The musician who uses "reefers" finds that the musical beat seemingly comes to him quite slowly, thus allowing him to interpolate any number of improvised notes with comparative ease. While under the influence of marijuana, he does not realize that he is tapping the keys with a furious speed impossible for one in a normal state of mind; marijuana has stretched out the time of the music until a dozen notes may be crowded into the space normally occupied by one. Or, to quote a young musician arrested by Kansas City officers as a "muggles smoker":

"Of course I use it—I've got to. I can't play any more without it, and I know a hundred other musicians who are in the same fix. You see, when I'm 'floating,' I *own* my saxophone. I mean I can do anything with it. The notes seem to dance out of it—no effort at all. I don't have to worry about reading the music—I'm music-crazy. Where do I get the stuff? In almost any low-class dance hall or night spot in the United States."

Soon a song was written about the drug. Perhaps you remember:

> Have you seen
> That funny reefer man?
> He says he swam to China;
> Any time he takes a notion,
> He can walk across the ocean."

It sounded funny. Dancing girls and boys pondered about "reefers" and learned through the whispers of other boys and girls that these cigarettes could make one accomplish the impossible. Sadly enough, they can—in the imagination. The boy who plans a holdup, the youth who seizes a gun and prepares for a murder, the girl who decides suddenly to elope with a boy she did not even know a few hours ago, does so with the confident belief that this is a thoroughly logical action without the slightest possibility of disastrous consequences. Command a person "high" on "mu" or "muggles" or "Mary Jane" to crawl on the floor and bark like a dog, and he will do it without a thought of the idiocy of the action. Everything, no matter how insane, becomes plausible. The underworld calls marijuana "that stuff that makes you able to jump off the tops of skyscrapers."

REPORTS from various sections of the country indicate that the control and sale of marijuana has not yet passed into the hands of the big gangster syndicates. The supply is so vast and grows in so many places that gangsters perhaps have found it difficult to dominate the source. A big, hardy weed, with serrated, swordlike leaves topped by bunchy small blooms supported upon a thick, stringy stalk, marijuana has been discovered in almost every state. New York police uprooted hundreds of plants growing in a vacant lot in Brooklyn. In New York State alone last year 200 tons of the growing weed were destroyed. Acres of it have been found in various communities. Patches have been revealed in back yards, behind signboards, in gardens. In many places in the West it grows wild. Wandering dopesters gather the tops from along the right of way of railroads.

An evidence of how large the traffic may be came to light last year near La Fitte, La. Neighbors of an Italian family had become amazed by wild stories told by the children of the family. They, it seemed, had suddenly become millionaires. They talked of owning inconceivable amounts of money, of automobiles they did not possess, of living in a palatial home. At last their absurd lies were reported to the police, who discovered that their parents were allowing them to smoke something that came from the tops of tall plants which their father grew on his farm. There was a raid, in which more than 500,000 marijuana plants were destroyed. This discovery led next day to another raid on a farm at Bourg, La. Here a crop of some 2,000 plants was found to be growing between rows of vegetables. The eight persons arrested confessed that their main source of income from this crop was in sales to boys and girls of high-school age.

With possibilities for such tremendous crops, grown secretly, gangdom has been hampered in its efforts to corner the profits of what has now become an enormous business. It is to be hoped that the menace of marijuana can be wiped out before it falls into the vicious protectorate of powerful members of the underworld.

BUT to crush this traffic we must first squarely face the facts. Unfortunately, while every state except one has laws to cope with the traffic, the powerful right arm which could support these states has been all but impotent. I refer to the United States government. There has been no national law against the growing, sale, or possession of marijuana.

As this is written a bill to give the federal government control over marijuana has been introduced in Congress by Representative Robert L. Doughton of North Carolina, Chairman of the House Ways and Means Committee. It has the backing of Secretary of the Treasury Morgenthau, who has under his supervision the various agencies of the United States Treasury Department, including the Bureau of Narcotics, through which Uncle Sam fights the dope evil. It is a revenue bill, modeled after other narcotic laws which make use of the taxing power to bring about regulation and control.

The passage of such a law, however, should not be the signal for the public to lean back, fold its hands, and decide that all danger is over. America now faces a condition in which a new, although ancient, narcotic has come to live next door to us, a narcotic that does not have to be smuggled into the country. This means a job of unceasing watchfulness by every police department and by every public-spirited civic organization. It calls for campaigns of education in every school, so that children will not be deceived by the wiles of peddlers, but will know of the insanity, the disgrace, the horror which marijuana can bring to its victim. And above all, every citizen should keep constantly before him the real picture of the "reefer man"—not some funny fellow who, should he take the notion, could walk across the ocean, but—

In Los Angeles, Calif., a youth was walking along a downtown street after inhaling a marijuana cigarette. For many addicts, merely a portion of a "reefer" is enough to induce intoxication. Suddenly, for no reason, he decided that someone had threatened to kill him and that his life at that very moment was in danger. Wildly he looked about him. The only person in sight was an aged bootblack. Drug-crazed nerve centers conjured the innocent old shoe-shiner into a destroying monster. Mad with fright, the addict hurried to his room and got a gun. He killed the old man, and then, later, babbled his grief over what had been wanton, uncontrolled murder.

"I thought someone was after me," he said. "That's the only reason I did it. I had never seen the old fellow before. Something just told me to kill him!"

That's marijuana!

American Journal of Police Science

No. 3

MARIHUANA AS A DEVELOPER OF CRIMINALS

By Eugene Stanley
District Attorney, Parish of Orleans, New Orleans, La.

Many prosecuting attorneys in the South and Southwest have been confronted with the defense that, at the time of the commission of the Criminal act, the defendant was irresponsible, because of being under the influence of Marihuana to such a degree he was unable to appreciate the difference between right and wrong, and was therefore legally insane. A great deal of difficulty has been experienced in combating this defense with the testimony of psychiatrists, for, while some of these experts are conversant with the nature and effect of this drug, it has been the experience of the author that many of them are without any information on the subject. This is probably due to the fact that this drug has come into wide use in certain parts of the South only within the last ten years.

It is the purpose of this article to give a brief outline of the nature and origin of Marihuana and the Legislation so far enacted concerning its sale and use; to recommend that this drug be placed within the provisions of the Harrison Anti-narcotic Act, and to give a list of some of the works which may be consulted by any person interested in making a thorough study of the situation.

Marihuana is the Mexican term for Cannabis Indica. The plant or drug known as *Cannabis Indica,* or Marihuana has as its parent the plant known as *Cannabis Sativa.* It is popularly known in India as *Cannabis Indica;* in America, as *Cannabis Americana;* in Mexico, as *Cannabis Mexicana,* or Marihuana. It is all the same drug, and is known in different countries by different names. It is scientifically known as *Cannabis Sativa,* and is popularly called *Cannabis Americana, Cannabis Indica,* or *Cannabis Mexicana,* in accordance with the geographical origin of the particular plant. In the East, it is known as Charras, as Ganga, as Hasheesh, as Bhang, or Siddi, and goes by a variety of names in the countries of continental Europe.

Cannabis Sativa is an annual herb from the "hemp" plant; it has angular, rough stems and deeply lobed leaves. It is derived from the flowering tops of the female plant of hemp grown in semi-tropical and temperate countries. It was once thought that only the plant grown in India was active, but it has been scientifically determined that the American specimen termed "marihuana" or "mug-

gles" is equal in potency to the best weed of India. The plant is a moraceous herb. In the South, amongst the negroes, it is termed "mooter." In India, where marihuana is scientifically cultivated on a wide scale for the drug obtained from it, the plants, when small, are separated, the female plant being used exclusively for the purpose of obtaining the drug. In Mexico and in America, the plants are permitted to grow together indiscriminately, without separating the male and female specimens, and as a result the potency of the female is lessened by the admixture of the male element. In semi-tropical climates, because of the fertility of the soil and the ease with which hemp seed may be procured, the plant can easily be cultivated, and prohibition of its cultivation is rendered practically impossible. It resembles a weed, and has been found growing in some of the back yards and lots of cities. Traffic in it, and in the drug derived from it, has been found to be considerable, particularly in the South and Southwestern States.

Cultivation of Hemp

Hemp is cultivated all over the world; its culture probably originated in China, from whence it spread. It is grown for three purposes; for the fibre, out of which rope, twine, cloth and hats are made; for the seed, from which a rapidly drying oil is obtained that is used in the arts and as a commercial substitute for linseed oil; and for the narcotic contained in the resin of the dried, flowering tops of the pistillate plant. The seed is also sold as a constituent of commercial bird seed.

Hemp was grown in the New England colonies for fibre to be used in the making of homespun. It was also grown in the Virginia and Pennsylvania colonies and cultivated at a very early date in the settlements of Kentucky, whence the industry spread to Missouri. It has been grown at various times in Illinois, near Champaign, in the Kankakee river valley, in Indiana; in Southeastern Pennsylvania and in Nebraska, Iowa and California. It is now abundant as a wild plant in many localities in Western Missouri, Iowa, Southern Minnesota and in the Southwestern and Western States, where it is often found as a roadside weed. It is not known when the plant was introduced into Mexico and the Southwest, but probably along with the early Spanish settlements. It was known in Chile in the 16th Century.

The hemp first cultivated in the United States was of the small European variety, but this has been replaced since 1857 by the larger

Chinese hemp. Practically all the seed for present day American hemp culture is grown in the Kentucky river valley.

Cannabis Indica or Sativa

Cannabis Sativa is designated as a "narcotic" in a number of State laws. It is sometimes mentioned in the law as "loco weed" because of its inebriate effect upon men and cattle; in others as "marihuana," "hemp," or "hashish"; in fact the drug is known by a wide variety of names. It is one of several drugs included under the anti-narcotic laws of 17 states, namely: Texas, Arkansas, Louisiana, New Mexico, Nevada, California, Oregon, Idaho, Washington, Utah, Maine, Vermont, Massachusetts, New York, Indiana, Wisconsin and Iowa. It is also prohibited under the laws of Mexico and England. In a great many of the States where this legislation was enacted, so wide-spread was the use of marihuana, and so terrific the result, that grave emergencies were declared to exist which justified the legislation taking effect immediately, and restrictions respecting the smoking of "hemp" are mentioned along with those restricting opium smoking.

Although the different forms of the plant have been described under various botanical names, there are no essential differences in any of their specific characteristics, and all cultivated or wild hemp is now recognized as belonging to one species--*Cannabis Sativa.*

The Origin of the Drug

The origin of the drug is very ancient.

In the year 1090, A. D., the religious and military order or sect of the Assassins was founded in Persia, and the numerous acts of cruelty of this sect was known not only in Asia, but in Europe as well. This branch of the Shiite sect, known as Ismalites, was called Hashishan, derived from Hashish, or the confection of hemp leaves (*Cannabis Indica*). In fact, from the Arabic "Hashishan" we have the English word "Assassin." It is mentioned in the Arabian Nights, and was known at the time of the crusades. It was known to the Greeks as "Nepenthe," and was lauded in the immortal Odyssey of Homer as a drug to lull all pain and anger, and to bring forgetfulness of all sorrow.

It was known in ancient times to the Egyptians, and its use in Egypt, at the present time, is wide-spread. In fact, it is presently as widely used amongst the Egyptians, and in the East, as opium is

used by the Chinese, and alcohol by the Americans and Europeans. Its effect upon the Malays has been terrific, and the natives of the Malayan Peninsula have been known, while under its influence, to rush out and engage in violent or bloody deeds, with complete disregard for their personal safety, or the odds arrayed against them. To run "amok" in the Malay Peninsula is synonymous with saying one is under the influence of this drug.

In America, particularly in the South and Southwestern portions of the United States, it is called marihuana. It is popularly known amongst the criminal element as "muggles," or "mooter" and addicts are commonly termed "muggle heads."

The Effect of the Use of the Drug

The flowering tops of the female plant are the source from which the drug is obtained, and in America these flowering tops are gathered and rolled into cigarettes and smoked, the smoke being inhaled. A favorite method of enjoying these cigarettes is for the user to draw the smoke into the mouth and then blow it out against the cupped hands, whence he inhales it.

In India, marihuana or "muggles" is mostly used in "ganja" form, which is the Indian name for a mixture of the stems, leaves and flowering tops of the cultivated female plant. It is smoked, as in America, in the form of cigarettes, or in a pipe; its smell is typically offensive, and is easily recognized by the initiated.

Bhang or *siddi*, are the Indian names for the mixture of these dry leaves and capsules without stems, whether male or female, cultivated, or in its wild state. It is the cheapest and the weakest of all the preparations of hashish, and is taken as "tea." In that country, the resinous substance which exudes from the flowering head of the female plant is called "charris," and is either smoked or taken in pills or in confections, or mixed with sugar or honey, and is commonly sold amongst the bazaars of Egypt and the far East.

In many respects, the action of *Cannabis Sativa* is similar to that of alcohol and morphine. Its toxic effects are ecstasy, merriment, uncontrollable laughter, self-satisfaction, bizzare ideas lacking in continuity, and its results are extreme hyperacidity, with occasional attacks of nausea and vomiting. It has also been described as producing, in moderate doses, anything from a mild intoxication to a dead drunk, a drowsy and semi-comatose condition, lapsing into a dreamy state, with a rapid flow of ideas of a sexual nature, ending in a deep sleep, interrupted by dreams. On awakening, there is a feeling of

great dejection and prostration. Large doses produce excitement, delusions, hallucinations, rapid flow of ideas, a high state of ecstasy, psychomotor activity with a tendency to wilful damage and violence, with a temporary amnesia of all that has transpired. In cases of prolonged addiction, especially in the Malays, the somnolent action of *Cannabis Indica* is replaced with complete loss of judgment and of restraint - the effect so frequently observed in alcoholic intoxication.

It is commonly used as an aphrodisiac, and its continued use leads to impotency. This has been observed amongst the natives of India.

It is an ideal drug to cut off inhibitions quickly.

At the time of the founding of the religious sect or order of "Assassins," in Persia, by Hassan Ben Sabbat, young men whom the Shiek desired to subjugate were given this drug, and when under its influence, were taken, blindfolded, into the garden of the Shiek, where every pleasure which appealed to the senses awaited them.

When complete indulgence in these pleasures had been had, they were taken from this garden, and so eager were they for a further opportunity to use the drug and for a repetition of the attendant pleasures, that they were under the complete domination of the Shiek, who alone knew its secret, and gladly followed his will, even to the extent of sacrificing their lives if so commanded, in order further to experience the pleasures to which they had been initiated.

At the present time, the underworld has been quick to realize the value of this drug in subjugating the will of human derelicts to that of a master mind. Its use sweeps away all restraint, and to its influence may be attributed many of our present day crimes. It has been the experience of the Police and Prosecuting Officials in the South that immediately before the commission of many crimes the use of marihuana cigarettes has been indulged in by criminals, so as to relieve themselves from the natural restraint which might deter them from the commission of criminal acts, and to give them the false courage necessary to commit the contemplated crime.

The Government's Attitude Towards Marihuana

Indian hemp (marihuana) addicts were made eligible for treatment in recent legislation enacted by the 70th Congress, approved January 19th, 1929, establishing narcotic farms for the confinement and treatment of persons addicted to the use of habit-forming narcotic drugs. This legislation is somewhat unique in Congressional legisla-

tion, since Indian hemp is not classified as a habit-forming drug or narcotic in other Federal narcotic laws.

Inasmuch as the harmful effects of the use of marihuana are daily becoming more widely known, and since it has been classed as a narcotic by the statutory laws of seventeen American States, England and Mexico, and since persons addicted to its use have been made eligible for treatment in the United States Narcotic Farms, the United States Government, will unquestionably be compelled to adopt a consistent attitude towards it, and include it in the Harrison Anti-narcotic Law, so as to give Federal aid to the States in their effort to suppress a traffic as deadly and as destructive to society as that in the other forms of narcotics now prohibited by this Act.

POISONS, 9.

STATE v. DIAZ.

No. 4985.

Supreme Court of Utah.

Aug. 16, 1930.

1. Criminal law ⇐549.

It is jury's duty to consider whole evidence in case, not merely defendant's testimony.

2. Criminal law ⇐554.

In homicide case, jury had right to disbelieve defendant's testimony of intoxication and narcotic influence depriving him of knowledge of acts.[1]

Defendant testified that he was under the influence of whisky and especially of marijuana to such an extent that he could not recollect anything that occurred at the time of the homicide. A physician testified for defendant that marijuana is a narcotic and acts upon the central nervous system, affecting the brain, producing exhilarating effects, and causing one to do things which he otherwise would not do, and especially induces acts of violence; further, that such condition would be greatly aggravated where defendant had been using intoxicating liquors and thereafter took the narcotic.

3. Criminal law ⇐554.

Jury *held* not required to accept blindly defendant's testimony, especially where other evidence of circumstances attending crime and defendant's conduct immediately thereafter rendered story improbable.[2]

4. Homicide ⇐270.

As regards first degree murder, it was jury's duty, under instructions, to determine whether defendant was so intoxicated or faculties benumbed by marijuana that he was incapable of forming or had no premeditated design to kill.

5. Criminal law ⇐741(1), 742(1).

Credibility of witnesses and weight and value of testimony are questions exclusively for jury.

6. Homicide ⇐237.

Evidence *held* to support jury's conclusion that defendant was capable of forming premeditated intent to kill.

7. Criminal law ⇐1170½(2).

State's hypothetical question to state's narcotic expert, unfamiliar with marijuana, whether defendant's conduct was possible if under influence of narcotics, *held* not prejudicial, in view of affirmative answer.

The state's medical expert had previously stated that, although he was familiar with the effects of narcotics upon the human system, he had no experience with the use of marijuana. He was asked by the district attorney, in the form of a hypothetical question, whether defendant's conduct at the time of, and shortly after, the commission of the crime, could possibly be that of a person under the influence of narcotic drugs. His answer was "Yes"; thus favorable to defendant's contention. Even if the question was improper, it was therefore not prejudicial.

Appeal from District Court, Davis County; Geo. S. Barker, Judge.

Nicholas Diaz was convicted of murder in the first degree, and he appeals.

Affirmed and remanded, with instructions.

James S. Gregerson, of Salt Lake City, for appellant.

L. A. Miner, Asst. Atty. Gen., and Geo. P. Parker, Atty. Gen., for the State.

FOLLAND, J.

Defendant was convicted of murder in the first degree and sentenced to death. He appeals. Only two questions are presented on this appeal: First, it is contended that the defendant's motion for new trial should have been granted upon the alleged ground that the verdict is contrary to the evidence and the court's instructions with respect to the question of premeditation and intent. Second, that the court erred in overruling defendant's objection to the testimony in rebuttal of the state's medical expert, and particularly in permitting him to answer the hypothetical question propounded by the state.

Juan F. Martinez, a Mexican section hand in the employ of the Oregon Short Line Railroad Company, was found dead, lying upon a cot in his room in a bunkhouse near Kaysville, Davis county, Utah, about 5 o'clock p. m., May 10, 1929. The body was discovered by

[1] State v. Hitesman, 58 Utah, 262, 198 P. 769.

[2] State v. Allen, 56 Utah, 37, 189 P. 84.

other section workers upon their return from work. The deceased met his death as the result of a bullet wound in the top of his head. The physician who examined the body gave it as his opinion that death, which had been instantaneous, had occurred at about 10 o'clock in the morning, that the body had not been moved after life had passed, and that the wound could not have been self-inflicted. The deceased had been working night shift, and was last seen alive about 8 o'clock in the morning of May 10th as he left his work and was traveling toward the bunkhouse. His companions who slept in the bunkhouse with him were working day shift. These men, upon returning from work about 5 o'clock, found the outside door padlocked. They entered the house and found the body of Martinez lying upon a cot. There was nothing to indicate that the deceased had been engaged in any struggle immediately prior to being shot. He was lying upon his back, with his head turned to one side and the right hand elevated a little and bent over his body. He had on his pants and shirt, but shoes and socks had been removed. His face was partially covered by part of an old sweater. One pocket of his trousers had been turned inside out. There was a .22 caliber rifle leaning against the table in the kitchen. The rifle had an empty cartridge in the barrel and several loaded shells in the magazine.

Three other Mexicans lived in the section bunkhouse in which were two or more small bedrooms and a kitchen. Certain articles of clothing, shoes, mackinaw coat, and a suitcase belonging to one of these men, Zavalo, were found to be missing. Zavalo's trunk had been broken open, apparently by means of an ax which was lying by the side of the trunk. The tray was by the side of the trunk, and some articles of clothing had been scattered around. A pair of pants afterwards found upon the defendant had been taken from the trunk. The deceased had received two pay checks, Nos. 5554 and 5782, which were made out in the name of John Martinez. At about 10:45 a. m. of May 10th, the day of the homicide, the lawn tender of the Oregon Short Line Railroad Company observed a Mexican wearing a blue serge coat and pants and light cap, and carrying a suitcase in one hand and a large bundle in the other, walking northerly on the Oregon Short Line Railroad Company platform at Kaysville; that is, he was walking away from the direction in which the bunkhouse was located. At about 11:38 a. m. a Mexican wearing a blue coat, carrying a suitcase, went to the ticket window of the Bamberger Electric Railway Company at Kaysville and asked for a ticket to Salt Lake. Upon being told by the agent, "There is no train until twelve o'clock, it is a bus," he said, "Give me a ticket to Ogden." The agent sold him an Odgen ticket and the Ogden train was just then coming into the station. This man was sweating; sweat rolled down his face, and he had a strong odor about him; he seemed agitated and excited. The evidence shows that this defendant was in Ogden between 12 and 1 o'clock on that date; that he went to a clothing store operated by Max Ollash, where he bought a cap which was offered and received in evidence as Exhibit G, and in payment he tendered the Oregon Short Line pay check No. 5782 which was made payable to John Martinez. The check had already been indorsed, so the proprietor of the store required the defendant to sign his name on a card. The defendant told him his name was John Martinez, and he signed that name on the card given to him. At about the same time the defendant went into the clothing store operated by Glish Medoway in Ogden, where he purchased a pair of pants, a sweater, which was received in evidence as Exhibit H, and a shirt. In payment for these he tendered Oregon Short Line pay check No. 5554. This proprietor also had him sign a card for the purpose of identifying the signature on the check, which was already indorsed, and again he signed the name John Martinez. In each case he received money for the balance of the check. Each of these clothing merchants identified the defendant as the person who presented the checks and bought the articles, and said that at the time of the transaction defendant was not nervous, or groggy, or sick, that he acted in a normal manner. The manager of the Panama Hotel testified that a Mexican boy registered at her hotel between 11 and 12 o'clock on May 10th, and that he left the hotel about 8:30 p. m. and did not come back; that this man gave no indication of being drunk or under the influence of narcotics. At the time he left, he was wearing the cap and sweater which were identified as Exhibits G and H, respectively.

The defendant was apprehended in South San Francisco. A deputy sheriff of Davis county went to California for the purpose of bringing defendant back to Utah. The deputy sheriff testified that he saw the cap, Exhibit G, on the defendant in the county jail at South San Francisco, and also the sweater, Exhibit H, and that the trousers worn by him in the jail in California were the trousers identified as Exhibit B which were taken from the trunk in the bunkhouse, and that, when the defendant left with the sheriff, the defendant brought with him the mackinaw coat which was identified as Exhibit A, and which belonged to the witness Zavalo. Several conversations were had with the defendant by the officers and were testified to by them. These conversations, which were received in the nature of admissions, were shown to have been voluntarily made. There is no error assigned by the defendant with respect to the admission of this evidence. In one of these conversations the defendant stated that

he had cashed the checks at the places and in substantially the manner testified to by the merchants, and, when asked by the officer where he got the checks, he answered: "He said he got them off Juan—that is the way he said it, and that is as far as I went into details with him there."

The defendant further stated to the officers that he had taken the suitcase belonging to Zavalo. When asked how he came to kill the deceased, he said, according to one of the witnesses: "That the deceased had been sitting on the bed and that they had got into a quarrel and the deceased jumped up and grabbed the knife; that the defendant had taken the knife away from him and thrown it away; that the deceased then took the gun or 22 calibre rifle and he grabbed it from him, and then they wrestled, and the defendant got his hand onto the trigger of the gun and as they wrestled the gun went off and killed Martinez." and in answer to inquiry as to why he had done it, he said, "I had been drinking considerably."

The defendant went upon the stand and testified substantially as follows: that he was past 20 years of age, had been in the United States since 1924; that he had been working on the section and living in the same bunk house with Martinez; that on the 6th of May he, through Martinez, asked the foreman for his time and quit work, going to Salt Lake; that on the night of the 9th he returned to Kaysville and saw the deceased and the other Mexicans who lived at the bunk house and there visited with them; that he had a bottle of whisky which he passed around and that all drank together. Thus far his story is corroborated by other witnesses. The defendant said he then left Kaysville and came back to Salt Lake and that he drank considerable with some Mexican boys there. He was unable to give their names or where he met them or where he drank with them. He stated they drank all night and that toward morning he bought some cigarettes and that some one gave him marijuana which he smoked. He did not remember returning to Kaysville the next day nor anything else which happened until he was on the train on his way from Los Angeles to San Francisco, having first gone from Salt Lake to Los Angeles. He claimed his mind was an entire blank as to all that happened to him and stated that after smoking the marijuana he became "very crazy."

Two points are raised on this appeal. The first one urged by the appellant is that the court erred in denying defendant's motion for a new trial for the reason that "the verdict of the jury is against the weight of the evidence and against the instructions of the court." The only defense interposed at the trial was that at the time of the homicide the defendant was under the influence of intoxicating liquor and marijuana so that his mind "was in such a state as to preclude the existence of any purpose, motive or intent to commit the crime of which he was convicted." The defendant's testimony, as already indicated, was that he had been drinking whiskey on the night of the 9th and morning of the 10th; that he bought cigarettes and was given marijuana and that after he smoked the cigarettes and the marijuana that he was "very crazy." He did not know who the boys were with whom he drank except such drinking as he did at Kaysville when he and four or five others had a small flask of whiskey between them. There is nothing definite in his testimony as to the amount of liquor he drank nor the amount of marijuana he smoked. He said he did not remember returning to Kaysville on the 10th nor of seeing Martinez on that morning; did not remember shooting Martinez; did not remember cashing of checks or going to Ogden or anything else that happened on the day of the 10th. It is contended that this evidence shows conclusively that the defendant's mind was in such a state or condition as to preclude the existence of any particular motive or intent to commit murder in the first degree; that it would preclude the element of premeditation and thus require a verdict, if a verdict of guilty at all, in some degree less than murder in the first degree. A physician, called by the defendant testified as to the effect of the use of marijuana. He stated that it is a narcotic and acts upon the central nervous system affecting the brain, producing exhilarating effects and causing one to do things which he otherwise would not do and especially induces acts of violence; that violence is one of the symptoms of an excessive use of marijuana; that one who had used considerable liquor and also marijuana would have an aggravated condition as a result of the marijuana and that the effects of such use might last several days; that the mental condition would be very much aggravated if the individual had been using intoxicating liquor and thereafter had smoked a considerable amount of marijuana and would not be altogether accountable for what he did. That the marijuana produces an "I don't care" effect. A man having used liquor and marijuana might deliberately plan a robbery and killing and carry it out and escape, and then later fail to remember anything that had occurred. He might remember that he had committed a crime but probably would not know what crime. He might remember some of the incidents, but not all of them.

The court gave instructions which fairly presented to the jury the issues raised by the defense, among others, the following:

"No. 8. You are instructed that under the law no act committed by a person while in a state of voluntary intoxication is less criminal by reason of his having been in such condition; but whenever the actual existence

of any particular purpose, motive or intent is a necessary element to commit any particular species or degree of crime, the jury may take into consideration the fact that the accused was intoxicated at the time in determining the purpose, motive or intent with which he committed the act.

"That is to say, if you believe from the evidence that the defendant was intoxicated, either as a result of drinking intoxicating liquor or smoking marijuana, at the time of the commission of the alleged crime, if you find from the evidence that he did commit it, to such an extent that he was mentally incapable of deliberating or premeditating or entertaining malice aforethought, or to form a specific intent to take the life of the deceased, in such event the jury should find him not guilty of murder in the first degree.

"And you are further instructed that wherever as explained in these instructions any particular purpose, motive or intent is a necessary element to commit any particular species or degree of crime, you may take into consideration the fact that the accused was intoxicated at the time, if you believe he was intoxicated, in determining the purpose, motive or intent with which he committed the crime, if you believe from the evidence that he did commit it.

"However, if you believe from the evidence that the defendant's intoxication, or abnormal condition, if any, did not affect the mind of the accused to the extent herein stated, or at all, then it is your duty to disregard the matter of intoxication and not consider it."

"No. 10. After you have considered the case submitted to you, if you find from the evidence and according to the law given to you by the court that you are not convinced beyond a reasonable doubt that the defendant has committed the crime charged in the information, or any crime included within it, then you should acquit him; but if you find from the evidence beyond a reasonable doubt that any such crime has been committed by the defendant, without any justification therefor, you should next inquire as to the degree of the offense and determine such degree, and if you are convinced by the evidence beyond a reasonable doubt that the defendant has committed one of the crimes included within the information in this case, without any justification therefor, and there is in your mind a reasonable doubt as to which of said crimes or degrees he is guilty, you can only find him guilty of the lowest of such crimes or degrees, and if there is any reasonable doubt in your mind on the whole case as to whether the defendant is guilty of any crime charged in the information, you must find him not guilty.

"If there is any reasonable doubt as to premeditation, there can be no conviction of murder in the first degree. If there is a reasonable doubt as to whether the killing was with malice, there can be no verdict of murder in the second degree. If there is a reasonable doubt as to whether the elements which compose the crime of manslaughter have been proved, the defendant cannot be convicted of that offense. If there is any reasonable doubt on the whole case, the defendant must be found not guilty."

No objection was made or exception taken to these instructions. On the other hand, the defendant relies upon them as being an accurate statement of the law applicable to the case. The argument made by counsel for the defendant is, however, that the jury disregarded these instructions of the court and the evidence of the defendant and of the medical men. He says: "In the case at bar it is apparent that the appellant in this case was not only under the influence of intoxicating liquor, but that he was also under the influence of marijuana, and the jury in finding the appellant guilty of first degree murder, under the facts as shown by the records in this case, clearly show that such verdict is against the weight of the evidence and against the instructions of the court. The law being that the appellant is only required to show his lack of capacity to form an intent and to know right from wrong and to prove such facts, not beyond a reasonable doubt nor either by preponderance of the evidence, but only so far as to create a reasonable doubt in the minds of the jurors, whether the homicide in question was excusable or not."

[1-6] This argument, however, entirely fails to take into consideration the fact that it is the duty of the jury to consider all of the evidence in the case and not rest its verdict merely upon the testimony of the defendant. The jury had the right to disbelieve the testimony of the defendant as to the extent of intoxication or incapacity produced by drinking and smoking. There is nothing definite in his testimony as to the amount of liquor consumed by him or the amount of marijuana smoked by him. The only corroboration of his testimony with respect to drinking is that of the witnesses who drank with him at Kaysville, when a small flask of whisky was consumed by five or six persons prior to 10 o'clock on the night of the 9th. It is entirely uncertain how much marijuana was smoked. The defendant in one place stated that a cigarette of marijuana was given him by the dealer who sold him the package of cigarettes, and that he smoked this. In another place in his testimony he stated that marijuana was given him by the boys with whom he was drinking. He indicates in his testimony a failure to remember anything more definite than this. The testimony of the medical experts is likewise indefinite, because they could not be informed as to the amount of liquor consumed or the amount of marijuana smoked.

In their testimony it is clear that they based their conclusions upon the hypothesis that a "considerable amount" had thus been used. The jury is not bound to believe all that the defendant testified to. It is not required to blindly accept his testimony, as the truth, especially where, as here, the other evidence in the case as to the circumstances attending the commission of the crime and the conduct of the defendant immediately thereafter render his story improbable, or doubtful. State v. Allen, 56 Utah, 37, 189 P. 84. The jury had the right to disbelieve the testimony of the defendant that he had been drinking whisky and smoking marijuana to such an extent that he did not know what he was doing on May 10th. State v. Hitesman, 58 Utah, 262, 198 P. 769. It was the duty of the jury under the instructions given by the court to determine from the evidence whether the defendant was in fact so intoxicated by liquor or his faculties benumbed by the use of marijuana that he was incapable of forming or in fact had no premeditated motive or design to kill the deceased. Thomas v. State, 18 Okl. Cr. 648, 197 P. 853; Wharton on Homicide (3d Ed.) 809. The credibility of the witnesses and the weight and value to be given to their testimony are questions exclusively for the jury. The jury had before it ample evidence from which it could find as it did that the defendant was capable of forming a premeditated intent to kill as defined in the instructions. There was the mute evidence of the homicide and the conditions attendant upon its commission, the testimony of the witnesses who saw him and transacted business with him a short time after the homicide, finding him then in an apparently normal condition, and also the explanations and admissions made by him as to the taking of the checks of the deceased and the manner in which the killing occurred as described to the officers after his arrest.

[7] The second and third assignments are based upon the overruling of defendant's objection to the testimony of the medical expert called by the state and his answer to a hypothetical question propounded by the district attorney, and are based upon the ground that this expert had previously stated that, although he was familiar with the effect of narcotics upon the human system, he had had no experience with the use of marijuana. The question asked by the district attorney, to which objection was made, is as follows:

"Assuming that an individual about twenty-one years of age was in Kaysville about ten o'clock p. m. on the 9th day of May, 1920, and about between nine and ten a. m. on the 10th day of May an individual was shot while lying on a bed in a bunkhouse in Kaysville, with no indications of a struggle; the place was ransacked and the clothing stolen and two checks were stolen from the body of the person killed, and the person committing the murder or the crime packed up the clothing and put part of it in a suitcase and part in a bundle and carried a coat away and went to the station, the Bamberger station, in Kaysville, and asked the ticket agent for a ticket to Salt Lake, or he asked when a train went to Salt Lake and he was told in about half an hour, and then he wanted a ticket to Ogden and said 'Give me a ticket to Ogden' and purchased a ticket to Ogden and he went on the train to Ogden and there went to a rooming house and left the suitcase there and went to a place of business and cashed one of the checks, representing himself to be the individual designated as payee in the check, that is, the deceased person; upon request signing his name on a card and tendering the check in payment for a cap which he had selected, taking the change for the amount of the check above the amount of the purchase, and going to another store and asking for and buying a certain amount of clothing and buying two shirts, a pair of pants and a sweater, and tendering the other check in payment and receiving the change on the check; going to a rooming house and putting on other clothes and some of the clothes purchased; bought a ticket and came to Salt Lake, and there bought a bus ticket to Los Angeles, and from Los Angeles to San Francisco; in your opinion, doctor, could a person under the influence of narcotic drugs, carry out a course of conduct such as I have outlined?"

The answer to this question was "Yes."

Defendant's expert had been asked a hypothetical question of substantially the same character and the answer given by him was "Yes." Even if it were conceded, which we do not concede, that it was improper to ask the state's witness this question because of his unfamiliarity with the use of marijuana, there clearly was no prejudice to the defendant, since the answer was favorable to his contention and entirely in harmony with the answer given by the expert produced by him. This testimony was relied on to support the argument of defendant's counsel on the other branch of the case.

No other questions are presented to us for review on this appeal. We have carefully scrutinized the record to determine whether or not any error appears therein which has not been called to our attention by defendant's counsel. We have found none. A reading of the record convinces us that the defendant had a fair trial and that the issues presented by him in his defense were fairly and adequately presented to the jury; that there is ample evidence to support the jury's verdict, and therefore there is nothing we can do but affirm the judgment.

The judgment is affirmed, and the cause is remanded to the district court of Davis coun-

ty, with instructions to fix the date of execution.

CHERRY, C. J., and ELIAS HANSEN, STRAUP, and EPHRAIM HANSON, JJ., concur.

STATE v. NAVARO.

No. 5430.

Supreme Court of Utah.

Nov. 17, 1933.

1. Statutes ⇐188.

In absence of statutory or established technical meaning, word in statute must be given its ordinary meaning, unless different meaning was intended.

2. Statutes ⇐188.

Meaning of word may depend on way it is used in statute.[1]

3. Poisons ⇐2.

"Mariguana," as used in statute penalizing sale, gift, or possession of certain narcotic drugs, means a drug prepared from "cannabis sativa," designated in technical dictionaries as "cannabis" and commonly known as marijuana, mariahuana, marajuana, maraguana, or marihuana, in Southern and Western states (Comp. Laws 1917, § 4432, as amended by Laws 1927, c. 65).[2]

"Cannabis" is the dried flowering tops of the pistillate plants of "cannabis sativa" Linne (Fam. Moraceæ). Indian hemp consists of the dried flowering or fruiting tops of the pistillate plant of cannabis sativa, Linn., grown in India; from which the resin has not been removed." The "cannabis sativa," or hemp plant, is a tall, rough annual, from four to sixteen feet or more in height, with erect, branching, angular stem, etc. "American cannabis" is yielded by cannabis sativa plants cultivated in various sections of the United States, and occurs on the market in the form of broken segments of the inflorescences and more or less crumpled and broken leaves, varying in color from brownish-green to light brown.

4. Indictment and Information ⇐110(3).

Information charging felonious possession of mariguana in language of statute *held* sufficient (Comp. Laws 1917, § 4432, as amended by Laws 1927, c. 65).

5. Statutes ⇐196.

Relative or qualifying words of statute must be applied to words immediately preceding or following, unless contrary legislative intent is indicated.

6. Statutes ⇐184.

In construction of statute, court must be controlled by evident purpose of Legislature to attain certain end.

7. Poisons ⇐2.

Where statute penalizing sale, gift, or possession of named narcotic drugs, "flowering tops and leaves, extracts, tinctures and other narcotic preparations of hemp or loco weed, or chloral hydrate," was amended by inserting "mariguana" before "or chloral hydrate," Legislature intended to prohibit unauthorized use of narcotic drug known as "mariguana" and not the flowering tops and leaves of mariguana (Comp. Laws 1917, § 4432, as amended by Laws 1927, c. 65).

8. Poisons ⇐9.

Where statute prohibited sale, gift, or possession of mariguana except on prescription of licensed physician, dentist, or veterinary surgeon, burden was on accused to bring himself within exception (Comp. Laws 1917, § 4432, as amended by Laws 1927, c. 65).

Appeal from District Court, Salt Lake County; Allen G. Thurman, Judge.

Pablo Navaro was convicted of unlawful possession of mariguana, and he appeals.

Affirmed.

Wm. Reger and David H. Oliver, both of Salt Lake City, for appellant.

Joseph Chez, Atty. Gen., and John D. Rice, Deputy Atty. Gen., for the State.

FOLLAND, Justice.

The defendant was convicted of the crime of unlawful possession of mariguana. He appeals and makes fourteen separate assignments of error which have been grouped and argued by appellant under two general heads: (1) Insufficiency of the information to charge a crime and of the evidence to support the verdict; and (2) failure of the state to prove the negative allegations of the information.

[1] State v. Hendrickson, 67 Utah, 15, 245 P. 375.

[2] State v. Diaz, 76 Utah, 463, 290 P. 727; State v. Tiernan, 76 Utah, 262, 289 P. 109.

The information charged: "That the said Pablo Navaro, on the 6th day of February, A. D. 1933, at the County of Salt Lake, State of Utah, did wilfully, unlawfully and feloniously have possession of marijuana, the said Pablo Navaro not then and there having possession of the said marijuana upon the written order or prescription of a reputable licensed practicing physician, licensed dentist, or licensed veterinary surgeon, and the said Pablo Navaro not then and there being a jobber, wholesaler, or manufacturer of marijuana to retail druggists, nor a retail druggist, nor a regular reputable licensed practicing physician, nor a dentist, nor a veterinary surgeon, nor a manufacturer of proprietary or pharmaceutical preparations which require marijuana in the manufacture of said preparations, nor the agent or officer of any hospital, college, scientific, or public institution, and the said marijuana not being a preparation recognized by the United States Pharmacopoeia or as a standard proprietary remedy. * * *"

The statute under which this charge was made is Comp. Laws Utah 1917, § 4432, as amended by Laws of Utah 1927, c. 65, and reads in part as follows: "It shall be unlawful for any person, firm, or corporation to sell, furnish, or give away, or offer to sell, furnish, or give away, or to have in possession, any cocaine, opium, morphine, codeine, heroin, peyote (mescal button), alpha eucaine, beta eucaine, nova caine, flowering tops and leaves, extracts, tinctures, and other narcotic preparations of hemp or loco weed, (cannabis sativa,. Indian hemp), mariguana, or chloral hydrate, or any of the salts, derivatives, or compounds of the foregoing substances, or any preparation or compound containing any of the foregoing substances, or their salts, derivatives, or compounds, excepting upon the written order or prescription of a physician, dentist or veterinary surgeon licensed to practice in this State. * * *"

The evidence shows that defendant was stopped on a public street in Salt Lake City by two police officers; that one of them pushed defendant's sweater open and drew from his shirt pocket a package containing ten cigarettes done up in brown papers. The officers testified that the defendant said in answer to their questions that the package belonged to him and that it contained marijuana. That he made such statements was denied by defendant testifying in his own behalf. The city chemist made an examination of the contents of the package and testified he found the cigarettes contained American cannabis or mariguana; that "cannabis is commonly known as a drug, but it is not a drug from a scientific standpoint. Cannabis is a scientific name of a genus of herbs. It is a Latin word meaning hemp." It was stipulated that the state chemist, if present, would testify that cannabis is a drug.

It is appellant's contention that the statute does not prohibit possession of mariguana itself, but that it prohibits possession of the flowering tops and leaves of mariguana, the tincture, extract, or other preparations of mariguana, and that the information, in order to charge an offense under the statute, should have charged unlawful "possession of the flowering tops and leaves of mariguana" instead of directly charging unlawful "possession of marijuana." This view is predicated on: (a) The grammatical construction of the first sentence of the statute above quoted, and (b) the definition of the word "mariguana" which appellant claims means or signifies a plant and not a drug.

Counsel for appellant filed helpful briefs which indicate an exhaustive study of and reference to substantially all the available literature on the subject of the plant scientifically known by the name of cannabis sativa, and otherwise referred to as hemp or loco weed, and the drug cannabis under the various names by which it is known. Whether "mariguana" is another name for the plant cannabis sativa or for the drug cannabis is the object of this investigation.

[1-3] The word "mariguana" is not found in most of the ordinary dictionaries of the English language, nor is it directly defined in any of the medical or scientific dictionaries available to us. It is, however, defined in the New Standard Dictionary (1928) p. 1514, as follows: "Marihuana, n. (Mex.) A narcotic plant reputed to cause insanity in persons drinking an infusion of its leaves or smoking them. Mariguana."

It is a word of Mexican origin and has come into common use in the south and west portions of the United States. It is found in the statutes of several of the states of the Union, including this state, and is variously spelled either mariguana, marijuana, marihuana, marajuana, maraguana, or marihuana. The word, however spelled, is the same word and refers to the same thing. No point is made by appellant that it is spelled differently in the information than in the statute. Under the ordinary canons of construction of statutes we are required to give the word its plain, natural, ordinary, and commonly understood meaning, in the absence of any statutory or well-established technical meaning, unless it is plain from the statute that a different meaning is intended. The definition may depend on the character of its use in the statute. 59 C. J. 974; State v. Hendrickson, 67 Utah, 15, 245 P. 375, 57 A. L. R. 786. There is a growing body of literature with respect to mariguana and its uses, but this is found mainly in magazines and newspapers rather than in the standard scientific works. The reason for this is that "mariguana" is not a scientific name either of a plant or a drug, but is a word in local use and of com-

paratively recent origin in the United States. From our reading on the subject we have reached the conclusion that as used in our statute it means or refers to the preparation or product from the plant scientifically known as cannabis sativa, and is the same product or preparation described in the technical dictionaries and books as cannabis; that it is a word of common use in this locality and its meaning is well understood.

In the United States Dispensatory (21st Ed., 1926), cannabis is defined as "Cannabis is the dried flowering tops of the pistillate plants of Cannabis sativa Linne (Fam. Moraceae). * * * Indian Hemp consists of the dried flowering or fruiting tops of the pistillate plant of Cannabis sativa, Linn., grown in India; from which the resin has not been removed." Br.

"Cannabis indica, Br.; Hemp, Indian Hemp; Guaza, Ganjah, Herba Cannabis Indicæ; Chanvre, Chanvre de l'Inde, Fr.; Indischer Hanf, G.; Canamo, Sp.; Marihuana, Mex.

"The Cannabis sativa, or hemp plant, is a tall, rough annual, from four to sixteen feet or more in height, with erect, branching, angular stem," etc.

"American cannabis is yielded by Cannabis sativa plants cultivated in various sections of the United States. It occurs on the market in the form of broken segments of the inflorescences and more or less crumpled and broken leaves, varying in color from brownish-green to light brown."

Similar definitions of cannabis are found in "Properties and Uses of Drugs" by Rusby, Bliss and Ballard (1930), The Tenth Decennial Revision Pharmacopœia of the United States, official from January 1, 1926, page 95, and Steadman's Medical Dictionary (1926 Ed.) p. 155.

Mariguana is referred to in 2 Encyclopædia Britannica (14th Ed.) p. 420, in the article entitled "Hemp," which it defines as "an annual herb (Cannabis sativa) having angular rough stems and deeply lobed leaves. The best fibres of Cannabis are the hemp of commerce, but the products from many totally different plants are often included under the general name of hemp. * * *

"Hemp is now cultivated for fibre production in Russia, Italy, Jugoslavia, Rumania, Hungary, Poland, Spain, Belgium, France, Turkey, China, Japan, the United States and Chile. Other forms are cultivated for the narcotic drug cannabin, known in different forms and in different countries as hasheesh, bhang, gunga, charras, kif, and marijuana, in India, Arabia, Africa and Mexico."

See, also, "The Opium Problem," by Terry and Pellens (1928) page 809, where it is said: "More recently, another group of drugs has found its way into the anti-narcotic laws of a number of the states. This group is included under the genus of cannabis sativa which includes the two species cannabis indica and cannabis americana. * * * This drug is also known under the Spanish name of Mariahuana."

The use of the word "mariguana" by physicians, chemists, police officers, persons who smoke it, and by this court is indicated in our decisions. In State v. Diaz, 76 Utah, 463, 290 P. 727, 729, the defendant, who was charged with murder, took the stand and testified, among other things, that prior to the homicide he had been drinking liquor and smoking mariguana, and that after the smoking of mariguana he became very crazy. We quote from the decision: "A physician, called by the defendant testified as to the effect of the use of marijuana. He stated that it is a narcotic and acts upon the central nervous system affecting the brain, producing exhilarating effects and causing one to do things which he otherwise would not do and especially induces acts of violence; that violence is one of the symptoms of an excessive use of marijuana; that one who had used considerable liquor and also marijuana would have an aggravated condition as a result of the marijuana and that the effects of such use might last several days; that the mental condition would be very much aggravated if the individual had been using intoxicating liquor and thereafter had smoked a considerable amount of marijuana and would not be altogether accountable for what he did. That the marijuana produces an 'I don't care' effect. A man having used liquor and marijuana might deliberately plan a robbery and killing, and carry it out and escape, and then later fail to remember anything that had occurred." See, also, State v. Franco, 76 Utah, 202, 289 P. 100.

It would seem from the above that the word, when used without qualifying or modifying words, indicates the product or preparation consisting of the flowering tops, leaves, and seeds of the plant, rather than either the whole plant, or the fibrous stalks thereof. That such is the meaning of the word elsewhere is clearly indicated by cases and statutes from other states. In State v. Bonoa, 172 La. 955, 136 So. 15, 16, the defendant was charged with having possession of 500 of "the plants known as marajuana" under a statute making it unlawful to possess, sell, etc., "the plant known as marajuana, or any of its derivatives, either dried, or in the form of cigarettes, tobacco or any other way whatsoever." The defendant there objected that there was no such plant known as mariguana, and hence the terminology used conveyed to the people of the state no conception of what was prohibited. The court in holding against defendant's contention said: "We do not find any difficulty in holding that the use of the word, 'marajuana,' in connection with

the word, 'plant,' conveys to the mind exactly what the Legislature intended to convey, namely the plant scientifically known as Cannabis Indica or Cannabis America, though there possibly may be some slight and unimportant botanical difference between the two, but apparently none in its effects upon the human system. It is true that the word is not found in dictionaries ordinarily used, but it is found in the American Illustrated Medical Dictionary, where it is spelt 'Marihuana,' and in the Encyclopedia Brittanica (1929, 14 Ed.), in the article on 'Hemp,' where it is spelt 'Marijuana,' and in the statutes of at least two other states, namely, New Mexico, where it is spelt, 'Mariguana' (Chapter 42 of Laws of New Mexico, 1923, p. 58), and Texas, where it is spelt 'Marijuana' (Vernon's Annotated Criminal Statutes, 1925, vol. 2, Pen. Code, chapter 3, art. 720). In these statutes the word seems to be used in reference to some drug or preparation from the plant Cannabis Indica or Cannibis Sativa. However, the application of the name of the drug or preparation to the plant, as, for instance, the 'plant known as Marajuana,' could hardly be misleading, even assuming that the word more properly refers to the drug or preparation than to the plant itself."

It is clear from the opinion, and particularly the part we have quoted, that in Louisiana the word "Maraguana" properly refers to the drug or product of the plant rather than to the plant itself. The same is true in Texas. Gonzales v. State, 108 Tex. Cr. R. 253, 299 S. W. 901; Santos v. State (Tex. Cr. App.) 53 S.W.(2d) 809.

Many of the states, by statute, prohibit possession or use of this drug under the name of cannabis, cannabis indica, or cannabis americana. In the states where the word "mariguana" is used in the statute, it is given the meaning we have attributed to it. Laws Colorado 1927, chap. 95, p. 309, § 1:

"That Cannabis Indica, or Cannabis Sativa, commonly known as Indian Hemp, Hasheesh, or Marijuana, is hereby found and declared to be a habit-forming drug, the unrestricted use of which is injurious to the well-being of the users."

The Texas statute (Complete Texas Statutes 1928, art. 720, p. 1107 [Vernon's Ann. P. C. art. 720]). "No person, firm or corporation shall sell, furnish, or give away cocaine, derivations of cocaine, preparations containing cocaine or derivatives of cocaine, morphine, derivations of morphine, preparations containing morphine or derivatives of morphine, opium, preparations containing opium, chloral hydrate or preparations containing cloral (chloral) hydrate, canabis (cannabis) indica, cannabis (cannabis) sativa or preparations thereof or any drug or preparation from any canabis (cannabis) variety, or any preparation known as marijuana."

The New Mexico statute (Laws New Mexico 1923, c. 42, § 1, p. 58): "It shall be unlawful to import into the State of New Mexico cannibas indica, also known as hashish and mariguana, in any form or any preparation or derivative thereof: Provided, That cannibas indica, also known as hashish and mariguana, may be imported for medicinal purposes only, and then only by licensed pharmacists and licensed physicians of the State of New Mexico."

The Montana act, Rev. Codes Mont. 1921, § 3186, as amended by Act of March 8, 1927, c. 91, § 1, reads as follows: "It shall be unlawful for any person to sell, furnish, or dispose of any opium, morphine, alkaloid-cocaine, or alpha or beta eucaine, or codeine, or heroin, or mariahnana (Cannabis Indica), or any derivative, mixture, or preparation' of any of them except upon the signed prescription of a physician or veterinarian duly licensed under the laws of the State. * * *"

In volume 23 of the Journal of Criminal Law and Criminology (1922), at page 1086, is an article entitled "marihuana" written by M. H. Hayes, of Friends' University, Wichita, Kan., and L. E. Bowery, of the Wichita, Kan., police department, from which we quote: "Marihuana is referred to by Brundage's Toxicology as a drug the use of which results in 'a sense of exhilaration; pleasurable intoxication; peculiar prolongation of time; sense of double consciousness followed by drowsiness; anaesthesia; loss of power, particularly of the lower extremities; pupils dilated; pulse rapid; respiration slow; may cause increased sexual desires; catalepsy; sometimes convulsions.' It is known most generally in the United States by the Mexican name, 'Marihuana,' because it was introduced into this country by Mexicans."

In volume 2, American Journal of Police Science, at page 252, is an article entitled "Marihuana as a Developer of Criminals" by Eugene Stanley, district attorney, parish of Orleans, New Orleans, La., wherein is contained a history of cannabis sativa, and, while he has not nicely distinguished as to the meaning of the word "Mariguana," he states:

"It is the purpose of this article to give a brief outline of the nature and origin of Marihuana and the Legislation so far enacted concerning its sale and use; to recommend that this drug be placed within the provisions of the Harrison Anti-Narcotic Act [26 USCA §§ 211, 691-707] and to give a list of some of the works which may be consulted by any person interested in making a thorough study of the situation.

"Marihuana is the Mexican term for Cannabis Indica. The plant or drug known as Cannabis Indica, or Marihuana, has as its parent the plant known as Cannabis Sativa. It is popularly known in India as Cannabis

Indica; in America, as Cannabis Americana; in Mexico, as Cannabis Mexicana, or Marihuana. It is all the same drug, and is known in different countries by different names. It is scientifically known as Cannabis Sativa, and is popularly called Cannabis Americana, Cannabis Indica, or Cannabis Mexicana, in accordance with the geographical origin of the particular plant. In the East, it is known as Charras, as Ginga, as Hasheesh, as Bhang, or Siddi, and goes by a variety of names in the countries of continental Europe.

"In America, particularly in the South and Southwestern portions of the United States, it is called marihuana. It is popularly known among the criminal element as 'muggles,' or 'mooter' and addicts are commonly termed 'muggle heads.'"

[4] While in some of the articles to which we have referred the word "mariguana" is used indiscriminately with reference to the plant, the drug, or the flowering tops and leaves of cannabis sativa, the preponderant use of the word, we think, is clearly with reference to the product which is used for smoking. Such use is so frequent and common that no one can misunderstand when the statute prohibits its unauthorized possession or sale as a drug. The information in this case charges the unlawful possession of mariguana in the language of the statute, and that is sufficient.

[5-7] The grammatical construction of the sentence in the statute does not require a different definition of the term. Appellant's position is stated in his brief:

"From a grammatical standpoint, the amended statute would seem to be correct, and bear out the construction placed thereon by appellant. It will be noted that the words, to-wit, 'Opium, morphine, codeine, heroin, peyote, alpha eucaine, beta eucaine, nova caine, flowering tops and leaves, extracts, tinctures, and other narcotic preparations,' are objects of the verbs, to-wit: 'Sell, give away, or offer to sell, furnish, or give away, or to have in possession.' While the words, to-wit, 'hemp or loco weed, (Cannabis sativa, Indian Hemp), mariguana, or chloral hydrate,' are the objects of the preposition 'of.' No other conclusion can be reached when it is once understood that marihuana is a plant and not a narcotic drug."

Counsel have worked out a diagram of this sentence according to the rules of grammarians by which it is claimed the words "flowering tops and leaves, extracts, tinctures, and preparations" are modified by the words "hemp, loco weed, (cannabis sativa, Indian hemp), mariguana and chloral hydrate." If their contention is correct, the statute must be construed to prohibit possession of the flowering tops and leaves of chloral hydrate as well as of mariguana. This, however, is an impossible construction because chloral hydrate is unquestionably not a plant, but is a drug. It is described in United States Dispensatory (21st Ed.) p. 323, as follows: "'Chloral Hydrate contains not less than 99.5 per cent. of $CCl_3CHO.H_2O$.' U. S. 'Chloral Hydrate, $C_2Cl_3H_3O_2$, may be obtained by the addition of water to the liquid chloral, C_2Cl_3HO, produced by the action of dry chlorine gas on ethylic alcohol.' Br."

Before the statute was amended in 1927 by the insertion of the word "mariguana" after the words "(cannabis sativa, Indian Hemp)," and before the words "or chloral hydrate," the phrase "flowering tops and leaves" etc., was clearly intended to modify or apply to "hemp or loco weed," and not to "chloral hydrate." Had it been the legislative intent by the amendment of 1927 when the word "mariguana" was inserted to use such word as the name of a plant instead of a drug, undoubtedly the Legislature would have used some such language as this, "The mariguana plant or weed," instead of merely inserting the word "mariguana," which, as we have seen, is commonly used to refer to the narcotic product of the plant cannabis sativa. By the rules of construction the relative or qualifying words are to be applied to the words immediately preceding or following, unless the legislative intent is indicated that a different application be made. 59 C. J. 985. There is not anything in the amendment of 1927 to indicate that the qualifying words were intended to be extended farther than in the original statute. Since the flowering tops and leaves of cannabis sativa, which is but the scientific name of the hemp plant or loco weed, constitute a drug known as cannabis and commonly known in this locality as mariguana, there was no necessity for the amendment except to clarify the statute by inserting the name by which the drug was commonly known by those who trafficked in, and used, mariguana. The character of its use in a section dealing with narcotic drugs indicates clearly that the word was intended to have its commonly understood meaning. We must be controlled by the evident purpose of the Legislature in view of the object sought to be attained. State v. Hendrickson, supra; Richardson v. Treasure Hill M. Co., 23 Utah, 366, 65 P. 74. It is obvious the Legislature intended to prohibit the unauthorized use of the narcotic drug or product known as mariguana. This being true, the court properly overruled the demurrer to the information and the objections made by the appellant on the ground of insufficiency of the information and of the evidence to sustain the verdict.

[8] On the second point made by the appellant he must also fail. He contends it was incumbent on the state to produce evidence to prove the negative allegations of the information to the effect that the defendant did not have possession of the mariguana on a written order or prescription of a licensed physi-

cian, dentist, or veterinary surgeon, and that he was not a jobber, wholesaler, manufacturer, or other person lawfully entitled under the statute to have possession of mariguana. The rule is well stated in 49 C. J. at page 1053: "Where the statute relating to poisons or narcotic drugs contains exceptions, a defendant desiring to avail himself of any of them by way of defense must show that he comes within its intent. Thus the burden is upon one accused of illegal possession to show that his possession was lawful under a proviso or exception of the statute under which he is being prosecuted, or, where the animus possidendi is an element of the offense, to show honest ignorance of the fact of possession." See, also, State v. Chin Gim, 47 Nev. 431, 224 P. 798; People v. Moronati, 70 Cal. App. 17, 232 P. 991; and People v. Montgomery, 271 Ill. 580, 111 N. E. 578. This case falls within the rule stated in Corpus Juris and the above cases.

We find no error in the record. The judgment of the district court of Salt Lake county is affirmed.

ELIAS HANSEN, EPHRAIM HANSON, and MOFFAT, JJ., concur.

STRAUP, Chief Justice.

I concur. The act in question deals with the possession and use of "narcotic drugs." It provides that "it shall be unlawful for any person * * * to have in possession * * * mariguana," except those specified in the act. The information charged that the defendant unlawfully had in his possession "mariguana" and negatived the exceptions enumerated in the statute. The evidence shows that the defendant on a public street was possessed of a package of cigarettes done up in brown paper. Evidence was given to show that the defendant stated that the package "contained mariguana." The state chemist stated that the "cigarettes contained American Cannabis or mariguana," commonly known as a drug.

The point made is that under the statute it was not unlawful for any one to have "mariguana" in his possession. The statute says it is unlawful. In such particular it is contended that under the act it is unlawful only to possess the "flowering tops and leaves of mariguana." Should that be conceded, that was what the cigarettes contained, that was what the defendant possessed. What is "mariguana"? Botanically or scientifically it is known as cannabis sativa. It is a plant. Cannabis often is spoken of as the dried flowering tops and the leaves of the plant. They contain the narcotic property or element of the plant. In different countries where the plant is cultivated it is known by different names. In Mexico it is known as "marihuana." The word "marihuana" often is spelled differently. I care not about that, they all mean the same thing. The proper spelling of the Mexican term probably is "marihuana," and is so spelled in the Standard Dictionary. It is there defined as "a narcotic plant reputed to cause insanity in persons drinking an infusion of its leaves or smoking them." It thus is the leaves and top blossoms of the plant which contain the narcotic properties of the plant, and it is the drinking of an infusion of them or smoking them which produces the injurious effects upon a person. To unlawfully possess them is unlawfully to possess mariguana. So, when the act deals with the general subject of the possession and use of "narcotic drugs" and declares it unlawful to possess "mariguana," it of necessity implies a possession of the narcotic properties and elements of the plant and not the possession of the mere stem or fiber of the plant from which coarse cloth and cordage are made.

Thus, when the term "mariguana," the name of which has its origin or derivation in Mexico, is used in the statute, it is there used in the popular sense of its narcotic properties or drug. Taking such view of the matter, I think the defendant was properly charged with having possession of mariguana, and upon the evidence properly convicted of having it in his possession.

legislative and judicial trends in marijuana controls

By Donald E. Miller,
Chief Counsel, Federal Bureau of Narcotics,
U.S. Treasury Department,
Washington, D.C.

MARIJUANA abuse is literally first and foremost a legal problem. However you may choose to describe it—as a sociological, as a psychological or as a human problem—the fact remains that our society has decided to subject marijuana to controls through the use of criminal sanctions.

The prevailing philosophy in the United States, and I might add throughout the world, is based on the premise that it is better for persons to function without resorting to the abuse of a drug so dangerous as marijuana. Abuse of the drug has been considered to be a major social threat by our legislators, who have enacted and retained the anti-marijuana laws.

My topic will lead me to consider some of the patterns of legal controls, the application of those controls, and the need to retain rather stringent federal and state regulatory statutes.

Prior to the enactment of the Marijuana Tax Act of 1937 (the primary federal control), Congress was possessed of quite a lot of information concerning the social and physiological effects of marijuana. By today's standards, perhaps the evidence against it was not as strong as it might have been. Joseph Oteri has made a special point of this in his discussion, "A Look at the Passage of the Marijuana Tax Act."(1) But, in developing programs, our lawmakers are not required to rely on only uncontroverted factual propositions. Nevertheless, the hearings, including the secondary reference material, provided ample support for the proposition that marijuana had harmful effects and that it contributed to anti-social problems.

Interestingly enough, medical science all over the world has long recognized the damages of marijuana. There is not a single modern, responsible medical body (to my knowledge) that supports the legalization of marijuana. The American Medical Association opposes it—and the World Health Organization opposes it. Additionally, the nations of the world have long opposed the abuse of marijuana. In fact, the Single Convention on Narcotics Drugs (1961) obligates the 65 parties to maintain special measures of control on marijuana, and to prohibit the use of marijuana for other than medical and scientific purposes within 25 years.

It is ridiculous to conclude that the public health officials who helped formulate the health policies all over the world did so without adequate knowledge of marijuana's dangers. To conclude, as Mr. Oteri seems ready to do, that former Commissioner Harry J. Anslinger duped all the world's scientists, legislators, and public officials and that he alone "turned off the world," is equally contrary to common sense.

The impression is being created that virtually nothing is known about marijuana. This is false. Also, the impression is being created that there is nothing harmful about marijuana. This is equally false. Too many people seem to think that we should not pay any attention to the old studies. Too many permissivists argue that the studies of Benabud (2), Bouquet (3), Chopra (4), Gardikas (5), Joachimoglu (6), and Wolff (7) are not valid because they were not done in America, under American standards, using American subjects, and using "American-type" marijuana. I cannot dismiss those studies so lightly, and neither should you.

The real damage being done in this crisis of confidence is that some scholarly men are more willing to attack the marijuana controls than to justify them; that these persons are more concerned with deriding the public officials who are charged with enforcing the laws than in helping them prevent drug abuse; and that they are more interested in rationalizing the use of marijuana than in presenting reasons for controlling it.

It is true that we do not possess absolute knowledge of the effects of marijuana. However, let us remember that marijuana contains a very powerful ingredient, tetrahydrocannabinol, which is capable of producing many ill effects. Various studies from the Middle East, the Near East and in the United States indicate that the mental effects are very significant. Emotional balance is disturbed—waves of euphoria are often interspersed with phases of anxiety: paranoid episodes are frequent—giving rise to disturbances of conduct: volition and initiative are impaired: sensation is changed and distorted: and even the so-called "American-type" marijuana can produce full-fledged hallucinations and delusions.

Reported Effects

The formal list of reported physiological and psychological effects of the intake of marijuana is quite varied and lengthy. The 1965 report on Drug Dependence of the World Health Organization lists the following:

"Among the more prominent subjective effects of cannabis . . . are: hilarity . . . carelessness; loquacious euphoria . . . distortion of sensation and perception . . . impairment of judgment and memory; distortion of emotional responsiveness; irritability, and confusion. Other effects, which appear after repeated administration . . . include: lowering of the sensory threshold, especially for optical and accoustical stimuli . . . illusions, and delusions that predispose to antisocial behavior: anxiety and aggressiveness as a possible result of the various intellectual and sensory derangements; and sleep disturbances."

A problem in the United States in the field of research is the lack of a potent standard product. Significantly, about 50 per cent of novices report that they obtained no effects whatever the first time they used marijuana. They have not been the victims of a drug, but merely have been deceived with a hoax. There is

so much gyping going on that it helps support the notion that marijuana is innocuous. Chemically speaking, many persons who confess on questionnaires to have been "triers" of marijuana really have done nothing more than to become partially asphyxiated from polluted air.

There is a wide variance in the potency of black market marijuana. Although hashish is readily available in many parts of the United States, the majority of the marijuana is of the less potent variety. Also, we know that marijuana varies according to where it is grown, when and how it is harvested, and its age. Nevertheless, there is little doubt that marijuana contains a very powerful hallucinogen, and when potent substances are consumed, or the dosage of a weaker substance is increased, mental and physical reactions are intensified. The results of using the natural occurring tetrahydrocannabinol of marijuana seem to be conclusive. Dr. Harris Isbell concludes that in sufficient dosage, the properties of marijuana "can cause psychotic reaction in almost any individual."(8)

The isolation of the tetrahydrocannabinols and the promise of increasing availability of synthetic substances makes it possible for us finally to perform the vitally needed pharmacologic, biochemical, genetic and behavioral research necessary to answer the questions about the long-range effects of marijuana. More likely than not, the earlier failures in finding such effects in this country resulted from the unavailability of chronic users of high quality marijuana. Even the clinical studies in the highly regarded "LaGuardia Report,"(9) must be reviewed with the knowledge that marijuana of unknown potency was smoked, and that much of the research involved oral administration of a marijuana concentrate.

Hence, we find very adequate reasons for proscriptions against marijuana. Even if we were to accept the snobbish proposition that the children of our colleges today possess a superior sense of moral intelligence and are better able to deal sensibly with drugs, and even if we were to conclude that marijuana affects only the weak and the vulnerable, since when has our society stopped being concerned about a minority? The very purpose of many of our health laws is the protection of minorities. I am not impressed that a law student with a high I.Q. does not obtain a reaction from taking two or three puffs on a marijuana cigarette. I am concerned over the consequences of making the drug readily available in a society containing millions of persons predisposed to impulsive and aggressive behavior.

Question of Control

I believe that most of us involved in this symposium would oppose complete legalization of marijuana. The real issue seems to be the extent to which we should control it. The Marijuana Tax Act of 1937 (10) is a system of registration, occupational tax, transfer tax, and transfer forms. The law is designed to permit marijuana to be produced and used for industrial, scientific and medical purposes only. In determining which persons may become registered, and thereby sell or acquire marijuana, the regulatory scheme requires as a condition precedent that the applicant be qualified to engage in the activity according to the applicable state provisions. A typical "street peddler" could not become registered, because such a person is disqualified by state law. Lawyers will continue to argue that the federal government has no right to rely on such controls. Indeed, great stress has been put on certain aspects of such laws in recent Supreme Court decisions. (11) However, I take it that the major concern of this Symposium is in the area of penalties. So, I will try to ventilate the fog of misunderstanding in that area.

Penalties Severe

It is true that the federal law does have rather substantial sentencing provisions. The penalties provide not less than two years or more than 10 years for a possession offense, and not less than five years or more than 20 years for a sale offense. Perhaps, if the law had been designed for and applied against minor traffickers and so-called "users," there might be a need for adjustment of the penalties to fit the gravity of the offense. However, this is not the case. The mandate from Congress and the Executive policy makers is to concentrate our efforts on the larger international and interstate traffickers. Even if we were to obtain evidence against a mere possessor of marijuana for his own use, there are certain latitudes, such as charging the person as a "juvenile delinquent" or handling him under the Federal Youth Corrections Act rather than sentencing him under the regular penalty provisions. I can recall no case where a student was prosecuted in federal court based on mere evidence of possession of marijuana for his own use. It is interesting to note that Congress has looked at these penalty provisions on several occasions, and has not found a need to reduce them.

Why make possession a violation of law? Law professors will claim that in order for a law to be an effective prevention, its operation must be prompt, certain, efficient, and its threats must not be bluff—its club must not be stuffed with highly selective enforcement and frequent evasions. On the surface, this would not be true with the Marijuana Tax Act of 1937 in view of the manner in which the laws are administered. Nevertheless, it is reasonable to assume that the fear of suffering the consequences of the law does deter countless reasonable and responsible persons. Avoidance of punishment and disgrace is a very decisive reaction of normal people. It can be assumed that the vast majority of the people who have lived with the social contrivance of punishment, in the home, in the schools, at play and at work, will avoid certain courses of action which are potentially injurious. The big red apple on the tree in the field where the bull grazes may be enticing, but most of us are too afraid to go over the fence after it.

This, consequently, sets up a barrier, not only to unauthorized use, but more importantly against proselytizing. We can make one generalization: marijuana abuse spreads from person to person—the users who possess it are the ones who breed new users. To condone possession is to condone a ready source of marijuana for proselytizing. The result of "legalizing" possession can only be a more permissive attitude.

I believe a case has been made against marijuana. It is a harmful and dangerous substance which must be controlled. Further scientific studies are needed, and the National Institute of Mental Health is presently carrying on a complete plan of research, covering all aspects of marijuana use. The Bureau of Narcotics has been working with N.I.M.H. to develop procedures to facilitate research, and to obtain sufficient quantities of marijuana and tetrahydrocannabinol for the research. We are hoping that continual funds will be available for the next several years in order that we will be able to find the answers to the basic research questions which are being asked.

In the meantime, pending the results of the new studies, we should not make any off-the-cuff decisions. We should not take any action which will be seized upon as approval to use a debilitating drug. We now have more than 62,000 reported active addicts, we have untold thousands of amphetamine and barbiturate abusers, and we have millions of persons who drink too much alcohol. That seems to be quite enough.

The Marihuana Tax Act of 1937

David F. Musto, MD, New Haven, Conn

The anti-marihuana law of 1937 was largely the federal government's response to political pressure from enforcement agencies and other alarmed groups who feared the use and spread of marihuana by "Mexicans." Recent evidence also suggests that the Federal Bureau of Narcotics resisted the enforcement burden of the anti-marihuana law until mounting pressure on the Treasury Department led to a departmental decision, probably in 1935, to appease this fear, mostly in the Southwest and West, by federal legislation. Previously unpublished documents clarify the role of medical research in the campaign for a federal anti-marihuana law and in the Treasury Department's preparation for congressional hearings.

SOCIAL reformers successfully initiated federal restrictions on cannabis, along with alcohol, opiates, cocaine, and chloral hydrate in the first decade of this century. The Pure Food and Drug Act of 1906 required that any quantity of cannabis, as well as several other dangerous substances, be clearly marked on the label of any drug or food sold to the public.[1] Early drafts of federal antinarcotic legislation which finally emerged as the Harrison Act in 1914 also repeatedly listed the drug along with opiates and cocaine (for example, H.R. 25,241 61st Cong., 2nd Sess. [1910] which was prepared and endorsed by the State Department and introduced April 30, 1910). Cannabis, however, never survived the legislative gauntlet, probably because of the pharmaceutical industry's opposition. At that time, and for at least a decade longer, the drug trades did not see any reason why a substance used chiefly in corn plasters, veterinary medicine, and other non-intoxicating forms of medicaments should be so severely restricted in its use and sale. Not even the reformers claimed, in the pre-World War I hearings and debates over a federal antinarcotic act, that cannabis was a problem of any major significance in the United States.

Dr. Hamilton Wright, a State Department official who from 1908 to 1914 coordinated the domestic and international aspects of the federal antinarcotic campaign, wanted cannabis to be included in drug abuse legislation chiefly because of his belief in a hydraulic model of drug appetites. He reasoned, along with numerous other experts, that if one dangerous drug was effectively prohibited, the addict's depraved desires would switch to another substance more easily available. He felt, therefore, that cannabis should be prohibited in anticipation of the habitual user's shift from opiates and cocaine to hashish. The narcotic reformer's task, then, was to prohibit and control as many dangerous and seductive substances as possible at one time.

Although congressional hearings rarely heard any witnesses defend opiates or cocaine, those against including cannabis in federal legislation spoke more openly. In January 1911 hearings were held on a federal antinarcotic law before the House Ways and Means Committee. The National Wholesale Druggists' Association (NWDA) representative protested, in addition to other aspects of the proposed legislation, the inclusion of cannabis alongside opiates and cocaine. Charles A. West, chairman of the NWDA Legislative Committee, complained that "cannabis is not what may be called a habit-forming drug."[2(p30)] Albert Plaut, representing the New York City pharmaceutical firm of Lehn & Fink, objected to including "insignificant articles, the habit-forming quality of which is more than doubtful."[2(p73)] In particular he objected to the inclusion of cannabis; he attributed its reputation more to literary fiction, such as the description of hashish in the *Count of Monte Cristo*, than to informed opinion. "Cannabis brought into this country," Plaut explained, "is used almost altogether for the manufacture of corn cures and in veterinary practice. As a habit-forming drug its use is almost nil."[2(pp72-74)] When questioned as to whether cannabis might be taken by those whose regular supply of opiates or cocaine is restricted, Plaut responded that the effects of cannabis were so different from those of opiates and cocaine that he would not expect an addict to find cannabis attractive.[2(pp77-78)]

The drug industry's complaints received stern rebuttals but no one denied that cannabis constituted at that time a very small part of drug abuse. Arguments for inclusion rested on the belief of such authorities as Dr. Alexander Lambert, of Bellevue Hospital and later President of the

American Medical Association, that some of his patients were habitual users of cannabis and that, therefore, the drug was habit-forming.[2(p511)] One of the most stirring attacks on cannabis came from a comrade of Dr. Lambert, the lay proprietor of a profitable hospital for addiction treatment, Charles B. Towns. Towns' chief fame arose from his popularization of a supposed cure for the cravings of drug-users, but he made an active sideline out of appearing before committees of inquiry and drafting model legislation to combat the evils of drug abuse. He was an impressive witness in 1911, nearing the peak of his fame as one of mankind's benefactors.[3] He took a very uncompromising attitude toward drug use:

> To my mind it is inexcusable for a man to say that there is no habit from the use of that drug. There is no drug in the Pharmacopoeia today that would produce the pleasurable sensations you would get from cannabis, no not one—absolutely not a drug in the Pharmacopoeia today, and of all the drugs on earth I would certainly put that on the list.[2(p49)]

The "Father of the Pure Food Law," Dr. Harvey Washington Wiley of the Department of Agriculture, was no less adamant than Towns. Dr. Wiley favored prohibition of the drugs listed in the proposed legislation but if regulation was all he could get, he would settle for that. To his mind the list of drugs was too short and it should have included not only acetanilid, antipyrene, and phenacetin, but also alcohol and caffeine. Dr. Wiley declared alcohol to have no medicinal value and caffeine to be a habit-forming drug, sold indiscriminately even to children in cola and other drinks. The only value he saw to habit-forming painkillers was to permit an easy death; a patient who had a chance for recovery would be better off without them since he might establish a habit which could never be broken.[3(pp86-87)]

While most spokesmen for the drug trades opposed federal regulation of cannabis, one distinguished member favored its control and most of the other provisions of the new legislation: Dr. William Jay Schieffelin of New York, like Dr. Lambert, was prominent in the nation's social and political life as well as in his profession as the president of a wholesale drug house. He moved with the progressive and reform spirit of the era and was, therefore, somewhat separated from the rank and file as regards the acceptable burdens antinarcotic legislation would place on the drug trade. Schieffelin believed cannabis was "used only to a slight extent in this country," but he had heard that there was a demand for it in the "Syrian colony in New York" where he thought it was smoked like prepared opium. He concluded, "The evil is minute but it ought to be included in the bill."[4]

Cannabis was not included, though, and except for the Pure Food and Drug Act's provision as to labeling, no federal regulatory law was enacted until 1937. (By 1931 regulations under the Food and Drug Act had limited the importation of cannabis except for medical purposes.) Meanwhile the two contrasting attitudes toward cannabis remained pretty much the same: the reformers feared its use; the drug industry, which used it in rather minor preparations, felt less concern about possible misuse and opposed its regulation. Both sides seemed to agree that cannabis was not as threatening as other drugs and that its inclusion in regulatory laws would be for the purpose of anticipating its popularity once opiates and cocaine were brought under control.

Complaints about cannabis continued to come to the attention of the federal government, although without the frequency or insistence which was to occur in the 1930s. In preparation for the First Hague Conference, which led to the Hague Convention (1912) for the control of the world's narcotic traffic, one of the American delegates, Henry J. Finger of the California Board of Pharmacy, wished to draw particular attention to the dangers of cannabis. Many Californians, particularly in San Francisco, were frightened by the "large influx of Hindoos . . . demanding cannabis indica" who were initiating "the whites into their habit."[5] Finger wanted the world traffic in cannabis to be controlled.[5] The United States delegation, of which Dr. Wright was a member, gladly adopted Finger's goal, but did not find the Hague Conference favorably disposed to include cannabis in the Hague Convention. The best the United States could accomplish at this time was the adoption of a recommendation that nations look into the charter of the drug and see whether it merited regulation.[6] Agreement that international traffic in cannabis should be regulated did not come until the Second Geneva Convention in 1925.[7]

Domestic concern over cannabis seemed to originate in the Southwest and to begin increasing after the First World War. In 1919 the crucial Supreme Court decision outlawing addiction-maintenance for pleasure or comfort led to national restrictions on physicians, druggists, and other outlets for drugs believed to be responsible for America's many addicts. Such a time was also appropriate for control of other dangerous substances. Of course, alcohol was outlawed for convivial consumption when the 18th Amendment became effective in January 1920. Cannabis also ought to be controlled, argued the Governor of Louisiana and the president of Louisiana's Board of Health. Their contact with "marijuana" had elements which would become familiar in the 1930s. A white, 21-year-old musician in New Orleans had been arrested for forging a physician's signature in order to get some "mariguana" imported from Mexico. The musician said the substance was taken to "make you feel good," but the dangers of this substance were clear to Dr. Oscar Dowling and Governor John M. Parker. Dr. Dowling, who was also a member of and later chairman of the American Medical Association's Board of Trustees, warned the Governor that marihuana was "a powerful narcotic, causing exhilaration, intoxication, delirious hallucinations, and its subsequent actions, drowsiness and stupor."[8] He also urgently requested of the Surgeon-General of the Public Health Service that the federal government take "some action" to control the traffic in marihuana.[9] The Surgeon-General replied that he was in complete agreement with Dr. Dowling's concern.[10] Shortly thereafter Governor Parker claimed in a letter to Prohibition Commissioner John F. Kramer that "two people were killed a few days ago by the smoking of this drug, which seems to make them go crazy and wild" and he expressed his surprise that there were no restrictions against marihuana.[11] But the troubles the government was already having with enforcement of

the Harrison Act may not have encouraged addition of more drugs for control.
