The individual who smokes marijuana today hardly fits the sterotyped image concocted in the 1930's--the depraved criminal who got "high" on his reefer and commited vicious crime. In fact, the Shafer Commission found--"the most notable statement that can be made about the vast majority of marijuana users - experimenters and intermittent users - is that they are essentially indistinguishable from their non-marijuana using peers by any fundamental criterion other than their marijuana use."

The use of marijuana today is socially the equivalent of the use of alcohol by most of our citizens. It is the recreational drug of choice of a growing minority.

16. How do the voters feel about decriminalization?

A. For the first time, as a result of a recent national survey commissioned by the Drug Abuse Council, we have current data available. Prior to this, most surveys failed to differentiate between decriminalizing the marijuana user, and legalizing its sale, rendering their results useless as far as determining potential political support for decriminalization.

According to the D.A.C. Survey, as of October, 1974, the public is finally changing their attitudes towards marijuana smoking, and the trend towards decriminalization is unquestionable:

16% of the public favor legalization;
an additional 13% favor decriminalization;
an additional 10% favor the civil-fine approach:
39% - (current political support for some form of decriminalization)
13% would make no change at this time;
8% are undecided
40% would prefer stronger penalties.

This means that 39% favor some form of decriminalization, with an almost equal 40% still clinging to stiff criminal penalties. Thus the 13% who would currently want no change, plus the 8% undecided, will decide this issue as they select their sides.

As the favorable results of the Oregon experience become better known nationally, decriminalization will, for the first time, become the favored position politically.

17. What organizations and individuals have endorsed decriminalizing the marijuana smoker?

Since the Marijuana Commission made its recommendation in March of 1972, the concept of decriminalization has been endorsed by a growing list of organizations, including:

American Bar Association
Consumers Union, publishers of Consumer Reports
National Conference of Commissioners on Uniform State Laws
American Public Health Association
National Advisory Commission on Criminal Justice Standards and Goals
National Council of Churches
The Governing Board of the American Medical Association
National Education Association
B'nai B'rith
Canadian Commission of Inquiry into the Non-Medical Use of Drugs (Le Dain Commission)
San Francisco Committee on Crime
Mayor's Advisory Committee on Narcotics Addiction (Washington, D.C.)
American Academy of Pediatrics
Illionis Bar Association
Minnesota Bar Association
Vermont Bar Association
New York Bar Association
Washington Bar Association
Massachusetts Bar Association

In addition, four state legislatures have made their own studies (California, Maine, New Jersey and Massachusetts) and have all recommended decriminalization.

The concept has recently been endorsed editorially by William F. Buckley, Jr., James J. Kilpatrick, Ann Landers, The Washington Post, The New York Times, The Los Angeles Times, The Boston Globe, The Chicago Sun-Times, and many others.

Mr. Harold R. Tyler
Deputy Attorney General
U.S. Department of Justice
Constitution Ave. and 10th Street
Washington, D.C. 20530

Dear Mr. Tyler:

We were pleased to learn, from Mr. Don Miller, Chief Counsel of the Drug Enforcement Administration, that the Department of Justice is currently reviewing its policy towards minor marijuana violations, and is particularly examining the feasibility of switching to a civil fine system under federal law.

As you may know, the suggestion that rather than eliminating all penalties for the private use of marijuana, a civil fine should be retained, was originally the suggestion of Congressman Paul Rogers and Tim Lee Carter, and Mr. Mitchell Ware, as a minority footnote to the Marijuana Commission Report in March of 1972. This concept has been gaining significant support nationwide, with more than 20 states intruducing legislation to accomplish that recommendation in the current legislative session. It appears that as many as a half a dozen states will enact these measures this year.

Our organization favors total decriminalization, as espoused by the majority report of the Marijuana Commission, as we recently testified. But we also recognize the need to minimize the numbers of casualties from the current criminal prohibition at the earlies possible time. Thus our organization is supporting these civil citation measures as a possible middle ground until our long-term marijuana policy in this country can be more deliberately developed. Simply stated, we cannot justify the alarming and increasing numbers of arrests for minor marijuana violations for the next couple of years while we attempt to gain sufficient support to enact a bill we prefer.

I am hopeful that the Department of Justice will also be mindful of the tremendous number of otherwise law-abiding persons whose lives are currently being disrupted and often their careers ruined while the marijuana issue is debated in the halls of Congress. About the only opposition to this concept any longer comes from the traditional law enforcement agencies. Apparently many law-enforcement policy makers are simply unwilling to break from a traditional position. Cer-

tainly a statement of support for a civil citation system for minor marijuana offenses from the Department of Justice would be sufficient to assure enactment of this concept federally and in many states within a very short time.

I have enclosed for your information a brief memorandum which states in some detail the position of our organization. I would appreciate your comments concerning the view of the Department of Justice.

Regards,

R. Keith Stroup

Congressman Paul G. Rogers
Chairman, Subcommittee on
Health and the Environment
Committee on Interstate and
Foreign Commerce
Room 2415
Rayburn House Office Bldg.
Washington, D.C. 20515

Dear Congressman Rogers:

As you are undoubtedly aware, the position first espoused by yourself along with Congressman Carter and Mr. Mitchell Ware, in the final report of the National Commission on Marijuana and Drug Abuse, that of retaining a small civil fine against the user of marijuana, appears to be the position around which a consensus is forming nationwide. More than 20 states have had civil fine bills introduced legislatively this session, and as many as a half a dozen appear likely to win approval. As was expressed by yourself and the other dissenters in the Commission's final report, the retention of the civil fine against the marijuana smoker is seen by many as a more dramatic and sincere effort at discouraging use, while at the same time avoiding the harsh consequences of the current criminal prohibition.

Senator Birch Bayh recently announced his support for the civil citation concept and held public hearings in the Juvenile Delinquency Subcommittee on S.1450, the Marijuana Control Act of 1975, recently introduced by Senators Javits, Cranston, Nelson and Brooke. In the course of those hearings, Mr. Don Miller, Chief Counsel of the Drug Enforcement Administration, testified that the department had not yet taken a position on the concept of a civil citation for minor marijuana infractions, and further reported that he was personally in charge of an ongoing study to determine the feasibility of just such a system. I'm sure you will agree that this represents a significant change in the traditional position of the Department of Justice on this metter. It appears to signify a willingness to look seriously at the feasibility of adopting federally the recommendation you made in March of 1972.

With this growing momentum in favor of a non-criminal response to the private use of marijuana, I would like to suggest that this might be an appropriate time to schedule legislative hearings in the Subcommittee on

Health and the Environment, to consider H.R.6108, the proposal by Congressman Edward Koch and numerous co-sponsors to enact the civil citation system for minor marijuana offenses federally.

Should you decide to schedule hearings on this measure, our organization would be anxious to testify and to assist the committee staff in any way possible in arranging for other effective spokespersons who support the concept embodied in H.R.6108.

Regards,

R. Keith Stroup

Director

NORML
A SPECIAL
REPORT

Washington, D.C.
July 21, 1975

Maine, Colorado & California End Jail Penalties

This month the governors of Colorado and California signed similar bills reducing marijuana possession penalties. Possessing an ounce or less of marijuana now calls for fines up to $100. Amounts in excess of one ounce are punished as misdemeanors and selling marijuana still remains a criminal offense.

Two weeks before in Maine, James B. Longley, the country's only governor elected as an independent, signed a bill establishing a maximum $200 civil fine for possessing not more than an ounce and a half of marijuana.

With Alaska's action in May, four states have passed new laws this year discarding jail penalties for minor marijuana violations. Oregon was first to adopt a marijuana fine law in 1973.

The laws vary somewhat in their provisions and definitions, but in each possession of a small quantity of marijuana has been made the legal equivalent of a traffic offense that is enforceable by a citation instead of an arrest.

The California bill, sponsored by Senator George Moscone (D-San Francisco) and Assemblyman Alan Sieroty (D-Los Angeles), appeared lost earlier this year when it fell four votes short of the 41 required for passage in the State Assembly. After agreeing to reconsider the proposal, the Assembly engaged in a heated and partisan battle before adopting the bill 42-34, without a single Republican vote. The measure won bi-partisan support in the State Senate, and was signed by Governor Edmund G. Brown, Jr. on July 9. It becomes effective next New Year's Day. Gordon Brownell, NORML West Coast Coordinator, said the law "finally signals the end of 60 years of treating marijuana possession as a felony in California."

Around the state, the San Francisco Chronicle called the new law "... a wise reform" and the Los Angeles Times said "the law is sensible and humane" and "a big and responsible step forward". Meanwhile, grumbling L.A. Police Chief Edward M. Davis compared the Sacramento lawmakers to Donald Duck and predicted a devastating crime wave.

Colorado's new law became effective on July 1, the same day it was signed by Democratic Governor Richard A. Lamm. "Non-public" possession now is punishable by a maximum $100 fine, while "public display and consumption" carries the same fine but the violator also runs the risk of a possible 15 day jail term.

The Colorado law represents a compromise, but as Jim Moore, Aspen District Attorney and NORML's State Coordinator, points out: "The marijuana smoker will no longer be subject to arrest or jail when smoking is limited to private situations."

State Senate Majority Leader Richard Plock (R-Denver) and Representative Chuck Howe (D-Boulder) sponsored the Colorado measure.

Maine's new marijuana law won easy approval and is part of a sweeping legislative package that completely revamps the state criminal code. The new code is the culmination of nearly three years work by the state's Criminal Law Revision Commission headed by former Maine Attorney General Jon A. Lund.

Richard Clark, NORML Maine Coordinator, said the legislation recognized that the criminal law is "too costly and too severe for attempting to regulate private conduct." The new law does not become effective until March 1, 1976.

Summaries of the new laws are available from NORML.

STATE, FEDERAL UPDATE

Marijuana reform proposals remain alive in Michigan, New Jersey, New York, Washington state and Wisconsin. Hearings were held July 16 on bills in Ohio and the District of Columbia.

Reform bills in Georgia, Hawaii and Tennessee must wait for action until 1976. In Minnesota, a proposal for a $100 citation system was shelved until after the first of next year when the legislature's official session ended before final approval could be given.

Bills in Arizona, Connecticut, Florida, Illinois, Iowa, Maryland, Massachusetts, Nevada, New Hampshire and Texas were either voted down or killed for the year. A proposal to include private cultivation in Oregon's marijuana decriminalization law was tabled without consideration.

In a backward step earlier this year, Indiana outlawed items like roach clips and hash pipes, but exempted papers, apparently believing many Hoosiers still roll their own cigarettes.

No additional Congressional activity has taken place since the hearings before Sen. Birch Bayh's (D-Ind.) Juvenile Delinquency Subcommittee in May.

On Sunday, August 3rd, at 10:00 P.M., NBC-TV News has scheduled a one hour documentary on marijuana entitled "Mary Jane Grows Up: Marijuana in the 70's". In light of the past coverage of this issue by NBC News, we are naturally cautious in our expectations. Nonetheless, it is an apparent attempt to examine both the medical and legal issues objectively.

We have tentatively chosen the weekend of December 5-7 as the date for the 1975 NORML Conference in Washington, D.C. Although no final commitments will be made for a few weeks, we now plan to utilize the same hotel and meeting facilities which were used last year.

Please advise if the suggested dates are inconvenient for your schedule and would preclude you from attending. For the Conference to be worthwhile, we need the participation and attendance of most of our key people. We urge you to set this weekend aside now and to make plans to come to Washington and be part of our annual meeting.

In addition, we are now at the stage of planning the agenda for the Conference and inviting speakers. We would like your suggestions for ways to improve the Conference. For example, we may attempt to sub-divide certain sections of the Conference into smaller workshops where those in attendance could participate more directly. Do you support this variation, and do you have any particular suggestions for topics which would be useful and appropriate for the workshops? Likewise, could we have your suggestions for persons we might invite to address the Conference? Please offer your comments and suggestions for the Conference within a short time so that we can have the benefit of your ideas.

Two sections of Ohio's marijuana law were recently declared unconstitutional by the U.S. Court of Appeals for the Sixth Circuit in Cincinnati. The Court held that the minimum penalties contained in the Ohio law for sale of marijuana (20 years) and for possession for sale of marijuana (10 years) were so excessive and disproportionate to the offense that they constituted Cruel and Unusual Punishment in violation of the Eighth Amendment.

This decision is the first time that a federal court has found a criminal penalty imposed by a statute to be cruel and unusual solely on the basis of the length of imprisonment imposed.

The Court pointed out that Ohio's marijuana penalties, which are among the most severe in the country, were much stiffer than the state's penalties for assault with a deadly weapon (2-5 years), or for kidnapping, armed robbery, burglary, rape, and voluntary manslaughter (4-7 years).

Unless the ruling is appealed to the U.S. Supreme Court, it could result in all persons presently incarcerated in Ohio for sale and possession for sale being released. The ruling could also affect the three other states which are covered by the Sixth Circuit, Tennessee, Michigan, and Kentucky, but the penalties in these states are generally much less severe than the Ohio penalties.

The decision may be cited: Downey v. Perini, _____ F.2d _____, No. 74-1929 (6th Cir. July 3, 1975). It is excerpted at 44 L.W. 2034 and 17 Cr.L.Rep. 2324. Copies of the full Slip Opinion are available from the D.C. office of NORML for $1.00. For further information contact NORML's Ohio Coordinator, David Weiner, Esq., 800 National City East 6th Bldg., Cleveland, Oh., 44114, tel. (216) 621-0150.

There are currently two marijuana decriminalization proposals before Congress.

H.R. 561 (Reintroduced as H.R.4520)

Rep. Ed Koch (D.-N.Y.) has reintroduced the Javits-Koch bill (S. ___/H.R. 561) to completely decriminalize the marijuana smoker. This bill, first introduced in 1972, reflects the recommendation of the National Commission on Marijuana and Drug Abuse. Recently reintroduced as H.R. 4520, this measure is co-sponsored by Bella Abzug (D.-N.Y.), Herman Badillo (D.-N.Y.), George E. Brown (D.-Calif.), John Burton (D.-Calif.), John Conyers (D.-Mich.), Robert Drinan (D.-Mass.), Don Edwards (D.-Calif.), Donald M. Fraser (D.-Minn.), Michael Harrington (D.-Mass.), Elizabeth Holtzman (D.-N.Y.), Paul McCloskey (R.-Calif.), Robert N.C. Nix (D.-Pa.), Charles Rangel (D.-N.Y.), Benjamin Rosenthal (D.-N.Y.), Edward R. Roybal (D.-Calif.), Pete Stark (D.-Calif.), Steven J. Solarz (R.-N.Y.), and Henry Waxman (D.-Calif.)

Senator Javits has not reintroduced the Senate version this session.

H.R. 6108/S.1450

On April 17, the Marijuana Control Act of 1975 (S.1450/H.R.6108), a proposal to adopt a maximum $100 civil fine for minor marijuana violations, was introduced for the first time federally, based on the successful Oregon experience. This measure is co-sponsored in the Senate by Jacob Javits (R.-N.Y.), Alan Cranston (D.-Cal.), Edward Brooke (R.-Mass.) and Gaylord Nelson

(D.-Wis.), and in the House of Representatives by Edward Koch (D.-N.Y.), Bella Abzug (D.-N.Y.), Herman Badillo (D.-N.Y.), John Burton (D.-Cal.), Phil Burton (D.-Cal.), John Conyers (D.-Mich.), Ron Dellums (D.-Cal.), Robert Drinan (D.-Mass.), Robert Duncan (D.-Ore.), Don Edwards (D.-Cal.), Robert Edgar (D.-Pa.), Michael Harrington (D.-Mass.), Paul McCloskey (R.-Ca.), Charles Rangel (D.-N.Y.), Benjamin Rosenthal (D.-N.Y.), James Scheuer (D.-N.Y.), Pete Stark (D.-Cal.), and Henry Waxman (D.-Cal.).

I. THE HOUSE OF REPRESENTATIVES

A. When federal drug legislation is introduced in the House, it is referred to the Subcommittee on Health and the Environment, Committee on Interstate and Foreign Commerce.

H.R.561 (H.R.4520) and H.R.6108 have both been referred to this Subcommittee for consideration.

To date, no hearings have been scheduled on the proposals, nor has any other action been taken. Subcommittee Chairman Paul Rogers (D.-Florida), a Presidential appointee to the National Commission on Marijuana and Drug Abuse (Shafer Commission), which originally recommended decriminalization in its 1972 Report, has not yet been willing to take the initiative on this issue. So the measures lie dormant.

Please contact members of the Subcommittee, as well as the Chairman, uring their early action in support of these bills. Legislative hearings should be scheduled promptly, followed by a vote to favorably report a decriminalization bill to the full Committee.

Please write as many members of the Subcommittee as time permits.

In addition, you should write the Chairman of the full Committee, Rep. Harley O. Staggers (D.-W.V.), and the ranking minority member, Rep. Samuel L. Devine (R.-Ohio), both ex-officio members of the Subcommittee.

HOUSE SUBCOMMITTEE ON HEALTH AND THE ENVIRONMENT

Rep. Harley O. Staggers (W.V.) 2366 Rayburn H.O.B. Washington, D.C. 20515	Rep. Samuel L. Devine (Ohio) 2206 Rayburn H.O.B. Washington, D.C. 20515

B. As a result of the recommendations of the National Commission on Reform of Federal Criminal Laws (Brown Commission), a comprehensive new federal criminal code is being considered by the House Subcommittee on Criminal Justice, Committee on the Judiciary.

The Brown Commission, in their 1971 Report, recommended that possession of marijuana be treated as a non-criminal "infraction," punishable by a maximum $500 fine only.

H.R. 333, sponsored by Reps. Robert Kastenmeir (D.-Wis.), Don Edwards (D.-Calif.), Joshua Eilberg (D.-Pa.) and Abner Mikva (D.-Ill.) reflects the Brown Commission "infraction" recommendation.

H.R.3907, sponsored by Rep. Charles E. Wiggins (R.-Calif.), is the Nixon-Ford administration's response to the Brown Commission. Under this proposal, marijuana possession would carry a possible 30 days in jail and/or $10,000 fine.

Current federal law permits a maximum one year in prison and/or $5,000 fine.

No Subcommittee action has occurred on either measure, and none is expected until late this year.

Nonetheless, letters to the Subcommittee in support of marijuana decriminalization as part of any new federal criminal code would be appropriate.

II. THE SENATE

A. Federal drug bills introduced in the Senate are usually referred to the Subcommittee to Investigate Juvenile Delinquency, Committee on the Judiciary.

S.1450 has been referred to this Subcommittee where legislative hearings were held on May 15, 1975. During this hearing Subcommittee Chairman Sen. Birch Bayh (D.-Ind.) and Sen. Phillip Hart (D.-Mich.) announced their support for the concept of marijuana decriminalization.

Subsequently, Sen. Floyd F. Haskell (D.-Colorado) and Sen. John V. Tunney (D.-Calif.) have requested to be added as co-sponsors of S.1450.

No further action has occurred with respect to the bill. Sen. Bayh is expected to schedule additional hearings before the Subcommittee is asked to vote on the measure.

You should contact all Subcommittee members now urging favorable action on S.1450.

Senate Subcommittee to

B. The Report of the National Commission on the Reform of Federal Criminal Laws (Brown Commission), has also resulted in a Senate version of a comprehensive new federal criminal code.

The Subcommittee on Criminal Laws and Procedures, chaired by Sen. John L. McClellan (D.-Ark.), currently has before it S.1, the Nixon-Ford administration's response to the Brown Commission Report. The provisions of S.1 are identical to H.R.3907, sponsored by Rep. Charles Wiggins (R.-Ca.) in the House.

Although the Brown Commission recommended that marijuana be treated as a non-criminal "infraction," punishable by a maximum $500 fine, the sponsors of S.1, Sens. McClellan and Hruska, chose to ignore this aspect of the Commission Report. Instead, they propose a possible 30 days jail and/or $10,000 fine.

Sen. Jacob Javits (R.-N.Y.) has now introduced Amendment #584 to S.1, which would incorporate the basic provisions of S.1450 ($100 civil fine) for marijuana possession. No action has occurred on this amendment.

Sen. Philip Hart (D.-Mich.) also intends to offer amendments to S.1 soon which will incorporate marijuana decriminalization into the comprehensive proposal.

Due to the composition of the Subcommittee membership, the decriminalization fight may not occur until the proposal reaches the full Judiciary Committee.

Please write all members of this Subcommittee uring an amendment to S.1 to decriminalize marijuana. It is very likely that some version of S.1 will be voted on in the Senate later this session. Our efforts now can significantly increase the likelihood that decriminalization amendments will eventually be accepted in full Committee. This may lead to the first Senate floor vote on decriminalization later this session.

SENATE SUBCOMMITTEE ON
CRIMINAL LAWS AND PROCEDURES

C. The following is a listing of all members of the full Senate Judiciary Committee.

It is urgent that you contact members of this Committee, as they must eventually approve any decriminalization provision before it can be voted on by the entire Senate. Both S.1450 and S.1 must receive favorable action by the full Judiciary Committee before they can be brought up on the floor. The Committee will be considering S.1 during September and October, so don't delay with the letter writing.

NORML A SPECIAL REPORT

August 15, 1975

A Compilation of State Citation Laws for Minor Marijuana Offenses

In October 1973, Oregon became the first state to eliminate criminal arrest and jail penalties for possession of small amounts of marijuana, substituting a citation-enforced civil fine. The results of this innovative approach have been overwhelmingly favorable: there has been no demonstrable increase in marijuana smoking; thousands of young people have been spared the debilitating aspects of a life-long criminal record; and the police have been freed of a costly and time-consuming burden to concentrate on serious crime.

As a result, five other states have recently enacted similar laws: Alaska, Maine, Colorado, California and Ohio. The provisions of these laws are set out below, and copies are available from NORML. In each of them, regardless of whether marijuana may now technically be said to be "decriminalized" or not, the person who smokes marijuana or possesses a small amount, is no longer subject to arrest or jail, nor left with any permanent criminal record.

NORML NATIONAL ORGANIZATION FOR THE REFORM OF MARIJUANA LAWS
2317 M STREET, N.W., WASHINGTON, D.C. 20037

SUMMARY CHART - MARIJUANA CITATION LAWS

State	Max. Fine Imposed	Max. Amount Possessed	Criminal or Civil Violation	Effective Date
Oregon	$100.00	1 oz.	Civil	Oct. 5, 1973
Alaska	$100.00	Any amount in private for personal use or 1 oz. in public	Civil	Sept. 1, 1975
Maine	$200.00	Any amount[a] for personal use	Civil	March 1, 1976
Colorado[b]	$100.00	1 oz.	Class 2 petty offense - no criminal record	July 1, 1975
California[b]	$100.00	1 oz.	Misdemeanor - no permanent criminal record	Jan. 1, 1976
Ohio[b]	$100.00	100 grams (approx. 3 1/2 oz.)	Minor misdemeanor - no criminal record	Nov. 1975

a There is a rebuttable presumption that possession of less than 1 1/2 oz. is for personal use, and possession of more than 1 1/2 oz is with an intent to distribute.

b Distribution of marijuana by gift, or for no remuneration, is treated the same as possession in California (for up to 1 oz.), Colorado (for up to 1 oz.), and Ohio (for up to 20 grs.).

PROVISIONS OF STATE LAWS

	First Offense	Subsequent Offense
1. OREGON		
House Bill No. 2936, amending O.R.S. 167.207, effective October, 5, 1973.		
Possession (up to 1 oz.)	$100 fine only	Same

Note: Possession of up to 1 oz. of marijuana is considered a non-criminal "violation" with a maximum fine of $100, enforced by a citation system. Possession of more than 1 oz., cultivation, and sale of any amount, remain criminal offenses, subject to 0-10 yrs. and/or $2,500.

2. ALASKA		
Senate Bill No. 350, amending A.S. 17.10.010 et seq., approved May 16, 1975, effective September 1, 1975.		
Possession (any amount in private for personal use, or up to 1 oz. in public)	$100 fine only	Same
Possession (while driving a motor vehicle)	$1000 fine only	Same
Public use	$1000 fine only	Same

Note: The new Alaska law is similar to the Oregon law in that it provides for civil fines enforced by citations. The Alaskan Supreme Court has generally held that possession of amounts up to 8 oz. - 1 lb. are presumed to be for personal use. The Supreme Court of Alaska's recent decision holding that possesion of marijuana by adults in the home is constitutionally protected by the Right of Privacy, appears to invalidate certain of the civil fines involved in the new law. Ravin v. State, No. 1156, May 27, 1975. Possession of more than 1 oz. in public remains a criminal offense, subject to 0-1 yr. and/or $1,000. Sale is punishable by 0-25 yrs. and/or $20,000.

	First Offense	Subsequent Offense
3. MAINE		
Maine Criminal Code revision, Title 17-A of Maine Revised Statutes Annotated, Chapter 45 et seq., approved June 18, 1975, effective March 1, 1976.		
Possession (any amount for personal use -- see note)	$200 fine only	Same
Possession (with intent to distribute	0-1 yr. and/or $500	Same
Sale or distribution	0-1 yrs. and/or $500	Same
Sale or distribution (to persons under 16)	0-5 yrs. and/or $1000	Same

Note: Possession of any amount of marijuana for personal use is a civil violation, subject to a maximum $200 fine, enforced by citation. There is a rebuttable presumption that possession of more than 1 1/2 oz. is with an intent to distribute. A "usable" amount is required, and residue found in a pipe, or a few seeds, would not be sufficient. The new law also provides that as an alternative to the fines indicated above for sale, a fine of up to twice the "pecuniary gain" involved in the sale may be imposed.

4. COLORADO		
House Bill No. 1027, amending Sec. 12-22-401 et seq. of the Colorado Dangerous Drug Act, effective July 1, 1975.		
Possession (up to 1 oz.)	$100 fine only	Same
Public display or consumption (up to 1 oz.)	$100 fine mandatory and up to 15 days	Same
Possession (more than 1 oz.)	0-12 months and/or $500	0-2 years and $500-$1,000

	First Offense	Subsequent Offense
Colorado, cont.		
Transfer "for no consideration" (up to 1 oz.)	$100 fine only	Same
Transfer of more than 1 oz. or any amount to a minor	3-14 years and up to $10,000	Same (except prison term mandatory)

Note: Possession of up to 1 oz. of marijuana is a non-criminal "violation" punishable by a maximum $100 fine. Transferring not more than 1 oz. "for no consideration" is defined as simple possession, and is subject to the same $100 maximum fine. Transferring more than one ounce, or any amount to a minor, is subject to imprisonment for 3-14 years and up to $10,000. Cultivation is subject to imprisonment for 1-14 years and a fine of up to $1,000.

5. CALIFORNIA

Senate Bill No. 95, amending Sec. 11357 et seq. of the Health and Safety Code and Sec. 853.6 of the Penal Code, effective January 1, 1976.

Possession (up to 1 oz.)	$100 fine only	Same (see note)
Possession (more than 1 oz.)	0-6 months and/or $500	Same
Possession (hashish)	0-5 yrs. and/or $500	Same
Furnishing "without consideration (up to 1 oz)	$100 fine only	Same (see note)
Furnishing "w/c" (more than 1 oz.) or sale of any amount	5 years - life (must serve 3 years)	Same (must serve 5 years)

Note: Possession, furnishing "without consideration," and transporting up to 1 oz. is technically still a misdemeanor, subject to a maximum $100 fine and enforced by citation, although there is no permanent criminal record. If the person charged was previously convicted three or more

	First Offense	Subsequent Offense

California, cont.

times for these offenses within a two-year period, he shall be diverted to an educational or treatment program in lieu of the fine, and if no program can be found, the fine is imposed.

Cultivation of any amount remains a felony punishable by a jail term from one to 10 years.

The new law abolishes the previous offenses consisting of (1) use of marijuana, (2) possession of marijuana paraphernalia, and (3) being in a place where marijuana is being used. The new law also requires that all records pertaining to the arrest or conviction for possession of marijuana be destroyed within two years, and that no public agency within the State shall deny or limit any license or privilege on account of a conviction for marijuana-related offenses.

6. OHIO

House Bill No. 300, amending Ohio Rev. Code Ann. Sec. 3719.01 et seq., approved August _____, effective 90 days thereafter.

Possession (up to 100 grams) (up to 5 gr. hashish) or 1 gr. hash oil)	$100 fine only	Same
(100 - 200 gr.) (5 - 10 gr. hashish or 1-2 gr. hash oil)	0-30 days and/or $250	Same
(200-600 gr.) (10-30 gr. hashish or 2-6 gr. hash oil)	6 mos. - 5 yrs. and/or $2,500	1-10 yrs. and/or $5,000
(over 600 gr.) (over 30 gr. hashish or 6 gr. hash oil)	1-10 yrs. and/or $5,000	2-15 yrs. and/or $7,500
Gift (20 gr. or less)	$100 fine only (criminal record maintained)	0-60 days and/or $500
Sale (up to 200 gr.) (up to 10 gr. hashish or 2 gr. hash oil)	6 mos. - 5 yrs. and/or $2,500	1-10 yrs. and/or $5,000

	First Offense	Subsequent Offense
Ohio, cont.		
(200-600 gr.) (10-30 gr. hashish or 2-6 gr. hash oil)	1-10 yrs. and/or $5,000	2-15 yrs. and/or $7,500
(over 600 gr.) (over 30 gr. hashish or 6 gr. hash oil)	2-15 yrs. (6 mos. mandatory) and/or $7,500	2-15 yrs. (1 yr. mandatory) and/ or $7,500
Furnishing to a Minor (who is at least 4 yrs. younger than transferor)	6 mos. - 5 yrs. (3 mos. mandatory) and/or $2,500	1-10 yrs. (3 mos. mandatory) and/or $5,000
Cultivation (any amount)	6 mos. - 5 yrs. and/or $2,500	1-10 yrs. and/or $5,000

Note: Possession of up to 100 grams of marijuana (approx. 3 1/2 oz.) is classified as a "minor misdemeanor," as are possession of up to 5 grams of hashish or 1 gram of hash oil. There is no criminal record for these offenses.

Criminal penalties are maintained, though drastically reduced, for all sale offenses and for cultivation, as well as possession of over 100 grams.

OHIO DECRIMINALIZES MARIJUANA

On Friday, August 22, Republican Gov. James A. Rhodes signed into law a measure making Ohio the latest State to abandon jail penalties for minor marijuana offenses. Ohio joins Oregon, Alaska, Maine, Colorado and California in changing their public policy toward marijuana. The provisions of House Bill 300, a comprehensive drug bill which maintains strong criminal sanctions toward all other drugs, call for a maximum $100.00 fine for possessing up to 100 grams of marijuana. Enforcement is by a citation, similar to a traffic ticket.

H.B. 300 was first introduced two years ago as Ohio Attorney-General William J. Brown's "law-and-order" drug bill. Later, over the objections of the Attorney General, several legislators, including Reps. Ed. Orlett (D.-Daton) Harry Lehman (D.-Cleveland) Charles R. Saxbe (R.-Machanicsburg) and Mike Stinziano (D.-Columbus) and Sen. Stanley Aronoff (R.-Cincinatti), were successful in amending the proposal to include the more moderate marijuana penalties.

When the reduced penalties become effective in three months, possessing up to 100 grams (about 3 1/2 ounces) of marijuana will be classified as a "minor misdemeanor" and specifically exempted from any criminal record. Lesser amounts of hashish (5 grams) and hashish oil (1 gram), both concentrates of marijuana, will also carry the maximum $100.00 fine.

Richard Wolfe, Columbus businessman and Chairman of the Franklin County Mental Health and Mental Retardation Board, called the new measure "a balanced bill that properly addresses both the so-called 'hard' and 'soft' drug problems." Wolfe recently testified before the state legislature in support of the bill along with Art Linkletter; University of Virginia Law Professor Richard Bonnie, former Associate Director of the National Commission on Marijuana and Drug Abuse (Shafer Commission); J. Pat Horton, District Attorney for Lane County, Oregon; and award winning science writer, Edward Brecher, author of Consumer Union's highly respected book, Licit and Illicit Drugs.

NORML's Ohio state coordinator, Cleveland attorney David Weiner, called this latest legislation "a tribute to the people of Ohio." He praised the lawmakers for their willingness to incorporate sensible marijuana

penalties into the bill at a time when the subject still raises emotions among many Ohioans. "They remained firm with the dangerous drugs, while adopting a realistic position for marijuana," said Weiner.

Under this new bill, criminal penalties are maintained, though reduced, for possesion of larger amounts, and for cultivation or sale of any amount. A gift of less than 20 grams of marijuana, however, would subject the donor to a maximum $100 fine.

Ohio's old marijuana law, one of the toughest in the nation, treated possession of marijuana for sale with a minimum 10 year sentence, and sale of any amount with a minimum 20 year sentence. In a recent landmark federal court decision, Downey V. Perini, (July 3, 1975), the 6th Circuit Federal Court of Appeals ruled that the harshness of these penalties, in contrast with lesser penalties available for many crimes of violence, were "cruel and unusual punishment", in violation of the 8th Amendment to the U.S. Constitution.

	First Offense	Subsequent Offense
Possession (up to 100 grams) (up to 5 gr. hashish or 1 gr. hash oil)	$100 fine only	Same
(100 - 200 gr.) (5 - 10 gr. hashish) or 1-2 gr. hash oil)	0-30 days and/or $250	Same
(200-600 gr.) (10-30 gr. Hashish) or 2-6 gr. hash oil)	6 mos. - 5 yrs. and/or $2,500	1-10 yrs. and/or $5,000
(over 600 gr.) (over 30 gr. hashish or 6 gr. hash oil)	1-10 yrs. and/ or $5,000	2-15 yrs. and/or $7,500
Gift (20 gr. or less)	$100 fine only (criminal record maintained)	0-60 days and/or $500
Sale (up to 200 gr.) (up to 10 gr. Hashish or 2. gr. hash oil)	6 mos. - 5yrs. and/or $2,500	1-10 yrs. and/or $5,000
(200-600 gr.) (10-30 gr. hashish or 2-6 gr. hash oil)	1-10 yrs. and/or $5,000	2-15 yrs. and/or $7,500
(over 600 gr.) (over 30 gr. hashish or 6 gr. hash oil)	2-15 yrs. (6 mos. mandatory) and/ or $7,500	2-15 yrs. (1 yr. mandatory) and/ or $7,500
Cultivation (any amount)	6 mos. - 5 yrs. and/or $2,500	1-10 yrs. and/or $5,000

Hon. Birch Bayh
363 Russell Senate Office Building
Washington, D.C. 20510

RE: S.1 and S.1450

Dear Senator Bayh:

I am writing to urge your strong and active support for both S.1450 and an amendment to S.1 which would remove criminal penalties for the private use and possession of marijuana.

The case for S.1450 and a decriminalization amendment to S.1 is not based on the premise that marijuana is harmless, or that its use should be encouraged, but rather on the immense (and growing) human, fiscal, and social costs of marijuana prohibition and on our traditional American values of individual freedom, personal choice, and the right to privacy.

Six states (Alaska, California, Colorado, Maine, Ohio, and Oregon) have enacted legislation ending the arrest and jailing of marijuana users. Similar action on the part of Congress will have a major impact on other states, and end the unconscionable arrests of half a million Americans annually on marijuana charges.

I urge you to support S.1450 and any amendments to S.1 which will incorporate a non-criminal approach to marijuana use and possession in the new federal criminal code. Thank you very much.

Sincerely,

Gordon S. Brownell

With the current economic crisis which confronts many city and state governments, an increasingly important consideration in the debate over marijuana policy is the cost involved in attempting to enforce the current marijuana prohibition. The question arises, "Are the marijuana laws worth what they are costing us?"

Enforcement costs include the police, prosecutorial, judicial, penal and probationary personnel involved in marijuana law enforcement. Obviously it is difficult to accurately separate these marijuana related costs from the overall costs of administering our criminal justice system.

Two state studies have attempted an analysis of their costs of enforcing these laws. While conditions differ in each state, these costs analyses should be useful, in absence of more specific data, in estimating marijuana enforcement costs in your state.

A. California

The May, 1974 report of Sen. George Moscone's Senate Select Committee on Control of Marijuana, entitled Marijuana: Beyond Understanding concluded that when all marijuana arrests were felonies, each ended up costing the state $1,630. After the law was modified in 1968 to permit first offenders to be handled as misdemeanors, at the discretion of the judge, the cost per arrest dropped slightly to $1,340.

The Committee found that California was arresting nearly 100,000 persons annually on marijuana charges, resulting in a cost in excess of $100 million dollars in law enforcement resources.

B. Illinois:

In July, 1975, the Illinois Economic and Fiscal Commission, established by the state legislature, published an evaluation of state drug abuse programs. This report concluded that the average cost per arrest (not limited to drug arrests) was $1,139. Examining the drug law enforcement in particular, the report concluded that marijuana arrests involving possession of an ounce or less accounted for 44% of all drug arrests in 1974 resulting in law enforcement costs to the state of $15,490,000.

Copies of both of these state cost analyses are available upon request from NORML.

Senator Birch Bayh
United States Senate
Washington, D.C. 20510

Dear Birch:

I have just learned that you are conducting hearings in the Senate on the possession and use of marijuana. I should like to forward to you a few of my thoughts on this matter.

If the legal dimensions and restrictions on the possession and use of marijuana are removed, this country will be subjecting itself to moral and social problems of such proportions that the ills of the Roman Empire will be a picnic by comparison. No greater contribution to the degradation of society could be made than to reduce and decrease the legal penalties for possession and use of this controlled substance.

Some of us who work with young people day in and day out are totally convinced that the law should deal with "possession and use" together. Although these two areas can be separated theoretically; they cannot be separated from a practical point-of-view. In moments of objectivity, young people from 18-21 years of age will generally verify and confirm this position. I do hope that we do not enact "soft-headed" laws on the possession and use of marijuana. In fact, we should be strengthening and upgrading the laws for possession and use and not weakening and downgrading them.

I submit these observations with great sincerity in the hope that we do not contribute negatively to society by weakening laws in this connection.

Sincerely,

John E. Horner
President

Enclosure

HANOVER COLLEGE
HANOVER, INDIANA 47243
Office of the President

July 10, 1975

Senator Birch Bayh
United States Senate
Washington, D.C. 20510

Dear Birch:

Thank you for your letter of July 3, 1975 in which you enclosed materials related to the control of marijuana through federal legislation. I appreciate your sending this information to me. Since you invited me to react to the materials, I shall do so through this letter.

The general thrust of the information which you forwarded to me appears to have as its major points the separation of possession and use and the reduction of legal penalties for private possession of small amounts of marijuana. The documents also stress the high cost of processing the breaches of current marijuana laws.

It would be my judgment that if we move in the direction of separating the legal sanctions for possession and use and a pattern of fines for the private possession of small amounts of marijuana, we will have even greater problems in our nation, and the cost of prosecution for breaches of the legal code will rise markedly. If psychology tells us anything, it certainly tells us that by reducing penalties for human error, we will not necessarily reduce the number of errors made. In fact, most psychological research shows the opposite to be true. I believe that the same rationale can be applied to matters related to the possession and use of marijuana and other addictive drugs.

I must indicate that the statement presented to your Committee by R. Keith Stroup of NORML is like asking the Mafia if it endorses crime. I must state that I was concerned that there is an almost total absence of medical evidence and testimony in the documents. I am wondering why the studies made at Tulane University and Columbia University have not been stressed in the considerations by your

Committee. I believe that there is growing evidence concerning the harmful medical effects of marijuana, although this aspect of the matter is often deprecated by proponents of reduction of penalties for marijuana usage. I am fully aware that your emphasis must be on the legal dimensions, but the concern for health, life and limb are also important considerations, so they cannot be set aside as you and your colleagues review the matter. Certainly, the environmental protection legislation, the automobile regulations as to seat belts and control of gasoline fumes, etc., relate to governmental concern for health problems. In brief, I personally believe that the health and medical factor should weigh heavily in the creation of legislation in this area.

I commend you and your Committee for probing deeply into this problem. I must admit that my point of view is colored greatly through the events and developments which I see day-by-day in working with youth at the college level. As I said in an earlier letter, I do not feel that possession and use can be separated effectively, as legal entities, and that the reduction of penalties exacted on possessors and users will aid in the solution of the problems. I feel that the problems will be magnified if changes are made.

Thank you again for your invitation to respond to the documents which you forwarded to me.

With kindest personal regards, I am

Yours cordially,

Jack

John E. Horner
President

An Argument Against the Decriminalization of Marijuana Now!

(By George Gubar)

There are apparently a multitude of problems inherent in any discussion concerning the question of the decriminalization of marijuana. I could probably list these problems without discussion or clarification, but to do so would only add to the confusion which already exists.

The topic of marijuana is an emotional one engendering discussion, argumentation, and rhetoric from users, non-users, and should-I-be-using individuals. In most of the discussions and debates concerning the decriminalization of the use and possession of marijuana which I have had with members of The National Organization for the Reform of the Marijuana Laws, it becomes apparent that decriminalization is not an end, but only the first step toward the legalization of the use, possession, and sale of cannabis in all forms. If this is the case, why cloud the issue; discuss legalization.

However, if we assume that this is not the case, and decriminalization is the end and not the means, other serious considerations are implicit.

There is no need for me to reiterate the reported physical hazards concerning chronic and longitudinal use of marijuana, such as has been suggested by prominent scientists around the world. I can only say that this evidence may have been disputed, but in fact has never been refuted, and the body of evidence grows daily.

To argue (as do the advocates) in favor of the recreational use of marijuana on an unlimited basis because there has been some questionable research concerning the possible limited medical use of cannabis has no merit whatsoever.

Perhaps the first question that should be asked is not "should marijuana be decriminalized or legalized," but "should the marijuana laws be modified?" To this question, I would have to answer "Yes—BUT . . . !"

As a general axiom, marijuana laws should not be considered on an individual basis, nor on a State by State basis, but should be unified on a National basis. I would personally resent, as an American citizen, being fined for the possession of twenty-eight (28) grams[1] of marijuana in New Jersey and be arrested and possibly jailed for the same offense in New York or Pennsylvania. Further, the bases for change of laws which attempt to protect the mental and physical health of the American people should be considered on the recommendation of the F.D.A. after careful consideration of all of the evidence as in the case of any product offered for sale under the rubric of food or drugs.[2]

If we accept the fact (which most of us do) that there is no proven relationship between the use of marijuana and the progression to "harder" drugs, then we must also accept the fact that study after study has shown that individuals who smoke marijuana are more likely to use "harder" drugs than a person who does not smoke marijuana.

As a college professor, who instituted (and still conducts) one of the first college level courses in the United States[3] concerning drug abuse, I am becoming more and more distressed that students freely admit driving automobiles more frequently while under the influence of marijuana with the misbelief that marijuana intoxication does not cause any behavioral or response decrements in driving ability. This, in spite of the momentary lapses in attention, possible interference with peripheral and central vision, decreases in response time, distortion in time perception, and increased sensitivity which might cause a driver to focus and fix his senses on interfering stimuli such as lights, sounds, etc. These factors are reluctantly admitted by the students and have been shown under experimental conditions.

Driving while "stoned" does present other problems which must be considered before we attempt to change our mairjuana laws. Namely, how do we determine the potency (quality) empirically of the marijuana which is being used and secondly how do we determine levels of cannabis intoxication? How do we determine unimpaired vs impaired vs drunk? There is presently no accepted test to determine level of marijuana intoxication as there are tests to determine levels of alcohol intoxication.

As a result of the Harrison Act of 1914, our government created an illegal market for morphine. If we decriminalize marijuana, will we do the same thing,

[1] Twenty eight (28) grams of marijuana will produce between fifty-five (55) and eighty-five (85) cigarettes, depending on the proficiency of the "roller."

[2] The urgency and immediacy to decriminalize and/or legalize marijuana NOW is incomprehensible because of the Thalidamide experience.

[3] This course began five years ago at Seton Hall University, South Orange, N.J.

because who will supply the smoker with grass? Will decriminalization create a market for cannabis in New Jersey which is greater than the one which presently exists?

The Oregon experiment reducing the penalties for marijuana offenses is being touted as a reason for decriminalization and/or legalization because there is a small increase in heavy users versus a larger decrease in occasional users. This is a smoke screen! There has been a general reduction nationally in the number of marijuana smokers in the last year by all people (with a consequent switch to alcohol) as was predicted by the Shaffer Commission. This is especially true of college students. Oddly—the decrease in Oregon may be in line with the national patterns, but the increase of heavy use may be as a result of decriminalization.

Two other totally incorrect statements made by the advocates of decriminalization and therefore subsequent legalization have to do with the total number of marijuana smokers in the United States and the fact that marijuana is harmless. I should like to dispel both of these myths.

Firstly, an estimate of twenty (20) million smokers in the United States is ludicrous—we don't grow nor have smuggled that amount of marijuana and secondly, any person who has admitted smoking marijuana one time only (even one puff or "hit" as it is called) is considered to be a user.

So far as marijuana being harmless, there is no completely safe drug known to man. To underestimate the potential dangers of the use and abuse of marijuana is to invite disaster. This is the posture that decriminalization and legalization would foster. I doubt that any clear thinking husband (or physician) would advocate the use of marijuana by his pregnant spouse!

Nowhere in the New Jersey proposal by Senator Alexander Menza that marijuana be decriminalized is there a reference as to the action which is to be taken when a twelve (12) to fifteen (15) year old child is found in possession of "less than twenty-eight grams of marijuana" or approximately 55–85 joints. Does this child pay a fine or . . . . what? A breakdown of marijuana smokers by age would show that the thirteen (13) to seventeen (17) year old children are the second largest group of marijuana smokers in the country (junior and high school students).

As a licensed clinical psychologist who specializes in the treatment of addicted individuals, I can mention some psychological conditions affecting marijuana smokers which are seen more frequently than by chance alone.

Firstly, there is an impairment of memory for immediate events. Secondly, there is a decrement in performance on complex motor and complex cognitive tasks. Thirdly, is the incidence of paranoia which is not attributable to the illegality of marijuana. Fouth is the amotivational syndrome which does afflict some cannabis users, and lastly, is the incidence of a transient form of psychosis which may affect heavy or even moderate smokers. It is true that in some instances marijuana may be the effect rather than the cause, but it is just as true that in many cases, marijuana may be the cause. Unfortunately, as knowledgeable as psychologists are, they have not yet devised a test which can determine which individuals among us are "walking a psychological tightrope" and who will suffer ill or negative effects from the use of this mild hallucinogenic.

Two publications which are most frequently quoted as legitimate sources of information for changes in the cannabis laws include Licit and Illicit Drugs by Edward M. Breeller who states "The Commission (Le Dain Commission in Canada) concludes that . . . the scientific evidence concerning marijuana is not yet all in . . . " And later asks the question: "Would a decision by the government to assume responsibility for the quality control and distribution of cannabis imply, or be taken to imply approval of its use and an assurance as to the absence of significant potential harm?"

In the Second Report of the National Commission on Marijuana and Drug Abuse titled Drug Use in America: Problem in Perspective, the Commission corrects its original report by stating that "there are adverse effects on driving while under the influence of marijuana intoxication and then summarizes its position by stating the following:

"The Commission notes the significant role played by the voluntary sector of the American Community in influencing the social, religious, and moral attitudes of our nations citizens and *recommends that the voluntary sector be encouraged to take an active role in support of our recommended policy of discouraging the use of marijuana.*" [1]

[1] The italics are the authors.

There is no question in my mind, nor should there be in the minds of any clear-thinking individuals that before the marjuana laws are changed, if they are to be changed, there must be much more definitive research to answer all of the unanswered questions combined with an extensive program of awareness concerning the potential danger and possible hazards that can occur as the result of marijuana use.

John H. Stamler who is a member of the New Jersey Drug Abuse Advisory Council and Counsel to the New Jersey Narcotic Enforcement Officers Association on December 2, 1974 issued a statement asking for the decriminalization of marijuana in the amount of ten (10) grams or less than one (1) gram of hashish in opposition to Menza's request for 28 grams of marijuana and 6 grams of hashish). Nowhere does Mr. Stamler mention the ages of the offenders and states what he labels "incontrovertible facts" about marijuana as follows:

"Competent, credible, medical studies confirm that the use of marijuana is a destructive influence upon the human psychology and physiology."

"Ten grams of marijuana will make twenty-eight to thirty cigarettes, an amount which the President's Commission on Marijuana found to be months supply for the casual user;"

"Possession of more than twenty-five (25) grams of marijuana should continue to be a high misdemeanor;"

"The use and abuse of alcohol by millions while socially acceptable, are no reason to permit, support, or encourage the disablement of another twenty million Americans through the use and abuse of marijuana."

And finally, Mr. Stamler states quite emphatically:

"I oppose the use of marijuana."

Referring to Mr. Stamler's mention of alcohol, it has been suggested that if alcohol were to be discovered today, It would not be licensed by the F.D.A., even as a prescription drug, because of its potential for harm. Before we add another drug to this category, much more thought and investigation should be given to this substance.

We are constantly being asked, "should college students suffer the trauma of arrest and jail records?" To which I must answer, why are college students being singled out, because arrest and jail records have been shown to be traumatic to all kinds of people.

If, as the advocates suggest, marijuana is not addictive, why not declare a moratorium on its use (by college students and others) until such time as the evidence has become fact, rather than risk many unnecessary and possible unpleasant consequences because of its use.

Mr. Harry Anslinger may have distorted or emphasized the negative facts in his desire to have Congress pass the Marijuana Tax Act of 1937, but it seems just as dishonest for the advocates of decriminalization by omission or commission to do the same thing!

Dr. DuPont originally said that marijuana should be legalized, but reversed himself three days later—but the "pros" don't mention the reversal! United States Attorney Earl Silbert said his office would not prosecute cases involving possession of five or fewer cigarettes, but then reversed himself—but the "pros" don't mention the reversal! In 1967 Dr. D. Henry Powelson said "marijuana is harmless" but then reversed himself in December of 1974—but the "pros" don't mention this either.

There is a suggestion that there is no middle ground in this argument. Either the answer is decriminalization and legalize marijuana, or keep marijuana illegal and criminal.

This is far from the truth! I am advocating a middle ground. Consider changing the marijuana laws when we have the facts—and then we can take a reasonable, scientific and sane view of the problem and come to realistic solutions. But let us avoid the dangers of immediacy and urgency by "burying our heads in the sand" concerning either side of the question.

As a scientist it would be criminal on my part to deliberately ignore the possibility of the debilitating psychological and physiological effects of cannabis simply because of the impatience of a sector of the population desiring what they have come to regard as indulgence in a new form of recreation. In this era of maturity in which we are attempting to instill in our children a sense of responsibility it appears incongruent to change laws to accommodate law breakers. If this is the attitude, we should liberalize our gambling, prostitution, pornography, statutory rape, etc. and all of our victimless crime laws. It is true that we cannot legislate morality, nor is it true that we should legislate immorality!

Therefore, I am urging the membership of the New Jersey Psychological Association not to endorse the position of decriminalizing and/or legalizing marijuana on the basis of immediacy or urgency.

As a professional and scientific society, we should state that there is validity to the consideration of the possibility of a change in our marijuana laws but only after empirical evidence indicates changes should be made.

The New Jersey Psychological Association should remain as unemotional and rational as our patients, students, and constituents believe we should, in a matter concerning their psychological and physiological health.

[From the Washington Star, Mar. 22, 1972]

NIXON PANEL URGES END TO PENALTIES FOR SMOKING 'POT'

(By Judith Randal)

Saying that marijuana is not a major "threat to the social order," a presidentially appointed commission recommended today that the nation substitute a policy of "discouragement" for the current prohibition and abandon criminal penalties for simple possession and use.

But a year of study also has convinced the panel that current sanctions against sale and distribution of marijuana should be continued.

In a 180-page report, the 13 members of the National Commission on Marijuana and Drug Abuse agreed unanimously that adoption of these recommendations would focus law enforcement efforts where they are most needed and end the uneven administration of justice for those engaged in private and, for the most part, harmless recreational behavior.

"The fundamental principles and values upon which the society rests are far too enduring to go up in the smoke of a marijuana cigarette," the report says.

President Nixon, who appointed 9 of the commissioner's 13 members, received the report without comment. Assistant White House press secretary Gerald L. Warren turned aside questions about whether the President would back the recommendations. Nixon has said he opposes legislation but thinks some penalties for possession are too high.

The panel recommended that possession of an ounce or less of marijuana in public remain subject to summary seizure and forfeiture but no longer be against the law, but not all members concurred.

At one end of the dissenting spectrum was Mitchell Ware, a Chicago lawyer who formerly headed the Illinois Bureau of Investigation. He favored "some sort of penalty short of criminalizing the user."

Two other dissenters, Reps. Paul Rogers, D-Fla., and Tim Lee Carter, R-Ky., suggested civil fines, which—like the fines paid for traffic violations—would not become part of police records.

Sens. Harold Hughes, D-Iowa, and Jacob K. Javits, R-N.Y., took issue with both these stands, finding them unreasonable. "If marijuana held for personal use within a home is not contraband," they asked, "why should marijuana within one's automobile be contraband?"

They also found fault with the majority's recommendation that public possession of more than an ounce of "pot" be a criminal offense punishable by a $100 fine.

For one thing, they said, there are already penalties for intent to sell so that there is "no need to further proscribe simple public possession."

For another, they said, it is illogical that "the individual who buys an ounce and a half would be a criminal when he buys on the corner, when he puts it in his pocket, when he gets in his car and drives home, when he is on his doorstep, but not when he crosses the threshold of his home."

Although praising the commission for advocating decriminalization of private marijuana possession, the National Organization for the Reform of Marijuana Laws—the principal "pot" lobby—criticized the report for not going far enough.

A critique prepared for NORML by Dr. Lester Grinspoon, a professor of psychiatry at the Harvard Medical School, said that heroin became a widespread problem among servicemen in Vietnam only when authorities cracked down on marijuana.

He expressed fear that failure to legalize and regulate the use of marijuana similarly would escalate the use of harder drugs in the United States. He said the danger is the greater because the commission recommended stepping up measures to prevent the entry of "pot" into the country.

A key element of the commission's report and its 33 recommendations is the hope that the marijuana problem will go away.

The hope is based on a survey released earlier this year by the chairman of the commission. Raymond P. Shafer, a former governor of Pennsylvania. It found that an estimated 24 million Americans have tried marijuana, but 41 percent of the adults and 45 percent of the youth (those under 25) abandoned its use for lack of interest.

At a briefing for newsmen, Shafer said the commission had decided against recommending legalization, even though present evidence shows little harm from marijuana, because it opposes encouraging use of any mind-changing drug and because future evidence might show more bad effects of the drug.

Legalization, he said, would be "almost certain to promote further use."

Shafer said he had never tried marijuana himself, but that some of the commissioners had, though he didn't know how many.

MAY BE A FADING FAD

"There was a recurring awareness of the possibility that marijuana use may be a fad which, if not institutionalized, will recede substantially in time," says the report. "Present data suggest that this is the case and we do not hestitate to say that we would prefer that outcome. . . . We believe that society must have time to consider its image of the future. . . ."

In contrast to legalization, it added, "a discouragement policy toward marijuana at this time would facilitate such a reappraisal while official neutrality, under present circumstances, would impede it. . ."

"There is no fundamental principle supporting use of the drug, and society is not compelled to approve or be neutral toward it."

The report hints broadly in several places that many erroneous beliefs about marijuana can be traced to misinformation spread by the government "within the context of 30 years of instilled fear."

The reports points out, for example, that marijuana is not addictive, and draws a distinction between its use in societies where there is little upward mobility and its use in the United States

The lethargy often characteristic of "pot" users in those countries, it says apparently has more to do with lack of social opportunity than with the drug per se, and thus there is little likelihood that marijuana will stifle the initiative of Americans.

"Young people who choose to experiment with marijuana (in the United States) are fundamentally the same people, socially and psychologically, as those who use alcohol and tobacco," the report says.

Nevertheless, it insists that the 500,000 Americans it defines as heavy users because they smoke several times a day are a "high-risk" population—despite references in the report to studies of heavy long-term users in Greece and Jamaica which found little evidence of physical or mental harm.

In addition to potentially risking their own health, says the commission, heavy American users are a danger because they may initiate others into the drug subculture and its unconventional life-styles.

There is "no valid evidence . . . to support the thesis that marijuana, by itself, either inevitably, generally, or even frequently causes or precipitates the commission of crime," the report says.

Indeed, "perhaps, the major impediment to rational decision-making (about marijuana) is the tendency to think only in terms of the legal system in general and the criminal justice system in particular," it says.

NO LINK TO HARD DRUGS

Nor did the commission decide that marihuana leads to the use of other drugs. Pressure from others of the same age group, the report says, is the chief factor in all drug use.

"Indeed, if any drug is associated with the use of other drugs, including marihuana, it is tobacco, followed closely by alcohol. . . . The fact should be emphasized that the overwhelming majority of users do not progress to other drugs."

The report says there is "no reliable evidence that marihuana causes genetic (birth) defects in man . . . and no conclusive evidence . . . of any physical damage, disturbances of bodily processes or proven human fatalities attributable solely to even very high doses of marihuana."

This, it says, "contrasts sharply with the well-established brain damage of chronic alcoholism" and is the reason why the "vast majority" of "pot" users require neither treatment nor rehabilitation.

Rather, it says: "Marihuana has become both a focus and a symbol of the generation gap . . . and an expedient means of protest against adult values."

CONTINUED RESEARCH URGED

The commission advocates a continuation of research that would detect harmful effects, if any, on heavy users and demonstrate the drug's potential in the treatment of such disorders as glaucoma, high blood pressure and terminal cancer.

In 42 states and the District of Columbia, simple possession of marihuana in small quantities is a misdemeanor. In half of the remaining states, judges are free to sentence marihuana users as misdemeanants instead of felons if they choose.

The commission will spend the next year preparing a companion report on heroin and other drugs. It also may amend its recommendatons on marihuana in 1973 if that seems appropriate.

[From the Los Angeles Times, Mar. 26, 1972]

MARIHUANA

(An editorial)

Though it tried hard to avoid it, the National Commission on Marihuana and Drug Abuse couldn't get around a major contradiction in its chief recommendation, and that contradiction has now been given to the public to wrestle with.

The private possession or use of marihuana, says the commission, should not be illegal. This is because the "proven danger" of physical or psychological harm for the occasional marihuana smoker is so slight that the drug cannot now be considered a major threat to public health. So, there is no need or justification for the government to concern itself with what a marihuana smoker does in the privacy of the home.

But—and comes now the inconsistency—the commission strongly favors a policy of discouraging any use of marihuana. While it would wipe away existing penalties on private use of the drug, it would retain the legal prohibition on growing or selling marihuana for profit, and on its use in public. These deterrents are necessary because, among other reasons, marihuana has "uncertain long-term effects" and because its moderate or heavy use does have undesirable behavioral or physical consequences.

There are, obviously, a number of bothersome points here. First, the commission wants to discourage any use of marihuana, on the sound ground that it could be hazardous, that it could, as happens so often with alcohol, be abused. But is "decriminalizing" the private use of marihuana really an effective way to discourage its use?

It's often said that one of the attractions of marihuana is precisely that it is illegal—the old idea that forbidden fruits are always the most tempting. There may be a lot to that. But it doesn't follow that legitimizing the private use of marihuana would reduce its appeal, any more than it followed that the repeal of Prohibition led to a diminution in drinking. If anything, it seems to us, sanctioning marihuana would tend to increase the number of its users, though not necessarily the number of heavy or habitual users.

Then there is that curious distinction between possessing and using the drug, which would be legally permitted, and growing or selling it for profit, which would not be. Unless each marihuana user were to cultivate his own garden, the drug would have to be purchased, and in the nature of the marketplace it would be sold for a profit, as it is now. The trick, as now, would be for the peddler to avoid getting caught. But, to get fanciful for a moment, why should sellers under the proposed legal changes continue to be in jeopardy of the law? They would, after all, only be providing a commodity whose use, in private, would be entirely legal. Perhaps in justice, if there is legal sanction for one end of the transaction, there ought to be for the other as well.

The commission's response to this is, we think, rather labored and not truly persuasive. It makes the point that only about 2 percent of Americans who have

ever used marihuana are now heavy users, and that many of these persons have suffered psychological or physical harm. In public health terms 2 percent is not considered much. But—again that but—the commission is worried that "a sudden shift in social policy—i.e., fully legalizing the drug—could result in a great increase in the number of heavy users of marihuana, and convert "what is now a minor public health concern in this country to one of major proportion."

Well, if the free sale of the drug were to pose that threat, then so too could free private use of the drug. Which brings us right back to the commission's wish to discourage any use of marihuana, and the inescapable question of whether removing legal penalties on its private use would in fact serve that purpose.

Perhaps it would be better to look at the question from a different angle. Government interference with the cultivation, importation, sale or use of marihuana is justifiable for one reason alone: the drug's danger to health. Like any drug, marihuana is potentially harmful. The issue has become how harmful. The commission says that, on the basis of existing evidence—and we would emphasize existing—light or intermittent use of marihuana apparently is not really dangerous. If that is true, then the justification for government interference is at the least considerably diminished. Private marihuana smoking might then be regarded like private drunkenness, of minimal concern to the law.

Should legal restrictions on private use of the drug then be eliminated entirely? We think not, first because scientific evidence about marihuana's dangers remains inconclusive, second because such a move might well encourage a spread in use. The real legal issue, it seems to us, is how vigorously should existing prohibitions on private use of marihuana be enforced. Is the effort and the drain on police and court time and resources worth it, given the doubts about marihuana's actual dangers? Along with a lot of law enforcement officials, we think it is not.

The best approach would seem to be a pragmatic one, to regard private marihuana smoking essentialy as one of those "victimless crimes" where social harm is slight or nonexistent, where interference by authority is not really necessitated by any demonstrable threat to the community. What an individual chooses to do in privacy is his business alone, provided no harm is done to others. That choice may not be wise, or likely to win moral approval, nor is there need to sanction it by law. But neither is there need for interference by authority, and in the case of private marihuana smoking that ought to be the practice.

[From the National Observer, Mar. 31, 1973]

Is "Drug Abuse" A "Useless Code World"?

(By William J. Lanouette)

Washington, D.C.—The National Commission on Marihuana and Drug Abuse has spent two years and nearly $4 million. In its first report, last year, it recommended that Federal and state penalties for the possession and use of marihuana be eliminated, on the grounds that the drug is not nearly as dangerous or harmful as many people once believed.

In its second and final report, a 481-page document issued here last week, the nine-member commission had little new to say about marihuana, but it did offer more than 100 recommendations about everything from alcohol to zealots. Among its findings:

> The No. 1 drug problem in the United States today is neither marihuana nor heroin but alcohol.
>
> Federal drug-information programs are too often used "to propound and defend the official doctrines and values rather than to communicate accurate information" and should be discontinued until their facts and purposes can be resolved.
>
> A "drug-abuse industrial complex," which spends almost $1 billion a year in Federal funds, is actually confusing and perpetuating many social and medical drug problems.
>
> The dependence on barbiturates (sedatives) by frustrated housewives parallels increased alcohol use during the 1950s by this same group, and it may be a modern equivalent of the hidden opiate habits of the late Nineteenth Century.

Overzealous public officials rely too heavily on law enforcement as a solution to drug abuse, when medical and social therapy could be more appropriate.

Indeed, the commission dismissed the term "drug abuse" as being a useless code word "for that drug which is presently considered wrong," The conclusions even go one step further, stating that "popular conceptions and definitions of drugs and drug use are, in an important sense, *the* drug problem."

MOOD ALTERATION

The commission said thaat "no semantic fiction will alter the fundamental composition of alcohol and tobacco." The commission's chairman, former Republican Gov. Raymond Shafer of Pennsylvania, elaborated on the need for clearer public conceptions of all drugs. He said: "Instead of assuming that mood alteration through some drugs is inherently objectionable, while similar use of others is not, the pubic and its leaders must focus directly on the appropriate role of drug-induced mood alteration. It is no longer satisfactory to defend social disapproval of use of a particular drug on the ground that it is a 'mind-altering drug' or a 'means of escape.' For so are they all."

Beyond such general pronouncements, however, and a call to involve "private institutions" in drug-control activities, the commission's efforts did little to discover specific factual information about either marihuana or drug abuse. For example, it produced an ambivalent conclusion about the effects of marihuana on driving ability, weighing one report that concluded the drug had no adverse effects with another that concluded it did.

The commission said that "no semantic fiction will alter the fundamental and staff, yet it devoted very little attention to the increasing role of international drug trafficking. Furthermore, its most important single recommendation—that all drug-related Federal programs be combined under one authority—is simply an expanded version of a reorganization plan that President Lyndon Johnson proposed in 1968 after he received a set of recommendations from another Presidential commission. In fact, even last year's proposal that penalties for marihuana possession be eliminated had been made in the Department of Health, Education, and Welfare as long ago as 1967.

CONFLICT WITH PRESIDENT

But if the final report offered little more than a compilation of familiar ideas from the 1960s, it nonetheless did conflict with proposals made recently by President Nixon. His call for mandatory minimum sentences for some drug-related offenses returns public thinking to the era of "get tough" drug laws that were in vogue, and were enacted, in the 1950s. The President dismissed last year's commission recommendations to "decriminalize" marihuana use and is not expected to view last week's final report with much favor.

The commission, established in 1970 by Congress and made up of persons selected by President Nixon, was to answer questions about marihuana and drug abuse that then puzzled lawmakers and the public. But with the findings and recommendations now in hand, there still seems to be a paucity of reliable information on which future laws might be based.

"POT" PENALTIES SMALLER, ARRESTS UP

(By Robert M. Press)

BOSTON—Marihuana-related arrests in the U.S. are increasing, even as more and more states are reducing criminal penalties against its use.

Most arrests are for personal use and many are a result of discovery of marihuana when state and local police stop persons for other reasons.

Federal arrests are growing, too, as significant smuggling of marihuana into this country continues.

State and local marihuana arrests nationwide jumped about 30 percent from 1971 to 1972, according to statistics given to this newspaper by the Federal Bureau of Investigation. There were approximately 184,000 marihuana arrests in 1971 and 239,100 in 1972 by state and local police, the FBI says.

USE STILL ILLEGAL

A recently compiled sampling of drug arrests in Massachusetts in April, May, July, and September, showed that marihuana arrests made up nearly one-half the total. Heroin arrests, the second largest group, comprised about 12 percent of the total.

An estimated 35 states since 1970 have followed the federal government's example of lowering the penalty for use of small amounts of marihuana from a felony to a misdemeanor. Its use is still illegal in every state, however.

The upswing in marihuana arrests over the past several years appears to be continuing. Federal agents this year had made about 34 percent more marihuana arrests by Oct. 1 than they had all last year, the FBI says. Such arrests as of Oct. 1 totaled 1,141 compared to 850 in all of 1972, the FBI says.

Federal marihuana arrests are closely related to attempts to smuggle the drug into the United States. As of Oct. 1 federal agents had seized approximately 29,000 pounds of marihuana. The total seized in 1971 was 52,000, a jump from 9,000 pounds taken in 1970.

The "vast majority" of arrests by state and local police appear to be "haphazard," not the result of planned anti-marihuana drives, says Robert Bogomolny. Mr. Bogomolny researched the question for the National Commission on Marihuana and Drug Abuse.

Arrests of this type may continue to increase in the wake of two recent Supreme Court decisions allowing police to conduct complete body searches of individuals they arrest. The high court said any evidence obtained during this type of search could be used against the individual at trial.

Usually police stop someone in a car or on the street for some reason that has "nothing at all to do with drugs," then happen to find marihuana, said Mr. Bogomolny.

"My personal belief is that young, long-haired people, who are not street people but ook like street people, wear jeans, may be bearded or mustachioed, are seen by police as high risks," he said.

He found in a sampling of about 3,000 arrests that only about one out of three persons arrested on a marihuana charge ever was sentenced. Most of those sentenced were convicted of possession, not sale, he said. And only about one out of three of those sentenced was locked up, he added.

OCCASIONAL USERS

"The typical person arrested for marihuana was a young, white male, a permanent resident in the area arrested, a blue-collar worker, or attending school," he said. About one-third were 18 or younger and about one-half were between the ages of 19 and 22, he said.

"Approximately 9 million to 10 million Americans use marihuana occasionally, and about half a million use it regularly," says Dr. Dana L. Farnsworth, one of the principal organizers of reports prepared by the national commission.

The commission estimated that approximately 26 million Americans have tried marihuana at least once.

"But the rate of increase in use has been slowing down the past several years," said Dr. Farnsworth, a consultant to the Harvard University School of Public Health.

[From the Washington Post, Nov. 18, 1974]

THE LIMITS OF CRIMINAL SANCTION

Over the last several years, most states have reduced the felony statutes for possession of small quantities of marijuana to misdemeanors. One state, Oregon, has made simple possession of the drug the legal equivalent of a traffic offense. It was only a matter of time before the federal government would begin to move in the same direction. A presidentially appointed commission argued in 1972 for "decriminalization" and although President Nixon simply rejected the recommendation, a number of federal officials have since taken the position that making marijuana possession a federal felony offense serves no useful purpose.

The latest federal official to take that position is Dr. Robert L. DuPont, President Ford's chief adviser on drug abuse control. Significantly, Dr. DuPont chose a meeting here of the National Organization for the Reform of Marijuana Laws to endorse the Oregon solution. In doing so, Dr. DuPont took the same stance that many responsible officials in federal and state government have

CONTINUED

16 OF 33

taken: Marijuana is potentially dangerous to the individual smoker, but smoking by individuals poses no threat to the society that justifies locking up those unlucky enough to be caught.

The marijuana laws, because they proscribe a "crime" that has no victim, are ordinarily enforced against those whose "criminality" comes to the attention of the authorities by accident. Thus, the other day, a federal official whose home here had been burglarized was arrested the same day for possession of an ounce of marijuana found by the police officers investigating the burglary. But for that accident, we can assume his private use of marijuana would have remained his private affair.

That is how it is with most of the 20 million Americans estimated to have smoked marijuana. There is hardly a legal restraint that compares with the law on marijuana for inconsistency of enforcement. Most people who smoke never are caught. About a half million people will probably be arrested this year. Many of those will be released as first offenders without any action having been taken against them, particularly if they are juveniles. The application of the law is selective in many parts of the country. Young people the police may wish to detain for other reasons often go to jail because they happen to have a small quantity of marijuana on their persons during encounters with police.

Under those circumstances, the logic of Dr. DuPont and those other federal officials who have called for "decriminalization" makes sense. It is unwise for a society to permit the creation of so large a class of presumptive criminals when their crime can be of no demonstrable harm to anyone other than themselves. This is especially so when other recreational drugs are readily available and legal. The danger to the individual who drinks alcohol is at least as great as the danger of smoking marijuana, and may be far more so. Yet, it is perfectly legal for persons who are not minors to buy all the alcohol they wish. If the theory behind proscribing marijuana was that its use would diminish, the policy has been a failure. When the substance was made illegal in 1934, it was estimated that 50,000 Americans used it. The figure could be as high as 25 million today. "Marijuana," said a study by Consumers Union several years ago, "is here to stay."

Since there is little evidence to contradict that conclusion, and since many prosecutors—most recently the U.S. Attorney for the District of Columbia—have argued that they would like to get marijuana out of the way so they and the police can concentrate on real crime, it makes sense to support Dr. DuPont and those who argue for "decriminalization." But "decriminalization" should be recognized for what it is. It is a politically delicate way of saying that you are taking a first step toward the day marijuana will be legal. That is apparent on its face. Dr. DuPont says that "decriminalization" should be accompanied by programs that educate the public to the dangers of marijuana use. Despite such programs, it is doubtful that the use of marijuana is going to decline. If there is merit in relaxing the rules on possession, simple logic dictates that it makes sense eventually to legalize its sale and use and control its quality. That is the way to keep some of the more harmful and dangerously potent forms of the drug off the market. It is also a way of separating marijuana from some of the much more dangerous substances, such as cocaine, LSD and heroin, that now circulate through the same channels as marijuana.

For many young people, the illegality of marijuana makes a mockery of the law. Despite what those who seek to justify the criminal sanction might argue, the logic of the matter causes many youngsters to see duplicity in the current state of affairs. It is perfectly legal for their parents to drink alcohol but an indictable offense for them to possess marijuana. That kind of double standard is corrosive of the principle of the rule of law. The value of the criminal sanction in a society rests on the foundation of fairness. For that reason, the criminal sanction is most effective when it is limited to proscribing those offenses of genuine danger to the society. Possession of marijuana does not meet that test.

[From the Washington Star-News, Nov. 10, 1974]

END THE POT PENALTIES

(By William F. Buckley, Jr.)

A couple of years ago Johnny Carson turned suddenly to me, in a general discussion of the drug laws, and asked me point-blank: "Have you ever tried pot?" I said, yes, I had. And added primly that I was on my boat, outside the 3-mile limit, so that I wasn't breaking any law. (He went on to ask: "Did it do anything for you?" And I replied, "No.")

Now as a matter of fact, Carson should not have asked that question. It is in the category of questions you do not ask, like: "Have you ever cheated on your wife?" The rule is that you should never ask somebody a question if there is a high probability that the answer will reveal the questionee to be either a law-breaker or a liar. And of course for some such questions there is no escape clause. There is no such thing as cheating on your income tax outside the 3-mile limit.

But Carson did ask me, and my reply was truthful, and I have been plagued by it ever since. I seldom address a college audience without somebody bringing it up in some way or other during the question period. Example: "Mr. Buckley, how did pot get into your boat in the first place?" (My answer: Parthenogenesis.) Or: "Do you think it's fair that only people who have yachts can smoke pot legally?" (My answer: "Anybody can rent a boat. They come as low as ten, 15 bucks a day.") The audience is good-humored, mostly because if you are addressing a college audience, you are talking to a group 95 percent of which has experimented with pot. College students recognize that to experiment with pot is extremely safe, and you don't have to go out into the ocean to do it with impunity.

I say extremely safe with sharp reservations, having read the figures for the arrests during 1973, and the projected arrests for this year. These come to 400,000 and a half-million respectively. The figures are appalling, and I pass them along only because there is no reason to distrust the author of them. But what they seem to suggest is that although the typical campus is nowadays never, ever raided, still there are busts, hundreds of thousands of them, and a continuation of those preposterous penalties which are indefensible.

It is widely noticed that the Senate Internal Security Subcommittee has been transcribing a lot of anti-pot material offered by various doctors and scientists. It has not been widely noticed that the head of that committee, the draconian Senator James Eastland, has himself come out against any penalties for the users of marijuana (as distinguished from purveyors of it).

But somewhere along the line, the American public decided not to legalize pot. This conclusion it reached, in my opinion, on the grounds that any different conclusion would appear to be a capitulation to the counter-culture.

But at the same time, American parents reached the conclusion, or such is my reading of it, that they did not desire their 18-year-old boys and girls to be sent to jail for smoking pot which said parents had every reason to suppose they were experimenting with at school.

If the awful figures are correct—a half-million arrests—there has been a breakdown in communication between the public and the police.

The old adage is that the best way to get a bad law repealed is to enforce it. Perhaps this is what the police are trying to effect: the repeal of the law by the enforcement of it. In which event it is paradoxical that the police do not interfere with the colleges. Or is the problem that there aren't enough police to arrest the guilty students?

Little by little, the distinctions emerge. Richard Cowan, a young journalist from Texas, makes them most neatly, in my judgment. They are: Pot is harmful; but people shouldn't go to jail for smoking it. The difficulty is in trying to take the two positions simultaneously. The art of communication seems to break down. It is instantly supposed that if you desire decriminalization, you are saying there is nothing wrong in smoking pot. Or that if you disapprove of pot, you must be in favor of illegalizing it.

But there is a book in prospect on the subject, being written by the aforesaid Mr. Cowan, and it will be a blessing. In his case, frustration has been the mother of invention: he cannot communicate these simple disjunctions, so he is writing a book.

Meanwhile, the apparent indifference of parents to other parents' children being sent to jail for smoking pot, speaks poorly of our sense of community.

[From the Washington Post, Nov. 14, 1974]

REEFER

(By Ann Landers)

Dear Ann Landers:

I figured that all those loony letters would get to you sooner or later, but I didn't expect it to happen so soon. I honestly believe you've gone off your rocker.

I just read where you and some other oddballs have signed some sort of endorsement for marijuana. Now you say it is "normal" for kids to use it and all the scare stories about marijuana are nonsense and actually turning kids to harder stuff because they don't believe any of the propaganda about drugs.

I always thought you had good common sense, and I was pleased you were against pot because it helped me make a case with my own children. They have faith in what you say and will take it from you, but not from me.

Now, what am I to tell them when they catch up with your latest? Please explain. I am—Dumbfounded

Dear Founded—or perhaps I should say Dear Dumb:

Talk about getting facts twisted! You win the cutglass fly swatter. My position on marijuana is unchanged. I haven't budged an inch. I still believe that marijuana is not harmless. I continue to be opposed to any mind-altering drug—including alcohol, especially for teen-agers.

I did sign a statement declaring that I am in favor of the decriminalization of marijuana. This does not mean that I want to see it legalized. I do not. But I do want to see the laws in regard to possession changed.

The name of the organization whose statement I endorsed is "NORML." It is The National Organization for the Reform of Marijuana Laws. The state volunteer coordinator is Paul H. Kuuhn Jr., a highly respected gentleman.

The other "oddballs" (your term, not mine) who have endorsed the decriminalization statement are John Finlator, William F. Buckley Jr., James J. Kilpatrick, Sens. Barry Goldwater, Jacob Javits, Harold Hughes, Charles Percy and Adlai Stevenson II, and Joel Ford, M.D.

You write better than you read—and your apologies are accepted.

LEGAL HOSTILITY TO "POT" FADES

(By Allan Parachini)

Despite recent medical studies purporting to show evidence of physiological risks to smokers of marijuana, there is a clear and growing trend toward decriminalizing the drug. Opposition to "pot," once centered in the law-enforcement community, seems to be crumbling.

Either by statute or de facto means, police and prosecutors seem prepared to accept the fact that marijuana use now is widely accepted and that continued stringent enforcement of antimarijuana laws is unrealistic.

Decriminalization would mean the easing or elimination of penalties for private use or possession of marijuana. Penalties vary widely at present, ranging from a $100 fine in Oregon to a possible 15-year prison term in New York.

Captain Jerry Kennedy, commander of the Denver, Colo., vice squad, recalls that his officers at first opposed a Denver marijuana ordinance easing penalties, but have changed their minds. "Before," he says, "we were bogged down in marijuana arrests. We could never get on the quality cases."

The New Jersey Narcotics Officers Association has backed decriminalization in that state. In many cities, police arrest users only, as one New York City policeman has said, "if they blow smoke in your face." When Los Angeles Police Chief Edward M. Davis issued a statement opposing, on moral grounds, any statute change, the local police commission forced him to distribute a cover letter saying he had spoken as an individual and not on behalf of the department.

"The simple fact is that there is a tremendous number of people using marijuana these days," says Wesley Pomeroy, police chief in Berkeley, Calif., and a former Justice Department official, "and from a pragmatic point of view, the police ought not to be put in the uncomfortable position of having to enforce an unenforceable law."

In Washington, D.C., United States Attorney Earl J. Silbert announced last month that his office would no longer prosecute, and capital police should not arrest, users in possession of five or fewer marijuana cigarettes. Mr. Silbert canceled the order before it was to go into effect last Monday, however, because of the controversy that developed over the issue.

Prospects for widespread easing of marijuana laws appear greater now than ever before. Federal decriminalization legislation is expected to be introduced in

the next session of Congress in the Senate by Jacob K. Javits, Republican of New York; and in the House by Representative Edward I. Koch, Democrat of New York. Mr. Javits has said that "it's time to do something" about marijuana laws to make them conform to what has become accepted social behavior.

CHANGING STANCES

At the Federal level, the change in administration seems to have had a pronounced effect. Former President Richard Nixon repeatedly told aides there was "no way" he would ever support less stringent marijuana penalities, even after the National Commission on Marijuana and Drug Abuse called for such a change in 1972.

Betty Ford, the new President's wife, has publicly said she is certain her three children have tried "pot." One of the Fords' two sons has reportedly met several times with officials of the National Organization for the Reform of Marijuana Laws (NORML). Offspring of public officials, including Oregon's Gov. Tom McCall and former Presidential counsel J. Fred Buzhardt, have been arrested on marijuana charges.

Mr. Ford's chief drug policy adviser, Dr. Robert L. DuPont, said publicly in recent Senate subcommittee hearings and at a NORML-sponsored conference what he has long told intimates privately—that there is little point in continuing to jail marijuana users.

Keith Stroup, who as NORML's director keeps close watch on the legals aspects of marijuana, belives that several states are almost certain to decriminalize it next year. They are Colorado, California, Hawaii, Minnesota, New Jersey, Vermont and Massachusetts.

Various cities and states have already chosen to remove marijuana from criminal law enforcement.

In October, 1973, Oregon abolished criminal penalties for marijuana use, substituting civil fines of up to $100. Marijuana offenders are given citations that are processed like traffic tickets.

After the law's first year, a statewide evaluation was conducted by the Drug Abuse Council, a privately funded Washington, D.C., research organization. Forty per cent of the respondents who said they had used "pot" said they had decreased their consumption; 52 per cent reported no change and only 5 per cent had increased use. And 58 per cent of all respondents favored the present law or a more liberal statute; only 39 per cent thought the law was too lenient.

In Denver, the City Council last spring passed its ordinance overriding the state marijuana law, which had held possession to be a misdemeanor. The new ordinance treats possession of up to a half-ounce as a noncriminal violation. In October, the State District Attorneys Association approved, by a 3–1 margin, a resolution to support a change in the state law to conform with the Denver experiment. The measure will be introduced next year.

The so-called "parking ticket model" was first introduced in Ann Arbor and Ypsilanti in Michigan. A year ago, voters in the two neighboring cities approved a referendum providing for a maximum $5 fine in marijuana cases. The referendum reimplemented a system initially approved in Ann Arbor three years ago but briefly eliminated by the City Council.

In New York City, District Attorney Richard Kuh last summer instituted a circumvention of the potential 15-year prison term for possession of more than a quarter-ounce of marijuana. Under the Kuh plan, which also has the backing of three of the other four district attorneys in the city (Staten Island declined to participate), persons accused of "simple possession" of up to two pounds of marijuana are permitted to plead guilty to a single misdemeanor count.

Decriminalization ferment might seem to be contradicted by arrest statistics, which continue to show an upward trend. In 1973, for instance, 420,700 persons were arrested nationally on marijuana charges, up from 188,682 in 1970 and as few as 18,815 in 1965. Many observers believe the increase is the result of more uninhibited and widespread use. Though few of the offenders ever go to jail and many cases are dismissed, suspects retain their arrest records for life in most states.

Significantly, none of the proposed state and federal statute changes goes beyond the elimination of penalities for private use and possession of marijuana. The sale and distribution of marijuana would still be illegal.

[From the New York Times, Dec. 28, 1974]

HARSH PENALTIES FOR POT

Two years ago the National Commission on Marijuana and Drug Abuse reported that marijuana was a "low priority" risk compared with other drugs, including alcohol, and recommended the elimination of legal penalties for private possession and use while retaining stiff criminal penalties for marijuana traffickers.

This carefully considered proposal got short shrift from then President Nixon, who promptly denounced it. Efforts to liberalize drug laws along lines recommended by the commission so far have been stymied in Congress and in the Legislature of New York which retains some of the toughest anti-marijuana legislation in the country.

Private possession of small amounts of marijuana, which would be subject to no criminal charges under the commission's proposals, still can invoke penalties of up to fifteen years in jail in this state. Only last March, a man in Buffalo was sentenced to five years in prison for possessing 1.9 ounces of "pot." Last year in New York City alone there were nearly 6,800 arrests on marijuana charges, mostly of young people who were stigmatized for life because they were caught with less than one-quarter of an ounce of this drug.

Fears that liberalizing the law would encourage the use of "pot" and compound police problems do not appear to be borne out by the experience of at least one state that has pioneered in this area. In October, 1973, Oregon abolished criminal penalties for marijuana use, substituting civil fines of up to $100. After the law's first year, a statewide evaluation found that 40 per cent of respondents who acknowledged they had used "pot" said they had decreased their consumption; 52 per cent reported no change and only 5 per cent had increased use.

No one should underestimate the potential risks in marijuana use which are still incompletely understood.

The question is whether the harsh legal sanctions against marijuana prevailing in this and most other states really serve as a deterrent. The evidence is that they do not. Public attempts to control private vices through excessive and heavily punitive laws only undermine respect for law and divert law enforcement agencies from more urgent tasks.

[News release, Health and Welfare Canada, Nov. 26, 1974]

CANNABIS LEGISLATION INTRODUCED

OTTAWA.—A bill which would transfer cannabis (marijuana and hashish) from the Narcotic Control Act to the Food and Drugs Act was introduced in the Senate today.

The bill would not legalize the possession or distribution of cannabis. Possession would still be an offence, and there would still be severe penalties for the distribution of cannabis.

A variety of other illicit substances, such as LSD and MDA, are already controlled by the Food and Drugs Act which provides penalities for their possession and distribution. The presence of cannabis in this Act would therefore be both logical and consistent.

The bill would lessen the impact of the law for the offence of possession, and provide the courts greater flexibility in the application of the law regarding cannabis in general.

Specific changes to the law, if the bill is approved by Parliament, would see:

1. *The introduction of a choice of ways to proceed in trying most cannabis offences.*

At the present time, all offences except for possession result in criminal proceedings by indictment. In the case of simple possession, a choice between summary conviction and indictment exists. Under the new law, prosecutors would have the choice of proceeding by summary conviction or indictment for all offences except in the case of simple possession, where the only method open to the prosecutor would be summary conviction.

Summary conviction proceedings generally carry with them less severe sentences and shorter periods before pardon can be applied for, than do criminal indictment proceedings.

2. *No jail sentences for simple possession of cannabis except in default of payment of a fine.*

At the present time, persons convicted by indictment can receive up to seven years imprisonment. Persons convicted by summary conviction can be sentenced to a fine of up to $1,000 or imprisonment for six months, or both for a first offence. Summary conviction for a second or subsequent offence results in a fine of up to $2,000 or imprisonment for one year, or both.

Under the new bill, prosecutors would proceed by way of summary conviction only. The penalty upon summary conviction of simple possession would be a fine of up to $500 for a first offence, or a fine of up to $1,000 for a subsequent offence. In default of paying the fine, a person convicted for the first time of simple possession would receive a jail sentence of up to three months, and six months if it were a subsequent offence.

3. *Reducation of the maximum penalty of life imprisonment for trafficking and possession for the purpose of trafficking.*

Under the Narcotic Control Act, there are no summary proceedings for the offence of trafficking and possession for the purpose of trafficking, and conviction upon indictment results in imprisonment, the maximum sentence being life.

Under the proposed new section of the Food and Drugs Act (Part V) summary conviction of trafficking or possession for the purpose of trafficking would result in a fine of up to $1,000 or imprisonment for up to 18 months, or both. Conviction upon indictment would carry the penalty of imprisonment for up to 10 years.

4. *Removal of the mandatory minimum prison sentence for importing or exporting of cannabis where the convicted person can prove that he imported or exported for his own consumption only.*

Under current legislation, no summary proceedings are allowed for importing. Conviction of importing or exporting under indictment carries a prison sentence—a mandatory minimum of seven years and a maximum of life.

Under the new bill, all convictions would still carry prison sentences. However, under summary conviction the penalty would be imprisonment for up to two years. Conviction upon indictment would result in imprisonment of not less than three years and not more than 14 years.

The three-year minimum sentence would not apply however, where the convicted person could prove that he imported or exported the cannabis for his own consumption only.

5. *Choice of fine, imprisonment, or both in the sentencing of persons convicted of cultivation of cannabis.*

At the present time, conviction of cultivation results in a prison sentence of up to seven years. Under this bill, summary conviction of cultivation would carry a penalty of a fine of up to $1,000 or imprisonment for up to 18 months, or both. Conviction upon indictment would result in imprisonment for up to 10 years.

The proposed legislation is designed to continue to prohibit the availability and use of cannabis while at the same time giving the penal court system more flexibility in relating the sentences to the seriousness of the offence committed. Severe maximum penalties would remain in the law in order to respond to organized crime activities of importing, trafficking and cultivation for financial gain—activities which increase availability and lead to increased use.

[From the Washington Post, Feb. 27, 1975]

Pot Debate Stokes Up

(By Hal Willard)

I had dinner a few evenings ago at a table with nine women: six lawyers, two doctors and an ordinary American housewife, and there wasn't a pothead among them. But there was one on the podium: Keith Stroup, dandily dressed, meticulously groomed, fast-talking Apostle of Pot.

We were at the Cosmos Club, one of Washington's last (and weakening) bastions of male exclusivity of membership and a dispenser of alcohol, but no other drug.

The Women's Bar Association and the Women's Medical Society were holding their annual joint (no pun intended) meeting and had paid their collective way into the auditorium of the great, gray edifice on Massachusetts Avenue for

dinner and a panel discussion involving three persons from the National Organization for the Reform of Marijuana Laws, who titillated them with claims for the ordinariness, the conventionality, the overwhelming acceptance in our society of marijuana.

Stroup, aged 31, father of a 6-year-old daughter, and who is a lawyer and director of NORML, did not keep the women waiting: He quickly described himself as a confirmed and regular user of marijuana of six or seven years' standing and with his darting intelligence, grasp of statistics and command of a battalion of evidence against alcohol, the establishment's drug, was demonstrating that the drug marijuana did not transform a true-blooded American man into a raging savage.

Stroup, highly charged, fervent and passionately dedicated to his cause seems to me to be cast in the same mold as the evangelical temperance crusaders of the past, except that while they were against alcohol, he is for marijuana.

But he is for marijuana primarily to get it categorized in what he regards as the proper way: it should be decriminalized; it should not be considered a moral problem; if it is any kind of problem, and Stroup doesn't believe it is, it is a health problem and should be so treated.

Stroup doesn't drink alcohol, "except an occasional glass of wine," because he thinks it is bad for people and causes hangovers. Stroup, further, quit smoking tobacco cigarettes because of the fear that they cause cancer.

But he is a regular smoker of marijuana, using it, he says, "in a social way, the same way you (his audience of female doctors and lawyers) use alcohol. When I have people over on a Friday or Saturday night, we smoke marijuana instead of drinking alcohol."

The only possible undesirable effect Stroup lays at the door of marijuana he first described as a "lapse of memory" after smoking it. He subsequently said that what he meant was during the 30 minutes to an hour period of the marijuana "high, that people smoke it for," there is a "distortion of time and space and some memory loss." He went on to explain that he was referring, for example, to a situation in which the marijuana smoker, while high, could "lose his train of thought for a few seconds while in conversation, but then come right back to it."

Others on the panel were Dr. Norman E. Zinberg, a psychiatrist and professor at Harvard University, and Dr. Dorothy V. Whipple, a pediatrician and professor at Georgetown University. Both are on the advisory board of NORML.

Neither was as excitable on the subject as Stroup, but both supported his views on decriminalization. Dr. Zinberg went a step further in the question period: he said he opposed having any drug made illegal, but stressed that he favored controls on them.

During his talk, he expressed the view that social control of marijuana is desirable, but is "hindered by the illegality."

Tossing the subject of controls back and forth, Stroup and Zinberg agreed there should be protection of the public against drivers of automobiles being stoned on marijuana, just as it is against the law to drive while drunk on alcohol. Zinberg also said there should be an "age ceiling," too, such as no marijuana under age 18.

Stroup said "the goal of law is to control, not punish" and therefore marijuana smokers shouldn't be jailed. Stroup also said that controls are needed because there is "no quality control" of marijuana. "Some marijuana is adulterated with more dangerous drugs," he said.

Stroup got his start as a lawyer in what he calls "public interest law" and working for "product safety." He called that a "much more creative field" than regular law. He got into the business of trying to change the marijuana laws when a friend was "busted," and, in trying to help him, Stroup discovered "the field was wide open."

He smokes marijuana because he "enjoys" it. Although Stroup repeatedly drew parallels between marijuana smoking by mostly young people and the social consumption of alcoholic beverages, Zinberg said he felt there was a clear distinction.

He said he felt marijuana smokers go for the "high," whereas alcohol drinkers, for the most part, have learned how much it takes to get them high and stop drinking before that point. He said most drinkers have a drink or two to "relax" and not to get high. He said some young people are using alcohol as a "high" drug now, just like pot.

In discussing the widespread use of marijuana, Dr. Whipple said 26 million Americans had experimented with it. Stroup said 30 million had. Both said 13

million were regular users. To Stroup, regular usage means two or three "joints" a week.

He said he gets his marijuana from a lawyer friend who has a connection with a man who gets it from another man who drives it into the United States from Mexico. It costs, on the average, from $15 to $25 an ounce, or $180 to $200 per pound, with the price going up to $35 and more for "premium quality marijuana."

The average user, Stroup says, makes an ounce last two or three months. But it didn't appear to be the smoker of two or three joints a week who worried some members of the lawyer-doctor audience.

One doctor spoke of problems in the operating room with nurses being high on marijuana. She didn't say what hospital or what town the hospital was in.

This use of marijuana was deplored by the panel, but they were against criminal penalities in any form.

None of the panel members dwelt on the subject of the possible health dangers of marijuana. I gathered that they don't really think there are any. Others people do.

What are the facts. It appears to me that there aren't any in the sense that a real fact should stand unassailable. In the case of marijuana, medical facts must come from scientists, but, so far, scientists disagree—and some vigorously assail the opinions of others.

Despite reports issued by the National Commission on Marijuana and Drug Abuse and the President's Drug Abuse Council and the Senate Judiciary Committee's subcommittee hearings on "marijuana-hashish epidemic and its impact on United States security," despite books by eminent scientists and meticulous research by other eminent scientists; despite the clamor of marijuana smokers to be allowed to fly high in peace, and the equally raucous clamor of those opposed to marijuana that it will send the country to perdition—despite everything, serious questions about the drug remain unanswered.

After reading some of the pro and con, and after listening to leading scientists on both sides of the question. I am unable to form an opinion that can be supported by incontrovertible evidence.

I thought the remarks made to me by some leading scientists about other leading scientists were slanderous, so obviously I won't transform the slander into libel by identifying the scientists here. But some of their remarks bear repeating.

One called another's serious study "stupid." One called another a "right-wing fanatic."

Why all the fuss?

I asked that question of Dr. Lester Grinspoon, associate professor of psychiatry at Harvard, a member of NORML's advisory board and author of the book "Marijuana Reclassified."

He said he used to think marijuana was harmful, but under pressure from young people's need to know, decided to study the question and discovered, to his satisfaction, that it "is a dangerous drug, in the sense that any drug that can affect man's mental function is dangerous—but it is less harmful than, say, tobacco and alcohol. I decided that if we continued to tell our young people that marijuana was harmful while tobacco and alcohol were in such widespread use by their elders, they would not believe us on anything."

He said he favored decriminalization of marijuana and all drugs, for that matter) because a "stupid law leads to disrespect for all laws. I think making possession of marijuana a criminal act punishable by imprisonment damages respect for the law among young people."

On the other hand, Dr. Hardin B. Jones, a biophysicist-physiologist at the University of California at Berkeley, describes marijuana as "the most potent drug as far as damaging cells is concerned." He said the cells of the "gonads, brain and the immunity mechanism" are the most affected.

"Marijuana causes irreversible brain damage," he said "but we don't know how much of it used over what period of time causes the damage."

Dr. Jones has become known among the pro-marijuana people as a crusader against the weed and is vigorously attacked by them. Dr. Morton A. Stenchever, professor of obstetrics and gynecology at the University of Utah in Salt Lake City, whose research is cited by Dr. Jones, is not known as a crusader. He says marijuana causes injury to chromosomes.

Dr. Stenchever told me he began his research with a bias in favor of marijuana; that is, he felt his results would show that it had no effect on chromosomes.

"But I was wrong," he said. "It does damage the chromosomes."

Dr. Stenchever's work was cited in the February issue of Good Housekeeping magazine. It was contradicted in the March issue of Consumer Reports, referring to the work of Dr. Warren W. Nichols at the Institute for Medical Research in Camden.

Dr. Nichols, Consumer Reports said, gave "24 subjects measured doses of marijuana daily for five or 12 days" and detected no damage to chromosomes.

Dr. Stenchever did not regard that as significant in relation to his own experiments, which used 40 subjects who had smoked marijuana for an average of three years—none for less than six months.

On the question of the effect of marijuana on male testosterone levels—or fears that the drug may cause sterility and/or impotence—there are at least two major and contradictory studies:

A research team headed by Dr. Robert C. Kolodny and including sex researcher Dr. William H. Masters, worked at the Reproductive Biology Research Foundation in St. Louis and found that there was a drop in hormone level among chronic marijuana users "and we speculate that this would lead to adverse effects," Dr. Kolodny said.

Consumer Reports referred to work by Dr. Jack H. Mendelson and associates at the Alcohol and Drug Abuse Research Center, Harvard Medical School-McLean Hospital, that concluded that "high-dosage marijuana intake was not associated with suppression of testosterone levels. . ."

Good Housekeeping and Consumer Reports more or less summed up the situation with the titles of their articles: Good Housekeeping's was "Special: the alarming new evidence about marijuana's effects;" and Consumer Reports' was "Marijuana: The Health Questions—Is marijuana as damaging as recent reports make it appear?" The article answered the question in the negative.

There seems to be a tendency in the country toward decriminalization, on the theory that even though marijuana may be harmful to the user, possession of it or the smoking of it are not offenses serious enough to society to require imprisonment.

Columnists William F. Buckley Jr., James J. Kilpatrick, Ann Landers and Raymond Price, for example, favor decriminalization.

The Washington Post and the New York Times have editorialized for legalization.

The State of Oregon has made possession of marijuana the legal equivalent of a traffic offense. California is moving toward decriminalization.

District of Columbia City Councilman David Clarke is preparing similar legislation which, he says, is primarily designed to reduce the burden of enforcing marijuana laws on the Metropolitan police department and the courts.

NORML's Stroup says a dozen or more other States are moving toward some sort of decriminalization.

My own feeling after all this is continued rebellion against anything that is "psychoactive," to use the psychiatric term for substances that alter the mental function. But I must join those who feel the use of marijuana should not be an offense that requires imprisonment.

I think people who smoke marijuana are being foolish, as long as there are reputable scientists who believe the drug is harmful—and I think marijuana users reveal deep inadequacies in themselves if they continue to smoke it regularly to achieve "highs."

I feel the same way about any artificial addition to the body's chemistry done to alter one's mental function without a doctor's orders.

However, being foolish and inadequate shouldn't be a criminal offense, unless it leads to harmful effect on other people.

And it may be that scientists eventually will prove to everyone's satisfaction that marijuana causes no more harm than real grass. If they prove the opposite maybe marijuana will be the solution to the population problem.

[From the Chicago Sun-Times, Dec. 1, 1974]

POT—LONG-SMOLDERING ISSUE MAY END IN DECRIMINALIZATION

(By William Hines)

For the first time since ex-Commissioner of Narcotics Harry J. Anslinger trumped up a marijuana crisis in 1935, a real possibility exists that jail terms for pot users will be eliminated from Federal law. It could happen before another year has passed.

In turn, it is widely believed that if Congress acts to decriminalize marijuana, the 49 states that still hold the threat of jail over users (as opposed to peddlers) of the drug will soon fall in line.

Oregon has pointed the way in a law that went into effect last fall. Under its statute, possession of less than an ounce of pot—a misdemeanor in the Federal code and in all other states—is redefined as a "violation" to be dealt with through tickets and fines.

Already preliminary skirmishes are taking place on Capitol Hill, foreshadowing a serious legislative battle in the next Congress, whose coloration will be substantially more liberal.

Last week, a Senate alcoholism and narcotics subcommittee headed by Sen. Harold E. Hughes (D-Iowa) held two days of hearings aimed at showing that present punitive policies directed at minor pot offenders were doing the Nation more harm than good and developing a generation not of "semi-zombies" but of cynics and scofflaws.

Hughes, who has heard and heeded a religious evangelical call, will not be in the Senate next year, but Jacob K. Javits (R-N.Y.), re-elected this month, will. And Javits has sworn an all-out effort to decriminalize pot.

As Javits and others of like mind see it, decriminalization is the way off the horns of a dilemma that bothers those in this country (probably a majority) who do not want to sanction the smoking of grass, but who, at the same time, dislike the idea of young lives being ruled by a criminal record imposed for an impulsive, and ultimately trivial offense.

Decriminalization in the Oregon manner recognizes that public acceptance of marijuana as a major recreational drug has passed the point of no return.

When Anslinger created his pot scare in 1935, he estimated (probably overestimated) that 50,000 persons in the United States were smoking the devil weed. The best estimate now is that 13 million Americans—260 times as many—smoke it occasionally, and that about 2,500,000 smoke "regularly" (say twice a week or more). And 26 million are estimated to have "tried" marijuana at least once.

These numbers probably represent a greater proportion of the population than was guzzling illicit hootch while the writ of Andrew J. Volstead was running (1919–1933) during the "noble experiment" of Prohibition. Sociologists and law enforcement officers are virtually unanimous in agreeing that when an illegal activity achieves this wide an acceptance, there is no stamping it out.

So what to do?

The alternative, in the case of the Volstead Act and the 18th Amendment, was repeal with subsequent legalization of beverage alcohol under state and local controls.

As long as the two sides had to fight about the hazards of marijuana, they never could reach a definitive conclusion.

That has changed recently, but such results as have been reported are either inconclusive, controversial or both. The latest Health, Education, and Welfare Dept. report on "marijuana and health" (the government persists in spelling marijuana with an "h") was delayed for several months to obtain and include some new experimental data, but much of these results left a lot to be desired scientifically.

As far as the relative hazards of the three most widely used recreational drugs—alcohol (95 million users), tobacco (55 million) and marijuana—are concerned, Federal mortality statistics on the first two are revealing.

The National Clearinghouse on Smoking and Health identifies 92,000 deaths a year attributable to cigarettes. The Clearinghouse on Alcoholism has statistics that suggest something in the order of 20,000 deaths a year from alcohol abuse (not including vehicular and other forms of homicide perpetrated by drunks).

By contrast, Sen. Hughes in sharp questioning of Dr. Robert L. DuPont, head of the Special Action Office for Drug Abuse Prevention, drew from the psychiatrist-bureaucrat the admission that he knows of not one death directly attributable to marijuana abuse. It is on these statistics that the pro-reform element will rest its case about relative health hazards.

But this is not the real ace-in-the-hole of Javits, Rep. Edward Koch (D-N.Y.) and others who will be sponsoring decriminalization legislation in the next Congress. They offer two intriguing arguments—one philosophic, the other pragmatic. The philosophic argument is directed at conservatives, the pragmatic at every person preoccupied with crime, taxes and inflation.

To the true conservative (and such conservatives as William F. Buckley and James J. Kilpatrick are on written record to this effect), there is no justification

for the law stepping in to save the fool from his own folly. It is bad public policy to punish crimes without victims.

This goes hand-in-hand with the pragmatic argument that a great deal of law-enforcement effort is being frittered away in combating the ubiquitous, victimless crime of marijuana use.

[From the Washington Star-News, Dec. 4, 1974]

THOUGHTS ON MARIJUANA

(By James J. Kilpatrick)

Proposals for the "decriminalization" of marijuana once again are being heard. The proposals make sense—much sense that they ought to be seen as a first step toward reconsideration of public policy on the whole field of victimless crime.

Granted, "criminalize" and "decriminalize" are verbs that make a man wince, and "decriminalization" is a noun that would have driven H. L. Mencken up the wall. Yet the words are useful, all the same, in defining an area of the law in which an act is illegal but not criminal. Overparking is a familiar example. If I recall my dog Latin correctly, such an offense once was known as "malum prohibitum" as distinguished from "malum in se."

Over the past 40 years, most states have treated even the mere possession and use of marijuana as crimes—as felonies or grave misdemeanors, punishable by both fine and imprisonment. Here and there, as reason has replaced emotion, attitudes have moderated. Oregon now treats simple possession as a "violation," usually punished by a $25 fine.

Dr. Robert L. DuPont, chief White House spokesman on drug abuse, last month recommended that possession of marijuana (as distinguished from sale) be decriminalized at the federal level. His predecessor, Dr. Jerome H. Jaffe, concurred. Here in Washington, U.S. Atty. Earl J. Silbert announced that his office no longer would prosecute cases in which the evidence indicated possession of five or fewer cigarettes. Chief Judge Harold H. Greene backed him up. (Silbert later backed down.) On Capitol Hill, Rep. Edward Koch, D.-N.Y., said he would reintroduce a decriminalization bill next month. In Miami, Atty. Gen. William Saxbe said he would welcome a change in the law.

For the most part, the recommendations draw support from liberals. Such conservatives as James Eastland, chairman of Senate Judiciary, remain stoutly opposed. Yet carefully examined, the idea of decriminalizing marijuana precisely accords with conservative thinking.

Conservative doctrine holds that to the greatest degree possible, consistent with a demonstrably overriding public interest, the individual citizen should be both free and responsible—free to do what he pleases, responsible for the harm he himself may suffer. Unless it can be demonstrated convincingly that marijuana constitutes a health hazard to society, conservatives cannot consistently support the criminal sanctions that now apply.

No such evidence has been brought forward. Even as to individual harm, medical testimony is in conflict. The notion that most or all pot smokers proceed from marijuana to heroin has been exploded. As a hazard to public health, marijuana plainly does not qualify.

There is a second, pragmatic reason for abolishing criminal prosecution of marijuana users. It is a foolish and wasteful use of the time of both policemen and judges to continue the spasmodic and capricious enforcement of the marijuana law.

Half a million such arrests will be made this year. The cases divert police from such truly serious crimes as burglary and robbery, and they clog the courts with defendants—mostly young defendants—not guilty of any true offense against society.

To be sure, only 2 or 3 percent actually wind up in jail, but all of them suffer the stain of a criminal arrest on their records.

The same considerations ought to be applied to many other "crimes." Distasteful as the process may be, conservatives should re-examine their hostility to repeal of laws that make it criminal for adults to engage in homosexual relationships.

Why is simple drunkenness a "crime"? Why are those who gamble still lawfully subject to arrest and imprisonment?

We need to think on these things. The decriminalization of marijuana offers a fine place to start.

[Nov. 6, 1974]

ANOTHER COLUMN NOT ABOUT MARIHUANA

(By Richard C. Cowan)

FORT WORTH.—When a writer fails to get his point across he would naturally like to blame the obtuseness of his readers, but that doesn't do anyone any good. From time to time, perhaps too often, I attempt to convey my views on the subject of marijuana, and I can't say that I feel exactly triumphant.

Actually, I do not write so much about the weed itself as about the controversy surrounding it. There are several reasons for this approach. First, it is difficult and really pointless to try to critique a research report in a seven hundred word column for general readers. Secondly, I hope that younger readers who know what a mess the government has made of the "drug problem" will be consequently less anxious for the government to "solve" other problems, if this question is handled in a general way. (Of course. I run the risk of turning off conservatives who will simply put me down as a pot-head.) Finally, I don't go into specifics, because the arguments for decriminalization of possession (or legalization of sale) do not rest at all on the "alleged harmlessness" of pot. Not at all, but simply on the harm done by the laws.

Recently, however, we have been inundated by a new wave of anti-pot propaganda which is the grand finale of two years of hearings by the Senate Internal Security Subcommittee, headed by Sen. James O. Eastland, D-Miss.

There are several points about these hearings that are interesting. First, Senator Eastland seems to have endorsed the decriminalization of possession of small quantities. Thus, supposedly his objective is not to support the jailing of your kids, but to warn America about the dangers of marijuana. There is an interesting twist here. While many conservatives and even one tired old liberal (on whom I will pounce in a moment) have seen fit to report the "findings" of the hearings, few have mentioned the seemingly newsworthy endorsement of discriminalization by the senator.

What makes this even stranger is that invariably the columns assert that the "harmlessness of pot" has been argued by those favoring decriminalization, and even that the burden of the argument for decriminalization somehow rests on the "alleged harmlessness." Well, the National Organization for the Reform of Marijuana Laws (the only pot lobby in Washington), the Shafer Commission, William Buckley, and James Jackson Kilpatrick, and yours truly, have never said that pot is harmless. Maybe someone's favorite hippy says so, but that would hardly be representative of the "national debate," if there is such a debate. It is just the old "strawman" technique, of misrepresenting the opposition, subversive of the truth, i.e. a lie.

Secondly, following the press releases of the Sub-Committee, writers frequently start with some statement to the effect that "pot isn't harmless, after all, like everyone thought." Not just pot-heads like Kilpatrick, but the general population of America has thought for forty years that pot is harmless. Sure. This is a "news" lead in for a column. "Contrary to popular misconception" keeps propaganda from looking like propaganda.

Well, if you can find me a person who, one, thinks that pot is harmless and, two, thinks that Senator Eastland is an authority on the subject, I'll roll him in your newspaper and smoke him. The point is that the only people who will be influenced by this propaganda will be those seeking to justify the laws.

Senator Eastland has been attacked for his efforts, but he has in fact been more honest than those who bought his story. The old senator never made any bones about it. He candidly admits that these hearings have been open only to known anti-marijuana crusaders most of whom had testified before the Shafer Commission. Generally, however, the results of the hearing have been presented as "new research" when in fact much was old and no actual research was done by the Sub-Committee.

I have been disappointed, of course, that a number of conservative columnists have fallen for the "new evidence" bit, but the really incredible all-time sucker has to be John P. Roche, former head of the super-liberal Americans for Democratic Action. Professor Roche was turned off by the New Left, which turned on, so in the Oct. 5 issue of TV Guide he salutes NBC news for overcoming liberal inhibitions about believing Eastland, just this once, of course. For some reason Roche finds all this "authoritative" (such interesting epistemology), but that's okay. What really got me, though, was that he says that, "Except in rare cases, the police simply ignored pot parties." After one million arrests, the former head of the ADA can say that?

Another half million Americans will be arrested this year, and if you think that this column is pro-pot, or even about pot, I have struck out again.

AMERICAN BAR ASSOCIATION

REPORT TO THE HOUSE OF DELEGATES
SECTION OF INDIVIDUAL RIGHTS AND RESPONSIBILITIES

RECOMMENDATION

Be It Resolved, That, because of the tendency to punish those who [illegible] experiment with use of small quantities of marijuana and to apply too serious penalties to them, rather than to concentrate on detecting and punishing sellers of the drug, there should be no criminal laws punishing the simple possession of marijuana by users; and

Be It Further Resolved, That casual distribution of small amounts not for profit be treated as simple possession; and

Be It Further Resolved, That the American Bar Association deplores the use of marijuana; and

Be It Further Resolved, That educational programs should be established as widely as possible to discourage the use of marijuana and other drugs which may be harmful.

REPORT

The report and the recommendations contained therein were duly adopted and approved by the Council of the Section of Individual Rights and Responsibilities at its May 12, 1973 meeting in Washington, D.C.

Previous Activity on the Part of the American Bar Association and the Section's Committee on Alcoholism and Drug Reform With Respect to Reforming the Present Marijuana Laws

On April 21, 1971, Hon. Raymond P. Shafer, Chairman of the Commission on Marijuana and Drug Abuse, wrote to Edward L. Wright, President of the American Bar Association, requesting an expression of the Association's views on existing marijuana laws. On May 7, 1971, Mr. Wright advised Governor

Shafer that the Association "has not adopted any formal policy statement through its Board of Governors or House of Delegates." He added that several sections and committees were considering the problem and might be interested in communicating with the Commission. Chairmen of relevant sections and committees were advised of the President's response to Governor Shafer's inquiry.

On July 9, 1971, the Committee on Alcoholism and Drug Reform of the American Bar Association's Section of Individual Rights and Responsibilities sent its statement to the Commission on Marijuana and Drug Abuse. The Committee, without any dissent from its fourteen members, recommended the adoption of a regulated system of distributing marijuana similar to that now in use for alcohol, or at the very least, that criminal penalties be retained only for selling marijuana for profit, not for mere possession.

While acknowledging that marijuana use -- like the use of any drug, even aspirin -- can be dangerous, the Committee noted that alcohol is by far a greater threat to health, crime control and traffic safety. The Committee pointed to several societal costs resulting from the use of the criminal law in an attempt to suppress marijuana, costs which far outweigh the potential for harm associated with marijuana use. The marijuana laws:

-- are incredibly harsh and disparate among differing jurisdictions;

-- are selectively enforced;

-- engender disrespect for all laws;

-- criminalize the 26 million Americans who have used, or are using, marijuana;

-- stigmatize tens of thousands of otherwise lawabiding citizens who are arrested and convicted for marijuana-related offenses;

-- stifle the already overburdened criminal justice system with the processing of thousands of minor arrests;

-- divert law enforcement resources away from the control of serious crime;

-- impugn the credibility of the criminal law when it warns against the dangers of hard drug use;

-- enable a black market distribution system to flourish, one which involves sellers who may traffic in hard narcotics and which permits the sale of adulterated substances, marijuana of uncertain potency and transfers to minors.

Following submission of its statement to the National Commission the Committee recognized that the Association's failure to adopt a position with respect to an issue of such widespread interest and importance was wholly inappropriate. Committee deliberations in the months that followed produced last year's report and the resolution, subsequently submitted by the Section of Individual Rights and Responsibilities to the House of Delegates at the 1972 Annual Meeting in San Francisco. The resolution provided:

> RESOLVED, that because the individual and social costs resulting from existing laws punishing simple possession of marijuana substantially outweigh any benefits derived, federal, state, and local laws punishing simple possession of marijuana should be repealed; and
>
> BE IT FURTHER RESOLVED, that consideration be given to the feasibility of licensing the distribution of marijuana as a means of regulating its use.

After a debate in which, according to the ABA Journal for October, 1972, "it was obvious that many of those /sic/present simply do not believe the various scientific studies that indicate that marijuana is not harmful and does not lead to addiction to 'hard drugs,'" the House of Delegates approved a modified resolution providing:

> RESOLVED, that, because the individual and social costs resulting from some existing laws punishing personal use or simple possession of marijuana substantially outweigh any benefits derived, federal, state and local laws punishing personal use or simple possession of marijuana should be overhauled and present excessive criminal penalities should be eliminated;
>
> BE IT FURTHER RESOLVED, that the American Bar Association deplores the use of marijuana.

Additional reports, new data and changing conditions indicate that the Association's policy towards marijuana deserves further consideration and revision. The Committee wishes to make clear that at no time, either with its initial statement nor with the current report, has it sponsored or promoted the use of marijuana. Nor in view of the ready availability of marijuana does the Committee believe that the repeal of existing laws would encourage the use of this commodity. Indeed, the Committee recognizes that while long term, chronic use of the drug has not been proven harmful neither has it been proven safe. The crucial question which the Association must face is not a medical one. Rather, it is whether society's severest sanction, the penal law, should be used to punish a person who at most may be placing his own health in danger, particularly when by so doing society incurs significant costs far exceeding any real or potential benefits from the laws in question.

Extent and Scope of Domestic Marijuana Use

If one single fact stands out above all others in the debate over marijuana it is that harsh criminal laws have been a total and utter failure as a deterrent to marijuana use. When marijuana was first prohibited at the Federal level with the passage -- despite opposition at the time from the American Medical Association -- of the Marijuana Tax Act of 1937, there were an estimated 50,000 cannabis users, mostly members of minority groups, especially blacks and Mexican-Americans. Within several years every state had made possession of marijuana illegal, and most states instituted lengthy prison terms for violators.

Nevertheless, the second report of the National Commission on Marijuana and Drug Abuse, released March 22, 1973, estimates that 26 million Americans have now smoked marijuana at least once in their lives (16% of all adults over the age 18, 14% of all youths between the ages of 12 and 17). Moreover, 13 million people indicated they considered themselves regular users of marijuana, a substantial increase from the 8.34 million regular users reported by the Commission in 1972. Two-thirds of all college students have tried marijuana, while a survey conducted by two Stanford University medical researchers revealed that 25% of all doctors have experimented with marijuana and 7% remain regular users.

These statistics are remarkable only because each and every one of these 26 million people knowingly committed a criminal act by merely trying marijuana. One need possess but minimal insight to realize the damage done to our system of law and government by such widespread disregard for any law, much less one which has achieved such symbolic prominence among so many concerned parties.

One can expect little decrease in marijuana usage in the future. A report prepared for the Bureau of Narcotics and Dangerous Drugs and published in 1 Contemporary Drug Problems 467, by Dr. William H. McGlothlin of the UCLA Department of Psychology places the annual domestic consumption of marijuana in 1972 at 3.3 million pounds. For 1976 he projects between 9 and 22 million regular users consuming as much as 9.4 million pounds at maximum levels. Current estimates that 4 tons of marijuana are successfully smuggled into the country daily tend to be confirmed by the size of recent seizures.

For example, according to Newsweek, March 26, 1973, a joint U.S.-Mexican police raid netted 24.5 tons of marijuana about to be shipped across the border. The same article quoted a U. S. Customs agent as saying, "It would take one person every 15 feet /along the 2,013 mile U. S.-Mexican border/ to control ground smuggling. In the air, its impossible."

Moreover, marijuana grows wild in virtually every state in the Union. Pilot programs initiated by the Department of Agriculture in a futile attempt to eradicate marijuana from a number of midwestern states were abandoned several years ago.

Data such as this undoubtedly had a profound impact on the Consumers Union, for its recent book Licit and Illicit Drugs contains the following observation:

"It is now much too late to debate the issue: marijuana versus no marijuana. Marijuana is here to stay. No conceivable law enforcement program can curb its availability."

In brief, information presently available indicates convincingly that smoking marijuana has become a permanent part of our culture. This is true regardless of whether marijuana is believed good or bad, whether it is medically harmful or not, whether smoking it is seen as socially desirable or undesirable. Given the demand for and availability of marijuana the issue then becomes one of whether we as a people can continue a hopelessly futile prohibitory policy toward marijuana in the face of increasingly severe social costs by so doing.

NEW PARA.

Current Legal Approaches

One of the more odious aspects of the marijuana laws is the appalling disparity in the range of punishment prescribed from one jurisdiction to another, and the differences in sentences actually imposed within a given jurisdiction. Thus, a youth in Texas is subject to a sentence of life imprisonment, as a first offender, for possession of the same small quantity of marijuana possessed by a young Nebraskan whose sentence cannot exceed seven days in jail, in New York City -- though not necessarily in other parts of the state -- a first offender found in possession of a moderate quantity of marijuana is likely to have his case adjourned in contemplation of dismissal. On the adjourned date, the case is dismissed if the defendant has stayed out of further trouble, and his record expunged. Similar procedures may be followed at the judge's discretion in Tennessee, Oklahoma and West Virginia, among other states. Massachusetts imposes mandatory probation for first offenders in marijuana possession cases, and in New Jersey that state's Supreme Court has judicially barred jail terms for persons first convicted of possession. In Texas and Rhode Island, on the other hand, conviction for even a first offense is classified as a felony.

In at least one state -- Texas -- the imposition of long-term or life sentences for first offenders convicted of possessing small quantities of marijuana is not merely a possibility but a reality. At least one offender is currently serving a life sentence for conviction in 1962 of possessing one penny matchbox full of marijuana, and another first offender received a sentence in excess of fifty years in 1967 for possession of ten marijuana cigarettes.

According to a report prepared for the state Senate Interim Drug Study Committee entitled Marijuana in Texas, as of March 1972, 691 people were serving sentences averaging 9-1/2 years in Texas prisons for possession of marijuana. Included among this number were thirty people serving 30 years or more and thirteen people sentenced to life terms, three of them first offenders.

Some states, of course, have recently adopted less severe penalties for marijuana possession. Hawaii and Pennsylvania both now provide for maximum sentences of 30 days and/or a $500 fine; New Mexico, 15 days and/or a $100 fine. On the other hand, New York, despite the adjournment provisions mentioned supra retains a maximum penalty of 1 - 7 years for possession of 1/4 oz. to 1 oz. of marijuana, 7 - 15 years for over 1 oz. Additionally, even though many states have one year maximums for first offenders, those convicted a second time for marijuana possession might receive 10 or 20 year sentences in half a dozen states.

Moreover, the fact that stiff sentences are imposed in but a few cases raises another troublesome issue. If most marijuana defendants received probation, suspended sentences or short jail terms, what about the few unfortunates who receive maximum terms? In some instances, political dissidents, the poor, the young, and racial and ethnic minorities bear the heaviest burden of the law. (The Texas study found that blacks, Mexican-Americans and the poorly educated were disproportionately represented among those in prison.) A good example is the recent sentence of 10 years and 1 day given the editor of an underground newspaper in Dallas, Texas for possession of 1/18 of an ounce of marijuana. (Sentences of 10 years or less may be probated but any sentence over 10 years carries a mandatory term.)

Selective enforcement of marijuana laws and discriminatory and grossly uneven treatment for those convicted substantially undermines public confidence in the legal system.

In this context an additional question comes to mind: Is respect for law enhanced by retention of criminal sanctions which are flagrantly and persistently disregarded by millions of people and for which enforcement procedures are directed predominantly against young people in a totally arbitrary and capricious fashion? The Section answers this query in the negative. We believe that society and its legal institutions suffer far greater damage from the hypocrisy and unpredictability of current marijuana laws than from use of the drug itself.

At another level the National Commission on Marijuana and Drug Abuse found solid agreement among the large group of district attorneys it surveyed as to the ineffectiveness of current policy. More than half of the prosecutors agreed that present laws do not deter people under 30 from initiating marijuana use, do not deter those wishing to smoke regularly from so doing, and do not deter transfers of small amounts for little or no profit, envne though most states treat such transfers as sales with accordingly harsh penalties. Judges, the Commission discovered, are equally disenchanted with the law -- only 13% said they would imprison an adult charged with possession of marijuana, and only 4% would incarcerate a minor.

Despite this attitude on the part of some elements of the criminal justice system, arrests of marijuana smokers have grown to staggering proportions. Between 1965 and 1970, state marijuana arrests increased dramatically from about 19,000 in 1965 to over 188,000 by 1970, and increased of nearly 1000 per cent. Estimates published in the ABA News indicate that the number of state arrests grew again in 1970 to 226,000, plus an additional 3300

Federal marijuana arrests. According to the National Commission approximately 93% of these arrests are for simple possession and about 88% of those arrested are under the age of 26 (58% under age 21). In other words, more than 600 young people are arrested every day in this country for nothing more than having in their possession some quantity, usually under one ounce, of marijuana. Included in this number are the sons and daughters of corporate presidents, elected officials, and law enforcement personnel; in other words, every strata of society feels the adverse impact of marijuana laws. The Section can imagine no other such purely private activity which carries with it such potentially severe consequences.

A young defendant charged with possession of marijuana need not be imprisoned or even convicted to suffer long term ill effects from his experience. Often arrest alone is enough to stigmatize an otherwise law-abiding citizen. While young people may be most often arrested, the grief, shame and emotional trauma involved is shared by their parents and family. Promising careers have been and continue to be ruined because of marijuana arrests, and convictions inevitably foreclose entry into many professions and occupations. The average person who first endures the horrors of the criminal justice system because of a marijuana arrest will leave his experience somewhat bitter and alienated. He may, in fact, become so disillusioned as to "dropout" -- the ultimate irony since marijuana laws are sometimes cited as essential to discourage pot smoking and the apathy and amotivation which allegedly follow. Clearly, for most individuals the present marijuana laws themselves carry a greater potential for harm than do any other aspect of marijuana use, including possible medical effects.

The Basic Issues

In his excellent book analyzing the legal and social realities of present day marijuana use, Marijuana, The New Prohibition, Stanford Law School Professor John Kaplan observes that "(T)he wisdom of a law should be determined in pragmatic terms by weighing the costs it imposes upon society against the benefits it brings." This simple balancing of interests, although self-evident, is sometimes overlooked in our eagerness to promote the general welfare.

Unquestionably, the motives of those who argue in favor of marijuana laws are unimpeachable. The intention is to curb the growing drug culture and prevent adverse health effects, though in actuality few unhealthy side effects have been substantiated despite some 3000 years of use and nearly 80 years of study. There are, of course, few virtues in smoking marijuana, though the same comment holds true for smoking cigarettes or drinking alcohol. If, in fact, the marijuana laws successfully deterred use, then the balancing test suggested by Professor Kaplan might well extol the value of the laws.

But available evidence points to the failure of the laws as a deterrent, as noted supra. The drug is readily available for those who want it, and the prospects of arrest, prosecution and conviction -- while an unpleasant reality to some -- are too remote to deter most users. The Consumers Union Report, Licit and Illicit Drugs, estimates that in the United

States, where five million marijuana cigarettes were smoked daily in 1971, the likelihood of being arrested on any particular occasion of use was far less than one chance in 5000; for many users the risk approached zero. The simple fact is that for the most part the law is probably an irrelevancy in the decision to use, or not to use the drug--except in those cases where marijuana is used -- for reasons of protest and to defy authority -- simply because it is illegal. One young man appeared before the New York State Commission on Campus Unrest and related how a severely worded law actually helped entice him to experiment with the drug which he knew to be harmless. He observed: "It isn't often that a person can create a felony in the privacy of his own room in his own house."

When reviewing society's approach toward other potentially deleterious substances one is immediately struck by the unique and adverse status accorded marijuana, this nation's third most popular and widely used (after alcohol and tobacco) recreational drug, according to the National Commission. For example, cigarette smoking is legal despite clear and unequivocal evidence of its danger to life and health. Persons with emphysema are warned that smoking is apt to result in their death. But it is not illegal, punishable by a jail term, for them to smoke cigarettes. Similarly, persons having relatively large amounts of fat in their blood are warned to refrain from certain high-cholesterol foods. But they are not subject to arrest and imprisonment when they ignore their doctor's advice.

Smoking marijuana, on the other hand, remains illegal despite the lack of reputable medical evidence as to direct harm from moderate use. Certainly marijuana smoking does not carry with it even the slightest threat of a lethal experience. On this point the National Commission stated:

> "A careful search of the literature and testimony of the nation's health officials has not revealed a single human fatality in the United States proven to have resulted solely from ingestion of marijuana. Experiments with the drug in monkeys demonstrated that the dose required for overdose death was enormous and for all practical purposes unachievable by humans smoking marijuana. This is in marked contrast to other substances in common use, most notably alcohol and barbiturate sleeping pills."

A number of other findings of the thirteen member National Commission on Marijuana and Drug Abuse -- including nine appointees of President Nixon -- are worth considering in relation to potential dangers, both medical and social, arising from marijuana use.

-- "the most notable statement that can be made about the vast majority of marijuana users -- experimenters and intermittent users -- is that they are essentially indistinguishable from their non-marijuana using peers by any fundamental criterion other than their marijuana use."

-- "from what is now known about the effects of marijuana, its use at the present level does not constitute a major threat to public health."

-- "a large amount of research has been performed in man and animals regarding the immediate effects of marijuana on bodily processes. No conclusive evidence exists of any physical damage, disturbances of bodily processes or proven human fatalities attributable solely to even very high doses of marijuana."

-- although a number of studies have been performed, at present no reliable evidence exists indicating that marijuana causes genetic defects in man."

-- "in sum, the weight of the evidence is that marijuana does not cause violent or aggressive behavior; if anything, marijuana generally serves to inhibit the expression of such behavior."

-- "no objective evidence of specific pathology of brain tissue has been documented. This fact contrasts sharply with the well-established brain damage of chronic alcoholism."

-- "no outstanding abnormalities in psychological tests, psychiatric interviews or coping patterns have been conclusively documented."

-- "in a word, cannabis does not lead to physical dependence."

-- "although evidence indicates that heavy, long-term cannabis users may develop psychological dependence, even then the level of psychological dependence is no different from the syndrome of anxiety and restlessness seen when an American stops smoking tobacco cigarettes."

-- "research has not yet proven that marijuana use significantly impairs driving ability or performance."

-- "no valid evidence was found to support the thesis that marijuana, by itself, either inevitably, generally or even frequently causes or precipitates the commission of crime, including acts of violence, or juvenile delinquency. Within this framework, neither the marijuana user nor the drug itself can be said to constitute a danger to public safety.

The report of the National Commission is unique only for the comprehensive, thorough nature of its research. Most of the facts it reports and the conclusions it reaches have been noted by a number of other government commissions, including the Indian Hemp Drugs Commission (1893-94), the Panama Canal Zone Military Investigations (U.S. Army, 1925), the New York

Mayor's Committee on Marijuana (La Guardia Report, 1944), the Advisory Committee on Drug Dependence of the United Kingdom Home Office (Wootton Report, 1968), the Canadian Commission of Inquiry into the Non-Medical Use of Drugs (LeDain Commission, 1972), and the National Institute of Mental Health (Marijuana and Health, 1972). Not only were these reports in agreement as to the relative harmlessness of marijuana, many of them recommended that criminal penalties for private possession of marijuana be eliminated. The Section recognizes that differences may exist as to the validity of any given study or report on the subject. However, the Section also believes that the weight of the evidence clearly disproves allegations sometimes heard that "more study is required" or that "not enough is known about marijuana." Simply stated, such comments reflect either a basic ignorance of available information or a conscious attempt to obfuscate the issue.

The hypocrisy of justifying present marijuana laws on the grounds of danger to the users' health or to society generally is further emphasized when alcohol is considered. According to the National Commission, about 80 million Americans currently use alcohol, and dependence on alcohol is "without question the most serious drug problem in this country today."

Alcohol has been shown to be far more dangerous than marijuana in several respects. From the point of view of the health of heavy drinkers the evidence is conclusive. Heavy drinking is associated with nutritional deficiencies, cirrhosis, cardiovascualr disease, tuberculosis, and brain damage. Alcoholics die earlier than non-alcoholics of natural and unnatural causes. Adverse social effects caused by heavy drinking among alcoholics and non-alcoholics, while too numerous to detail, include thousands of deaths due to traffic and other accidents. The link between alcohol and crime, particularly crimes of violence, is well known.

Any comparison of alcohol and marijuana should not overlook the issue of physical addiction. It is a uniformly accepted principle that of the two drugs, only alcohol is physically addictive. Alcoholics suffer from distressing withdrawal symptoms (known as delirium tremens) which, if untreated, may lead to death.

Alcohol presents a far greater danger than marijuana to society. This is not subject to honest debate. What has been questioned is the relevancy of the alcohol analogy. It has been urged on both sides of the "legalization" argument that the alcohol analogy is a "red herring." The Section feels that the alcohol analogy is not "red herring." It should be an important element in any consideration of laws making the possession and sale of marijuana illegal. We cannot overlook the question of hypocrisy being raised so adeptly by the younger generation. The label of "red herring" is hardly a rational response to this obvious difference in the handling of drug problems. There is simply no justification for present laws regulating alcohol yet prohibiting marijuana. We are concerned with inconsistencies in law and charges of hypocrisy both in law and in the enforcement of law, and as lawyers we are especially cognizant of the need for the legal system to be just and to appear to be just. Inconsistencies such as these must be corrected if we are to have any credibility when we preach respect for law and the institutions of government.

Prohibition did not work for precisely the same reasons that existing marijuana laws do not work. People want the product and, accordingly, there is widespread flaunting of the law. Still, from nearly every medical and social perspective alcohol is far more destructive and has a far greater adverse impact than does marijuana. Consequently, the two positions (endorsing marijuana laws and opposing any change in alcohol possession and distribution laws) appear to us to defy logic.

But it is not only the alcohol analogy which persuades this Section to urge repeal of criminal penalties for simple possession of marijuana. On balance, the total "costs" of retaining these laws outweigh any benefits derived from them. For, as the National Commission concluded, "The actual and potential harm of use of the drug [marijuana] is not great enough to justify instrusion by the criminal law into private behavior, a step which our society takes only with the greatest reluctance."

The Link Between Marijuana and Use of Other Drugs

One of the arguments most often raised in defense of existing marijuana laws is that use of marijuana leads to use of heroin or other drugs. On this question the National Commission is unequivocal -- such arguments are absolutely false. To quote the Commission's findings:

> If any one statement can characterize why persons in the United States escalate their drug use patterns and become polydrug users, it is peer pressure. Indeed, if any drug is associated with the use of other drugs, including marijuana, it is tobacco, followed closely by alcohol.
>
> Marijuana use per se does not dicate whether other drugs will be used; nor does it determine the rate of progression, if and when it occurs or which drug might be used.
>
> The fact should be emphasized that the overwhelming majority of users do not progress to other drugs.

While it is true that some 85 to 90 percent of heroin users have smoked marijuana, the more important consideration is that only about 3 percent of those trying marijuana have subsequently used heroin. Indeed, the Committee feels that laws prohibiting marijuana may have a more direct correlation with the use of heroin and other dangerous drugs than does any chemical or pharmocological property of the substance itself. This is true for two reasons.

First, the illegality of marijuana coupled with its popularity and consequent high demand gives rise to a flourishing black market. Most marijuana smokers obtain their supply from friends or other amateur sources. Indeed, Professor Eric Goode of the State University of New York at Stony Brook estimates that roughly 45 percent of all users have sold or otherwise

transferred marijuana at one time or another. At the same time, some marijuana smokers are forced to deal with professional black marketeers whose stock may include not only marijuana but also heroin, barbiturates amphetamines or hallucinogens as well. These drug pushers have no qualms about offering other of their wares should marijuana be unavailable. Such was the case in late 1969 and 1970 when the U. S. Government's "Operation Intercept" program caused temporary shortages of and higher prices for marijuana. During this period large numbers of young people first began experimenting with "reds" (barbiturates). Ironically, then, present marijuana laws may tend to increase, for at least some young people their exposure to dangerous and addicting drugs.

A second, related factor concerns the user's attitute toward both marijuana and its legal status. A marijuana smoker knows that his use of the drug is illegal. He sees his friends arrested for similar behavior. (The National Commission found that 53 percent of all 16 and 17 year olds know someone who has been arrested for marijuana use.) He realizes he is a criminal because of an act he believes to be essentially harmless. Once his self-image is that of an "outlaw" he feels less inhibited about indugling in other behavior which society condemns. In many states the penalties for possession of dangerous drugs are equal to or only slightly more severe than penalties for marijuana possession. Once the marijuana smoker has risked arrest and imprisonment for his use of that drug he may well harbor no second thoughts about acquiring and using other illegal drugs.

Our marijuana laws have, indeed, created an entire generation of criminals, and respect for all law cannot but suffer as a result. This general attitude of disrespect for and disgust with the legal system poses a far greater societal threat than the simplistic and discredited notion that marijuana is an inevitable "stepping-stone" to heroin.

Marijuana and the Agencies of Criminal Justice

Clearly, an individual who is arrested and prosecuted on a marijuana charge endures great personal anguish for an act with de minimus social consequences. But the real loser because of the current marijuana laws is society itself. We find ourselves today in the midst of rising crime rates and growing concern over the adequacy of our law enforcement and criminal justice systems. Yet we persist in diverting an ample portion of our limited resources to the apprehension of young people whose only crime is smoking a marijuana cigarette. Accordingly, we must acknowledge that one of the most significant costs of present marijuana laws is their adverse effect on a criminal court system already groaning under the weight of huge backlogs of undisposed of cases and an overcrowded prison system which admittedly has virtually failed as an instrument of social rehabilitation.

The direct monetary costs involved are staggering. California alone spends an estimated $100 million annually to enforce its marijuana laws. In terms of resource allocation, each and every police, narcotics and customs officer who spends his time pursuing marijuana users could more effectively serve the cause of crime control by switching his attention and efforts to those who traffic in heroin and other hard drugs.

Occasionally, someone argues that the failure of the marijuana laws as a deterrent to the proscribed behavior is no reason to repeal these laws, since other criminal laws, e.g., the homicide statutes, also fail in their deterrent capacity. That view might be persuasive if marijuana use were realistically perceived as dangerous or even unhealthy. Such is not the case, however. As the National Commission has declared:

> "When the issue of marijuana use is placed in this context of society's larger concerns, marijuana does not emerge as a major issue or threat to the social order."

As already noted, there can be no doubt as to the utter failure of present laws in deterring the use of marijuana. Although the number of people arrested reached the astonishing total of 230,000, this figure represents less than 2% of the total number of regular marijuana smokers. Thus, for most users the possibility of arrest is so remote that few, if any, refrain from smoking marijuana because of the laws. Yet the cumulative effect on the criminal justice system of these thousands of arrests is staggering.

What is worse, enforcement of the marijuana laws has given rise to police practices of dubious wisdom and doubtful constitutionality. Long-haired young people have become prime targets of police harassment, which most often takes the form of wanton searches of persons and property without probable cause. Such tactics have, for example, become so prevalent along the New Jersey Turnpike that pending litigation seeks a permanent injunction to bar state police from engaging in future illegal searches. Even more insidious is the growing practice of deploying undercover narcotics agents in high schools and on college campuses. While the alleged goal is stopping hard drug traffic, the use of these agents most often comes to light amid highly publicized reports of campus "crackdowns" where dozens of students are arrested for possession of "narcotics." Close scrutiny of these reports reveals that almost all charges and drug confiscations involve not heroin or amphetamines but marijuana. On those campuses where agents are not deployed student informers are relied upon. Millions of students and young people no longer feel secure, even in the privacy of their rooms, a situation which must dismay those of us concerned with the diminishing rights of privacy we all enjoy.

In short, the marijuana laws are responsible for the wasteful and unwise deployment of law enforcement resources, for adding thousands of cases of trivial import to overloaded court calendars, and for inviting abuse of

the civil rights and civil liberties of millions of this nation's youth through unconstitutional searches and unhealthy police practices. In practical terms, these costs of existing marijuana laws are perhaps the most significant and certainly the most inexpedient.

Appropriate Governmental Response to the Use of Marijuana

We understand the concerns of those who support existing marijuana laws, though frankly we believe that many people have based their position on untenable arguments supported by discredited information and myth. We believe that if recreational drugs such as tobacco, alcohol and marijuana, remain popular -- and no reasonably objective observer could conclude otherwise for any of the aforementioned substances -- then the government has an obligation to regulate their availability and use. Reliance upon criminal sanctions in an attempt to regulate marijuana is, in our view, both inappropriate and counterproductive. In fact, a key point which must be stressed is that it is impossible to regulate a substance which is prohibited, a lesson which this country should have learned during the days of alcohol prohibition. (A curious footnote to Prohibition is the fact that while the sale of alcohol was universally forbidden, in only a few states was possession of alcohol illegal; this is in marked contrast to the present day situation with respect to marijuana which finds both sale and possession banned in all jurisdictions.)

Having said that, the question becomes one of what response to the issue by government is appropriate. There are several steps which government may properly take in this area. One is education. To date we have not done an adequate job of educating our citizens, both young and old, on the dangers of abusing any drug, including prescription and over-the-counter drugs. By grouping marijuana with heroin, by imposing strict penalties for its use and by overstating the possible dangers of the drug we have, in fact, lost credibility among both users and non-users of marijuana. As a result young people no longer believe us when we counsel against the dangers of narcotics. Thus the Section believes that an essential step in developing sound drug education programs is the reexamination of our response to the widespread use of marijuana and the revision of our criminal laws on the subject to reflect the wealth of information now available.

A second possibility involves governmental regulation of the channels of marijuana distribution. Contrary to what many believe, such a step would actually mean more controls over marijuana, not less. Age controls would be possible, as would purity and potency standards. At present none of these controls -- which are properly imposed on the other popular recreational drugs, tobacco and alcohol -- can be established for marijuana for the simple reason that a black market seller cares not whether his customer is 13 or 30, whether his product is pure or laced with more potent (and dangerous) adulterants, or whether the marijuana he sells is twice or even four times stronger than his previous supply thereby creating a potentially harmful situation for the novice smoker. Government regulation over the distribution of marijuana--with particular emphasis on purity and potency of the drug and age limitations on the buyer--will greatly reduce and perhaps eliminate the major known dangers associated with marijuana use today.

The wisdom of a government controlled regulatory system for distributing marijuana has recently been enunciated by the San Francisco Committee on Crime, by the District of Columbia Mayor's Advisory Committee on Narcotics Addiction, Prevention and Rehabilitation, and by Consumers Union. As the editors of the last named organization concluded in Licit and Illicit Drugs:

> We do not recommend legalization because we believe that marijuana is 'safe' or 'harmless'. No drug is safe or harmless to all people at all dosage levels or under all conditions of use. Our recommendation arises out of the conviction that an orderly system of legal distribution and licit use will have notable advantages for both users and non-users over the present marijuana black market. In particular it will separate the channels of marijuana distribution from heroin channels and from the channels of distribution of other illicit drugs -- and will thereby limit the exposure of marijuana smokers to other illicit drugs. Even more important, it will end the criminalization and allienation of young people and the damage done to them by arrest, conviction and imprisonment for marijuana offenses.

The Section's Recommendation

The users of any drug want to know about its dangers. For that reason the government has a responsibility to continue research into possible effects of marijuana on the user, and to publicize its findings. But once adequate warnings are given, the government has fulfilled its obligations. Millions of cigarette smokers daily ignore the government's advice, stated clearly on each pack. Their behavior may be foolish, but it cannot be classified as criminal. The same approach should be followed for marijuana, which medically is a far less harmful substance.

In summary, the Section believes that the time has come for government to acknowledge its obligation to minimize the abuse potential of marijuana by instituting strict legal controls over its distribution and use while recognizing the exorbitant cost of continuing the impractical and ineffective approach toward marijuana presently being followed.

Accordingly the Section of Individual Rights and Responsibilities respectfully urges the House of Delegates of the American Bar Association to endorse our recommendation -- as a meaningful initial step toward a rational policy on marijuana -- that: (1) there should be no criminal laws punishing the simple possession of marijuana; (2) casual distribution of small amounts not for profit be treated as simple possession: and (3) regulatory schemes governing distribution of marijuana be established by the States.

Respectfully submitted,

McNeill Smith, Chairman

August, 1973

REMARKS OF DONALD E. SANTARELLI
FORMER ADMINISTRATOR OF LEAA
TO THE SUB-COMMITTEE ON ALCOHOLISM AND NARCOTICS

I offer these few remarks to make clear the perspective from which I view this most timely subject of law enforcement and marijuana use.

From the beginning of my experience as a law clerk and then as Assistant U.S. Attorney for the District of Columbia, through my experience as legislative counsel to both the House and Senate Judiciary Committee, and as Associate Deputy Attorney General from 1969 to 1972 up to my term as Administration of LEAA, I have maintained a consistent point of view - that we need to strengthen our law enforcement institutions in dealing with the problem of controlling crime in America. But in the evolution of my short career I have come, some time ago, to recognize that simply strengthening law enforcement is not a sufficient objective in the desire to control crime in America. I have come to the rather strongly held and often expressed view that a particularly necessary and missing element in the present war against crime is a role for individual citizens, both at the crime prevention and law enforcement ends of the spectrum. Citizens simply must do more. They must report crime, they must testify about crime, they must refuse to be victimized at the hands of the criminal elements as well as at the hands of the criminal justice system accountable as well as holding their other community institutions accountable.

I have tried diligently and with some controversy to turn the direction of LEAA towards the development of citizen initiatives. These programs would, hopefully, revitalize and restore the missing element of community participation in crime prevention and law enforcement. I pressed for the commitment of LEAA funds to citizens activities such as witness and victims programs; juvenile delinquency prevention programs; community support for corrections and rehabilitation programs. I believe strongly that a community must have the greater role in the crime prevention and law enforcement. It is from that perspective that I make the observations on the enforcement of so called "victimless crimes" and particularly on the enforcement of laws against possession for personal use of marijuana.

MARIHUANA RESEARCH AND LEGAL CONTROLS, 1974

WEDNESDAY, NOVEMBER 20, 1974

U.S. SENATE,
SUBCOMMITTEE ON ALCOHOLISM AND NARCOTICS
OF THE COMMITTEE ON LABOR AND PUBLIC WELFARE,
Washington, D.C.

The committee reconvened, pursuant to recess, at 10 a.m., in room 4232, Dirksen Senate Office Building, Senator Harold E. Hughes (chairman of the subcommittee), presiding.

Present: Senators Hughes and Javits.

Senator HUGHES. The Subcommittee on Alcoholism and Narcotics will come to order.

The first witness is Mr. Michael Sonnenreich, speaking on behalf of Dr. Dana L. Farnsworth.

Mike, we want to welcome you before the subcommittee.

You may proceed with your testimony as you would like.

STATEMENT OF MICHAEL R. SONNENREICH, ESQ., SPEAKING ON BEHALF OF DR. DANA L. FARNSWORTH, FORMER VICE CHAIRMAN OF THE NATIONAL COMMISSION ON MARIHUANA AND DRUG ABUSE, HENRY K. OLIVER, PROFESSOR OF HYGIENE EMERITUS, HARVARD UNIVERSITY, AND CONSULTANT IN PSYCHIATRY, HARVARD SCHOOL OF PUBLIC HEALTH

Mr. SONNENREICH. Thank you very much, Senator. It is a pleasure to be here.

I am speaking on behalf of Dr. Dana L. Farnsworth, who was vice chairman of the National Commission on Marihuana and Drug Abuse, and I am speaking at his request.

I would like to read his statement.

The report of the National Commission on Marihuana and Drug Abuse has now been available to the American people for more than a year and a half. Its general conclusions, developed after 2½ years of study by hundreds of authorities in the field, are still as valid as when they were first made.

The Commission recommended, in 1972, that possession of small amounts of marihuana, 1 ounce or less, no longer be a criminal offense but that penalties be retained for possession of larger amounts presumably for sale. In addition, it asserted that the use of marihuana should be discouraged by all reasonable means, mainly through social controls, with particular emphasis on heavy and very heavy use.

Marihuana is a dangerous drug, as all drugs are when used excessively. However, its capacity for harm appears to be considerably

less than the harm done by the barbiturates, amphetamines, opium derivatives, and particularly alcohol.

Since the publication of the Commission's report in March 1972, numerous studies have been reported, some suggesting that the dangers of marihuana are far greater than the report indicates, others demonstrating that its use produces relatively little harm. In short, despite all these new studies, work in the past 2 years has not fundamentally changed the data base on which the recommendations were made.

The greatest harm stemming from marihuana use comes from the excessively harsh penalties applied to young persons caught with the drug in their possession. The harm done to a young person sentenced to several years in prison, or to any term in prison, is not limited to the cost of their incarceration but rather to the lives of otherwise effective persons being virtually ruined by the degrading experiences of prison life.

The stigma of a criminal record for relatively slight offenses effectively handicaps many persons in an unreasonable manner. In addition, the widespread disrespect for law and authority in general instilled by such harsh and basically unworkable laws is incalculable.

Several States have liberalized their marihuana laws, among them Oregon, Michigan, Rhode Island, and Texas. Others have lagged behind, stimulated, in part, by excessive and misplaced emphasis on the dangers of marihuana.

Recent attempts from several sources to persuade the American people that the use of marihuana is more destructive than it really is, and more dangerous than alcohol, the barbiturates, the amphetamines, and the opiates, are doing a disservice to the ideal of helping our people to learn how to use drugs for their benefit rather than to allow them to become their masters.

A finding made in 1973 that alcohol was the drug whose misuse was far and away the most serious problem facing this Nation was no surprise to the experts but disconcerting to many people, especially in that more than half our people do not consider it a drug.

The use of LSD and the amphetamines has apparently begun to decline, particularly among college students. Heroin use, on the decline for a short time, now once again seems to be increasing.

By no means is all concern with marihuana of a negative nature. There is considerable indirect evidence to suggest that therapeutic compounds could be derived from synthetic chemical structures modeled after those occurring in cannabis sativa, the marihuana plant. Such therapeutic possibilities include nonaddicting sedatives and analgesics, as well as compounds that may be useful in the treatment of high blood pressure and narcotic addiction. Work of this nature is now being actively pursued.

It can hardly be overemphasized that efforts to improve the quality of life of all our people through the removal of social and economic deprivation and raising the level of opportunity for self development will be the most effective means of reducing drug dependence.

Too much emphasis on any one particular index of personal frustration tends to divert attention from other sources of discontent. Ideally, solution of the drug problem should be one of the dividends of major

art[illegible] and effort toward the solution of all our social problems which, by their nature, impair human dignity in any of our citizens.

That is the statement that Dr. Farnsworth asked me to direct to the Committee, Mr. Chairman.

Senator HUGHES. Mr. Sonnenreich, would you care to add anything on your own?

First, I should ask you a couple of questions.

Were you the executive director of the National Marihuana Commission throughout its existence?

Mr. SONNENREICH. Yes, I was.

Senator HUGHES. Did you attend all of the hearings or practically all of them that were held here and around the world?

Mr. SONNENREICH. All of them.

Senator HUGHES. Did you do the work related to all the investigations of marihuana all over the globe?

Mr. SONNENREICH. That is correct, Senator.

Senator HUGHES. And before that time, were you not employed by the Justice Department?

Mr. SONNENREICH. I was.

Senator HUGHES. In what capacity?

Mr. SONNENREICH. I was Deputy General Counsel of the Federal Bureau of Narcotics and Dangerous Drugs, which has now become the Drug Enforcement Administration in the Department of Justice.

Senator HUGHES. On the basis of your own personal experience, would you like to say anything to the Committee this morning?

Mr. SONNENREICH. Yes, I would.

I firmly believe that the recommendations of the Commission, both its first and second reports, remain valid today. I think that the furor, or the recent publicity with respect to new scientific studies that are being conducted with respect to marihuana, are interesting and merit some careful attention. But I do not think they address the social issue which you, as a member of the National Commission, were actively involved in.

That social issue was what do we do with this drug, which is not just a drug but a social issue, and the question we resolved in the Commission, which was unanimous, and I still firmly personally believe it, is that the cost of the continual use of the criminal justice system to try and compel a social policy just does not work.

Now, with respect to marihuana, the decriminalization recommendation of the Commission is not only inevitable, but sound. I do not see any value whatsoever for putting people in jail for the use of marihuana.

Senator HUGHES. Well, as a matter of fact, the report of the Commission was condemned by the President before it was ever issued, was it not?

Mr. SONNENREICH. That is correct.

Senator HUGHES. His rejection seemed to add to the already existing public hysteria about marihuana, regardless of 2 years of effort in this country and all over the world by experts in every country which had had experience, including some countries where cannabis had been used for several hundred years. Is that not correct?

Mr. SONNENREICH. That is correct, Senator.

The fundamental issue, which is that we could disapprove or not condone the use of the drug, does not necessarily mean that there is a concomitant criminal penalty that has to be applied to it.

We could very strongly want to discourage the use of the drug or any psychoactive substance, but in terms of trying to enforce it through using an institutional approach, that is the criminal justice system, and incarceration, not only makes no sense, based on what we know about the substance, but does not seem to make sense knowing what we do about our own society. The statistics cannot be ignored in terms of the fact that a lot of people have used marihuana. They cannot be ignored that a lot of people will continue to use it. And they cannot be ignored that, from a curiosity point of view, the more we talk about this and the more we polarize the issue, the greater the curiosity factor becomes for many of our young people to just see what it is that we are creating such a fervor about.

The one thing that was pointed out in the Commission repeatedly is that we have to be absolutely certain that when the Government decides to impose any kind of restriction via the criminal justice system on any act that it seeks to condemn, then it must be competent to deal with that kind of situation. And if the law cannot deal with it, it loses credibility.

I think, to a large extent, we have lost a great deal of credibility in our criminal justice system through the use of these possession penalties on marihuana.

Senator HUGHES. Well, just to establish some of the basic facts which you say you still believe and which Dr. Farnsworth also reiterated in this statement which you read in his behalf as vice chairman of the National Marihuana Commission, No. 1, the Commission finding was that marihuana is a dangerous drug; is that correct?

Mr. SONNENREICH. That is correct.

Senator HUGHES. And you still believe it should be categorized as that today?

Mr. SONNENREICH. Well, dangerous is a relative term, as you know. It is a dangerous drug. Any drug used in excess is going to produce hazardous effects.

Senator HUGHES. Number 2, the recommendation was to use every method possible within reason to discourage the use of marihuana, was it not?

Mr. SONNENREICH. That is correct.

And I think that what Dr. Farnsworth is talking about and what I am talking about is that we have a great many sources of control that are not institutionalized. We have peer pressure, we have the church, and we have the local community. We exert pressures through these groups all the time on social behavior.

If the community feels something is not to be accepted, we use those social institutions, the private sector, to try and change attitude and change behavior. We do not always have to use the criminal justice system to do that.

Senator HUGHES. Was it not also the finding of the Commission that of the drugs and narcotics that we particularly looked at, including at least one drug, alcohol, marihuana was the least offensive of the group?

Mr. SONNENREICH. That is correct. Both if we were to talk about it from the scientific point of view, in terms of relative danger, it would be correct and if we talk about it from the social point of view, just limiting it to the United States, it is correct.

We know what the problems with a drug like alcohol are. We know what the social costs of alcohol are in terms of assaultive crime, in terms of loss of time on the job, and in terms of breakup within the family unit. These costs are very well documented.

I believe the figures are that approximately 10 million Americans might be classified as alcoholics in the United States.

Senator HUGHES. And was it not the unanimous conclusion of the Commission and yourself, as director, that the personal consumption of marihuana or private use in small amounts should be entirely decriminalized?

Mr. SONNENREICH. That is correct.

Senator HUGHES. Could you describe to the committee what the Commission and you meant by decriminalization?

Mr. SONNENREICH. We meant something very similar to what has been going on, and transpiring within the whole range of private activity.

It simply means we would control the manufacture and sale. We would continue to criminalize the commercial distribution, but not individual possession and use.

Senator HUGHES. That would continue to be criminalized?

Mr. SONNENREICH. That is correct. This is similar to the kind of situations you have with obscenity laws, that you had with alcohol prohibition. We would not make it a crime for the simple possession or the use of the drug. The fact that you have it in your possession does not mean you are criminally liable.

We also extend it beyond that, and I believe you were very intimately involved in this, both in terms of legislation, in the original 1970 act, and in the Commission, Senator, when we also included transfers of marihuana for small or little remuneration within the decriminalization framework. In this way, we recognized the way in which the drug was used, such as the so-called pot party.

There is the situation where somebody will give a marihuana cigarette to his friends. That kind of transfer, where he is not a commercial dealer, would be treated the same as simple possession, and we did not make that a crime.

What we were doing was, in effect, borrowing from what you had done in the 1970 Drug Abuse Prevention and Control Act. And I think that is valid, because I think we have to take into account the way in which a substance is used in the United States, not just simply draw very careful theoretical lines.

Senator HUGHES. In other words, one of the problems we were dealing with and trying to get at was that if five or six youngsters decided to have a pot party, and each chipped in a buck apiece to buy a small amount of marihuana, and one of these individuals made a contact and bought some for no profit to take back for sharing with five others, he was not a pusher. That is what we were dealing with.

Mr. SONNENREICH. In essence, that is correct.

We would not categorize that as criminal.

Senator HUGHES. In other words, let's carry this one step further, if we could. Dr. Farnsworth covered this very well in his statement, I think, but I would like for you to cover it also. Putting an individual into prison for a minor offense, and we found it to be a minor offense, was far worse than the offense itself, was it not?

Mr. SONNENREICH. In terms of social cost, absolutely.

Senator HUGHES. Could you describe that social cost for us to any extent, Mike?

Mr. SONNENREICH. We ran two studies back to back in the first year and the second year of the Commission. What we wanted to do was to find out just what was happening, who were the people that were getting arrested. We had our suspicions that they were young people, and we had our suspicions that they were heavily represented among the college students. And, of course, this was borne out in a six metropolitan area study.

The thing that was very disturbing was the fact that most of the people that were arrested for marihuana offenses, this was their first offense for any kind of criminal activity, including a moving traffic violation. I think the figure was about 93 percent of the people that were arrested for simple possession.

The question is, having been a prosecutor and recognizing how the system works—and it is imperfect and we admit it—it really is not designed to deal with that number of people and that type of individual. And the cost to society is having hundreds of thousands of young people being processed through a criminal justice system that really is not designed to deal with these people. It is designed to deal with our common law crimes and a variety of other crimes. I would be less than candid if I did not say that the system, during this processing, probably loses a great deal of credibility.

In 1972, we had almost 200,000 people arrested by State officials for marihuana offenses. Then it went up to 225,000, I believe, the next year. And from what I gather in statistics this year, it has gone over 300,000. That is an awful lot of people. This is the third largest category of crime that is reported by the FBI in their Uniform Crime Reports. The first is alcohol--drunk and disorderly. The second is petty larceny crimes under $100. And the third is drug offenses.

One has to ask the question, aside from the tying up of the criminal justice system, as to just what the impact of that system is on the people going through it, in terms of criminal records, in terms of disruption of, perhaps, their college life, and in terms of disruption of their families. The social cost that is spread is enormous. We would have to quantify it pretty much the same way as we would in terms of alcohol cost, even where the person is not necessarily arrested, in terms of the impact on the family, and in terms of the impact on future work. These costs are hard to assign but they are very real.

I think what has happened is that we have turned a lot of rebels, who I might call mini-rebels, because much of this was symbolic, into some very, very discouraged and disappointed people within our system.

There are many faults in our criminal justice system, but I believe that we have to preserve that system and try to make it workable. Pouring all these people through that system just does not make it workable. The statistics prove it for the simple reason that most of [illegible] never go to trial. They never get convicted.

What happens to the untrained or unknowing eye is that it looks like the system is being subverted when, in reality, the system is trying to keep itself together by diverting the people, dropping the cases, moving them into other alternatives, other than going through the court system.

And I think we have lost an incredible amount of credibility.

Senator HUGHES. Mike, one final question.

Your background in this field has been extensive and far more than any person normally gets. You have been a prosecuting attorney, an official of the old Bureau of Narcotics and Dangerous Drugs, and Executive Director of the National Marihuana Commission. In that job you were part of the team that conducted hearings, did the research, wrote the report and prepared the analyses and recommendations. You are now a private practicing attorney. What recommendation would you make to the Congress at this point in history on the basis of current research, some of which has raised, once again, the old questions regarding marihuana?

What should we do?

You have already stated that clearly, but just as a final statement, I would like for you to put it in perspective.

Mr. SONNENREICH. Scientific research that is going on, Senator, I think has to go on and continue. But I do not think it has anything to do with the issue.

The issue is whether or not people should be put in jail for using marihuana. I think that while everybody can voice concern and can carefully study all research findings that come out, I do not think it really has anything to do with this social policy issue.

I believe that the Congress should take the initiative. We know that with drug legislation and drug laws it is the States, in the past, that usually took the initiative. Now, what would be not only nice, but appropriate, is for the Congress of the United States to pass a bill, face the issue head on, and decriminalize the drug.

There is great concern and there is still a tremendous amount of misinformation in the public mind about the substance, and we are going to get a lot of emotional commentary by those who favor absolutely taking a giant step and dealing with marihuana like alcohol on one hand, and those who are concerned that it is a very, very dangerous substance and would like to keep the status quo.

But we are in an inevitable situation. The Congress has to pass a law. It has to decriminalize the use of the drug. It has to separate clearly the issue of utilization of our institutional processes, the criminal justice system, from the scientific and medical processes, which will go on and on, regardless of what the Congress does.

There is going to be a lot of research on this drug, as there is with a whole range of other drugs. There is going to be a lot of contradictory findings. I do not think that whether or not we find that it is 3 percent more dangerous, or 5 percent less dangerous is really going to have, other than as an informational kind of thing, an impact on changing the social policy, which I believe should be decriminalization.

Senator HUGHES. Thank you very much. I appreciate your opinions and also those of Dr. Farnsworth.

I hope you will extend to him my personal appreciation for his statement and continuing concern in this field.

Mr. SONNENREICH. Thank you.

Senator HUGHES. I want to say to you personally that over the last 6 years I enjoyed working with you in one capacity or another, sometimes occasionally as antagonist, but most of all as a friend.

Thank you very much.

Mr. SONNENREICH. Thank you, sir.

John Rector, Esq.,
Sub-Committee on Juvenile Delinquency
of the Committee on the Judiciary
United States Senate
Washington, D.C. 20510

Dear Sir:

I am writing as chairman of the Sub-Committee on Drug Use of the Committee on Revision of the Criminal Law to let you know that we fully endorse the decriminalization of marijuana. I enclose a copy of our Position on the subject.

We would be glad to assist in any way in supporting this legislation, and particularly, to assist in arranging for the testimony of appropriate witnesses for your further hearings. If you deem it suitable, I will attempt to contact Mr. Whitney North Seymour, our former United States Attorney, and the Chairman of our State Bar Association. I have recently spoken with Mr. Seymour about this issue and I believe that he would join in supporting it.

We would be glad to hear from you to learn how we may help the decriminalization effort in the Senate.

Very truly yours,

DAVID S. MICHAELS

Position on Marijuana

As Secretary of the Criminal Justice Section of the New York State Bar Association, I hereby certify that the positions stated herein are the duly-adopted positions of the Section.

Herman H. Tarnow

Herman H. Tarnow

Resolution Concerning Decriminalization of Possession

WHEREAS: the present criminal prohibition of marijuana, which defines mere possession as a crime, is unreasonable and unwise in that it undermines respect for all law, encourages the violation of civil liberties, and threatens the criminal prosecution of a significant portion of our population for engaging in a personal act which poses no demonstrable danger to the public;

RESOLVED: that the Criminal Justice Section of the New York State Bar Association recommends that the Legislature decriminalize marijuana in accordance with the recommendations of the National Commission on Marijuana and Drug Abuse, by removing all criminal penalties for private use and possession of reasonable amounts of marijuana and treating the gift or profitless transfer of small quantities in a noncriminal manner.

--Adopted January 27, 1973

Resolution Concerning Inquiry into Lawful Sale

WHEREAS: the removal of criminal penalties for mere possession of marijuana would result in serious questions as to the wisdom and propriety of continuing the legal prohibition now applied to the sale and distribution of marijuana; and

WHEREAS: many proposals have been suggested as to legalizing such sale and distribution under varying methods of control, the comparative merits of which have not been adequately investigated and appraised; it is

RESOLVED: that the Criminal Justice Section recommends that an official temporary commission, established by legislative or executive authority, make a detailed study of various proposals governing the sale and distribution of marijuana under legal conditions of control, and make recommendations concerning the revision of our present criminal prohibition laws pertaining thereto so as to provide some lawful mechanism for the sale and distribution of the substance in question.

FURTHER RESOLVED: that we re-affirm our resolution of January 27, 1973, in favor of the decriminalization of the use and possession of marijuana, which resolution also urged that the profitless transfer of reasonable quantities of this substance be treated in a non-criminal manner.

FURTHER RESOLVED: that the Association present a copy of this resolution to the Governor and to every legislator.

--Adopted January 24, 1974

[From Presidential Documents, Vol. 12, No. 14, Apr. 5, 1976]

MARIHUANA REFORM

Q. I would like to know your views on marihuana reform.

THE PRESIDENT. I don't believe on the basis of the scientific evidence that we have available today that we should decriminalize the use of marihuana.

[From High Times, May 1976]

CARTER ENDORSES DECRIMINALIZATION

Surrounded by a phalanx of Secret Service agents, *High Times* news editor A. Craig Copetas recently questioned Democratic presidential hopeful Jimmy Carter on marijuana and the Drug Enforcement Administration (DEA).

"I favor the decriminalization of marijuana," said Carter, "but I'm not sure about the legitimacy of the federal government making this rule. Now in the field of alcohol, for instance, it's been a right reserved for the states and I don't think there are any uniform federal laws on the sale of alcohol except for the taxation of it. I think decriminalization is a matter best left up to the states for the time being."

[From High Times, May 1976]

THE SMOKE-FILLED ROOMS WHERE THE CANDIDATES STAND ON DOPE REFORM

(By Chip Berlet)

Marihuana has made it into the smoke-filled rooms of campaign '76. Reform of the grass laws is an acceptable issue in this year's presidential campaign. In fact, eight Democratic candidates favor marihuana decriminalization. Just the fact that all the candidates feel free to discuss grass is an indication of how far we've come. After all, four short years ago Senator George McGovern's support of decriminalization almost proved fatal to his bid to capture the Democratic presidential nomination. McGovern's primary opponents sneeringly labeled him the man in favor of the "Three A's—Acid, Amnesty and Abortion."

All of which is not to say that decriminalization or legalization is just around the corner. Republicans Gerald Ford, Ronald Reagan and Nelson Rockefeller, as well as Democrat George Wallace, still take strong stands against marihuana decriminalization. But it seems doubtful that this year any candidate will use grass as the blade with which to cut another up.

High Times has contacted every candidate's campaign headquarters to solicit the presidential hopefuls' stands on decriminalization. Decriminalization differs from legalization in that, while penalties for possession are reduced or abolished, grass remains technically illegal, with sale and distribution subject to criminal prosecution. Many of the candidates had already outlined their positions in response to a survey conducted by the National Organization for the Reform of Marihuana Laws (NORML).

High Times, however, has succeeded in getting some elaboration and in coaxing the first formal campaign statements from Ford, Reagan and Senator Hubert Humphrey.

NORML, incidentally, is trying to get a decriminalization stand written into the Democratic Party's platform. But according to Joe Duffy, former national chairperson of the liberal Americans for Democratic Action and an advisor to the Democratic Party platform committee, there is little chance of such a plank's being adopted. "We're not at the stage where it's going to be embraced by a national political party as a banner to run with," said Duffy. "I think it's a great mistake to press the Democratic Party to put some explicit language on decriminalization in the platform because at so many state and local levels it's already quietly happening, and it's happening quite often with the complicity of lots of people who formerly were bitterly opposed to decriminalization."

Keith Stroup, director of NORML, thinks "it's going to be one hell of an uphill battle to get decriminalization as a plank and we would be foolish to put a big stake in the issue. But we would be remiss if we did not make the effort to familiarize the Democratic leaders and the country as a whole with the issues in-

volved in decriminalization. . . . We're going in expecting to lose, but it's not a kamikaze mission. There is a chance that the Democratic nominee might go along with the decriminalization plank."

Whether decriminalization makes it into the platform or not, it is evident that grass is here to stay. "It's not going to be the kind of issue it was in 1972," says Joe Duffey. "The climate has changed."

Birch Bayh

Birch Bayh believes in decriminalization but not legalization, explained an aide. Bayh has spent 14 years as the junior senator from Indiana and during committee hearings came to the conclusion that federal policy toward marihuana was "unsound." "It is clear that the public interest is not served by arresting nearly 500,000. primarily young people, annually for simple possession of small amounts of marihuana." Bayh went on to say taxpayers, also, were not well served by "the current annual investment of $600 million for prosecuting [marihuana] cases," and noted that "last year, more than two thirds of all drug arrests were marihuana related."

Civil fines should replace criminal sanctions for possession, says Bayh, and when one ounce or less is involved, possession should be defined as including other incidental acts such as "cultivation and transportation for personal use, and the casual, nonprofit transfers of such amounts of marihuana."

Morris Udall

Morris Udall's views on marihuana reform parallel the recommendation of the President's Commission on Marihuana and Drug Abuse. The representative from Arizona subscribes to three basic conclusions: "Public use of marihuana and casual distribution of the drug in small amounts should be subject to citation and modest civil penalty. Possession and private use of small quantities of marihuana should no longer be a punishable offense. Sale of marihuana for profit, or serious misconduct under its influence, should remain a criminal offense."

Fred Harris

Populist Fred Harris supports decriminalization from a philosophical perspective. The former senator from Oklahoma feels that "making criminals out of people who use marihuana—a drug that's been found no more harmful than alcohol—grows out of an elitist attempt to use the government to enforce a general system of morals on its citizens." Harris favors a small fine for possession with specific laws left to local communities.

Milton Shapp

Milton Shapp thinks legalization might be justifiable and deserves further study. The two-term governor of Pennsylvania has proposed legislation in his state similar to the Oregon law. He supports decriminalization but does not want to encourage marihuana use. Shapp is not currently in favor of legalization, but says, "the prospect of legalizing and regulating marihuana similar to the way we control alcohol is attractive in several ways. It could means a new source of revenue for the federal government. It could give assurance that marihuana smokers will not be sold marihuana that has been laced with other drugs, and a curtailment of the interests of organized crime in the sale of marihuana."

Jimmy Carter

Jimmy Carter has surprised many observers with respectable showings in early state primaries and caucuses. The former governor of Georgia favors a modified form of marihuana decriminalization along the lines of the Oregon law and feels that this legislation should be left up to the individual state. Carter's issues coordinator said the candidate is definitely against legalization.

Henry Jackson

Senator Henry "Scoop" Jackson of Washington would support federal legislation "greatly reducing or eliminating the penalty for simple possession" of marihuana. In a slightly vague statement, the conservative Democrat seemed to lean toward decriminalization of possession, while retaining strict laws against the sale or distribution of marihuana for profit.

Frank Church

Frank Church, of Idaho, has spent 19 years in the Senate, and although he is not a formal candidate, he is considered in the running. Church leans toward decriminalization, having "voted to reduce the federal penalty for simple marihuana possession, but to toughen the penalties for drug traffickers." He does not feel legalization can be justified.

Gerald Ford

President Ford is obviously having trouble coming to grips with grass. The White House has sent up so many different smoke signals in recent months that it's hard to know exactly what the President's pot policy is—or what it will be in the future.

After the President's son Jack admitted last fall to an occasional toke, Ford said, "As far as I am personally concerned, I disapprove of young people using marihuana. I believe the preponderance of evidence so fare is that it is not a healthy habit to have."

The White House told *High Times* that the President continues to oppose any change in current federal marihuana legislation.

Nevertheless, there have been rumors in Washington that the man in the White House has been reviewing his pot position. Those rumors gained some credence when the President granted an interview in New Hampshire and addressed himself to the issue of decriminalization. "Personally," said Ford, "I do not approve of the use of marihuana and believe that its use should be strongly discouraged as a matter of national policy. I do not support decriminalization because I believe that this would be interpreted by potential users and by other nations as a signal that the United States government no longer opposes marihuana use. I do, however, support reduced federal penalties for simple possession such as those contained in the proposed Criminal Justice Act of 1975." (That legislation would reduce penalties to a maximum of 30 days.)

Whether Ford will stick to his position remains to be seen.

Ronald Reagan

It is probably Ford's opponent for the Republican nomination who will dictate the President's final position on grass. Ford and Ronald Reagan have been battling for conservative support, with Reagan succeeding in forcing Ford into ever more hard-line stands on various issues. Reagan has a long history of opposing marihuana reform. "Although there has been no written policy developed," his top policy spokesperson said, "the Governor is basically opposed to decriminalization. He thinks marihuana is harmful, and if we get around to talking about it in some detail later we will put out some sort of statement."

Nelson Rockefeller

There is no sign that the years have taken their toll on Nelson Rockefeller's presidential ambitions. There *are* signs that, should the Ford campaign falter, the Vice President will jump in the race. Rocky concocted some of the harshest drug laws in the nation while serving as governor of New York, Curious, then, that the Vice President should have supervised the work of the President's Domestic Council on Drug Abuse and that according to an aide, the Council's recommendations were "consistent with the views of the Vice President." Some of the mystery clears when one takes a careful look at those recommendations. For while calling for a "selective law enforcement approach"—with marihuana and cocaine listed as low-priority drugs—the Council said that this did "not mean that all efforts should be devoted to high-priority drugs [heroin, amphetamines and barbiturates], and none to others." A far cry from decriminalization.

George Wallace

On the Democratic side, only Governor George Wallace of Alabama remains unreconstructed in his attitude toward grass. In response to NORML's query on the Governor's position, Wallace snappishly wrote: "In answer to your question, I do not support any steps to decriminalize any narcotic offenses." An aide to the candidate confirmed that "the statement you got there is the only statement on it," and seemed hostile to the suggestion that marihuana was not a narcotic

and had been proven relatively harmless in a series of medical studies. "It's a narcotic," the aide huffed; "that's what it is classified as across the country—the governor has not changed his impression of marihuana."

Hubert Humphrey

Senator Hubert Humphrey from Minnesota is reluctant to give a position on marihuana since he is not officially in the presidential race. However, Humphrey leads Democratic presidential popularity polls and—assuming Teddy Kennedy remains serious about refusing a convention draft—it is he who, most political insiders feel, will step in to become the Democratic candidate if that party's convention is deadlocked.

Though Humphrey's pot position was formulated some time ago, an aide to the Senator says it still stands. "I believe," said the latter, "that a realistic response to the use of marihuana should definitely include the further reduction of penalties under existing law relating to the personal possession and use of marihuana, in light of continuing medical research and to strengthen the equity of justice. What is demanded today are extended programs of drug abuse prevention and rehabilitation, with law enforcement being concentrated on the apprehension and conviction of the professional and criminal traffickers in dangerous drugs." The Humphrey aide explicated that this meant the Senator did not favor decriminalization, but thought it deserved further sutdy.

Sargent Shriver

Sargent Shriver, who was George McGovern's running mate in 1972, favors a decriminalization system such as exists in Oregon, "where they use a system of civil fines, like traffic citations, to clearly express society's *disapproval* of the indiscriminate use of the drug, but where more severe penalties—totally out of accord with the severity of the risk to society—are not used." Shriver adds, "We know alcohol and tobacco can be harmful, but we don't jail people for using them. Instead we try to dissuade them in other ways. I think that's the approach we ought to take with marihuana."

Eugene McCarthy

Running as an independent candidate, Eugene McCarthy hasn't changed his position much since his 1972 presidential bid—but then, in 1972 he already supported controlled legalization and government regulation of grass. Now, he recommends the removal of all criminal penalties for marihuana and a licensing system like that used for alcohol, with sale prohibited to minors. In a recent speech the former senator from Minnesota told his audience that present laws on marihuana were "barbaric," and that marihuana sold over the counter should have "a warning on the package that says it doesn't cause cancer."

[From the Christian Science Monitor]

DEMOCRATS LABOR TO KEEP PLATFORM PLANKS FLEXIBLE

(By David T. Cook)

WASHINGTON, D.C.—After swiftly completing the first three planks in their party platform, Democrats are laboring to outline—in the most politically palatable prose—more highly controversial issues addressed in unfinished planks.

In a conspicuous effort to write a platform which avoids excessive specificity and controversy, the Democrate are trying to make campaigning as painless and profitable as possible for their presumed candidate Jimmy Carter.

In a sweltering, crowded, canary yellow, hotel ballroom here, platform committee delegates opened their Tuesday (June 15) meeting by considering ideological alterations to the "human needs" plank which deals with busing, abortion, and welfare reform among other issues.

Later in the day the delegates, squeezed behind long cloth-covered tables, were to face the even more controversial foreign-affairs plan. Language putting the party on record as opposed to development of the B–1 bomber is one of the expected amendments to that segment of the platform.

CONCERTED EFFORT

Efforts to turn aside proposals which would sharpen the platform language have been seen in both task forces which propose revisions in the platform draft and in meetings of the full platform committee. The full committee votes on both task force amendments and those proposed from the floor.

Former Ohio Gov. John J. Gilligan, who helped frame the initial platform draft, noted that he and his fellow authors had "walked away" from the issue of offering amnesty to military deserters in an effort to avoid rekindling what he termed the "refrain of the McGovern campaign—amnesty, abortion, and acid."

The delegates, however, didn't "walk away" from the amnesty issue. In sharp reversal of Carter recommendations, the delegates, 55–44, voted in favor of "full and complete pardon for those in legal and financial jeopardy because of peaceful opposition to the Vietnam war."

The delegates did follow Carter urgings in defeating a proposal to legalize marihuana.

One example of the toned down, conservative thrust of the full platform committee's deliberations was the rejection of a proposal that the platform-supported national health insurance system be fully financed by public revenues.

COMPROMISE LANGUAGE

All the urging of Carter supporters, the platform delegates voted down the full federal funding language in favor of a compromise plan operating with employer-employee shared payroll taxes as well as general tax revenues. Under the Carter supporters' amendment, a national health insurance system would be phased in gradually rather than implemented at once.

And while the platform calls for a "simplified, federally financed system of income maintenance," the delegates approved a proposal for immediate federal take-over of local welfare costs and a gradual take-over of the state's share of welfare costs.

Before turning to more controversial topics, the platform committee dispensed Monday night with its economic, government reform, and state and local government platform planks.

LOWERING UNEMPLOYMENT

A key element in the economic plank is a stated commitment to lower adult unemployment to 3 percent within a four-year period. But the specific mechanisms to be used in achieving this goal—and their cost—are not detailed.

Instead, the document refers to the use of institutional reforms: conventional tax, credit, and spending policies; and "a broad range of carefully targeted employment programs."

THE POT VOTE

by ROBERT R. CARR

No doubt there are a few old-timers who still sit around and argue about Prohibition. In the not-too-distant future they may be sitting around talking about today's marijuana laws.

Robert R. Carr is senior program officer of the Drug Abuse Council in Washington, D.C.

For a nation that does so much important business in smoke-filled rooms, we have failed to appreciate the importance of what is really going on in the Great Marijuana Debate. The various special commissions labor on. Legislatures pick their way through possible bills. The police still arrest smokers by the paddy wagon. Lab rats by the thousands smoke grass by the hundred weight. But the end of the controversy is in sight. The marijuana users are bound to win.

Within a generation, the United States will probably accept legally what it has learned to accept illegally. Decriminalization of marijuana will come about through the same process that solved the problems of Civil War veterans and what to do with all the horses that used to pull milk wagons. The old generation that doesn't use grass very much will be replaced by the younger generation that does. The demographics are irresistible.

The truth is that policymakers at all levels will continue to be replaced by younger men and women who most likely have either tried marijuana themselves or are at least much more tolerant of those who have. When leaders from the younger generations take control with the support of the majority of their peers, the marijuana debate will be over.

If younger adults maintain the attitudes they now have as they grow older, and if marijuana use continues to remain at its present level or increases in subsequent "younger adult" groups, we can expect an ever-increasing acceptance of marijuana in the years ahead and an increasing pressure to remove criminal sanctions for its use and possession.

The reasons are clear. In spite of massive law-enforcement efforts in the last decade to suppress its sale and use, marijuana is gradually taking its place with alcohol as the recreational drug of choice for millions of Americans. Marijuana is readily available to all who seek it, and the indications are that its use will continue to rise with each succeeding generation.

"It is now much too late to debate the issue: marijuana versus no marijuana," a Consumers Union report correctly observed as early as 1972. "Marijuana is here to stay. No conceivable law-enforcement program can curb its availability."

The most recent national surveys confirm that 1972 forecast. The National Commission on Marihuana and Drug Abuse reported to the public that, as of October 1971, 24 million Americans had tried marijuana, with eight million of them using it regularly—all illegally. A national survey commissioned by the Drug Abuse Council in October 1974 indicated that 29 million Americans had tried marijuana, with over 12 million of them using it regularly.

Indeed, if you look at marijuana as a consumer product, the demographics are enough to light up the heart of any marketing expert. Those who have tried the product are, most of all, young. While marijuana use cuts across all demographic lines, age is the single sharpest dividing line. Almost one-half of those between the ages of 18 and 25 report having tried marijuana at least once, while only 3 percent of those over 50 say that they have ever tried it.

Smokers also tend to live in big cities, easing the problems of distribution and advertising. Marijuana use varies significantly according to city size and region of the country. If you live in a city of one million or more, the chances are that one of every four adults you meet has at least tried marijuana. If you live in a city of less than 500,000, the chances of your meeting an adult who has tried marijuana are reduced to one in 10.

The highly lucrative western-states market has the highest percentage of users: 27 percent of adults say that they have ever used marijuana, with the northeastern states running a close second at 22 percent. A little more than one-half as many adults in the north central and southern states say they have tried marijuana.

The marijuana users of today are thus concentrated in urban centers and are particularly strong in the country's two largest markets. And because of their age, the marijuana smokers of today are likely to be tomorrow's majority. At the high school level, almost one-half of all students surveyed said they had tried marijuana. At the college level, that figure jumps to over two-thirds.

"Marijuana is here to stay.
No conceivable law-enforcement program
can curb its availability."

A recent follow-up study of a nationwide sample of high school boys first studied in 1966 reflects usage trends in a young adult male population, as reported to the U.S. Congress by the secretary of health, education and welfare. In 1969, when this group turned high school seniors, 20 percent had tried marijuana. By 1974, five years later, over three times as many (62 percent) had done so.

Professionals rank among the highest of all adult occupational groups in at least experimenting with marijuana. In the years to come, the legal and medical professions will be dominated by those who have sampled marijuana, if not by those who use it regularly—at least insofar as surveys of students at law and medical schools can be taken as barometers.

By any standard, marijuana is plainly a growth market right up there with quadraphonic stereos and digital watches. It is also a nonpartisan favorite. Of those adults declaring a political affiliation, a significantly greater percentage of independents have used and continue to use marijuana than either Democrats or Republicans. Democrats, however, use pot more often than Republicans—a fact that will probably not come as a surprise to either group.

We are witnessing the gradual acceptance of a new recreational drug into our society despite efforts at repression and medical warnings. Law-enforcement efforts are apparently having the same effect as they did during alcohol prohibition—large numbers of individuals are ignoring the law and rendering it ineffective.

But the law has hardly been ludicrous to those ensnared by it. Since 1965, almost two million arrests have been made by state and local authorities alone for marijuana violations. During that same period, law-enforcement officials have contined to assure us that marijuana law enforcement is a low priority, especially for personal possession and use. Yet in 1974 alone, marijuana arrests numbered 450,000, compared with only 19,000 in 1965. The overwhelming number of those arrests were for possession, not for sale.

Obviously, punitive criminal sanctions have failed to deter millions of people from using marijuana, and it remains readily available in every part of the nation. High school and college students report that "marijuana is easy to get." They are offered marijuana by friends, and it is often at parties they attend. Among adults who choose not to use marijuana, the reason usually has very little to do with their ability to obtain it.

California's experience with severe criminal penalties for marijuana possession illustrates the law's minimal impact on either use or availability. California had until recently one of the harshest antipot laws in the nation, with a maximum penalty of up to 10 years in jail for possession of any amount. Yet a Drug Abuse Council-sponsored survey in February 1975, when this tough law was still on the books, revealed that almost three out of 10 California adults had tried marijuana at least once, perhaps the highest experimentation rate among adults in any state.

The survey also revealed that of those Californians who were not currently using marijuana, the possibility of legal prosecution or the unavailability of marijuana ranked at the bottom of those reasons chosen for abstaining. Instead, over 90 percent of nonusers cited a lack of interest or perceived health dangers as their reasons for not trying grass.

In his appearances before local lawmakers, John Finlator, retired deputy director of the former Bureau of Narcotics and Dangerous Drugs, underscores the ineffectiveness of the criminal law as a deterrence to marijuana use. "Our criminal laws are a failure," he told a Vermont legislative committee. "We are simply fighting a ghost."

Policymakers are beginning to respond to the reality that the marijuana laws have not only failed in their purpose, but that draconian punishments do not fit the offense. As early as 1972, the National Commission on Marihuana and Drug Abuse, authorized by the Congress and created by ex-President Nixon, issued its first report, aptly titled *Marihuana: A Signal of Misunderstanding*. The commission recommended that possession of marijuana for personal use no longer be treated as a criminal offense and that distribution of small amounts of marijuana not involving profit be treated the same. The president ignored the report, but others were listening.

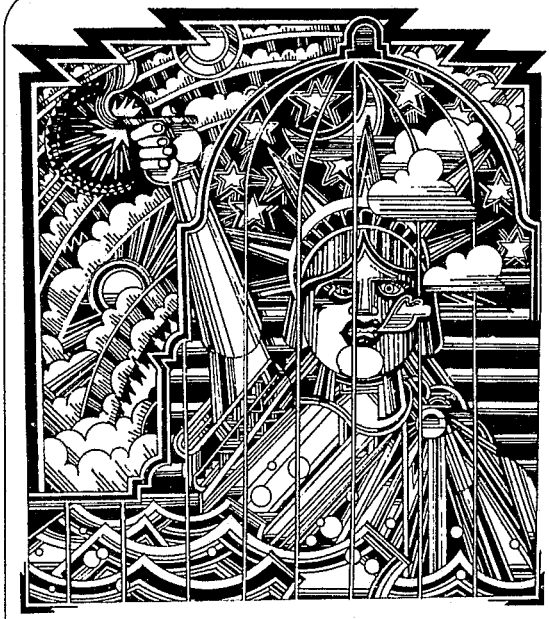
Within 18 months after the report was made public, the state of Oregon abolished criminal sanctions for possession of one ounce or less of marijuana and replaced them with a civil fine of $100 or less, similar to a traffic citation. The Oregon model is similar to that recommended by the commission—an official policy of discouragement of use by the imposition of a civil sanction and the elimination of criminal penalties. Criminal sanctions are retained, however, for possession of over one ounce, for selling and for cultivation.

What would be the results of the abolition of criminal penalties for possession of marijuana, and would the public accept that change? Evidence on this question comes from Oregon, where the Drug Abuse Council sponsored two identical surveys to assess the impact of their decriminalization law—the first survey was conducted one year after the new law went into effect, and the second was conducted one year after the first.

The fears of many that marijuana use would dramatically increase if criminal penalties were removed are not borne out by the Oregon experience. The first survey found that the number of individuals using marijuana had not significantly increased among Oregon adults during the year following removal of criminal penalties for simple possession of one ounce or less. Indeed, through a series of interviews with 802 respondents—a cross section of Oregon residents aged 18 or over—we found that only 72 adults (9 percent) reported being current marijuana users. Only four of the 802 respondents (0.5 percent) reported that they had started using it in the year following decriminalization.

Surprisingly, of those adults using marijuana at the time of the survey, four of every 10 reported an actual de-

"Professionals rank among the highest of all adult occupational groups in at least experimenting with marijuana."



crease in the amount they smoked during that year, while only one of 20 reported an increase. More than one-half (52 percent) of current users reported no change in consumption.

MARIJUANA USE IN OREGON

	Adults who have ever used	Adults who currently use
Oct. '74	19%	9%
Oct. '75	20%	8%

The follow-up survey found no significant difference among adults who said either that they had ever used or currently use marijuana. And, among those currently using, a similar decrease in consumption was reported. It would appear that marijuana use has stabilized among Oregon adults during the two years following the removal of criminal penalties.

The Oregon surveys also indicate that once the law has been changed to remove criminal sanctions, the public will accept that change. In both surveys, almost six of 10 adults favored the elimination of criminal penalties for the possession of small amounts of marijuana—the majority favored either the new law as is or even more lenient legal alternatives.

Within the last year, California, Maine, Alaska, Colorado and Ohio have substituted fines for jail sentences for possession of small amounts of marijuana. Several other states are presently considering such an approach. The Alaskan Supreme Court has gone even farther by declaring criminal penalties for marijuana possession to be unconstitutional invasions of privacy.

Yet criminal penalties remain in effect in 44 states, and the arrests continue. According to the latest federal statistics, state and local enforcement agencies spend some $600 million per year enforcing their marijuana laws.

Public attitudes are divided on what should be the proper legal response to marijuana use, but they seem to be moving toward more lenient approaches. Survey results compiled by the National Institute on Drug Abuse (*NIDA*), the federal drug-abuse treatment and research arm, indicate that 86 percent of adults are against sending marijuana smokers to jail for first conviction of possession, but they prefer other alternatives ranging from no penalty to probation and mandatory treatment.

The Drug Abuse Council's own national survey points to a sharp division of opinion toward legal alternatives to possession of small amounts of marijuana between those who have used it and those who have never tried it. Eight of every 10 adults who have ever used favor reducing or eliminating criminal penalties, compared with three of 10 of those who have never used.

The public's attitude toward the various legal alternatives varies from region to region, paralleling those in patterns of use. Of adults in the western states where use is the highest, 51 percent favor outright elimination of all criminal penalties for the possession of even small amounts of marijuana; that percentage drops precipitously to 31 percent in the southern states, where use is among the lowest.

Similar sharp variations in attitude are evident among age groupings, with younger adults by far the most lenient in outlook and older adults opting for the law as it now is or for stiffer penalties. Again, however, it should be noted that attitudes among these age groups generally follow patterns of use. Even more lenient attitudes toward mari-

"Marijuana is plainly a growth market right up there with quadraphonic stereos and digital watches."

juana laws are seen among the youth who will be reaching voting age in the next few years.

Decriminalization of marijuana is thus a matter of time. But meanwhile we are bombarded with a vociferous, if not acrimonious, rearguard action. Some of the summary language used, for example, to preface the marijuana hearings before the U.S. Senate Subcommittee on Internal Security in 1974 was reminiscent of the national hysteria of the 1950s. The subcommittee saw the marijuana euphoria as a danger to democracy with "subversive groups" playing a "significant role in the spread of the epidemic." It saw the nation being "saddled with a large population of semizombies." If the "epidemic is not rolled back," the subcommittee summary warns, "our society may be largely taken over by a marijuana culture."

The more serious debate about the possible health consequences of marijuana use has been flawed by a series of research reports, some of which resemble propaganda more nearly than scientific research. Science itself has become a weapon in a battle between conflicting values and lifestyles, and many of the scientists have taken off their hats to become protagonists or antagonists.

Without considering the detailed research findings, it is useful nonetheless to put them in the general context of the questions scientists themselves are asking about their purposes and methodologies. In early 1975, the Drug Abuse Council sponsored a conference in Washington, D.C., designed to comprehensively review the major marijuana studies reported since the commission issued its final report in March 1973. The participants were 19 distinguished scientists from the fields of immunology, genetics, endocrinology, pharmacology, psychiatry, psychology, internal medicine and neurology—those areas where the more serious allegations of potential health harm have been raised.

There was general agreement among the participants that "there are no new reasons to be especially disturbed by the use of marijuana." The scientists cautioned against acceptance of most of the recent findings prior to the completion of corroborating research. They called for large-scale epidemiological investigations to identify potential health consequences of chronic marijuana use, rather than the isolated animal research and retrospective studies that have dominated the area.

The National Institute on Drug Abuse, charged with the yearly responsibility of reporting to the U.S. Congress on research related to marijuana and health, says that "none of the results of marijuana research are conclusive." The institute itself spends over $5 million a year on marijuana-related studies. Yet, in five consecutive annual reports, it has never concluded that marijuana use poses a significant health danger, although it does point to possible negative consequences such as genetic changes and interference with driving skills. Everyone seems to agree that it is wise to abstain from marijuana if pregnant or when driving a motor vehicle or flying an airplane.

Few responsible scientists, however, would question that marijuana can be harmful, especially when taken in high dosages over an extended period of time. This is true of almost any drug, licit and illicit, with alcohol and tobacco ranking at the top of almost anyone's list of potential health hazards. But in pursuing a policy of discouraging use of alcohol and tobacco, especially at harmful levels, we have not framed our laws to make criminals of users.

The discouragement approach for marijuana is attracting increasing support among high-level policymakers. At a February 1976 news conference called to discuss the government's fifth annual report to Congress on marijuana and health, NIDA director Robert L. DuPont, M.D., endorsed the view that civil penalties should be substituted for criminal prosecution of possession of small amounts of marijuana. DuPont, who had previously avoided drawing comparisons among the three most widely used recreational drugs, declared alcohol and cigarettes to be far more dangerous to the health of the user than grass.

Legislation to remove criminal penalties for simple possession of marijuana has been introduced in Congress by Sen. Jacob Javits (R.-N.Y.) and Rep. Edward Koch (D.-N.Y.).

President Ford's Domestic Council Task Force on Drug Abuse released yet another major review of the nation's drug problems in its white paper to the president in December 1975. While not going so far as endorsing decriminalization of the Oregon variety, it did recommend that the marijuana laws go virtually unenforced.

The task force ranked drug-abuse priorities among the major classes of drugs according to dependence liability, severity of personal and social consequences and size of core problem. Marijuana was not only declared to be the least serious of the various problems associated with a variety of drugs, but it ranked "low" on each of the measurement scales.

There are signs that President Ford, unlike his predecessor, is listening to the advice of his domestic council that "public policy should be most concerned with those drugs which have the highest social cost." Ford has offered a general endorsement of the report and promises to put its recommendations into effect. It is too early to know whether the president will recognize the desirability of going beyond unenforced laws to repeal of those laws. He would attract considerable public suport if he did, and the experience with marijuana decriminalization, at least in Oregon where it has had a good chance to be tested, tells us that he ought to forge ahead.

The evidence to date should convince all but the most obstinate that the criminal law is not the answer and has failed to deter or decrease marijuana use. The attitudes those laws embody have gone up in smoke. A substantial number of Americans have voted with their lungs for their repeal.

The relative youth of today's marijuana users, their wide geographic spread and their heavy representation in the ranks from which the power structure of the future will be drawn makes the decriminalization of their drug of recreation inevitable. The major remaining question is the final cost of maintaining an archaic legal code that is bound to collapse sooner or later. IB

"The evidence should convince all but the most obstinate that criminal law has failed to deter or decrease use."

[From the Washington Star, Nov. 2, 1976]

MARIHUANA SMOKING ON INCREASE AND SO ARE ARRESTS

(By Abbott Combes)

People smoke it more. People enjoy it more. And people get arrested more for smoking and enjoying it more.

Marihuana. Killer weed of yesteryear, lightsome lift of today.

With public tolerance of once-dreaded pot apparently at a historic high, with the kindred impression among consumers that its use has been de facto decriminalized, the statistics are particularly astounding.

In Maryland and Virginia, marihuana-related arrests in 1975 were nearly double those of the previous year. Arrests likewise in creased in the District, through not so dramatically.

The local proliferation parallels a national trend. Marihuana arrests rose from 18,815 in 1965 to 445,600 in 1974, with each year between demonstrating progressively dramatic gains for a nine-year catch of 1.9 million Americans. (State-by-state statistics for 1975 have not yet been compiled by the FBI's uniform crime reports division.) And although eight states have decriminalized possession, the spiraling is expected to continue.

Present estimates place the number of American marihuana users at 13 million (8 percent of the adult population and 12 percent of those between the ages of 12 and 17) and the number who have sampled it at least once at 34 million (19 percent of the adults and 23 percent of the young).

In their annual crime in Maryland compilation for 1975, state police officials report that 75.4 percent of a total of 13,799 drug violations involved marihuana. Translated in numbers, this means 10,404 persons were arrested for having something to do with marihuana. The figure for 1974 was 5,997.

A similar Virginia report found that 77 percent of 11,288 drug arrests, or 8,691, involved marihuana. The figure for 1974 was 4,876.

(In the case of both Maryland and Virginia, 1975 was the first year statewide crime statistics were compiled by a single agency, the state police. Previously, figures were fed the FBI's computer by a disparate number of state and local law enforcement bodies. In 1974, for example, 16 agencies recorded Maryland's 5,997 arrests, and 23 agencies were employed for Virginia's 4,876.)

In the District, a total of 3,002 marihuana charges were brought in 1975, compared to 2,678 a year earlier. The large majority of these were for possession—2,967 in 1975, and 2,536 in 1974. (Maryland and Virginia do not provide breakdowns.)

The District's largest inflation in marihuana arrests came in the early 1970s. In 1970 there were 266 marihuana-related arrests, a figure that more than doubled to 694 a year later. But by 1972 the number had climbed to 1,667 and by 1973 to 2,553.

Burgeoning busts, however, do not translate into packed penitentiaries.

Most often, at least in the possession cases that account for the bulk of the load, discouraging words replace rides to the station, fines supercede sentences and "drug schools" double for prisons.

Take Northern Virginia. The results of an examination of arrests and court dispositions in Alexandria, Arlington and Fairfax County show that the punishment mostly fitting this crime is a fine or a dismissal.

Under the auspices of the local chapter of the National Organization for the Reform of Marihuana Laws (NORML), a researcher found the following:

Of Alexandria's 70 marihuana arrests in 1975, there was only one jail sentence (for 30 days). The remaining cases were resolved this way: 34 were dismissed, 21 were fined $50, two were fined $25, one $500, one $100, one $75, one was given a year's probation and eight went to the grand jury on sale or possession-with-intent-to-distribute charges.

Of Fairfax County's 488 marihuana arrests (421 males, 67 females and 167 under age 18) in 1975, there were eight jail sentences—four for 30 days, one for 20 days, one for 180 days, one for 12 months and one for 12 months with 10 months suspended. A partial accounting of the other cases included 62 dismissals, 35 sent to a grand jury, 21 $50 fines, 4 $100 fines, 2 $250 fines and 1 $75 fine.

Of Arlington's 163 possession, 10 sale and 12 possession-with-intent-to-distribute cases, exact disposition statistics were not available. However, the researcher concluded: "Officers I talked to felt most were nolle prossed (dropped) or received a delayed sentencing which in the event they kept out of trouble was a dismissal.

They also said . . . most policemen weren't bothering much with marihuana arrests."

Away from urban areas, policeman definitely are bothering with marihuana arrests. And rural judges are not adverse to strict sentencing. The difference, apparently, is lack of familiarity.

In the country, the stereotype of the Haight-Asbury hippie-dope addict persists, along with the steppingstone theory that marihuana smoking leads to habit-supporting crime, along with the dirty-old-man theory that has pushers skulking around grade-school playgrounds.

Throughout the metropolitan region, there are alternatives to imprisonment, and even fines, for first offenders.

In Prince Georges County, for example, 453 persons were admitted to "drug school" last year as an alternative to trials. According to the state's attorney's office, 355 persons graduated and 98 failed. Those that fail—chiefly for skipping school—get sent back to court. The school consists of four sessions, meets once a week and requires a five-page paper for graduation.

And in the District there are two first-offender programs, one operated by the U.S. attorney's office and one (Operation Crossroads) by Superior Court. In such instances, charges are filed in court, a continuance is granted and then the charges are dropped upon the successful completion of the program.

Given an increase in public acceptance—a recent NORML survey in Alexandria indicated 70 percent of the town's voters favored either minimal fines or no punishment at all for consumers, and a Harris Survey disclosed that Americans see more dangers in alcohol than in marihuana—why the escalation of arrests?

Because marihuana smokers have come out of the closet, have raised the shades they once puffed behind, have gone public. Marihuana is used openly at Capital Centre rock concerts, not to mention in Georgetown's street-corner society.

The flouting confounds the police. Simple marihuana possession may be merely a misdemeanor in local jurisdictions (as it has been federally since 1970), but it is still against the law. Good law, bad law, the policeman's job is to enforce it.

This has put police in a bind, with the result that some will make arrests, some will give lectures, some will destroy the discovered marihuana, some will inform parents of the offspring's offense, some will say smoke at home, some will simply sniff in the other direction and some might even confiscate for personal use later on. They also do not admit for attribution that such are the cases.

Witness the method of a local vice squad detective called upon to investigate a report that someone was growing a marihuana plant. He arrived at the door, without warrant, and asked if he could come in to look around. The answer, as he fully anticipated, was no. The good-natured detective announced that he would return in three hours with a warrant.

Most possession arrests occur in one of three ways: a routine check, say of a hitchhiker, turns up marihuana; a plant grows in a backyard and it is identified as marihuana; a person smokes it in public.

John Zwerling is a 33-year-old Alexandria lawyer whose practice consists primarily of drug cases. He is also Northern Virginia coordinator for NORML and as such is lobbying for decriminalization. (Alaska, California, Colorado, Maine, Minnesota, Ohio, Oregon and South Dakota already have decriminalized possession.)

For Zwerling, reduced sentences and fines are not enough. "The more lenient sentences are because of the bodies that have gone before them. It's costing the taxpayers a bloody fortune and breeding disrespect for the law at the same time," he says. "It's a situation where many police officers don't want to enforce it because it's a pain in the ass.

"The only rationale for making something a crime is to discourage—this hurts me more than it hurts you—but the police record is going to hurt them more than the drug.

"No one has ever been able to show any long-term or short-term harm," notes Zwerling, comparing the Virginia penalty for sale of a single joint with other crimes. Various types of murder and mayhem carry more lenient punishments than the sale of a single marihuana cigarette.

Making the cliche comparison between marihuana and martinis, hitting the hypocrisy of the people in authority who "tolerate their own recreational drugs" and ban marihuana, insisting that "no one is saying people should use recreational drugs," Zwerling says, "NORML is the vehicle through which the system is being tested. Parents tell their kids. 'The law is the law—you have to work

through the system to change it.' If we can't change the laws by working through the system, the entire argument is going to fall flat on its face."

There seems to be a consensus that laws making marihuana possession a crime will fall. But when is another matter. Anything so intimately tied to community standards, standards that swivel almost imperceptively, takes time.

The Justice Department, for example, was not prepared for acting U.S. Atty. Earl Silbert's 1974 announcement that he would no longer prosecute persons nabbed with small amounts of marihuana. Silbert, ordered Justice, was to enforce all laws on the books. No longer acting but the real U.S. attorney, Silbert says that about 20 percent of all misdemeanor cases prosecuted by his office involve marihuana, noting the current absence of undercover sales cases.

And the D.C. City Council was not prepared for the onslaught from local churches when it considered a decriminalization bill a year ago. After initially approving the measure 8–4, the council eventually voted 7–6 to table the measure.

"The timing is absolutely wrong," commented Chairman Sterling Tucker, a supporter who nevertheless voted for tabling.

So it goes. Maryland and Virginia legislators will again have opportunities to consider such reforms next year.

No matter the legal outcome, there is bad news for smokers. Herb famine and federal seizures have created dry times. Laments High Times, a magazine that concentrates on same, ". . . the dope shortage has reached crisis proportions with no end in sight. Repeat: no end in sight."

The solution? "The only hope for a high America," the magazine editorializes in its November issue, "is a return to the Victory Gardens that helped win World War II."

LEGISLATION

LAWS OF ALASKA

1975

Source: FCCS HCS SSSB 350 Chapter No. 110

AN ACT Relating to penalties for unauthorized possession and control of certain drugs

Be it Enacted by the Legislature of the State of Alaska:

Section 1. AS 17.12.110 is amended to read: [1]

SEC. 17.12.110. Penalties. (*a*) A person who violates a provision of this chapter relating to the possession or control of depressant, hallucinogenic and stimulant drugs, other than marijuana, when his possession or control is for his own use, is guilty of a misdemeanor and upon conviction is punishable by imprisonment for not more than one year, or by a fine of not more than $1,000, or by both.

(*b*) A person who violates a provision of this chapter other than one mentioned in (*a*) of this section, or a person who violates a provision of this chapter relating to the possession or control of depressant, hallucinogenic and stimulant drugs, when his possession or control is for the purpose of sale or other disposal to another person, is guilty of a felony and upon conviction is punishable as follows:

(1) for the first offense, by imprisonment for not more than 25 years, or by a fine of not more than $20,000, or by both;

(2) for the second and subsequent offenses, by imprisonment for any term of years or life, or by a fine of not more than $25,000, or by both.

(*c*) A person who violates a provision of this chapter by selling or otherwise disposing of a depressant, hallucinogenic or stimulant drug to a person less than 19 years of age is guilty of a felony and upon conviction is punishable by imprisonment for any term of years or life, or by a fine of not more than $25,000, or by both.

(*d*) A person who: (1) uses marijuana on a public street or sidewalk or on the premises of a public carrier or business establishment or any other public place, or (2) possesses or controls more than an ounce of marijuana on a public street or sidewalk or on the premises of a public carrier or business establishment or any other public place, or (3) possesses any amount of marijuana while operating a motor vehicle or airplane, or (4) while under the age of 18, possesses, controls or uses any amount of marijuana is, upon conviction, guilty of a misdemeanor punishable by a fine of not more than $1,000.

(*e*) A person 18 years of age or older who violates this chapter by possession or control of any amount of marijuana in other than a public place, when his possession or control is for his own use, or by possession of one ounce or less of marijuana in a public place, is punishable by a civil fine of not more than $100. Punishment under this subsection shall be initiated only by civil complaint or citation. The court may establish procedures for payment of fines by mail.

(*f*) In this section, "public place" means a place which is either in public ownership or a place available to public access.

STATE OF CALIFORNIA

Senate Bill No. 95

An act to amend Sections 11357, 11360, 11363, 11364, 11365, 11550, and 11590 of, and to add Sections 11006.5 and 11361.5 to, the Health and Safety Code, and to amend Section 853.6 of the Penal Code, relating to controlled substances.

[1] Permitted to become law without signature. Actual effective date: September 2, 1975.

83-313 O - 77 - 25

LEGISLATIVE COUNSEL'S DIGEST

SB 95, Moscone. Marijuana: penalties and offenses.

(1) The present statute specifying the penalty for unlawful simple possession of marijuana does not differentiate between large and small amounts of marijuana and makes no distinction based on potency. Under current law, unlawful simple possession of marijuana is punishable optionally as a misdemeanor or as a felony, but, if a person convicted thereof has been previously convicted of any of specified drug-related offenses, it is a felony and punishable by longer maximum and minimum terms in state prison.

This bill would revise the penalty for unlawful simple possession of marijuana to make possession of not more than 1 avoirdupois ounce of marijuana, other than "concentrated cannabis," a misdemeanor punishable by a fine of not more than $100.

However, the penalty for such offense with 3 or more previous convictions for possession of not more than 1 avoirdupois ounce of marijuana during the 2 years immediately preceding the offense would be diversion and referral to an appropriate community program for education, treatment, or rehabilitation, as specified.

Possession of more than one ounce of marijuana, other than "concentrated cannabis," would be a misdemeanor punishable by imprisonment in the county jail for not more than 6 months, by a fine of not more than $500, or by both such fine or imprisonment. Possession of "concentrated cannabis" would be punishable by imprisonment in the county jail for not more than one year or by a fine of not more than $500, or by both such fine and imprisonment, or would be punishable by imprisonment in the state prison for not more than 5 years. "Concentrated cannabis," for purposes of the bill, would be defined to mean the separated resin, whether crude or purified, obtained from marijuana.

(2) The present statute specifying the penalty for unlawfully furnishing or offering to furnish marijuana makes no distinctions based upon the amount furnished or offered, the potency of the marijuana furnished or offered, or whether any consideration is given or to be given in exchange for the marijuana. Under current law, unlawfully selling, giving away, or furnishing marijuana or offering to do the same is punishable as a felony, with increased maximum and minimum terms prescribed for persons previously convicted of any of specified drug-related offenses.

This bill would revise the penalty for giving away or offering to give away marijuana to make giving away or offering to give away not more than 1 avoirdupois ounce of marijuana, other than "concentrated cannabis," a misdemeanor punishable by a fine of not more than $100.

Existing penalties would be retained with respect to giving away or offering to give away more than one ounce of marijuana or any quantity of "concentrated cannabis."

(3) The present statute specifying the penalty for unlawfully transporting, offering to transport, or attempting to transport marijuana does not differentiate beween large and small amounts of marijuana and makes no distinction based on potency. Under current law unlawfully transporting, offering to transport, or attempting to transport marijuana is punishable as a felony, with increased maximum and minimum terms prescribed for persons previously convicted of any specified drug-related offenses.

This bill would revise the penalty for such offenses to make unlawfully transporting, offering to transport, or attempting to transport, not more than 1 avoirdupois ounce of marijuana, other than "concentrated cannabis," a misdemeanor punishable by a fine of not more than $100. Existing penalties would be retained with respect to unlawfully transporting, offering to transport, or attempting to transport more than one ounce of marijuana or any quantity of "concentrated cannabis."

(4) Current statutes specify that it is unlawful to (a) possess any device, contrivance, instrument, or paraphernalia used for unlawfully injecting or smoking marijuana, or (b) visit or be in any room or place where any marijuana is being unlawfully smoked or used with knowledge that such activity is occurring.

This bill would delete such offenses.

(5) Existing law makes it a misdemeanor, with a mandatory 90-day minimum jail term, for any person to use or be under the influence of marijuana, except when administered by or under the direction of a person licensed by the state to dispense, prescribe, or administer controlled substances.

This bill would delete such offense.

(6) Nothing in present law requires the destruction of records pertaining to arrests and convictions for violation of penal statutes relating to marijuana.

This bill would require the destruction of records of any court or state or local public agency pertaining to an arrest or conviction for possessing marijuana, other than "concentrated cannabis," or for giving away or otherwise furnishing without consideration, transporting, offering to transport, or attemping to transport not more than one ounce of marijuana, other than "concentrated cannabis," where the conviction or the arrest, if there is no conviction, occurs after January 1, 1976. The bill would also require superior courts, as specified, to order the destruction of records of courts and public agencies of convictions for possession of marijuana, and arrests for possession of marijuana not followed by conviction, occurring prior to January 1, 1976, upon presentation of a petition by the person subject to such arrest or conviction and payment by such person of the costs of destruction, not exceeding $50, and would require destruction of such court order. The bill would prohibit public agencies from attaching any disability, as specified, on account of an arrest or conviction for which records are required to be destroyed under the bill, or on account of facts or circumstances leading to such an arrest or conviction.

(7) Present law authorizes the issuance of citations for misdemeanors in specified cases.

This bill would require the issuance of citations to persons possessing, giving away or otherwise furnishing without consideration, offering to give away or otherwise furnish without consideration, transporting, offering to transport, or attempting to transport not more than one ounce of marijuana, other than "concentrated cannabis."

(8) The bill would make changes in provisions relating to the registration of persons convicted of controlled-substance offenses in order to conform to certain penalty changes which would be made by the bill.

(9) Under present law penalties prescribed for certain violations of the California Uniform Controlled Substances Act are increased if the person convicted thereof has been previously convicted of prescribed offenses involving marijuana.

This bill would delete previous convictions of misdemeanors involving marijuana from those previous convictions which result in increased penalties in such cases.

(10) The bill would make no appropriation for the reimbursement of any local agency for costs incurred by it pursuant to the bill for a specified reason.

The people of the State of California do enact as follows:

Section 1. Section 11006.5 is added to the Health and Safety Code, to read:

11006.5. "Concentrated cannabis" means the separated resin, whether crude or purified, obtained from marijuana.

SEC. 2. Section 11357 of the Health and Safety Code is amended to read:

11356. (a) Except as authorized by law every person who possesses any concentrated cannabis shall be punished by imprisonment in the county jail for a period of not more than one year or by a fine of not more than five hundred dollars ($500), or by both such fine and imprisonment, or shall be punished by imprisonment in the state prison for a period of not less than one year or more than five years.

(b) Except as authorized by law, every person who possesses not more than one avoirdupois ounce of marijuana, other than concentrated cannabis, is guilty of a misdemeanor and shall be punished by a fine of not more than one hundred dollars ($100). Notwithstanding other provisions of law, if such person has been previously convicted three or more times of an offense described in this subdivision during the two-year period immediately preceding the date of commission of the violation to be charged, the previous convictions shall also be charged in the accusatory pleading and, if found to be true by the jury upon a jury trial or by the court upon a court trial or if admitted by the person, the provisions of Sections 1000.1 and 1000.2 of the Penal Code shall be applicable to him, and the court shall divert and refer him for education, treatment, or rehabilitation, without a court hearing or determination or the concurrence of the district attorney, to an appropriate community program which will accept him. If the person is so diverted and referred he shall not be subject to the fine specified in this subdivision. If no community program will accept him, the person shall be subject to the fine specified in this subdivision. In any case in which a person is arrested for a violation of this subdivision and does not demand to be taken before a magistrate, such person shall be released by the arresting officer upon presentation of satisfactory evidence of identity and giving his written promise to appear in court, as

provided in Section 853.6 of the Penal Code, and shall not be subjected to booking.

(c) Except as authorized by law, every person who possesses more than one avoirdupois ounce of marijuana, other than concentrated cannabis, shall be punished by imprisonment in the county jail for a period of not more than six months or by a fine of not more than five hundred dollars ($500), or by both such fine and imprisonment.

SEC. 3. Section 11360 of the Health and Safety Code is amended to read:

11360. (a) Except as otherwise provided by this section or as authorized by law, every person who transports, imports into this state, sells, furnishes, administers, or gives away, or attempts to import into this state or transport any marijuana shall be punished by imprisonment in the state prison for a period of five years to life and shall not be eligible for release upon completion of sentence or on parole or any other basis until he has been imprisoned for a period of not less than three years in the state prison.

If such person has been previously convicted once of any offense described in subdivision (b), the previous conviction shall be charged in the indictment or information and, if found to be true by the jury upon a jury trial or by the court upon a court trial or if admitted by the person, he shall be imprisoned in the state prison for a period of five years to life and shall not be eligible for release upon completion of sentence or on parole or any other basis until he has been imprisoned for a period of not less than five years in the state prison.

If such person has been previously convicted two or more times of any offense described in subdivision (b), the previous convictions shall be charged in the indictment or information and, if found to be true by the jury upon a jury trial or by the court upon a court trial or if admitted by the person, he shall be imprisoned in the state prison for a period of 10 years to life and shall not be eligible for release upon completion of sentence or on parole or any other basis until he has been imprisoned for a period of not less than 10 years in the state prison.

(b) Any previous conviction of any of the following offenses, or of an offense under the laws of another state or of the United States which, if committed in this state, would have been punishable as such an offense, shall be charged pursuant to subdivision (a) of this section:

(1) Any felony offense described in Section 11378, 11379, or 11380.

(2) Any felony offense described in this division involving a controlled substance specified in subdivision (b) or (c) of Section 11054, specified in paragraph (10), (11), (12), or (17) of subdivision (d) of Section 11054, or specified in subdivision (b) or (c) of Section 11055.

(3) Any felony offense described in this division involving a narcotic drug classified in Schedule III, IV, or V.

(c) Except as authorized by law, every person who gives away, offers to give away, transports, offers to transport, or attempts to transport not more than one avoirdupois ounce of marijuana, other than concentrated cannabis, is guilty of a misdemeanor and shall be punished by a fine of not more than one hundred dollars ($100). In any case in which a person is arrested for a violation of this subdivision and does not demand to be taken before a magistrate, such person shall be released by the arresting officer upon presentation of satisfactory evidence of identity and giving his written promise to appear in court, as provided in Section 853.6 of the Penal Code, and shall not be subjected to booking.

SEC. 4. Section 11361.5 is added to the Health and Safety Code, to read:

11361.5. (a) Records of any court of this state, state agency, or local public agency pertaining to the arrest or conviction of any person for a violation of subdivision (b) or (c) of Section 11357 or subdivision (c) of Section 11360, shall not be kept beyond two years from the date of such a conviction, or from the date of the arrest if there was no conviction. It shall be the duty of each court and public agency having custody of such records to provide for the timely destruction thereof in accordance with the provisions of this subdivision. The requirements of this subdivision shall not apply to records of any conviction occurring prior to January 1, 1976, or records of any arrest not followed by a conviction occurring prior to such date.

(b) Any person convicted of a violation of Section 11357 or a statutory predecessor thereof, or arrested but not convicted for a violation of Section 11357 or a statutory predecessor thereof, may petition the superior court for the county in which the conviction or arrest occurred for an order directing the destruction of records pertaining to such arrest or conviction. If the court, after a hearing to determine the facts, finds that such an arrest or conviction occurred,

it shall, subject to payment of the costs of destruction by the petitioner, order each court of this state, state agency, and local public agency having records pertaining to the arrest or conviction to destroy all records thereof in the possession of the court or agency within such reasonable time as the court in its order shall determine. However, in no event shall the petitioner be required to pay more than fifty dollars ($50) for the aggregate costs of destruction. Moneys submitted by the petitioner for the costs of destruction of such records shall be remitted by the court to the agencies and courts destroying such records to reimburse the cost thereof. Upon the expiration of such reasonable time as the court in its order shall determine, the order of the court shall be destroyed.

This subdivision shall be applicable only to arrests and convictions occurring prior to January 1, 1976.

(c) Destruction of records required by this section shall be accomplished by actual physical destruction of the document constituting such a record and any copies or photographic records thereof. However, if actual physical destruction of a record would necessarily effect the destruction of other records, the agency charged with the destruction thereof may comply with the requirements of this section by permanently obliterating such record.

(d) No public agency shall alter, amend, assess, condition, deny, limit, postpone, qualify, revoke, surcharge, or suspend any certificate, franchise, incident, interest, license, opportunity, permit, privilege, right, or title of any person because of an arrest or conviction for a violation of Section 11357 or 11360, or because of the facts or events leading to such an arrest or conviction, on or after the date the records of such arrest or conviction are required to be destroyed by subdivision (a) or pursuant to an order of the court authorized by subdivision (b). As used in this subdivision, "public agency" includes, but is not limited to, any state, county, city and county, city, public or constitutional corporation or entity, district, local or regional political subdivision, or any department, division, bureau, office, board, commission or other agency thereof.

SEC. 5. Section 11363 of the Health and Safety Code is amended to read:

11363. (a) Every person who plants, cultivates, harvests, dries, or processes any plant of the genus Lophophora, also known as peyote, or any part thereof shall be punished by imprisonment in the county jail for a period of not more than one year or the state prison for a period of not more than 10 years.

(b) If such person has been previously convicted of any offense described in subdivision (c), the previous conviction shall be charged in the indictment or information and, if found to be true by the jury upon a jury trial or by the court upon a court trial or if admitted by the person, he shall be imprisoned in the state prison for a period of not less than two years or more than 20 years.

(c) Any previous conviction of any of the following offenses, or of an offense under the laws of another state or of the United States which, if committed in this state, would have been punishable as such an offense, shall be charged pursuant to subdivision (b) of this section:

(1) Any offense described in Section 11378, 11379, or 11380.

(2) Any offense described in this division involving a controlled substance specified in subdivision (b) or (c) of Section 11054, specified in paragraph (11), (12), or (17) of subdivision (d) of Section 11054, or specified in subdivision (b) or (c) of Section 11055.

(3) Any offense described in this division involving a narcotic drug classified in Schedule III, IV, or V.

(4) Any offense described in this division involving marijuana, except a misdemeanor.

SEC. 6. Section 11364 of the Health and Safety Code is amended to read:

11365. It is unlawful to visit or to be in any room or place where any controlled strument or paraphernalia used for unlawfully injecting or smoking (1) a controlled substance specified in subdivision (b) or (c) of Section 11054, specified in paragraph (11), (12), or (17) of subdivision (d) of Section 11054, or specified in subdivision (b) or (c) of Section 11055 or (2) a controlled substance which is a narcotic drug classified in Schedule III, IV, or V.

SEC. 7. Section 11365 of the Health and Safety Code is amended to read:

11365. It is unlawful to visit or be in any room or place where any controlled substances which are specified in subdivision (b) or (c) of Section 11054, specified in paragraph (11), (12), or (17) of subdivision (d) of Section 11054, or specified in subdivision (b) or (c) of Section 11055, or which are narcotic drugs classified in Schedule III, IV, or V, are being unlawfully smoked or used with knowledge that such activity is occurring.

SEC. 8. Section 11550 of the Health and Safety Code is amended to read:

11550. No person shall use, or be under the influence of any controlled substance which is (1) specified in subdivision (b) or (c) of Section 11054, specified in paragraph (11), (12), or (17) of subdivision (d) of Section 11054, or specified in subdivision (b) or (c) of Section 11055, or (2) which is a narcotic drug classified in Schedule III, IV, or V, excepting when administered by or under the direction of a person licensed by the state to dispense, prescribe, or administer controlled substances. It shall be the burden of the defense to show that it comes within the exception. Any person convicted of violating any provision of this section is guilty of a misdemeanor and shall be sentenced to serve a term of not less than 90 days nor more than one year in the county jail. The court may place a person convicted hereunder on probation for a period not to exceed five years and shall in all cases in which probation is granted require as a condition thereof that such person be confined in the county jail for at least 90 days. In no event does the court have the power to absolve a person who violates this section from the obligation of spending at least 90 days in confinement in the county jail.

SEC. 9. Section 11590 of the Health and Safety Code is amended to read:

11590. (a) Any person who, on or after the effective date of this section, is convicted in the State of California of any offense defined in Section 11350, 11351, 11352, 11353, 11354, 11355, 11357, 11358, 11359, 11360, 11361, 11363, 11366, 11368, or 11550, or any person who is on or after such date, discharged or paroled from a penal institution where he was confined because of the commission of any such offense, or any person who is, on or after such date, convicted in any other state of any offense which, if committed or attempted in this state, would have been punishable as one or more of the above-mentioned offenses, shall within 30 days after the effective date of this section or within 30 days of his coming into any county or city, or city and county in which he resides or is temporarily domiciled for such length of time, register with the chief of police of the city in which he resides or the sheriff of the county if he resides in an unincorporated area.

(b) Any person who, on or after the effective date of this section is convicted in any federal court of any offense which, if committed or attempted in this state would have been punishable as one or more of the offenses enumerated in subdivision (a) shall within 30 days after the effective date of this section or within 30 days of his coming into any county or city, or city and county in which he resides or is temporarily domiciled for such length of time, register with the chief of police of the city in which he resides or the sheriff of the county if he resides in an unincorporated area.

(c) This section does not apply to a conviction of a misdemeanor under Section 11357 or 11360.

SEC. 10. Section 853.6 of the Penal Code is amended to read:

853.6 (a) In any case in which a person is arrested for an offense declared to be a misdemeanor and does not demand to be taken before a magistrate, such person may, instead of being taken before a magistrate, be released according to the procedures set forth by this chapter. If the arresting officer or his superior determines that the person should be released, such officer or superior shall prepare in duplicate a written notice to appear in court, containing the name and address of such person, the offense charged, and the time and place where and when such person shall appear in court. If the person is not released prior to being booked and the officer in charge of the booking or his superior determines that the person should be released, such officer or superior shall prepare such written notice to appear in court.

(b) Unless waived by the person, the time specified in the notice to appear must be at least five (5) days after arrest.

(c) The place specified in the notice shall be the court of the magistrate before whom the person would be taken if the requirement of taking an arrested person before a magistrate were complied with, or shall be an officer authorized by such court to receive a deposit of bail.

(d) The officer shall deliver one copy of the notice to appear to the arrested person, and the arrested person, in order to secure release, must give his written promise so to appear in court by signing the duplicate notice which shall be retained by the officer. Thereupon the arresting officer shall forthwith release the person arrested from custody.

(e) The officer shall, as soon as practicable, file the duplicate notice with the magistrate specified therein. Thereupon the magistrate may fix the amount

of bail which in his judgment, in accordance with the provisions of Section 1275 of the Penal Code, will be reasonable and sufficient for the appearance of the defendant and shall indorse upon the notice a statement signed by him in the form set forth in Section 815a of this code. The defendant may, prior to the date upon which he promised to appear in court, deposit with the magistrate the amount of bail thus set. Thereafter, at the time when the case is called for arraignment before the magistrate, if the defendant shall not appear, either in person or by counsel, the magistrate may declare the bail forfeited, and may in his discretion order that no further proceedings shall be had in such case, unless the defendant has been charged with violation of Section 374b or 374e of this code or of Section 11357, 11360, or 13002 of the Health and Safety Code, or a violation punishable under Section 5008.7 of the Public Resources Code, and he has previously been convicted of a violation of such section or punishable under such section, except in cases where the magistrate finds that undue hardship will be imposed upon the defendant by requiring him to appear, the magistrate may declare the bail forfeited and order that no further proceedings shall be had in such case.

Upon the making of such order that no further proceedings be had, all sums deposited as bail shall forthwith be paid into the county treasury for distribution pursuant to Section 1463 of this code.

(f) No warrant shall issue on such charge for the arrest of a person who has given such written promise to appear in court, unless and until he has violated such promise or has failed to deposit bail, to appear for arraignment, trial or judgment, or to comply with the terms and provisions of the judgment, as required by law.

(g) The officer shall indicate on the notice to appear whether he desires the arrested person to be booked as defined in subdivision 21 of Section 7 of this code. In such event, the magistrate shall, before the proceedings are finally concluded, order the defendent to be booked by the arresting agency.

(h) A peace officer may use the written notice to appear procedure set forth in this section for any misdemeanor offense in which the officer has arrested a person pursuant to Section 836 or in which he has taken custody of a person pursuant to Section 847.

(i) If the arrested person is not released pursuant to the provisions of this chapter prior to being booked by the arresting agency, then at the time of booking, the arresting officer, the officer in charge of such booking or his superior officer, or any other person designated by a city or county for this purpose shall make an immediate investigation into the background of the person to determine whether he should be released pursuant ot the provisions of this chapter. Such investigation shall include, but need not be limited to, the person's name, address, length of residence at that address, length of residence within this state, marital and family status, employment, length of that employment, prior arrest record, and such other facts relating to the person's arrest which would bear on the question of his release pursuant to the provisions of this chapter.

(j) Whenever any person is arrested by a peace officer for a misdemeanor, other than an offense described in subdivision (b) of Section 11357 or subdivision (c) of Section 11360 of the Health and Safety Code, and is not released with a written notice to appear in court pursuant to this chapter, the arresting officer shall indicate, on a form to be established by his employing law enforcement agency, whether or not each of the following was a reason for such nonrelease:

(1) The person arrested was so intoxicated that he could have been a danger to himself or to others.

(2) The person arrested required medical examination or medical care or otherwise unable to care for his own safety.

(3) The person was arrested for one or more of the offenses listed in Section 40302 of the Vehicle Code.

(4) There were one or more outstanding arrest warrants for the person.

(5) The person could not provide satisfactory evidence of personal identification.

(6) The prosecution of the offense or offenses for which the person was arrested or the prosecution of any other offense or offenses would be jeopardized by immediate release of the person arrested.

(7) There was a reasonable likelihood that the offense or offenses would continue or resume, or that the safety of persons or property would be imminently endangered by release of the person arrested.

(8) The person arrested demanded to be taken before a magistrate or refused to sign the notice to appear.

(9) Any other reason. If the person arrested was not released for one or more of the reasons specified in paragraphs (1) to (8), inclusive, the arresting officer shall specifically state on the form the reason for the nonrelease.

Such form shall be filed with the arresting agency as soon as practicable and shall be made available to any party having custody of the arrested person, subsequent to the arresting officer, and to any person authorized by law to release him from custody before trial.

SEC. 11. If any provision of this act or the application thereof to any person or circumstances is held invalid, such invalidity shall not affect other provisions or applications of the act which can be given effect without the invalid provision or application, and to this end the provisions of this act are severable.

SEC. 12. Notwithstanding Section 2231 of the Revenue and Taxation Code, there shall be no reimbursement pursuant to this section nor shall there be any appropriation made by this act, because the Legislature recognizes that during any legislative session a variety of changes to laws relating to crimes and infractions may cause both increased and decreased costs to local government entities and school districts which, in the aggregate, do not result in significant identifiable cost changes.

STATE OF COLORADO

1975

AN ACT

House Bill No. 1027. By Representatives Howe, Arnold, Barragan, Brown, Burrows, Castro, Dick, Frank, Knox, Lloyd, McCroskey, Marks, Orten, Smith, Taylor, and Valdez; also Senators Cisneros, Comer, Darby, DeBerard, Groff, Holmc, Kadlecek, Plock, Sandoval, and Smedley

Concerning the Drug Cannabis

Be it enacted by the General Assembly of the State of Colorado:

Section 1. 12-22-301 (16), Colorado Revised Statutes 1973, is amended to read:

[NOTE.—Capital letters indicate new material added to existing statutes; all small capital letters indicate deletions from existing statutes and such material not part of act.]

12-22-301. *Definitions.* (16) "Narcotic drugs" means coca leaves, opium, CANNABIS, and any compound, manufacture, salt derivative, mixture, or preparation of coca leaves CANNABIS, and opium, including morphine, codeine, and heroin but not including apomorphine, noscapine, papaverine, narceine, cotarnine, isonipecaine, amidone, isoamidone, or keto-benidone, or any of their salts, and any other drug EXCEPT CANNABIS to which the federal "Controlled Substances Act of 1970" may apply, and any drug found by the state board of health, after reasonable notice and opportunity for hearing, to have an addiction-forming or addiction-sustaining liability similar to morphine or cocaine, from the date of publication of such finding by said state board of health.

Section 2. 12-22-303 (1), Colorado Revised Statutes 1973, is amended to read:

12-22-303. *License required—fee.* (1) No person knowingly shall cultivate, grow, produce, process, or manufacture, or knowingly allow to be cultivated, grown, produced, processed, or manufactured, on land owned, occupied, or controlled by him any opium, coca leaves, CANNABIS, MARIJUANA, or other narcotic drug without first obtaining a license as a manufacturer of narcotic drugs from the department of health.

Section 3. 12-22-311 (1) (b) and (4), Colorado Revised Statutes 1973, are amended to read:

12-22-311. *Records to be kept.* (1) (b) No record need be kept of narcotic drugs administered, dispensed, or professionally used in the treatment of any one patient, when the amount administered, dispensed, or professionally used for that purpose does not exceed in any forty-eight consecutive hours: Two grains of opium; one-quarter of a grain of morphine or of any of its salts; or one grain of codeine or of any of its salts; OR ONE-HALF GRAIN OF EXTRACT OF CANNABIS OR ONE GRAIN OF ANY MORE POTENT DERIVATIVE OR PREPARATION OF CANNABIS; or a quantity of any other narcotic drug or any combination of narcotic drugs that

does not exceed pharmacologic potency of any one of the drugs named above in the quantity stated.

(4) The form of records shall be prescribed by the department of health. The record of narcotic drugs received in every case shall show the date of receipt, the name and address of the person from whom received, and the kind and quantity of drugs received; the kind and quantity of narcotic drugs produced or removed from process of manufacture and the date of such production or removal from process of manufacture; AND the proportion of morphine, cocaine, or ecgonine contained in or producible from crude opium or coca leaves received or produced. AND THE PROPORTION OF RESIN CONTAINED IN OR PRODUCIBLE FROM THE DRIED FLOWERING OR FRUITING TOPS OF THE PISTILLATE PLANT, CANNABIS SATIVA L., FROM WHICH THE RESIN HAS NOT BEEN EXTRACTED, RECEIVED, OR PRODUCED. The record of all narcotic drugs sold, administered, or dispensed shall show the date of selling, administering, or dispensing, the name and address of the person to whom, or for whose use, or the owner and species of animal for which the drugs were sold, administered, or dispensed, or otherwise disposed of, and the kind and quantity of drugs. Every such record shall be kept for a period of two years from the date of the transaction recorded. The keeping of a record required by or under the federal narcotic laws, containing substantially the same information as is specified above, shall constitute compliance with this section; except that every such record shall contain a detailed list of narcotic drugs lost, destroyed, or stolen, if any, the kind and quantity of such drugs, and the date of the discovery of such loss, destruction, or theft.

Section 4. 12-22-403, Colorado Revised Statutes 1973 (numbered as 48-8-1, C.R.S. 1963), and the amendment thereto enacted by section 1 of chapter 55, Session Laws of Colorado 1974, is amended BY THE ADDITION OF THE FOLLOWING NEW SUBSECTIONS to read:

12-22-403. DEFINITIONS. (1.5) "Cannabis" includes all parts of the plant cannabis sativa L., whether growing or not; the seeds thereof; the resin extracted from any part of such plant; and every compound, manufacture, salt, derivative, mixture, or preparation of such plant, its seeds, or resin but shall not include the mature stalks of such plant, fiber produced from its stalks, oil or cake made from the seeds of such plant, any other compound, manufacture, salt, derivative, mixture, or preparation of its mature stalks, except the resin extracted therefrom, fiber, oil, or cake, or the sterilized seed of such plant which is incapable of germination.

(1.6) "Cannabis concentrate" means hashish, tetrahydrocannabinois, or any alkaloid, salt, derivative, preparation, compound, or mixture, whether natural or synthesized, of tetrahydrocannabinois.

(13.5) (a) "Tetrahydrocannabinois" means synthetic equivalents of the substances contained in the plant, or in the resinous extractives of cannabis, sp., or synthetic substances, derivatives, and their isomers with similar chemical structure and pharmacological activity such as the following:

(I) ^{1}cis or trans tetrahydrocannabinol, and their optical isomers;

(II) ^{6}cis or trans tetrahydrocannabinol, and their optical isomers;

(III) ^{3,4}cis or trans tetrahydrocannabinol, and its optical isomers;

(b) Since nomenclature of substances listed in paragraph (a) of this subsection (13.5) is not internationally standardized, compounds of these structures, regardless of numerical designation of atomic positions, are covered.

Section 5. 12-22-403 (4), Colorado Revised Statutes 1973, is amended to read:

12-22-403. DEFINITIONS. (4) "Dangerous drug" means CANNABIS, CANNABIS CONCENTRATE, or any depressant drug, hallucinogenic drug, stimulant drug, or tranquilizer, or any of such drugs in a mixture or compound or with any other substance.

Section 6. 12-22-404 (1) (d), Colorado Revised Statutes 1973, is amended, and the said 12-22-404 (1) is further amended BY THE ADDITION OF A NEW PARAGRAPH, to read:

12-22-404. UNAWFUL ACTS. (1) (d) The possession or use of any dangerous drug, EXCEPT CANNABIS OR CANNABIS CONCENTRATE, or the attempt to obtain a dangerous drug, EXCEPT CANNABIS OR CANNABIS CONCENTRATE, or to procure the administration of a dangerous drug, EXCEPT CANNABIS OR CANNABIS CONCENTRATE, by fraud, deceit, misrepresentation, or subterfuge, or by the forgery or alteration of a prescription or of any written order or chart order, or by the use of a false name or the giving of a false address; for said attempt, a person, upon conviction thereof, shall be punished the same as for the use or possession as provided in section 12-22-412(6):

(1) The possession or use or attempt to obtain or procure the administration of cannabis, which shall be punished as provided in section 12-22-412 (12).

Section 7. 12-22-412. Colorado Revised Statutes 1973, is amended BY THE ADDITION OF A NEW SUBSECTION TO READ:

12-22-412. VIOLATIONS-PENALTIES. (12) (a) Any person who possesses not more than one ounce of cannabis is guilty of a class 2 petty offense and, upon conviction thereof, shall be punished by a fine of not more than one hundred dollars.

(b) Whenever a person is arrested or detained for a violation of paragraph (a) of this subsection (12), the arresting or detaining officer shall prepare a written notice or summons to appear in court, which written notice or summons shall contain the name and address of such arrested or detained person, the time and place where such person shall appear, and a place for such person to execute his or her written promise to appear at the time and place indicated on the notice or summons. One copy of said notice or summons shall be given to the person arrested or detained, one copy shall be sent to the court where the arrested or detained person is to appear, and such other copies as may be required by the law enforcement department or agency employing the arresting or detaining officer shall be sent to the places designated by such law enforcement or agency. The time specified in said notice to appear must be at least five days after such arrest or detention unless the person arrested or detained shall demand an earlier hearing. The place specified in said notice to appear must be before a judge within the county in which the class 2 petty offense charged is alleged to have been committed and who has jurisdiction of such class 2 petty offense. The arrested or detained person in order to secure release from arrest or detention must give his or her written promise to appear in court by signing the notice or summons prepared by the arresting or detaining officer. It shall be a class 3 misdemeanor, as defined by section 18-1-106, C.R.S. 1973, for any person to violate a written promise to appear given to an officer upon arrest or detention or issuance of summons under this subsection (12).

(c) Any person who openly and publicly displays or consumes not more than one ounce of cannabis is guilty of a petty offense and, upon conviction thereof, shall be punished, at a minimum, by a fine of one hundred dollars or, at a maximum by a fine of not more than one hundred dollars and fifteen days in the county jail.

(d) Any person who possesses more than one ounce of cannabis or any amount of cannabis concentrate, upon conviction thereof, shall be punished as provided in subsections (6), (10), or (11) of this section.

(e) Transferring or dispensing not more than one ounce of cannabis from one person to another for no consideration shall be deemed possession and not dispensing or sale thereof.

(f) The court may utilize the treatment, probation, and deferred prosecution or deferred sentencing provisions of subsections (6) (b), (7), (8), and (9) of this section for any person who violates paragraph (d) of this subsection (12).

(g) Any provision of this part 4 to the contrary notwithstanding, any person eighteen years of age or older who transfers or dispenses more than one ounce of cannabis for consideration or any amount of cannabis concentrate, with or without consideration, to another person under the age of eighteen years is guilty of a felony and, upon conviction thereof, shall be punished by imprisonment in the state penitentiary for not less than three years nor more than fourteen years and, in the discretion of the court, by a fine of not more than ten thousand dollars. Upon a second or subsequent conviction of any person under this paragraph (g), the imprisonment prescribed in this paragraph (g) shall be mandatory, and the court shall have no jurisdiction to suspend the sentence of imprisonment or to grant probation to such person.

(h) No person knowingly shall cultivate, grow, produce, process, or manufacture, or knowingly allow to be cultivated, grown, produced, processed, or manufactured, on land owned, occupied, or controlled by him any cannabis or cannabis concentrate without first obtaining a license as a manufacturer pursuant to section 12-22-408.

Section 8. *Nonseverability.* If the provisions of section 12-22-412 (12) (g), C.R.S. 1973, as enacted by section 7 of this act are found to be invalid, such invalidity shall apply to the entire provisions of this act. It is hereby declared by the general assembly that, but for the provision of said section 12-22-412 (12) (g), the general assembly would not have enacted this act.

Section 9. *Repeal.* 12-22-301 (3) and 12-22-322 (7), Colorado Revised Statutes 1973, are repealed.

Section 10. *Effective* date. This act shall take effect July 1, 1975.

Section 11. *Safety clause.* The general assembly hereby finds, determines, and declares that this act is necessary for the immediate preservation of the public peace, health, and safety.

FRED E. ANDERSON,
President of the Senate.
COMFORT W. SHAW,
Secretary of the Senate.
RUBEN A. VALDEZ,
Speaker of the House of Representatives.
EVELYN T. DAVIDSON,
Chief Clerk of the House of Representatives.

Approved:_____.
RICHARD D. LAMM,
Governor of the State of Colorado.

STATE OF MAINE

1975

S.P. 113—L.D. 314

AN ACT Creating the Maine Criminal Code

Be it enacted by the People of the State of Maine, as follows:

SEC. I. 17-A MRSA is enacted to read:

TITLE 17-A

MAINE CRIMINAL CODE

PART I

GENERAL PRINCIPLES

CHAPTER I

PRELIMINARY

§ 1. Title; effective date; severability

1. Title 17-A of the Revised Statutes Annotated shall be known and may be cited as the Maine Criminal Code. When it is alleged that an element occurred "on or about" a certain date, and the period so alleged may reasonably be interpreted to include the date on which this code becomes effective the prosecution shall be governed by the prior law.

2. This code shall become effective March 1, 1976, and it shall apply only to crimes committed subsequent to its effective date. Prosecution for crimes committed prior to the effective date shall be governed by the prior law which is continued in effect for that purpose as if this code were not in force; provided, however, that in any such prosecution the court may, with the consent of the defendant, impose sentence under the provisions of the code. For purposes of this section, a crime was commited subsequent to the effective date if all of the elements of the crime occurred on or after that date; a crime was not committed subsequent to the effective date if any element thereof occurred prior to that date.

* * * * * * *

4. Schedule Z:

A. All prescription drugs other than those included in schedules W, X or Y;

B. Marijuana;

C. All nonprescription drugs other than those included in schedules W, X or Y as the Board of Pharmacy shall duly designate;

5. Notwithstanding anything in this section, no drug or substance which is legally sold in the State of Maine without any federal or state requirement as to prescription and which is unaltered as to its form shall be included in schedule W, X, Y or Z.

§ 1103. Unlawful trafficking in scheduled drugs

1. A person is guilty of unlawful trafficking in a scheduled drug if he intentionally or knowingly trafficks in what he knows or believes to be any scheduled drug, and which is, in fact, a scheduled drug, unless the conduct which constitutes such trafficking is either:

A. Expressly authorized by Title 22; or

B. Expressly made a civil violation by Title 22.

2. Violation of this section is:

A. A Class B crime if the drug is a schedule W drug;

B. A class C crime if the drug is a schedule X drug; or

C. A Class D crime if the drug is a schedule Y or schedule Z drug.

§ 1104. Trafficking in or furnishing counterfeit drugs

1. A person is guilty of trafficking in or furnishing counterfeit drugs if he intentionally or knowingly trafficks in or furnishes a substance which he represents to be a scheduled drug but which, in fact, is not a scheduled drug, but is capable, in fact, of causing death or serious bodily injury when taken or administered in the customary or intended manner.

2. Trafficking in or furnishing counterfeit drugs is a Class C crime.

§ 1105. Aggravated trafficking or furnishing scheduled drugs

1. A person is guilty of aggravated trafficking or furnishing scheduled drugs if he trafficks with or furnishes to a child under 16 a scheduled drug in violation of section 1103 or 1104.

2. Aggravated trafficking or furnishing is a crime one class more serious than such trafficking or furnishing would otherwise be.

§ 1106. Unlawfully furnishing scheduled drugs.

1. A person is guilty of unlawfully furnishing scheduled drugs if he intentionally or knowingly furnishes what he knows or believes to be a scheduled drug, and which is, in fact, a scheduled drug, unless the conduct which constitutes such furnishing is either:

A. Expressly authorized by Title 22; or

B. Expressly made a civil violation by Title 22.

2. Violation of this section is:

A. A Class C crime if the drug is a schedule W drug; or

B. A Class D crime if the drug is a schedule X, Y or Z drug.

3. A person shall be presumed to be unlawfully furnishing a scheduled drug if he intentionally or knowingly possesses more than 1½ ounces of marijuana.

* * * * * * *

§ 1114. Schedule Z drugs; contraband subject to seizure.

All scheduled Z drugs, the unauthorized possession of which constitutes a civil violation under Title 22, are hereby declared contraband, and may be seized and confiscated by the State.

* * * * * * *

Part III

CHAPTER 53

FINES

§ 1301. Amounts authorized.

1. A natural person who has been convicted of a Class C, Class D or Class E crime may be sentenced to pay a fine, subject to section 1302, which shall not exceed:

A. $1,000 for a Class C crime;

B. $500 for a Class D crime;

C. $250 for a Class E crime; and

D. Regardless of the classification of the crime, any higher amount which does not exceed twice the pecuniary gain derived from the crime by the defendant.

* * * * * * *

§ 2383. Possession

Possession of a usable amount of marijuana is a civil violation for which a forfeiture of not more than $200 may be adjudged.

* * * * * * *

NORML A SPECIAL REPORT

A COMPILATION OF STATE CITATION LAWS

FOR MINOR MARIJUANA OFFENSES

In October 1973, Oregon became the first state to eliminate criminal arrest and jail penalties for possession of small amounts of marijuana, substituting a citation-enforced civil fine. The results of this innovative approach have been overwhelmingly favorable: there has been no demonstrable increase in marijuana smoking; thousands of young people have been spared the debilitating aspects of a life-long criminal record; and the police have been freed of a costly and time-consuming burden to concentrate on serious crime.

As a result, seven other states have recently enacted similar laws: Alaska, Maine, Colorado, California, Ohio, South Dakota and Minnesota. The provisions of these laws are summarized below, and copies are available from NORML. In each state, regardless of whether marijuana may now technically be said to be "decriminalized" or not, the person who smokes marijuana or possesses a small amount is no longer subject to arrest or jail, nor left with any permanent criminal record.

(more)

SUMMARY CHART - MARIJUANA CITATION LAWS

State	Max. Fine Imposed	Max. Amount Possessed	Criminal or Civil Violation	Effective Date
Oregon	$100.00	1 oz.	Civil	Oct. 5, 1973
Alaska	$100.00	Any amount in private for personal use or 1 oz. in public	Civil	Mar. 1, 1976
Maine	$200.00	Any amount[a] for personal use	Civil	Mar. 1, 1976
Colorado[b]	$100.00	1 oz.	Class 2 petty offense - no criminal record	July 1, 1975
California[b]	$100.00	1 oz.	Misdemeanor - no permanent criminal record	Jan. 1, 1976
Ohio[b]	$100.00	100 grams (approx. 3½ oz.)	Minor misdemeanor - no crim. record	Nov. 22, 1975
South Dakota	$ 20.00	1 oz.	Civil	April 1, 1977
Minnesota	$100.00[c]	1½ oz.	Civil	April 10, 1976

a There is a rebuttable presumption that possession of less than 1½ oz. is for personal use, and possession of more than 1½ oz. is with an intent to distribute.

b Distribution of marijuana by gift, or for no remuneration, is treated the same as possession in California (for up to 1 oz.), Colorado (for up to 1 oz.), and Ohio (for up to 20 grams).

c Second offense within a two year period carries a possible 90 days in jail and a $300 fine.

BAYH ASKS CRIME-FIGHT CHANGES

WASHINGTON—Senator Birch E. Bayh (D-Ind.) said yesterday it is time to divert some of the crime-fighting energy used against small-time marihuana users to combating violence

He scheduled hearings in his Juvenile Delinquency subcommittee next Wednesday on a bill which would abolish criminal penalities for simple possession of marihuana and substitute a civil fine for possession and nonprofit sales up to an ounce.

The Hoosier said marihuana arrests increased from 188,682 in 1970 to 420,700 in 1973 and may have gone as high as 500,000 in 1974.

"The majority of those arrested are otherwise law-abiding young people in possession of small amounts of marihuana," Bayh said.

He said the rising tide of serious crime "inevitably raises the question of whether we are properly allocating our limited crime fighting resources in aggressively pursuing the arrests and criminal prosecutions of the 13 million American users of marihuana" Bayh estimated prosecuting such cases costs $600 million a year.

A presidential commission, Bayh said, found the vast majority of marihuana users indistinguishable essentially from their nonuser peers.

He said he has asked Attorney General Edward H. Levi and other experts to testify before the subcommittee on the question.

[From the Christian Science Monitor, May 28, 1975]

UNITED STATES WARNED ON MARIHUANA

(By Reuters)

The United States could lose the cooperation of other nations in combating illegal narcotics if it eases the penalities for simple possession of marihuana, Congress was told recently.

The warning came from Donald Miller, chief counsel of the Justice Department's drug enforcement administration, in testimony before a Senate subcommittee on juvenile delinquency.

Sen. Birch Bayh, the Indiana Democrat who chairs the subcommittee, told a hearing the United States spends too much money, an estimated $600 million a year, in pursuit of marihuana offenders.

The subcommittee is considering legislation that would make possession of up to one ounce of marihuana a civil, not criminal, offense carrying a $100 fine.

Mr. Miller said the Justice Department opposes "decriminalization" of simple marihuana offenses.

"If we do not continue to have and enforce laws against marihuana use," Mr. Miller said, "the cooperation we can expect from foreign governments in helping us control our herion and cocaine problem will be significantly reduced."

He said a permissive U.S. attitude toward marihuana might lead other countries to think that America was "unmindful of its obligations and unconcerned with the domestic drug problems of others."

[From the Indianapolis News, May 14, 1975]

BAYH URGES CUTTING POSSESSION PENALTIES

WASHINGTON (UPI)—Sen. Birch Bayh, D-Ind., suggested today criminal penalties for possession of small amounts of marihuana be eliminated so more law enforcement resources can be used to fight violent crime.

In remarks prepared for the opening of a hearing on decriminalization of marihuana proposals, Bayh suggested the nation is not helped by spending $600 million a year to prosecute young persons arrested for marihuana offenses.

"The rising tide of serious crime inevitably raises the question of whether we are properly allocating our crime-fighting resources by aggressively pursuing the arrest and criminal prosecution of the 13 million American users of marihuana," Bayh said.

He said arrests for simple possession have jumped from 188,682 in 1970 to 420,700 in 1973 and may hit 500,000 for 1974. "Available studies and research to date have found the majority of those arrested are otherwise law-abiding young people in possession of small amounts of marihuana," Bayh said.

[From the Louisville Times, May 14, 1975]

WILL LOBBY'S EFFORT FLOWER, OR JUST GO TO POT?

(By Jerry Hicks)

WASHINGTON—Keith Stroup grows a lot of plants in his office, for atmosphere. But none, he quickly points out, is marihuana.

Stroup is a marihuana smoker—has been for eight years. But he won't grow his own at his suite of offices near Georgetown, Md., nor allow any staff member to smoke it on the premises.

That would be an easy set-up for the police, he says, a waste of all the hard work his people have done fighting marihuana laws.

Stroup, a 31-year-old attorney is director of the only registered lobby working to eliminate laws used to put people in jail for smoking marihuana. But on one finger he can count the actual victories for his National Organization for the Reform of Marihuana Laws (NORML), formed five years ago.

Only Oregon, where the organization campaigned heavily two years ago, has made the possession of a small quantity of marihuana an offense punishable by a fine (maximum $100), not a jail term.

But Stroup points to lots of signs he says are encouraging, and rattles them off with unparalleled speed;

A bill in Congress to reduce penalties for users and new hearings this week. Thirty-five state volunteer organizations working to decriminalize marihuana laws. Conservatives like William F. Buckley, Jr. joining the cause. First Lady Betty Ford saying her children have experimented with it. Bills being considered this year in California, Colorado, Maine, Illinois, New York and Minnesota.

Stroup talks as if trying to stay ahead of a lightning bolt, but without a word slurred or a line of thought misconveyed.

"It's a job getting across that not everyone who opposes stiff marihuana laws is young, has long hair and smokes grass," he said in an interview at his office. "Of course, we at NORML are young, have long hair, and God knows we love our grass, but we aren't all the 13 million people in this country who regularly smoke pot, or the millions more who become opposed to outdated laws when a son, or friend, lands in jail for smoking a joint."

Stroup's agency operates out of a former storefront. While the outside would give the appearance that the building has been abandoned—the display window is kept bare because plants wouldn't keep and Stroup's people just aren't sure what to do with it—the inside is a lively combination of hanging ferns, rich red carpet, ample poster advertising, barefoot secretaries, pictures of Washington and Lincoln and a fireplace that dominates the main floor.

The lobby group's products team occupies the basement. You can buy NORML T-shirts ($4.50 regular, $8.50 for ribbed cotton, long sleeves, cream colored with marihuana design front and back), "Reefer Madness" movie posters, a "Liberate Marihuana" handbag or a poster that says, after all, marijuana is just a weed that turns into a flower once it hits your head.

Up a winding staircase from the main floor is the lobby group's legal team and its Center for the Study of Non-medical Drug Use. The center is approved as tax-exempt by the Internal Revenue Service, but is prohibited from carrying out any functions that would be considered as lobbying.

Peter Myers, a 28-year-old attorney, usually can be found in a back office on the top floor poring through law books for legal precedents to convince the courts that the use of marihuana is a matter of one's privacy and as such is protected by the Bill of Rights.

"That's the same attack the pro-abortion people used when they went to the U.S. Supreme Court," Myers said. "And they won."

So far the group has two important court cases pending, one in the District of Columbia, the other in New Orleans.

Stroup says the organization spends very little time gathering information about marihuana and laws.

"Quite frankly, we know all there is to know," he said. "We're the only people around working on this full-time. What we have to do now is educate people who have been listening to 35 years of marihuana prohibition."

Stroup would love to see no penalties at all for smoking marihuana. It's less dangerous than alcohol, he says. ("What a scene, these congressmen bellying up to the bar decrying the evils of pot.") But for now he is willing to settle for Oregon-style plans nationwide.

Why spend most of his time in Washington when those laws usually enforced are state laws?

"If we can get Congress to decriminalize marihuana, a lot of states would fall immediately," he said. "There is a lot of support for discrimination, but nobody wants to be first, or feel they are in conflict with the national law."

Stroup is scheduled to testify this week before the Senate subcommittee on juvenile delinquency, which is considering a bill by Sen. Jacob K. Javits, R-N.Y. The bill would amend the Federal Controlled Substances Act, abolishing criminal penalties for possession of marihuana and substituting a civil fine.

The subcommittee is chaired by Indiana's Democratic Sen. Birch Bayh, who announced last week he was leaning toward decriminalization.

When a list of witnesses was being put together, Stroup's name was the first to come to mind, according to John Rector, director of the subcommittee staff.

"Stroup knows more about marihuana than any other person in Washington," Rector said.

Stroup is a nonstop talker whose monologue somehow doesn't offend. The son of Southern Illinois Baptists, he says he began smoking marihuana as a law student at Georgetown University.

After law school he joined the staff of a congressional commission to study product safety. His decision to set up a marihuana lobby came about after a close friend was arrested for smoking marihuana.

The organization is not a shoestring operation. Its 25,000 members have paid either $15 or $10 (students and military). It has private donors, such as Playboy publisher Hugh M. Hefner, who gives at least $50,000 annually plus free advertising in his two magazines, and the group's products brought in close to $100,000 profit last year.

Kentucky has no group among the 35 volunteer organizations that get expense money from the organization.

"We haven't found much interest there yet," he said, "But it will come."

Stroups calls the organization's activities public-interest law and credits consumer advocate Ralph Nader with building interest in such activities.

All of the group's staff smoke marihuana—blacks push civil rights, farmers push for farm rights, so it's only natural, Stroup says—but Stroup insists the organization does not support marihuana smoking.

"Only the individual's private right to decide for himself," he said.

[From the New York Post, May 14, 1975]

BAYH: MORE CRIMEBUSTING, LESS POT-BUSTING

(By John S. Lang)

WASHINGTON—Marihuana prosecutions this year will cost the nation $100 million and will cloud the reputations of half a million young people, a Senate panel reported today.

Opening a hearing on a bill to remove criminal penalties for simple possession of marihuana, the Subcommittee on Juvenile Deliquency noted that marihuana arrests have increased twelve-fold in the past decade and now account for 67 per cent of all drug arrests.

Chairman Birch Bayh (D-Ind.) observed that while law enforcement agencies concentrated on "pot busts," serious crime rose 17 per cent last year, the highest annual increase since the FBI began collecting data 45 years ago.

"The rising tide of serious crimes inevitably raises the question of whether we are properly allocating our crime fighting resources in aggressively pursuing the arrest and criminal prosecution of the 13 million American users of marihuana," Bayh said.

"Is the public interest served by arresting annually 500,000 mostly young people for simple possession of small amounts of marihuana and thereby assuring that they are inhibited for life—in their education and careers—by the unrelenting stigma of criminal record?"

The bill under study, cosponsored by Sen. Javits (R-N.Y.), would retain criminal penalties for the sale of marihuana for profit but would allow only a civil fine of up to $100 for possession and non-profit transfers of less than one ounce.

Such an approach is supported by the American Bar Assn., the National Council of Churches, the governing board of the American Medical Assn., the National Education Assn. and B'nai B'rith.

But the proposed legislation is opposed by the Justice Dept. and Federal Drug Enforcement Administration.

"I want to state that the marihuana traffic is big business," protested Donald E. Miller, chief counsel of the DEA, in a prepared statement.

"Today, tons of marihuana are being smuggled into the U.S. by large, well-financed and well-organized criminal organizations."

Miller said the government seized over two million pounds of it last year but "the amount getting through is astronomical."

Speaking for both the DEA and the Justice Dept., Miller said the administration believes most Americans still want tough enforcement of tough marihuana laws.

Miller also objected that the measure "is a pronouncement that the government no longer takes a harsh view regarding those persons who convert naive persons to drug abusers."

"This means," he said, "that if a person desires to introduce marihuana use to juveniles, he may do so and face only a fine of up to $100 so long as the transfer is totally donative . . ."

Miller said the bill would harm the U.S. fight against drug trafficking worldwide because many cooperating nations do not have severe problems with cocaine and heroin but do consider cannabis a threat.

The bill before the subcommittee is similar to the law now in force in Oregon, which reports after one year of experience there was no increase in the number of users and thta a majority of its citizens approve of the law.

Similar measures are being considered by more than 20 state legislatures.

[From the Washington Star-News, May 14, 1975]

Drug Law Easing Is Urged

(By Michael Satchell)

The Nation's estimated 13 million marihuana users may be raising the blinds and unlocking their doors in the near future if the sentiments expressed at a Senate hearing today are translated into congressional approval and an easing of the laws against pot smoking.

The Senate Juvenile delinquency subcommittee, meeting to consider a bill that would decriminalize simple possession of the weed, heard Chairman Birch Bayh, D-Ind., cite the enormous social and economic costs of prosecuting marihuana smokers and recommended passage of the bill.

He noted FBI crime statistics that showed a 17 percent rise in serious offenses last year, and argued: "The rising tide of serious crime inevitably raises the question of whether we are properly allocating our crime-fighting resources and aggressively pursuing the arrest and criminal prosecution of 13 million American users of marihuana. It is estimated that the prosecution of these cases costs $600 million each year.

"In view of the failure nationally to curb violent and serious crime, I believe it is time to seriously reassess our priorities relative to the limited resources available to the nation's severely overburdened criminal justice agencies."

The Senate bill is identical to a House measure currently in committee, and both bills have bipartisan support. They are identical to the Oregon law passed about 18 months ago in which pot smokers caught with an ounce or less receive a civil citation much like a traffic ticket. There would be a maximum fine of $100 regardless of how many times the individual is arrested on a possession charge. Criminal penalties for sale of marihuana or possession of larger amounts would remain intact.

Federal law now carries a one year and $5,000 fine maximum penalty for simple possession of marihuana.

Today's only major dissent from witnesses on the proposal for a further lessening of marihuana penalties came from Donald Miller, general counsel of the Drug Enforecment Administration, who raised several questions about how a new federal law would be written and applied. Miller said the Jsutice Department has not taken a position on the concept of decriminalization.

Other witnesses at the hearing, all of whom backed the proposal, were Keith Stroup, director of the National Organization for the Reform of Marihuana Laws; Richard Bonnie, assistant law professor at the University of Virginia; J. Pat Horton, district attorney of Eugene, Ore., and Richard Wood, an assistant prosecutor from Denver.

Bayh said he was concerned with the growing numbers of young people arrested for marihuana smoking, noting an increase from about 190,000 in 1970 to around half a million last year. The smokers, he said, were "otherwise law-abiding young people, the vast majority indistinguishable from their nonuser peers by any criteria other than its use."

The Indiana Democrat quoted from a recent interview in The Washington Star in which Oregon Atty. Gen. Lee Johnson said that state's new pot law increased rather than decreased respect for laws among young people, giving them a feeling that government is more receptive to social changes which have taken place.

Sen. Philip Hart D-Mich., offered an amendment to the Senate proposal. Hart's amendment would remove all penalties for possession or non-criminal distribution of up to 100 grams (about 3½ ounces) of marihuana.

[From the Bloomington (Ind.) Herald-Times, May 15, 1975]

BAYH COMMITTEE HEARS TESTIMONY ON "POT" LAWS

WASHINGTON (UPI).—J. Pat Horton, a district attorney from the state that removed criminal penalties for personal possession of marihuana 18 months ago, says not much is gained by harsh enforcement of marihuana laws.

Horton, DA for Lane County in Oregon, told a Senate Juvenile Delinquency subcommittee Wednesday, chaired by Sen. Birch Bayh, D-Ind., that "by any reasonable standard," Oregon's experience with liberalized pot laws has been a success.

"As a law enforcement tool, there's not much good that can be accomplished by harsh enforcement of marihuana laws," Horton said.

He said the Oregon law, which removes criminal penalties and substitutes a $100 civil fine for possession of up to one ounce of marihuana, has not resulted in significantly more pot smokers.

But, he said, "There is a greater rapport between the law enforcement agents and the young people of our state than ever before."

Marihuana arrests are easy to make, Horton said, and result in impressive statistics for police departments. But, he said, it would be better to use the resources to fight violent crime.

Richard Wood, assistant district attorney in Denver, said city police decided they only had limited crime fighting funds and that marihuana offenses did not warrant the money being spent on enforcement. The law was changed, Wood said, and the DA's criminal case load decreased at least 10 percent.

Bayh agreed marihuana must be decriminalized to free resources to fight more serious crime, which increased 17 percent last year. He said the current laws are unfairly enforced and demonstrate an attitude of "hypocrisy."

The bill under consideration by Bayh's subcommittee would make possession and nonprofit transfer of up to one ounce of pot a civil offense subject to a $100 fine. At present, the offenses are misdemeanors punishable by up to 1 year in prison and a $5,000 fine.

[From the Washington Post, May 17, 1975]

JUSTICE DEPARTMENT SHIFTS STANCE ON MARIHUANA

(By Douglas Watson)

The Justice Department, which consistently had opposed efforts to remove the criminal penalty for posession of marihuana, shifted this week to taking no position on a bill that would "decriminalize" personal use of the controversial plant.

Attorney General Edward H. Levi "doesn't have a formal position on marihuana—he just hasn't addressed himself to it yet," said a spokesman for the nation's chief law enforcement officer who took office in February. The aide added that Levi "doesn't want to be locked into a position."

Levi's expected reconsideration of the federal government's position on marihuana contrasts with the position of his predecessor, William B. Saxbe, who in December said, "I have no intention to advicate or support legislation that would legalize or decriminalize possession and use of marihuana . . . Marihuana is no harmless lollipop."

The shift in the Justice Department from opposition to no position on removing criminal penalties for personal use of marihuana became apparent at a Senate Judiciary subcommittee hearing Wednesday on a bill that would substitute a maximum $100 civil fine for such possession.

Shortly before appearing before a Senate Judiciary subcommittee to voice objections to the bill, Donald E. Miller, chief counsel of the Drug Enforcement Administration, which is part of the Justice Department, was advised to delete the last sentence of his prepared testimony, which was to have said, "The Department of Justice recommends agains enactment of this legislation."

Instead, Miller said in answer to a question by Sen. Birch Bayh (D-Ind.), the subcommittee chairman, that he is considering drafting a model law for states that want to decriminalize the use of marihuana.

Last year more than 400,000 Americans were arrested for marihuana possession, Bayh said. There are criminal penalties for marihuana possession in all states except Oregon, whose law is the model for the proposed federal legislation.

The proposed fine under the new bill would apply to those found to have not more than one ounce of marihuana for their personal use, whether in a private or public place, or for those found transferring such an amount of marihuana if no sale is involved.

Previous proposed legislation would have legalized marihuana possession. The pending bill would impose the civil fine up to $100 like a traffic ticket but would not inflict an arrest record on the individual.

The bill is sponsored by Sens. Jacob K. Javits (R-N.Y.), Edward W. Brooke (R-Mass.), Alan Cranston (D-Calif.) and Gaylord Nelson (D-Wis.). A similar bill has been introduced in the House by Rep. Edward I. Koch (D-N.Y.).

R. Keith Stroup, director of the National Organization for the Reform of Marihuana Laws (NORML), in testifying in favor of the legislation, said:

"Skydiving, drinking alcohol, smoking cigarettes and overeating are but some of the high-risk activities people engage in every day. Yet they remain free from arrest. . . But the 13 million persons who regularly smoke marihuana are still classified as criminals" by the federal government and 49 states.

Miller testified that the proposed federal legislation would make it much more difficult for the Drug Enforcement Administration to obtain cooperation from many foreign nations which view marihuana as a greater problem than heroin and other "hard" drugs. He also maintained that the proposed legislation is unworkable.

Changing the federal law, under which comparatively few people are arrested, would not bar states from continuing criminal penalties for marihuana possession, but would probably have a heavy impact on state laws.

[From the Cleveland Plain Dealer, May 18, 1975]

THE ARGUMENT FOR "DECRIMINALIZING" MARIHUANA

(By Richard G. Zimmerman)

WASHINGTON—"We want to keep the laws against adultery because we want to preserve our morality. But we don't want to enforce them because we want to preserve our behavior."

So observed a witness last week before a Senate subcommitte. But he wasn't testifying on adultery laws. He was adroitly summing up why the "decriminalization" of simple possession of small amounts of marihuana appears to be an idea whose time has—or is about to—come.

As opposed to outright legalization of the private possession and use of pot, decriminalization involves abolishing criminal penalties for simple possession and replacing them with civil sanctions, in most cases a maximum $100 fine imposed much as a fine for a minor traffic offense is imposed.

In fact, Oregon and Denver have adopted such civil sanctions, and police officers actually issue tickets to offenders instead of making criminal arrests.

By retaining a fine, society certainly cannot be accused of condoning the use of marihuana and so our morality is preserved. But our behavior also is preserved, to a degree, in that users are not carted off to jail or saddled with a criminal record the rest of their lives.

The decriminalization of private pot use is a logical progression of the softening of marihuana laws that began when pot moved out of the ghettos into the homes of children of middle and upperclass whites. It was one thing to allow the courts to toss ghetto blacks into jail for five or 10 years, but quite another to mete out such draconian sentences to suburban, blue-eyed Dicks and Janes.

Until 1972, Ohio, like most states, retained heavy felony penalties for the simple, first-time offense of private use of marihuana. I remember watching in horror as a judge in a rural county sentenced a frail college freshman to five to 10 years in Mansfield Reformatory for smoking a joint in his dorm room. (Horror turned to cynicism a few hours later as I watched the same sentencing judge get bombed on martinis at the local country club.)

Such sentences became too much even for the often slow-acting Ohio Legislature to stomach and, along with every other state in the Union, a first offense for possession was made a misdemeanor. Judges were permitted wide discretion in sentencing, and no more than a year in jail could be handed down.

Yet there was uneasiness with even the reformed law. More and more otherwise respectable young people were using the stuff and even a misdemeanor conviction carries the lifelong brand of criminality. Some illiberal judges also were quick to impose maximum sentences and ship kids off to dehumanizing, filthy, local jails where sexual assaults were as common as cockroaches.

So Oregon, one of the most progressive states, and Denver came up with something less than criminal prosecution and more than legalization—decriminalization. If the Oregon experience is any indicator, it is a good compromise.

A survey by the independent Drug Abuse Council shows that "the number of individuals using marihuana has not significantly increased in Oregon during the year since it has removed criminal penalties for simple possession of one ounce or less."

One reason why Oregon did not suddenly become a smokers' haven is that police appear to be more comfortable issuing ticket-citations to private users than making arrests that could result in criminal prosecution. Instances of police action in pot cases rose 30 percent after decriminalization.

That decriminalization likely will be adopted by Congress and a number of states in the near future is evident in the number of prestigious groups supporting the concept. The American Bar Association, the National Council of Churches, the American Medical Association, B'nai B'rith and even conservative columnists such as William F. Buckley Jr. (who has experimented with pot) and James J. Kilpatrick have endorsed the decriminalization concept.

Even a commission of middle-aged establishment squares appointed by President Nixon endorsed the idea—which Nixon rejected out-of-hand, apparently favoring only the decriminalization of obstruction of justice by the White House.

One thing standing in the way of congressional approval this year is the Justice Department's ambivalence.

Last week, a representative of the department's Drug Enforcement Administration criticized certain parts of a pending decriminalization bill, but struck from his prepared remarks a sentence that might have left the impression that the department opposed the broad concept of decriminalization. Yet nothing was added to denote approval, either.

Atty. Gen. Edward Levi isn't exactly out of step. He just seems to be standing still watching the parade go by.

UNITED STATES TAKING NO POSITION ON BILL TO EASE MARIHUANA PENALTIES

(By Douglas Watson)

WASHINGTON—The Justice Department, which consistently had opposed efforts to remove the criminal penalty for possession of marihuana, shifted last week to taking no position on a bill that would "decriminalize" personal use of the controversial substance.

Atty. Gen. Edward H. Levi "doesn't have a former position on marihuana—he just hasn't addressed himself to it yet," said a spokesman for the nation's chief law enforcement officer. The aide added that Levi, who took office in February, "doesn't want to be locked into a position."

Levi's expected reconsideration of the federal government's position on marihuana contrasts with the position of his predecessor, William B. Saxbe, who in December said, "I have no intention to advocate or support legislation that would legalize or decriminalize possession and use of marihuana. Marihuana is no harmless lollypop."

The shift in the Justice Department became apparent at a Senate Judiciary subcommittee hearing Wednesday on a bill that would substitute a maximum $100 fine for such possession.

Shortly before appearing to voice objections to the bill, Donald E. Miller, chief counsel of the Drug Enforcement Administration, which is part of the Justice Department, was advised to delete the last sentence of his prepared testimony, which was to have said, "The Department of Justice recommends against enactment of this legislation."

Instead, Miller said in answer to a question by Sen. Birch Bayh, D-Ind., the subcommittee chairman, that he is considering drafting a model law for states that want to decriminalize the use of marihuana.

Last year more than 400,000 Americans were arrested for marihuana possession, Bayh said. There are criminal penalties for marihuana possession in all states except Oregon, whose law is the model for the proposed federal legislation.

The proposed fine under the new bill would apply to those in possession of not more than one ounce of marihuana for their own use, whether in a private or public place, or for those found transferring such an amount of marihuana if no sale is involved.

Previous proposed legislation would have legalized marihuana possession. The pending bill would impose a civil fine of up to $100, like a traffic ticket, but would not inflict an arrest record on the individual.

The bill is sponsored by Sens. Jacob K. Javits, R-N.Y., Edward W. Brooke, R-Mass., Alan Cranston, D-Calif., and Gaylord Nelson, D-Wis. A similar bill has been introduced in the House by Rep. Edward I. Koch, D-N.Y.

R. Keith Stroup, director of the National Organization for the Reform of Marihuana Laws in testifying in favor of the legislation, said, "Skydiving, drinking alcohol, smoking cigarettes and overeating are but some of the high-risk activities people engage in every day. Yet they remain free from arrest. But the 13 million persons who regularly smoke marihuana are still classified as criminals" by the federal government and 49 states.

Miller testified that the proposed legislation would make it more difficult for the Drug Enforcement Administration to obtain cooperation from many foreign nations that view marihuana as a greater problem than heroin and other "hard" drugs. He also maintained that the proposed legislation is unworkable.

Changing the federal law, under which relatively few persons are arrested, would not bar states from continuing criminal penalties for marihuana possession. But the existence of a federal law with weak sanctions probably would lead in time to weakening of state laws.

JUSTICE DEPARTMENT INCHING TOWARD MORE TOLERANT VIEW OF MARIHUANA USE

(By William Hines)

WASHINGTON, May 17.—The Justice Department gave evidence last week of starting to ease up on the hard-line stance against marihuana law reform that

has been fixed administration policy since the first term of former President Richard Nixon.

The hint that this was in the offing came by surprise as a top Justice official read the final paragraph of prepared testimony at a hearing on "pot" law revisions chaired by Sen. Birch Bayh (D-Ind.).

Donald E. Miller, chief counsel for the Drug Enforcement Administration, criticized at some length a bill sponsored by Sen. Jacob Javits (R-N.Y.), which would reduce simple possession and use of marihuana to the status of a civil violation punishable by a fine.

Then he came to the last paragraph of his statement, which read:

"Therefore, the Department of Justice recommends against the enactment of this legislation."

Pausing just before this passage, Miller said, "I want to strike the next sentence and say instead that the Department of Justice is not taking a position on the concept of the legislation."

Miller, one of the five witnesses at the hearing, argued that the Javits proposal would be unenforceable and said that in any event, federal drug police are not now enforcing existing legislation that makes first-offense marihuana violations punishable as misdemeanors.

Miller's testimony, which in the normal course would have been cleared through the Justice Department's congressional liaison office, apparently got official approval late last week. He is understood to have been told Wednesday morning shortly before going to Capitol Hill to soften his final, summary remark.

Some of Miller's comments drew sarcastic reaction from another witness, Richard Bonnie, a University of Virginia law professor who served as associate staff director of a Nixon-appointed presidential commission that recommended in 1972 a total decriminalization of pot.

Bonnie was particularly scornful of Miller's admission that existing pot law is not now enforced as a matter of government policy. Terming this approach to law enforcement "symbolism," Bonnie said, "We want to keep (laws) on the books because we want to keep up our morality, and we want to keep them unenforced because we want to keep up our behavior."

Two county-level prosecutors, Dist. Atty. Pat Horton of Lane County (Eugene), Ore., and Asst. Dist. Atty. Richard Wood of Denver, argued strongly for passage of the Javits bill or something like it. Both officials represent communities where simple pot violations have been reduced to traffic-ticket status.

In neither jurisdiction, they said, has there been an upsurge of marihuana abuse, and the elimination of criminal penalties for pot violations has freed police to crack down on perpetrators of violent crimes.

R. Keith Stroup, director of the National Organization for the Reform of Marihuana Laws (NORML), characterizing himself as a pot user, said he resents "the fact that someone can fine me" for this form of recreational drug-taking. But, he added, NORML is prepared to support the Javits bill as a "conditional cease-fire" pending eventual full decriminalization.

GOVERNMENT GIVES UP ANTI-POT STANCE

WASHINGTON.—The Justice Department, which consistently had opposed efforts to remove the criminal penalty for possession of marihuana, shifted this week to take no position on a bill that would "decriminalize" personal use of the controversial substance.

Attorney General Edward H. Levi expected reconsideration of the federal government's position on marijuana contrasts with the position of his predecessor, William B. Saxbe, who in December said, "I have no intention to advocate or support legislation that would legalize or decriminalize possession and use of marihuana . . . marihuana is no harmless lollypop."

The shift in the Justice Department from opposition to no position on removing criminal penalties for personal use of marihuana became apparent at a Senate Judiciary subcommittee hearing Wednesday on a bill that would substitute a maximum $100 civil fine for such possession.

Donald E. Miller, chief counsel of the Drug Enforcement Administration, told Sen. Birch Bayh (D-Ind.), the subcommittee chairman, that he is considering drafting a model law for states that want to decriminalize the use of marihuana.

Last year more than 400,000 Americans were arrested for marihuana possession, Bayh said. There are criminal penalties for marihuana possession in all states except Oregon, whose law is the model for the proposed federal legislation.

The proposed fine under the new bill would apply to those in possession of not more than one ounce of marihuana for their personal use, whether in a private or public place, or for those found transferring such an amount of marihuana if no sale is involved.

R. Keith Stroup, director of the National Organization for the Reform of Marihuana Laws (NORML), in testifying in favor of the legislation, said "Sky-diving, drinking alcohol, smoking cigarettes and overeating are but some of the high-risk activities people engage in every day. Yet they remain free from arrest . . . but the 13 million persons who regularly smoke marihuana are still classified as criminals" by the federal government and 49 states.

Changing the federal law, under which relatively few persons are arrested, would not bar states from continuing criminal penalties for marihuana possession. But the existence of a federal law with weak sanctions probably would lead in time to weakening of state laws.

ON DECLARING POT A LOT LIKE BOOZE

(By Susan Fogg)

WASHINGTON.—Decriminalization of marihuana would be a "cautious, conservative" reform, given the high price society pays for existing laws, according to the former associate director of the Schafer Commission on Marihuana.

Richard Bonnie, a law professor at the University of Virginia since leaving the presidential commission, told a Senate hearing that in his personal view marihuana should be treated under law the same way alcohol is.

"My personal opinion is that if marihuana is used in moderate amounts for recreational purposes, the state ought not to intervene," Bonnie told the Senate Judiciary subcommittee on juvenile delinquency.

"Our policy ought to be the same as for alcohol, with intervention not to prohibit people from getting the drug, but to make sure that people are getting the healthiest product available," Bonnie said.

"But I realize that reform can be incremental and that the regulatory approach is not feasible," he said. "It might violate some of our international treaty obligations and it is politically unfeasible."

In contrast to the regulatory approach that would for the most part allow adults free access to the drug, decriminalizations is—and was for the commission headed by former Pennsylvania Gov. Raymond Schafer—a "cautious, conservative" approach, Bonnie said.

Bonnie made his statement in response to questions from subcommittee Chairman Birch Bayh, D-Ind., about the possible inconsistency in the Schafer Commission's recommendation to remove criminal penalties for possession, while retaining them for distribution or cultivation.

"Were you concerned with the consistency of saying it's okay to use it but not okay to sell a substance we say is okay," Bayh asked. "If the commission decided the substance doesn't harm individuals, why punish them for selling it?"

Bonnie responded that the commission, appointed by President Nixon, "did not say marihuana is okay, but that we are paying too high a price for criminal laws against personal use."

That price includes both the $600 million a year law enforcement agencies spend in making marihuana arrests—resources diverted from the prosecution of violent crimes and thefts—as well as the stigma attached to hundreds of thousands of young people arrested each year for simple possession, Bonnie said.

Bayh's subcommittee is considering a bill introduced by Sen. Jacob K. Javits, R-N.Y., that would amend federal drug law to make possession of one ounce or less of marihuana punishably only by a civil fine of not more than $100.

The bill is modelel on Oregon state law and contains some significant revisions of the bill Javits introduced last year, changes Bayh's staff said will make the bill more passable.

Javits originally favored a bill to make possession of up to three ounces of marihuana lawful, with no reference to civil fines or confiscation of the drug.

Bayh plans further hearings this year on the bill to clarify some of its technical provisions. As now written, the measure provides no mechanism for issuing citations for civil fines, and it lacks guidelines for the handling of arrest records—whether they can be withheld in employment or educational applications.

The authority of police to confiscate marihuana in making an arrest is not clear in the bill, and it does not indicate whether the burden of proof in an arrest is on the police or the defendant.

The bill would change only federal law, leaving unaffected the state and local ordinances under which most marihuana arrests are made. However, Keith Stroup of the National Organization for the Reform of Marihuana laws has predicted that at least 30 states would follow the federal example if the Javits bill were passed.

[From the National Drug Reporter, Vol. VI, August–September 1976]

BAYH PROPOSES STRICTER PENALTIES FOR HEROIN PUSHERS AND DECRIMINALIZATION OF MARIHUANA

In an August 3 message to the Senate, Sen. Birch Bayh (D–IN) announced his intention to introduce a drug bill later this year which will include a marihuana use decriminalization proposal modeled after the Oregon state law, and mandatory minimum sentences of 10 to 30 years for a first-offense conviction for selling 1/10 of an ounce or more of pure opiate narcotic, and mandatory life imprisonment for subsequent offenses. Eligibility for parole would be permitted after serving 30 years of a life sentence.

Bayh said his mandatory penalty proposal will target high-level traffikers who are pushing drugs for profit, and called it superior to the President's proposal, S. 3411 (see above story), which does not distinguish as to the amount or purity of drug involved in a sale. In accordance with S. 3411, Bayh would also require forfeiture of money used in illegal transactions, allow Customs agents to search suspects for currency, and enact new reporting requirements for seagoing vessels entering the country.

In support of marihuana decriminalization, Bayh said, "we must recognize that the $600 million invested annually to prosecute marihuana cases can be used in a manner more consistent with the protection of property and safety of the taxpayers . . . 7 in 10 drug arrests are for predominantly simply marihuana possession. We must reject such counterproductive law enforcement policy."

ARTICLES RELATED TO MARIHUANA LEGISLATION

ALASKA

[From the Washington Star-News, May 21, 1975]

ALASKA CUTS PENALTIES FOR POT SMOKERS

The Alaska legislature has approved a bill that removes criminal penalties for possession of small smounts of marijuana. If the bill is not vetoed by Gov. Jay Hammon, Alaska will join Oregon as the second state in the United States to decriminalize pot possession.

Approved Friday, the bill is more refined than the 18-month-old Oregon law which levies a maximum $100 fine on persons caught with an ounce or less in their possession.

The Alaska measure allows pot smokers to have unspecified amounts in their private home with a maximum fine of $100. However, those caught smoking marijuana in public, or found with marijuana on their person while driving, are subject to fines up to $1,000.

Keith Stroup, director of the National Organization for the Reform of Marijuana Laws, described the law as "sensible."

"The clause covering unspecified amounts kept in the home for personal use doesn't mean that a dealer can keep half a ton of grass in his room and not expect to be charged with possession with intent to distribute.

"The Alaska Supreme Court has generally held that amounts up to 8 ounces are probably for personal use and anything over that means that the individual is probably intending to sell it."

[From the New York Times, May 28, 1975]

COURT IN ALASKA BACKS MARIJUANA

SAYS CITIZENS HAVE RIGHT TO USE THE DRUG IN HOMES

JUNEAU, Alaska, May 27 (AP)—The Alaska Supreme Court ruled today that citizens have a constitutional right to possess marijuana for personal use in their own homes.

However, the court said the state has a "legitimate concern" with outlawing the use om marijuana in public.

With four concurring opinions and no dissent, the five-member court said the right of individuals to privacy in their homes "would encompass the possession and ingestion of substances such as marijuana in a purely personal, noncommercial context in the home."

The Legislature this month adopted a bill to reduce penalties for possession of the drug. At the same time, it imposed only civil penalties for personal possession of marijuana in the home.

Those provisions for fines would apparently be called into question by the high court ruling.

TRAFFIC CITATION ARREST

The decision came in a case against an Anchorage lawyer, Irwin Ravin, who was arrested in late 1972 after policemen discovered a small amount of marijuana on him while issuing him a traffic citation. His conviction was returned to District Court for further proceedings.

The court noted that there was a substantial body of scientific evidence that marijuana is a relatively harmless drug and said that the state could not demonstrate a sufficient threat to public safety to justify invading the privacy of the home.

But the state has "a legitimate concern with the problem of driving under the influence of marijuana," the court said.

The court noted that the state retains the right to outlaw the buying and selling of marijuana or possession of amounts "indicative of intent to sell rather than possession for personal use."

A law that was to take effect this September removed the threat of a $1,000 fine a year in jail for possession of any amount of marijuana for personal use in the home or possession of an ounce or less in public. While jail sentences were dropped, the Legislature retained a $1,000 fine for any public use of the drug, possession of more than one ounce in public, possession of any amount in a car or airplane and for possession of any amount by a minor.

CALIFORNIA

[From the Los Angeles Times West Magazine, Aug. 16, 1970]

THE HIGH COST OF CANNABIS

(By Walt Anderson)

They have a new courthouse in Orange County, an elegant 11-story building with 33 comfortable air-conditioned courtrooms in it. And a new courthouse building is going up in Los Angeles, too, across the street from City Hall. This will be the Criminal Courts Building: 22 stories high, 50 courtrooms.

These are prosperous times for courthouse builders. The population of Southern California counties is increasing, the amount of crime generally is increasing right along with it, and arrests and convictions in one group of crimes—those involving marihuana—are increasing even faster than the population.

In less than a decade, marihuana crimes have emerged from relative obscurity to a clear number one position. From 1960 to 1968, according to the Bureau of Criminal Statistics, marihuana violations in California increased more than 700 percent among adults, more than 2,000 percent among juveniles. At the present time, more than 70,000 people a year are arrested for marihuana violations in Los Angeles County alone. This means that the whole machinery of law enforcement has become in large part an apparatus for the processing of pot smokers. And it means that the taxpayers of California, most of whom presumably have never purchased a joint, are spending a great deal of money on marihuana.

This change has done more than just crowd the courts and boost business for lawyers and bail bondsmen. It has changed the whole tone and style of the law-enforcement business, and it has brought a whole new class of people into contact with the inside of jail cells and courtrooms. Go down, any day of the week, to the municipal courthouse annex on the corner of Sunset and Broadway, drop into Division 40, and you will see what I mean.

Twice a day, in Division 40, prisoners are arraigned on felony charges. They are transported from the jails by bus, unloaded, held in the cells in the back of the annex building, and then, at around 11 in the morning and 3 in the afternoon, brought into the courtroom. The prisoners' boxes, one for men and one for women, are big enough to seat about 30 people, but there are usually 40 or more prisoners at a time, and those who cannot find seats crowd into the closed-off area and stand wherever they can find room.

It is a crowded and busy place anyway. A young lawyer from the Public Defender's office, using a microphone so his voice will come over the sound system, calls off each prisoner's name and reads the charges against him. Then the judge takes over to set the amount of bail and preliminary hearing date for each prisoner. This operation, or something about like it, has gone on for years, and the main change has been the number and kind of people in the box. The prisoners used to be mostly blacks and Mexican-Americans. They still are, but now a third ethnic out-group—young, middle class whites—has joined them.

In 1960, the average person who came before the courts on a narcotics charge in California was 30 years old, from a racial minority group, with a fairly extensive criminal record. Today the median age of a drug offender is 19; three-quarters of them are white, and the great majority has no previous criminal record.

When I was in the early stages of researching this article, I happened to get into a conversation with a group of people from the city Human Relations Commission who were having coffee in the cafeteria in the new Hall of Records. I said something about the increase in the use of marihuana.

Leon Smith, who is black, corrected me on that. "You talk about marihuana like it was something new," he said. "You ought to be sure you know who it's new to. It's new to the white middle-class, that's all. Kids have been smoking it in the ghettos for years, and nobody worried about it."

Today, anyway, a lot of people are worried about it, and the public worry has been reflected in the increase in the number of public servants who are in one way or another trying to do something about it. Public problems have a way of carving out a place for themselves in the bureaucracy, and marihuana has done this with amazing speed. I spent several weeks in and out of offices and courtrooms in Southern California, talking to people who are employed in the legal side of the marihuana business. There are a lot of them.

One agency which becomes involved with a high percentage of the people arrested on marihuana charges is the Public Defender's Office, which provides legal counsel for those who can't afford to hire a private attorney.

The men who work for the Public Defender's Office tend to be young lawyers, with hair as long as you can safely wear into a courtroom when you want to stay on the right side of the judge. There are now 300 attorneys in the L.A. County Office of the Public Defender, working at salaries of a thousand a month upward, and they spend a lot of their time defending marihuana cases. Usually with a good deal of enthusiasm. One man from the P.D. Office told me: "We consider these to be serious cases, and we work hard at them." Then he added, with some pride, "It costs the taxpayers a fortune."

The average marihuana case requires about nine court appearances as it goes through the routine of arraignment in municipal court, preliminary hearing in municipal court, arraignment in superior court, continuances, and so forth, until sentencing.

For the defendant, it means four to six weeks will pass before the case is completed. During this time the arresting officer will have to make at least one court appearance, and usually more; at least two deputy district attorneys will be involved with the prosecution; and three or four different judges will have handled some part of the case in their respective courts. L.A. County has 134 Superior Court judges, and the Board of Supervisors is trying to get the state to authorize 27 more.

Although a good portion of the work of defending marihuana cases falls to the Public Defender's Office, private attorneys get their share. Many attorneys who would never have touched a narcotics case 10 years ago now make it an important part of their practice. As one lawyer put it, "It's really a gold mine since marihuana moved into the middle and upper classes. A lot of these kids that get busted may look like hippies, but they've got a daddy with money."

Getting defended by a private attorney in a marihuana case may cost a few thousand dollars, or it may only cost a few hundred. The prices on the lower end of the scale are those charged by some lawyers who have made a specialty of defending marihuana cases, and who sometimes come into court with a list of clients almost as long as the Public Defender's.

Because the courts are crowded, because marihuana cases are so numerous, because they do tend to fall into patterns of similarity, the whole judicial operation inevitably begins to take on the quality of processing Army recruits. Judges and lawyers will tell you that they want to treat each case on its individual merits, and mean it, but when a hundred or two hundred defendants move through a single courtroom in a single day—which is not at all unusual—they become an anonymous blur.

Around courthouses I sometimes heard this or that judge praised as a "great administrator." That sounded odd, to my outsider's ear. I thought they should call him a "great jurist," something of that sort. More majestic. But then I saw

a judge handle over 40 felony arraignments in about 20 minutes, and I knew what they meant.

In the day-in-day-out run of marihuana cases, there are certain ritual acts that the defense attorney can be expected to perform. He will usually make a motion for suppression of evidence, arguing that it was obtained illegally.

If the judge feels that the arresting officer violated the rules of search and seizure and grants the motion, that ends it then and there, because a possession case generally has one witness—the arresting officer—and one item of evidence—the marihuana. The amount, in about 90 percent of possession cases, is an ounce or less.

Another strategem is to have the defendant plead guilty to a lesser charge. This calls for some negotiating between defense and prosecution, but it has advantages all around. It makes it possible, for example, that somebody who is arrested for having been found with marihuana plead guilty to the lesser charge of being present when marihuana was being used.

The moral contradiction of pleading guilty to a crime one didn't commit doesn't seem to bother too many people, and it makes the legal gears grind. The prosecution gets a conviction, the defense attorney has done something for his client, and everybody is spared the time and expense of going on to a full-scale jury trial.

Once the defendant has been found guilty, there is still a further possibility. Although possession of marihuana is a felony, carrying a sentence of one to 10 years in state prison, the judge may, on a first offense, prescribe a misdemeanor sentence with a maximum of one year in county jail.

The chances of getting such a reduction vary from judge to judge, and from county to county. In Orange County 90 percent of first offense possession violators receive felony sentences; in Los Angeles County only 21 percent receive felony sentences. Alan Sieroty, a liberal young assemblyman from Beverly Hills, wants to pass a law which will do away with this inconsistency by making possession of marihuana simply a misdemeanor. Other lawmakers want to do away with the inconsistency by making all possession convictions felonies.

Meanwhile, it is possible for the judge to find the defendant guilty of a felony, suspend his sentence and put him on probation for a couple of years, and then reduce the conviction to a misdemeanor later on at the recommendation of the probation officer. And most of the misdemeanor sentences, for that matter, lead to a period of probation.

The Los Angeles County Probation Department has been growing, too, about three times as fast as the population. In 1969 its budget was about $41 million, and the department now has neary 2,000 probation officers.

They made a statistical survey of people on probation last year, and it showed that there were 3,298 adults on probation for the single offense of possession of marihuana. This figure which did not include other marihuana violations such as possession for sale, accounted for the largest single block of probationers.

It easily beat out such old probation standbys as nonsupport, petty theft and forgery.

Among juveniles, too, possession of marihuana is the leading offense—but the situation there is more complicated because narcotics in general and marihuana in particular so saturate all relationships between youth and the law that it is hardly possible to make any real distinction between the juvenile who is in trouble for a marihuana offense and the juvenile who is in trouble for something else.

One of the probation officers I talked to was Mike Allen, who works in the field office in Hawthorne. It is one of those bland government buildings, on a side street off El Segundo Boulevard; inside is a big waiting room with rows of metal chairs where probationers sit until they are called for their appointment, and beyond the waiting room are the offices, long rows of cubicles separated by barriers of metal and frosted glass, where tweed jackets hang on coat hangers and young men with psychology degrees sit interviewing clients and filling out forms.

I asked Mike, a big open-faced man with an impressive set of sideburns, how many of his clients were marihuana cases. Mike works exclusively with juveniles. He looked through the metal file on his desk, started to itemize cases, and then shoved the drawer back into the cabinet.

"Hell," he said, "they all use grass. There's not one kid I've talked to who does not use it or hasn't used it." So they all use grass, and so there sits a probation officer whose duty, you would think, is to persuade them to do otherwise. What does he do? Put it another way, what can he do? It seemed to me that this was very important, because the period of probation, for most people, is what the whole courtroom process finally leads to.

"I never argue about the advantages and disadvantages of grass," Mike said. "I never try to talk them out of it. I just say, look, it's against the law. You smoke, you're going to get busted again. That much, sometimes, I can get them to listen. And some kids I know, I knew they smoked grass but then I heard they were using pills also. And I warned them against the pills. I think they listened to me, because I hadn't preached to them before."

Most of the probation officers I talked to brought up the work they do in trying to help their clients cope more effectively with their problems; they view the use of narcotics as a symptom of more serious troubles, and try to deal with those. The contemporary probation officer, in short, tends to view himself as a kind of psychotherapist.

EDUCATION IS SEEN AS A NEW PANACEA

The trouble with this, aside from whatever displeasure it might cause in the psychiatric profession, is that probation officers don't have much time to work with their clients. The average probation officer is usually responsible for somewhere around a hundred people. Some have smaller caseloads, some have 200. He may see some of his clients twice a week, for a period of a half hour or so, and he may see some of them once every three months. Many probationers are on "mailer" status. That means they are only required to mail in a form periodically to their probation officer, and do not see him in person at all.

A couple of Mike's superiors in the Probation Department, whom I talked to in a big office in the Hall of Records, stressed the fact that the probation officer is only one person in the client's life, vastly outnumbered by all the peers and contemporaries who have other values. The solution to the marihuana problem, they feel, will have to come from education. They told me about various programs going on in the schools' educational films about the dangers of narcotics, lectures by experts and former addicts, demonstrations by yoga teachers to encourage turning-on with exercise and meditation instead of with grass.

Many people I talked to said they thought an educational effort will succeed in reducing the popularity of marihuana. But they also said that, so far, marihuana use is still on the rise. The use of various kinds of pills—uppers and downers—is on the rise also.

So far we have been talking only about the various agencies which deal with the marihuana violator from arrest onward. We have left out the law-enforcement agencies and completely ignored that new American folk figure, the narcotics agent, referred to by the probationer as a nark.

Nobody seems to know exactly how many narcotics agents—federal, state, county sheriff's departments, city police departments—are operating in Southern California, and occasional attempts to shed some light on this question have encountered a certain hostility from the authorities. Last year the Los Angeles *Free Press* published a list of the names and addresses of state narcotics agents—including 26 from the Los Angeles area office—and as a result of it a former reporter, Jerry Applebaum, and the Freep editor Art Kunkin were convicted of felony charges of receiving stolen property.

When I first talked to Lt. Ladhoff, the Los Angeles Police Department's press representative, about the article I was working on, he was unenthusiastic. "We don't want a lot of stories about undercover agents out on buy programs," he said.

"But there are undercover agents out on buy programs, aren't there?" I asked.

"Oh sure," he said. "But we don't want a lot of stories about them."

We were sitting in Lt. Ladhoff's office in Parker Center, and as we talked I saw a couple of shaggy-looking young men in the next room. They were laughing and talking to a secretary, and one of them was carrying a large potted marihuana plant, so perfect in shape and color that I think it was probably artificial.

"Who are those guys?" I asked the Lieutenant.

He said he didn't know who they were. As far as I can dope out the possibilities they were either (a) two undercover narcotics agents or (b) two hippies walking through Parker Center with a marihuana plant.

A couple of days later I went to see Captain Roger Guindon, who is commander of the narcotics division of the LAPD. To get in to see him you pass through a crowded outer office, full of kids being questioned by officers.

I had expected Captain Guindon to be reluctant to talk about how his division operates, but he turned out to be a courteous, soft-spoken type, and not reluctant at all. He told me, first off, that about 80 percent of narcotics arrests, including almost all the routine marihuana possession cases, are made not by men in his division, but by uniformed officers.

The narcotics agents in his division, plainclothesmen, are mainly involved with special investigations and with preparing the complaints which have to go to the District Attorney's Office before anyone is officially charged with a crime—that was what was going on in the outer office. There are now 128 officers in the narcotics division—an increase of a little over 100 percent in the past 10 years.

In addition to the regular officers, the division has an extra 15 men or so attached to it as undercover agents. These are young officers, fresh out of police academy, who let their hair or their beards grow and go out into the streets.

COST OF LAW ENFORCEMENT IS SKYROCKETING

They are not out there to get bigtime pushers. "This program," the Captain explained, "is basically designed for the small street peddler. He is the most contaminating source in society today, because he contacts the most people."

The undercover agent becomes assimilated into a group, or into several groups, makes acquaintances with people who are selling, makes two or three buys from each. After about four months, when his undercover tour of duty is finished, warrants are issued and all the sellers are arrested. According to Captain Guindon, the department gets 30 to 40 peddlers arrested for each undercover officer it puts in the field.

I thought about this later, and I estimate, based on the number of buys per officer, that the LAPD must be purchasing around $50,000 worth of marihuana a year.

I talked to Captain Guindon about the whole narcotics scene, and especially about marihuana. He is very upset at people such as Margaret Mead who are advocating more liberal laws about marihuana. Doctor Mead has said that marihuana should be legalized, and she is very unpopular with the police these days. Captain Guindon does not agree with people who think society should become more permissive. He, too, thinks education is the way to solve the problem. He had a folder on his desk from Lockheed Educational Systems, who have designed a narcotics program they are trying to market to local school districts.

Meanwhile, the narcotics division is growing. The City Council has been talking about increasing its strength to 226 officers, as part of a "war on narcotics."

One reason divisions such as Captain Guindon's keep getting larger is that the problem never seems to go away. Arrest 30 street peddlers, and in no time 30 new peddlers have come along to take their place.

Marihuana is also the easiest of all contraband goods for the user to produce himself. A few seeds and you are your own connection; nothing in the era of bathtub gin and home brew was ever as easy as home-grown grass.

This being true, it was inevitable that there would be an increase in the number of persons choosing to grow their own and avoid the uncertainties and expense of buying it from somebody else. In one year, from 1967 to 1968 (well before the beginning of the federal government's campaign to cut off smuggling from Mexico), the number of marihuana plants seized in California jumped from 72,772 to 1,327,260—an increase of over 1,500 percent.

Another evidence of the grass-growing boom—which I found even more dramatic than the statistics—is the kind of laboratory facilities which are now being built. The Sheriff's Facility in Orange County, a new building which went up at about the same time as the courthouse—has a beautifully equipped crime laboratory where chemists are kept busy—very busy—running the analyses which are necessary before any narcotics can be introduced in court as evidence. The crime lab has a place for keeping bulk quantities of seized drugs—this is a fragrant room full of lockers—and a herbarium on the roof, for living plants. The herbarium is a locked cubicle: from the outside, it looks as if it might be a structure for power equipment; from the inside, it looks like a greenhouse. It is full of potted marihuana plants, some peyote and a few bonzai trees being grown by one of the lab men.

A herbarium struck me as a kind of bizarre thing to find on the roof of the Orange County Sheriff's building, but it makes sense: if you are going to seize marihuana plants and introduce them as evidence in trials that may not take place for several months, you have to have someplace to keep them alive. If present trends continue, a herbarium will become a standard item for the modern police station.

But the increase in home-grown marihuana does not seem to be causing any decrease in the number of people who are bringing the stuff in from Mexico. That is a federal offense, and the responsibility for prosecuting the people who get caught bringing narcotics across the border from Mexico falls to Harry Steward, U.S. Attorney for the district encompassing San Diego and Imperial counties. When I talked to Harry Steward on the phone, he said, "This is a real bad news deal we've got going down here. The court congestion you wouldn't believe."

I asked him if he knew how many marihuana cases his office was handling per year, and he gave me almost exactly the same answer I had gotten when I asked the crime lab man at Santa Ana how many samples they were being asked to analyze. He said he was so far behind he hadn't time to figure out how far behind he was.

Later, when I visited him in his office in the old federal courthouse building in San Diego, he did come up with some figures. Steward is an informal type, with reddish hair and a reddish face and big horn-rimmed glasses, and he put his feet up on his desk as he talked, sitting there under his framed photograph of Richard Nixon.

He told me that his district—which takes in San Diego and Imperial counties—has the highest rate of violations of federal law of any district in the United States. "We're inundated," he said. "The demand for marihuana is up north, and the supply is down south, and we're sitting in the middle." The statistic he gave me was a figure on the number of cases each judge in his district was required to handle; it was 1,250 cases per year, compared to the national average of 250 cases per year.

The crime, illegal importation of marihuana, carries a federal prison sentence of five to 20 years on the first offense, 10 to 40 years on the second offense. No probation. There is a lesser offense, failure to pay import duties, to which some offenders, with a little luck and a good lawyer, sometimes get their charges reduced; that has a two-to-10 year sentence with the possibility of probation.

Steward did not have any data on what kind of people are being arrested and charged with smuggling marihuana across the border—except to say that they are, on the average, getting younger. "They run the gamut," he said. "You've got the experimenter, the addict or user, the mule—that's some guy, usually some poor dumb peasant, who gets talked into bringing some stuff across the border for somebody else, and then there's the big-time commercial peddler, whom you seldom catch. Right now we're getting more mules."

Steward told me about the programs which the Mexican government has undertaken since the beginning of Operation Co-Operation: searching vehicles on the highways, discovering and burning entire fields of marihuana plants. Operation Co-Operation, Steward thinks, is the best hope of cutting off the supply. The solution to the demand problem, he thinks, is education: he showed me a newspaper clipping about a national campaign being launched under the direction of a New York advertising agency, a campaign to change young people's attitudes about narcotics through advertisments.

IT'S BEEN A BAD YEAR FOR THE GRASS GROWERS

Those things, Steward conceded, will take some time to produce results. Meanwhile, he was glad to hear that Congress was passing a bill authorizing three new federal judges for his district. This will lessen some of the court congestion in San Diego, although the caseload will still be far above the national average. With the three new judges, Steward will also be authorized six more prosecutors.

From the Federal Courthouse I went to the Customs Bureau, the agency which is responsible for policing the border. I was looking for some information on how many people they were actually arresting every year for bringing marihuana in from Mexico. They didn't have that data, but they did give me a total of the amount of marihuana seized by border agents: it had gone up from 2,165 pounds in fiscal 1965 to 48,896 pounds in 1968.

The men at the Customs Bureau—one of whom wore the uniform of a border customs inspector—were a couple of friendly bureaucrats, interested in their work and glad to be able to tell somebody what they were doing. I did not get the impression that they felt caught up in some great social crisis, sitting there in that pleasant building by the freeway on a sunny San Diego day; they weren't even mad at Margaret Mead. They were busy, and, like bureaucrats everywhere, felt they need more help.

They are going to get it: more customs inspectors have been authorized, and the government is going to do some construction work at the San Ysidro border station. Right now there are 16 usable lanes; this is going to be increased to 26, so that many more inspectors can be working and that many more vehicles can be spot-checked.

I drove down to the border, then, and stood for a while watching cars stream across it from Tijuana; the usual herds of fishermen, campers, Mexican workers, sightseers, horseplayers, hippies on the road and sailors on shore leave. I watched them come across and tried to see them as experimenters and users and mules; somehow it didn't work, but by all the odds, several pounds of marihuana must have moved past me on its way north as I stood there.

Up in an office above the San Ysidro border station they have a wall chart with a month-by-month breakdown on narcotics seizures and arrests. It showed that they are currently arresting more than a thousand people a year for crossing the border with marihuana. I noticed that the amount of marihuana seized in 1969 was considerably less than for 1968. This was the first time in all my researchers that I had seen anything decline. I assumed that it had something to do with Operation Co-Operation, but one of the narcotics agents (not an inspector; there are 31 plainclothes narcotics agents working out of San Ysidro also) told me it was the result of bad weather and crop failures in Mexico. Apparently the fields are fluorishing again; according to the charts, the influx is rising, and right now marihuana seizures are better than a ton a month.

A ton a month is a lot of grass, and of course the amount seized is only a small fraction of the amount that gets across; I can only conclude that Mexico must still have a lot of unburned marihuana fields.

During the weeks that I spent traveling around Southern California, looking at different public agencies dealing with marihuana, and talking to people about what they thought was going on, I got a great deal of agreement on some points, and a great deal of disagreeemnt on others.

Everybody agrees that the situation is critical. Some use the word crisis, some call it an epidemic, some call it a war. The choice of adjectives shows more variety; some people say the situation is tragic, and others say it is ridiculous. Everybody agrees that it is expensive.

Now, about solutions: I ran across quite a number of people on the public payroll who think marihuana ought to be legalized; they spoke out with surprising vehemence, and then asked me not to use their names.

SENTENCING VARIES GREATLY BY COUNTY

For most people legalization is not quite thinkable, and the favorite word is education: Lockhead, or Madison Avenue, or some alliance of documentary film-makers, yogas, ex-users and health experts, will shatter the network of shared values which now makes pot desirable to so many young people.

Others are for escalation: more and tougher laws, more and tougher law enforcement.

Meanwhile, the number of people using marihuana and getting arrested for it continues to increase, and so does the number of people whose occupation it is to catch, prosecute, defend, punish or counsel the users. I am not prepared to estimate how much it all costs: you would have to compute some portion of the salaries of all the uniformed police officers peering into Volkswagen campers, all the undercover men out making friends and looking for connections, all the narcotics agents writing complaints, all the men from the district attorneys' offices prosecuting the cases in court, all the laboratory men studying samples of Acapulco Gold through microscopes so the prosecution will have scientific evidence that somebody has not been arrested for possession of a bag of oregano, all the public defenders cross-examining policemen to try to establish that they got their evidence illegally, all the judges hearing the cases, all the probation officers warning their clients not to get arrested again, and whoever it is that waters the plants on the roof of the Orange County Sheriff's Department.

There are a lot of people in the marihuana business, and there will be more people in it tomorrow than there are today, and I do not know of anybody—anybody at all—who can clearly foresee an end to it.

[From the Los Angeles Times, July 20, 1971]

THREE MAYOR SAN FRANCISCO LAW OFFICERS OPPOSE RECOMMENDATION

SAN FRANCISCO (UPI)—There top San Francisco law enforcement officers Monday unanimously opposed a recommendation of the San Francisco Committee on Crime to legalize marihuana.

"Because something is wrong, you just can't legalize it out of existence," said Police Chief Alfred J. Nelder. "You can't take a defeatist atitude.

"Marihuana is detrimental to the user," Nelder said. "Recently, prior to testifying before a congressional subcommittee, I canvassed numerous heroin addicts. All said they started on marihuana. Each was asked if they advocated usage of marihuana. All said no."

Matthew O'Connor, regional chief of the State Narcotics Bureau, said marihuana is "a dangerous, unpredictable substance. According to our studies, marihuana used consistently and in substantial amounts disorients the personality."

O'Connor said studies of more than 1,000 individuals made by the State Bureau of Criminal Statistics in Sacramento showed that 12% of those arrested for marihuana offenses were arrested subsequently for heroin offenses within five years.

"Several Haight-Ashbury studies here reflected that of persons involved in the initial use of marihuana, a large percentage will go on to other drugs—including heroin—within less than a three-year period," he said.

Dist. Atty. John Jay Ferdon said he also was against legalization "because marihuana has been proven to have deleterious effects."

A minority on the crime committee also disagreed with the 17-member majority reports.

CRIME COMMITTEE URGES END TO LAWS AGAINST MARIHUANA

SAN FRANCISCO (UPI)—While deploring the use of any mind-altering drugs, the San Francisco Committee on Crime recommended Monday the repeal of laws prohibiting use of marihuana by adults, but retention of laws making the sale of heroin illegal.

In its 11th and final report, the 27-member committee split in its recommendations. About one-third of the members were against the marihuana recommendations and filed minority reports. Only one member dissented from the recommendations on heroin.

The committee's recommendations for repealing laws prohibiting marihuana use were based, the report emphasized, on the belief that the criminal process is not the best way to control use of the drug.

"We do not propose that society discontinue efforts to deter people from using marihuana," the report said.

COMMENTS ON EFFECTS

"It's use is probably not as deleterious as its most earnest detractors say, but certainly people would be better off without it. In an age when human wits are most needed, they should not be subjected to manipulation or alteration by drugs.

"We simply conclude that the criminal process is not the way to go about achieving the goal given the present state of evidence.

"Indeed, removing the stigma of criminality may remove the attraction of the illicit and eliminate the impetus to use that comes from bravado.

"Criminalization has failed; we suggest that society now try non-criminalization."

The committee members, in an introduction to the report, emphasized that they were not condoning or endorsing marihuana use.

"We realize that previous portions such as those dealing with prostitution and pornography, have been carelessly read by portions of the public, including those who should know better.

"The committee thoroughly deplores prostitution and has the utmost detestation for pornography. Yet our reports have been carelessly interpreted as an endorsement of these vices.

"We resign ourselves to a like misinterpretation that the committee approves the use of marihuana, despite our reiteration that we disapprove the use of marihuana and encourage all non-criminal processes to prevent it."

Regarding marihuana, the committee recommended:

Repeal of laws prohibiting the use and possession of marihuana by adults.

Repeal of laws prohibiting sale of marihuana to adults and regulate sale to them by laws on the order of those regulating alcoholic beverages.

Continue to prohibit sale to minors and possession by minors.

Prohibit any advertising of marihuana.

Devise and expend a vigorous education program about marihuana.

The committee said in the case of heroin "a wholly different set of considerations is apparent.

"The use of heroin is unmitigatably bad. It is destructive to the user, and it is destructive to society. No one is more contemptible than the vendor or pusher who 'hooks' another into use for the sake of profit.

"If society is ever justified in punishing anyone for the sake of revenge and detestation rather than for determent or rehabilitation, it would be justified in doing so to the vendor of heroin."

But the committee also said that "efforts to date by criminal law to check heroin traffic have been singularly unsuccessful. Major arrests are few and do not visibly decrease the traffic."

Therefore, the report said, "Long-range solutions to the heroin problem must be found in efforts by the federal government to stop opium cultivation, heroin refining and importation and in massive educational programs aimed at the drug."

UNDERWORLD SOURCES

The report said heroin addicts can obtain their drug only from underworld contacts because of current laws and commit crimes in order to obtain money.

"At this time, there appear to be only two ways of having a substantial effect on the heroin crime cycle," the report said.

"The first alternative is to place addicts permanently in institutions. This is punishment for illness.

"The second alternative is to establish government-controlled medical clinics where, if nothing else succeeds, heroin could be administered, not handed out, to confirmed heroin addicts on the educated, experienced judgment of physicians.

"This would substantially reduce crime, the role of the commercial peddler, and the likelihood of peddlers attempting to hook our youth."

INTRODUCTION

The Senate Select Committee on the Control of Marijuana was established by the adoption of Senate Rules Committee Resolution Number 401. The Select Committee was authorized and directed to ascertain, study and analyze all facts relating to the administration and effect of laws relating to control of the use and availability of marijuana, and report thereon to the Legislature including in its report its recommendations for appropriate legislation.

The Select Committee, in accomplishing its assigned tasks, has completed the following activities:

1. Held a series of three public hearings in various regions of the State.
2. Held meetings with concerned citizens.
3. Reviewed extensive study and report material available relative to the subject of marijuana use throughout the United States.
4. Completed this report on the Select Committee's activities.

The Select Committee report draws liberally upon other studies, reports, letters and the considerable experience of other states in the field of marijuana use. The Committee sought out and evaluated "the best thought" and experience on marijuana use before formulating its report. A great number of outstanding citizens were consulted. These are truly dedicated individuals who have given unselfishly of their time and talent

in assisting the legislative committee. They have assisted entirely at their own expense.

The conclusions and recommendations in this report offer a reasonable and realistic approach to a program of action by individuals and their governments.

Chapter 1

GENERAL CONCLUSIONS

In submitting its final report to the Senate Rules Committee, the Senate Select Committee on the Control of Marijuana states the following general conclusions reached after thoughtful consideration of the marijuana criminalization issue:

1. The Committee finds, even assuming marijuana has some undesirable or harmful properties, attempts at prohibition through utilization of the criminal law is not a proper approach in controlling these properties and effects.

2. The Committee further finds private use of marijuana is a private act.

3. Marijuana use is to be regarded as involving primarily a risk to the individual user.

4. The State does not have sufficient compelling interest to prevent the individual from taking such risks.

5. Marijuana use is not a threat to public health, safety or morals so as to warrant state intrusion.

6. The use of marijuana is not such a threat to society to warrant the jailing of people as a way to deal with the attendant issues.

7. The State does not have the responsibility to protect an individual against the potentially harmful effects of a drug when these are still unknown and when all the evidence suggests they are no greater in severity, and possibly not so much different in kind, than those from other socially acceptable drugs.

8. If the individual needs to have some deterrant to over-use of a drug, bringing the individual into the criminal justice system does not constitute a desirable way of accomplishing this end.

9. The benefits, compared to the dollars spent by the State and the social costs suffered by the individual, are not worth the use of the criminal process.

10. One cannot justify a law which in actual practice can only

be selectively enforced.

Therefore, the Select Committee concludes possession and use of marijuana is a private act and recommends decriminalization of marijuana possession for private use.

Further conclusions:

1. In the thirteen-year period 1960-1972, over 400,000 Californians were arrested on marijuana charges.

2. There were approximately 75,561 marijuana arrests in California in 1972.

3. There were 52,027 adult felony marijuana arrests in the State comprising 22% of all adult felony arrests in the State.

4. Similarly, there were 21,034 juvenile marijuana arrests comprising approximately 20% of the 103,347 juvenile major law violation arrests.

5. Marijuana use is not a youth phenomenon. It pervades all groups and classes of people.

6. There is great selectivity of marijuana law enforcement. Due to its limited resources, it is clear law enforcement cannot and does not arrest all users. About 1 out of 200 users is touched by the law.

7. In 1972, approximately $11 million or $144 per arrest was expended by county law enforcement for marijuana offenders.

8. The Department of Corrections spends approximately $900,000 per year on marijuana offenders incarcerated in State prisons. The median time served by male marijuana offenders in State prisons is 24 months.

9. According to all information available to the Committee, the classification of marijuana as a criminal offense has cost the taxpayers of California about 577 million dollars to arrest, prosecute and punish 400,000 people since 1960. Over the thirteen-year span (1960-1972 inclusive), the fiscal costs of California law enforcement have averaged $44,407,941 per year, or about $1,630 per arrest.

10. Unless present marijuana laws are modified, California may

expect to continue adding 100 million dollars each year to the almost 600 million dollars already spent since the cost of enforcement will continue to rise and the number of arrests will continue to grow.

11. The Committee finds polarization has lead to a growing lack of respect for our entire legal system. The marijuana laws, more than anything else, have caused the hostility between police and many of our citizens. As a consequence, respect for our criminal justice system has diminished to an almost irreparable stage.

12. The Committee found disrespect for the law was further engendered by the dishonesty about marijuana. Furthermore, education in the schools about drugs suffered because students felt they were lied to about marijuana.

13. Marijuana criminalization has created an unfairness and selectivity of enforcement because it has been used as a weapon and whipping device to penalize and repress people who have different lifestyles while allowing others continued use or security from arrest and prosecution.

14. The Committee found the marijuana laws as they pertain to single possession for private use are ineffective. They do not share the consensus of the people. The present system is not working. It is not stopping people from using marijuana or trafficking in it.

15. Law reform or re-setting of priorities would alleviate the dilemmas of thousands who are within the criminal justice system; those who are preparing for careers in the criminal justice system; what to do when they themselves or their superiors are users or have used marijuana, or do not use it but are confronted with situations where friends do; having to prosecute an arrestee for behavior they do not consider wrong.

16. Civil liberties of individuals are seriously jeopardized by arrests without probable cause, illegal searches and selective enforcement occurring often enough to arouse concern about the integrity of the criminal process.

17. It was found the most serious cost of criminalization of marijuana is it makes felons of a large segment of our population, especially our youth.

18. The great number of marijuana possession arrests each year clog and overload the criminal justice system.

CONTINUED

17 OF 33

19. The limited resources of law enforcement are heavily taxed, and diverted from other more serious concerns.

20. The impact on the increase or decrease of marijuana use will be minimal, if any, if the law is changed.

It was determined the stated fear California will become a "pot-smoking" state is greatly exaggerated and decriminalization will not put the imprimature by the legislature of approval on marijuana possession and use.

It was found in the face of the most vigorous laws, law enforcement, and uniform belief marijuana was a highly hazardous drug, a marijuana explosion occurred; and these methods just did not work.

21. It was found over 25 million persons in the United States are estimated to have used marijuana.

One million marijuana users account for 43% of the estimated 2.6 billion marijuana cigarettes consumed. Studies reporting the amount of marijuana smoked per occasion indicate the majority of users consume no more than one cigarette.

Approximately four tons of marijuana per day must be smuggled into the U.S. to meet consumption demand.

In summary, the current prevalence of marijuana use is high and is likely to continue to increase for a number of years. The present policies do not effectively deter use. The current epidemic of marijuana use among all classes and groups of people is probably a strong indication marijuana use has become permanent.

Chapter 2

SUMMARY OF RECOMMENDATIONS

The marijuana laws as they pertain to simple possession for private adult use should be amended to abolish the felony offense.

The Legislature should adopt a program of decriminalization making simple possession of marijuana for private adult use an infraction, if anything.

The Legislature should retain the criminal provisions of the marijuana laws as they pertain to cultivation, transportation, sale and selling or giving to a minor, and as they pertain to concentrated marijuana.

The Legislature should adopt a policy to:

1. Go after the major or big pusher or trafficker, that is, the top levels of the distribution pyramid.

2. Recognize the importance of the right of privacy.

3. Recognize state intrusion is only warranted when there is a threat to the public health, safety or morals.

4. Recognize the existence of serious threats to the civil liberties of people.

5. Recognize the need for the policies of all state agencies to be directed toward fulfilling the State's adopted policy.

6. Recognize the continued growth in use and the rise in arrests increases the demands on the already burdened criminal justice system, makes the law harder to enforce and encourages selectivity of enforcement since not all users can be arrested.

7. Recognize the need to redefine responsibilities of law enforcement and to provide them with guidance, authority and other assistance in order they may adopt and carry out decriminalization reform.

8. Recognize the interest of the people is protection from more serious crimes and transgressions against the person and property.

9. Recognize people criminalized by the marijuana laws are a valuable resource being lost because of felony arrest, polarization and other results of the law.

10. Lastly, recognize the present marijuana laws are not working and reform is needed.

The need for changes in the marijuana laws of California, particularly as they apply to simple possession for private adult use, has become increasingly apparent over the past several years. Broad dissatisfaction has been expressed by the public and organizations, as well as by legislators, attorneys, and others involved in the enforcement field.

Essentially, the dissatisfaction results from one basic problem. Even assuming marijuana has some undesirable or harmful properties, prohibition through criminal law is not a proper approach in controlling these properties and effects. The removal of minor marijuana related acts from the criminal laws avoids the problems of over-criminalization. The limited resources of the criminal justice system -- police, prosecutors, courts, incarceration, rehabilitation -- can be better utilized. There are arbitrary and sometimes illegal arrests and searches. There is growing disrespect for the law. There are charges of great waste in the efforts of law enforcement. The stigmatization of an arrest and conviction record inflicted upon a great number of people, especially youth, can be minimized.

To best elucidate this problem, reference is made to Edward Brecher's testimony presented to the Committee:

"I don't know your feelings about the American jail and prison systems. I cannot believe that what goes on in jails and prisons is a good thing for our young people or an appropriate public response to the smoking or possession of marijuana.

A judge in Washington, D.C. announced from the bench that he was going to stop sending marijuana offenders to the District of Columbia jail. And his statement from the bench -- it was so powerful that I hope you will let me take just a moment to read it to you. This is Judge Charles W. Halleck of the District of Columbia Court of General Sessions, testimony before the House of Representatives, September 1969, explaining why he no longer gives jail sentences to youthful marijuana smokers.

And I quote, if I send a long-haired marijuana offender to that jail, even for 30 days, Senator, he's going to be the victim of the most brutal type of homosexual, unnatural perverted assaults and attacks that you can imagine, and anybody who tells you it doesn't happen in that jail day in and day out is simply not telling you the truth. How in God's name, Seantor, can I send anybody to that jail knowing that? How can I send some poor young kid who gets caught by some zealous policeman who wants to make his record on a narcotics arrest? How can I send that kid to that jail? I can't do it. So I put him on probation or I suspend the sentence and everybody says the judge doesn't care. The judge doesn't care about drugs, lets them all go. You just simply can't treat people like that.

This is a district judge testifying before the United States House of Representatives. And this is an expurgated version of his remarks. My editors wouldn't print some of the details of what happens to marijuana offenders in prison because you want to remember that they are the vulnerable group; they are the long-hairs, they are the soft, and they are going to get it. And this has got to stop."

Chapter 3

TESTIMONY ON DECRIMINALIZATION

Thirteen witnesses testified. One did not make a recommendation. Two recommended reduction of penalties. Seven witnesses advocated some form of marijuana decriminalization. All of these felt penalties should fit the crime and major law enforcement emphasis be put on major trafficking and distribution. The various specific recommendations for decriminalization of marijuana possession for private adult use contained significant differences.

Recommendation Number 1

The National Commission on Marihuana and Drug Abuse recommends the following decriminalization models:

1. Remove criminal penalties for adult use and possession of marijuana in private.
2. Discourage use of marijuana.
3. Civil fine (without jail) for public use.
4. Marijuana found in public is subject to confiscation (two commissioners would do away with this part).
5. Continued criminal penalties for sale, importation and cultivation of marijuana, with the emphasis of law enforcement efforts directed at "the top of the distribution pyramid," i.e. major trafficking.

Recommendation Number 2

The 1974 California Marijuana Initiative recommends:

1. Remove criminal penalties for adult private use, possession, transportation, and cultivation of marijuana (provided cultivation is shielded from public access).

2. Allow local governments exclusive jurisdiction to punish public use of marijuana with a maximum fine of $100.

3. Criminal penalties for sale, importation, or commercial distribution of marijuana would remain.

Recommendation Number 3

The Consumers Union alternative regulatory models are:

1. Immediate removal of all Federal laws governing use, possession, cultivation, transporting, processing, and sale of marijuana; Similar repeal of all state laws, replacing them with new laws legalizing the cultivation, processing, and orderly marketing of marijuana "subject to appropriate legislations."

2. Urge "the widest possible experimentation" among the states as to different models for legal use, possession, and distribution of marijuana, and advocate a Federal Commission to monitor these different approaches and select the best features of each for a new system of Federal regulation.

3. It was specifically suggested to the Committee that California might try the Oregon system, or an alternative system decriminalizing possession of up to one pound of marijuana for personal use, for a period of 24 months and see how this works.

Recommendation Number 4

The Oregon decriminalization system:

1. Makes possession of up to one ounce of marijuana a civil rather than a criminal offense (similar to an infraction in California), punishable by a maximum $100 fine.

2. Retains criminal penalties for possession of more than one ounce, transportation, cultivation, supplying to a minor and sale.

3. Allows citations to be use for simple possession cases.

Recommendation Number 5

The Alcoholic Beverage Control recommends:

1. Suggests several models or projects of "legalization" or

83-313 O - 77 - 28

controlled distribution should be tried in different jurisdictions, California being one, with the hope of ascertaining what features can be relied upon to protect the rights of individuals and the legitimate interests of society.

2. Marijuana would be treated as alcohol is, allowing it to be sold under a license.

3. Allow for quality and potency control.

4. Uniformity of price control and regulation and revenue raising through taxation.

5. Decriminalize marijuana use, sale and distribution.

Recommendation Number 6

Several witnesses who favored some form of decriminalization also advocated other modifications of State laws, including:

1. Reclassification of marijuana to remove it from its present category as a "narcotic drug".

2. Prohibition of advertising of marijuana or other drugs.

3. Disallowing a plea of marijuana intoxication as a defense in prosecution of other criminal acts.

4. Warnings as to the potential hazards of marijuana if commercial preparation and marketing is allowed.

5. Modifying legal definitions to decriminalize marijuana but retain criminal penalties for possession, use, or sale of hashish or prepared cannabis products.

6. Place marijuana control under the health department, rather than under law enforcement agencies.

7. Return the reporting forms used by the Bureau of Criminal Statistics to their 1973 form or a more detailed form. Specifically, it was recommended that the four "Law Enforcement Dispositions" categories on the 1974 reporting forms (released, turned over to other jurisdictions, misdemeanor complaint filed, and felony complaint filed) be retained and that the four categories of offenses on the 1973 reporting forms (heroin and other narcotics, marijuana, dangerous drugs, other drug offenses) be reinstituted immediately.

8. Two witnesses recommended continued criminal sanctions against possession and use of marijuana, but spoke against excessive penalties for those activities and recommended jail either not be used or be used only as a last resort. Advocated education for offenders.

9. Three witnesses remained opposed to any form of decriminalization or penalty reduction and advocated retention of present California laws.

   Commander Charles Reese of the Los Angeles Police Department noted a marijuana possession offense "is a great one for the District Attorney to say, 'This is not worthy under social attitudes of felony prosecution'," pointing to Section 17 of the California Penal Code allowing District Attorneys to prosecute certain felony cases as misdemeanors.

10. All witnesses urged further educational efforts and continued research.

Chapter 4

SKEPTICISM

Skepticism was expressed when the Committee was formed because it was not known what it would do specifically.

In testimony taken from witnesses, again, skepticism resounded off the walls of the hearing rooms because it was felt the Committee was trying to "reinvent the wheel" with the same witnesses, the same kind of things and so forth done by the National Commission in greater detail and depth with a budget of over three million dollars and the specific charge of finding out the truth on marijuana.

Skepticism was expressed of the outcome in this State today. Because many other states ridicule us because of our legislative approach to the drug marijuana. California is one of only four states which continues to treat possession of marijuana for personal use as a felony arrest.

The Committee was urged to be skeptical of the witnesses and things heard on both sides of the issue as marijuana is a very symbolic issue. It is an area where there is tremendous mythology. It is an area where many people feel moral righteousness as to the inherent good or evil of one drug over another.

The Committee has taken testimony of witnesses, gathered data and information and has taken notice of various major studies done so far in its quest to particularize the issue to this State.

Therefore, the Committee respectfully submits its report in the hope it brings us closer to a resolution of the marijuana issue.

Chapter 5

MARIJUANA: THE RIGHT OF PRIVACY

While reasonable minds will differ, and while the medical evidence concerning the physical and psychological consequences of the use of marijuana is sometimes conflicting, and will continue to do so, it is found these consequences are minimal compared to the continued imposition of severe criminal sanctions for simple possession and private use, the resulting hardships on individuals and families, and the disruptive influence in our society.

Rather than attempt to settle the disagreement as to the medical effects of marijuana use, the Committee has instead decided to grapple with legal effects of marijuana law enforcement and the right of privacy.

Whether The Use Of Marijuana Is A Private Act?

The question to be determined then, is whether a fundamental constitutional right is involved in this case.

The Supreme Court of the United States has recently spoken with regard to the right of privacy as follows:

> "The Constitution does not explicitly mention any right of privacy. In the line of decisions, however, going back perhaps as far as Union Pacific Railroad Company v. Botsford,[1] the Court has recognized that a right of personal privacy, or a guarantee of certain areas or zones of privacy does exist under the Constitution. In varying contexts the Court or individual justice have indeed found at least the roots of that right in the First Amendment; in the Fourth and Fifth Amendments; in the penumbra of the Bill of Rights; in the Ninth

> Amendment; or in the concept of liberty guaranteed by the first section of the Fourteenth Amendment. These decisions make it clear that only personal rights that can be deemed 'fundamental' or 'implicit' in the concept of ordered liberty are included in this guarantee of personal privacy.[2]

This determination and holding of the Supreme Court of the United States seems to compel the conclusion the right of an adult to possess and use marijuana in private is an act falling within the ambit of the fundamental right of privacy. The Supreme Court of the United States has made clear the right of privacy and personal liberty is not a static, but an evolving right.

In considering this problem the National Commission on Marijuana and Drug Abuse in its report, said:

> "With possession and use of marihuana, we are dealing with a form of behavior which occurs generally in private where a person possesses the drug for his own use. The social impact of this conduct is indirect, arising primarily in cases of heavy or otherwise irresponsible use and from the drug's symbolic aspects. We do not take the absolutists position that society is philosophically forbidden from criminalizing any kind of 'private' behavior. The phrase 'victimless crimes,' like 'public health hazard,' has become a rhetorical excuse for avoiding basic social policy issues. We have chosen a discouragement policy on the basis of our evaluations of the actual and potential individual and social impact of marihuana use. Only now that we have done so can we accord appropriate weight to the nation's philosophical preference for individual privacy.
> "On the basis of this evaluation we believe that the criminal law is too harsh a tool to apply to personal possession even in the effort to discourage use. It implies an overwhelming indictment of the behavior which we believe is not appropriate. The actual and potential harm of the use of the drug is not great enough to justify intrusion by the criminal law into private behavior, a step which our society takes only with greatest reluctance."[3]

Further, in outlining the basic problems of this issue, the Commission stated:

> "The preference for individual privacy reflected in the debate over the philosophical limitations on the criminal law is also manifested in our constitutional jurisprudence. Although no court, to our knowledge, has held that government may not prohibit private possession of marihuana, two overlapping constitutional traditions do have important public policy implications in this area. The first revolves around the concept that in a free society the legislature may act only for public purposes. The 'police powers' of the states extend only to the 'public health, safety and morals.' In the period of our history when the people most feared interference with their rights by the government, it was generally accepted that this broad power had an inherent limitation. For example, early prohibitions of alcohol possession were declared unconstitutional on the basis of reasoning such as that employed by the Supreme Court of Kentucky in 1915 in the case of Commonwealth v. Campbell;"[4]

In this case, the Court declared it is not within the competency of government to invade the privacy of the citizen's life and to regulate his conduct in matters in which he alone is concerned, or to prohibit him any liberty the exercise of which will not directly injure society.

The Court, noting the defendant was "not charged with having liquor in his possession for the purpose of selling it, or even giving it to another," and "ownership and possession cannot be denied when such ownership and possession is not in itself injurious to the public," the Kentucky Court concluded:

The right to use liquor for one's own comfort, if they use it without direct injury to the public, is one of the citizen's

natural and inalienable rights... We hold that the police power--vague and wide and undefined as it is-- has limits...(Id., emphasis added). This is what is usually referred to as personal privacy. It is conduct in and of itself solely related to the life style of an individual. It is one's right to personal autonomy. Any transgression into this zone of personal autonomy requires the consent of the individual, or an explanation and/or justification. Further, this means what one eats, wears, or thinks is to be regarded as immune from outside interference, that is, "where there is significant encroachment upon personal liberty, the State may prevail only upon showing a subordinating interest which is compelling." [5]

Furthermore, the National Commission stated, even the perceived dangers of opium were not enough to convince some members of the judiciary that the government could prohibit possession. It is historically instructive to consider these words, penned in 1890, by Judge Scott in Ah Lim v. Territory:[6]

> "I make no question but that the habit of smoking opium may be repulsive and degrading. That its effect would be to shatter the nerves and destroy the intellect; and that it may tend to the increase of the pauperism and crime. But there is vast difference between the commission of a single act, and a confirmed habit. There is a distinction to be recognized between the use and abuse of any article or substance...If this act must be held valid it is hard to conceive of any legislative action affecting the personal conduct, or privileges of the individual citizen, that must not be upheld...The prohibited act cannot affect the public in any way except through the primary personal injury to the individual, if it occasions him any injury. It looks like a new and extreme step under our government in the field of

> legislation, if it really was passed for any of the purposes upon which that character of legislation can be sustained, if at all."

The Commission proceeded to say: As a matter of constitutional history, a second tradition, the application of specific provisions in the Bill of Rights, has generally replaced the notion of "inherent" limitations. The ultimate effect is virtually the same, however. The Fourth Amendment's proscription of "unreasonable searches and seizures" reflects a constitutional commitment to the value of individual privacy. The importance of the Fourth Amendment to the entire constitutional scheme was eloquently described by Justice Brandeis in 1928 in the case of Olmstead v. U.S.:[7]

> "The makers of our Constitution undertook to secure conditions favorable to the pursuit of happiness. They recognized the significance of man's spiritual nature, of his feelings and his intellect. They knew that only a part of the pain, pleasure and satisfaction of life are to be found in material things. They sought to protect Americans in their beliefs, their thoughts, their emotions and their sensations. They conferred, as against the government, the right to be let alone -- the most comprehensive of rights and the right most valued by civilized men." (emphasis added)

The Commission continued: although the Fourth Amendment is itself a procedural portection, the value of privacy which it crystallizes is often read in conjunction with other important values to set substantive limits on legislative power. The Supreme Court, in the case of Griswold v. Connecticut,[8] held in 1965 that Connecticut could not constitutionally prohibit the use of birth control devices by married persons. Although the Justices did not agree

completely on the reasons for their decision, Justice Douglas stated in the opinion of the Court:

> "The present case, then, concerns a relationship lying within the zone of privacy created by several fundamental constitutional guarantees. And it concerns a law which, in forbidding the use of contraceptives rather than regulating their manufacture or sale, seeks to achieve its goal by means of having a maximum destructive impact upon that relationship. Such a law cannot stand in light of the familiar principle, so often applied by this Court, that a 'governmental purpose to control or prevent activities constitutionally subject to state regulation may not be achieved by means which sweep unnecessarily broadly and thereby invade the area of protected freedom.'[9] Would we allow the police to search the sacred precincts of marital bedrooms for telltale signs of the use of contraceptives? The very idea is repulsive to the notions of privacy surrounding the marriage relationship."[10]

In expanding the right of privacy, four years later, the Supreme Court, in Stanley v. Georgia,[11] held even though obscenity is not "speech" protected by the First Amendment, a state cannot constitutionally make private possession of obscene material a crime. The Court's reasoning is revealed in the following language:

> "(The) right to receive information and ideas, regardless of their social worth, is fundamental to our free society. Moreover, in the context of this case -- a prosecution for mere possession of printed or filmed matter in the privacy of a person's own home -- that right takes on an added dimension. For also, fundamental is the right to be free, except in very limited circumstances, from unwanted governmental intrusions into one's privacy". (emphasis added)

The Commission made the following conclusion: While the judiciary is the governmental institution most directly concerned with the protection of individual liberties, all policy-makers

have a responsibility to consider our constitutional heritage when framing public policy. Regardless of whether or not the courts would overturn a prohibition of possession of marihuana for personal use in the home, we are necessarily influenced by the high place traditionally occupied by the value of privacy in our constitutional scheme.

Accordingly, we believe that government must show a compelling reason to justify invasion of the home in order to prevent personal use of marihuana. We find little in marihuana's effects or in its social impact to support such a determination. Legislators enacting Prohibition did not find such a compelling reason 40 years ago; and we do not find the situation any more compelling for marihuana today.[12] (emphasis added)

The Select Committee concurs with the National Commission and concludes the State does not have a compelling interest to invade the privacy of one's home, one's personal use of marijuana. Therefore, the Committee recognized the use of marijuana in one's home as a private act with the State having no compelling interest to interfere.

Second, marijuana use is to be regarded as involving primarily a risk to the individual user. In State v. Kanter,[13] the concurring opinion of Justice Abe stated in part:

> "...one has a fundamental right of liberty to make a fool of himself as long as his act does not endanger others, and the State may regulate the conduct of a person under pain of criminal punishment only when his actions affect the general welfare, that is,

where others are harmed or likely to be harmed."

> Justice Abe went on to say, "I believe the right to the 'enjoyment of life, liberty and the pursuit of happiness' includes the smoking of marijuana, and one's right to smoke marijuana may not be prohibited or curtailed unless such smoking affects the general welfare."

Third, the State does not have sufficient compelling interests to prevent the individual from taking such risks, if any. On this point, in Kanter, supra, Justice Abe said;

> "The finding marijuana is harmful to the user does not authorize the State under its police power to prohibit its use under the threat of punishment." He further stated, "The State must prove the use of marijuana is not only harmful to the user, but also to the general public before it can prohibit its use."

The evidence is abundant to dispel old and preconceived notions marijuana is a "dangerous" drug. No conclusive evidence exists of any physical damage, disturbances of bodily processes or proven human fatalities attributable to even very high doses of marijuana. There was no valid evidence found to support the thesis marijuana, by itself, either inevitably, generally, or even frequently causes or precipitates the commission of crime, including acts of violence, or juvenile delinquency.

Fourth, marijuana use is not a threat to public health, safety or morals so as to warrant State intrusion. In all its studies, the National Commission on Marijuana and Drug Abuse found no evidence of chromosome damage or teratogenic or matagenic effects due to cannabis, at doses commonly used by man.

Marijuana use is not a stepping-stone to the use of other drugs.

The overwhelming majority of marijuana users do not progress to other drugs. Marijuana is not addictive. The actual and potential harm of the use of marijuana is not great enough to justify intrusion by the criminal law into private behavior.

Fifth, the use of marijuana is not such a threat to society to warrant the jailing of people as a way to deal with the effects and properties of marijuana. In both of its reports, the National Commission recommended decriminalization of possession of marijuana for personal use on both the State and federal levels. The majority of the witnesses who appeared before the Select Committee recommended some form or another of decriminalization, too.

Sixth, if the individual needs to have some deterrent to overuse of a drug, bringing the individual into the criminal justice system does not constitute a desirable way of accomplishing this end.

Chapter 6

SOCIAL COSTS OF THE MARIJUANA LAWS

1. Impact on the people of California

In order to ascertain the facts relating to the effect of laws relating to control of the use of marijuana, the Committee sought to answer the question, "What are the social costs of marijuana criminalization?"

The Committee was found the impact on the people of California caused by the polarization resultant from marijuana criminalization; the impact on the individual; and the impact on the criminal justice system are the social costs.

a. Polarization

Alienation and polarization are one of the social costs of marijuana criminalization. Decriminalization would lessen the alienation and polarization caused by the marijuana criminalization of individuals of the group of users who have never been caught but who are nonetheless alienated from our society because they have been made criminals for an act they, in their minds, do not consider morally wrong nor criminal.

The social label of marijuana users, the experience of being a marijuana user defined by society as something, is intimately associated with polarization. If a person is labeled a criminal or deviate by society, a problem of recognition is presented. To best exemplify this, a brief excursion into testimony of a witness before the Senate Select Committee will be made. The witness testifies:

MR. CHRISTIE: In respect to college students, they are not being bombed, at least not in current times, so the processes are rather different. Apparently people evaluate situations as fairly black-white things, good-bad. Some studies have been done to indicate that people define things as good or bad, as actors, actions or objects. Certain combinations of those are consistent, they don't require any further thought, they can be processed within the scheme without any dissidents being aroused. In other kinds of patterns maybe you can call a halt and explain away the problem in some fashion. For example, for a good actor to commit a good act to a good person is consistent. For a bad actor to commit a bad act to a good person is morally wrong. For a good actor to commit a bad act to a bad actor is probably the bell-ringer of all possible combinations of the three elements with the two signs.

I would argue that the marijuana user, particularly the collegiate marijuana user, who is a success by social definition in other forms, who is definitely achievement oriented, who has survived a winning process to get into college, who is not oriented to ripping anybody off, is not in any way criminal in his own eyes, suddenly finds himself confronted with an emotional reality if he takes up the use of marijuana. At some point he has to realize that according to the law the police officer catching him doing what he is doing, he is subject to criminal penalties and a label on the part of

society. In addition, there are all of the popular methods that define marijuana users as losing the desire to work, or dirty, sloppy, generally undesirable. Confronted with that kind of label, the individual has to reconcile his view of the world.

He can do several things. Obviously he could declare himself to be a bad actor. In fact, if you check the old literature on alcoholics and heroin addicts up until two years ago, you discover that heroin addicts and alcoholics saw themselves in fact as bad actors; that is, that if the police came and harassed them and arrested them and put them in jail, that was what they deserved and the police were still good people for doing that, they were obviously protecting the interests of society because they were ripping people off, damaging their health, et cetera.

The witness, Mr. Christie, further testifies:

Returning to the question of the marijuana user at UCLA, what I think is going on there, what is consistent with this evidence, is the individual becomes emotionally aware that they are at risk as a criminal, when in fact they don't see themselves as criminals at all. They are a good person by any other definition. They have to reconcile the fact that society labels them a criminal when they are in fact a good person. Apparently the way that they do it is by labeling the police as bad actors. In other words, the police all

83-313 O - 77 - 29

through civics classes in high school and in the family are labeled as protectors and friends, yet for a college marijuana user the policeman is not a friend, he is an enemy who is out to get him.

Since 52% of the student body at the current time have tried at one time or another marijuana, the impact on the college population's point of view towards the police is enormous. With that widespread point of view it is going to have an impact on the nonusers by sheer influence. In fact, when you look at the data, items that rate attitudes toward the police are really hallmarks of the marijuana user. You can spot him right off. The police are political agents in society. It's an item which marijuana users enforce and nonusers tend not to enforce as being true.

THE CHAIRMAN: Question, please. The significance of the attitudinal change in the good actor who is a marijuana user and regards the police as a bad actor because they are to apprehend them, does that then have some further response on that individual?

MR. CHRISTIE: Well, it certainly limits the degree to which they can identify and cooperate with such agents.

THE CHAIRMAN: That is what I am asking. Does that end there or does that permeate to a greater extent?

MR. CHRISTIE: Several things appear to happen. For one thing, if the police are bad actors, then those who support their policies and direction by implication must be bad

actors. Also, the whole radical new left philosophy body of rhetoric explains this. It says, "Of course the police are bad actors, and those who direct them are bad actors. That's because America is directed by imperialists. And of course you are being persecuted by this group." It certainly makes a person much more suspect on his world view by adopting that whole frame of reference.

By simply monitoring the student press over a period of time you would see that students tend to interpret such material in negative ways, particularly anything that relates to lifestyle, anything that relates to race or social class considerations. The police are seen as being representatives of the ruling class and who are persecuting those who have lifestyles that in some way threaten the interests of that class. I see that myself as an effect of this preliminary change. Students that were not involved with marijuana in the past, most college students particularly, never had any occasion to question the influence that had come from their homes, environment, parents, school systems in which they were educated in terms of the fact that police are out basically to protect the interests of society and when they act, they generally act out of good motives.

On the side of the police, Kaplan says, "Marijuana enforcement creates resentment among the police as well as among the citizenry. Their problem is simply that they are told to do two completely inconsistent things. They are told to

> enforce a widely violated law against a victimless crime that is generally committed in private; and at the same time they are ordered to abide by a whole series of constitutional guarantees that aim at protecting the privacy and the dignity of the individual. Since the police cannot possibly do both, they tend to focus their resentment on the guarantees that interfere with the performance of their duties, rather than upon the duties themselves. This erosion of respect for constitutional principles among the police is, of course, a deep-rooted and complex problem. Nonetheless, to a considerable extent it is a cost of the marijuana laws."1/

Therefore, the Committee finds polarization has led to a growing lack of respect for our entire legal system. The marijuana laws, more than anything else, have caused the hostility between police and many of our citizens. As a consequence, respect for our criminal justice system has diminished to an almost irreparable stage.

b. Selectivity of Enforcement

Marijuana criminalization has created an unfairness and selectivity of enforcement because it has been used as a weapon and whipping device to penalize and repress people who have different lifestyle while allowing others continued use or security from arrest and prosecution.

Witnesses testified Chicanos, Blacks and other minorities, and young people who have long hair, wear beads and other things, are

more likely to be arrested and penalized by tougher sentences than somebody else with the same amount of marijuana.

The testimony of Dr. Aldrich states:

> "Real concern over the use of marijuana did not surface either publicly or with the authorities until its use started to be noticed among Mexican-American laborers in the Southwest and Blacks in New Orleans. In the Western states, including California, the main impetus for state marijuana criminalization laws was racial prejudice against ever-increasing numbers of immigrants from Mexico in each state, the migrant farm workers who harvested the sugar beet crops and used marijuana all the way up as far north as Canada just above Montana. 'Whether motivated by outright prejudice or simple discriminatory disinterest' National Commission consultants Bonnie and Whitebread state, the result was the same in each legislature--little if any public attention, no debate, pointed references to the drug's Mexican origin and sometimes vociferous allusion to the criminal conduct inevitably generated when Mexicans ate the 'killer weed.' Since the passage of the California and nationwide anti-marijuana laws, the severe sentences have always been meted out to the racial minorities--the Blacks and the Chicanos especially."

The result of using marijuana as this whipping device has given the people affected a very low opinion of law and order. It has hurt law and order more because of the great hypocrisy since it is common knowledge who gets arrested and what the disposition will

be; especially when there are a great number of users and it is obvious the police are not and cannot arrest all of them.

Lastly, it must be remembered what happens to a marijuana offender in jail is much more costly in terms of personal harm and anguish than the end sought by incarceration because they are the vulnerable; they are the Chicano, the Black, and the white long-haired; they are the soft; and they are going to get it.

The Committee is concerned about the wrecked careers and ruined lives which continue to result from the application of the criminal law to the user. Here in California, with the great number of persons in prison for possession and use, that effect is most apparent. And for what reason? Are these people better off in jail? Are we as a society better served by having these people locked up in cages? The answer to both questions is "no". The individuals involved and society would be better served if they were in school, at their jobs, and with their families.

We have a magnificent opportunity here in California to rectify this situation and to base our marijuana laws on modern knowledge of its potential risks. The Committee urges decriminalization of the personal possession and use of marijuana.

c. Honesty

In the wake of the surge of marijuana arrests and anti-marijuana propaganda campaigns, disrespect for the law and the loss of credibility were left floundering in the sea of hypocrisy because of the dishonesty with regard to marijuana.

Education in the schools about drugs suffered because kids felt they were lied to about marijuana. After reassessment of the damage done was made, it was found teaching in the schools about drugs cannot be done until there is honesty about marijuana.

It was found honesty is a big factor because people do not take a positive stance on marijuana according to their beliefs. A great many people are secretly in favor of decriminalization, lessening the penalties for simple possession for private use, but because of their position they outwardly come out against it. There are indications this attitude pervades from legislators to doctors and from district attorneys to law enforcement.

In conclusion, in order to reverse this trend of attitude it is incumbent upon all concerned to find a medium for these diverse attitudes about marijuana use to infuse efficacy in existing law. A realistic position on marijuana, removing the criminal penalties for simple possession and use, is a giant step towards restoring this necessary trust.

d. Inefficacy of the Law

Given the great number of marijuana users not touched by the law and the large number arrested, it is evident law enforcement can only try to keep marijuana use in sight and appears to be having difficulty doing this, much less containing it. It is also evident anti-marijuana propaganda campaigns and harsh laws have not deterred or discouraged marijuana use. The law and propaganda seemed to have had to the opposite effect instead, the curiosity of people has been aroused to see and find out what marijuana is

all about and test the truth of what they have been told.

It was found some people use marijuana because it is illegal, and some who do not use it because of its illegality; while still others use marijuana just to rebel against its prohibition.

Law enforcement and some witnesses appearing before the Committee expressed satisfaction the marijuana laws are stopping some people and may deter others to some extent. It was stated the existing law is viable, and should not be changed because somewhere along the line the threat of a sanction being applied is utterly necessary to forestall people from forming anti-social or socially harmful acts.

In contrast, the National Commission's report shows as to efficacy of existing law, a majority of the prosecutors polled agree the marijuana laws do not deter, or only deter minimally, but do believe it deters open use of marijuana. Further, even though most favor some lessening of the penalties, they are reluctant to give up formal, criminal control. Judges felt the same. Probation officers and clinicians were highly skeptical about formal control.

Hearing testimony revealed, when talking in terms of the entire criminal justice system, the marijuana laws are not working. They are not stopping those who choose to use marijuana or traffick in it. Further, in spite of the harsh laws and other insulation given the people, a marijuana explosion occurred.

Therefore, the Committee found the marijuana laws as they pertain to simple possession for private use are ineffective. They do not share the consensus of the people. The present system is

not working. It is not stopping people from using marijuana or trafficking in it.

e. Other Costs

(1) Dilemma

Criminalization of marijuana has created dilemmas of great magnitude with potential of serious implications to the people of the State of California.

There are thousands of career men and women within the criminal justice system, and many more preparing themselves for careers as police, deputy sheriffs, probation, parole, correction officers, and as potential public defenders and prosecutors. Some of these people use marijuana experimentally, others as an intermittent social lubricant, and others not at all--but most are very disturbed by marijuana enforcement policy.

The evidence revealed dilemmas such as:

"I do not smoke marijuana but if I become an officer will I have to arrest my friend, or inform on the ones who do? If I become a prosecutor, will I have to prosecute a friend?"

"How do I handle the matter of grass use when I face an oral board or the like? Do I lie? Do I tell the truth?"

"Should I give up thoughts of a criminal justice career?"

"I smoke marijuana, and believe the current laws are not consonant with an effective criminal justice system."

"Should I arrest a user when I come up with one in the field, or do I let him or her go with a warning?"

"If I let him or her go, am I shirking my responsibility and being derelict about my duties?"

"I am a ranking officer. My wife and I use marijuana, usually with friends on weekends. I must approve the arrest reports of my men, and some of them make marijuana arrests for possession and use.

"How can I approve these reports, when I personally use marijuana and do not regard the offense as immoral or as serious misconduct?"

These and other dilemmas are created by the marijuana law enforcement policy. The Committee did not get specific answers to these problems, and recognizes the way to alleviate them is for the people of the State of California to re-set its priorities as to what they want the police to do.

Further, the Committee may help the problem by recommending legislation to change the law, or if not, to change the policy of enforcement such as allowing more liberalization for diversion through a citation system.

(2) Civil Liberties Violated?

The National Commission found other disturbing consequences

of laws proscribing possession of marijuana for personal use are the techniques required to enforce them. Possession of marijuana is generally a private behavior; in order to find it, the police many times must operate on the edge of constitutional limitations. Arrests without probable cause, illegal searches and selective enforcement occur often enough to arouse concern about the integrity of the criminal process.

In discussing a facet of polarization of marijuana criminalization, Kaplan says:

> "This problem has an even less attractive side. While, almost certainly, the great majority of the police confine their resentment of constitutional principles to the realm of opinion, it is fairly clear that a number exert themselves to subvert these principles. Our search-and-seizure laws make this possible. A search without a warrant, as almost all in the marijuana area are, is constitutional only if it is made with the consent of the person searched or accompanying an arrest based on probable cause. Again and again, cases come up where the police officer testifies either that he made the search that turned up marijuana pursuant to the defendant's consent, or else that his attention was drawn to a car with young people in it because the car was missing a taillight and that when he approached the car he either smelled marijuana or saw someone make

a 'furtive gesture,' as if to hide something, which provided him with sufficient probable cause for the arrest and search.

The problem is, of course, that there is no way of either verifying or disproving this testimony--especially since in any particular case the police officer is probably telling the truth. After all, the officer's motive to fabricate is far less than that of the defendant. And, not only is the policeman more likely to be telling the truth, but the judge, in weighing his credibility, cannot help but be influenced by the facts that the only issue is one of constitutional search and that the defendant is clearly guilty of the crime charged.

Nonetheless, the frequency of the hotly denied 'furtive gesture' or consent to search is reason for prosecutors as well as other observers to suspect that police perjury as to search-and-seizure issues in marijuana cases is not unknown. This, as one might surmise, is an especially emotion-laden issue. It is only rarely discussed in print. A recent study in the Stanford Law Review, however, did document more than fifteen 'strange coincidences' in its sample of eighty arrests studied. In addition to several 'furtive gesture' cases:

In one case officers stopped to question four young men parked at night in an exclusive residential area. One officer stated that when he requested identification from one occupant, 'as he was leaning to one side to abstract his wallet from his pocket, I was able to notice vegetable-botanical material underneath his foot on the floor-boards.' Twenty grams of marijuana were discovered when the car was searched. This was one of five cases in which officers claimed that from outside a car at night they were able to observe marijuana seeds, marijuana debris, or a single 'roach' (the unburned end, or 'butt,' of a marijuana cigarette) inside the car on the floor. In assessing the officers' explanations, it should be noted that the interior of an automobile is lit dimly (if at all), that the floor is generally covered with dark carpeting or rubber mats, that dirt and other debris are usually present, and that seeds and particles of marijuana rarely exceed one-sixteenth of an inch in any dimension.

> The costs of even a suspicion of police perjury are extremely high. Reports of cases known to young people circulate widely, and the chances are that many believe police perjury to be far more common than it actually is. This, of course, not only weakens the confidence of a large number of our youth in our whole judicial system, but also aggravates greatly the hostility many young people feel for the police."[2/]

c. Impact on Individual

The most serious cost of criminalization of marijuana is it makes felons of a large segment of our population, especially our youth.

Criminalization of marijuana possession and use subjects an individual to being arrested for a felony; acquiring an arrest record; attaches the social stigma attendant with an arrest; and, in a certain sense, creates peer-pressure for the young user because of the aura of illegality and the opportunity to flaunt the law with impunity--thus increasing criminality.

The employability of an idividual is limited and curtailed in some instances. There is likelihood of loss of employment. Arrest or conviction may prevent a person from entering such professions as medicine, law, and teaching, or if not, it subjects them to more scrutiny. Difficulty arises in obtaining a responsible position in business or industry. Sometimes special hearings are necessary to hold a government job.

People may find their education interrupted and their future shadowed or altered by having a police record. An arrest or conviction complicates lives and plans at many turns. For example, in many states a person with a record must meet special conditions to obtain or renew a driver's license. Also, many states require a felon to register with the police or sheriff's department when they come or move into a town.

Expulsion from professional groups, membership in organizations, societies or fraternal orders may occur, or entrance into such groups denied.

Lastly, the effect of an arrest is often underestimated. A great deal of personal tragedy and social waste occurs as a result of an arrest. The question of money for bail and defense adds to this; coupled with sitting in jail until release and all the attendant problems of processing.

3. Impact on the Criminal Justice System

Noting the great number of marijuana possession arrests each year, there is no doubt another consequence of marijuana criminalization is the clogging of the judical calendars and the overloading of the criminal justice system.

A quick sojourn into the hearing testimony expresses this well:

> MR. BROWNELL: The impact on the criminal justice system at the state prison level and in the correctional system is not felt that greatly within the state prison complex. In other words, the number of individuals who

are going to state prison for simple possession in insignificant compared to the disposition of cases elsewhere in the criminal justice system. Let me rephrase that differently. Where the marijuana laws are hurting the criminal justice system is: One, taking police officers off of the streets when they make an arrest. Seventy-three thousand felony marijuana arrests in California took a large number of police officers off of the streets or off of the highways to book those individuals. That's the first effect of these laws on the criminal justice system, is that people who want protection against street crime and who want police out on the streets are losing those police that have to go back in to the booking stations taking in kids or mature adults for marijuana. That's the first impact. The second would be within the court system, the backlog and the clogging of marijuana cases mainly in the lower courts, but all of these cases have to be disposed of in one fashion or another; and most of the people now are copping pleas, or getting out, are not going to state prison, but for the period of time that they're in court, the period of time that they are awaiting pretrial hearings, and so forth, these individuals are clogging the courts and, most importantly, they are clogging our county jails. The number of individuals who are presently incarcerated in county jails and institutions in the state awaiting pretrial hearings of

one kind or another, or awaiting trial, is surprisingly high, as you know. I recall one study that said over 80% of the inmates at one county jail, one of the larger county jails in the state, were there awaiting trial. These are people who have not been found guilty, who have not been--who have not been tried yet. And this is where most of the incarceration takes place of marijuana users. It's at the county level. It's taking the police officer off of the street and then it's clogging up the district attorneys, and the judicial system and the courts where they have to deal with them."

4. Impact of Marijuana Decriminalization on Drug Use.

In attempting to assess the impact marijuana decriminalization would have on drug use, the Committee reports the following accounts on the most lenient marijuana possession law in the nation. The first account is a newspaper assessment which reads:

MARIJUANA LAW HAS LITTLE IMPACT
BUT OREGONIANS FEAR ITS POTENTIAL

Last October, the most lenient marijuana possession law in the United States went into effect in Oregon.

Under a law enacted with little controversy by the Legislature, persons found with up to one ounce of marijuana--enough for 20 cigarets--could not be found guilty of a crime but only a "violation," something like a traffic offense.

They could be punished with nothing more than a $100 fine. They could not be jailed, nor would they acquire a criminal record.

83-313 O - 77 - 30

Stiff criminal penalties remained in effect for possession of larger amounts or possession for sale.

By most authoritative accounts, the new law has produced little change in the pattern of illegal drug use in the state. Law enforcement officials said that in some respects it had made their task simpler and more efficient.

Nonetheless, some narcotics officers expressed uneasiness about the long-range effects of the law. And a citizens' group plans an initiative campaign to repeal the measure.

Critics of the law believe it was enacted in haste, without sufficient consideration of either the potential dangers of marijuana or the social impact of removing the criminal penalties.

"We get a lot of calls from parents whose sons and daughters are telling them there's practically no law against smoking marijuana anymore so why shouldn't they do it," said Sgt. Robert Skipper of the Multnomah County sheriff's vice section. "It's tough for the parents to argue with their kids when 'wise people'--the legislators--acted as they did."

A group called the Committee Against Liberal Drug Laws will begin circulating initiative petitions next month, seeking to restore criminal penalties for marijuana possession.

"The new law is going to make marijuana more available and encourage youths to use it," said Mrs. Susan Roylance of Hermiston, chiarman of the repeal effort.

Mrs. Rcylance, the mother of six children of her own and one foster child, said she became personally concerned about drug problems after seeing what she called the "very real effects" that marijuana had on the personalities of two close relatives.

Law enforcement authorities say they have detected no significant increase in the supply of marijuana, or other illegal drugs, that can be attributed to the new law.

"If Oregon is being flooded with pot or pot smokers, they haven't surfaced yet," said a federal narcotics official.

But there is some concern that in warmer weather the liberalized law might encourage an influx of out-of-state users.

"We have no evidence more marijuana is being used," said Michael T. Bailey, Multnomah County Senior Deputy District Attorney. "But realistically we can't help but believe that, with all the publicity of the new law, people who were afraid to use it before are less afraid now. I suppose people are trying it who never tried it before."

Bailey said he had "no great philosophical agreement" with the law but conceded it had "administrative and fiscal benefits."

Under the law, offenders are cited, rather than arrested and booked. The streamlined procedure saves time and expense. Offenders, facing only a minor penalty, are more inclined to plead guilty rather than demand a trial.

"So far it's been quite successful," Bailey said. "The police by and large are happy with it--they don't have to spend half a shift booking a suspect and writing a report. The judges are pleased with it because it saves court time. And our office is pleased with it because we can concentrate more on serious crimes."

Bailey's office handles the majority of drug cases in the state. He estimated that there had been "less than 50" marijuana possession prosecutions since the new law took effect--a rate about one-third less than before.

In Multnomah County, which includes Portland, judges have been imposing a $25 fine or, if the offender agrees, 16 hours of work with a local community service organization.3/

The second account is a letter in response to the following questions posed to J. Pat Horton, Oregon's Lane County District Attorney, by the Committee:

1. How is the new law change working out?;
2. Has there been any significant increase in the use of marijuana?;
3. Have there been any problems administering the law?;
4. What are the attitudes of the public, enforcement agencies and the courts?

The response to these questions reads in part, "Our new decriminalization law here in Oregon appears to be working superbly.

There has been no notable significant increase in the use of marijuana although that, of course, is really a subjective evaluation since an empirical evaluation of that is virtually impossible. There have been few, if any, problems result from administering the new law. The attitude of the public, enforcement agencies and courts appears to be uniformly in favor of the decriminalization effort. There is one caveat, however, and that was the inclusion of hashish and hashish oil into the decriminalization statute. Several weeks ago, our special session of the Legislature excised from the decriminalization statute hashish and hashish oil. That is currently a crime in the State of Oregon and the decriminalization statute applies solely to the stock, stems and leaves of the cannabis plant. We have not yet compiled any early statistics on numbers of citations issued or the frequency rate of filings under the new marijuana law."

Other than these accounts the Committee, the same as everybody else, has no indication of what impact on drug use a change in the law would have. The Committee heard testimony, it was anybody's guess. Most likely not much would happen. It is conceded use of marijuana may go up but to what extent it is not known. It was stated if marijuana is decriminalized, some people who are not involved in it will likely experiment it just to satisfy their curiosity and leave it once whetted.

The National Commission and other major commissions feel very little social impact will occur if marijuana is decriminalized.

The Commission feels marijuana, as a drug, is not the drug of choice in our aggressive, competitive society, and although marijuana use will not go away 100%, it will not become any real problem even though there will always be some people who will use it.

It was stated the fear California will become a "pot-smoking" state is greatly exaggerated and decriminalization will not put the imprimature by the Legislature of approval on marijuana possession and use.

Further, it should be kept in mind if ever a country were superbly protected against marijuana it was the United States in 1960, nd a marijuana explosion occurred in the face of the most vigorous laws, law enforcement, and uniform belief marijuana was a highly hazardous drug; and these methods just did not work.

In conclusion, from what is known about marijuana effects, use does not constitute a major threat to public health, safety or morals. However, marijuana is not an innocuous drug and needs more study and research such as the National Institute of Mental Health and other agencies.

With the National Institute of Mental Health support, scientists are now studying all aspects of marijuana effects, if it interferes with normal mental processes, and its effect upon the centers controlling emotion, alertness, sensation and behavior. The disparity between subjective estimate of performance and the objective analysis of performance is being scrutinized. The possible harmful effects of the smoke effect upon the unborn are under study.

Possible uses of THC are being researched. Most important, the answers to questions of long-term effects upon body and mind are being sought.

Chapter 7

AVAILABILITY OF MARIJUANA

Another charge the Committee had was to ascertain the availability and use of marijuana. From the testimony heard and the evidence scrutinized, the Committee felt it would best serve its charge by incorporating in its report an analysis made by William H. McGlothlin, Ph.D.

The McGlothlin report, probably the most comprehensive done, points out, as of mid 1972, about 22 million persons in the United States are estimated to have used marijuana or about 14% of the population age 11 and over. The Committee notes the figure may be somewhat higher now.

Of the estimated 22 million persons in the United States who have used marijuana one-or-more times, 48% are further estimated to have stopped or to have used less than 10 times; 37% to be currently using one to eight times per month; and 15% three or more times per week; 80% of this group are estimated to be males.

It is of interest to note that one million marijuana users account for 43% of the estimated 2.6 billion marijuana cigarettes consumed. Studies reporting the amount of marijuana smoked per occasion indicate the majority of users consume no more than one cigarette.

Assuming a weight ration of 10.7% for crude to cleaned marijuana, an estimated 1,501,700 kg. of crude marijuana are required to satisfy the annual consumption.

90% of the crude marijuana consumed in the United States originated outside the country. The total foreign grown for U.S. market is 1,481,500 kg. or 1,899,400 short kg. The estimated annual expenditures for marijuana prior to import is 66 million dollars.

Approximately four tons of marijuana per day must be smuggled into the U.S. to meet consumption demands.

On entry into the U.S., marijuana sells for around $75 to $90 per short kilogram in lots of 100 or more bricks at points near the Mexican border. As distribution is made, the price may go from $150 to $200 per short kilogram in California and border states, to $225 to $275 in other areas of the country.

Annual expenditures run from $163,000 @$85/short kg. for 100 kg. and up, to $288,800 @$150/short kg. for 10-15 kg. and $481,300 @$250/short kg. for one kg.

The standard retail unit for marijuana is an ounce or "lid" of uncleaned material. The price per short ounce runs from $10 to $15 in California and Southwest, to $20 to $25 in Chicago and in Ohio as high $35 to $40.

The national average price of marijuana is assumed to be $250 per short kilogram and $20 per short ounce.

The estimated annual retail expenditure for marijuana and hashish combined is around 1.4 billion dollars. Cost per user is around $9 per week for daily users and $4 for those using three to six times per week.

It is estimated there is a gross retail profit of 835 million dollars since the retail level is a low profit operation. The gross retail profit estimate here would be sufficient to employ some 280,000 persons in retail selling.

The cost of processing the California adult and juvenile marijuana arrests for 1969 has been estimated to be 43 million dollars or about $780 per arrest.

These, then, are some of the facts in the analysis. It is urged a careful reading of the analysis be made so a better picture may be seen.

MARIJUANA: AN ANALYSIS OF USE, DISTRIBUTION AND CONTROL

William H. McGlothlin, Ph.D.

This paper is an effort to integrate the available information on marijuana use, distribution, economics and control into an internally consistent presentation. It also examines the extent and type of use that may result in the United States within the next few years along with alternative control policies.

Prevalence and Patterns of Use

Numerous surveys have been conducted on the prevalence of marijuana use in the past few years--especially in high schools and colleges. Berg has summarized the statistics from 69 sources.[1] Table 1 shows the percentages having-ever-used for national surveys conducted during the past two years. Results from a 1970 survey of New York State are also shown.

These data indicate that, in the general population, males are

Note: This article is based on a monograph of the same title (SCID-TR-2, June 1971) prepared for the Bureau of Narcotics and Dangerous Drugs under Contract J-70-33. Various estimates have been revised in accordance with data which became available during the past year. Funding of this study by the BNDD does not necessarily imply their endorsement of the findings or conclusions

about twice as likely to have tried marijuana as are females. For college students the male-female ratio is about 3:2, and is somewhat closer at the high school level. Two surveys have shown that the percentage of college students who have used marijuana is nearly twice that for the same age group (18-24) of non-students,[2] although this difference is probably decreasing as marijuana use becomes more widespread. Usage is still low among the older age groups; the 1970 New York State survey found 4% for the 35-49 age group and 2% for those 50 and over; the 1972 Gallup survey reported 7% for the 30-49 age group and 2% for those 50 and over. The Marijuana Commission mail survey is an exception, reporting 6% for those 50 and over.

The values presented in Table 2 represent a best estimate of the number of persons having used marijuana one or more times by mid-1972. They are based on a composite of the various survey results projected to the 1972 time period. Since data on student usage are much more extensive than those for non-students, these estimates are treated separately from the remainder of the population. In summary, as of mid-1972, about 22 million persons in the U.S. are estimated to have used marijuana, i.e. about 14% of the population age 11 and over.

Frequency of use. Until recently most survey results were only reported as percentages "having-ever-used" or in vague terms such as occasionally, frequently and regularly. Table 3 provides limited data on frequencies of use. It appears that about one-third of all persons having ever tried marijuana are currently

using one-or-more times per week. In addition to the fact that more males than females have tried marijuana, the former are also more likely to use the drug frequently. The proportion of females having-ever-used who fall in the 3-or-more-times-per-week range is about one-half that for males.[3] In schools where marijuana usage has existed for several years and prevalence is high, the proportion of frequent users tends to be relatively high, e.g., San Mateo County High Schools in California. Schools which exhibit low prevalence of use typically show 50% or more of those having-ever-used are experimenters (fewer than 10 times).[4] Limited data on usage among persons over 35 also show a high proportion of those having used are in the experimenter class.[5]

Table 4 provides frequency-of-use estimates which are consistent with the data shown in Table 3. Estimates are made by sex, student and non-student status, and by two age categories in the non-student group. The frequency-of-use data are reasonably plentiful for the student population, but scarce for other groups. In particular, the 18-34 non-student group is estimated to have a relatively high proportion in the daily-use category because of the heavy drug-using subculture which is largely contained in this segment. However, since no data are available on the size of this subculture, this estimate could be substantially in error.

In summary, of the estimated 22 million persons in the U.S. who have used marijuana one-or-more times, 48% are further estimated to have stopped or to have used less than 10 times; 37% to be

currently using 1-8 times per month; and 15% 3-or-more-times per week. Of those using 3-or-more-times per week, 80% are estimated to be males.

Amount used per occasion. Information on the amount of marijuana consumed per use is essential--both from the standpoint of assessing the impact on the user and for estimating the volume and economics of the marijuana market. In this country, marijuana is normally smoked in the form of cigarettes, so the natural unit of measure is the number of cigarettes per use or per day. Certain exceptions exist. It may be smoked in a pipe, but probably no more than 10% is used in this manner.[6] Marijuana is also occasionally taken orally, but the amount consumed in this manner is negligible.[7] Finally, use in the form of hashish is increasing, and probably represents 15-20% of the total at present. Survey data generally do not distinguish between marijuana and hashish use, however, seizure data provide the basis for an estimate. In 1971 seizures by Federal agencies were 100,627 kg. of marijuana and 3,526 kg. of hashish.[8] If it is assumed hashish is approximately 5 times as potent as marijuana by weight,[9] the hashish seizures would be equivalent to 17,630 kg. of marijuana, or about 15% of the total seizures. Hashish use is increasing, and is projected to represent 20% of the total use by mid-1972. For the purposes of this subsection, total use will be estimated in terms of marijuana cigarettes and then 20% will be subtracted as representing use in the form of hashish.

Studies reporting the amount of marijuana smoked per occasion indicate the majority of users consume no more than one cigarette. One study found that 50% reported using one cigarette or less and 10% more than 3 cigarettes.[10] Another interview study of fairly regular users (median 2 times per week) found that the large ma majority smoke 1/2 to 1 cigarette "to get high," but that 76% reported they normally smoked an additional amount subsequent to achieving this effect.[11] A third study of an older sample (mean age 44) who had typically used marijuana for many years found 63% used no more than one cigarette per occasion, while 26% stated they normally smoked 3 to 5.[12] The potency of available marijuana varies widely and contributes to the variability in amount consumed. The delta-9 tetrahydrocannabinol content varies from 0.1 to 5% in the dried material exclusive of stems and seeds. Mexican grown marijuana sold in the U.S. averages about 1% THC[13]; domestic marijuana contains only 0.1-0.5% THC.[14]

Experimental data provide further evidence on the effective marijuana dose level. When given as a single administration, smoked doses of 2 mg. THC, or its marijuana equivalent, are sufficient to produce a mild euphoria in experienced users; 7 mg. produce some perceptual and time sense changes; and 15 mg. produce a relatively high level of intoxication.[15] Assuming marijuana containing 1.0% THC, and cigarettes weighing 0.5 gm., these doses are equivalent to about 1/2, 1 1/2 and 3 cigarettes respectively. Marijuana users do not necessarily smoke it in a single dose,

previously, the amount of hashish consumed is assumed to be equivalent to about 20% of the total consumption, so we may subtract this amount (262,800 kg.) leaving 1,051,200 kg. of clean marijuana plus 52,560 kg. of hashish.[17]

Crude marijuana loses about 25-30% by weight when prepared for smoking due to the removal of seeds, stems and excess moisture.[18] Assuming a weight ratio of 10:7 for crude to cleaned marijuana an estimated 1,501,700 kg. of crude marijuana are required to satisfy the annual consumption.

In larger quantities, marijuana is usually sold in the form of wrapped bricks of compressed material ostensibly weighing one kilogram. In actual practice, the bricks typically weigh substantially less than one kilogram. Statistics from 35 seizures involving some 5,000 bricks revealed an average net weight of 780 gm., with a range of 539-995 gm.[19] The number of "short kilograms" necessary to supply 1,501,700 kg. of crude marijuana is thus 1,925,250.[20]

Source.[21] Some marijuana is cultivated or collected from low-potency wild growth in the U.S., but the large majority is grown outside the country, principally in Mexico. In the last 2 or 3 years, substantial quantities have originated in Jamaica, and to a lesser extent from Central America, Southeast Asia and other areas, but the primary source is still Mexico. For the present purposes it will be assumed that 90% of the crude marijuana consumed in the U.S. originates outside the country.

Crude marijuana consumed	1,501,700 kg.
Originating outside the U.S. (90%)	1,351,500 kg.
Marijuana seized	130,000 kg.[22]
Total foreign grown for U.S. market	1,481,500 kg.
or	1,899,400 short kg.

The estimated acreage required to produce this amount is 7600.[23] In Mexico marijuana sells for $6-10 per kilogram brick in the fields, and purchases are often of the order of several tons. It is normally trucked to points on the Mexican side of the border where it sells for $35-40 per short kg. in quantities of 100 kg. or more. At $35, the estimated annual expenditure for marijuana prior to import is $66 million.

Hashish is generally assumed to originate in Lebanon and other Middle Eastern countries. Prices paid at the point of origin are not well established, but it may be bought in several Middle Eastern countries for $35-45 per kilogram. Assuming an annual consumption of 52,560 kg. and a price of $40 per kg., the current estimated expenditure at the point of origin is $2 million.

Importation. The enormous bulk of the marijuana traffic does not impose severe restrictions on the Mexican side of the border. At the point of importation and beyond, the bulk involved imposes a severe limitation and is the major factor shaping the distribution system on the U.S. side. When one considers that (1) approximately 4 tons of marijuana per day must be smuggled into the U.S., typically in lots of no more than 50-300 kg.; and (2) the bulk of

marijuana makes it infeasible to store in quantity on the U.S. side, the prohibitive complexity of organizing more than a relatively small operation becomes apparent. By comparison, the annual import of heroin is only 1 or 2 days' smuggling activity for marijuana by weight, and it may be imported and stored in the U.S. well in advance of its distribution.

Amounts of marijuana smuggled from Mexico vary from 1 or 2 kilograms brought across the border by an individual to a recent attempt to import 5 tons by boat.[24] The vast majority of smuggling attempts involve amounts on the low end of the scale. In 1971, the mean weight of the 6,312 marijuana seizures made by Customs was less than 15 kg.[25] About 85% of that seized at the U.S.-Mexican border is intercepted in vehicles. However, some authorities are of the opinion that aircraft and boats are carrying an increasing portion of the traffic--considerably more than is indicated by the percentage of seizures.

Hashish is most frequently smuggled into the U.S. aboard commercial aircraft. The mean weight for 1757 Customs seizures in 1971 was 1.8 kg.,[26] although currently seizures of 40-50 pounds are not infrequent.

Distribution. On entry into the U.S., marijuana sells for around $75-90 per short kilogram in lots of 100 or more bricks at points near the Mexican border. Virtually all warehousing of large quantities of marijuana is done outside the U.S. Normally, the buyers for a lot of 100 kg. or more are known prior to importation,

83-313 O - 77 - 31

and dispersal or transshipment takes place immediately after delivery.

Typically, although an individual buying in 100 kg. lots would not sell in quantities of less than 5 or 10 kg., he may frequently be willing to sell much larger quantities for lower profits, particularly to another known wholesaler, a transaction which involves little risk. In general, the price is dependent on the size of transaction, extent of risk, and distance from the border. The quality of the marijuana and the actual weight of the "kilogram" bricks are also factors, especially in smaller transactions. Finally, the price will vary with availability, and there is some seasonal fluctuation corresponding to the time of harvest in Mexico. At the time of this writing (Spring, 1972) marijuana is $300-400, or about double the price for 1971. For the present purposes, the current prices are assumed to be atypical, and calculations are based on the 1971 prices, i.e., $150-200 per single short kilogram in California and other border states and around $225-275 in most other areas of the country.

Assuming an annual consumption of 1,925,250 short kilograms of marijuana (including Mexican, domestic and other origin), the annual expenditures in the U.S. as a function of lot size are estimated as follows:

Level	Price per short kg.	Annual expenditure (000)
100 kg. and up	$85	$163,600
10-15 kg.	150	288,800
1 kg.	250	481,300

Hashish sells for $600-1,000 per pound. There does not appear to be much regional variation in price, although it generally sells for less in areas where there is a relatively large market or where it is in competition with low priced marijuana, e.g., San Francisco and Los Angeles. No information was available on price for multi-pound lots. Assuming the annual consumption to be 92,560 kg., or 115,900 lbs., and a price structure similar to marijuana, the annual expenditures for hashish are estimated as follows:

Level	Price/lb.	Annual expenditure (000)
10 lbs. and up	$500	$57,950
1 lb.	800	92,700

The standard retail unit for marijuana is an ounce or "lid" of uncleaned material. In the majority of cases the "ounce" is short by about the same proportion as the brick, i.e., it averages around 22 instead of the full 28.3 gm. Marijuana is also sold in pound, half-pound and quarter-pound quantities. The current price per short ounce in California and the Southwest is $10-15. In most other areas, a short ounce sells for $20-25, and prices in Chicago and Ohio are quoted as high as $35-40. Marijuana may also be retailed in "nickel bags," containing 3-5 gm. and selling for $5. Occasionally, the smaller quantities are sold in loose cleaned (manicured) form, or as cigarettes. The addition of adulterants such as oregano is not uncommon in this form.

Hashish retails for $5-10 per gram, but it is often sold to the ultimate consumer in ounce quantities at prices ranging from $70-125.

Several authors have described the distribution of marijuana at the retail level.[27] The majority of persons who use several times per week or more, technically have also sold marijuana, although it may be no more than sharing a purchase with friends at no profit. One survey reported 85% of persons using 3-or-more-times per week fall in this category.[28] Others casually sell to a few close acquaintances to earn their own supply and a small amount of money. Others retail marijuana as a full-time occupation. Still others move further up the ladder, buying in quantities of 1-10 kg., selling some as single bricks, and retailing the remainder in ounces or fractions of a pound.

Retail expenditures. In order to estimate the retail expenditures for marijuana, it is necessary to assume the purchase size by the ultimate consumer. As would be expected, heavier users are more likely to buy larger amounts at a time. The buying of one-quarter to one pound, or even a kilogram, for sharing among a group of users is not uncommon. In one study of fairly heavy users, 17% stated they purchased a kilogram at a time about one-half of the time.[29] The size of purchase is also influenced by the economic status of the buyer and the price of marijuana, e.g., purchases of less than an ounce are relatively uncommon in California where the ounce price is $10-15, but in the East a cost of $25 an ounce reportedly results in more frequent purchases of smaller quantities, especially among lower socio economic groups. The retail expenditures for marijuana and hashish are estimated in Table 6, account

being taken of the variability in purchase sizes as a function of frequency of use. The number of users and percentage of total consumption by frequency of use are taken from Table 5. The national average price of marijuana is assumed to be $250 per short kilogram and $20 per short ounce, or $700 for a short kilogram bought in short-ounce units. The more frequent users are assumed to obtain their supplies at less than $20 per short ounce, by purchasing in larger quantities, by sharing in group purchases, or by obtaining lower prices through familiarity with dealers. The average price paid for daily and 3-6 times-per-week users is estimated to be $450 and $575 per short kilogram respectively. Of those persons using 2 times per week or less, one-half is assumed to buy at $20/short ounce and one-half in smaller units equivalent to $30/short ounce, for an average of $875 per short kilogram.

Similar assumptions were made for hashish purchases. Retail prices for hashish were assumed to be $8/gm. and $90/oz. Three-fourths of the daily users and one-half of the 3-6 x/wk. group were estimated to obtain hashish at the ounce price and the remainder at the gram price. All of the 2 x/wk. or less group were assumed to buy at the gram price.

The estimated annual retail expenditure for marijuana and hashish combined is around 1.4 billion dollars. Cost per user is around $9 per week for daily users and around $4 for those using 3-6 x per week.

Subtracting the previously estimated annual expenditure for

marijuana at the short kilogram level ($481 million) and that for hashish at the pound level ($93 million) from the retail expenditure in Table 6 leaves a gross retail profit of $835 million. Several authors have concluded that marijuana-hashish dealing at the retail level is a low profit operation--a dealer serving only some 25 customers and making $200-300 per month.[30] At this rate, the gross retail profit estimated here would be sufficient to employ some 280,000 persons in retail selling. Data are not available for estimating the number of persons involved in the wholesale marijuana-hashish market. If it were assumed that the average gross profit was $20,000 per year per person, then the gross wholesale profit subsequent to purchase on the U.S. side of the border ($353 million) would result in some 17,500 persons being employed at the wholesale level.[31] Figure 1 provides a summary of the estimated use, distribution and economics of the marijuana-hashish market for mid-1972.

Enforcement

Seizures. In 1971, U.S. Customs and the Federal Bureau of Narcotics and Dangerous Drugs seized 91,400 and 9,200 kg. of marijuana, respectively.[32] The corresponding hashish seizures were 3,100 and 400 kg. California State and local seizures in 1970 accounted for an additional 26,000 kg. of marijuana.[33] Data on seizures by other state and local agencies are generally not available, but are know to be relatively small in comparison to those for California.[34] The marijuana seizures by Customs (1971),

NDD (1971) and California (1970) represent 8% of the estimated 1972 consumption. If it is assumed that the 1971 consumption was no more than 75% that for 1972, and that state and local agencies other than California seized an additional 20,000 kg., the total 1971 marijuana seizures represented about 13% of the 1971 attempted importation.

Arrests. Statistics from the 1970 Uniform Crime Reports show 157,000 arrests for marijuana or 45% of the total 346,000 drug arrests.[35] The 1970 adult and juvenile marijuana arrests in California totaled 69,000.[36] For 1969, 34% of the 55,000 California marijuana arrests were for persons 18-20, which yields an arrest rate of 1.8 per 100.[37] Males accounted for 86% of marijuana arrests for persons 18 and over, for an arrest rate of 3.0 per 100 in the 18-20 age group. The percentage of senior high school males reporting marijuana use in San Mateo County, California during 1969 was 50.[38] If we assume the statewide average for marijuana use is about 80% that for San Mateo County, the arrest rate for males age 18-20 who used marijuana one or more times in 1969 is estimated to be 7.4 per 100. If we further assume that virtually all the arrests are among the 60% using marijuana on more than an experimental basis (≥ 10 times), the arrest rate for this group of males, age 18-20 is 12 per 100.

The number of California arrests for sale or transporting marijuana in 1969 was 7,800.[39] If we assume the number of persons involved in wholesale and retail selling in California during 1969

was 30,000, the arrest rate was 26 per 100.[40]

In summary, the risk of arrest for use or sale of marijuana is quite substantial, at least in California. The penalties imposed by the courts are also significant. Of the 37,700 adult (18 and over) non-Federal arrestees in 1969, 21% were convicted on felony charges. Incarceration rates were relatively low--0.6% and 8% of the total arrested received prison and jail sentences respectively; however, the additional implications of felony convictions are severe. The cost of processing the California adult and juvenile marijuana arrests for 1969 has been estimated to be $43 million, or about $780 per arrest.[41]

Future use of Marijuana

Current trends. Figure 2 presents some trend indicators of marijuana use and control over the past 5 years. Obviously the seizure and arrest data may reflect variations in enforcement emphasis as well as changes in usage.

As the percentage of students ever having used marijuana approaches or exceeds the 50% mark, increasing interest focuses on trends in the proportion which continues use. A comparison of the Gallup college surveys for 1970 and 1971 indicates continuing use may be nearing a plateau.[42] On the other hand, the San Mateo County secondary school data show a definite increase in one-or-more-times-per-week use over the same period.[43] This survey had tended to show a leveling out of use from 1969 to 1970, but the sharp rise resumed in 1971. Interview studies have provided

additional data on the question of duration of use. One 1970 college survey found that, of those persons initiated to marijuana more than 3 years before, and using on more than an experimental basis (> 10 times), 37% had currently either stopped or were using infrequently, and 32% and 31% reported current usage at several times per month and several times per week, respectively.[44] Another 1970 college study found 77% of those initiated to marijuana 4 or 5 years previously were still using to some degree.[45]

In summary, the currently available trend data on marijuana usage leave unanswered the question of whether it is likely to be a transient or permanent phenomenon. The number of persons who have ever used marijuana is continuing to increase, probably at a rate of 25-30% per year. In addition, there is no evidence as yet that the number of persons who discontinue after a significant period of usage are exceeding the number newly initiating such behavior. On the other hand, the behavior has many of the characteristics of a fad or temporary style: its very rapid acceptance by that segment of the population most susceptible to fads; the fact that it has been enthusiastically propagandized via music, psuedo-philosophy and the popular media; the fact that its use is, in part, an anti-establishment reaction stemming from other factors than the properties of the drug itself. In addition, the appearance of Western style (occidental) marijuana use among university students in most countries throughout the world has more the flavor of adoption of styles of music or hair length than a lasting behavior.

The contrary view holds that since cannabis (marijuana) is the second most widely used intoxicant in the world, it clearly is a drug which may prove attractive to large numbers of people on a continuing basis. Once a drug with these features is introduced into a culture on a widespread basis, it seems quite likely it will be retained by some portion of the population. Blum has noted that the history of drug use records few instances where a drug achieves widespread acceptance in a culture and is subsequently discarded.[46]

Insights from other cannabis-using cultures. Cross-cultural generalizations are hazardous; however a brief examination of the prevalence and patterns of cannabis use in cultures where it has existed for centuries may be helpful in forecasting the future use in the U.S. For instance, what proportion of the population elects to use the drug under conditions of acceptance in countries with a long history of use? Nepal is reportedly the only country in the world which imposes no restrictions on cannabis use. Approximately 4,000 acres are officially cultivated and taxed, and additional amounts of hashish are harvested from wild growth for commercial purposes.[47] In spite of the fact that cannabis is legal, readily available and inexpensive, Napalese use if very limited and virtually all of the crop is illicitly exported to India and Pakistan.

In India and Pakistan charas (hashish) was prohibited in 1945, but other preparations of cannabis (bhang and ganja) are still legal in selected states. Daily use is probably of the order of

2 or 3 million or about 4 per 1000 on a per capita basis.[48] However, since use is restricted to lower class males and is concentrated in certain states, daily usage may be as high as 5% of the relevant population in some areas.

In Morocco, occasional and regular cannabis users were estimated to represent 10% of the population prior to the drug's prohibition in 1954.[49] Since use is primarily restricted to males, this is about 25% of the adult male population. Other estimates of regular use have run as high as 50% of the native male population in some areas of South Africa,[50] and 40-50% of the male population in Jamaica.[51]

In summary, there are very few areas in the world where the prevalence of cannabis use approaches that for alcohol in the Western culture. Usage is largely restricted to lower-class males, and daily use seldom exceeds 5-10% among this group. By comparison, 2.5% of U.S. males age 14-34 are currently estimated to use marijuana daily and an additional 4.6% 3-6 times per week (Table 4).

Probably the most significant comparison between the use of marijuana in the U.S. and that in other cultures concerns the amount consumed. In Table 5, the typical U.S. dosage is estimated at 1-3 marijuana cigarettes or 5-15 mg. THC. The maximum amount consumed by heavy users is of the order of 10 cigarettes or 50 mg. THC per day. By contrast, the <u>average</u> amount consumed by daily users in India, Egypt and Morocco is estimated to contain 45-60 mg. THC, and the maximum is around 200 mg.[52] Some studies have indicated usage equivalent to over 700 mg. THC.[53] In Greece, chronic hashish

users serving as experimental subjects a routinely given smoked-THC doses of 150 mg., whereas 15 mg. is normally the maximum administered experimental subjects in this country. The current 1-3 cigarette dosage is also low in comparison to the 6-10 cigarettes per day estimated for regular users in the 1940's.[54] It is also low in comparison to the amounts currently used by American soldiers in Vietnam and Germany. One study of heavy hashish users among the U.S. military in Germany found an average use of over 3 gm. per day, i.e., the equivalent of 30 marijuana cigarettes per day.[55]

In summary, most of the current U.S. marijuana smokers are best described as playing at cannabis use in comparison to users in other cultures. It seems likely that the average amount of THC consumed by continuing users in this country is likely to increase in the next few years, although probably not to the level observed in other cultures. Additional experience, the availability of more potent preparations and the development of tolerance among frequent users will tend to increase the average amount consumed. In addition, it would not be surprising if some individuals daily consume 200 mg. THC or more in the form of hashish or other concentrated preparations, an amount greatly in excess of that previously observed in this country. Experience in other countries indicates that the use of these very large amounts occurs in about the same proportion of users as does alcoholism in the U.S., i.e., about 5-10% of the total number of users.

Predicted use in 1976. Table 7 compares higher and lower predictions of marijuana usage for 1976 with the estimate for 1972.

The predicted use of larger quantities of THC in the form of marijuana or other preparations is reflected in the 1976 estimates. Daily and 3-to-6 times-per-week users are estimated to be using 5 and 3 marijuana cigarettes, or equivalent, in comparison to 3 and 2 cigarettes assumed in Table 5 for 1972. Although the lower estimate for 1976 assumes a somewhat smaller population of users than that for 1972, the predicted larger amounts per user result in an increase in total consumption. The estimated retail expenditures are calculated on the same basis as those in Table 6.

Alternative Control Policies

Marijuana control policies have been discussed at length in previous documents.[56] The present section will be primarily limited to an examination of the major alternative policies in the context of the quantitative estimates of use, distribution and enforcement effectiveness developed in the previous sections.

Several features characterize the current marijuana-hashish market, as summarized in Figure 1. First, in the case of marijuana, the fact that 99 units of inert substance must be handled for every one unit of the active drug means that large amounts of bulky material must be transported--an estimated 4 tons are smuggled into the U.S. daily. Second, distribution within the U.S. involves numerous independent operations with little evidence of central organization. This is probably closely related to the difficulty of smuggling and storing large quantities of the drug. Third, the market involves a large number of users who make a relatively small amount of money by retail selling. Fourth, the monetary cost of

marijuana use to the individual is relatively low, i.e., fifty cents to nine dollars per week, depending on the frequency of use.

The effectiveness of the present marijuana control system may be measured: (1) in terms of enforcement statistics, e.g., drug seizures and arrests for sale and use; (2) indirectly in terms of availability and price of the drug; and (3) directly in terms of extent and type of use. An overall evaluation should also consider the costs of control, monetarily, as well as in terms of unintended side effects such as alienation of youth or diversion to more dangerous drug use. With regard to the more quantitative measures, the current marijuana control system is estimated to seize 13% of the marijuana and hashish intended for sale; to annually arrest 26% of those regularly involved in selling (California, 1969); and to annually arrest up to 3% of those using marijuana one or more times during the year (California, 1969).[57]

The present control system has had only limited success in restricting the availability of marijuana and hashish. Availability is not sufficiently open such that purchases can be easily made by persons not involved in the drug subculture but regular users generally have little difficulty obtaining the drug.[58] Periodic shortages occur, but they appear to be mostly related to seasonal fluctuations in harvesting, rapid increases in demand, and variations in supply related to the situation of storage being largely outside the U.S. The price of marijuana has increased by about 50% in the past 3 years, but this is not a limiting factor for most users. With respect to controlling the extent of marijuana

use, the present policies have obviously been unsuccessful in preventing the rapid increases over the past few years.

With respect to possible policy changes, there are three primary alternatives:

I. Increase criminal sanctions for both use and sale.

II. Decrease or eliminate penalties against use and continue or increase efforts to eliminate the supply.

III. Regulate the sale of marijuana in the manner of alcohol controls.

The adoption of the first alternative in terms of penalties as well as arrests would undoubtedly increase the level of deterrence. It seems equally clear that society would be unwilling to incur the costs of such an approach. The current trend toward decreasing or eliminating penalties at the user level is essentially being forced by the realities of the widespread usage. This leaves II and III as feasible policy changes.

Ability to suppress supply. The immediate question with regard to policy II concerns the ability to suppress the supply of marijuana and hashish. The increased pressure against smuggling by Customs in the last 3 years has clearly resulted in a sharp increase in seizures (Fig. 2). The current estimated seizure rate of 13% is very substantial when interpreted in terms of risk of arrest. While no attempt was made in the present study to estimate the results of additional enforcement efforts, it is relatively

certain that such a policy can be expected to further increase both seizures and arrests. On the other hand, there is no indication as yet that the present level of enforcement is capable of severely restricting the availability of marijuana.

Efforts are also being made to eliminate the sources of marijuana in Mexico.[59] Information is not available to evaluate the progress of this effort, but it is clear that this approach to cannabis control on a world-wide basis would be more difficult to implement than the current attempt to suppress the sources of opium. Cannabis grows wild in many portions of the world and may be cultivated with relatively little effort in any temperate or tropical climate. It requires no processing in the crude form, and relatively little for the more concentrated preparations.

Reactions to increased smuggling controls. The major difficulty in smuggling marijuana is the excessive bulk. The estimated 3700 kg. smuggled into the U.S. daily contains only about 37 kg. of THC. Further significant increases above the already high marijuana seizure rate will likely result in efforts to decrease the risks of detection via reductions of bulk. The most obvious countermeasure would be the gradual replacement of the marijuana market with hashish from the Middle East, either smuggled directly into the U.S. or via Mexico or Canada. Hashish is estimated to contain 5% THC and is also a solid, which further reduces the space below that required for the leafy marijuana. As mentioned earlier, the increased smuggling of hashish is already evident--the ratio of hashish to marijuana seizures in 1971 was double that for 1970.

Marijuana may also be converted to an extract containing up to 20% THC with very little technical skill. This method has already been employed on a small scale and seems likely to increase. In general, any method which allows importation in a more concentrated and compact form will increase the ease of concealment for smuggling, and reduce information leaks by permitting more centralized operations.

Another result of increased enforcement effectiveness would be an increase in the price paid for marijuana and hashish. One of the announced objectives of Operation Intercept in 1969 was to raise the price of marijuana outside the reach of the adolescent. The price in the U.S. has increased by around 50% in the past 3 years; however, the relative costs of comparable levels of intoxication achieved via marijuana and alcohol are probably still of the order of 1:2 to 2:3. This would indicate the current marijuana price might rise by 50 to 100% if the risks of importation and distribution are substantially increased. It is of interest to note that the price of hashish is about $1 per gram in Holland and Denmark, which have relatively permissive policies; about $3 per gram in Norway, which stresses enforcement; and $8 per gram in the U.S. ($3 per gram in ounce quantities).

Limitations on marijuana supply should also be considered in the context of availability of other drugs. For instance, during the period when the price of marijuana increased by 50%, the widespread availability of LSD resulted in its wholesale price dropping to 1/5 of its former level. Marijuana shortages apparently result

83-313 O - 77 - 32

in increases in other drug use.[59] Alcohol and hallucinogens are the most frequent substitutes, but there is also some increase in sedative, stimulant and opiate use, especially among those heavily involved in the drug subculture. Finally, increased domestic cultivation of marijuana is another possible reaction to heightened controls against importation. Marijuana plants may be grown indoors as well as outside. Should sanctions be dropped at the user level, cultivation for personal use might pose a difficult legal problem.

Contribution to criminal behavior. A control policy which attempts to deal severely with the seller, and leniently or not at all with the user, will inevitably encounter difficulty in differentiating between the two categories. A major disadvantage of maintaining marijuana in the illicit drug category is the encouragement of large numbers of young persons to become involved in retail selling. It is especially easy to begin selling marijuana on a casual basis and quickly become seriously enmeshed in a highly criminogenic subculture. As previously discussed in the section on the marijuana market, the majority of regular users have technically sold the drug at some time -- 280,000 persons are currently estimated to earn all or a significant portion of their income by retail selling. Applying the same formula of $250 per month for the retail dealer to the 1976 upper estimate of $2 billion in gross retail profits would result in some 670,000 persons employed in the retail selling of marijuana.

In addition to encouraging young marijuana users to adopt the dangerous and unproductive life of retail selling, the large wholesale profits are attractive to organized crime--a development which is considered more likely if the more concentrated preparations replace marijuana. The present estimated wholesale market of $0.6 billion per year (1 kg. level) is predicted to increase to $0.7-1.7 billion by 1976. With additional pressure against smuggling and distribution, price increases might raise these market values by 50-100%.

Regulated sale. Legal distribution of marijuana would provide the usual advantages of licensing, including control of conditions of sale, especially those relating to the age of the purchaser. Other controls employed in some countries are the limiting of amount purchased and the issuing of permits for use.

Another advantage of regulated sale is the imposition of quality and potency control. As discussed earlier, increased pressure against sales and smuggling seems likely to result in a shift to more potent forms. While the availability of the more potent preparations of cannabis does not necessarily result in the consumption of larger amounts of the active ingredient, there is general agreement that excessive use is more prevalent under such conditions. Some countries have initiated controls which allow consumption of low potency materials but prohibit the more concentrated forms.[60] Regulated sale would also prevent adulteration. This has not been an appreciable problem thus far because of the

lack of an economic incentive, but if extracts come into use it is likely they would often be mixed with other active adulterants.

Another major advantage of legal sales is the removal of large numbers of youth from the criminogenic retail sales occupation. It would also reduce the cost of enforcement, disassociate marijuana from other drug sales, and encourage a credible approach to education.

Finally, if marijuana sales were regularized in the same manner as alcohol, the profits which now go into criminal channels could presumably be converted to tax revenues. If we assume the same tax percentage for marijuana as alcohol (approximately 30%), the current estimated $1.4 billion retail expenditure for marijuana and hashish would yield around $420 million in taxes per year, or about 8% of the current alcohol tax revenue. The 1976 lower and upper estimates of retail sales would result in tax revenues of $480 and $1,100 million, or some 9-22% of the current alcohol revenues. The current retail price of marijuana could probably be doubled and still be competitive with alcohol and, since marijuana is easy to grow and process, the tax percentage could be substantially higher than 30% of the total price. Thus, it is reasonable to predict that tax revenue could be nearly one billion at present, and possibly as much as 2 billion within 5 years, or some 40% of the alcohol revenue.

Conclusions. This paper has examined some of the implications of various marijuana control policies in the context of estimates of current and future use and distribution. In summary, the current prevalence of marijuana use is high and is likely to continue to

increase for at least 2 or 3 years. Among younger age groups, the present policies do not effectively deter use, particularly in certain areas of the country. The reaction of policy makers to the failure of deterrents and the costs of criminal sanctions have been to reduce penalties against the user, while continuing or increasing pressure against distribution. It is reasonably certain that this trend will continue in the immediate future, possibly including dropping other than token sanctions against the user. Additional pressure against smuggling and sale of marijuana should further increase seizures and prices, although as yet there is no evidence that this approach is capable of severely restricting availability. A likely countermeasure is the shifting to hashish or other concentrated preparations in order to reduce the risk of smuggling. A major cost of a policy aimed at suppressing supply is the criminalizing of large numbers of young persons involved in casual sales. A policy of legalization would eliminate this problem, encourage a credible educational approach, produce a substantial tax revenue and provide potency and other controls related to legal sale. On the other hand, legalization would very likely produce greater prevalence of use, whereas strong efforts against the supply of marijuana, together with token sanctions against use, would indicate social disapproval and discourage its use, at least among some portions of the population.

The major uncertainty concerns the future trends in marijuana usage related to factors other than control policies. If the demand for marijuana continues at the present or higher level and

efforts to suppress the supply are unsuccessful, then a policy of continued prohibition would have most of the disadvantages of legalization and none of the advantages. On the other hand, the current epidemic use of marijuana among the middle class is too new to allow confident predictions as to whether or not it will be a permanent phenomenon. Early legalization would provide official, and perhaps irreversible, sanction to a potentially harmful behavior that might otherwise have been primarily a transient phenomenon.

19. Mr. Norman Nordweir of U.S. Customs, Los Angeles Office, Mr. Lloyd Sinclair of the Bureau of Narcotics and Dangerous Drugs, Los Angeles Office, and Mr. William Arnold of the California State Bureau of Narcotics Enforcement, Los Angeles Office provided these data.

20. An alternative approach to estimating the amount of marijuana consumed is to utilize data on the number of cigarette papers sold, which is available from tax records. After subtracting those used for tobacco cigarettes, this presumably provides an estimate of the number used for marijuana. This approach has been attempted (see note 4, supra), but the instability of the recent cigarette paper sales data made the results of dubious value.

21. This subsection is largely based on information obtained in interviews with U.S. Customs, BNDD, California State and local narcotics agencies, and various other persons familiar with the source and distribution of marijuana and hashish. Some published and unpublished data on prices and seizures were obtained from BNDD and U.S. Customs, and several published descriptions of the retail marijuana market were also utilized.

22. 1971 BNDD and Customs seizures plus an estimated 30,000 kg. by California State and local narcotic agencies. The Mexican government also reported seizing 35,000 kg. of marijuana and the destruction of 390,000 kg. of dried marijuana in the fields during the period October 1969-March 1971--BNDD bulletin, U.S. Department of Justice, May-June, 1971.

23. Based on the average of 300 pounds of dried cleaned marijuana obtained per acre from experimental cultivation in Mississippi; N. J. Doorenbos, supra, note 18.

Figure 1. Summary of marijuana - hashish use, distribution and economics for 1972

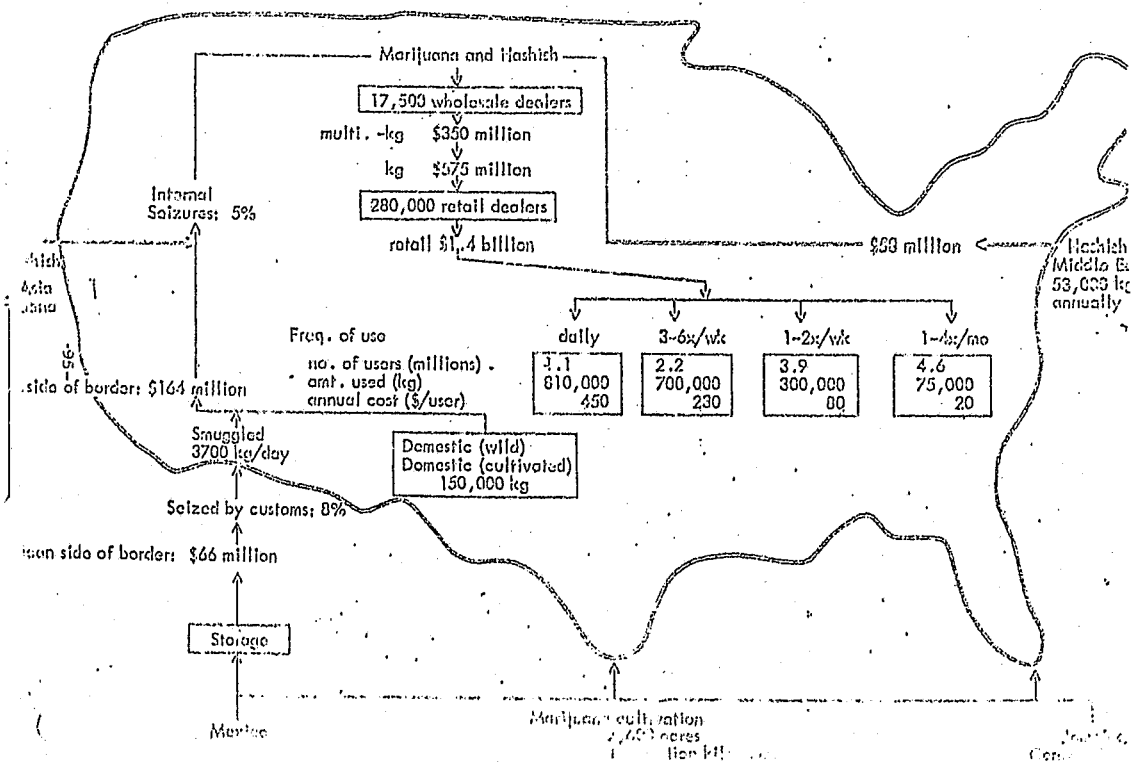

FIGURE 2. MARIJUANA TREND INDICATORS: USE AND CONTROL

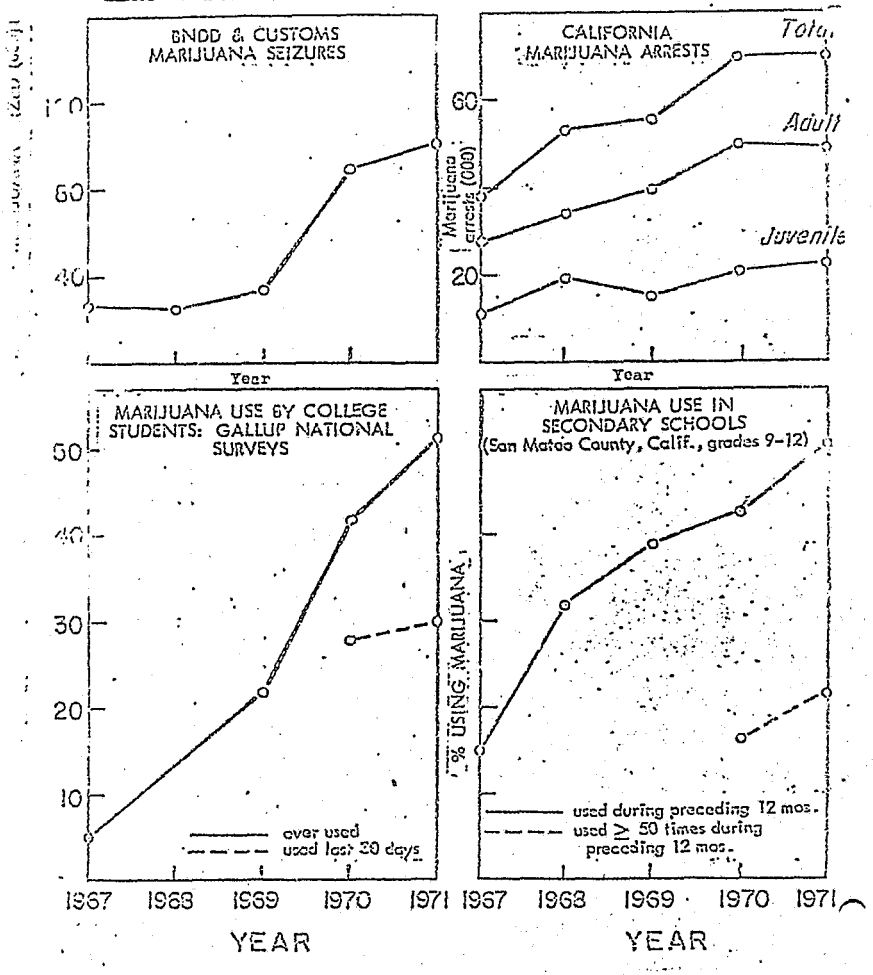

Chapter 8

FISCAL COSTS OF CALIFORNIA MARIJUANA LAW ENFORCEMENT

> "...The fact that nearly one-fifth of all California felony arrests pertain to marijuana charges indicates that marijuana enforcement costs constitute a significant portion of all California law enforcement and correctional expenditures."
>
> --Legislative Analyst A. Alan Post, 1972

Because almost all marijuana offenses are classified at the point of arrest as criminal felonies, it is apparent that the cost to taxpayers is considerable. The Committee attempted to ascertain these fiscal costs by collecting evidence from the State Department of Justice Bureau of Criminal Statistics, the State Health and Welfare Agency (particularly the Department of Corrections), various law enforcement agencies, private research organizations, published state and local budgets, and a number of witnesses who presented information either orally or in writing to the Committee.

The information thus gathered is summarized below; however, as one preliminary study presented to the Committee stated, "Obtaining accurate quantitative estimates about marijuana law enforcement, court and prison activities is just about impossible. Records keeping systems are inadequate, interpretation difficult, and conclusions dangerous."

1. Arrests

Evidence presented to the Committee (See Table 1) shows that in the thirteen-year period 1960-1972, over 400,000 Californians

were arrested on marijuana charges, and almost three-fourths of those arrested were adults. This indicates that marijuana use is not primarily a youthful phenomenon. In 1972, there were 52,027 adult felony marijuana arrests comprising almost 22% of all adult felony arrests in the state, according to information filed through a monthly reporting system to the Bureau of Criminal Statistics. Similarly, the 21,034 juvenile marijuana arrests reported in 1972 were approximately 20% of the 103,347 juvenile major law violation arrests. Adult misdemeanor marijuana arrests, on the other hand, constitute a mere fraction (less than one-half of one percent) of all adult misdemeanor arrests: so small a fraction indeed, that these arrests were not recorded by the bureau for 1972 and had to be estimated, based on previous years' statistics, at approximately 3500. If this estimate is correct, there were 76,561 marijuana arrests in California in 1972.

Los Angeles County annually makes 35 to 40 percent of all marijuana arrests in the State. In 1971 the 26,074 marijuana arrests in Los Angeles were 40.4% of the State total of 64,597, and in 1972 Los Angeles accounted for 27,834 marijuana arrests, or 38.1% of the 73,061 adult felony and juvenile marijuana arrests reported for the State. Most of these arrests, as in all other counties, are made by regular uniformed police officers; according to Los Angeles Police Department Commander Charles Keese, 93% of Los Angeles marijuana arrests in 1973 were made by uniformed field officers.

2. County Law Enforcement Expenditures for Marijuana Arrests

Local police agencies and sheriff's departments make the overwhelming majority of marijuana arrests in the State. The Bureau of Criminal Statistics gave the Committee substantial information on these local arrest costs, based primarily on a 1971 study made by the office of Legislative Analyst A. Alan Post in conjunction with the Bureau. "Based upon scanty available data," it stated, "it was determined that approximately 25% of a police officer's time is devoted to the detection and apprehension of criminals. Therefore, it was concluded that 25% of the county's law enforcement budget is expended on criminal activity. The percentage of total marijuana arrests of the total arrests was computed for each county. This percentage was applied to that activity. Thus, a rough approximation was constructed of what it costs California county law enforcement agencies to effect marijuana arrests."

This method revealed that in 1971, local police and sheriff's departments spent approximately $8.9 million on investigation and arrest of marijuana offenders, an average of $138 per marijuana arrest. Using the same method, county law enforcement expenditures for marijuana arrests in 1972 were calculated for the Committee at approximately $11 million, or $144 per arrest.

Year	Total Calif. Felony and Misdemeanor Arrests	Total Mj. Felony and Misdemeanor Arrests	% Mj. of Total Arr.	Crim. Activity Expenditures For Total Arrests	Crim. Activity Expenditures For Marijuana Arrests	Cost per Mj. Arr.
1971	1,139,121	64,597	6	$148,416,401	$ 8,904,984	$138
1972	1,154,335	76,561	6.6	$167,150,502	$11,031,933	$144

Further cost analyses submitted to the Committee stated that if California Highway Patrol expenditures are added, the cost per arrest in 1971 becomes $166 and the cost per arrest in 1972 becomes $171. Approximately 63% of California Highway Patrol felony arrests in 1972 involved marijuana and other drug arrests.

3. Adult Felony Prosecution

The Committee received a substantial amount of information relative to the fiscal costs of prosecuting adult felony marijuana offenders through the judicial system. However, less information was available on lower court dispositions of adults whose felony charges were reduced to misdemeanors, and very little information was presented on proceedings against juvenile marijuana offenders; consequently neither of these areas were included in the fiscal cost estimates submitted to the Committee.

After an arrest is made, police have a legal obligation to file charges against the person arrested within two days, if not sooner. Of the 52,027 adult felony marijuana arrests in 1972, approximately 896 were transferred to other jurisdictions for prosecution. Of the remaining 51,131 adults arrested, 18% (9204) were released without charges being filed, and 82% (41,927) had complaints filed against them (Crime and Delinquency in California 1972, p. 44).

At this stage Section 17b4 of the California Penal Code allows prosecutors to file misdemeanor complaints on offenses, including marijuana possession, which carry alternate prison-jail sentences.

Section 17b5 of the Penal Code similarly allows lower court judges to adjudicate certain felony level offenses as misdemeanors instead of transferring them to superior courts for trial. Section 17 has been increasingly used in prosecuting first offense marijuana possession cases throughout the State, especially in Los Angeles County. As L.A.P.D. Commander Charles Reese noted in testimony to the Committee, "It's a great one for the District Attorney to say, 'this is not worthy under social attitudes of felony prosecution.'"

Thus in 1972 a total of 21,230 felony marijuana complaints were processed as felonies through California superior courts (8,884 felony filings) or as misdemeanors through the lower courts (12,346 felony filings). This leaves what one witness to the Committee called "a serious lacuna in the disposition information available," i.e. some 20,697 complaints unaccounted for in the Bureau of Criminal Statistics record books. This considerable number of complaints -- 40% of the 41,927 complaints originally filed -- could have been filed as misdemeanors, reduced through plea bargaining, or dropped entirely. Because their disposition is unknown, it is impossible to calculate their cost.

a. Lower Court Prosecution

Of the 12,346 felony complaints prosecuted in the lower criminal courts, 161 were dismissed but subsequently prosecuted in juvenile court or other jurisdictions, leaving 12,185 terminated without subsequent prosecution. Of these, 3875 were dismissed in lower

courts, and 8310 were convicted; 1778 of those convicted had been refiled as misdemeanors or had pled guilty to misdemeanors, while 6,532 were felonies prosecuted as misdemeanors per Section 17 (Adult Prosecution Reference Tables, p. 9).

b. Superior Court Prosecution

Of the 8,884 felony complaints filed in superior courts, 7991 received dispositions in 1972. Of these, 1,057 were dismissed; 394 were acquitted; 1,118 were found guilty; and 5422 pled guilty. Thus, 1,451 (18%) of these defendants were not convicted, while 6540 were convicted of some felony charge (Ibid., pp. 13, 16). About 45% (2,947) of those convicted were given misdemeanor sentences, and the median time from filing date to sentencing date for these 6540 felony defendants convicted in superior court was precisely the same as the median time for all felony defendants in the State, approximately two and half months. (Ibid., pp. 23,28).

However, only 6,271 of these 6,540 were convicted on felony marijuana offenses (possession 4,734; sale 1,248; other 289). An additional 379 adults not originally charged with marijuana violations as their most serious offense, were eventually convicted of marijuana offenses in superior courts in 1972, which brings the superior court total to 6,650 persons convicted. (Ibid., pp. 20, 35, 40)

c. Recapitulation

Combining the 8,310 convicted in lower courts with the 6,650 convicted in superior courts, a total of 14,960 adults were

CONTINUED

18 OF 33

convicted on marijuana law violations in California in 1972. This represents 29% of the 52,027 adults originally arrested on felony marijuana charges.

It is apparent from the foregoing that the most significant influence on reducing the fiscal costs of processing marijuana offenders through the criminal courts has been Section 17 of the Penal Code. Increasing use of Section 17, particularly in Los Angeles County (where the practice increased 11% in 1972, compared with a 2% increase in the rest of the State), has considerably reduced the number of cases bound over to superior court. In 1972 superior court prosecutions "dropped drumatically by 11%," according to the Bureau of Criminal Statistics, "while lower court felony prosecutions rose by over 5%." (Ibid., p. 2)

On the other hand, "the levelling-off of lower court terminations in 1972 may indicate that the use of Penal Code Section 17b5 to dispose of felonies carrying alternative sentences of jail or prison has reached its full potential." (Crime and Delinquency in California 1972, p. 36) If this is true, it may also be true that the use of Section 17 has likewise reached its maximum effectiveness in reducing the fiscal costs of prosecuting marijuana offenders under the present system.

4. Commitments

Of the 14,960 adults convicted on marijuana offenses in 1972, no information was presented to the Committee on the commitments of the 8,310 offenders sentenced in California lower courts, and

consequently these persons are not included in fiscal cost estimates. Information was available, however, on the commitments of offenders convicted in superior courts.

Incarcerated, 2639 = 39.7%
Not incarcerated, 4011 = 60.3%

It may be noted that 76% (5067) of the adults sentenced in superior courts in 1972 were convicted of simple marijuana possession, with probation and probation with jail being the most common sentences for these offenders. It must also be pointed out that 40% (2,639) of the felony defendants convicted in superior courts were incarcerated for some period of time in state prisons, the Youth Authority, or county jails. Several witnesses to the Committee pointed out that county detention facilities, rather than state institutions, bear the brunt of the fiscal costs involved in marijuana law enforcement, in terms of both arrestees

held in local custody prior to trial and those convicted and sentenced in superior courts who are ultimately committed to jail.

A request to the Department of Corrections for information on how many persons were in state penal institutions for marijuana offenses disclosed the following tables showing commitments to the Department of Corrections by various classes of marijuana offenses for the first and second halves of 1972 and the first half of 1973:

COMMITMENTS TO DEPARTMENT OF CORRECTIONS
1972 and First Half of 1973

Source: Communication from Corrections Dept. 3 Jan. 1974

Offense	1972 1st	1972 2nd	1973 1st
MEN	85	76	71

WOMEN	5	4	2
Possession of marijuana	3	2	-
Possession for sale	1	1	2
Sale of marijuana	1	1	-
TOTAL	90	80	73

Thus according to the Department of Corrections, a total of 170 men and women were committed to the Department in 1972. The discrepancy between this information and that provided in the previous chart of 1972 commitments may perhaps be explained by the fact that the previous chart does not include the commitments of those convicted in lower courts on marijuana charges.

The Committee was also told by the Department of Corrections that commitments are listed for statistical purposes on the basis of the most serious (as determined by the severity of the penalty) and that "therefore, it is possible there may be persons not shown in the above tables who are in on multiple commitments, one of which is more serious than the marijuana offense."

Turning for a moment from commitments to prison to release from prison, the Department of Corrections informed the Committee that 317 persons were paroled for the first time in 1972 from a commitment for a marijuana offense. Tables 6A and 6B (see following two pages) show, by men and women, these releases by offense, and the time served before being paroled, broken down between those who were narcotic addicts and those who were not.

The Committee noted from these tables that the median time served by male marijuana offenders in state prison before parole was 34 months, with those convicted of sale serving a median of 37.5 months and those convicted of possession serving a median of two years.

5. Department of Corrections and Youth Authority Cost Estimates

Further information provided to the Committee by the Department of Corrections revealed that as of December 31, 1973, there were 621 felons in state prison whose most serious commitment offense was violation of some law pertaining to marijuana. This represents about 3% of the total prison population of 19,794 on that date. Similarly, there were 858 marijuana offenders on parole as of that date, or approximately 7% of the 12,996 felons on parole. In addition, the Department had in institutions and on parole "several thousands of other persons on civil commitments, etc."

MARIJUANA FELONS IN PRISON AND ON PAROLE
As of December 31, 1973

Source: Communication from Department of Corrections, 13 Feb. 1974

	Total Offenders	Marijuana Offenders			% Marijuana of Total
		Total	Men	Women	
Prison	19,794	621	606	15	3.14
Parole	12,996	858	817	41	6.60
Prison & Parole	32,790	1479	1423	56	4.51

In sum, the Department of Corrections had almost 1500 marijuana felons in prison or on parole at the end of last year, representing about 4½% of their felony workload. In estimating the fiscal costs involved, the Department commented: "Actual cases, both in the institutions and on parole are handled individually according to their needs, so some individuals may have taken a great amount of staff time to resolve various problems while others took relatively little . . . In agreement with the Legislative Analyst, various per capita cost figures are used in accord with circumstances.

"For example, a reduction of one inmate in the population would make virtually no difference in departmental costs, but if you reduced the institution population by 1,500 you might be able to close an entire institution. In any event in terms of the numbers involved in marijuana we would estimate their cost to the Department at approximately $900,000 a year."

An additional request to the State of California Health and Welfare Agency elicited a slightly higher cost estimate for the Department of Corrections, as well as an estimate for the Youth Authority expenditures and manpower involved in processing marijuana law offenders. In a communication to the Committee on March 7, 1974, the Health and Welfare Agency provided the following information:

"The Departments of Health, Corrections, and Youth Authority do not budget their respective narcotic and drug abuse programs by drug or substance but rather by treatment and rehabilitation modalities. While statistics are available for wards and inmates convicted of marijuana law violations, they cannot reflect the true overall extent to which these offenders absorb our resources. The data base for marijuana law-involved clients in Department of Health supervised local programs does not directly capture the sort of information you requested. Thus, the following breakdown represents our best interpolation of available data."

Department	Dollars (%)	Man yrs. (%)
Corrections	$1,085,000 (0.7%)	44.0 (0.5%)
Youth Authority	1,656,000 (2.6%)	31.9 (1.4%)
Rehabilitation	N. A.	N. A.
Employment Development	-0-	-0-
TOTALS	$2,741,000	95.9

6. Fiscal Costs of the Present Criminal Marijuana Laws

Administration of the present criminal marijuana laws permeates the entire State criminal justice system, from uniformed police officers who make the bulk of arrests, to prosecutors and judges who must review every complaint filed to determine whether to adjudicate it in lower or superior court and then must process each case through preliminary hearings, trials, and sentences; to arresting officers who often must appear in court to give evidence, and public defenders who are given numbers of indigents for simple possession; to county jail, CYA, and state prison, parole, probation, and rehabilitation program personnel who must supervise the relatively small percentage of those arrested who are finally convicted of marijuana crimes.

Any responsible attempt to estimate the fiscal costs of marijuana law enforcement must take each stage of the criminal process into account. Then legislators must determine what, if any, effect various legislative changes have had on these fiscal costs over the years. Finally, the potential effect of alternative legislation on these fiscal costs must be considered. The Committee received information on most of these factors from

several witnesses and from a wide variety of published sources.

A careful preliminary study submitted to the Committee (see Appendices) estimates that over $100 million a year has been spent by State and local government agencies since 1970 enforcing marijuana laws. This study reviewed the numbers of marijuana offenders at each stage of the criminal justice process and assigned cost/unit figures based on previous studies and all information currently available, to the numbers of offenders remaining in each stage: arrests, prosecutions, and ultimate commitments. Expenditures of local and State law enforcement agencies; prosecutor, judge, and public defender costs in lower, superior, and appellate courts; and jail, prison, Youth Authority, probation, and parole costs were included.

The lowest estimate calculated for 1972 in this preliminary study was $52 million, which did not include State law enforcement agency costs and various other State expenditures. The highest estimate obtained was $119 million, and intermediary estimates using variations on earlier techniques (modified to account for the fact that California criminal justice agency expenditures rose by 67% from fiscal 1968 to fiscal 1972) were $95 million and $105 million. These estimates included the costs of adult and juvenile marijuana arrests; the costs of prosecuting adult felony marijuana offenders on whom information could be obtained, through the judicial system; and the costs of commitments for adult offenders convicted in superior courts.

However, it was emphasized to the Committee that these estimates must be regarded as tentative and conservative, because they did not include the costs of processing approximately 20,000 adult marijuana arrestees on whom complaints were filed in 1972 but whose court dispositions are not known; nor the costs of commitments to various public agencies of some 8,310 felony marijuana defendants convicted in lower courts; nor the costs of processing juvenile marijuana law offenders through the criminal justice system; nor the costs of diversion and rehabilitation programs; nor peripheral government costs which accrue as a result of the present marijuana laws, such as welfare payments to families of those incarcerated for marijuana law violations.

Because information was not available to estimate the fiscal costs of these components of marijuana law enforcement, the Committee was informed that the figure of $100 million for 1972 is to be considered a minimum calculation: the actual costs to the taxpayer were probably much higher. It was also pointed out that the local law enforcement costs involved in making the initial 76,561 arrests in 1972 were but the tip of the iceberg: the bulk of the fiscal costs occurred at the judicial prosecution and ultimate commitment stages of the criminal process. Thus the local law enforcement expenditures of approximately $144 per arrest in 1972 may be correct, but the disposition costs turn out to be much higher. These appear to be in the neighborhood of $1,200 - $2,800 per complaint filed, depending on whether the $52 million figure

or the $119 million figure is applied to the 41,927 complaints filed against adults in 1972. Without further information the Committee was unable to obtain more precise estimates.

7. An Overview of Marijuana Enforcement Costs, 1960-1972

In an attempt to discern trends over a thirteen-year period, the Committee considered previous marijuana enforcement cost estimates in relation to the various legislative changes which have influenced these costs since 1960.

In 1968 Stanford law student Lawrence Calof wrote the definitive early study of California marijuana enforcement costs. Taking the 1966 marijuana arrest and disposition data and applying fiscal 1967-1968 budget figures, Calof arrived at a "hybrid" estimate of $29,783,418.56 for the 18,243 adult and juvenile marijuana arrests and the dispositions of 14,209 adult felony offenders through each stage of adjudication and commitment. This averages out to approximately $1,630 per arrest, or $2,100 per adult disposition.

Stanford law professor John Kaplan used the Calof method to determine the 1968 enforcement costs in his book Marijuana: The New Prohibition (1970). He arrived at a figure of about $72 million for adult felony dispositions.

U. C. L. A. researcher William McGlothlin, using a more conservative variation of the Calof method, estimated approximately $43.1 million for the cost of 1969 marijuana dispositions. McGlothlin excluded certain costs which Calof had included

(appeals, State Bureau of Narcotics, motions to suppress evidence) and used significantly lower cost/unit estimates for various commitment costs.

Tod H. Mikuriya, M.D., a consultant to the National Commission on Marihuana and Drug Abuse, estimated 1970 marijuana enforcement costs at $106 million. This figure was obtained by multiplying Calof's estimate by the percentage increase in marijuana arrests in 1970 over 1966.

Perhaps not coincidentally, an extrapolation of the Bureau of Criminal Statistics/Legislative Analyst method of determining arrest costs for 1971 gives approximately the same $106 million figure obtained for 1970. The cost estimate thus remains identical even though the number of marijuana arrests in 1971 actually declined by 3,681 from the previous year.

Between 1961 and 1968, unlawful simple possession of marijuana in California was punishable by imprisonment in State prison for one to ten years, and the offender could not be released until at least one year had been served. Possession of marijuana for sale drew two to ten years, and sale of marijuana was punished by imprisonment from five years to life. These rigorous mandatory minimum penalties began to influence enforcement costs significantly, especially at the commitments end of the process. Calof's average of $1,630 per arrest may be taken as representative of the fiscal costs involved in processing marijuana felony cases during this period.

In 1968, the penalty for unlawful simple possession of marijuana on first offense was revised. Where no prior convictions were found, judges were given discretion to punish marijuana possession as either a misdemeanor (up to one year in county jail) or as a felony (one to ten years in State prison). As judges began to use this option in 1969, the cost of commitments to State institutions (felony sentences) declined sharply, as evidenced in McGlothlin's cost estimate.

However, the number of individuals arrested and processed through the criminal court and correctional system increased so drastically from 1966 to 1970 that costs once again began to soar.

As noted elsewhere in this report, perhaps the most significant influence on reducing marijuana disposition costs since November 1969 has been the revision of Section 17 of the Penal Code which allows prosecutors and judges to adjudicate first-offense marijuana possession cases as misdemeanors in the lower courts. This primarily affected the costs in the middle of the criminal justice process, especially reducing superior court costs. But as superior courts handle fewer marijuana cases, lower courts handle more. With the number of marijuana arrests and dispositions still increasing, it appears that the effectiveness of Section 17 in reducing fiscal costs is beginning to wane. Like other legislative attempts to mitigate the costs, it appears that Section 17 has succeeded temporarily but may be overcome by the numbers of marijuana offenders annually thrust through the

criminal justice system. The apparent levelling-off of enforcement costs at $100 million might as easily be a result of not having information available on the dispositions of 49% of the complaints filed in 1972, as of hypothetical savings from increasing use of Section 17.

One clear fact emerges from the weight of evidence presented to the Committee: despite all attempts to reduce them, the fiscal costs of marijuana law enforcement throughout the criminal justice system continue to increase, slightly or suddenly, year after year. This is graphically depicted in the following chart summarizing the evidence presented to the Committee on the fiscal costs of enforcing the California marijuana laws since 1960:

Year	Marijuana Arrests	Source or Cost/Unit	Cost of Enforcement	Relevant Laws
1960	5,155	Calof-	$ 8,402,650	All arrests,
1961	3,794	$1,630	6,184,220	Prosecution,
1962	3,743	"	6,101,090	Commitments
1963	5,518	"	8,994,340	handled as
1964	7,560	"	12,322,800	Felonies.
1965	10,002	"	16,303,260	
1966	18,243	"	29,147,418	Average cost
1967	37,514	"	61,147,820	of marijuana
1968	50,327	Kaplan	72,074,860	dispositions per arrest: $1,630
1969	55,176	McGlothlin	43,100,000	"Wobbler" &
1970	69,021	Mikuriya	106,028,968	Section 17:
1971	64,597	Extrapola.	106,859,808	Average cost
1972	76,561	Aldrich	100,000,000	per arrest: $1,340
TOTAL	407,211	$1,417.70	$577,303,234	$44,407,941 yearly

Thus according to the best available information, classification of marijuana as a criminal offense has cost the taxpayers of California about $577 million to arrest, prosecute, and punish 400,000 people since 1960. Over the thirteen-year span (1960-1972 inclusive), the fiscal costs of California marijuana law enforcement have averaged $44,407,941 a year.

When all marijuana offenses were disposed of as felonies, the cost per arrest was about $1,630. The Wobbler bill in 1968 and the modification of Section 17 Penal Code in 1969 had the effect of reducing the cost per arrest about $290 because dispositions could be handled as misdemeanors in first offense possession cases. Nevertheless, the costs of enforcing the marijuana laws in California continue to rise as the number of arrests continue to grow. Cumulatively, unless present legislation is further modified, California can expect to continue adding $100 million each year to the almost $600 million already spent.

Chapter 9

LEGISLATIVE HISTORY AND HEARINGS ON SENATE RESOLUTION 401

On Wednesday, 15 April 1973, Senate Democratic Leader George Moscone appeared before the Senate Rules Committee to ask approval of SR 23.

Witnesses invited to testify in favor of SR 23 included:

1. J. Thomas Ungerleider, M.D., UCLA Neuropsychiatric Institute and Member, National Commission on Marijuana and Drug Abuse (1971-1973).

2. Mrs. Gloria Coodley, Chairman, Narcotics Committee, 1972, Los Angeles County Grand Jury and Member, Narcotics and Dangerous Drugs Commission of Los Angeles County.

3. Hank Gordon, Chairman, Narcotics and Dangerous Drugs Commission of Los Angeles County.

4. Richard Lance Christie, Research Coordinator, UCLA Longitudinal Marijuana Study.

5. Gordon S. Brownell, Member, White House Staff (1969) and Assistant to the Chairman, 1970 Re-election Campaign of Governor Reagan. Registered Legislative Advocate, AMORPHIA, a non-profit drug research, education and legal reform organization.

6. Harry V. Lehmann, Statewide Chairman, College Program, 1972, Committee to Re-elect the President and third-year law student, University of San Francisco School of Law.

7. Robert Ashford, Attorney, California Marijuana Initiative.

Senator Moscone submitted Senate Resolution No. 23 to consider what alternative laws and regulations should be placed on marijuana use in the event it should become legalized and to study regulations and models of control for legalized personal use of marijuana.

Initially, Senate Resolution No. 23 was accepted in principle,

but was held in Committee because the Select Committee's intent and purpose was not clearly and specifically spelled out.

The Resolution was then rewritten by Senator Moscone and was approved by the Senate Rules Committee as Senate Rules Committee Resolution No. 401 on May 16, 1973.

The Resolution proposed the study and analysis of information relating to the administration and effect of the laws regarding the control of the use and availability of marijuana in California.

Senator Moscone, Chairman of the Select Committee on the Control of Marijuana, asked Senators Anthony Beilenson and Craig Biddle and they agreed to serve on the Committee. Senator H. L. Richardson asked and was put on the Committee. On April 24, 1974, Senator Richardson resigned from the Committee and Senate Rules appointed Senator Milton Marks as his replacement.

Three hearings were held to carry out the purpose of the Resolution. The first hearing was held on Friday, November 10, 1973, in Los Angeles. Michael R. Aldrich, Ph.D., Research Director, AMORPHIA; Louis Bozzetti, M.D., Medical Director U.C. San Diego Psychiatric Clinic; Art Linkletter; Richard Lance Christie, Ph.D., Research Director, UCLA Longitudinal Marijuana Study; D. C. Parks, President, Addictive Drugs Educational Foundation; Charles D. Reese, Commander, Bureau of Special Investigations, Los Angeles Police Department; and A. E. LeBas, Chief, Civil Division, Los Angeles Sheriff's Department, gave testimony on various aspects of marijuana.

The second hearing was held in Sacramento on January 10, 1974. Testimony was taken from Tod H. Mikuriya, M.D., Psychiatrist,

Berkeley, California, Consultant to the National Commission on Marijuana and Drug Abuse and former director of marijuana research at the National Institute of Mental Health, who appeared at the behest of the Committee; and Hardin Jones, Ph.D., Professor of Medical Physics, Professor of Physiology, UC Berkeley; and D. Harvey Powelson, M.D., Donner Laboratory, Donner Pavillion, UC Berkeley, who appeared at the special request of Senator Richardson.

The third hearing was again held in Sacramento on February 14, 1974. Testimony was taken from J. Thomas Ungerleider, M.D., Associate Professor of Psychiatry, UCLA Medical Center, and Member, President's National Commission on Marijuana and Drug Abuse; Edward M. Brecher, author of Licit and Illicit Drugs, Consumers' Union Report; Gordon Brownell, President, AMORPHIA; and Michael R. Aldrich, Research Director, AMORPHIA.

[From the Christian Science Monitor, Feb. 18, 1975]

California Marihuana Ease-Up?

(By Curtis J. Sitomer)

Los Angeles.—Encouraged by a "successful" experiment in neighboring Oregon, California seems on the verge of liberalizing its marihuana law.

Legislation which, in effect, would reduce a charge of possession of marihuana from a felony to a misdemeanor is moving with surprising ease through committees and is heading for debate on the open floor.

If it passes the Legislature, it likely will be signed by Democratic Gov. Edmund G. Brown, Jr. Mr. Brown, who took office last month, favors lower penalties for possession and use (as opposed to sale) of marihuana. His predecessor, Republican Ronald Reagan, vigorously opposed any change in the law which now gives the courts jurisdiction to decide whether a particular "use" offense is a misdemeanor or a felony.

In 1972, a hotly debated ballot measure to decriminalize marihuana possession here was soundly defeated at the polls. And efforts by the Legislature to accomplish similar laws have since failed—or been vetoed by Mr. Reagan.

Why the possible turnaround now?

Observers say continued pressure from the National Organization for Reform of Marihuana Laws (NORML) and similar groups have gained influence in what now is a heavily Democratic and "liberally" oriented Legislature.

Also, reports on the lack of negative effects following Oregon's action in October, 1973, to abolish criminal penalties for marihuana use have had an impact in California. Oregon was the first to take such a radical stance. Recent citizen surveys there indicate that more than 50 percent still support the more liberal law—and 26 percent are reported to advocate "legalization" of sale and possession of small amounts of the drug.

However, what is still not clear is whether reduced penalties have increased use of marihuana—particularly among young people.

This has been a major dispute between backers and opponents of proposed legislation here. Also contested are the harmful physical effects marihuana may have on users.

Proponents argue: the drug has become part of the American "lifestyle"; it is widely used (regularly by as many as 8 million people); it is not physically harmful nor does it lead to use of "hard" drugs.

But valid data is still sketchy—and many state and national studies are contradictory.

For example, in 1972, the National Commission on Marihuana and Drug Abuse—after a two-year probe—concluded that criminal penalties for marihuana use should be lifted.

However, late last year, a U.S. Department of Health, Education, and Welfare report indicated that the drug has "serious implications" for users' physical and psychological health.

Advocates of abolishing or lightening criminal penalties for use point to hazards of smoking and alcohol use—which carry no strict penalties for participants.

And some surveys indicate that parents continue to oppose marihuana use by their youngsters; at the same time, many oppose jail sentences or stiff fines for this practice.

Among other things, the proposed California law would make possession of less than one ounce of marihuana a misdemeanor—carrying a "citation" instead of arrest—and resulting in a maximum $100 fine; assess a $500 fine or six months in jail for possession of more than one ounce; levy a misdemeanor penalty of no more than $100 for giving less than one ounce to somebody else.

A state law here making it a felony to sell or grow marihuana or possess the drug with the intention to sell it would continue to stand.

[From the Washington Star, Feb. 22, 1975]

Laws That Don't Work

(By Raymond Price)*

Whether California, in addition to being the most populous state, is also the pot-usingest can only be guessed at. But there's a good chance that it is. Thus it should be of considerable national interest that a bill substantially easing marihuana penalties is currently making its way through the California legisltaure, and that it recently cleared what was expected to be its toughest hurdle, the Judiciary committee of the state Senate.

The California bill stops short of outright decriminalization, much less legalization. But it's a large step in that direction, particularly for a state whose marihuana penalties are now among the harshest in the nation.

Under the proposed California law, possession of less than an ounce would be a misdemeanor, but the offender would be cited, as for a traffic offense, rather than arrested, with a maximum penalty of a $100 fine. In a complex set of other provisions, giving less than an ounce to a friend would be treated the same as possession of less than an ounce; possession of more than an ounce would be a regular misdemeanor, with a maximum six months in jail and $500 fine; growing or selling, or possession with intent to sell, would remain a felony. Personal use convictions would be purged from a person's record after two years.

As a political footnote, one sad irony was that the measure cleared the Judiciary committee on a straight party-line vote: Republican members solidly against the easing. Democratic members solidly in favor. It's high time more Republicans began recognizing that their own [illegible] against statist intrusion on personal liberties ought to apply not on[illegible] excesses of compulsory busing, but also to the right of personal choice between the uncertain evils of pot and the well-documented evils of demon rum. Unless they do, they can hardly expect to be taken seriously by the post-martini generation.

The issue of marihuana laws is of vital and intensely personal concern to millions of young Americans and it deserves a constant drum-beat of attention until the laws are changed.

How many parents have seen their children's lives ruined—not by pot, but by a pot bust? It's not the marihuana that does the harm in these cases, it's the law.

All of us have friends or relatives who use pot. Do we really want them dragged through the courts, disgraced, thrown in jail? As long as we keep the present laws on the books we're saying one of two things; either that we do, or else that we're hyprocrites who want the penalty for someone else's friends and relatives but not for our own.

The proper use of the criminal law is to protect one citizen from abuse by another, not to let one citizen tyrannize over another. Our present marihuana laws are tyranny, not protection. Scores of thousands of young lives are severely scarred, for nothing. Millions of young Americans are placed outside the law, branded as criminals, taught to fear rather than respect the law—and for what? For choosing the risk, to themselves alone, of whatever limited damage marihuana use might entail. By this logic, mountain-climbing ought to be a misdemeanor, playing professional hockey a felony and over-eating punishable by 30 years.

Marihuana use may be harmful, as some scientific studies indicate. I don't know, and I don't use it. But so are a lot of other pleasurable activities harmful. As I write this, I'm putting on a pipe and about to have a drink before dinner—and if an agent of the government, wrapped in the majesty of the law, were to march in and try to haul me off to the pokey for doing so, I'd either throw him out on his ear or start a rebellion.

That, I think, is how quite a few millions of young Americans feel about the present pot laws, and with good reason. Those laws don't work. The ones they hurt most are those they're meant to help, and they have no place in a society that prides itself on devotion to individual freedom and to the civilizing leaven of mutual tolerance and mutual respect. California, like Oregon before it, at least seems headed in the right direction.

POT AND THE LAW

State Sen. George R. Moscone's proposal to liberalize California's marihuana law is a necessary and important step toward addressing this controversial issue in a more sensible and evenhanded way. We support the adoption of SB 95.

Under current law, pot offenses are treated as a misdemeanor or a felony, depending on the court's discretion. Virtually all minor offenses are treated as misdemeanors, but the defendants often wind up with felony arrest and conviction records.

The original intent of the Moscone bill was to follow 17 months ago. Possession of less than an ounce there is not a crime, but is a civil "violation," and a defendant pays a maximum $100 fine and has no arrest record.

Oregon's experience with the nation's most relaxed pot law may be instructive. Officials there do not report a significant increase in marihuana use or a significant unclogging of the criminal justice system.

Moscone, a San Francisco Democrat, says "practical and political reasons" resulted in a revision of his original bill. Decriminalization is not an idea whose time has come in the California Legislature. But, happily, political pragmatism in this instance is not without redeeming social value.

Under SB 95, the possession of less than an ounce of marihuana would be a misdemeanor. It would be a "citable arrest" similar to a parking ticket, and would carry a maximum $100 fine. The defendant would have a criminal record, but it would be purged automatically after two years. And past records could be purged with court approval.

The record purging is the most significant element of the legislation. It was introduced as part of the compromise in which Moscone traded off the possession of less than three ounces of marihuana as a civil infraction.

By including the purging of records, the legislation begins to address the crux of the marihuana controversy—that is, whether the use of pot should be a crime, and whether a marihuana user should be marked for life as a criminal.

What the bill says, in effect, is that the use of marihuana is a crime—but only for two years. Defendants would not have to endure the lifetime stigma of a record. That seems a most humane and progressive approach.

At the same time, while the legislation proposes to reduce the penalties for using marihuana, it does not address or answer the question of whether there should be penalties at all. The legislation would not sanction the use of pot, but it would not severely punish pot users.

Any move to legalize marihuana would be premature at this time. But there can be little doubt that a serious move in this direction will be forthcoming before too long, and that it must receive honest consideration.

The most important question in determining public policy is whether marihuana should be regarded in a health rather than a criminal context. The sentiment in Sacramento is that the Moscone bill goes as far as the Legislature will go now.

SB 95 is a step forward. Let's enact it and see how it works.

[From the Los Angeles Times, July 10, 1975]

BROWN SIGNS BILL TO EASE "POT" PENALTIES

(By Jerry Gillam)

SACRAMENTO.—Gov. Brown Wednesday night signed into law a controversial bill sharply reducing potential penalties for smoking marihuana in California.

The action came about 8:45 p.m., little more than three hours before a midnight deadline for the governor to sign or veto the bill, or let it become law without his signature.

The legislation calls for a traffic-style citation and a maximum fine of $100 for possession of one ounce of marihuana or less.

One ounce of marihuana is enough to make about 50 thin cigarettes.

Possession of more than an ounce of marihuana would be punishable by six months in county jail, a $500 fine or both.

The penalty for possession of an ounce or less with three or more prior convictions in two years would be mandatory referral to a marihuana education and rehabilitation program.

Records of persons arrested or convicted for possession of marihuana would have to be purged by law enforcement agencies after two years.

Persons caught with any amount of marihuana presently can be charged with either a misdemeanor or a felony with a maximum penalty of 10 years in state prison.

The lesser penalties would become effective Jan. 1, 1976.

In a brief statement, Brown warned the new law doesn't decriminalize possession of marihuana as many suppose.

"Severe penalties still remain for possession of even less than one ounce of marihuana by minors who may be made wards of the court and incarcerated," the governor said.

"The sale to an adult of any amount of marihuana, even less than one ounce, remains punishable by a term of five years to life; and giving or selling to a minor any amount whatsoever remains punishable by a term of 10 years to life.

"Cultivation of marihuana in any amount remains punishable by a term of one year to life. Finally, possession of even less than one ounce by an adult is still a misdemeanor crime and the defendant is subject to court proceedings and a fine of $100."

Authored by Sen. George Moscone (D-San Francisco), the bill was narrowly approved by the Senate and the Assembly.

Proponents argued that existing penalties are too harsh and should be reduced to fit the crime, freeing law enforcement officers for more important work.

Opponents replied that reducing the penalties would encourage increased use of marihuana, particularly by young people, and lead to its legalization.

[From the San Francisco Examiner and Chronicle, July 20, 1975]

THE POLITICS OF MARIHUANA

(By Ira Eisenberg)

It was a chilly spring night in San Francisco, and the National Organization for the Reform of Marihuana Laws (NORML) was throwing a victory party for itself and State Senator George Moscone (D-San Francisco), author of SB95, a bill aimed at reducing the legal penalty for simple possession of marihuana.

The date was May 3rd, and the place was the elegant Victorian law offices of two prominent "dope lawyers," Michael Stepanian and Terence Hallinan, just a few blocks from City Hall. Some 400 people paid between five and ten dollars a head to join the celebration, although in point of fact, SB95 had still not cleared the Assembly.

Yet the question of ultimate victory seemed academic. The Moscone bill had already passed the more conservative Senate, the Democrats held 55 of the 80 seats in the Assembly, Assembly Speaker Leo McCarthy was confidently predicting its passage, and Governor Jerry Brown was committed to signing the bill into law.

A local band, Kindred Souls, held forth from the living room, and a smattering of the Bay Area's "high" society jammed the gilded, high-ceilinged rooms. Dr. Barry Ramer, author of the city's methadone program, danced with Beryl Feinglass of the Division of Special Programs. Eugene Schoenfeld, M.D. (Dr. Hip) mingled near the bar. Anne Daley, San Francisco Sheriff Richard Hongisto's secretary, picked over the tables loaded with "hors d'oeuvres from the Normandy Province of France." And, of course, there were the politicans: Senator Moscone, Senator Jerry Smith (D-San Jose), Senator Milton Marks (R-San Francisco), Assemblyman John Foran (D-San Francisco) and John Molinari of the San Francisco Board of Supervisors—all smiles and handshakes.

The booze flowed freely from plastic cups at fifty cents a hit, and a whiff of the weed could occasionally be detected in the upstairs bedrooms. But the crowd mainly was getting off on the prospect of California taking a first step toward decriminalizing marihuana.

Not that SB95 was such a big step. It would reduce the penalty of possessing an ounce or less of weed from a felony to a misdemeanor. Dealing would still be

a felony, as would growing your own. Simple possession would remain a "crime," but SB95 would mean an end to personal possession busts in California. A user, if caught, would be issued a citation, and if convicted would pay a fine of no more than $100. Even hard-nosed Evelle Younger, California's Republican Attorney General and the only member of the GOP in the state's administrative hierarchy to survive the 1974 elections, was willing to go that far.

But Gordon Brownell, the young Republican who is the West Coast coordinator for NORML, was visibly uneasy. He had fully expected SB95 to have passed the Assembly by this evening, and yes, the celebration of a victory was a bit premature. But the majority leaders in the lower house were confident they had enough votes. It was just a matter of timing, he said.

What Brownell did not share with his guests that night were the rumors out of Sacramento that hard-line Republicans were maneuvering for a caucus vote on SB95. If they succeeded, the Democrats would be deprived of a half dozen or so Republican votes they were counting on.

Five days later, Assembly Republicans caucused in Sacramento. Dixon Arnett, the Republican whip from Redwood City, Caucus Chairman Frank Murphy of Monterey, and Republican floor leader Bob Beverly of Redondo Beach opposed making SB95 a partisan issue. But John Briggs, a conservative from Orange County who missed becoming caucus chairman last January by a single vote, argued that marihuana reform was an issue they could defeat the Democrats on. If they took a caucus position, they could stop the majority cold.

A majority of Briggs' colleagues saw the political cunning in what he proposed. The Democrats, they knew, counted on some Republican votes to pass SB95. If the unit rule were applied and the Democrats thus denied these Republican votes, they could rob the Democrats of victory and humiliate them before their many constituents who favored marihuana decriminalization. Or they could force the Democrats to commit the votes of freshmen newly elected from conservative, normally Republican districts, and then use the marihuana issue to regain these districts in 1976, when the entire Assembly stands for re-election and the Republicans hope to regain some of what they lost in last year's post-Watergate debacle.

In defiance of their own elected leaders, the Assembly Republicans voted to bind all of their members to either vote no, or to abstain from voting on SB85.

That same morning, the Assembly voted passage of another and possibly more controversial bill, San Francisco Assemblyman Willie Brown's so-called "consenting adult" bill, which decriminalized homosexuality and other forms of nonstandard sex when practiced by consenting adults. But by this time the Democrats knew they were in deep trouble on the marihuana bill.

Seven Republicans had voted for Willie Brown's sex bill, and without them it would have failed. Now, on the very same day, they were being asked to loosen the marihuana laws. There were loud grumblings from conservatives about the impending downfall of society. And Assembly Democrats, some of them freshmen from heavily conservative, Southern California districts, were scurrying to Speaker McCarthy's office in panic. How, they asked, could they go on record in favor of marihuana reform and face their right-wing constituents next year?

Speaker McCarthy's answer was that of course, they could not risk voting on SB95. It was important that the party preserve its in-roads into normally Republican territory, and protect the weight of its majority. McCarthy claimed he could pass the marihuana bill without committing those vulnerable freshmen votes.

But events proved the Speaker wrong. In what was nothing less than a stunning defeat, the Assembly Democrats failed to muster the 41 votes required to pass SB95. The roll call was 37–36, with 14 Democrats opposing the bill and no Republicans supporting it.

Sen. Moscone was openly bitter at the defeat, accusing the Assembly of ignoring the merits of his bill in favor of purely political considerations. He even suggested dropping any further efforts to pass SB95. But Assemblyman Alan Sieroty (D-Beverly Hills), the bill's floor leader in the lower chamber, won approval for a reconsideration vote "in due course."

Sen. Moscone predicted that SB95 "absolutely" would pass the Assembly, but would not say when.

The problem was that the Democrats just weren't sure how many firm votes they had, and were holding out as long as possible. Throughout May and most of June, nobody in Sacramento could count 41 "yes" votes for SB95. So the big

question became, will Speaker Leo McCarthy pressure some freshmen into risking defeat at the polls in order to pass SB95?

The Speaker was unavailable for direct comment following the May 8th defeat. But Jack Johnson, his press aide, didn't believe SB95 was "that important" a piece of legislation. He also quoted McCarthy as believing that "we can get the bill out without those freshmen votes."

The Republicans, said Johnson, "think it's good politics to force freshmen Democrats to vote on the marihuana bill, then attack them for it in their home districts."

Consider Bill McVittie. He got elected down in San Bernardino County by only a thousand votes. It's the first time a Democrat has represented this district, which is heavily impacted with Mormons and Seventh-Day Adventists. Presumably, if McVittie voted for SB95, he'd be voting himself out of office.

"If freshman votes are necessary to pass SB95, they will be used," Johnson promised. "But why hang them out to dry?"

Sen. Moscone professed continued confidence in Assembly Speaker McCarthy's commitment to his marihuana reform bill. After all, Moscone did stay out of the long and bitter fight between McCarthy and Assemblyman Willie Brown for the speaker's job. And McCarthy realizes how important passage of SB95 is to Moscone, who wants to be Mayor of San Francisco. But some of the senator's key aides felt the Speaker "didn't do his homework" the first time around, and that McCarthy's commitment to SB95 was "lukewarm" at best.

Meanwhile, Gordon Brownell of NORML tried to keep the pressure on from his tiny office overlooking Union Street. With an autographed photo of Ronald Reagan staring down at him from the wall above his desk (he worked for Reagan in 1970), the 30 year old former member of the pre-Watergate Nixon White House churned out "Urgent—Act Today!" appeals to NORML members, who were asked to write letters to Speaker McCarthy and wavering Assembly Democrats demanding action on SB95. But he was clearly discouraged.

From where Brownell sat, SB95 was clearly "not a priority issue" with the Democrats.

"I'm very apprehensive about its ability to pass on reconsideration," said Brownell, who has been down the marihuana-reform-through-legislation road several times before. He didn't believe Assembly Speaker McCarthy had any real intention of committing freshmen votes from unsafe districts. "He considers them untouchables," said Brownell. "They must not vote on SB95. Their political careers are more important than the 106,000 people who will be arrested for marihuana possession in California next year if SB95 doesn't pass."

That was in late May. On June 24th, just days before the Legislature was due to recess, the Democrats called up the marihuana decriminalization bill on reconsideration.

Before a packed gallery, Assemblyman Willie Brown waved a hand-rolled cigarette and demanded that the Assembly pass SB95. "It is time the criminal justice system stops assuming you are a big drug pusher if you possess one, two or three joints," Brown said.

"It's quite possible that in 1976, your platform will be 'Grass, Gays and Godlessness,'" growled Assemblyman John Briggs (R-Fullerton), who had hatched the unit rule strategy that stopped the majority May 8th. After the laughter from the gallery subsided, the Democrats lined up behind SB95 and passed the marihuana decriminalization bill by a vote of 42–34—one more vote than was needed for victory.

Afterward, Assembly Speaker McCarthy accepted credit for the bill's passage, and chided those who doubted him.

Yes, the Speaker admits, he did persuade certain freshmen not to vote the first time around. But that was because he knew he had enough "safe" votes to pass SB95 without falling into Briggs' trap of exposing vulnerable freshmen to attack in their districts. Those who doubted him "just don't know the Assembly that well," says McCarthy.

Indeed, there were some additional "safe" democratic votes for SB95 the second time around. Assemblyman John Knox of Richmond was back from Europe to cast his vote. Long Beach Democrat Fred Chel, who didn't vote on May 8th, and Bill Lockyer of San Leandro, who first supported, then opposed SB95 the first time, also were counted in the "yes" column. But they only brought the count to 40 votes in favor, and 41 were needed to pass.

According to Gordon Brownell the real profiles in courage on SB95 were drawn by freshmen Democrats Floyd Mori of Pleasanton, and Richard Robinson of Santa Ana.

Assemblyman Mori, a Mormon who strongly opposes the use of marihuana or any other drug, voted "no" on SB95 the first time around. But on reconsideration he cast the crucial 41st vote in favor of decriminalization. To him it was "a question of the efficacy of legislating what is good." In a three page statement to his constituents, Mori said the use of marihuana does not warrant a jail term, and that the real answer to drug abuse was for parents and the rest of us to "teach correct principles."

Assemblyman Richard Robinson was the only "yes" vote from Orange County. He had voted "no" on May 8th, and even on reconsideration, Speaker McCarthy urged Robinson not to vote for the bill. But the freshman Democrat said his vote was a matter of conscience, even if SB95 could have passed without him.

"McCarthy delivered. He's a man of his word," says Gordon Brownell, flushed with a victory that was years in the making.

Moscone also praises the leadership of Assemblyman Speaker McCarthy: "He was ready to pull all the stops," even though he got "a deluge of heat from individuals and the press" after the May 8th vote.

Moscone credits NORML's Gordon Brownell with convincing the Speaker and key Assembly Democrats that marihuana reform was worth fighting for.

In the end, Moscone said, the fight over SB95 strengthened the Democratic majority in the Legislature. "Most freshmen in the Assembly hadn't been exposed to controversy," he points out. "The experience gave them some mettle."

There are a few rumblings on the right. Los Angeles Police Chief Ed Davis, who revels in his Blue Meanie reputation, is calling for an initiative campaign to repeal SB95. And the Republicans will no doubt try to make marihuana a campaign issue next year.

In any event, on New Year's Day, 1976, the simple possession of marihuana will cease to be a felony in California for the first time since 1915. The state will then join Alaska, Maine, Oregon and Colorado in what has become a growing movement to repeal marihuana prohibition throughout the United States.

[From the Los Angeles Times, July 28, 1975]

MOVE TO EASE "POT" LAWS GAINS FORCE

(By Tendayi Kumbula)

When Gov. Brown signed the state's controversial new marihuana law earlier this month, California joined a small but growing group of states beginning to reduce the penalties for private use of the drug.

So far legislatures in five states—Oregon in 1973 and Alaska, California, Colorado and Maine this year—have decriminalized the possession of small amounts of marihuana for personal use.

In these states, possession of small amounts of the drug is treated pretty much as a traffic citation with fines but no jail time and often no criminal record.

However, possession of large amounts and commercial trafficking are still subject to stern criminal sanctions.

Throughout the country, there is unprecedented legislative and judicial movement at both state and federal levels against the heavy penalties imposed for violations of marihuana laws.

This year alone, bills calling for reduced marihuana penalties were introduced in the legislatures of 25 states and the city council of the District of Columbia, often with strong bipartisan support.

In congress, both the House and the Senate have bipartisan marihuana bills pending.

Even the U.S. Justice Department, which previously backed the retention of strong marihuana laws, backed off this year, saying "at the moment" Atty. Gen. Edward H. Levi does not have a formal position on the marihuana issue.

And, according to some sources, a special 15-member task force of the White House Domestic Council that has been studying the issue is reportedly leaning towards decriminalization.

These sources said that when the report is released, probably in September, the task force probably will urge President Ford to support changes in marihuana laws.

Only among some law enforcement officials, including Los Angeles Police Chief Edward M. Davis and Los Angeles County Sheriff Peter J.Pitchess, and in parts of the Midwest and the South is opposition to revising marihuana penalties still unrelenting.

Yet even in the South during the current legislative session marihuana reform bills were introduced (though subsequently defeated) in the legislatures of Florida, Georgia, Tennessee and Texas.

The proponents of reform have also been bolstered by two recent landmark decisions striking down some marihuana laws in Alaska and Ohio.

In May, in a unanimous decision, the Alaska Supreme Court said possession of small amounts of marihuana in the home for personal use was protected under both federal and state constitutional provisions relating to the right of privacy.

It was the first such ruling by a state supreme court.

Less than three weeks ago, the federal 6th Circuit Court of Appeals struck down Ohio's penalties for dealing in marihuana. The laws, which carried jail terms of 20 to 40 years for marihuana trafficking, were judged cruel and unusual punishment by the court.

James M. Maddican Jr., a spokesman for the Ohio state attorney general, said the state had asked that the decision be stayed, and had served notice of its intention to appeal to the U.S. Supreme Court for what would be a definitive ruling on whether some marihuana laws constitute cruel and unusual punishment.

One legal challenge that is pending was filed in October, 1973, in federal court in the District of Columbia by former Atty. Gen. Ramsey Clark. The action, filed on behalf of the National Organization for the Reform of Marihuana Laws (NORML), challenges the constitutionality of the nation's marihuana laws.

Despite the advent of California's marihuana law, Gordon Brownell, West Coast coordinator for NORML and the state's only registered marihuana lobbyist, said his group is considering a legal attempt to have all California marihuana laws voided.

One area being studied, he said, is whether the right of privacy guarantee, which also is contained in California's Constitution, could be used as the springboard for a legal challenge as it was in Alaska.

"We feel that if somebody wants to smoke pot privately that should not be a concern of the state. There is no compelling state interest in that," he said.

"We also feel that the ounce limitations that have been imposed by the decriminalizing states are arbitrary. People who drink wine or smoke cigarettes are not subject to the same limitations. They often have more cigarettes or more wine than they can use at any one time."

Brownell said there should be no ounce limitation on possession of marihuana for personal use, and added: "We are planning to bring a number of legal challenges to the pot laws across the country."

Judges, Brownell argued, will "address themselves to the issues involved, such as right of privacy and cruel and unusual punishment, because the courts are much more objective. They are not subject to the political pressures and partisan considerations that often get in the way of legislators."

By and large, the marihuana reform forces are euphoric over their achievements the last year. Keith Stroup, executive director of the Washington-based NORML said:

"We consider that we have broken the logjam on the state level. We think that another dozen or so states will change their marihuana laws in 1976. The next step for use now is Congress."

Stroup said California's enactment of a marihuana reform bill probably would tip the scales in favor of revision in some of the wavering states.

"California is very important to win legislatively and judicially. Because of its size and population California is regarded by many states as the trend-setter," he said.

"We consider the victory in California to be the most important one to date. It was the first major and most highly sophisticated state to support the changes in marihuana laws."

Congress has several marihuana bills pending.

One, by Rep. Edward Koch (D-N.Y.), with 16 bipartisan supporters so far, is modeled after the pioneering Oregon law, substituting fines for jail time.

"He has been introducing the bill every session since 1971 but it never made any headway," an aide said. "This year we are getting more action and there are more people willing to support the bill. But it is difficult to say if we will succeed this year and get it passed. Still, we keep hoping."

In the Senate, Jacob Javits (R-N.Y.), Edward Brooke (R-Mass.), Alan Cranston (D-Calif.) and Gayloid Nelson (D-Wisc.) teamed up to introduce a marihuana decriminalization bill.

Also, Javits has tacked a marihuana amendment onto Senate bill 1, the controversial measure that seeks to revise the Federal Criminal Code.

Most legislatures around the country have adjourned for the year and except in a few states, there is not likely to be much action on marihuana legislation for the remainder of the year.

Lawmakers still are in session in Ohio, where the House overwhelmingly passed an omnibus crime bill that includes some changes in drug laws.

The bill, backed by Ohio Atty. Gen. William J. Brown, would reduce possession of up to 100 grams of marijuana to a misdemeanor punishable by a fine. A spokesman for Brown said it appears likely the Senate will pass the bill before adjourning.

Marihuana reform advocates are hoping that decriminalization in Ohio would have a rippling effect on other Midwest states.

In the District of Columbia, public hearings on marihuana decriminalization have been held and it is considered likely the D.C. Council will pass a reform bill before the end of the year.

In Wisconsin a bill to create a state system for the legal distribution of marihuana has been introduced, but there has been no committee action on it and none seems likely this year.

However, the Wisconsin Controlled Substances Board, which has been reviewing the state's drug laws, is expected in November to urge the legislature to pass a decriminalization law.

In Minnesota, the legislature adjourned after both houses passed separate bills to reduce marihuana penalties. A conference committee later agreed on a compromise version of the two bills.

A vote on that awaits the return of the legislature from its recess early in January.

In New York, although Gov. Hugh Carey supports changes in the marihuana statutes, no action has been taken because upstate Republicans led by Senate Majority Leader Warren Anderson are opposed.

[From the Baltimore Sun, Dec. 29, 1975]

California Readies Soft Marijuana Law

(By Bruce Winters)

Los Angeles—The nation's largest state is relaxing its marijuana laws January 1, offering policemen, lawyers and social workers their best laboratory yet to determine if easy laws drive up drug use.

Predictions from California law enforcement officials differ widely.

Edward M. Davis, the Los Angeles police chief, forecasts a 50 per cent increase in crime over the next two years, and a doubling of the heroin-addiction rate, coupled with more police paper work and confusion among the citizenry.

When Gov. Edmund G. Brown, Jr., signed the bill into law, making possession by adults of an ounce or less a misdemeanor subject to a traffic-style ticket of $100, Chief Davis said:

"It is obvious that Mickey Mouse and Goofy and all the other characters are alive and well in Disneyland north [Sacramento]. . . . It's unfortunate that the largest state has to be the greatest fool."

But a spokesman for San Diego's acting police chief, William Kollender, said the new law will not change things much. "For the past five years, simply possession of marijuana has been treated as a misdemeanor here," he said, "so the new law will not make much difference."

In San Francisco, Sgt. Charles Hoenisch, of the narcotics detail, said the new law "merely formalizes that our department has been doing for the past year—citing rather than arresting for simple possession."

The new law was written by San Francisco's mayor-elect, George R. Moscone, who was then a state senator.

Two years ago, Oregon became the first state to ease off on Draconian local laws that in some instances required 5- and 10-year prison terms for first offenders caught with small amounts of marijuana for personal use. Oregon pioneered the traffic-style citation procedure.

Alaska, Colorado, Maine and Ohio have since followed suit with easier laws.

Corey Busch, Mr. Moscone's administrative assistant, said neither the Oregon experience nor the legislative hearings produced evidence to support Chief Davis's alarm.

In fact, a poll in Oregon published last month showed that marijuana use there had not increased during the new law's two-year life.

Conducted for the Drug Abuse Council, of the District of Columbia, the poll involved 800 face-to-face interviews with persons 18 and older. It was a follow-up on one taken in October, 1974.

The latest survey found that 20 per cent of the sample had tried marijuana at least once, compared to 19 per cent in 1974. Eight per cent listed themselves as current users, compared to 9 per cent in 1974.

Moreover, 93 per cent of the nonusers cited simple lack of interest or possible health dangers—not legal penalties—as reasons for avoiding the drug.

Violators arrested under the new California law may be fined a maximum of $100, which can be paid like a traffic ticket without a court appearance.

Felony provisions against growing and selling marijuana, and driving while under its influence, remain unchanged. It likewise continues to be a felony to provide any amount of the drug to a minor under 18.

In addition, the 500,000 or more Californians arrested for possession before January 1 will be allowed to petition the courts to have their records purged. Persons in prison for mere possession will be freed on parole as quickly as possible.

With no arrests, no bookings, no incarceration, no processing of bail services and no jury trials, the new law very likely will save the courts money, according to the California Judicial Council.

COLORADO

Minutes

DECRIMINALIZATION OF MARIJUANA

Meeting with
Senator Birch Bayh
Friday, March 19, 1976
Colorado Division of Criminal Justice
Denver, Colorado

Attendees:

Murray C. Bond	Mark C. Pautler
Curtis A. Bridges	Paul G. Quinn
Robert K. Burke	Pat Ratliff
Robert C. Cantwell	Raymond M. Rice
Richard T. Castro	Frank Simons
Norman Early	Charles D. Weller
Jim Henderson	Richard D. Wood
Joan Keane	
Betty Miller	John Toohey, *The Denver Post*

Senator Bayh opened the meeting by stating what he considered to be one of the best vehicles in changing the way the federal government handles the marijuana problem, and that is to show how Colorado and other states have approached the problem. The purpose of this informal discussion is to assess the pluses and minuses Colorado has experienced in dealing with the new marijuana law.

Senator Bayh posed the following questions with corresponding responses from meeting attendees:

What affect has the reduction of penalties for the possession of marijuana had on the criminal docket?

Wood: Since the penalties for possession of marijuana have been reduced by state law and city (Denver) ordinance, the criminal docket has shifted from the felony court to the city ordinance court. Felony courts now have more time to prosecute more severe cases.

Cantwell: While the new law may have opened up more time for the DA's office to prosecute more severe cases, the law has created a frustrating problem for police officers who are becoming increasingly reluctant to enforce the law on possession. The process is still the same for the police officer: administer rights, file reports, lab analysis. The paperwork and time involved in a possession case are hardly worth the effort.

Bridges: In Ann Arbor, Michigan, the fine for possession of less than one ounce of marijuana was $5. Police officers became frustrated not only because of the inordinate amount of paperwork, but because it was nearly impossible to find a lab analyst who would process small amounts of marijuana. The police officer was caught between department policy and the law.

Simon: Before the law, 20 percent of the cases were for marijuana possession. Now, posession cases are virtually nonexistent, and there has only been one felony sale case (summons and complaint) since the law went into effect.

Wood: The Denver District Attorney's Office prosecuted more felony sale cases in 1974 and 1975, whereas traditionally there have been more possession cases. The downgrade of possession penalties has emphasized prosecution of narcotic and other dangerous drug cases.

Weller: Some statistics have been compiled in Denver covering the seven-month period prior to the state law and city ordinance and then again seven months after. These statistics indicate an increase in juvenile and adult cases:

	Seven Months Prior:	Seven Months After:
Juveniles	212 cases	225 cases
Adults	532 cases	564 cases
TOTAL	744 cases	789 cases

They also reveal that marijuana is more available and that the quantity and quality of marijuana arrests have increased.

Cantwell: Two years ago there were fewer policemen but more possession arrests. Marijuana arrests increase only because there are more men on the job for quantity arrests.

What effect have the new laws had on the availability and use of marijuana? (Responses to first question apply.)

Castro: A survey in Oregon showed a reduction in usage.

Weller: In Denver, the number of arrests for hard drugs which included marijuana increased from 1969 to 1974. After the law was passed, 1975 showed a decrease in arrests for hard drugs, excluding marijuana, of 900 cases. But it must be remembered that for about four months after the law was passed, arrests were still being made for marijuana possession.

How has the public reacted to the changes in the possession law? Does the use of marijuana create a public hazard? Has any decision been reached as to what effect marijuana really has on people? What possible harm does the use of marijuana cause the community?

Why I ask about public safety in regard to the use of marijuana is to know if the change in law significantly increased violations?

Castro: Drivers under the influence of alcohol or marijuana do create public concern. *Simon:* It is against the law to drive under the influence of marijuana, but the problem is that it is difficult to determine the level of marijuana. *Cantwell:* DUI car units have brought many people in for drunk driving, but when administered the breath test, there is no indication of the presence of alcohol. This suggests that they are driving under the influence of some substance, drug or narcotic, without the presence of alcohol. *Simon:* Driving under the influence of marijuana has become a substitute for alcohol.

Wood: There is no definitive answer to the question of its affect on public safety. Oregon has shown no dramatic impact on public safety. *Weller:* As to the possible harm marijuana causes the community--it is impossible to determine. HEW can't even address this question.

Have juveniles switched to wine instead of marijuana?

Henderson: It is true that juvenile alcoholics are increasing and there are no programs for juvenile offenders who are drug and alcohol abusers.

Senator Bayh asked why Colorado did not participate in the JD Act.

Miller: Colorado did not want to run the risk of not being able to comply with federal requirements, in particular the provision requiring that any state participant is to deinstitutionalize within a two-year period. This provision would require legislation.

1976 monies in the amount of $256,000 will be requested and will be used to set up some group homes or shelter care facilities.

Castro: Colorado is now ranked 47th or 49th on its taxes on liquor, but if the present legislation is passed, Colorado will be fourth in the nation. This money may be a resource for alcohol and drug abuse programs.

Bond: In the small communities of Colorado, alcohol not drugs is the primary concern a ' such communities lack treatment facilities for alcohol-related programs

Weller: Nearly all juvenile offenders suffer from learning disabilities. A Division of Youth Services youth camp survey revealed either a physical or emotional learning disability (87 to 90 percent of 444 youths studied). One problem is that it is not until a youth becomes a delinquent that it is discovered he has a learning disability.

Keane: It is hard to determine if alcohol is a direct cause of crime, because there is no way of comparing alcohol use of kids outside the system to those within the system and drawing any conclusions as to a direct relationship.

Weller: In Denver around 1970 or 1971, kids nine to ten years old begin by sniffing glue, the progressed to paint, gasoline, wine, beer, hard liquor, marijuana. At ten years they begin joy riding and progress to petty theft and upward. In Denver, substance abuse has been virtually nipped in the bud. Now we are going into alcohol abuse treatment programs. Abuse tends to be more prevalent in certain areas. *Castro:* Twenty years ago alcohol and drug abuse was almost exclusively a Chicano and Black problem, but today a far broader spectrum of society is involved in drug and alcohol abuse.

Cantwell: We have identified why kids use drugs and we provide police officers with in-service training in prevention. The Denver Police Department has a school liaison program. There are seven to eight policemen involved in this public school system program.

Early: The problem with many alcohol and drug abuse programs is that there are very few good programs in the United States. Some programs actually stimulate kids' curiosity of drugs. We want programs that approach the problem in a positive way making kids feel good about themselves. *Cantwell:* With the availability of drugs everpresent, we need to educate the parents and then the kids. Whether we are tough or loose on marijuana, marijuana is here and a part of society (25 to 30 million people have used marijuana).

Weller: I suggest boring in on the interstate transportation traffic on the sale of marijuana. This would put the pressure on legislature to deal with the marijuana problem.

Is there any magic to a specific amount of marijuana to be decriminalized?

Wood: The question of what specific amount of marijuana can be decriminalized has been wrestled with in the legislature to no avail. Where is the break between a misdemeanor and a felony?

How does the decriminalization of possession relate to the dollar figure?

Wood: Prosecution of more serious cases in the District Attorney's Office has not created the need for more lawyers. This can be attributed to the fact that marijuana possession cases are now handled by the lower court system.

What is Colorado's treatment for possession of small amounts of marijuana? Should multiple offenses be treated differently?

Wood: Up to one ounce is a petty offense with a fine of $100 and no jail. An ounce or more for a first-time offender incurs a fine of no more than $500 or jail for no longer than one year or both (still a misdemeanor). If it is a second offense involving drugs or marijuana in excess of an ounce, it is a felony and is punishable by no less than one year and not more than ten years or a fine not less than $500 or more than $1,000 or both.

Public possession of less than an ounce can have a potential penalty of 15 days in jail. Private possession of less than an ounce has a fine only.

Castro: One thing that made me favor the law was that I saw too many offenders of this type at the state penitentiary in Canon City.

Cantwell: In Denver, I have never seen a case where an offender was incarcerated for the mere possession of marijuana.

How would you design the federal treatment of marijuana?

Simon: Same as treatment for alcohol: tax it and distribute it. The problem is the age limit. *Early:* Should anyone go to jail for use of marijuana or alcohol?

Simon continued: The attitude of law enforcement people differs from officer to officer. An officer in a narcotic unit will tend to be more conservative. An officer who has a less specialized job tends to have a more liberal attitude. Just as older officers are more conservative. Police training now produces an officer who is familiar with marijuana and its effects.

Cantwell: If marijuana is decriminalized, all we are doing is falling into a pattern to decriminalize cocaine.

COLORADO REVISED STATUTES 1973

ARTICLE 22
Drugs and Druggists

PART 4
Dangerous Drugs

12-22-412. Violations - penalties. (1) Any person who manufactures or dispenses dangerous drugs in violation of section 12-22-404, except as provided in this section, is guilty of a felony and, upon conviction thereof, shall be punished by a fine of not more than one thousand dollars and by imprisonment in the state penitentiary for not less than one year nor more than fourteen years.

(2) Any person who attempts to manufacture or dispense any dangerous drug in violation of section 12-22-404, except as provided in this section, is guilty of a felony and, upon conviction thereof, shall be punished by a fine of not more than one thousand dollars and by imprisonment in the state penitentiary for not less than one year nor more than fourteen years.

(3) Any person who has in his possession any dangerous drug with the intent to dispense said drug in violation of the provisions of section 12-22-404, except as provided in this section, is guilty of a felony and, upon conviction thereof, shall be punished by a fine of not more than one thousand dollars and by imprisonment in the state penitentiary for not less than one year nor more than fourteen years.

(4) Any person who is convicted of a second or any subsequent violation of section 12-22-404 (1) (a) or (1) (e) shall be punished by a fine of not more than five thousand dollars and by imprisonment in the state penitentiary for not less than five nor more than thirty years.

(5) Any person who violates section 12-22-404 (1) (b), (1) (c), (1) (f), (1) (g), (1) (h), (1) (i), (1) (j), or (1) (k) is guilty of a misdemeanor and, upon conviction thereof, shall be punished by a fine of not more than five hundred dollars, or by imprisonment in the county jail for not more than one year, or by both such fine and imprisonment.

(6) Any person who possesses or uses any dangerous drug in violation of section 12-22-404 (1) (d), upon a first conviction, is guilty of a misdemeanor, and the court may:

(a) Impose a fine on the defendant in an amount not to exceed five hundred dollars, or a sentence of imprisonment in the county jail for not more than one year, or both such fine and imprisonment;

(b) Place the defendant on probation for a period not to exceed one year, and as a condition of such probation, the court may require the defendant to obtain treatment for any mental condition which, in the view of the psychiatrist making a report to the court under the provisions of subsection (9) of this section or section 16-11-102 (3), C.R.S. 1973, may be related to the use and possession of dangerous drugs by the defendant. The defendant may be permitted to obtain such treatment from any psychiatrist or at any suitable public or private medical facility of his choosing. Upon request of the defendant, the department of institutions shall admit him for rehabilitative treatment to one of the mental institutions under its control for a period not to exceed one year. The defendant may be required to remain under treatment for such time, not to exceed one year, and under such conditions as the psychiatrist responsible for his care deems necessary to improve, to the extent possible his mental condition related to the use and possession of dangerous drugs.

(7) (a) At any time prior to trial for a first violation of section 12-22-404 (1) (d), or prior to entry of a plea of guilty to a first violation thereof, the court may, with the consent of the defendant and the prosecution, order the prosecution of the offense be deferred for a period not to exceed one year, during which time the court may place the defendant under supervision of the probation department. As a condition of such supervision, the court may require the defendant to obtain treatment for any mental condition that, in the view of the psychiatrist making a report to the court under the provisions of subsection (9) of this section, may be related to the use and possession of dangerous drugs by the defendant. The defendant may be permitted to

obtain such treatment from any psychiatrist and at any suitable public or private mental health facility of his choosing. Upon request of the defendant, the department of institutions shall admit him for rehabilitative treatment to one of the mental institutions under its control for a period not to exceed one year. The defendant may be required to remain under treatment for such time, not to exceed one year, and under such conditions as the psychiatrist responsible for his care deems necessary to improve, to the extent possible, his mental condition related to the use and possession of dangerous drugs.

(b) Upon the defendant's satisfactory completion of and discharge from the court's supervision, the charge against the defendant shall be dismissed with prejudice. If the conditions of supervision are violated, the defendant shall be tried for the offense for which he is charged, and, upon conviction thereof, the court shall make disposition as provided in subsection (6) of this section.

(c) Upon consenting to a suspension of trial as provided in this subsection (7), the defendant shall execute a written waiver to his right to a speedy trial.

(d) If a defendant gives his consent to a deferred prosecution under this subsection (7), it shall not be construed as an admission of guilt, nor shall such consent be admitted in evidence in a trial for the offense of which he is charged.

(8) If any person is charged with a violation of the provisions of section 12-22-404 (1) (d), the court, prior to trial and with the defendant's consent, shall cause a probation officer to conduct an investigation of the background of the defendant which shall include, to the extent possible but not limited to, such information about his characteristics and any circumstances affecting his behavior as may be helpful to the court in determining whether prosecution should be deferred under subsection (7) of this section, or whether probation should be granted if the defendant is convicted of such violation. The court, upon its own motion or upon petition of the probation officer, may order any defendant who is subject to pretrial investigation to submit to a mental and physical examination. For the purposes of such evaluation, the court may appoint any psychiatrist in this state to conduct such examination either on an outpatient basis or in a suitable medical facility. Upon request of the court or probation officer, the department of institutions shall furnish such facility and services as are necessary to conduct a psychiatric examination.

(9) (a) Upon completion of such pretrial or presentence investigation, the probation officer and the physicians conducting the examination shall each submit written reports to the court.

(b) No substantive evidence acquired directly or indirectly for the first time as the result of any such observation and examination shall be admissible on the issue of guilt of the crime charged.

(10) A person who is convicted of a second offense under section 12-22-404 (1) (d) involving stimulant drugs or hallucinogenic drugs is guilty of a felony and shall be punished by imprisonment in the state penitentiary for not less than one year nor more than ten years, or by a fine of not less than five hundred dollars nor more than one thousand dollars, or by both such fine and imprisonment. Any person convicted of a second offense under section 12-22-404 (1) (d) and not covered by section 12-22-403 (7) or (13) is guilty of a misdemeanor and shall be punished by:

(a) A fine of not less than five hundred dollars nor more than one thousand dollars, or by imprisonment in the county jail for not more than two years, or by both such fine and imprisonment; or

(b) Any provision of law to the contrary notwithstanding, the court may place the defendant on probation for a period not to exceed two years, and as a condition of such probation the court may require the defendant to obtain treatment for any mental condition which, in the view of the psychiatrist making a report to the court under the provisions of subsection (9) of this section or under section 16-11-102 (3), C.R.S. 1973, may be related to the

use and possession of dangerous drugs by the defendant. The defendant may be permitted to obtain such treatment from any psychiatrist and at any suitable public or private mental facility of his choosing. Upon request of the defendant, the department of institutions shall admit him for rehabilitative treatment to one of the mental institutions under its control for a period not to exceed two years. The defendant may be required to remain under treatment for such time, not to exceed two years, and under such conditions as the psychiatrist responsible for his care deems necessary to improve, to the extent possible, his mental condition related to the use and possession of dangerous drugs.

(11) Any person who is convicted of a third or subsequent offense under section 12-22-404 (1) (d) is guilty of a felony and shall be punished by:

(a) A fine of not less than one thousand dollars nor more than two thousand dollars, or by imprisonment in the state penitentiary for not less than one year nor more than fourteen years, or by both such fine and imprisonment; or

(b) Any provision of law to the contrary notwithstanding, the court may place the defendant on probation for a period not to exceed five years, and as a condition of such probation the court may require the defendant to obtain treatment at one of the mental institutions under the control of the department of institutions for such time, not to exceed five years, as the superintendent or director of such institution deems necessary to rehabilitate the defendant.

Cross references. As to the definition of hallucinogenic drugs, see § 12-22-403(7). As to the definition of stimulant drugs, see § 12-22-403(13). As to unlawful acts concerning dangerous drugs, see § 12-22-404. As to the submission of a person eligible for probation or presentence investigation to a mental and physical examination, see § 16-11-102(3).

Possession with intent to dispense dangerous drug in violation of law consists of two distinct elements, possession of dangerous drug and simultaneous intent to illegally dispense drug. People v. Gill, ___ Colo. ___, 506 P.2d 134 (1973).

Therefore, where evidence was presented that defendant dispensed dangerous drug to undercover agent who defendant thought was illicit user of drugs, evidence more than supported jury's verdict that defendant intended to dispense dangerous drugs in violation of law, because had the facts been as defendant believed them to be, he would have succeeded in violating law as he intended, and fact that his intention was frustrated by facts unknown to him does not change his intent or relieve him of criminal responsibility, because offense was complete when he had drugs in his possession and formed intent to illegally dispense drugs. People v. Gill, ___ Colo. ___, 506 P.2d 134 (1973).

And assuming that dispensing dangerous drug to undercover police agent is exempt from criminal liability, defendant can still be guilty of possession with intent to illegally dispense dangerous drug. People v. Gill, ___ Colo. ___, 506 P.2d 134 (1973).

1975 Cumulative Supplement

12-22-412. Violations - penalties - nonseverability. (1) Any person who manufactures or dispenses dangerous drugs in violation of section 12-22-404, except as provided in this section, is guilty of a felony and, upon conviction thereof, shall be punished by a fine of not more than one thousand dollars and by imprisonment in the state penitentiary for not less than one year nor more than fourteen years.

Editor's note: This subsection (1) is reprinted for reenactment to correct an editorial or typographical error contained in the original text. (See Volume 11, C.R.S. 1963.)

(12) (a) Any person who possesses not more than one ounce of cannabis is guilty of a class 2 petty offense and, upon conviction thereof, shall be punished by a fine of not more than one hundred dollars.

(b) Whenever a person is arrested or detained for a violation of paragraph (a) of this subsection (12), the arresting or detaining officer shall prepare a

written notice or summons to appear in court, which written notice or summons shall contain the name and address of such arrested or detained person, the time and place where such person shall appear, and a place for such person to execute his or her written promise to appear at the time and place indicated on the notice or summons. One copy of said notice or summons shall be given to the person arrested or detained, one copy shall be sent to the court where the arrested or detained person is to appear, and such other copies as may be required by the law enforcement department or agency employing the arresting or detaining officer shall be sent to the places designated by such law enforcement department or agency. The time specified in said notice to appear must be at least five days after such arrest or detention unless the person arrested or detained demands an earlier hearing. The place specified in said notice to appear must be before a judge within the county in which the class 2 petty offense charged is alleged to have been committed, which judge has jurisdiction of such class 2 petty offense. The arrested or detained person, in order to secure release from arrest or detention, must give his or her written promise to appear in court by signing the notice or summons prepared by the arresting or detaining officer. It shall be a class 3 misdemeanor, as defined by section 18-1-106, C.R.S. 1973, for any person to violate a written promise to appear given to an officer upon arrest or detention or issuance of summons under this subsection (12).

(c) Any person who openly and publicly displays or consumes not more than one ounce of cannabis is guilty of a petty offense and, upon conviction thereof, shall be punished, at a minimum, by a fine of one hundred dollars or, at a maximum, by a fine of not more than one hundred dollars and fifteen days in the county jail.

(d) Any person who possesses more than one ounce of cannabis or any amount of cannabis concentrate, upon conviction thereof, shall be punished as provided in subsections (6), (10), or (11) of this section.

(e) Transferring or dispensing not more than one ounce of cannabis from one person to another for no consideration shall be deemed possession and not dispensing or sale thereof.

(f) The court may utilize the treatment, probation, and deferred prosecution or deferred sentencing provisions of subsections (6) (b), (7), (8), and (9) of this section for any person who violates paragraph (d) of this subsection (12).

(g) Any provision of this part 4 to the contrary notwithstanding, any person eighteen years of age or older who transfers or dispenses more than one ounce of cannabis for consideration or any amount of cannabis concentrate, with or without consideration, to another person under the age of eighteen years is guilty of a felony and, upon conviction thereof, shall be punished by imprisonment in the state penitentiary for not less than three years nor more than fourteen years and, in the discretion of the court, by a fine of not more than ten thousand dollars. Upon a second or subsequent conviction of any person under this paragraph (g), the imprisonment prescribed in this paragraph (g) shall be mandatory, and the court shall have no jurisdiction to suspend the sentence of imprisonment or to grant probation to such person.

(h) No person knowingly shall cultivate, grow, produce, process, or manufacture, or knowingly allow to be cultivated, grown, produced, processed, or manufactured, on land owned, occupied, or controlled by him any cannabis or cannabis concentrate without first obtaining a license as a manufacturer pursuant to section 12-22-408.

(i) If the provisions of paragraph (g) of this subsection (12) are found to be invalid, such invalidity shall apply to the entire provisions of sections 12-22-301 (16), 12-22-303 (1), 12-22-311 (1) (b) and (4), 12-22-403 (1.5), (1.6), and (13.5), 12-22-403 (4), 12-22-404 (1) (d) and (1) (l), and paragraphs (a) to (f) and (h) of this subsection (12), as enacted or amended by chapter 115,

Session Laws of Colorado 1975. It is hereby declared by the general assembly that, but for the provision of said paragraph (g) of this subsection (12), the general assembly would not have enacted said sections.

Source: Added, L. 75, pp. 435, 436, § § 7, 8.

Effect of amendment. The 1975 amendment added subsection (12).

Exclusive possession of premises not required for exclusive possession of drugs. Sole and exclusive possession of the premises where drugs are found is not required to attribute to him exclusive possession of the drugs, but joint possession in a place at least partially under the dominion and control of the accused is sufficient. People v. Wilkie, 185 Colo. 149, 522 P.2d 727 (1974).

DECRIMINALIZATION OF MARIJUANA

Meeting with
Senator Birch Bayh
Friday, March 19, 1976

ATTENDEES:

1. Mr. Murray C. Bond
   Administrative Assistant/Public Information Officer
   Colorado Commission on Criminal Justice Standards and Goals

2. Mr. Curtis A. Bridges
   Crime Prevention Coordinator
   Colorado Commission on Criminal Justice Standards and Goals
   Member: Colorado Alcohol and Drug Abuse Advisory Council

3. Mr. Robert Burke
   Grant Administrator
   Colorado Division of Criminal Justice

4. Sergeant Robert C. Cantwell
   Supervisor
   Organized Crime Strike Force
   Denver Police Department

5. Representative Richard T. Castro
   Colorado House of Representatives
   Member: Health, Environment, Welfare and Institutions

6. Mr. Norman Early
   Deputy District Attorney
   2nd Judicial District (Denver)

7. Mr. Jim Henderson
   Drug Program Coordinator
   Alcohol and Drug Abuse Division
   Department of Health

8. Ms. Joan Keane
   Acting Juvenile Specialist
   Colorado Division of Criminal Justice

9. Ms. Betty Miller
   Executive Director
   Department of Local Affairs

10. Mr. Mark C. Pautler
    Director
    Colorado Commission on Criminal Justice Standards and Goals
    President Designate, Colorado Correctional Association

11. Mr. Paul G. Quinn
    Director
    Colorado Division of Criminal Justice
    Member: Colorado Alcohol and Drug Abuse Advisory Council

12. Ms. Pat Ratliff
    Evaluator
    Colorado Division of Criminal Justice

13. Mr. Raymond M. Rice
    Colorado State Representative
    Region VIII
    Law Enforcement Assistance Administration

14. Mr. Frank Simons
    Deputy State Public Defender
    Colorado Springs Regional Office
    Member: National Organization for Reform of Marijuana Laws

15. Mr. Charles D. Weller
    Executive Director
    Denver Anti-Crime Council

16. Mr. Richard D. Wood
    Pitkin County Attorney
    Former Deputy Assistant District Attorney, 2nd Judicial District

Mr. John Toohey
Staff Writer
The Denver Post

CONNECTICUT

[From the Christian Science Monitor, May 23, 1975]

CONNECTICUT PUTS ASIDE LEGALIZED-MARIJUANA BILL

LEGISLATION CALLED "BACK DOOR" APPROACH

HARTFORD, CONN.—A bill to legalize small amounts of marijuana in Connecticut has been sidetracked, at least for a year.

The State Senate, without voting yes or no on the measure, agreed to put off consideration of the proposal until the 1976 session of the General Assembly.

The bill would have removed all penalties for the use of an ounce or less of marijuana in private. But it would have set a $50 fine for possession of an ounce or less of the drug in public.

Possession of more than an ounce would have continued to carry the penalty of more than a year in jail and a $1,000 fine.

In brief debate, the Senate heard a number of opinions on the subject of legalization. State Sen. David Neiditz (D) of West Hartford said the bill received a favorable Judiciary Committee report because it wanted "the problem brought to the attention of the public. We'll be hearing from it again."

State Sen. Paul Amenta (D) of New Britain said passage of the bill would have "opened a back door approach" to the complete legalization of marijuana. "How, then, could you punish the sellers?" he asked.

In other legislative action last week.

The Connecticut House approved an increase in financial aid for most public schools, a new lottery to pay for it, and a freedom-of-information bill.

But representatives rejected a proposal to ban throwaway beverage containers in the state.

The bottle bill, rejected 90 to 51 by the House May 16, would have required a deposit on bottles and cans and outlawed pull-top containers.

The measure was patterned after laws in Oregon and Vermont. But Connecticut lawmakers feared it would intensify unemployment problems and raise retail prices. Supporters argued that neither of those happened in Oregon after a ban was passed.

Gov. Ella T. Grasso and the state Department of Environmental Protection supported the measure, which was the most lobbied bill of the legislative session.

The education measure, passed May 16 and sent to the Senate, would give more state money to the 145 communities with the smallest tax bases and least per capita income. But unlike the earlier proposal, it would not take funds away from richer towns.

Each community would receive the $250 per pupil it now gets each year. But the less affluent towns would receive the proceeds of two "instant lotteries" a year, in which ticket buyers would immediately know if they won.

Those proceeds are estimated at between $5 million and $8 million, the poorest town would get the largest increase.

The measure sets a limit of $12.50 on the additional amount per pupil any town may get.

The education package is an attempt to narrow the gap between the amount richer towns and communities with less taxable property have to spend on public elementary and secondary education.

Superior Court Judge Jay Rubinow ruled unconstitutional last year the present method of paying each community $250 per child regardless of the amount that can be raised locally.

The size of the state's share of educational funding forces all towns to raise most of their school money through local property taxes.

The state has appealed the Rubinow decision to the Connecticut Supreme Court.

The freedom-of-information bill the House sent to the Senate would open to public scrutiny the records and meetings of government agencies.

The bill would create a three-member commission to settle disputes between citizens who want access to records and meetings and agencies which don't want to open them.

The measure, supported by most Connecticut new organizations, was unani-

mously approved. It would establish penalties of up to a year in jail and a $1,000 fine for destruction of certain records.

The bill would allow some documents to remain confidential, including labor, financial, and real estate negotiations, law enforcement and security records, information concerning an attorney-client relationship, arrest records of juveniles, and records on pending court cases.

The measure also would allow agencies to withhold information if it is determined it is in the public interest. But that determination could be appealed to the commission.

The General Assembly has approved a bill legalizing hitchhiking in Connecticut, except on limited-access highways.

But there is some question as to whether Governor Grasso will sign the measure.

Mrs. Grasso said the bill raises a number of questions on safety matters. State Police Commissioner Edward P. Leonard Jr. said he is opposed to legalized hitchhiking.

The bill would legalize hitchhiking so long as the hitchhiker stays on the shoulders of the road.

DISTRICT OF COLUMBIA

[From the Evening Star, Washington, D.C., Apr. 29, 1972]

GRASS

Although marihuana is illegal and smoking it is a criminal offense, it is prevalent among high school and college students.

The Star talked at random to students at Woodrow Wilson Senior High. Of 14 students interviewed, eight said they smoke marihuana, five said they don't and one said he did, but has stopped. Some of their reasons for smoking or not smoking appear here.

THEY DON'T

"I used to smoke. When my friend got busted and told me how it was in jail, I stopped. I actually saw a friend pulling his hair on a trip."—Wilson Junior.

"There's no point in it. I don't care if my friends do, and they don't care if I don't. But what if they find out it does harm you? Why take a chance? And it's still against the law."—Ted Tavlarides.

"A few of my friends have. I don't want to get involved in it. I'm afraid in a way. They're still not sure if it's harmful."—Nandi Mangoaela.

"I'm a science freak. I have other interests. The information on marihuana isn't conclusive. I'm not going to touch it until I know for a fact that it's not harmful."—Constantine Sismanitis.

"With our social group, you don't have to smoke grass. I just don't associate with people who do. If it's harmless, I don't see anything wrong with it. I have never been tempted enough to try it."—Doris Oyelude.

"I've never had the need for it. I play sports instead."—Marc Leiber.

THEY DO

"It's a pleasant experience, like going to the movies for entertainment."—Wilson Sophomore.

"I smoke reefers once in a while. But I got busted so I've stopped. It's not my thing anymore. It wastes money and they sell you fake stuff."—Wilson Junior.

"I just like being up there."—Wilson Junior.

"It's good. I don't like to drink because I get sick. So when I want to celebrate or feel good, I smoke grass. I don't want to go to harder drugs and get messed up. Grass is good enough for me."—Wilson Senior.

"Friends told me I should try it about a year-and-a-half ago. I smoke it about once a week."—Wilson Junior.

"It's a nice high. I don't like to drink. Grass has the same effect as alcohol, but your senses are more aware because you know it's against the law. When you drink, it's legal, so you don't care and don't have to be aware."—Wilson Sophomore.

DISTRICT OF COLUMBIA DOCTORS: LEGALIZE USE OF MARIHUANA

(By Lawrence Feinberg)

The D.C. Medical Society has recommended that use and possession of small amounts of marihuana be legalized but that sale of the drug remain a crime.

Its resolution, that there be "no criminal sanctions" for personal use of marihuana, is the most far-reaching proposal for marihuana law reform yet made by any state or big city medical organization in the country, according to a spokesman for the American Medical Association.

It is contrary to a resolution by the AMA last year that marihuana possession be considered a misdemeanor "with commensurate penalties applied." But it is in line with recent recommendations by several prominent nonmedical groups, including the American Bar Association.

Dr. Irving Burka, president of the D.C. Medical Society, said his organization adopted its resolution at its annual meeting Monday night after a year-long study by its committee on drug abuse.

The resolution says that although "use of marihuana is not recommended . . . there appear to be no serious or lasting physical or mental effects from moderate or intermittent usage in healthy adults."

The effects of marihuana "are much less than one would see with alcohol," Dr. Burka said in an interview. "Possessing a small amount of it shouldn't be a criminal offense, any more than possessing a pint of liquor is."

But Burka added that because marihuana use shouldn't be encouraged, "peddling marihuana should continue to be illegal."

Possession of marihuana here is a misdemeanor, usually dealt with in court if it comes to trial at all, and carrying a suspended sentence and small fine.

In another resolution, the medical society urged that acupuncture treatments be given only as part of research studies in hospitals or medical schools, and not by independent clinics.

Burka said the society has asked the D.C. government to close several acupuncture clinics that have opened here recently "unless they are willing to put themselves under the auspices of a hopsital."

The resolution said acupuncture treatments should be limited because there have been few studies of the procedure by Western scientists and because acupuncture might "mask" the symptoms of "a serious or perhaps fatal condition otherwise amenable to treatment."

[From the Washington Post, July 20, 1975]

SENSE AND NONSENSE ABOUT "POT"

Last December, the U.S. Attorney for the District of Columbia announced his intention to ignore cases involving simple possession of small amounts of marihuana. His reasoning was that such cases take an enormous and costly toll on the time of courts and prosecutors. He was supported by several members of the D.C. Superior Court, but the idea went nowhere for the very good reason that the police cannot be placed in the position of having to turn a blind eye to certain violations of law. The proper approach is—obviously—to amend those laws which have become obsolete.

That the laws against the simple possession of marihuana have outlived their usefulness is plain for almost all to see. Heavy use of marihuana may be harmful to health, but there is no evidence that it is sufficiently harmful to the community as to justify the present criminal sanction. Accordingly, the D.C. City Council has taken the proper course. It is considering a bill that would reduce the present penalties for possession of marihuana to a civil fine of $100 and give the offense the status of a traffic violation. While such a course would not suit everyone, it would at least maintain a method of expressing society's concern without making presumptive criminals out of the thousands of persons in this community who use the drug.

It is possible that by October the District will have joined five states—Californit, Colorado, Alaska, Maine and Oregon—in rationalizing its approach to the

problem of marihuana use. On the way to that solution, however, District residents are apparently in for some strange rhetoric, marked by a lack of information and an abundance of demagogy.

Consider the remarks of the Rev. Douglas Moore on Wednesday during the hearings on the marihuana measure. Mr. Moore suspects his colleagues on the council are proposing this measure now because there are many whites who smoke "pot," and he goes on: "A lot of whites who want to become judges and lawyers would be prevented if they had a criminal marihuana record." That logic is perverse in face of the facts. Three times as many blacks are arrested here for possession as whites. Mr. Moore's concern should be that the criminal brand will affect the futures of both black and white youths. And if he cares about that, then his position on the bill is nonsensical.

It would be good if the council could complete its debate on this bill without more of this gratuitous diversion from the real business of legislating. It demeans the council and its purposes and gives nothing in return.

[From the Washington Post, Oct. 8, 1975]

Council Acts To Cut Marijuana Penalty

(By LaBarbara Bowman)

A split D.C. City Council gave preliminary approval yesterday to a controversial bill that would greatly ease the city's penalties for possession of an ounce or less of marijuana.

After considerable debate on the issue, eight Council members—David Clarke, Arrington Dixon, Julius Hobson, Polly Shackleton, Sterling Tucker, John Wilson, Marion Barry and James Coates—voted to approve the bill on its first reading.

Four Council members—Douglas Moore, Jerry Moore, Nadine Winter, and Willie Hardy—opposed it. William Spaulding was present but did not vote.

The bill, probably the most controversial to come before the Council since it took office at the beginning of the year, would allow police officers to treat possession of an ounce of marijuana like a traffic offense. The person would be given a citation and fined $100. There would be no arrest.

The present penalty of one year in jail and/or a $1,000 fine would remain in effect for people caught possessing more than an ounce. The bill does not legalize marijuana possession.

An ounce of marijuana will make about 32 cigarettes, according to the committee report on the bill.

The sometimes emotional debate between Council members on the bill took place before a packed audience that included several prominent Baptist ministers who have vehemently opposed the bill.

The debate centered primarily on the issue of whether lessening the penalties would help or harm the city's black people. More than 70 per cent of the District's residents are black and the 13-member Council has only two white members.

"The District will become the marijuana capital of the world," said Council member Douglas E. Moore (D-at-large), a Methodist minister who has consistently opposed the bill.

"We don't need no smoke to cloud our minds for us to be in stupor," so blacks cannot recognize the injustices done to them, Moore said. This Council should never permit this," he added.

"The son of a prominent person will not be arrested for possession of marijuana because their daddy knows somebody . . . the poor people elected this Council so they will have a daddy, too," said Council member John Wilson (D-two), speaking in support of the bill.

Council member Arrington Dixon (D-four), who cosponsored the bill with Council member David A. Clarke (D-one), said he knew young black people who had been "stigmatized for the rest of their lives" because they had been arrested for having small amounts of marijuana and who were "crushed" because these arrest records kept them from getting jobs.

Council member Willie Hardy (D-seven) said she believes the bill was really saying to young people "since the law is going to be broken, let's lessen the penalties." Young people should be taught to obey the law, she said.

Council member James E. Coates (D-eight), a Baptist minister, said the debate reminded him of similar arguments that had taken place during Prohibition. "We should recognize that the use of marijuana will continue in epidemic proportion," he said, voicing general support for the bill.

Clarke, the bill's main supporter, said he introduced it to free policemen to investigate and solve more serious crimes committed in the city. He said police officers are tied up for an inordinate amount of time prosecuting people now arrested for possessing small amounts of the drug.

INDIANA

[From the Marion (Ind.) Chronicle-Tribune, April 23, 1975]

Aim New Pot Law at Dealers

WOULD LIGHTEN PENALTY FOR USERS

(By David Carlson)

If you're one of 26 million Americans who smoke marijuana, Indiana will be a little safer place for you this August.

This year's session of the Indiana General Assembly passed a new, more lenient law regarding possession and sale of marijuana—the legislators made both offenses misdemeanors. But, while the new law lightens penalties for marijuana, it stiffens sentences for sale and possession of other drugs.

Another provision in the new law allows courts to place first marijuana offenders on probation without finding them guilty. Upon fulfillment of the terms of probation, the law says, "the court shall discharge the offender and dismiss the action against him"—in other words, a first offense for possession of marijuana need never show on the user's criminal record.

The new law will not take effect, however, until about Aug. 1—if Gov. Otis Bowen signs the bill.

State Rep. Mendle Adams, D-Marion, told the Chronicle-Tribune the new marijuana law is "a step in the right direction." Adams said sentences in the current laws aren't equal to the offense committed by the marijuana user.

Adams sees a trend across the country to lighten sentences for marijuana use and expects Indiana to further lighten the penalties in the future.

State Rep. Robert Jones Jr., R-Indianapolis, House sponsor of the marijuana bill, told the Chronicle-Tribune he and other legislators drew up the bill because the tougher marijuana laws were not being enforced.

"I take the hard line on drug use," Jones said, "but many county prosecutors were not prosecuting marijuana cases under the old law. I guess they felt the penalties were too tough.

"The main idea was to reword the law. A lot of prosecutors apparently thought the first offense for marijuana possession was a felony under the old law, but the legislature didn't intend it to be that way. In the new version it is definitely stated as a misdemeanor."

"This law lightens the penalty for first offenses of marijuana and some other drugs, but it really tightens down on the drug traffickers. That's who we're aiming at—the dealers."

"Some of the more liberal members of the House felt it was the most reasonable narcotics legislation they had ever seen. I think we've added a valuable new tool to the arsenal of law enforcement," Jones said.

The new, more lenient law is definitely not a step toward decriminalization of marijuana possession in Indiana, Jones said. He indicated he doesn't feel future legislatures will further lighten the penalties.

A 23-year-old marijuana user interviewed by the Chronicle-Tribune doesn't agree with Jones, however. He sees the recent actions of the legislature as similar to the prohibition of alcohol during the 1920's.

"They tried to outlaw booze," he told the Chronicle-Tribune, "but when they found out they couldn't enforce the laws, they repealed them and made alcoholic beverages legal again. That's the same thing that's happening with marijuana in Indiana.

"They can make the penalties as tough or eas yas they please, but there's just no way they can enforce them," the user said. "Once they figure that out, they'll move to legalize pot, or at least decriminalize it like other states have."

The specific law marijuana users violate is called the "Controlled Substances Act" and has been on Indiana law books in some form since 1935. It has been revamped at least four times, 1970, 1973, 1974 and 1975.

The latest version states, "Unlawful possession of (30 grams or less of) marijuana or (two grams or less of) hashish is a misdemeanor punisable by a determinate term of imprisonment in the county jail of not more than one year and a fine not to exceed $500 . . ."

Possession of more than 30 grams of marijuana is a felony—an offense punishable by more than one year of imprisonment. A conviction carries a determinant 1–10 year prison sentence and a fine of up to $1,000.

Another major change in the new law from past ones is that sale of small quantities of marijuana is a misdemeanor. The penalty for sale of 30 grams or less of marijuana or two grams or less of hashish is identical to penalties for possession of those amounts—unless the recipient is under 18-years-old.

Under the law, "sale" doesn't necessarily mean in return for money, according to Rep. Adams. "As far as the law is concerned, giving it away is the same as selling it," Adams said.

The sale of large amounts of marijuana—more than 30 grams—is a felony. A conviction carries a determinant prison sentence of 1–20 years and a fine not to exceed $2,000. The sale of any amount to a person under 18 years old—unless the seller is also under 18—is also a felony carrying the same penalty, the law says.

While lightening the penalties for possession and sale of marijuana, the legislators stiffened the law regarding possession or sale of paraphernalia—". . . any instrument, device, article, or contrivance used, designed for use, or intended for use in ingesting, smoking, administering, or preparing marijuana, hashish, hashish oil or cocaine.

"Paraphernalia includes, but is not limited to, the following items: metal, wooden, acrylic, glass, stone, plastic, or ceramic marijuana or hashish pipes with or without permanent screens, hashish heads or punctured metal bowls; water pipes designed for use or intended for use with marijuana, hashish or other controlled substances . . ." Roach clips and marijuana cleaning devices are also included as "paraphernalia" under the law.

Unlawful possession of paraphernalia is a misdemeanor and carries a determinant term of imprisonment in the county jail or not more than one year and a fine of up to $500, the law says. A subsequent offense carries a sentence of 2–10 years and a fine of up to $1,000.

Rep. Jones said the paraphernalia section was added, "because we felt there was an internal inconsistency in the law." He said it doesn't make sense to outlaw marijuana and not outlaw articles used only for smoking it.

The current law, which will be in effect until August, carries a much stiffer penalty. Not many marijuana smokers realize that under the current laws, possession of the drug is a felony punishable by a prison sentence of up to 10 years and a fine of not more than $1,000.

Few marijuana users arrested in Grant County are charged as felons, however. Most who are arrested in Marion for the first time are charged in Marion City Court with a misdemeanor, fined $25 and costs and sent home—but not always.

The county prosecutor decides what charge to file and often that's a hard decision to make. What do you do with a "good kid" who's picked up by police with a "lid of dope" in his pocket? If he's charged with a felony he could be sent to prison for 2 to 10 years and be fined up to $1,000.

Grant Superior Court 2 tries most marijuana cases in Grant County that are charged as felonies. "I judge each case on its own merits,' says the court's judge, Thomas Wright.

"Most people who are convicted get jail time," Wright told the Chronicle-Tribune, "but that's not court policy. I have no average sentence.

"I attempt to put the seller away, help the user who is addicted and give the experimenter a taste of jail or fines. I usually follow police recommendations when sentencing," Wright said. "After all, they made the arrest and know the conditions.

"I don't try to put users away with a felony conviction," Wright said. "With small quantities, why file a felony charge? People picked up for the first time with a small quantity shouldn't go to jail."

Marion City Court Judge Thomas Michael tries more marijuana cases than any other court in the country. He sees his job as carrying out the wishes of the prosecutor.

Michael nearly always fines marijuana users $25 and costs. The judge says that if the prosecutor wanted defendants to receive a jail sentence, he'd file the charges in the county courts.

Marijuana users and even non-users can be arrested under the current law for possession of "paraphernalia"—equipment used for smoking or ingesting marijuana or other drugs.

The present law also makes some unusual quantity distinctions in possession of marijuana cases. Possession of more than 25 grams of marijuana—three grams less than one ounce—carries a felony charge.

Since marijuana is usually sold in one ounce "lids," an occasional user who purchased a new bag of marijuana would probably be subject to felony charges if arrested. Possession of less than 25 grams of marijuana can also be charged as a felony, but rarely is.

ILLINOIS

[From the Chicago Tribune, Sept. 5, 1975]

Propose Lighter Law on Pot Possession

(By Ed McManus and Chares Mount)

Decriminalization of marijuana possession was one of three plans offered for better drug abuse controls by an Illinois commission Thursday.

Under the plan possession would be reduced from a misdemeanor, for which an offender could receive a one-year jail term, to a petty offense punishable only by a fine.

The three alternatives were presented to the state legislature by the Illinois Economic and Fiscal Commission.

Tho the commission made no recommendations, a commission staff report contended there is no proof that marijuana is any more dangerous than alcohol or tobacco. Some medical authorities, however, disagree.

Another alternative offered by the commission would be to crack down on drug peddlers with stiffer prison terms.

A third would be to make greater use of drug abuse programs for those found guilty of drug law violations for the first time. But the commission urged improvement in existing drug treatment programs.

State Rep. Thaddeus Lechowicz [D. Chicago], chairman of the commission, stressed in making the report public that it is up to the legislature to decide which alternative, if any, will be accepted.

The report said decriminalizing the use of marijuana by making possession a petty offense could free law enforcement officials to fight "priority enforcement problems, such as hard drug traffic and crimes of violence."

The report estimated that 31,000 Illinois youth between 14 and 18 used heroin and 52,000 in the same age bracket sold illegal drugs of some kind. It estimated that 230,000 Illinois youths between 14 and 18 have used marijuana.

The report was critical of the state's drug release program, asserting that two-thirds of the drug addicts who seek help in the program drop out before treatment begins because of inept handling.

The report called on the Illinois Dangerous Drugs Commission to monitor and supervise the many private drug abuse programs operating in the state to prevent scandals such as that involving the West Side Organization clinic where four WSO employees were arrested on federal drug charges this week.

The report charged there is much duplication of effort by the Dangerous Drugs Commission and the Drug Abuse Program. The program operates state drug abuse clinics and assists private clinics. The Drugs Commission is supposed to regulate the program but also gets involved in treatment, the report stated.

KANSAS

[From the Kansas City (Mo.) Times, June 14, 1975]

KANSAS TO STUDY MARIJUANA LAWS

(By Laura Scott)

TOPEKA—The Kansas Legislative Co-ordinating Council voted yesterday to study reform of state laws relating to possession of small amounts of marijuana.

The council, on a 5-to-2 vote, assigned the study to the Interim Committee on Judiciary. The committee will conduct hearings during the summer with the idea of developing a report or legislation for submission to the 1976 session of the Legislature.

Reform of state laws relating to possession of marijuana has been promoted by the Kansas chapter of the National Organization for Reform of Marijuana Laws. The group has called for enactment of a civil penalty of a $100 fine for possession. It has not promoted change in the laws relating to sale of marijuana.

Craig Cornish, Kansas director of the reform group, said the organization will offer the study committee medical experts as well as witnesses from Oregon, a state which has removed criminal penalties for possession.

Cornish said he believes that the committee following hearings will recommend changing the laws relating to possession of marijuana in line with recommendations of the President's Commission on Marijuana and Drug Abuse, and other national groups.

Twenty-seven other states have studied or are studying the issue of reform of marijuana laws, he said.

Rep. Michael Glover (D.-Lawrence) also responded in favor of the study. Glover in the past has promoted legislation which would reduce criminal penalties for marijuana possession.

"The marijuana laws, as they now stand, are too harsh, too costly and very ineffective," Glover said.

In other action the co-ordinating council assigned to interim committee study three other topics:

1. Insulation and energy consumption standards in residential, commercial industrial and institutional buildings, and the potential for state action in these areas.
2. Desirability of state licensing and regulation of the use of soil additives.
3. Conditions in, and the operation of, halfway houses, sheltered living facilities and adult care homes which are serving as an alternative to institutionalization.

MAINE

[From the Washington Star-News, June 19, 1975]

MAINE EASES PENALTIES ON MARIJUANA

AUGUSTA, MAINE (UPI)—Maine has become the third state in the Union to decriminalize the personal use of small quantities of marijuana, following Oregon and Alaska. It becomes a civil offense instead.

The pot liberalization measure was included in a bill revamping Maine's entire criminal code and signed Wednesday by Gov. James Longley, the nation's only independent governor. It becomes effective March 1, 1976.

Under the measure, persons possessing less than 1½ ounces of marijuana would be subject to fine of up to $200—but no jail sentences or criminal records.

In the past, a person possessing a single marijuana cigarette in Maine could have been fined $1,000 and sentenced to up to 11 months in jail.

Possession of more than 1½ ounces would still be a criminal offense, however, under the assumption the possessor intended to sell or give the drug to others.

In a brief ceremony, Longley described the Maine Criminal Code as "a major landmark in the state's criminal statutes."

Earlier in the year Longley, a former Democrat, expressed reservations about the marijuana law. He made no mention of it during the signing ceremony.

Oregon passed the first state marijuana decriminalization law late last year. Alaska's legislature approved such a measure earlier this month. The California and Colorado legislatures are considering similar bills this week.

Also among the more controversial sections of the new code is removal of the present law that prohibits certain sexual activities between consenting adults.

The code does away with the present parole system and replaces it with a procedure in which the convict petitions the court to have his or her sentence reduced by a judge.

MARYLAND

[From the Baltimore News American, Aug. 14, 1975]

SENATORS LIKELY TO REJECT "POT" PENALTY RELAXING

(By David Ahearn)

ANNAPOLIS—Chances are dimming for state Legislative Council action to keep marijuana-smoking youths out of jail.

The State Senate Judicial Proceedings Committee next month is likely to vote against recommending any council approval of a bill that would substitute fines for prison sentences in marijuana-possession court convictions.

Committee members July 15 aired the measure and were told that marijuana use is widespread, leading to many otherwise model youths winding up in prisons and possibly heading into lives of crime.

Committee chairman J. Joseph Curran Jr., D-43-Balt., said the bill stands little chance of approval in the committee.

Committee approval would greatly increase prospects that the bill would pass into law during the 1976 General Assembly session.

Curran explained that many committee members think there is not enough information on possible bad effects on human health from marijuana use.

Several national studies have covered the subject—some saying there are no ill effects, and one saying marijuana use may cause genetic variations in users' children.

But committee members want to wait for results of still another national study, and that may not be until after the committee votes on the bill Sept. 2 or Sept. 9.

Those favoring the bill said at the hearing that society already permits use of two drugs with known and documented injurious effects on human health—alcohol and tobacco.

So, the proponents asked, why bar possession of marijuana—especially since it has not been proven to have any ill effects?

The bill would not legalize possession of marijuana, nor would it make possession a minor offense like a traffic violation as called for in the original bill.

Instead, the compromise bill now under consideration would maintain possession of small amounts of the drug as a misdemanor offense.

The bill would, though, substitute fines for possible prison sentences.

This is the second year a major effort has been mounted to change the marijuana—"pot"—laws here.

Last year, pro-pot forces—mainly University of Maryland students from College Park—noisily jammed the committee room and blew pot smoke in the faces of state police narcotics agents there to testify against the bi l.

The bill didn't even get to the Legislative Council last year.

And two days after that assembly session ended, state police staged a huge drug raid on the university campus arresting many students.

This year the students made a very low-key approach to the committee, and the bill encountered a much friendlier reception from legislators.

It even received approval on the floor of one assembly house, but died with the assembly session's end April 7.

And this year the bill made it into the Legislative Council, where it received less opposition from state police, who said they did not back the measure but could live with it.

But then Gov. Mandel said flatly he will veto the bill if the assembly passes it. And now it seems likely the assembly will fall in line with the committee and reject the bill.

[From the Washington Star, Aug. 22, 1976]

NONTRIALS WEIGHED FOR POT SMOKERS

(By Lynn Dunson)

Changing laws, lighter sentences and fines, agitation by reform groups and clogged court dockets are causing some legal minds in the metropolitan area to wonder if the occasional pot smoker shouldn't just pay a fine for the privilege when caught and bypass a court appearance.

Even with a "good" arrest and a conviction, getting the once-in-a-while offender punished is not the cream puff operation it was in the 1960s.

The typical "soft drug" arrest is not the big time grower, manufacturer or distributor. This is the typical drug bust:

In Alexandria, a man is picked up and arrested because he is wanted in traffic court in Fairfax County.

In Arlington, a couple of neighbors get into a squabble. Someone is arrested and charged with assault and battery.

In Prince Georges County, a fellow is arrested on a trespassing warrant because his girl friend no longer wants to continue the relationship, but can't get rid of him.

During a routine search of these three police discover on each a marihuana joint (cigarette) or half of a nickel ($5) bag of marihuana.

They are charged with possession of a controlled dangerous substance. But after all the paperwork, after all the pretrial investigation, chances are the drug charges will be dismissed. If there is a trial on the drug charges, chances are the fine, if any, will be small or that a sentence will be suspended.

"The penalty for possession now is so low that, as far as I'm concerned, it's a waste of time and money to prosecute possession cases," Alexandria Commonwealth's Atty. William L. Cowhig said.

Cowhig is against drugs and does not advocate a collateral system whereby an offender pleads guilty and pays a predetermined fine. However, he is resigned to it when he contemplates what he believes is now happening in Alexandria's General District Court.

Laden with a heavy criminal docket and lacking the staff and jail facilities to handle prosecution and sentencing of "soft" drug offenders, the courts are giving precedence to prosecution of what are generally considered more serious crimes than smoking pot, Cowhig said.

According to statistics kept by Cowhig, charges frequently are dropped if someone is found to have only a small amount of marihuana for personal use. If the case does go to court, fines of $50 or $100 are not uncommon.

Many of the dismissals stem from a recent state legislative measure which says that if a first offender is found guilty, the court may continue the case for as long as a year, after which, if there is no second violation, the case may be dismissed without a finding of guilt. Maryland has a similar law.

The fines, Cowhig maintains, are "hardly more than a slap on the wrist.

"I think the law should be enforced and I think the penalty should be increased. The users are beating the system by being more persistent than the system itself."

Neither the prosecutors, the courts nor the police pursue arrest and conviction for simple possession as vigorously as was the practice in the late '60s, when a few ounces of grass could net a convicted offender a jail sentence, he said.

While Sgt. Charles Cheslock of the Arlington County police vice unit agrees with Cowhig that arrests of the small users are no longer pursued the way they were in 1968 when he first joined the unit. Lt. Rocco Ricci of the Fairfax drug unit maintains the force is as energetic as ever. "Who are we to judge what's small and what's not small?" asked Ricci.

Probably more importantly, the general public is more tolerant of marijuana use. That shift is reflected in changes in the law which no longer treat simple possession as a felony.

Illustrative of the public's attitude are the results of a recent survey released by the National Organization for the Reform of Marijuana Laws (NORML),

which showed that of 300 Alexandria voters polled, almost 70 percent believed pot users should receive only minimal fines or not be punished at all.

Cowhig does not agree with the majority in that sampling. A collateral system, he claims, gives him what he wants as a prosecutor. "It not only guarantees a conviction, but it guarantees punishment," he asserted.

Since simple possession is a misdemeanor, the system could be set up by directive to the magistrates from Chief Judge Daniel F. O'Flaherty, of the General District Court. Collateral, said Cowhig, should be set at $150 or more.

The procedure would simplify matters for the person who knows he is going to admit guilt. It would require less paperwork and less time of the defendant and police, who must appear in court to testify.

Cowhig estimates Alexandria handles about 100 such minor drug cases a year at a cost of $200 to $600 a case, depending upon whether the accused pleads guilty or not guilty. He believes about 50 percent are eventually dismissed.

John K. Zwerling, Virginia coordinator for NORML, outspokenly favors "decriminalization" of marijuana, a step taken by Oregon and a few other states. A collateral system would not strike out all criminal penalties for using the drug, but Zwerling sees it as a first step in that direction.

Neither decriminalization nor a collateral system are popular among police and court officers interviewed around the metropolitan area.

O'Flaherty, who at best is lukewarm on the subject of a collateral system, does not like to compare the procedure to the paying of a parking ticket, an analogy which is commonly used.

"It conjures up an image of 'paying your way out,'" he protests, "and that is not what would happen. It wouldn't be a matter of someone coming in five or six times a year and just walking through."

As O'Flaherty points out, the posting of collateral would be subject to the court's approval, which would have the option of rejecting the plea of guilty and, instead, setting a trial date.

The chief judge of the General District Court in Montgomery County, Robert F. Sweeney, is willing to review the possibility of a prepayment system for certain other misdemeanors covered by county ordinance, but he has rejected the idea for marihuana offenses.

MICHIGAN

The Concurrent State and Local Regulation of Marijuana: The Validity of the Ann Arbor Marijuana Ordinance

The City Council of Ann Arbor, Michigan, has recently amended the City's "marijuana ordinance" so that it prohibits the possession, control, use, giving away, or sale of marijuana, and specifies a five dollar fine as punishment for violations of the ordinance.[1] The State of Michigan has also legislated to prohibit marijuana-related activities, specifying a number of different offenses with penalties ranging as high as four years in prison, or a 2,000 dollar fine, or both.[2] By

1. ANN ARBOR, MICH., CITY CODE, tit. IX, ch. 103, § 9:62(29) (1972):

No person shall: Have in his or her possession or under his or her control or use or give away or sell marijuana or cannabis which is defined as all parts of the plant cannabis sativa L., whether growing or not; the seeds thereof; the resin extracted from any part of the plant; and every compound, manufacture, salt, derivative, mixture or preparation of the plant, its seeds or resin. It does not include the mature stalks of the plant, fiber produced from the stalks, oil or cake made from the seeds of the plant, any other compounds, manufacture, sale, derivative, mixture or preparation of the mature stalks, except the resin extracted therefrom, fiber oil or cake, or the sterilized seed of the plant which is incapable of germination, unless such possession, control or use is pursuant to a license or prescription as provided in Public Act 196 of 1971, as amended.

Any violation of this Section shall be subject to a sentence of up to five dollars ($5.00) including judgment fee and costs, and no probation or any other punitive or rehabilitative measure shall be imposed; provided, however, that this Section shall not be construed to prohibit deferred sentencing. The District Court Clerk shall accept any plea of guilty which is made in the same manner as pleas of guilty are accepted at the parking Violations Bureau of the Fifteenth District Court. Persons pleading guilty of violation of this Section shall be allowed to tender the sum of five dollars ($5.00) to the District Court Clerk as a full and complete satisfaction of liability, and no appearance before a District Judge shall be required. In any prosecution for the violation of this section the burden of establishing any license or prescription shall be upon the defendant but this does not shift the burden of proof for the violation.

The City Council of the City of Ann Arbor specifically determines that the regulations herein contained concerning marijuana are necessary to serve the local purpose of providing just and equitable legal treatment of the citizens of this community, and in particular of the youth of the community who are present here as University students or otherwise, and to preserve the respect of citizens for the law and its processes.

2. The Controlled Substances Act of 1971, MICH. COMP. LAWS ANN. §§ 335.301-.367 (Supp. 1972) provides an extensive regulation of drugs in Michigan. MICH. COMP. LAWS ANN. § 335.341 (Supp. 1972) states:

(1) Except as authorized by this act, it is unlawful for any person to manufacture, deliver or possess with intent to manufacture or deliver, a controlled substance. Any person who violates this subsection with respect to:

. . . .

(c) . . . marijuana, is guilty of a felony and upon conviction may be imprisoned for not more than 4 years or fined not more than $2,000.00, or both.

(2) Possession of more than 2 ounces of marijuana is prima facie evidence of possession with intent to deliver.

. . . .

(4) It is unlawful for any person knowingly or intentionally to possess a controlled substance unless the substance was obtained directly from, or pursuant to, a valid prescription or order of a practitioner while acting in the course of his professional practice, or except as otherwise authorized by this act. Any person who violates this subsection with respect to:

. . . .

(d) Marijuana, is guilty of a misdemeanor punishable by imprisonment for

enacting the ordinance, the City government has minimized the criminal sanctions for an activity it has found essentially benign, pursuant to certain local purposes.[3] Since, however, there is concurrent exercise of control over marijuana by both a municipality and the State several issues for judicial determination arise concerning the constitutionality of the local ordinance.[4] Michigan cities are authorized by constitution and by statute to act only with respect to local concerns, and thus the courts must first determine whether the Ann Arbor marijuana ordinance deals with a "municipal concern" as defined by law. If the ordinance is found to deal with a problem within the ambit of permissible local authority, the courts must then consider whether the state legislation in the area of marijuana control has preempted the field, rendering ultra vires any municipal efforts at additional control. If the state marijuana laws are found to be nonpreemptive, then the Ann Arbor ordinance will be allowed to stand unless it is found to be "in conflict" with the provisions of the state law. In addition, the question arises whether the coexistence of the ordinance and the statute vests an impermissible degree of discretion in the prosecuting officer. Finally, in order to evaluate the impact of the ordinance it must be determined whether successive prosecutions by the City and the State for the same illegal activities would constitute double jeopardy in violation of the constitutions of Michigan or the United States.

Beyond the immediate interest of the City of Ann Arbor, the adjudication of the constitutionality of the ordinance will be significant as a measure of the extent to which municipalities may proceed at variance with state law in effecting independent responses to problems that relate to both local and statewide interests.

---

not more than 1 year in the county jail or by a fine of not more than $1,000.00, or both.

(5) It is unlawful for a person to use a controlled substance unless the substance was obtained directly from, or pursuant to, a valid prescription or order of a practitioner while acting in the course of his professional practice, or except as otherwise authorized by this act. Any person who violates this subsection with respect to:

. . . .

(d) Marijuana is guilty of a misdemeanor punishable by imprisonment for not more than 90 days in the county jail or by a fine of not more than $100.00, or both.

In addition MICH. COMP. LAWS ANN. § 335.346(2) (Supp. 1972) provides that

any person who distributes marijuana without remuneration and not to further commercial distribution and who does not violate subsection (1) is guilty of a misdemeanor and upon conviction may be imprisoned for not more than 1 year in the county jail or fined not more than $1,000.00, or both, unless the distribution is in accordance with federal law or the law of this state.

Subsection (1) of this provision authorized penalties double those listed in section 335.341(1) for the distribution of a controlled substance by a person over 18 years of age to a person under 18 who is at least 5 years his junior.

3. *See* notes 26-36 *infra* and accompanying text.

4. *See generally* Note, *Conflicts Between State Statutes and Municipal Ordinances*, 72 HARV. L. REV. 787 (1959).

The enactment of the home-rule provisions of Michigan, as in many other states, was presumably in response to the unsatisfactory condition of city-state relations during the latter part of the nineteenth century;[5] state legislatures of the period, which were controlled by the rural populace, were notorious for meddling in municipal affairs and for their abuses of the so-called "special acts" relating to cities.[6] The home-rule amendments to the constitutions of the various states may be self-executing,[7] or may require or authorize the legislature to enact enabling home-rule legislation.[8]

The states have also manifested variations in the scope of the home-rule powers afforded the cities. The California constitution, for example, empowers cities to enact and enforce ordinances in respect to municipal affairs, "subject only to the restrictions and limitations provided in their several charters . . . ."[9] This language has been interpreted by the California courts to give cities supreme control over municipal affairs. Indeed, the cities are "independent of general laws upon municipal affairs. Upon such affairs the general law is of no force."[10] Michigan, on the other hand, has granted to cities the home-rule powers over municipal concerns, "subject to the constitution and general laws of the state."[11] Unlike California's home-rule cities, municipalities in Michigan exercise concurrent control with the State over matters of municipal concern, and the state authority is supreme. The operative effect of the home-rule provisions of any state depends, however, upon the judicial interpretation of the scope of the home-rule powers. Thus, the broad constitutional grant of power to California cities is limited by the judicial construction given to the concept of "municipal affairs."[12] Conversely, though

5. A. BROMAGE, INTRODUCTION TO MUNICIPAL GOVERNMENT AND ADMINISTRATION 157 (1950).

6. *Id.* The concept of home-rule is consonant with the emphasis on "community control" which has recently arisen in education as well as in other areas. *Cf.* Kirp, *Community Control, Public Policy, and the Limits of Law*, 68 MICH. L. REV. 1389 (1970). Home-rule and local control are intended to guard against arbitrary legislation by keeping decision-making close to the people to be governed. Fordham, *Decision-Making in Expanding American Urban Life*, 21 OHIO ST. L.J. 274, 275 (1960). As one commmentator has observed:

> Municipal Government has at least two advantages over state government. A municipal administration is more responsive to the needs of local citizens, since it must depend exclusively on these people for re-election. Second, a local government is more efficient to the extent that efficiency is increased by closeness to the scene of operations and accessibility to the criticism and suggestions of the persons governed.

Note, *supra* note 4, at 740. *See also* Fordham & Asher, *Home Rule Powers in Theory and Practice*, 9 OHIO ST. L.J. 18 (1948).

7. *See, e.g.*, OHIO CONST. art. 18.

8. *See, e.g.*, MICH. CONST. art. 7, § 22.

9. CAL. CONST. art. XI, §§ 6, 8.

10. Wiley v. City of Berkeley, 136 Cal. App. 2d 10, 12, 288 P.2d 123, 125 (1955).

11. MICH. COMP. LAWS ANN. § 117.4j(3) (1967).

12. The California courts have observed that there is no precise definition of

Michigan's home-rule provisions are not among the most extensive as written, the Michigan courts have interpreted the provisions to allow a vigorous exercise of local authority by Michigan cities.

The source of the home-rule powers of Michigan cities is article 7, section 22, of the Michigan constitution:

> Under general laws the electors of each city and village shall have the power and authority to frame, adopt and amend its charter, and to amend an existing charter of the city or village heretofore granted or enacted by the legislature for the government of the city or village. Each such city and village shall have power to adopt resolutions and ordinances relating to its municipal concerns, property and government, subject to the constitution and law. No enumeration of powers granted to cities and villages in this constitution shall limit or restrict the general grant of authority conferred by this section.[13]

This provision is not of the "self-executing" type, and therefore the constitutional grant of power is implemented through Michigan's home-rule statutes, which delegate to home-rule cities, such as Ann Arbor, the authority to act

> to advance the interests of the city, the good government and prosperity of the municipality and its inhabitants and through its regularly constituted authority to pass all laws and ordinances relating to its municipal concerns subject to the constitution and general laws of the state.[14]

"municipal affairs." Dairy Belle Farms v. Brock, 97 Cal. App. 2d 146, 154, 217 P.2d 704, 708 (1950). Instead, the determination is one of degree. Certain concerns may be characterized as "strictly" or "essentially" municipal affairs, while others may be "partaking of the characteristics of a municipal affair" and yet encompass a far greater scope of interest than strictly municipal matters. Brewer v. Feigenbaum, 47 Cal. App. 2d 171, 176, 117 P.2d 737, 740 (1941). If there is any reasonable doubt as to whether a particular matter is a municipal affair, the courts will resolve the matter against the municipality and deny the power. Dairy Belle Farms v. Brock, 97 Cal. App. 2d at 154, 217 P.2d at 709.

Municipal control over municipal affairs is "independent of general laws" (*see* text accompanying note 10 *supra*) only when a matter is exclusively a municipal affair. The independence disappears as statewide interests begin to coincide with local interests. As the California supreme court recently noted in Lancaster v. Municipal Court for the Beverly Hills Judicial District of Los Angeles County, — Cal. 3d —, 494 P.2d 681, 682, 100 Cal. Rptr. 609, 610 (1972):

> [A] local municipal ordinance is invalid if it attempts to impose additional requirements in a field that is pre-empted by general law. . . . Local legislation in conflict with general law is void. Conflicts exist if the ordinance duplicates . . . contradicts . . . or enters an area fully occupied by general law, either expressly or by legislative implication . . . . If the subject matter or field of the legislation has been fully occupied by the state, there is no room for supplementary or complementary local legislation, even if the subject were otherwise one properly characterized as a "municipal affair."

Comparing the law of California with that of Michigan (*see* notes 12-23 *supra* and accompanying text) it becomes apparent that despite the constitutional variations in the scope of power, the practical powers of California and Michigan cities are strikingly similar.

13. MICH. CONST. art. 7, § 22.

14. MICH. COMP. LAWS ANN. § 117.4j(3) (1967).

Both the statute and the constitution expressly limit home-rule powers to control over areas of "municipal concern," a concept that does not encourage facile definition. There has been a certain tendency in Michigan to link the municipal concern idea with the scope of the police power.[15] It has been held that except as limited by the constitution or by statute the police power of home-rule cities is "of the same general scope and nature as that of the State."[16] This police power has been broadly defined and allows the flexibility necessary to deal with changing problems.[17] The enacting body has the discretion to determine what regulations are appropriate to protect the public interest;[18] and a person asserting the unconstitutionality of a municipal ordinance has the burden of showing that it has no real or substantial relation to the public health, morals, safety, or general welfare.[19]

Yet, the fact that a locality can assert some measure of municipal interest in an area of control does not necessarily bring that area within the ambit of permissible local authority under the meaning of the "municipal concern" language of the constitution and the enabling statute. Most problems are of concern both to the State and the cities, and the inquiry focuses on the degree to which one or the other might be concerned, or perhaps which entity has the primary concern. As one commentator has observed:

15. *See, e.g.*, Watnick v. City of Detroit, 365 Mich. 600, 113 N.W.2d 867 (1962); Huron Portland Cement Co. v. City of Detroit, 355 Mich. 227, 93 N.W.2d 888 (1959), *aff'd.*, 362 U.S. 440 (1960); People v. Sell, 310 Mich. 305, 17 N.W.2d 193 (1945); Eanes v. City of Detroit, 279 Mich. 531, 272 N.W. 896 (1937).

16. People v. Sell, 310 Mich. 305, 315, 17 N.W.2d 193, 196 (1945). A rather narrow view of municipal powers was expounded in the early cases of Attorney General v. City of Detroit, 225 Mich. 631, 196 N.W. 391 (1923), and City of Kalamazoo v. Titus, 208 Mich. 252, 175 N.W. 480 (1919). *Attorney General v. City of Detroit* held that a municipality exercised the police power only as an agent of the State, and in such capacity it could not set state policy by regulating areas of statewide concern. This concept precluded local wage and hour regulation in *Attorney General v. City of Detroit*, and local fixing of public utility rates in *Titus*. *People v. Sell* upheld a Detroit ordinance enforcing federally set wartime price ceilings on commodities. This ordinance can be viewed as a local exercise of the police power in an area of statewide concern. But the impact of *Sell* as precedent is limited by the court's reliance on the wartime emergency circumstances which necessitated the ordinance, as well as the fact that it merely augmented a state price ceiling statute which was already in effect.

17. In People v. Sell, 310 Mich. 305, 315-16, 17 N.W.2d 193, 196 (1945), the Michigan supreme court stated:

> The "police power" is . . . a power or organization of a system of regulations tending to the health, order, convenience, and comfort of the people and to the prevention and punishment of injuries and offenses to the public. . . . It embraces all rules and regulations for the protection of life and the security of property . . . . It has for its object the improvement of social and economic conditions affecting the community at large and collectively with a view to bring about "the greatest good of the greatest number." Courts have consistently and wisely declined to set any fixed limitations upon subjects calling for the exercise of this power. It is elastic and is exercised from time to time as varying social conditions demand correction.

18. Cady v. City of Detroit, 289 Mich. 499, 286 N.W. 805 (1939).

19. Austin v. Older, 283 Mich. 667, 278 N.W. 727 (1938).

> The courts have, generally speaking, been unable to devise any objective test whereby it can be determined with certainty what matters come within the term "municipal affairs," for the term has no fixed quantity, fluctuates with every change in the conditions upon which it operates, and has of necessity been determined by a slow process of judicial inclusion and exclusion.[20]

The elusive nature of the municipal concern idea may justify the Michigan courts' unwillingness to propose expansive or general definitions. The issue is more amenable to a subtle balancing process, weighing the sometimes conflicting interests of the cities and the state, considering the advantages to be derived in each case from broader local powers as opposed to more uniform regulation by the state. For example, a court might properly weigh the relative efficiency of local and state governments in the regulation of any given activity, the interest of local citizens in responsive implementation of local policies, and the possibility that local ordinances will interfere with the operation of statewide objectives or procedures. Such balancing of state and local interests seems implicit in decisions of the municipal concern issue; but whereas the balancing process is outlined in decisions of other jurisdictions,[21] the Michigan courts have not overtly subscribed to this approach.[22] In any event, the municipal concern question has traditionally been dealt with on a case-by-case basis in Michigan, resulting in lists of inclusion and exclusion.[23]

20. C. RHYNE, MUNICIPAL LAW 64 (1957).

21. *E.g.*, State *ex rel.* Heinig v. City of Milwaukee, 231 Ore. 475, 480-85, 373 P.2d 680, 684-87 (1962).

22. In a slightly different context the Michigan supreme court made some observations that may be pertinent to the municipal concern issue. In Miller v. Fabius Twp. Bd., 366 Mich. 250, 114 N.W.2d 205 (1962), the court addressed the issue of whether the regulation of water skiing was a problem susceptible to local control under what is now MICH. COMP. LAWS ANN. § 41.181 (1967), a statute defining the scope of a township's authority to enact ordinances. The court noted:

> While the general problem with reference to water skiing and motorboating and the use of our inland lakes by different classes of sportsmen are statewide problems, there are *peculiar circumstances that are local in character*—such as the number of boat users on the lake; the amount of fishing on the lake; the congestion and conflict between fishermen and water skiers; the location of the lake to densely populated areas—which the 1959 amendment authorizes townships to deal with under the "health and safety of persons and property" clause.

366 Mich. at 259, 114 N.W.2d at 209 (emphasis added). Although the court did not explicitly balance the state interest in regulation against the local interest, it recognized that even in areas of statewide concern, peculiar local circumstances may create a need for local regulation. Such an analysis might be equally applicable to the municipal concern question and might well produce results similar to a balancing approach.

23. The Michigan courts have found the following areas to be within the scope of the "municipal concern" requirement: Watnick v. City of Detroit, 365 Mich. 600, 113 N.W.2d 376 (1962) (Sunday closing laws); Huron-Portland Cement Co. v. City of Detroit, 355 Mich. 227, 93 N.W.2d 888 (1959), *aff'd.*, 362 U.S. 440 (1960) (air pollution); People v. Sell, 310 Mich. 305, 17 N.W.2d 193 (1945) (municipal enforcement of federal wartime commodity controls); Eanes v. City of Detroit, 279 Mich. 551, 272 N.W.2d 896 (1937) (regulation of barber shops).

In determining whether the Ann Arbor marijuana ordinance deals with an area of municipal concern, it must be noted that the same strong presumption of constitutionality applies to a city ordinance as to a state statute,[24] and such presumption must be overcome by a showing of unconstitutionality beyond a reasonable doubt.[25]

In response to an opinion by Attorney General Frank Kelly,[26] and in an effort to comply expressly with the municipal concern requirement, the City Council of Ann Arbor inserted in the ordinance a section that specifically identifies a local problem.[27] The ordinance speaks of a particular concern for the youth of the community, "present here as University students or otherwise," and seeks to "preserve the respect of such citizens for the law and its processes."[28] Justice Williams of the Michigan supreme court has suggested that rational legislation with respect to marijuana should serve this same purpose.[29] The Council may also have recognized a widespread use of marijuana within the City, and acted to prevent the strain on community relations between youth and the police that might have resulted were enforcement of harsh state penalties to continue.[30] A related aspect of this problem is the criminalization of the City's citizens who use marijuana; such citizens, through fear of enforcement of the strict state laws might come to regard the police as adversaries, rather than as public servants who can be relied upon for aid and

---

The case law has held the following to be of statewide concern, thus beyond the regulatory power of municipalities: Attorney General v. City of Detroit, 225 Mich. 691, 196 N.W. 391 (1923) (regulation of hours of labor and the minimum wage); City of Kalamazoo v. Titus, 208 Mich. 252, 175 N.W. 480 (1919) (fixing of rates for public utilities). The Michigan courts generally have not invalidated ordinances on the ground that they do not relate to municipal concerns. The tendency has been to find that where the legislature has acted with regard to areas of statewide concern, such statutes are pre-emptive. *See, e.g.*, City of Grand Haven v. Grocer's Co-operative Dairy, 330 Mich. 694, 48 N.W.2d 362 (1951).

24. People v. Sell, 310 Mich. 305, 314, 17 N.W.2d 193, 195 (1945). *See also* Goldstein v. City of Hamtramck, 227 Mich. 263, 198 N.W. 962 (1924).

25. Cady v. City of Detroit, 289 Mich. 499, 505, 286 N.W. 805, 807 (1939):

> A statute will be presumed to be constitutional by the courts unless the contrary clearly appears; and in case of doubt every possible presumption not clearly inconsistent with the language and subject matter is to be made in favor of the constitutionality of legislation . . . . [I]t is only when invalidity appears so clearly as to leave no room for reasonable doubt that it violates some provision of the Constitution that a court will refuse to sustain its validity.

30. *See* J. KAPLIN, MARIJUANA: THE NEW PROHIBITION 33-36, 39-40 (1970); H. PACKER, THE LIMITS OF THE CRIMINAL SANCTION 340-41 (1968); Note, *Possession of Marijuana in San Mateo County: Some Social Costs of Criminalization*, 22 STAN. L. REV. 101, 118-21 (1968).

protection.[81] This attitude could diminish community cooperation with the police in other, perhaps more critical, areas of police work. By reducing the marijuana penalties, the City has de-emphasized the offense, a result of which could not only be an improvement in police-community relations but also a reordering of enforcement priorities and a reallocation of police resources to more serious criminal activities. The ordinance may have been enacted in response to a growing lack of respect for the legal system among young people who believe that the marijuana prohibition is discriminatory because one class of persons is subjected to harsh criminal sanctions for the use of one recreational drug, marijuana, while another class of persons has general approval for the use of alcohol, another recreational drug.[82] By reducing the stigma, the inconvenience, and the financial cost of a marijuana conviction, the City can claim to be minimizing a cause of citizen disrespect for the law and its processes.[83]

There are, on the other hand, arguments for viewing marijuana regulation as a matter of statewide concern. The State can claim that Ann Arbor is not unique, that marijuana use in Ann Arbor is no less contrary to an expressed state policy than it is anywhere else in the State, and that uniform enforcement of state laws regulating the

---

81. *See* authorities cited in note 80 *supra*. These local interests might satisfy the "peculiar circumstances" test that the court applied under the township statute if the court chose to extend this test to the "municipal concern" question under the home-rule provision of the constitution. *See* note 22 *supra*.

82. In a concurring opinion in People v. Sinclair, 387 Mich. 91, 105-15, 194 N.W.2d 878, 881-87 (1972), Justice Swainson marshalled numerous studies and reports in a carefully documented comparison between the effects of marijuana and alcohol. Relying on THE INTERIM REPORT OF THE CANADIAN GOVERNMENT COMMISSION OF INQUIRY, THE NON-MEDICAL USE OF DRUGS 116-17, 122-23 (1970) [hereinafter CANADIAN COMMISSION]; L. GRINSPOON, MARIJUANA RECONSIDERED 39-61 (1971); J. KAPLIN, *supra* note 80, at 139-41; PRESIDENT'S COMMISSION ON LAW ENFORCEMENT AND ADMINISTRATION OF JUSTICE, TASK FORCE REPORT: NARCOTICS AND DRUG ABUSE 13-14, 25 (1967); REPORT BY THE ADVISORY COMMITTEE ON DRUG DEPENDENCE 12-13, 16, 20-21 (1968) (British Report); Bonnie & Whitebread, *The Forbidden Fruit and the Tree of Knowledge: An Inquiry into the Legal History of American Marijuana Prohibition*, 56 VA. L. REV. 971, 1105-07 (1970), he concluded that marijuana is not addictive, does not lead to the use of "hard" drugs, does not lead to violent crimes by the user, does not adversely affect psychomotor response (*e.g.*, driving abilities), and has no adverse physical effects on the user. Citing the CANADIAN COMMISSION at 43, 70-72, J. KAPLIN at 275-320, and the PRESIDENT'S COMMISSION ON LAW ENFORCEMENT AND ADMINISTRATION OF JUSTICE, TASK FORCE REPORT: DRUNKENNESS 35 (1967), he observed that alcohol, by comparison, is shown to be addictive, is clearly linked with the commission of violent crimes, and excessive use is associated with death of brain cells, mental deterioration, and cirrhosis of the liver.

83. However, it is arguable that the very coexistence of two distinct penalty schemes applicable to the same conduct will in itself cause people to view the legal policies underlying the prohibition as somewhat schizophrenic. In addition, the local interests that Ann Arbor asserts may be different from the interests of the rest of the State only as a matter of degree due to the fact that there is a greater concentration of young people in Ann Arbor because of the presence of the University. This may suggest that the limitation of marijuana offense penalties is really a matter of statewide concern which is simply more aggravated in Ann Arbor.

use of drugs is appropriate because of the statewide nature of the problem. By providing a shelter for marijuana violators, Ann Arbor may impede the ability of the State to suppress drug traffic throughout the State. This last danger, however, will be minimized to the extent that the City exercises its retained discretion to accede to prosecution of "traffickers" under state law.[84] Moreover, no reason appears why Ann Arbor's interest need be unique to justify control over a matter of great local significance.

Under the suggested balancing approach, it would appear that there are legitimate local interests furthered by the Ann Arbor marijuana ordinance which may be sufficient to prevail over the state interests involved. Thus, the Ann Arbor marijuana ordinance is capable of meeting the constitutional requirement of relation to a "municipal concern." The Michigan courts, however, have not expressly engaged in balancing in their treatment of the "municipal concern" issue, but perhaps have merged these policy considerations into their analysis of pre-emption and conflict.[85] Indeed, the Michigan courts have decided the vast majority of the cases dealing with municipal ordinances without ever mentioning the municipal concern requirement. The courts routinely uphold convictions under local ordinances, the implication being that such ordinances are valid exercises of the local police power, and the breadth accorded the concept of municipal concern has rendered this constitutional requirement somewhat ineffective as a limitation of the exercise of municipal powers. This is not to suggest that such powers are unlimited. Rather, the Michigan courts have generally chosen to impose the appropriate limits on local authority by invoking the doctrines of pre-emption and conflict.

In light of Michigan's broad judicial interpretation of the municipal concern clause, it becomes apparent that there are many areas where both the municipalities and the State can exercise legitimate control. One check upon local power is the doctrine of pre-emption. As with the municipal concern requirement, the pre-emption doctrine has its basis in the home-rule provision of the Michigan constitution.[86] Since the home-rule powers are subject to the constitution and general laws of the State, the courts have held that when the state legislature has intended to pre-empt the field in a given area, any local attempts at additional regulation in that area are void. When the legislature has manifested the necessary intent, pre-emption occurs regardless of whether the local ordinance complements or is contradictory to the statute.

In Michigan, the determination of legislative intent is of necessity

84. *See* notes 78-79 & 102-08 *infra* and accompanying text.

85. *See, e.g.*, Walsh v. City of River Rouge, 385 Mich. 623, 189 N.W.2d 318 (1971).

86. MICH. CONST. art. 7, § 22, set out in text accompanying note 13 *supra*.

made without the benefit of any recorded legislative history, and proceeds essentially on the basis of other guides to statutory interpretation. Thus, the nature and extent of the inquiry pursued by the courts in determining the legislative intent has varied considerably. In *Walsh v. City of River Rouge*,[37] the Michigan supreme court engaged in a thorough analysis of the state legislation. *Walsh* involved a Michigan statute granting emergency powers to the Governor, and a city ordinance granting similar powers to the mayor. Since the statute itself provided for discretionary grants of emergency power by the Governor to mayors, the court reasoned that the legislature intended that such powers be withheld from mayors absent a specific gubernatorial delegation thereof. Consequently, the statute was considered to embody a "legislative intent to lodge exclusive powers in the Governor, thereby pre-empting the field from local governments,"[38] thus rendering the ordinance void.

In *Richards v. City of Pontiac*,[39] the Michigan supreme court also found a state statute to be pre-emptive, but did so without the benefit of the forceful reasoning found in *Walsh*. The *Richards* court considered whether the Michigan legislature, in passing a trailer park act, had intended to pre-empt the field, rendering ultra vires a municipal attempt at additional control. The court described the provisions of the act, and, citing nothing more than the comprehensive nature of the statute and its general application throughout the State to cities as well as rural areas, stated in conclusory fashion that its "intent and purpose is to take over the entire field of regulation and supervision of trailer parks in the State."[40] The reasoning of the court is not entirely persuasive, for the factors cited by the court do not compel the conclusion that the legislature intended to occupy the field and preclude concurrent municipal regulation.

In other cases the Michigan courts have attached considerable significance to the presence or absence of express language reserving exclusive control in the legislature. In *Noey v. City of Saginaw*,[41] a city ordinance placed more restrictive closing hours on taverns than those provided for by statute. The Michigan supreme court held the ordinance void, noting that the State reserved, by legislative provision, " 'the sole right, power and duty to control the alcoholic beverage traffic . . . within the State.' "[42]

The court mentioned the absence of such an express statement of

legislative pre-emptive intent in upholding a city ordinance in *Miller v. Fabius Township Board*.[43] A city ordinance there imposed more restrictive hours on water skiing than those imposed by the state power-boating statute. Without any extensive analysis of the statute, the court found that the legislature "certainly" did not intend to pre-empt the field, and, furthermore, had they so intended, the legislature "could have expressly stated pre-emptive control."[44] It may be suggested that the absence of express language establishing pre-emptive intent was not the sole controlling factor in *Miller*, since the court on other occasions has declined to find significance in such a legislative omission.[45] The court's conclusion that the legislature did not intend pre-emption may have been influenced by its view that "the ordinance was enacted to prevent the many dangers and alleviate the congested local conditions that existed on Pleasant Lake."[46] In this respect it is worth noting that the Michigan supreme court in *Walsh* expressly stated that the "legal question" of pre-emption would be resolved "against [the] background of competing policy considerations."[47] Thus, this brief survey of Michigan case law demonstrates that in the absence of a readily discernible legislative intent the Michigan courts retain great flexibility in handling the pre-emption issue.

Turning to a consideration of the Ann Arbor marijuana ordinance, the question for determination is whether the Michigan legislature intended to pre-empt the field of marijuana control by passage of the Controlled Substances Act of 1971.[48] Certain factors do militate toward a finding of pre-emptive intent. First, the Act is very comprehensive in scope—marijuana is only one of many drugs regulated by the statute—and this factor was deemed relevant in *Richards*. Second, the argument that the State has an interest in the uniform application of its drug laws might suggest a presumption that the legislature intended exclusively to control marijuana-related activities.

While these considerations have merit, a reading of the Act and other factors indicate an absence of legislative pre-emptive intent. First, there is no provision in the Controlled Substances Act reserving exclusive control in the "administrator" of the Act.[49] In a rather

45. *See, e.g.*, Walsh v. City of River Rouge, 385 Mich. 623, 189 N.W.2d 318 (1971); Richards v. City of Pontiac, 305 Mich. 666, 9 N.W.2d 885 (1943).

46. 366 Mich. at 258, 114 N.W.2d at 208.

47. 385 Mich. at 634-35, 189 N.W.2d at 324.

48. MICH. COMP. LAWS ANN. §§ 335.301-.367 (Supp. 1972).

49. "'Administrator' means the state board of pharmacy or its designated or established authority." MICH. COMP. LAWS ANN. § 335.303(2) (Supp. 1972). The Act does vest discretion in the administrator to reclassify or delete controlled substances from the

analogous type of legislation, the Michigan Liquor Control Act of 1933,[50] the legislature provided for the creation of the liquor control commission,[51] and provided also that "the commission shall have the sole right, power and duty to control the alcoholic beverage traffic . . . within the state of Michigan."[52] The omission of such a clause from the Controlled Substances Act may suggest the absence of a legislative intent to pre-empt concurrent local regulation,[53] as the Michigan supreme court noted in *Miller*. Second, section 44 of the Controlled Substances Act provides: "Any penalty imposed for violation of this act is in addition to, and not in lieu of, any civil or administrative penalty or sanction otherwise authorized by law."[54] While this provision was presumably not drafted in contemplation of concurrent munipical control, it nonetheless makes clear that the Act does not contemplate pre-emption of *all* additional regulation and penalties.[55]

The brief survey and analysis of Michigan cases such as *Walsh* and *Miller* establish the principle that absent clearer indications of legislative intention, policy considerations properly may be raised in support of the Ann Arbor marijuana ordinance in response to a pre-emption challenge. This principle is not inconsistent with the fact that legislative intent is the touchstone of pre-emption. The Michi-

---

proscriptions of the Act on the basis of such factors as the state of the scientific knowledge, patterns of abuse, and risk to the public health. MICH. COMP. LAWS ANN. § 335.311 (Supp. 1972). Such a broad grant of discretionary power might evidence a legislative intention of providing sufficient flexibility to obviate the necessity of local regulation.

50. MICH. COMP. LAWS ANN. §§ 436.1-.58 (1967). The two laws are parallel in many respects. Both the Controlled Substances Act and the Liquor Control Act regulate and control the availability of substances which are prone to abuse and which possess habit forming characteristics. Both Acts provide for licensing distributors (MICH. COMP. LAWS ANN. §§ 335.332 (Supp. 1972), 436.17-.28 (1967)), regulation of labeling (MICH. COMP. LAWS ANN. §§ 335.331 (Supp. 1972), 436.46-.46a (1967)), revocation of licenses (MICH. COMP. LAWS ANN. §§ 335.334 (Supp. 1972), 436.20-.21, 436.51 (1967)), and for programs to combat abuse of the substances (MICH. COMP. LAWS ANN. §§ 335.358 (Supp. 1972), 436.47a (1967)).

51. MICH. COMP. LAWS ANN. § 436.5 (1967).

52. MICH. COMP. LAWS ANN. § 436.1 (1967).

53. The Michigan Legislature is not hesitant to include pre-emptive clauses in legislation. The Liquor Control Act is but one example. The uniformity provision of the state motor vehicle code, MICH. COMP. LAWS ANN. § 257.605 (1967), reads:

> The provisions of this chapter shall be applicable and uniform throughout this state and in all political subdivisions and municipalities therein and no local authority shall enact or enforce any ordinance, rule or regulation in conflict with the provisions of this chapter.

This clause does permit concurrent regulation but requires that it be strictly uniform, and it is pre-emptive of divergent local law.

54. MICH. COMP. LAWS ANN. § 335.344 (Supp. 1972).

55. On the other hand, the specific mention of civil and administrative proceedings coupled with the omission of any reference to criminal proceedings might be read as evidence of an intention to pre-empt the field of criminal regulation of controlled substances.

gan legislature, particularly in light of the recent enactment in 1971 of the Controlled Substances Act, must have been aware of the competing policies that were outlined above in the discussion of municipal concern[56] and surely acted to promote what was deemed, on balance, sound policy.

It was suggested above that the municipality's interest in encouraging respect for the law and its processes, in providing responsive and efficient local government, and in maintaining a healthy level of autonomy outweigh the State's interest in uniform control of marijuana-related activities. What a court would view as the probable legislative judgment in balancing these factors may affect the determination of the pre-emption issue. Significantly, to the extent that municipal ordinances benefit from a presumption of constitutionality,[57] a court should require substantial evidence that establishes pre-emptive legislative intent to void the Ann Arbor marijuana ordinance.

In areas not pre-empted by the State, "the 'rule' has long been recognized that municipalities are not divested of all control even where the legislature has enacted laws."[58] If the Controlled Substances Act was not intended to be pre-emptive, the Ann Arbor marijuana ordinance would be allowed to stand unless the provisions of the ordinance are in conflict with those of the statute.[59] The conflict principle is again based upon the constitutional home-rule provision, specifically the limiting phrase "subject to the constitution and law."[60] The words "subject to" have consistently been given the judicial construction of "not in conflict with,"[61] and the general rule succinctly states that "if a city ordinance prohibits something which a State statute permits, or vice versa, there is a conflict and the State law must prevail."[62] The "vice versa" suggests, of course, the existence of a conflict when a city ordinance permits conduct

City of Pontiac, 305 Mich. 666, 9 N.W.2d 885 (1943); National Amusement Co. v. Johnson, 270 Mich. 613, 259 N.W. 342 (1935).

prohibited by statute. Traditional conflict issues come most clearly into focus when both a city and the State act to regulate the same realm of activity with laws containing similar, though not identical, prohibitive provisions. At what point does permissible concurrent regulation become unconstitutional conflict and contravention? The Michigan supreme court has noted that the question is "difficult of solution, and cannot be determined by any fixed rule. Each particular case must be determined as it arises."[63]

This approach has hindered the development of any cohesive rubric, and analysis of the case law reveals a certain lack of harmony among the decisions. In *People v. McDaniel*,[64] the Michigan supreme court considered a municipal ordinance that prohibited the use of motor boats having engines of greater than five horsepower on a local lake. The State of Michigan had also legislated to control power boating, and required, *inter alia*, that power boats be equipped with specified sound control devices. Although the court acknowledged the municipal concern in eliminating the excessive disturbance to lakeshore residents caused by the larger power boats, the court held that the ordinance did in fact prohibit that which the statute permitted, and was consequently void.

An ordinance alleged to be in conflict with an amendment to the same power-boating statute was the object of the court's attention in a more recent case, *Miller v. Fabius Township Board*.[65] It was contended that an ordinance prohibiting water skiing between the hours of four p.m. and ten a.m. was in conflict with a section of the statute that prohibited water skiing during the period one hour after sunset until one hour before sunrise. Under the reasoning of *McDaniel* it would indeed seem that the ordinance prohibited that which the statute permitted, thus rendering the ordinance void. The Michigan supreme court, however, found that since the statute was not intended to be pre-emptive[66] and the field was amenable to additional regulation by the municipality, the town could properly prohibit that which the statute did not *expressly* permit.[67] This appears to be a more liberal view of the scope of permissible municipal authority than that envisioned in *People v. McDaniel*, which was cited by the dissent but ignored by the majority in *Miller*. Although *McDaniel* was not expressly overruled in *Miller*, the two cases are not easily reconciled. *Miller* may therefore suggest an increasing judicial sensitivity to the special concerns of municipalities.

While *Miller* and *McDaniel* treat the conflict issue as it relates to conflicting substantive provisions, it should be noted that in the case of the Ann Arbor marijuana ordinance, the question of conflict, if any, is more subtle. Since both the statute and ordinance provide some sanction for essentially similar conduct, it would not appear that a conflict arises within the literal terms of the general rule: The ordinance, while providing a different and lesser penalty, does not literally permit what the statute prohibits. On the other hand, it is arguable that the significantly lesser penalty of the ordinance conflicts with the legislative policy of the statute by implicitly condoning conduct which is prohibited by the statute and thereby undermining the statute's deterrent effect.[68] This conflict of policy, however, may be more appropriately dealt with under the municipal concern balancing approach or under the pre-emption doctrine.

It is significant that the Ann Arbor marijuana ordinance makes punishable as a misdemeanor certain offenses that are considered felonies under the statute. For example, selling or giving away marijuana is a misdemeanor under the ordinance, while "delivery" is a felony under the statute.[69] In some jurisdictions changing the classification of an offense from a felony to a misdemeanor might be conclusive evidence of a conflict.[70] Michigan does not adhere to this rule. Michigan courts have held that "a felony in this State is distinguishable from a misdemeanor as a grade of crime *only* by reason of the place and severity of punishment."[71] It could be argued that even this variation in degree creates a conflict sufficient to invalidate the ordinance. However, the Michigan supreme court's treatment of a case similar to that presented by the concurrent regulation of marijuana indicates that at least in certain instances an ordinance will be upheld despite the fact that it provides lesser penalties for conduct than the applicable state law.

The early case of *People v. Hanrahan*[72] dealt with concurrent regulation of prostitution by the City of Detroit and the State. Significantly, *Hanrahan* upheld a city ordinance that made punishable as a misdemeanor an offense that the State made punishable as a felony. The defendant was convicted under a city ordinance that prohibited keeping a house of ill fame, and that provided for a fine

68. *See* Note, *supra* note 4, at 748.

69. *See* notes 1-2 *supra*. While MICH. COMP. LAWS ANN. § 335.341 (Supp. 1972) makes delivery a felony, § 335.46(2) provides that noncommercial distribution without remuneration and not to further a commercial purpose is only a misdemeanor.

not to exceed 500 dollars, or imprisonment for up to six months or until such fine was paid. A statute barring similar and related conduct provided for a fine not to exceed 1,000 dollars or imprisonment for not more than five years, or both. In affirming the validity of the ordinance, the Michigan supreme court addressed itself to arguments relevant to the instant problem of marijuana control. The court first noted the argument for statewide uniformity of the criminal laws

> that it is the province of the legislature to declare what shall constitute crime, and to prescribe punishment therefore; that an offense against the criminal laws of the State is the same offense in whatever locality it is committed, and should subject the offender to the same punishment.[73]

The court rejected this argument, finding such contentions "not fundamental,"[74] and noting that the legislature might make certain acts criminal and punishable as felonies in some parts of the State while those same acts, if done in different sections of the State, would not be criminal at all.[75] The court expressed no dismay that municipalities could achieve the same result through the delegated lawmaking powers.

A second argument confronted by the court raised the prospect that this authority for local control, "carried to its logical results, would authorize each township in the State, and each county to have its own code of criminal laws, differing from the others."[76] The court responded to this approach by reasoning that although the legislature has the responsibility to determine what shall constitute a crime and how it shall be punished, a portion of this responsibility and authority was necessarily delegated to municipalities in order that they might implement their mandate to protect the health, morals, welfare, and good order of their communities.[77] The court conceded

76. 75 Mich. at 618, 42 N.W. at 1126.

77. 75 Mich. at 618, 42 N.W. at 1127. *See also* Feek v. Township Bd., 82 Mich. 393, 411-12, 47 N.W. 37, 40 (1890):

> [E]specially is it true where the constitution authorizes a delegation of legislative power for local purposes—the legislature may suspend, or authorize legislation which will necessarily operate to suspend, the general law in particular localities. The principle is a recognition of the right of local self-government. One locality may feel the need of different local regulations from another. The wants of a majority of its electors are respected in granting to the local municipality the power to enact such laws relating to their internal affairs as the feelings and wishes of the majority demand.

Feek, like *Hanrahan*, antedates the passage of the Home-Rule Act, yet its language concerning "delegation of legislative power for local purposes" becomes more significant in light of the subsequent enactment. The local police powers noted in *Hanrahan*, which gained statutory support in the Home-Rule Act (*see* notes 15-19 *supra*

the possibility of internecine strife and bitterness caused by arbitrary and inconsistent criminal laws in neighboring communities, but denied that any real likelihood of such a situation was present. The court also reasoned that

> [if such abuse of the local power] should be attempted, and result in wrong or oppression to the people, the remedy is in their hands. The legislators are chosen by them, and it is in their power to effect any needed reform.[78]

The *Hanrahan* case is not without weaknesses as precedent for similar resolution of a "conflict" problem in the home-rule context. *Hanrahan* was decided in 1889, well before the 1908 passage of the Michigan Home-Rule Act. The special charter passed by the legislature for the City of Detroit specifically authorized the City to act to " 'prohibit, prevent, and suppress the keeping and leasing of houses of ill fame.' "[79] The general conflicts rule that the city cannot permit what the statute prohibits is applicable "in the absence of specific statutory or charter power in the municipality."[80] Certainly *Hanrahan* could be distinguished on this ground. Nevertheless, the rationale underlying the court's holding seems to be based upon the general authority that the legislature delegated to municipalities to act in protection of the public order, health and welfare; the very same authority that was later embodied in the Home-Rule Act. The Michigan court has not felt constrained to limit the principles of *Hanrahan* to ordinances suppressing prostitution, but rather has recognized the breadth of its holding by citing it in support of local control in diverse areas.[81] The reasoning in *Hanrahan* supports later Michigan decisions that deal with the scope of municipal control after the passage of the Home-Rule Act:

> The [Home-Rule Act] was passed in obedience to a mandate of . . . the Constitution . . . . The new system is one of general grant of rights and powers, subject only to certain enumerated restrictions, instead of the former method of only granting enumerated rights and powers definitely specified.[82]

---

and accompanying text), would be ineffective without the concomitant power to enact ordinances for their enforcement.

The general grant of powers described in this passage suggests the same need for latitude in local action that *Hanrahan* endorses.

To the extent that *Hanrahan* remains viable, it suggests that a reduction in the class of offense from felony to misdemeanor does not create a fatal conflict. The social and political policies that underlie Michigan's determination to allow home-rule cities wide latitude in the control of their affairs are no less persuasive when the city makes a state felony punishable as a misdemeanor. Therefore, it is suggested that the Ann Arbor marijuana ordinance does not create a constitutionally significant conflict with the Controlled Substances Act.

Given the present concurrent city and state regulation of marijuana-related offenses, the question remains whether impermissible discretion is vested in the Ann Arbor City Attorney. The City of Ann Arbor is without power to pre-empt or suspend the operation of the state law within her city limits. Thus, the Ann Arbor City Attorney recognizes the continuing validity of the statute in Ann Arbor, and may refer marijuana offenders to the Washtenaw County Prosecutor for disposition under the state law. While the city Attorney's Office has declined to specify the criteria for such a decision, stating that the problem is dealt with on a case-by-case basis, it has been indicated that the quantity of marijuana involved is one relevant factor.[83] Significantly, the previous Ann Arbor marijuana ordinance, which was superseded by the present ordinance, provided that "it shall be a violation of this code to give away or sell marijuana or cannabis, as so defined, not for profit and not as part of a commercial distribution."[84] Although this distinction was not included in the present ordinance, the mayor's office[85] has indicated that it was the Council's understanding in passing the present law, that the commercial or noncommercial nature of the offense be considered before deciding whether or not to defer to county prosecution.

The present procedure may be simply described: Enforcement

See People v. Sell, 310 Mich. 305, 312-13, 17 N.W.2d 193, 195 (1945):

> A reading of the home-rule act shows that it is rather comprehensive in its provisions as to what the city may or may not incorporate in its charter, but it leaves many things to be implied from the power conferred. . . . The purpose of the legislative enactment was to give the city a large measure of home rule . . . . Considering its purpose, it should be construed liberally and in a home rule spirit.

See also Village of Kingsford v. Cudlip, 258 Mich. 144, 148, 241 N.W. 893, 894 (1932): "The provision for a general law for their incorporation was intended to confer upon them almost exclusive rights in the control of their affairs, not in conflict with the Constitution or general laws applicable thereto.

83. Interview with Jerold Lax, Ann Arbor City Attorney. *See* note 108 *infra*.

84. Ord. 4-71, adopted March 8, 1971, *as amended*, ANN ARBOR, MICH., CITY CODE, tit. IX, ch. 108, § 9:62(29) (1972).

85. Interview with Robert J. Harris, Mayor of Ann Arbor.

within the city limits is handled almost exclusively by the Ann Arbor Police Department.[86] When the infrequent arrest is made by the Washtenaw County Sheriff's Department or by the State Police, the person arrested is invariably turned over to the Prosecutor's Office for prosecution under the statute,[87] for the Sheriff's Department and the State Police have no mandate to enforce city law. After an arrest has been made by the Ann Arbor Police for a marijuana offense, the case is given to the City Attorney, who decides whether to prosecute under the ordinance or to transfer the case to the County Prosecutor.[88] Although city police can bring persons under their arrest to the Prosecutor for authorization to prosecute, they uniformly bring marijuana cases to the City Attorney, in accordance with an established, though unwritten, department procedure.[89] Thus, in practice the discretion rests with the City Attorney, and not with the arresting officers.

It is common for a prosecuting officer to be faced with different statutes or ordinances under which he could prosecute a given case, and the law recognizes the propriety of such prosecutorial discretion. As Judge, now Chief Justice, Burger observed in his concurring opinion in *Hutcherson v. United States*:[90]

> The functions of a prosecutor afford examples of a wide variety of powers to "select" the punishment in the sense argued by appellant, and to select the forum. One is seen in the situation where the prosecutor in one jurisdiction elects to yield prosecution of an accused for an offense to a jurisdiction which has capital punishment not available in the waiving jurisdiction. Similarly a prosecutor may elect to prosecute or not to prosecute, or to indict for greater rather than lesser included offenses on facts which reasonably support either.[91]

86. Since the ordinance has been in effect, there has been one arrest by authorities other than the Ann Arbor Police. In that case a city resident called the State Police to report that his neighbor was cultivating marijuana. The State Police responded and made an arrest. Interview with Washtenaw County Prosecutor's Office.

89. Interview with Harold Olson, Ann Arbor Deputy Chief of Police.

90. 345 F.2d 964 (D.C. Cir. 1965).

91. 345 F.2d at 970 n.5. Judge Burger continued: "The record before us shows that the Attorney General has promulgated standards for the guidance of United States Attorneys in the exercise of their discretion in narcotics prosecutions." Judge Bazelon (concurring in part and dissenting in part) quoted the following portion of sections 86.2-.3 of the United States Attorney's Manual:

> "The principal object of enforcement is . . . to prosecute the importers, dealers and traffickers . . . . The emphasis should be on prosecutions of the sellers or purveyors, particularly those who deal with minors, and not the mere addict possessors . . . . [C]riminal prosecutions of [addicts] in some instances may be justified so as to compel an addict to undergo complete [rehabilitative] treatment. . . . [P]rosecutions for such minor offenses which are considered to be local in character may well be and often are left to the state or local authorities. Not falling within such minor category are cases against persons, whether addicts or not, who engage in the importation or transportation or are in possession of these drugs under cir-

The decision that confronts the Ann Arbor City Attorney under the dual prohibitions of the statute and the ordinance is analogous to that faced by the prosecutor who waives jurisdiction to a state that has capital punishment.

Michigan law shares the acceptance of this discretion vested in the prosecutor's office. In *Murphy v. Weideman*[92] a defendant was first charged with driving without an operator's license in his possession, in violation of a local ordinance. The charge was dismissed by the judge, and a complaint was issued under a state statute that prohibited essentially the same conduct. Defendant, convicted under the statute, then contended on appeal that he should have been tried under the ordinance. The court found the contention to be without merit, noting that the defendant "had no vested right to be tried under the ordinance," since "[t]he prosecution might have been brought in the first instance under the statute . . . ."[93]

A different situation was presented in *People v. Lombardo*,[94] where the defendant was prosecuted under a statutory felony, aiding and abetting the keeping of a house of prostitution, rather than under a misdemeanor statute that prohibited admitting any person into a building for the purpose of prostitution. Whereas the alternative laws in *Murphy* proscribed the same conduct, the two statutes in *Lombardo* proscribed different conduct. The *Lombardo* court reached a similar result, however, holding that "[p]rosecuting officers have the right to use their discretion in determining under which of applicable statutes a prosecution shall be instituted."[95] Although the result in *Murphy* is inconsistent with a requirement that the two laws available to a prosecutor must contain different sub-

---

cumstances reasonably indicating that the drugs were intended for use in the illegal traffic."

345 F.2d at 975.

The standards that justified the exercise of prosecutorial discretion in *Hutcherson* are similar to those employed by the Ann Arbor City Attorney. Both consider the quantity of drugs involved, and the commercial or noncommercial nature of the offense. Neither office has seen fit to specify quantitative criteria upon which discretion is exercised. Significantly, discretion is justified in *Hutcherson* even though such discretion came very close to a sentencing type decision. By electing to proceed under one statute, the prosecutor in *Hutcherson* subjected the defendant to a more severe minimum sentence. This would not normally be the case with the discretion exercised by Ann Arbor's City Attorney, since the Controlled Substances Act provides no minimum sentences for first offenders. With multiple offenders, however, the situation would more closely parallel that of the *Hutcherson* case. The court has discretion to place a first offender on probation and may discharge such a person without an adjudication of guilt if he fulfills the conditions of his probation but may not do so with a person who has been previously convicted under the Act or under any federal or state law relating to narcotic drugs. MICH. COMP. LAWS ANN. § 335.347(1) (Supp. 1972).

stantive elements to justify the use of discretion, and the *Lombardo* court does not expressly mention this as a basis for its holding,[96] there are Michigan cases suggesting that the discretion is improper if the prosecutor can choose between laws with identical substantive provisions and varying penalties.[97]

For example, in *People v. Ryan*,[98] the defendant was convicted of a felony, voluntarily driving away the motor vehicle of another. The defendant contended on appeal that another statute made identical conduct a misdemeanor, and that the asserted difference in punishment for the same crime rendered the discretion vested in the prosecutor an unconstitutional delegation of authority to a nonjudicial officer. Significantly, the felony statute required the element of scienter, which was expressly discarded in the misdemeanor statute.[99] The court upheld the conviction, stating: "Since there is a distinction between the aforementioned statutes, it follows that the prosecutor had a right to use discretion in determining under which of applicable statutes a prosecution shall be instituted."[100] Thus, in *Ryan* the prosecutor's discretion is grounded upon the distinct elements of the available charges, whereas in *Murphy* it is not. This renders uncertain the presence of constitutional due process or equal protection when the prosecutor exercises discretion in charging either of two offenses with identical substantive elements but differing penalties.[101]

It is essential that the Ann Arbor City Attorney be vested with discretion to prosecute under the ordinance or to turn the case over to the County Prosecutor if a flexible system responsive to the dynamics of the individual cases is to develop. The Ann Arbor City

100. 11 Mich. App. at 561, 161 N.W.2d at 755-56.

101. This uncertainty is not limited to Michigan case law. A majority of the United States Supreme Court declined to reach this issue in Berra v. United States, 351 U.S. 131 (1955), although it was considered by Justice Black in a vigorous dissent, 351 U.S. at 139-40:

> [T]wo statutes proscribe identical conduct and no "different proof" was required to convict petitioner of the felony than would have been required to convict him of the misdemeanor . . . .
>
> A basic principle of our criminal law is that the Government only prosecutes people for crimes under statutes passed by Congress which fairly and clearly define the conduct made criminal and the punishment which can be administered. This basic principle is flouted if either of these statutes can be selected as the controlling law at the whim of the prosecuting attorney or the Attorney General . . . .
>
> A congressional delegation of such vast power would raise serious constitutional questions.

Attorney, in deciding whether to prosecute a marijuana violator under the ordinance, or to turn the case over to the County Prosecutor for disposition under the statute, may or may not be presented with the availability of identical provisions depending upon the offense charged. Both the ordinance and the statute proscribe the "use" of marijuana. However, other provisions of the two laws contain different elements. For example, the ordinance states that no person shall "give away or sell"[102] marijuana, whereas the statute prohibits "delivery"[103] and "distribut[ion] . . . without remuneration and not to further commercial distribution."[104] Prosecution may be brought under the statute for constructive delivery,[105] whereas a constructive sale or gift is not expressly prohibited by the ordinance. This distinction could justify a decision by the prosecuting officer to let the case proceed under the statute, since this course could increase the likelihood of success in cases involving the more complex forms of delivery. There is another variation: whereas the marijuana ordinance prohibits simple possession, the statute makes it unlawful for one "knowingly or intentionally"[106] to possess a controlled substance. The statutory element of *scienter*, absent from the ordinance, might distinguish the two offenses and thereby justify prosecutorial discretion even under the *Ryan* requirement of different elements in the available charges. Significantly, it is in the "use" cases that the two laws are most similar. Therefore, the exercise of prosecutorial discretion in a "use" case would be most susceptible to attack under the *Ryan* standard. Yet, in such cases the City Attorney, under the criteria noted above,[107] has the least margin for discretion: The simple "use" cases are those which are most likely to be dealt with under the ordinance, since they would typically involve an insignificant amount of marijuana in a noncommercial setting.[108]

The discussion of the differing elements of the municipal and statutory marijuana offenses also pertains to the issue of double jeopardy. Specifically, if a person is convicted or acquitted of a marijuana offense under the Ann Arbor ordinance, can he then be prosecuted for the same criminal behavior under the Controlled Sub-

108. Since the present Ann Arbor ordinance has been in effect, the City Attorney has prosecuted the vast majority of marijuana offenses under the ordinance. Only a few cases, all of which involved substantial quantities of marijuana, have been shifted to the Prosecutor's Office. Lax Interview, *supra* note 83.

stances Act? To prevent the State from defeating the City's purpose of lenient treatment of marijuana offenders, it is necessary that jeopardy attach to the municipal trial barring subsequent state prosecution.

The Supreme Court has held that the double jeopardy provision of the fifth amendment of the United States Constitution is applicable to the states through the fourteenth amendment.[109] The Court recently took the opportunity to consider the double jeopardy problem as it relates to successive prosecutions by a city and a state for the same offense. In *Waller v. Florida*,[110] a mural was stolen from a municipal building. The mural was subsequently recovered in a damaged condition by the police. The defendant was convicted of destruction of government property under a local ordinance. After serving his sentence, the defendant was then charged with and convicted of grand larceny under a statute. The district court of appeal upheld the conviction, disposing of the defendant's double jeopardy argument by invoking the dual sovereign doctrine.[111] This doctrine rests upon an analogy between the city-state relationship and that of a state and the federal government: Since an offense can simultaneously violate the laws of both sovereigns, both are entitled to prosecute the violator. In rejecting this argument, the Supreme Court stressed that cities are creations of the state, and derive their municipal powers and authority therefrom.[112] They are essentially subdivisions of a sovereign state, and lack the independent source of power associated with sovereigns. Thus, the Court held that

> [t]he Florida courts were in error to the extent of holding that "even if a person has been tried in a municipal court for the identical offense with which he is charged in a state court, this would not be a bar to the prosecution of such person in the proper state court."[113]

Waller changed the law in many jurisdictions,[114] but it merely served to reinforce what had long been the law in Michigan.[115]

Although *Waller* holds that a city and state cannot both prosecute a defendant for the same offense, it leaves unanswered the critical question of what constitutes the "same" offense. Michigan

113. 397 U.S. at 395, *quoting* 213 S.2d at 624.

114. Decisions of the states that appeared to treat municipalities and the state as separate sovereigns for double jeopardy purposes at the time of *Waller* are listed by the Court, 397 U.S. at 391-92 n.3.

115. People v. Hanrahan, 75 Mich. 611, 627-28, 42 N.W. 1124, 1130 (1889):

> [Where there is concurrent regulation by city and state] prosecutions may be instituted under either law, and the court that first acquires jurisdiction over the person of the accused has exclusive jurisdiction to hear, try, and determine the case; and a conviction for an offense which is the same in both laws will be a bar to a prosecution for the same offense under the other law.

courts have traditionally responded to this question by application of the "same evidence test."[116] In Michigan this test is applied "to ascertain whether the facts alleged in the second indictment would, if given in evidence, have warranted a conviction on the first."[117] Application of this test to successive prosecutions by City and State of marijuana offenses should be rather facile, and should lead to predictable results. Successive prosecutions under the "use" provisions of both laws would clearly be for the same offense, and would constitute double jeopardy. A city conviction or acquittal for "possession" should bar a later state prosecution for knowing or intentional possession, since the evidence necessary to prove the latter would warrant a conviction on the initial misdemeanor charge. Under this test, state charges of possession with intent to deliver, or of delivery itself would be barred by a prior municipal conviction or acquittal of simple possession.

There is additional protection afforded by statute:

> If, upon the trial of any person for a misdemeanor, the facts given in evidence amount in law to a felony, he shall not by reason thereof, be entitled to an acquittal of such misdemeanor, and no person tried for such misdemeanor shall be liable to be afterwards prosecuted for felony on the same facts, unless the court before which the trial shall be had, shall discharge the jury from giving any verdict upon such trial, and shall direct such person to be indicted for felony.[118]

Thus, for example, if a person is tried under the ordinance for violation of the possession provision and the facts given in evidence constitute delivery under the statute, such person cannot later be tried on those same facts for delivery, under the protection of both the statute and the "same evidence test." The statute is also protective in cases not covered by the Michigan "same evidence test." A person convicted of sale of marijuana under the ordinance might properly, per the "same evidence test," have then been charged under the Controlled Substances Act with possession with intent to deliver, a felony, since the facts necessary to prove possession with intent to deliver would not have warranted a conviction under the municipal "sale" provision. Since, however, in the municipal prosecution for sale, evidence sufficient to show possession with intent to deliver is likely to be presented at trial, later prosecution under the possession with intent to deliver provision would be barred by the statute.[119]

119. *Cf.* People v. Beasley, 370 Mich. 242, 121 N.W.2d 457 (1963).

Attempting to distinguish substantively the offenses charged is but one way of evading the double jeopardy protection. Another method is to demonstrate that the first proceeding was of such a nature that jeopardy did not attach. In cases of successive prosecutions by City and State, the State might claim that jeopardy did not attach to the municipal proceeding[120] since the municipal defendant, under the Ann Arbor marijuana ordinance, is subject only to a fine.[121] If a defendant's protection against double jeopardy

120. Indeed, it has long been argued in many jurisdictions (other than Michigan) that even those municipal offenses punishable by a jail term are merely civil or petty proceedings to which jeopardy does not attach. For a brief history of this theory, see Gross, *Successive Prosecutions by City and State—The Question of Double Jeopardy*, 43 ORE. L. REV. 281 (1964). This argument is losing favor, however:

> Where once successive prosecutions by city and state could be condoned because of the insignificance of municipal punishment, today that is no longer the case. Municipal prosecutions, exercising authority unparallelled at common law, meting out penalties comparable to those imposed by higher state authority, can be considered as nothing less than prosecutions by the state itself.

Id. at 314.

The view expressed in United States v. Dickerson, 168 F. Supp. 899, 901 (D.D.C. 1958), *revd. on other grounds*, 271 F.2d 487 (D.C. Cir. 1959), that "the constitutional protection against double jeopardy . . . is applicable to all proceedings, irrespective of whether they are denominated criminal or civil, if the outcome may be deprivation of the liberty of the person" is more consonant with the policies underlying the double jeopardy clause.

121. There is presently, however, some uncertainty on this point. A local judge recently declared the penalty provision of the Ann Arbor Marijuana Ordinance unconstitutional. People v. Fuqua, No. CR-7595 (Mich. Dist. Ct., Sept. 28, 1972). The judge did not reach the critical issues of conflict, pre-emption, or municipal concern, but limited his ruling of unconstitutionality to the penalty provision. The thrust of the opinion is that the City has unconstitutionally infringed upon the court's discretion to impose sentences of up to 500 dollars and/or ninety days for violation of ordinances, in that the City has specified a five dollar fine as the only permissible penalty upon conviction under the marijuana ordinance. As authority for its finding the court cited MICH. COMP. LAWS ANN. § 117.4(i) (1967), a section of the Home-Rule Act:

> Each city may in its charter provide: for the punishment of those who violate its laws or ordinances, but no punishment shall exceed a fine of $500 or imprisonment for 90 days, or both, in the discretion of the court.

The court interpreted this statute to mean that the city exceeds its power, and intrudes into the judicial domain when it sets the penalty for violations of ordinances below the statutory maximum. The judge failed to distinguish all other Ann Arbor ordinances, *none* of which authorize a 500 dollar fine and/or a ninety day imprisonment (100 dollars and/or ninety days is the maximum provision in the Ann Arbor City Code). The judge has ruled, in effect, that all Ann Arbor ordinances are unconstitutional, and, further, that if the City is to prohibit any activity (*e.g.*, overtime parking) it must allow the local judiciary to impose punishment of up to 500 dollars and/or ninety days, in its discretion, for violations.

It is noteworthy that this issue was not raised by either of the parties, and was decided on the court's own motion. The judge also denied a city attorney the opportunity to argue the motion on the merits, although argument was heard at a later date. The court's opinion will shortly be subjected to judicial review in the circuit court, on appeal by the City.

If the district court finding is upheld, and the five dollar fine invalidated, the severability clause of the City Code would act to continue the vitality of the marijuana ordinance, and the general penalty provision of the Code (100 dollars and/or ninety days) would then apply to the ordinance, unless the general penalty provision of the Code is held unconstitutional. The provisions of the ordinance would still differ

were limited to that provided by the United States Constitution, this argument might be successful. The provision of the fifth amendment is that "nor shall any person be subject for the same offence to be twice put in jeopardy *of life and limb*."[122] The federal courts have never confronted the issue of whether jeopardy attaches to a proceeding wherein conviction is punishable only by a fine, and not by a jail sentence, and this remains an open question.[123] Michigan law, however, is more clearly protective in this situation. The double jeopardy clause of the Michigan constitution does not include the "life and limb" qualification,[124] and Michigan case law supports the principle that jeopardy attaches to municipal trials regardless of the nature or the severity of the penalty sought to be imposed: "A person is in jeopardy when he is put upon trial in a court of justice charged with a violation of law."[125] Municipal ordinances have been described as possessing the full force of law:

> An ordinance, validly enacted, prohibiting certain acts under fines, penalties, or imprisonment, is within the jurisdiction of the municipality enacting it, as much entitled to respectful obedience, and is as much the law of the land for that locality, as a law enacted by the Legislature.[126]

It thus appears that regardless of whether violation of an ordinance is punishable by a jail term or by a fine only, prosecution under an ordinance is a bar to subsequent prosecution under a statute for the same offense. Thus, the argument that jeopardy does not attach to offenses punishable only by fine should not preclude jeopardy from attaching to offenses prosecuted under the Ann Arbor marijuana ordinance.

While the matter is not free from doubt, the foregoing analysis has suggested that the Ann Arbor marijuana ordinance may be supported as a valid exercise of municipal authority, even in the face of challenges of pre-emption and conflict. Through the cooperative interaction of the municipal marijuana ordinance, the double jeopardy bar, and the City Attorney's discretion to transfer the most serious cases to the county for prosecution under the state

from those of the Controlled Substances Act, and the issues discussed herein would still be relevant to the concurrent effect of the ordinance and the statute.

122. U.S. CONST. amend. V (emphasis added).

123. This issue has assumed greater significance since *Waller* applied double jeopardy to municipal trials because it is far more likely that offenses punishable only by fine will be found in municipal ordinances rather than in the federal or state codes. The case law suggests that "life and limb" should be read broadly. *See Ex parte* Lange, 85 U.S. (18 Wall.) 163 (1873); Clawans v. Rives, 104 F.2d 240 (D.C. Cir. 1939); United States v. Farewell, 76 F. Supp. 35 (D. Alas. 1948).

124. MICH. CONST. art. 6, § 1.

125. People v. Powers, 272 Mich. 303, 307, 261 N.W. 543, 544 (1935).

126. People v. Hanrahan, 75 Mich. 611, 620, 42 N.W. 1124, 1127 (1889).

law, the City of Ann Arbor has effectively declared the following proposition: Marijuana-related offenses—which are punishable as felonies, with possible prison terms, or misdemeanors, with possible jail terms, under the state law—will in most instances be punishable only as misdemeanors subject to five dollar parking-ticket-like fines if committed within the city limits. If the ordinance is upheld in the courts, the broader implications of the power that Ann Arbor has asserted will surely prove significant.

A broad construction of the home-rule powers coupled with the application of the pre-emption and conflict doctrines only when municipalities act in contravention of a readily discernible state legislative intent would contribute a desirable, if not necessary, element of flexibility to the efficient administration of government in Michigan, a state with a broad rural constituency but with pockets of urbanization such as Detroit, Lansing, Ann Arbor, Flint, and Pontiac. Urban populations deal with different problems, are influenced by different values, and envision different priorities than their rural counterparts. One system of state law cannot always reflect or serve best the interests of both, and when such discrepancies exist it seems appropriate for local legislation to supplement state law.[127]

It is clear, however, that the obvious benefits to be derived from flexibility are gained only at the expense of some uniformity in statewide law enforcement. While there would remain a uniform application of the state law in every county of the State, the conjunctive operation of enforcement of a differing local ordinance and resultant double jeopardy bar would detract from the uniform enforcement of state law. As in the case of marijuana-related offenses, certain locally held values might lead to disrespect for the law and its processes were any number of the State's criminal prohibitions to be enforced strictly;[128] and argument can also be made that the

---

127. A divergent local ordinance such as the one in question may help prompt the passage of similar state legislation. Progressive local communities, if given the freedom, can serve the function of Brandeis' famous laboratory experimenting with various socially progressive ideals of law and government. *See* New State Ice Co. v. Liebmann, 285 U.S. 262, 311 (1932) (Brandeis, J., dissenting). If such experiments prove successful, the legislature might adopt laws making such ideals the state policy. The impact of local legislation was noted by Governer Milliken in his Special Message to the Legislature on Alcohol and Drug Abuse, March 4, 1971:

> As public officials we must face squarely the need for a major revision of our laws dealing with marijuana. The hypocrisy of our present law, which falsely classifies marijuana as a narcotic, affects the credibility of our entire drug abuse program. Recent federal legislation and *the passage of local marijuana ordinances* give new urgency to the need for state action in this controversial area.

(Emphasis added.)

128. *See* H. PACKER, *supra* note 30, at 291; PRESIDENT'S COMMISSION ON LAW ENFORCEMENT AND ADMINISTRATION OF JUSTICE, TASK FORCE REPORT: THE COURTS 75-76 (1967). *Cf.* Goldstein, *Police Discretion Not To Invoke the Criminal Process: Low-Visibility Decisions in the Administration of Justice*, 69 YALE L.J. 543, 586-88 (1960); Kadish, *Legal*

failure of law enforcement officials to enforce unpopular laws fosters the same such disrespect.[129] Therefore, grounds would exist, not unlike those asserted by Ann Arbor, for a parade of concurrent municipal regulation that would certainly appear horrible to those who recognize the values of statewide uniformity of the criminal law. Indeed, the spectre of each locality enacting its own criminal code, is different only in degree from the situation presented by the concurrent operation of the Ann Arbor marijuana ordinance and the State's Controlled Substances Act.

While this problem does not admit of simple solution, it should not be insurmountable. The most fundamental answer is that municipalities are creatures of the State and, under the Michigan constitution and home-rule statute, have a limited authority and remain "subject to" the State's supreme command. Certainly the checks embodied in the municipal concern requirement and the pre-emption and conflict doctrines provide protection to the State should a municipality act adversely to the state welfare. Absent a clear indication of the legislative intent, the judicial determination of the appropriate limits of municipal power in Michigan has been shown to include, either expressly or implicitly, delicate questions of balance. The flexibility inherent in such a judicial inquiry allows careful consideration of the relevant competing policies, and renders unnecessary the promulgation of an angular standard to which later cases must be forced to conform. Finally, it should be kept in mind that the judicial determination is not the ultimate one in regard to these matters. Were the state legislature to take exception to certain municipal ordinances, even if upheld in the courts, it clearly would be within the power of the legislature to enact specific or general pre-emptive statutes to ensure that no significant state policy is impeded. Yet, as Michigan law has developed, no such scheme of pre-emptive statutes has been necessary, and the home-rule powers have been employed to secure to cities a healthy degree of autonomy in regard to matters of local concern.

THE TOWN THAT PUNISHES MARIHUANA SMOKERS WITH A $5 FINE

(By Mark Jury)

ANN ARBOR, MICH.—Here in this city—home of the sprawling University of Michigan—students light up marihuana as they gather on the campus, in movie theaters, at the weekly concerts and even in the public gallery of the City Council Chamber.

Aren't they worried about being arrested and ruining a college career with a jail sentence? Not at all, for the City Council has declared its independence from state drug laws governing marihuana and passed its own ordinance which punishes marihuana smokers with a $5 fine.

"Actually, it's sort of like a parking ticket," says Jerold Lax, City Attorney of Ann Arbor, "it was set up so that all a violator must do is mail back the marihuana ticket to City Hall with $5. If the person wishes to plead innocent, he will have to post an appearance bond and stand trial in municipal court, but the maximum penalty will remain the same—$5."

The ordinance covers only marihuana users, not sellers. Big pushers are still hit with the tough state law. Juvenile offenders are still turned over to juvenile authorities.

20,000 SMOKE

Like many communities throughout the U.S., Ann Arbor was caught in the marihuana explosion of the 1960's. The predominantly youthful community of 110,000, 30 miles west of Detroit, now may have as many as 20,000 marihuana smokers. Police say that trying to stop the flow of grass is a hopeless task, as is arresting and prosecuting everybody smoking it. "Marihuana, as much as we hate to say it, is becoming an acceptable commodity throughout the country," says Police Chief Walter Krasny.

The marihuana situation in Ann Arbor isn't unusual. With 24 million marihuana users in the U.S., most police departments don't aggressively seek pot smokers—if they did the jails would be overflowing. What is remarkable is that the Ann Arbor City Council is the only governing body in the nation that has approached current marihuana laws head-on and "decriminalized" pot by legislation.

The Ann Arbor Council acted under a Michigan law that gives cities the option of passing their own ordinances when they have a special need not recognized by law. The debate was sharp, and the action was taken by a 6 to 5 vote. Solidly opposed were the Council's five Republican members, mostly from more affluent suburban wards.

In favor were four Democrats and two young members of the Human Rights Party, a relatively new, radical group which draws a good deal of its strength from voters who are part of or sympathetic to the university community.

The Council majority made it plain they wanted marihuana use treated like a traffic violation, including the issuance of tickets rather than hauling people off to the station house.

COURT RULING

Last September, District Court Judge S. J. Eldon ruled the sentencing section of the ordinance unconstitutional, but allowed the ordinance itself to stand. Judge Eldon's ruling would eliminate the $5 penalty ceiling, and permit marihuana users to be fined up to $100, or sent to jail up to 90 days. However, the City of Ann Arbor is appealing his decision, and in the meantime both the ordinance and the $5 fine are in effect.

Says Mayor Robert Harris: "If a City Council sets a trivial penalty, the judges usually understand there's a reason—indicating how seriously the community judges the offense. Under state law, we can't legalize marihuana, but we can make it trivial.

As a result of the $5 penalty, the Ann Arbor police are reluctant to make arrests, since the money wouldn't begin to cover prosecution costs. The Michigan State Crime Laboratory of the State Police has relegated Ann Arbor marihuana cases to bottom priority because of the low fine.

Although the community at large seems to have accepted the new ordinance quietly, opponents remain unconvinced. Some argue that the use of marihuana frequently leads to heroin and other "hard drugs"—a contention heatedly denied by proponents of the new rule.

John D. McCormick, one of the City Councilmen who battled the $5 fine, declares: "In my opinion, the sum total of it all is that for all practical purposes marihuana has been legalized in the City of Ann Arbor. This town has been made a haven for the drug culture."

Adds another Republican Councilman, Lloyd Fairbanks: "There are so many creeps in this town, and they're unemployed and causing problems in the community. They're here because drugs are here."

Answers Councilman Gerald DeGrieck, 22, U. of Michigan graduate who was elected to the Council as a member of the Human Rights Party along with Nancy Wechsler, 23: "The whole issue is ludicrous, which is fine. The $5 ordinance showed the people that laws against marihuana were ridiculous."

What actual effect has the ordinance had? Police say there has been no great upsurge in pot smoking, although more of it seems to be smoked in public. One group did celebrate the new legislation with a "Hash Bash," where a couple of hundred people smoked openly on the university campus. Chief Krasny called the event a "farce," and while his men were present as observers, no arrests were made.

PENALTIES EASING IN U.S.

Although Ann Arbor is the only community to have equated marihuana smoking with parking violations, many other areas of the country are tacitly relaxing penalties. Keith Stroup, 29-year-old head of a Washington-based organization called the National Organization for the Reform of Marihuana Law (NORML) reports that while four years ago marihuana possession was a felony in all states of the Union, today possession of "a small amount" (the definition of which varies from place to place) is considered only a misdemeanor in all but two states, Texas and Rhode Island.

"Criminal penalties for possession, as distinguished from selling or pushing, are on the way out," says Stroup. "Ann Arbor's ordinance represents a new, creative effort in decriminalizing marihuana smoking."

Also applauding Ann Arbor's new policy is John D. Finlator, former No. 2 man in the Justice Department's Bureau of Narcotics and Dangerous Drugs, who's now a board member of NORML. Says Finlator. "When this country decides to honestly deal with the marihuana question, perhaps then we can begin to make some progress in the battle against serious drug abuse in the United States."

[From the Detroit News, Sept. 21, 1975]

MARIJUANA—CRIMINAL OR CIVIL OFFENSE?

(By David L. Good)

It was July 28, 1969, and Ann Arbor radical leader John A. Sinclair was livid as he was taken from the courtroom of Detroit Recorder's Judge Robert J. Colombo.

"You're a punk," he yelled at Colombo. "You're a pig. You will die."

The event made headlines because Colombo had just sentenced Sinclair, a three-time drug offender, to a prison term of 9½ to 10 years for possession of two marijuana cigarets.

Such harsh penalties for marijuana offenses long since have been abandoned in Michigan, and Sinclair himself was released after serving 27 months when the State Supreme Court ruled his sentence amounted to "cruel and unusual punishment."

But despite—or perhaps because of—a 1972 state law which drastically lowered penalties for marijuana offenses, legal confrontations between "pot" smokers and law-enforcement officials have been spiraling during the last six years.

In 1969, only 2,823 persons were arrested for marijuana offenses. Since then, the cumulative total has hit more than 70,000, reaching a high of 18,563 in 1974.

Last year's figure represented nearly three-fourths of all drug arrests in the state; the 1969 mark, in contrast, was just under half.

Now some officials, a few of them unhappy that the law obviously is failing to free authorities to concentrate on more "serious" drug offenses, are looking toward a new solution—lowering the penalties even further.

As part of a nationwide trend toward liberalizing marijuana laws, Michigan could become the seventh state to "decriminalize"—though not "legalize"—use and possession of the drug.

Under consideration in the State House of Representatives is a bill to change possession and use of the Cannabis plant from a criminal to a civil offense.

Smoking "weed" still would be illegal, but offenders would get a ticket and maximum fine of $100 instead of a jail term, and they would not have an arrest record.

If successful, the bill would put Michigan in the same category as Oregon, California, Alaska, Colorado, Maine and—as of Aug. 22—Ohio.

Beginning with Oregon in 1973, all have removed marijuana from the "hard drug" classification and reduced penalties in most cases to a maximum $100 fine ($200 in Maine).

Bills to lower penalties for possession also are pending in Minnesota and Washington, D.C., as well as in Congress.

In Ohio, for instance, a "pot" smoker can be caught with up to 100 grams of marijuana (3½ ounces) and after the new law takes effect Nov. 21 will receive a maximum fine of only $100. Up to 200 grams will bring a maximum $250 fine and 30-day jail term.

In contrast, Michigan law stipulated—before the provision was thrown out in the State Court of Appeals last year—that possession of two ounces was enough to prove intent to deliver (sell), a felony.

Michigan law before 1972 provided for maximum prison terms of 10 years for possession of marijuana and 20 years to life for sale.

The current state law calls for maximum sentences of 90 days in jail and a $100 fine for use, a one-year term and $1,000 fine for possession and a four-year term and $2,000 fine for possession with intent to deliver.

Bills to reduce the penalties further have been introduced over the last several years but have failed to earn serious consideration. In addition, a petition drive organized last year by Rep. Perry Bullard (D-Ann Arbor) to legalize the drug fell far short of its goal.

But the current bill is considered the most promising attempt so far.

Spensored by Rep. William R. Bryant Jr. (R-Grosse Point Farms) and 10 other legislators, it is expected to gather some bipartisan support.

After having been introduced two months ago, it now is before the House Civil Rights Committee, chaired by Bullard, and could be reported out for a vote this year.

The National Organization for the Reform of Marijuana Laws (NORML), a public-interest lobby based in Washington, intends to participate in the effort.

"We've listed Michigan as our top-priority state for '76," explained Keith Stroup, NORML director.

"Michigan actually should have moved before now. I think the trouble was that the early publicity on the drug tended to be identified with radical interests, and that must have bothered some legislators.

"We're not a 'pro-pot' group. We support a discouragement policy for all drug use, but there are 13 million Americans who smoke marijuana regularly, and we don't believe they should be saddled with arrest records."

Bryant, an attorney who is Republican floor leader in the House, said he considers the pending proposal a "middle ground" between the present "hard-line" criminal approach and complete legalization.

"I don't condone the use of any drugs," he said, "but its use is becoming so widespread that I just don't think it should carry a jail term.

"I am in favor of very stiff sentences for many criminal offenses, but I think we have an obligation to make sentencing as reasonable as we can in cases like these."

Current policy toward marijuana offenders varies across the state.

A few cities, including Ann Arbor, Ypsilanti and East Lansing, have ordinances calling for a $5 fine for conviction. Arrests in such cities have tailed off since passage.

More typical is Detroit's ordinance, which provides for a 90-day jail term and $100 fine. Arrests have increased from 483 in 1970 to 1,288 last year. Most cases now go through Traffic Court under the ordinance instead of through Recorder's Court under the state law.

A spokesman for the Wayne County prosecutor said police agencies seldom request warrants under the state law except for cases involving unusually large amounts of the drug.

In other counties, however, most communities have no local ordinances and continue to deal with offenders through the county prosecutor under state law.

This is true in Oakland and Macomb counties, where spokesmen for the prosecutors said they have seen no decline in cases since 1972.

However, since the time Sinclair was convicted, public opinion on marijuana appears to have shifted markedly—both legally and medically.

Although statements to the contrary still receive wide publicity, evidence seems to be growing that:

Although the enactment of milder penalties apparently has stimulated arrests, "decriminalizing" marijuana may not increase its usage. This view is bolstered by the experience in Oregon, where officials contend the action has not contributed to any marijuana "explosion" but has channeled police work more toward violent crime and crime against property.

Marijuana may not be particularly harmful to users, perhaps less so than tobacco or alcohol. This contention is supported by the failure of many recent tests to substantiate earlier claims that the drug causes brain damage, birth defects, sterility and other disorders.

Among the organizations going on record in support of removing criminal penalties for the use of marijuana are the American Bar Association, the governing board of the American Medical Association, the American Public Health Association and the National Council of Churches.

The same position was taken in 1972 and again this year by Consumers Union, the prestigious nonprofit testing organization based in Mt. Vernon, New York.

In the April, 1975, edition of its magazine, Consumer Reports, the organization concluded that marijuana, "like any other drug, is probably harmful in at least some respects to at least some users at some dosage levels under some conditions of use."

But, the magazine asked:

"Why should marijuana smokers, unlike tobacco smokers and alcohol drinkers be deliberately subjected to damage by society in addition to any damage they may do to themselves through the use of a drug?"

NEW JERSEY

"Marihuana and Hashish: Law Enforcement's Biggest Enforcement Problem"

A Report by the New Jersey Narcotic Enforcement Officers Association

To the People of the State of New Jersey and the Governor, the Legislature, and the Judiciary

I. INTRODUCTION

Relatively new among organizations representing the interests of law enforcement, the New Jersey Narcotic Enforcement Officers Association was formed in 1965 to provide a forum for the expression and exchange of ideas, for the training of professionals in drug abuse and enforcement, and as the spokesman for all persons who resent the toll that drugs have taken upon our youth.

The Association has grown to 1,500 members, and includes persons involved in federal, state, county and municipal law enforcement, and comprised also of educators, doctors, probation officers, attorneys, pharmacists, and persons from private industry. Unlike those law enforcement-oriented organizations which seek to improve the economic conditions of their members, this Association, through its members, serves all of the people of the State of New Jersey, and it is to them that this report is addressed.

II. THE PROBLEM

This report is directed to one problem: the possession for use of small amounts of marihuana and hashish. There are other serious problems, such as bail for persons who sell narcotics, mandatory minimum sentences for those sellers, and the general failure of our courts to meet their responsibilities to the public they serve; these problems, however, are the subject of resolutions by the Association to be made public at the conclusion of the conference.

Because the response to this issue—decriminalizing the possession for use of certain small amounts of marihuana and hashish—will be more emotional, and because the consequences will be far-reaching (to our knowledge, no law enforcement group has taken such a position), this report is presented to the people of this State in the hope that thereby there will be no misunderstanding as to the Association's proposals or the reasons therefor.

III. FINDINGS OF FACT

These findings of fact are based upon personal experiences by members of the Association in the investigation, arrest, prosecution, treatment or rehabilitation of more than 10,000 drug offenders.

Regardless of what arguments may be advanced as to the detrimental or beneficial effects of marihuana upon the human body or mind, certain facts we find as incontrovertible:

(a) Marihuana is a popular drug of use and abuse in the United States;

(b) The Association is absolutely and unalterably opposed to the use of marihuana, by whomever and for whatever reason;

(c) Competent, credible, medical studies confirm that the use of marihuana is a destructive influence upon the human psychology and physiology;

(d) Entertainment personalities, who are watched by, and are an influence upon, millions of Americans, regrettably attach to the use of marihuana glamour, attractiveness, or humor;

(e) Most persons who use marihuana generally possess it in small amounts for their own use;

(f) Most of those persons will not go on to a more dangerous drug;

(g) Most of the arrests by police for marihuana possession involve the class of persons in (e);

(h) The police are thereby required to spend much time processing and prosecuting that class of persons in (e), and are prevented from uncovering or investigating those people who distribute marihuana and other drugs for gain;

(i) Nothing that has been done by the courts, law enforcement, medicine, education, or the media, has substantially influenced people in the use or non-use of marihuana;

(j) It is unheard of for a person convicted of possession of a small amount of marihuana to receive a custodial sentence;

(k) A substantial number of those people in (e) will, by reason of conviction for a marihuana offense, be denied education or employment opportunities, even if they cease using marihuana;

(l) A large segment of the public (including those young people who find the use of marihuana fashionable, and their parents who cannot understand the attraction) has become alienated from the police officers who are sworn to serve that public.

(m) Ten (10) grams of marihuana will make twenty-eight (28) to thirty (30) cigarettes, an amount which the President's Commission on Marihuana found to be a month's supply for the casual user;

(n) An amount more than ten (10) grams of marihuana tends to encourage a person to give it to friends or sell it, acts equally punishable as "distribution" by our law;

(o) No matter what jurisdictions have decriminalized the use or possession of marihuana, those jurisdictions continue to take a strong position against distribution in any form.

IV. RECOMMENDATIONS

We are not urging the adoption of our recommendations because of personal conviction or philosophy. We *do* think something should be done that will acknowledge (a) the frustration of past efforts and (b) the Associations usefulness in providing meaningful solutions to problems facing society *and* law enforcement.

We are concerned with the monumental law enforcement administrative requirements and the court proceedings that follow an arrest for a small amount of marijuana; that the efforts of these officers are needed in other areas of enforcement; that the people arrested will in all probability never commit any other type of offense (other than a marijuana offense) throughout their lives; that they are the type of offenders who would never receive a custodial sentence; and that the cost to the public and the waste of officers' energy and ability further impede the effective administration of justice.

We recommend, therefore, that Section 20 of the Controled Dangerous Substances Act. (*N.J.S.A.* 24:21-1 *et seq.*) be amended to read:

(i) Possession of ten (10 grams or less of marijuana, including any adulterants or dilutants, or possession of one (1) gram or less of hashish, is a nuisance. The substance shall be seized by any law enforcement officer. The possessor thereof shall be issued a summons and shall be subject to a fine not to exceed $100;

(ii) Possession of more than ten (10) grams of marijuana, but less than twenty-five (25) grams, including any adulterants or dilutants, or over

more than one more than one (1) gram of hashish but less but five (5) grams, is a disorderly persons offense;

(iii) In a prosecution or proceeding under subsections (i) or (ii) above, written certification by a chemist certified by the State Department of Health shall be accepted as evidence by the court in such prosecution or proceeding as proof of the results of analyses performed by such chemist.

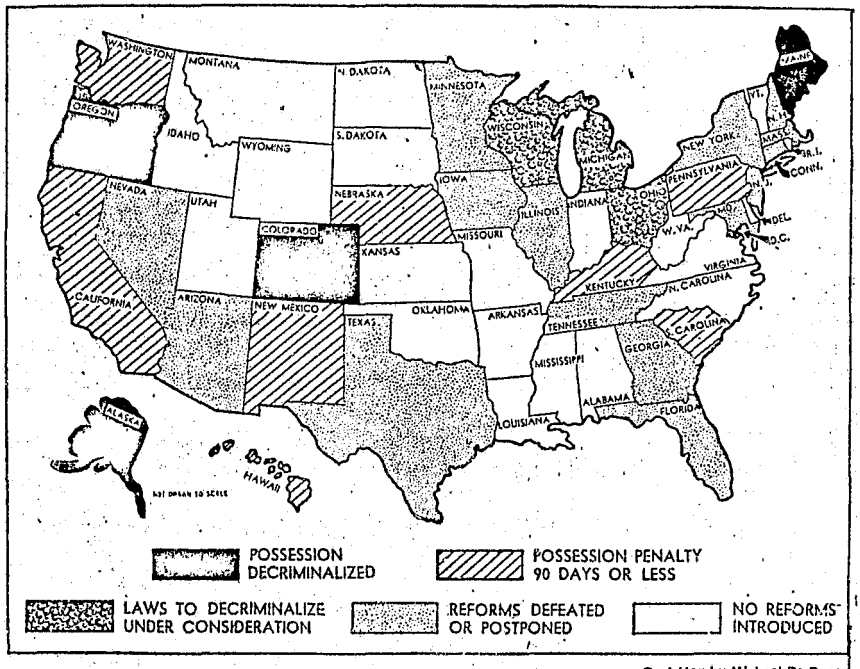
Possession of more than twenty-five (25) grams of marijuana should continue to be a high misdemeanor; and the unlawful use of any controlled dangerous substance should continue to be a disorderly persons offense.

The use and abuse of alcohol by millions, while socially acceptable, are no reasons to permit, support or encourage the disablement of another twenty million Americans thereby the use and abuse of marijuana.

We cannot stress enough the importance of understanding the position of the Association: we oppose the use of marijuana; we favor the decriminalization of the possession for use of small amounts of marijuana only as a solution to an enforcement problem—and we continue to oppose strongly any move to legalize further the possession or distribution of marijuana and hashish.

NEW YORK

[From the New York Post, July 1, 1975]



Post Map by Michael De Donno

Marijuana law reform is under way in the U.S., as this map shows. Four states have decriminalized possession, four are considering it, 15 have considered such measures without passing them, and seven have limited maximum penalties of 90 days or less.

POT BAN GOING UP IN SMOKE

(By Dick Brass)

For the first time since the U.S. outlawed marihuana in the 1930s, an end to harsh penalties for private pot possession appears a real prospect.

On Wednesday, California became the fifth state—the fourth in recent weeks—to end jail sentences for possession of small amounts of the drug.

Last May, Alaska's Supreme Court went even further and ruled private use of marihuana in one's home a constitutionally protected right.

And now, The Post has learned, a special, 15 member task force of White House Domestic Counsel studying federal drug policy is seriously considering calling for an easing of the federal marihuana laws.

If liberal consultants to the task force have their way, the group will recommend to the President in September that possession of small quantities of pot be "decriminalized."

Under this reform, violators would be subject to a fine—like the penalty imposed for going through a red light, for instance—but not to the stigma of imprisonment and a criminal record.

The Oregon, Alaska, Colorado, and Maine legislatures have already enacted similar measures (California henceforth won't jail pot users, but still considers their act a misdemeanor).

While few individuals are prosecuted under the federal law, it has served as a model for the states since Congress first outlawed marihuana in 1937.

And should Ford embrace decriminalization, state officials interviewed throughout the country agree, pressure on states to liberalize their own statutes would become intense.

The question they pose is whether Ford can afford to back a potentially controversial reform in an election year.

Or, they ask, will he chose to follow the example of President Nixon, who ignored similar advice offered by the National Commission on Marihuana and Drug Abuse in 1972?

"This is a much more open-minded Administration, from what I've been able to perceive," said Richard Parsons, the task force's director.

"I don't have any preconceived notions about the direction we're going in."

Backers of decriminalization, interestingly enough, base some of their hopes for an "open-minded" President on the Ford family itself.

It's one of Washington's non-secrets that some of the President's children have from time to time smoked pot (Mrs. Ford conceded as much in an early interview). And the pro-pot crusaders count them as well-placed lobbyists.

Generally accepted estimates put the number of regular marihuana users in the nation at 13 million, and there are roughly 30 million other Americans who have tried the drug.

The first inkling of an Administration reappraisal of marihuana laws—which led to more than 420,000 arrests last year—came in May.

Testifying before a Senate Judiciary subcommittee hearing on a marihuana decriminalization bill, introduced by several liberal Senators and until no given slim hope of passage, Justice Dept. counsel Donald Miller conspicuously deleted the department's customary, formal recommendation against such legislation from his remarks.

Indeed, a survey by The Post indicates that throughout the country a reappraisal of the various marihuana statutes is under way.

In addition to the five states which will no longer jail pot smokers, seven states now have maximum penalties of under 90 days (Nebraska has a one-week sentence for possession of amounts up to one pound).

In the District of Columbia and three states—Wisconsin, Michigan, and Ohio—decriminalization reforms are under consideration.

In 15 states—including New York—reforms were introduced in the most recent legislative session but failed to pass.

And in several states—including New York—first offenders are customarily granted a dismissal of charges or a low fine.

A FEW GET TOUGHER

In only 20 states last year no move to lighten the pot laws was made.

In a handful of states, however, the legislatures are leaning toward tougher laws. Indiana, for example, passed an act prohibiting the sale of pipes, cigaret holders, and other paraphernalia often associated with marihuana use.

The current reappraisal, many legislators admit is fueled by contradictory medical evidence on marijuana's danger.

Although it is no longer seriously maintained that the various plants of the genus Cannabis will make a smoker "mad" or lead to heroin addiction, researchers in recent years have indicted the herb for causing brain damage, lowering the body's disease resistance, disrupting chromosomes, enlarging male breasts and lowering male sex hormone levels.

But other researchers have found evidence that tends to dispute the findings—or have been unable to verify and repeat the original tests.

Because of this evidentiary jumble the Alaskan Supreme Court ruled on May 27 that the state had no right to invade citizen's constitutionally protected privacy by banning the use of marihuana in the home.

Although many states lack Alaska's specific protection of privacy in their own constitutions, Supreme Court decisions in recent years have evoked the principle of personal privacy to protect citizen's rights to contraceptive devices, abortion, and in-home pornography.

"Why not marihuana?" asks Richard Kelley, a 30-year-old Tacoma, Wash., attorney who is defending a teenager there accused of pot possession in what he hopes will be a test case similar to the Alaskan challenge.

OTHER LAWSUITS

Similar suits have been entered into in California, Louisiana, Illinois and the District of Columbia. If successful—and they may well be, according to some constitutional lawyers, including Cornell University law professor William Kaplin—private pot possession and use at home will become sanctioned.

"The problem," says Kaplin, "will be getting your marihuana home." Because the courts have allowed communities to ban the sale of certain pornography, he suggests, public use and sale of marihuana could also be outlawed.

The thrust of reform in those states where it has been enacted has been to minimize penalties for the use of marihuana. Sale of the drug is still treated as a crime.

The high court's limited definition of privacy and opposition from conservative legislators aren't the only bars to eventual full legalization of marihuana. As a signatory to the 1961 Single Convention on Narcotic Drugs, the U. S. is pledged to outlaw Cannabis.

ONE SOLUTION

One solution, according to state officials, would be to withdraw from the treaty—a solution which might even please other signatories, who stand to benefit as growers of the $3.5 billion worth of marihuana Americans are estimated to consume annually.

That "solution," if it ever comes, is, by even the most optimistic estimates, years away.

In the meantime, decriminalization, as a halfway measure is viewed warily by some pot smokers, who fear it will block eventual legalization.

The champion of decriminalization is an organization called NORML—the National Organization to Reform Marihuana Laws.

Funded by the Playboy Foundation and directed by an energetic young lawyer, Keith Stroup (a pot smoker himself), NORML has had a hand in most pro-pot lobbying and lawsuit efforts to date.

Originally demanding full legalization or nothing, NORML changed its tune for pragmatism's sake, and now counts among its allies the American Bar Assn., the Governing Board of the American Medical Assn., and B'nai B'rith.

EASTLAND PANEL

NORML's main organized opposition in Washington is from Mississippi Sen. James Eastland's Internal Security Subcommittee.

Formerly known for its anti-Communist inquiries, the subcommittee last year investigated and publicized the hazards of marihuana and its derivatives after it was discovered that U.S. soldiers guarding nuclear weapons overseas had used hashish.

"If those people think we're going to sit here and take half a million arrests, they're crazy," Stroup says.

"We represent 13 million people in this country—and we're winning. The politicians can no longer ignore us."

[From the New York Times, July 13, 1975]

In a Sometimes Bitter Fight, States and Cities Are Easing Marihuana Laws

(By Lesley Oelsner)

Washington, July 12—The criminal penalties for the private possession of marihuana are beginning to fall; so are the criminal sanctions for smoking marihuana, at least at home.

They are being toppled, in an often bitterly fought nationwide drive, by a combination of politics, practicality and a growing sense that the typical marihuana smoker is not a criminal.

In the last two months, Alaska, Maine, Colorado and California have enacted laws that make the possession of small amounts of marihuana in one's home a civil offense rather than a crime, punishable only by a small fine.

Alaska's Supreme Court went a step further, ruling unanimously on May 27 that the right to privacy protected an adult's possession of marihuana intended for personal use.

"It appears that the use of marihuana, as it is presently used in the United States today, does not constitute a public health problem of any significant dimensions," the court said.

Next week the Ohio Senate and the District of Columbia City Council will each hold hearings on similar so-called "decriminalization" legislation involving private possession of small amounts of marihuana. In both cases prospects for enactment are considered strong.

In Minnesota, one house of the state Legislature has passed a similar measure and the other house is expected to do so when it reconvenes in January.

In Hawaii, where the president of the state Senate, John T. Ushijima, strongly favors the abolition of criminal penalties, decriminalization is also considered likely in the next session.

In other places, prosecutors are deciding on their own not to enforce antimarihuana laws. In Montgomery County, Md., State's Attorney Andrew L. Sonner announced on June 26 that his office would no longer prosecute "small" cases involving possession in the home.

HASHISH INCLUDED

In some areas, such as Alaska, Hashish—a stronger though similar substance—is included in the decriminalization laws.

All of this takes place in the face of decades of stringent antimarihuana laws throughout the country and rapidly rising arrests for marihuana use or possession. Oregon enacted a decriminalization law in October, 1973, reducing the penalty for possession of less than an ounce to $100, with a traffic-citation-like system rather than arrest. Until this year, though, it was the only state with such a law.

The new trend still does not go so far as many reformers would like—removing all legal penalties for both possession and use, at least for adults. Legislatures in some states such as Illinois and South Carolina defeated or killed decriminalization bills this year, and in some areas, especially the South, resistance to change remains strong.

Nevada, Vermont and Wyoming tightened their marihuana laws this year, albeit slightly, so that all strains of marijuana are included in the general prohibition.

Legislatures in about half the states considered decriminalization bills this year, and in some areas, the bills picked up strong support.

In Arizona and New Hampshire, while one house of each legislature defeated bills, the other house passed them. In New Jersey, Attorney General William Hyland supports decriminalization for possession of small amounts for personal use, in Wisconsin, the state Controlled Substances Board, Dr. Joseph Benforade, says that the board plans to recommend to the Governor that decriminalization legislation be introduced in January.

SIGNIFICANT DECISION

In New York, Governor Carey—while not making a major effort on marihuana law reform—has stated his support for it.

Two bills are pending in Congress, one calling for removal of all penalties and one providing for a civil fine for possession of small amounts, similar to those enacted in states such as Oregon.

Also, in the latest development in a lengthy lawsuit brought by the National Organization for the Reform of Marihuana Laws, the major reform organization working on the matter, an administrative judge in the Justice Department's Drug Enforcement Administration recently issued a decision that could lead to significant reform.

Judge Lewis F. Parker found that the United States could, consistent with its international treaty obligations, shift "cannabis" and "cannabis resin"—the products that generally make up marihuana—from the most controlled list of drugs to a lesser list, and that it could decontrol cannabis seeds and artificial cannabis altogether.

He recommended that the administrator ask the Secretary of Health, Education and Welfare to make a scientific and medical evaluation and a recommendation regarding the appropriate schedule of controlled drugs on which the materials should be placed.

The major potential impact of the ruling, according to Peter Meyers, counsel for the National Organization for the Reform of Marihuana Laws, is in the medical area. Reclassification of marihuana could lead to authorization of its use for medical purposes, he said.

The administrator of the Drug Enforcement Administration, Henry S. Degin, is expected to decide soon whether to accept Judge Parker's recommendation.

The new decriminalization laws and bills reflect a common pattern: Private possession, generally in the home, is a civil rather than a criminal offense if the amount is small—one ounce in some places, 100 grams (about three ounces) in other places—with a citation, similar to a traffic ticket, given. The fine is relatively small, $100 or $200.

As a practical matter, this means smoking at home won't be punished as a crime either, according to Mr. Meyers. Among other things, many states' old laws on marihuana prohibited possession but not use; also, various court rulings centered on the question of whether an example of use—passing a "joint" around at a party—was enough to meet the ban on possession, and not on whether the use was a crime in itself.

Some of the new laws and bills also reduce penalties for other offenses. Public display or consumption in Colorado is subject to arrest but punishable only by a maximum of a $100 fine and 15 days in jail.

However, some of the laws and bills restate or increase the penalties for sale of marihuana and other drugs.

This raises the question: Why is it a crime—often punishable by lengthy prison terms—to sell people marihuana if it is not a crime for these people to have the marihuana sold them?

The answer lies in the trend toward decriminalization, in the reasons for the trend and for the opposition to it.

Involved are public opinion; the rising number of marihuana arrests, more than 400,000 last year, often of young people who may be burdened by the arrest records for life; the growing popularity of marihuana, not just for teen-agers and college students but for members of the middle class; the developing scientific research about the effects of marihuana; moral and religious scruples, the huge bother and cost (about $100-million a year just in California) of enforcing marihuana laws and extensive lobbying efforts across the country by the National Organization for the Reform of Marihuana Laws, directed by a lawyer named Keith Stroup.

Then there is the decades-old view of marihuana as a dangerous drug, a view still held by many people, such as Attorney General Rufus L. Edmiston of North Carolina, who said: "We feel that marihuana is a stepping stone to harder drugs and oftentimes the person selling marihuana also has harder drugs to sell."

There are disputes even in scientific circles about the effects of marihuana.

In 1972, the National Commission on Marihuana and Drug Abuse called for the abolition of criminal penalties for the personal possession and private use of

the drug. However, it also concluded that because of scientific uncertainty about the effects, the laws should continue to discourage marihuana use—hence, selling for profit should still be a crime.

[From the New York Post, July 14, 1975]

SEEMS IT'S HARD TO GET BUSTED FOR POT HERE

(By Dick Brass)

Last Thursday, a reporter placed a crudely-rolled imitation-marijuana cigaret (it contained a mixture of spices—oregano and taragon) in his pocket and went out to perform a test.

On the corner of 79th St. and Second Av., the casually-dressed young man lit up his "joint" as conspicuously as possible, puffing pungent fumes into the wind.

After a minute or so . . . a crowd waiting for a bus continued to ignore him. A man sitting against a building peered suspiciously, but said nothing. A passing police officer took no notice whatsoever.

The experiment was repeated in front of other policemen and private citizens at various Manhattan locations—in front of foreign embassies, at intersections near parked police cruisers. The reporter was not questioned, or even interrupted. No one, it semed, could care less.

All of which is to suggest that although New York boasts the toughest pot law in the nation (a single cigaret can mean a year in jail; possession of an ounce or more, 15 years) New York City cops do not appear eager to enforce it.

Nor, for that matter, are the prosecutors anxious to prosecute. First offenders caught with a small quantity of marijuana are routinely offered an adjournment in contemplation of dismissal—which means that if the offender stays clean for six months, the charges are dropped and the record is sealed.

"My position is basically we're overloaded with homicides, rapes, armed robberies—all of which are more serious matters than smoking marijuana," says Manhattan District Attorney Robert Morgenthau. "We in a sense have decriminalized marijuana here."

Other states, of course, have decriminalized pot more formally: In Maine, Colorado, Oregon, and Alaska, legislatures have decided smoking pot is equivalent to a traffic violation—the person receives a fine like a speeding ticket, but there's no formal record of arrest or imprisonment.

In California, possession of an ounce of marijuana is still a misdemeanor, but the maximum penalty is a $100 fine. Elsewhere, maximum penalties for small-time possession vary from seven days in Nebraska to the six-month and one-year penalties found in most states.

The trend toward marijuana reform has not been lost on the city's represer tatives in Albany. And during the past legislative session, five different reform measures were introduced.

The most liberal, sponsored by Assemblyman Alan Hevesi (D-Queens) and Sen. Franz Leichter (D-Man.) would have established a Marijuana Control Authority to regulate its sale in the state.

The bill never had a chance of passage, many legislators concede. Other proposals called for lightening the current penalty to 15 days in jail for first offenders, legalizing possession of up to one ounce, and legalizing up to four ounces. And still another bill would have authorized a statewide referendum on the subject.

Though Gov. Carey among others has supported some kind of marijuana reform, those particular five measures remained locked in committee. What's holding up the show, many in Albany complain, is Senate Majority Leader Warren Anderson (R- Binghamton).

"There's a very simple reason why no marijuana bills have passed in this state," said one Carey aide. "Sen. Anderson doesn't want them passed."

THEY'RE LEERY

State officials interviewed suggested that as long as the powerful Republican leader remains opposed to reform, few legislators from conservative upstate districts will take political risks for measures that have little chance of being approved.

Anderson, busy of late with budget matters, acknowledged through an aide that he was opposed to legalizing pot, but disputed the idea that his opposition had strangled reform.

Meanwhile, to be sure, city police are still arresting pot smokers. In 1971, 2,122 people were arrested here for possession. The figure rose to 2,308 in 1972 and 4,607 in 1973. It appears to be higher for last year, although complete statistics are not yet available.

But the number of people smoking marijuana and the amount being imported is also thought to have risen sharply in recent years.

"If police were arresting people today with the same vigor they used in 1970, there would be 100,000 New Yorkers in jail," insists Keith Stroup, a young lawyer and lobbyist who directs the Washington-based National Organization to Reform Marijuana Laws.

In fact, recent surveys indicate 13 million Americans regularly smoke pot—a figure representing about eight per cent of the adult population. The same figure applied to New York City alone would suggest there are more than 400,000 pot smokers here.

Interviews conducted by The Post show these include not only young adults, but middle-aged doctors, lawyers, successful businessmen, government and elected officials and even some policemen.

For more affluent smokers here, there exists a special breed of pot dealer supplying potent Thai-grown marijuana, for example, at $175 to $250 an ounce—ten times the price of the more common, domestic product.

Upstate, however, the drug scene appears less exotic—and the relative freedom from arrest and prosecution enjoyed by city residents simply does not exist in many northern counties.

"You're almost dealing with two different states," offered Clarence Sundram, Gov. Carey's assistant counsel and adviser regarding drug affairs. "What happens in New York City is not at all the same as what happens upstate. If you're caught in the north country, you can go up the river for a long time."

Upstate, fines and even prison sentences are meted out for marijuana possession as well as adjournments in contemplation of dismissal. Statistics supplied by the State Dept. of Correctional Services show 11 people went to prison last year for possessing less than a pound of pot—five for possessing an ounce or less.

And while details are somewhat sketchy, it is believed most of these offenders were sentenced in upstate counties.

But even upstate, some prosecutors are beginning to move toward easing marijuana penalties.

CLASH OF VALUES

In rural Tompkins County, in the Finger Lakes region, pot smoking has been an issue for more than a decade, reflecting at times a clash of values between the conservative residents and the student community surrounding Cornell University and Ithaca College there.

Prior to 1968, conservative DA Richard Thaler vigorously prosecuted pot smokers and dealers alike. But that year, Thaler lost his reelection bid to a former New York City lawyer, Matthew McHugh.

Now a Congressman representing the area, McHugh shifted emphasis from users to dealers, and the trend continued under his successor, William Sullivan, a local lawyer.

Sullivan, however, indicted many people for selling extremely small amounts—and liberal residents and students often complained that those indicted were only making "friendly," not-for-profit sales to police agents they failed to recognize.

Last fall, Sullivan was in turn defeated by Joseph Joch, a former New York City assistant DA, and one election issue was again marijuana.

The court calendar, Joch said, had become jammed with small-time dealing charges. And now, he says, law enforcement officials in the county will concentrate on other drugs.

"Really, it's a matter of evolution," Joch suggested. "When there is no other crime in a county, marijuana is a big problem. But in time, prosecutors find they are better served prosecuting robbery and other charges. Marijuana just seems less important."

[From the New York Times, Mar. 21, 1976]

CAREY BILL WOULD EASE PENALTY FOR POSSESSION OF MARIHUANA

(By Ronald Smothers)

ALBANY, March 20—Governor Carey has been privately circulating among legislators a rough draft of a bill to decriminalize the possession of up to two ounces of marihuana and the transfer, as a gift, of up to one ounce.

However, the proposal maintains stiff penalties for the sale of any amount.

Details of the proposed legislation were sketchy, but the outlines of the measure considerably blunted the sharp differences in the public interpretation of Governor Carey's original proposal and the views of the Senate majority leader, Warren M. Anderson, Republican of Binghamton.

When the Governor in his February State of the State message advocated decriminalization of "the sale and possession of up to two ounces" of marihuana, Mr. Anderson vowed to defeat any bill that lessened the penalties for sale. He also opposed the two-ounce ceiling as too liberal.

G.O.P. PREPARES PROPOSAL

The Governor's proposal is one of several before the Legislature this year that deal with varying degrees of decriminalization. Assemblyman Richard N. Gottfried, Democrat-Liberal of Manhattan introduced a decriminalization bill two weeks ago, and yesterday the Senate minority leader, Manfred Ohrenstein, Democrat-Liberal of Manhattan, introduced his own proposal. Senator Douglas H. Barclay, Republican of Pulaski, whose codes committee held two hearings on the subject last fall, said that a Republican proposal was being prepared and would be introduced in a few weeks.

Mr. Ohrenstein, trying to mute some expected Republican opposition, proposed the decriminalization of possession of up to two ounces of marihuana, maintaining penalties for sale and setting stiffer penalities for sale of marihuana to to someone under 18 years of age. Under current law, possession of up to a half an ounce is a felony, carrying a seven-year prison sentence, and possession of one ounce or more can mean up to 15 year's imprisonment.

Mr. Ohrenstein's bill provides reduced jail sentences, ranging from 15 days to one year, for possession of more than two ounces, and it mandates that judges adjourn proceedings involving first offenders for marihuana possession in contemplation of eventual dismissal. This would mean that first offenders with no arrests in the subsequent year would have the charges dismissed automatically.

Mr. Ohrenstein's bill proposes to make possession of under two ounce a violation punishable by a $100 fine under the public health law, rather than the penal law. An aide to the minority leader said, "You aren't really decriminalizing it unless you remove it from the penal code."

"It's a nice concept," said Senate Barclay, "but I don't think that it will be acceptable. It has to stay in the penal law because, although we are changing direction on this, we don't want to go too far and too fast."

He added that the Republicans' proposal was moving toward making possession of up to one ounce a violation under the penal code, reducing penalties but not to the level advocated by Mr. Ohrenstein.

There is, however, an agreement among the Governor and Republicans and Democrats in the Legislature that transfer of small quantities of marihuana without an "exchange of money or other valuable considerations" should also be decriminalized.

Currently when one person gives another a marihuana cigarette, that is defined in law as a sale. Mr. Gottfried's bill equates possession and transfer, levying fines and penalties ranging from a $100 penal-code violation to four years' imprisonment. Mr. Ohrenstein proposes a change in the definition of sale, making it clear that money or other valuables must be exchanged.

Mr. Barclay said that the Republicans were moving in the direction of accepting such a proposal. "We want to make sure, though, that we continue to get the people who are selling marihuana," he added.

NEW YORK STATE BAR ASSOCIATION
CRIMINAL JUSTICE SECTION
Committee on Revision of Criminal Law
1973-1974

July 1, 1975

Mr. John Rector
A. 504 - United States Senate
Washington, D.C. 20510

Dear Mr. Rector:

I enclose herewith the proposed legislation I have drafted which would decriminalize marijuana in New York, together with a memorandum. While the legislation has the endorsement of the leaders of our Criminal Justice Section it has not as yet been endorsed by the entire Association.

If I can in any way help to move things along towards decriminalization in the Federal arena, please do not hesitate to call on me.

Very truly yours,

DAVID S. MICHAELS
342 Madison Avenue
New York, New York 10017

PROPOSED LEGISLATION TO EFFECTUATE MARIJUANA LAW REVISIONS AND DECRIMINALIZATION. REVISED SECOND DRAFT - MARCH , 1975. *

DRAFTED BY THE COMMITTEE ON REVISION OF THE CRIMINAL LAW OF THE CRIMINAL JUSTICE SECTION OF THE NEW YORK STATE BAR ASSOCIATION.

David S. Michaels, Chairman
Sub-Committee on Drug Use,
342 Madison Avenue
New York, New York 10017

AN ACT

To amend the penal law and public health law, in relation to modifying the penalties for possession and sale of marijuana, amending the definition of sale and presumptions of possession, and repealing Section 240.36 of such penal law.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

* Substantive distinctions between this and the prior draft of this proposed legislation exist within Sections one, six and fifteen. Corrective revisions have been made in Sections three, four, eighteen and nineteen. The new crime of criminal use of marijuana, previously proposed to be enacted as a new Section 220.65, by the prior draft's Section fifteen, has been moved to 220.02, as proposed by this drafts's Section five, without substantive revisions, and the sections of this proposed legislation have been renumbered. A revised memorandum accompanies the second draft. It should be noted that this Committee draft differs from that recommended by some Section leaders as specified above, and at Sections four and twelve.

Section 1. Section 3382 of the public health law, as added by chapter eight hundred seventy-eight of the laws of nineteen hundred seventy-two, is hereby amended to read as follows:

Sec. 3382. Growing or possessing marijuana by unlicensed persons. A person who, without being licensed so to do under this article, grows any plant or plants of the genus Cannabis, or knowingly allows it to grow on his land without destroying the same, or who possesses marijuana, shall be guilty of a violation, which shall be punishable solely by the imposition of a civil fine of not more than one hundred dollars.

Section 2. Subdivision one of Section 3387 of the public health law, as added by chapter eight hundred seventy eight of the laws of nineteen hundred seventy-two is hereby amended as follows:

1. Any controlled substance which has been manufactured, distributed, dispensed or acquired in violation of this article, or the lawful possession of which cannot be ascertained /is hereby declared to be a public nuisance and/ may be seized by a peace officer and shall be forfeited, and disposed of as follows:

Section 3. Subdivision two of Section 240.45 of the penal law, as added by chapter two hundred thirty of the laws of nineteen hundred sixty-five, is hereby amended to read as follows:

2. He knowingly conducts or maintains any premises, place or resort where persons gather for purposes of engaging in /unlawful/ criminal conduct. Criminal nuisance is a class B misdemeanor.

Section 4. Subdivision one of Section 220.00 of the penal law, as added by chapter two hundred seventy-six of the laws of nineteen hundred seventy-three, is hereby amended to read as follows:

1. "Sell" means to sell, exchange, /give or dispose of to another or offer to agree to the same/ or otherwise transfer for consideration.

Section 5. Section 220.02 of such penal law is hereby enacted to read as follows:

Section 220.02 Criminal use of marijuana.

A person is guilty of criminal use of marijuana, when he possesses marijuana in a public place and such marijuana is burning or open to public view. Criminal use of marijuana is a class B. misdemeanor.

Section six. Section 220.03 of such penal law, as added by chapter two hundred seventy-six of the laws of nineteen hundred seventy-three is hereby amended to read as follows:

CONTINUED

19 OF 33

Sec. 220.03 Criminal possession of a controlled substance in the eighth degree.

A person is guilty of criminal possession of a controlled substance in the eighth degree when he knowingly and unlawfully possesses a controlled substance, unless such possession shall be of less than four ounces of marijuana. Criminal possession of a controlled substance in the eighth degree is a class A misdemeanor.

Section 7. Section 220.04 of such penal law is hereby enacted to read as follows:

Section 220.04, Criminal possession of a controlled substance in the seventh degree.

A person is guilty of criminal possession of a controlled substance in the seventh degree when he knowingly and unlawfully possesses more than eight ounces of marijuana. Criminal possession of a controlled substance in the seventh degree is a class E felony.

Section 8. Subdivision one of Section 220.06 of such penal law, as added by chapter two hundred seventy-six of the laws of nineteen hundred seventy-three, and as amended by chapter ten hundred fifty-one of the laws of nineteen hundred seventy-three, is hereby amended to read as follows:

1. A controlled substance other than marijuana with intent to sell it; or

Section 9. Subdivision three of Section 220.06 of such penal law, as added by chapter two hundred seventy-six of the laws of nineteen hundred seventy-three, as amended by chapter ten hundred fifty-one of the laws of nineteen hundred seventy-three is hereby repealed.

Section 10. Subdivision four of Section 220.06 of such penal law, as added by chapter two hundred seventy-six of the laws of nineteen hundred seventy-three and as amended by chapter ten hundred fifty-one of the laws of nineteen hundred seventy-three, is hereby repealed.

Section 11. Subdivisions ten and eleven of Section 200.09 of such penal law, as added by chapter two hundred seventy-six of the laws of nineteen hundred seventy-three, and as amended by chapter ten hundred fifty-one of the laws of nineteen hundred seventy-three are hereby repealed.

Section 12. Subdivision two of Section 220.16 of such penal law, as added by chapter two hundred seventy-six of the laws of nineteen hundred seventy-three and as amended by chapter ten hundred fifty-one of the laws of nineteen hundred seventy-three is hereby amended to read as follows:

2. A stimulant, hallucinogen, hallocinogenic substance, or lysergic acid diethylamade, with intent

to sell it and has previously been convicted of an offense presently defined in article two hundred twenty or the attempt or conspiracy to commit any such offense, except that any such prior conviction based solely upon the possession or sale of marijuana shall not constitute a prior conviction within the meaning of this section.

Section 13. Section 220.25 of such penal law, as amended by chapter ten hundred forty-four of the laws of nineteen hundred seventy-one and chapters two hundred seventy-six and two hundred seventy eight of the laws of nineteen hundred seventy-three is hereby amended to read as follows:

Section 220.25 Criminal possession of a controlled substance; presumption.

1. The presence of a controlled substance in an automobile, other than a public omnibus, is presumptive evidence of knowing possession thereof by each and every person in the automobile at the time such controlled substance was found; except that such presumption does not apply (a) to a duly licensed operator of an automobile who is at the time operating it for hire in the lawful and proper pursit of his trade, or (b) to any person in the automobile if one of them, having obtained the

controlled substance and not being under duress, be authorized to possess it and such controlled substance is in the same container as when he received possession thereof, or (c) when the controlled substance is concealed upon the person of one of the occupants, or (d) when the controlled substance is marijuana, or (e) where the occupants lack access to and a plain view of such substance.

2. The presence of a narcotic drug, or narcotic preparation /or marijuana/ in open view in a room, other than a public place, under circumstances evincing an intent by the occupants of such room to unlawfully mix, compound, package or otherwise prepare for sale such controlled substance is presumptive evidence of /knowing/ possession thereof by each such occupant, except that such presumption does not apply to such persons if (a) any of such persons is authorized by law to possess the controlled substance and does in fact do so, or (b) one of them has such controlled substance on his person.

Section 14. Section 220.29 of such penal law is hereby enacted to read as follows:

Section 220.29 Criminal sale of a controlled substance in the eighth degree.

A person is guilty of criminal sale of a controlled substance in the eighth degree when he knowingly and unlawfully sells marijuana. Criminal sale of a controlled substance in the eighth degree is a class A misdemeanor.

Section 15. Section 220.30 of such penal law is hereby enacted, to read as follows:

Section 220.30. Criminal sale of a controlled substance in the seventh degree.

A person is guilty of criminal sale of a controlled substance in the seventh degree when he knowingly and unlawfully sells more than four ounces of marijuana. Criminal sale of a controlled substance in the seventh degree is a class E felony.

Section 16. Section 220.31 of such penal law, as added by the laws of nineteen hundred seventy-three, chapter two hundred seventy-six, is hereby amended to read as follows:

Section 220.31. Criminal sale of a controlled substance in the sixth degree.

A person is guilty of criminal sale of a controlled

substance in the sixth degree when he knowingly and unlawfully sells a controlled substance, other than marijuana.

Section 17. Subsection 220.34 (1) (c) of such penal law, as added by chapter two hundred seventy-six of the laws of nineteen hundred seventy-three, is hereby repealed.

Section 18. Subsection 220.34 (2) is hereby amended to read as follows:

2. He commits the crime of criminal sale of a controlled substance and he has previously been convicted of criminal sale of a controlled substance other than marijuana in the sixth degree.

Section 19. Section 220.39 (2) of such penal law is hereby enacted, to read as follows:

2. A stimulant, hallucinogen, hallucinogenic substance, or lysergic acid diethylamide and has previously been convicted of an offense presently defined in article two hundred twenty or the attempt or conspiracy to commit any such offense, except that such prior conviction based solely upon the possession or sale of marijuana shall

not constitute a prior conviction within the meaning of this section.

Section 20. Section 240.36 of such penal law, as added by chapter six hundred sixty-eight of the laws of nineteen hundred sixty-eight, is hereby repealed.

Section 21. This act shall take effect sixty days subsequent to the date when it shall become a law.

New York State Bar Association

LEGISLATIVE MEMORANDUM CONCERNING REVISED SECOND DRAFT OF PROPOSED MARIJUANA REVISIONS AND DECRIMINALIZTION

Prepared by David S. Michaels
Chairman, Sub-Committee on Drug Use
342 Madison Avenue
New York, New York 10017

The Committee on Revisions of the Criminal Law of the Criminal Justice Section of the New York State Bar Association presents herewith a revised draft of proposed legislation in accordance with the resolutions of the Section of January 27, 1973 and January 23, 1974. The primary features of the provisions proposed are the decriminalization of small quantity private possession of marijuana by the deletion of the crime of simple private possession of under four ounces of this substance only from the Penal Law and the substitution therefor of a modified Public Health Law provision covering both the possession and growing on a violation level with civil fines as deterrants to infractions instead of criminal prosecution and incarceration; the reduction of penalty levels for all other marijuana offenses, which

NYSBA

would remain criminal, with the retention of felony penalties for significant possession and sales; the repeal of Sec. 240.36, concerning loitering in the first degree; the modification of the definition of sale within Sec. 220.00, so as to exclude therefrom the situations in which no actual sale transpired; the modification of Sec. 220.25 regarding presumptions of possession and the exclusion of violation-status matters from definition of criminal nuisance. The revisions proposed, aside from that defining "sale" and those modifying presumptions and loitering do not affect in any way the legal status of, or sentencing as to any controlled substance other than marijuana.

The revisions are based upon a present situation where the ounce is the standard unit of "retail" black-market distribution, which pattern outdates the 1/4 ounce misdemeanor limit of present law.

Section one would amend that provision of the Public Health Law which defines growing of marijuana to be a misdemeanor to provide violation status with civil fines for the growing or possession of marijuana. It is to be noted that such applies only to amounts of less than four ounces in the aggregate, whether growing or not. The utilization of the Public Health Law provision prohibiting growing the substance

serves to delete such offenses from the Penal Law, provide fines instead of jail sentences as continuing deterrants for such small quantity possession, and provide for users a manner of obtaining the substance no more criminal that the possessory act. This draft modifies the prior draft by setting $100 as the maximum fine. Sections two and three would delete the declaration of such small-quantity marijuana possession as a nuisance, to prevent misdemeanor criminal nuisance prosecutions based solely on violation-level possession. The wording of Section three has been corrected by this draft.

Section four amends the definition of sales to require transfer for "consideration" instead of the present offer, agreement, or gift, to better conform the definition to reality without unduly burdening the prosecution's ability to establish a sale. A technical correction has been made by this draft.

Section five would add a new provision, making the public use or display of even violation-levels of marijuana a class B misdemeanor. It is intended to insure that only the private possession of this substance is decriminalized. The prior draft hereof, at Section fifteen, enacted such provision numbered as Sec. 220.65.

Section six amends the present misdemeanor possession

provision as to all substances, which bears a one-year maximum jail sentence, to specify that, as to marijuana, such shall apply to possession of between four ounces and eight ounces. It makes no changes as to other substances. The prior draft hereof applied to between two and eight ounces.

Section seven would make felonious the possession of more than eight ounces on a class E felony level.

Section eight would delete, as to marijuana, the little-used charge of possession with intent to sell, on the theory that possession per se and sale per se constitute sufficient bases and levels of prosecution.

Section nine would delete the provission of present law by which possession of more than one-fourth ounce is defined as felonious and Sections ten and eleven would delete the computation of offense level by number of cigarettes. Present law makes all possession of over one-fourth ounce felonious, and allows C felony status, bearing a fifteen year maximum jail sentence, for possession of over one ounce, but makes no distinction whatever among levels of offenses for possession of over one ounce. Section eleven repeals the present fifteen year maximum jail sentence for possession of over one ounce.

Section twelve would delete prior marijuana convictions from the categories of prior convictions which could raise the level of a present offense to that of a class A felony, bearing mandatory jail sentence of up to life imprisonment.

Section thirteen would amend the presumptions of guilt presently specified where controlled substances are found in a vehicle or in a room under circumstances showing an intent by some individual to distribute, to provide that such resumptions shall not apply to marijuana, and that where applicable to any other controlled substance in a vehicle, such presumption arises only when the defendants had access to and a plain view of such substance. Such revision is to prevent the injustice of presuming a defendant's guilt in situations where he lacks in actuality indicia of possession or knowledge. Further, Section thirteen modifies the presumption of possession where a defendant is found in a room with controlled substances other than marijuana, to provide that for such presumption to arise, the circumstances relied upon must lead to a logical inference of the particular defendant's knowing possession and intent to distribute. The prior vague provision requiring "close proximity" by the defendant to the substance is deleted.

Sections fourteen, fifteen, sixteen, seventeen, eighteen and nineteen modify the offense levels and sentences for the sale of marijuana. While present law makes all sales of controlled substances at least a class D felony, with maximum sentences of seven years, and imposes a C felony status, with maximum sentences of fifteen years for all sales of marijuana, the proposed revision would make the sale of

more than four ounces of marijuana a class E felony, and would define a lesser sale of an amount the private possession of which would constitute only a violation to be a class A misdemeanor. The two ounce limit proposed by the prior drafr has been modified to four. It is to be noted that Section four of the proposed legislation would tighten the definition of "sale" to exclude gifts.

Section fourteen would establish the new offense of eighth degree sale, a class A misdemeanor for small-quantity sale of marijuana; marijuana sales of over four ounces are made a class E felony by Section fifteen. Sections sixteen and seventeen would delete the harsher C and D felony status previously applicable to all marijuana sales, and Sections eighteen and nineteen would delete prior marijuana convictions from the categories of prior convictions which would raise the level of a present offense to that of a class C or A-III felony, bearing mandatory jail sentences of up to life imprisonment. Sections eighteen and nineteen correct a significant omission from the prior draft.

Section twenty would repeal the present Section 240.36, making it a crime to loiter with the intention of possession controlled substances. Such is recommended because the present statute is of limited utility and is subject to abuse. This modification would not delete the violation of loitering per se.

Thus, in summary, the proposed legislation would both reduce sentences and partially decriminalize small-quantity possession of marijuana making the private possession and/or growing of less than four ounces of marijuana a violation outside the Penal Law, with civil fines of up to $100 ~~per ounce~~ and forfeiture of the substance as the sole specified penalties. Public use or display of such amounts would remain criminal as a class B misdemeanor, the possession of four to eight ounces would be a class A misdemeanor, and possession of larger amounts would constitute a class E felony. Sale would be redefined to exclude gifts, and sale of under four ounces, the possessory violation level, would constitute a class A misdemeanor, while sale of larger amounts would become a class E felony, thus treating marijuana sales somewhat less harshly than other controlled substance sales, instead of more harshly, as is the case at present.

Further, the presumptions of knowing possession within the present law would be modified to make them more realistic , prior marijuana convictions would not be used to subject defendants to increased penalties or mandatory incarceration for up to life sentences, the present crime of loitering with the intention of possessing controlled substances would be deleted, and the private use, growing or possession of small amounts of marijuana, as herein limited, could not be

considered a criminal nuisance.

It is thus intended to provide, within a coherent, logical, and complete structure, penalty reduction and decriminalization of the small-quantity private use and possession of marijuana by the abolition of jail sentences therefor and the substitution of civil fines to discourage use, while maintaining as criminal all public use and sales of marijuana and retaining the felony status of significant possession and sales. It is submitted that such limited decriminalization is more just and more economical, in both human and social terms, than is present law, especially in view of the widespread use of marijuana and the present medical knowledge concerning this substance. Therefore, such penalty reduction and decriminalization could well promote a greater respect for the law.

Submitted on behalf of the Committee on Revision of the Criminal Law of the Criminal Justice Section of the New York State Bar Association

OHIO

[From the Cincinnati Enquirer, Sept. 24, 1975]

OHIO'S NEW MARIJUANA LAW AMONG MOST LENIENT

(By Steve Wilson)

COLUMBUS.—Legal minds still argue just how far it does go, but most are not hesitant to admit that Ohio's new law on possession of small amounts of marijuana is probably the most lenient in the country.

When the new law becomes fully effective on July 1, 1976, possession of less than 100 grams will be punishable by a maximum $100 fine. There will be no increased penalty for repeat offenses and no criminal record. The penalty provision of the law becomes effective November 21.

That compares to the state's present statute which makes possession of any amount of marijuana a criminal offense carrying a maximum one year prison sentence and up to a $1000 fine. A second offense could result in a potential 10-year prison sentence.

David Weiner, a former Cincinnatian who now heads the Ohio chapter of the National Organization for Reform of Marijuana Laws (NORML), says the new law puts Ohio "neck and neck" with Alaska and better than any other state in reform of marijuana laws.

Alaska's reform came not so much through the legislative process as a state supreme court decision which contends that possession of marijuana in the home is constitutionally protected under the right to privacy.

Weiner, 31, a 1965 graduate of the University of Cincinnati and now a corporate attorney in Cleveland, terms the General Assembly's passage of a complex drug bill a "very good first step toward marijuana reform in this state."

"I think if anyone was asked even 10 months ago if we would have a decriminalization statute," Weiner said, "he would have given it a thousand to one odds. We've come a long way in a very short time."

The element of the new Ohio law which elevates it above most reform legislation passed in other states is the amount of marijuana a person is allowed to possess and still face only a minor misdeameanor.

Ohio's law will allow a person to have nearly 100 marijuana cigarettes without fear of facing a criminal sentence. Most other reform states have set the amount at less than half that figure.

As originally proposed by Attorney General William J. Brown, Ohio's law was to have a 30 gram provision. That amount was amended to 100 grams in the Ohio House.

The Senate Judiciary Committee resisted attempts to see the 30-gram limit reinserted in the legislation and a compromise amendment to decrease the amount to 45 grams was later offered on the floor of the Senate.

That amendment was resisted strongly by Cincinnati Republican Sens. Michael Maloney and Stanley Aronoff.

Aronoff says of the floor speeches that neither Republicans nor Democrats, liberals or conservatives, wanted to make a person a "pusher" because of small amount of marijuana.

"You could be making your own child a pusher," one senator said of the proposed amendment.

Aronoff's speech, coupled with supporting remarks from Maloney, the Senate's minority leader, helped in seeing the amendment defeated and the 100 gram provision retained.

Another determining factor, one observer said, was that Senate members voted on the amendment by standing rather than answering a roll call. There was no record as to how individual members voted as the amendment was defeated by an approximate two-to-one margin.

One supporter of the 100 gram provision said senators were able to vote their consciences if their consciences were not recorded. "If the vote were recorded by name," he added, "we would have lost."

Officials with the attorney general's office, admit they were disappointed in their futile attempts to reduce the amount in the law.

It was their contention that anyone possessing more than 30–45 grams could not only be a user but a distributor.

The lack of any substantial lobbying effort on the part of law enforcement officers for reducing the amount has also been credited wtih the leniency found in the Ohio law.

While the Ohio law on possession of small amounts of marijuana may be considered taking a soft stand, the overall law which includes the marijuana provision is considered "the toughest in the nation."

Depending on the amount, possession of marijuana can result in a jail term. Possession of more than 100 grams carries a potential 30-day sentence and $250 fine.

Selling marijuana in bulk amounts can result in a 2–15 year prison sentence with six months of the sentence mandatory.

The mandatory sentence for selling marijuana goes along with even harsher penalties in the new law for the selling of hard drugs.

Under the new law, a person convicted of selling 10 grams of heroin would receive a mandatory three-year prison sentence with no alternatives for parole, probation, suspension or shock treatment.

Assistant Attorney General Stephen Fitch says the state's new law on marijuana is a "recognition of conflicting testimony" concerning the possible hazards of smoking "pot" adding, "the jury is still out."

The law, he added, is aimed at discouraging the use of marijuana, but not putting people in jail for experimenting with what may or may not be a dangerous drug.

No one is quite yet willing to predict how the new law will affect the use of marijuana in Ohio.

Studies completed in Oregon following similar reform legislation indicated no significant increase in the use of marijuana, according to Fitch. "The law did point to a positive effect, however, in freeing law enforcement personnel to focus them on much more dangerous drugs like heroin and LSD.

"I would have to assume the experience in Oregon would be the same in Ohio," he said.

Meanwhile, reformer Weiner says states should continue to discourage the use of marijuana until more research can be completed. The long-range answer, he says, should be to place it under state control so that it can be regulated like alcohol and cigarettes.

"I'm surprised that we are as far as we are today," Weiner said, but added the "final step" in marijuana's reform will probably come in Ohio within five years at the outside."

REPORT

ON

LEGAL SANCTIONS OF MARIJUANA

To the Board of Governors,
The City Club of Portland:

I. INTRODUCTION

Because of the apparent wide-spread use of marijuana, particularly by young people, and the consequent public interest in and need for information about the subject, the Board of Governors, upon the recommendation of the Project Planning Board, established a research committee to study and report on the legal sanctions imposed upon the possession, use and sale of marijuana in Oregon, including in its consideration the appropriateness of the sanctions.

The Committee has limited its research to public information available from medical, law enforcement, and other private and government sources and did not attempt to develop its own independent body of data.

II. THE LEGAL ASPECTS OF MARIJUANA USE

A. Oregon Law

Prior to January 1, 1972, under Oregon Law, conviction of use or possession or sale of marijuana could be treated within the discretion of the court as either a felony punishable by a maximum of ten years in prison, or a misdemeanor. The possession of it was also subject to a fine of not more than $5,000.

In the new Oregon Criminal Code, effective January 1, 1972, the felony-misdemeanor dichotomy as it relates to marijuana is substantially retained, but with refinement. Conviction for possession or sale (now called "furnish") carries with it a term of imprisonment of up to one year in the case of a misdemeanor, or up to ten years in the case of a felony. Additionally or alternatively, a fine may be levied upon conviciton up to a maximum of $2,500 if a felony is involved or up to $1,000 for a misdemeanor violation.

Under the new law, the courts will no longer have the discretion to treat several marijuana offenses as either misdemeanors or felonies. For example, simple use of the drug is classified as only a misdemeanor. Also, if the conviction is for a first offense and less than one ounce of marijuana is involved, the penalty upon conviction must be that for a misdemeanor. However, if a person over 18 furnishes marijuana to a person under 18, and there is at least three years' difference in their respective ages, the penalty upon conviction of the furnisher must be that specified for a felony with an enhanced maximum term of imprisonment of up to twenty years.

B. Federal Law

Federal legislation concerning marijuana has recently been substantially revised. (Comprehensive Drug Abuse Prevention and Control Act of 1970, P.L. 91-513, 91st Congress, approved October 27, 1970.) This Act represents the latest piece of major legislation controlling manufacture and distribution of illegal drugs including marijuana. It repeals most of the prior federal legislation dealing with this subject.

This Act introduces major changes in the legislative control of marijuana. The general tenor of the new Act is to relax the severity of penalties for possession and use. All mandatory minimum sentences are eliminated except for the engaging in "a continuing criminal enterprise". In the case of a first offense for simple possession (not for distribution) the court may place the offender on probation, and if the probational conditions have not been violated during the term of probation, the proceedings may be dismissed without a determination of guilt or

the first offense. If, in the previous instance, the offender is under 21, the court can order expunging of all official records relating to the crime. Penalties for use, possession and distribution of narcotic drugs draw more severe sentences than for similar acts involving non-narcotic drugs. Distributing "a small amount of marijuana for no remuneration" is treated as a case of simple possession with the possibility of expungement of all criminal records relating to the offense as previously stated. (The Department of Justice agreed to inclusion of this provision stating that the intended meaning was "to cover the type of situation where a college student makes a quasi-donative transfer of one or two marijuana cigarettes and receives $.50 or $1 in exchange to cover the cost of marijuana".)

Federal legislation for the first time has not included marijuana as a narcotic drug and thereby follows the pharmacological dictionary definition of marijuana as a non-narcotic. The new Oregon law, on the other hand, still defines marijuana as a narcotic.

A more severe penalty is called for where a person over 18 sells to a person under 21, the first offense calling for twice the punishment otherwise prescribed. Subsequent convictions call for three times the punishment otherwise prescribed.

C. Single Convention on Narcotic Drugs, 1961

The United States became a signatory to this Convention by ratifying it in 1967. It obligates the Federal Government to pass laws preventing any state from having a licensing system for the sale of marijuana. Article 36 provides that each signatory country shall adopt such measures as will ensure that the cultivation, production, distribution, possession, et cetera, of marijuana, except for medical and scientific purposes, shall be punishable offenses.

D. Summary

The trend under both Oregon and federal law is to relax the penalties involving the possession and use of marijuana and to make more severe the offenses involving the sale of the drug to young persons. Before the present proscriptions could be abolished and the use of marijuana legalized, the United States may either have to withdraw unilaterally from the Single Convention on Narcotic Drugs or seek appropriate amendments to its binding provisions.

III. THE MEDICAL ASPECTS OF MARIJUANA USE

The report to Congress by the Secretary of Health, Education and Welfare on "Marijuana and Health" (January 31, 1971) noted that it is relatively free from unusual hazard as compared to most drugs. However, there is an apparent variation in the effects which result from smoking the plant *Cannabis sativa,* or Indian hemp, which depends on the preparation of the material, the way it is smoked, the social setting, and the attitude of the user. The pharmacological activity depends on the content of a chemical called tetrahydrocannibinol (THC), which is found mostly in the flowering parts and upper leaves of the plant. Numerous other factors, such as the way it is cultivated, the soil, the time of harvesting, the heat, and the humidity may affect the THC content of the final product. The stems and seeds are virtually inactive, and marijuana prepared from the whole plant has relatively little activity. If only the leaves and tops are used, activity is apt to be much greater. Marijuana available on the street may also contain mescaline, methamphetamine, LSD, or other drugs as additives to make it more potent.

A stronger form of marijuana is hashish. Hashish is a brownish resin collected from the leaves of the marijuana plant and has a far higher content of THC. Although not widely available in the United States at the present time, its use has been increasing recently.

Marijuana is usually smoked by deep inhalation and retention. Its effect is noticed within a few minutes and lasts for several hours. It can also be taken orally with a similar although delayed effect.

A. Pharmacological properties

THC in the amounts used during smoking a marijuana cigarette may produce conjunctival injection (reddening of the eyes), impaired coordination, drowsiness, hunger, and slurring of speech. Tolerance or addiction is generally not believed

to occur. Contrary to the common understanding, marijuana is not medically a narcotic. There is no convincing evidence that repeated use of cannabis derivatives leads to use of harder drugs such as heroin or other opiates, although most heroin addicts have used marijuana in the past. There is no evidence that there is any more casual connection between the use of marijuana leading to the use of heroin, than the prior use of alcohol and tobacco leading to the use of heroin. Alcohol appears to be far more dangerous pharmacologically than does marijuana. The marijuana smoker in our present society, however, is often exposed to harder drugs through sellers and groups oriented to the use of harder drugs. Presumably long-term marijuana smoking can contribute to chronic bronchitis and emphysema. The potential of marijuana to induce lung cancer is not known.

B. Psychological effects

A feeling of euphoria and relaxation is common. Changes in time sense have definitely been shown to take place during marijuana intoxication. There is a tendency to overestimate the passage of time particularly while engaged in some activity. Memory, both immediate and short-term, may also be impaired while under the influence of the drug. More complex functions involving learning and comprehension are adversely affected even at the moderate levels of typical American social usage. As with the use of alcohol, the loss of inhibition commonly occurs. Marijuana has no known aphrodisiac properties. Occasionally there is a feeling of anxiety, suspiciousness, or confusion. Except in high doses marijuana is not usually associated with delusions, hallucinations, or psychoses, although adverse mental reactions have been reported from the Far East, where the THC content of marijuana is higher than in this country. Acute psychotic episodes precipitated by marijuana intoxication have been reported. These appear to occur infrequently except in cases of high dosages. Even at levels of social usage, psychosis, depression, promiscuity, and anti-social behavior may appear in particularly susceptible individuals.

The long-term physical and psychological effects of heavy marijuana use are not fully known. Strong cannabis preparations have been available for centuries in some countries, and descriptions of psychoses and apathy as a result of such use are abundant. Unfortunately the available information is anecdotal in nature.

C. Genetic effects

The search for evidence of harmful effects in infants born of marijuana-smoking mothers has yielded negative results. As in the case of the use of other drugs, pregnant women and nursing mothers are cautioned against its use.

D. Summary

The undesirable psychological and physical effects of smoking small amounts of marijuana as it is done currently in this country are relatively mild in most instances. The effects of long-term use, or the use of stronger cannabis preparations, such as hashish, are not known. The possibility of "lacing" marijuana with other drugs, as well as the exposure of the marijuana smoker to other more dangerous drugs, provides an added hurdle to an objective evaluation. Most medical authorities, however, agree that marijuana has relatively mild physiological effects and that the current penalties regarding its use are out of line with the potential danger. Like any drug, it is undoubtedly subject to abuse but less so than the most commonly used drug: alcohol.

IV. THE SOCIOLOGICAL ASPECTS OF MARIJUANA USE

When Congress initially outlawed marijuana in 1937, it did so largely on the basis of statements made by officials of the Federal Bureau of Narcotics that users of the drug commit violent crimes while under its influence. The present literature published by the Federal Government no longer supports that view. Further, although the witnesses interviewed by the Committee included a number of law enforcement officials, no witness stated that the use of marijuana either directly or indirectly results in violent or anti-social behavior. In fact, contrary to the original premise for the proscription, the evidence today shows that a person under the influence of the drug tends to become passive rather than violent or aggressive.

Also, because marijuana is neither addictive nor expensive to obtain, it does not indirectly lead the marijuana user to commit other crimes to finance his purchase and use of the drug.

At the time the drug was first made unlawful, its use was limited to a small segment of our society which for various other reasons had a high incidence of delinquency. It was for this reason that the original advocates of the proscription assumed a cause and effect relationship between incidence of violent crime and users of the drug.

Today the use of marijuana is neither confined to a small segment of our society nor limited to groups which have a high incidence of delinquency. Both nationally and locally the use of marijuana is widespread, especially among youth. At the present, 30 to 40 percent of high school students in the Portland area have tried marijuana. The educators interviewed by the Committee did not feel that marijuana use led to delinquency, but they did associate it with poor scholarship resulting from a lack of interest in academic pursuits. It is becoming increasingly popular with youth from upper and middle class economic backgrounds, and is especially popular with today's college students. Its use at the college level is casual, however, and usually does not evoke response from either college administrators or police.

Some law enforcement officials feel that marijuana is a social problem and should not be subject to legal sanctions. Most others feel that the limited resources available for fighting crime can better be spent on prosecuting other offenses. A substantial portion of time and resources of local law enforcement agencies is currently being expended on prosecuting "sellers" and "suspected sellers" for marijuana violations.

There is reason to believe that the source of marijuana being sold in Portland is no longer limited to enterprising youth supplementing their income with occasional trips to Mexico for the purpose of acquiring marijuana for their own use and for sale to friends. Two witnesses interviewed by the Committee, one a law enforcement officer and the other a person close to the youth culture, stated that there is an indication that organized crime is becoming involved in the black market distribution of marijuana in the Portland area. They stated that there are times during the year when marijuana will suddenly become scarce in this area and the price of heroin drops at the same time; thus encouraging marijuana users to try the more dangerous drug.

The use today, however, is not restricted to the young. It is becoming more popular with their elders in the same middle and upper economic strata of our society. Thus, the present law is being broken by an increasing number of persons who come from those segments of our society which have been thought of traditionally as the most law-abiding because of their economic interest in maintaining order.

V. ARGUMENTS IN FAVOR OF AND AGAINST THE PRESENT LAWS

The arguments put forth by the witnesses interviewed by the Committee who do not favor legalizing marijuana at the present time were fourfold.

1. Until the full extent of psychological and physiological effects of marijuana are known we should not make legal a substance which may be permanently damaging to the user.

2. Society already has such a large scale problem resulting from the use of alcohol that it should not legalize another drug and create a second social problem of similar magnitude.

3. Marijuana adversely affects the individual by taking away his motivation, initiative and inhibitions. If its use is allowed to become more widespread by legalization the whole character of our American society and the free enterprise system on which it is based will be altered and possibly eventually be destroyed.

4. To legalize marijuana would make its use more widespread. Further, even though marijuana itself is not addictive, it could lead to greater use of truly dangerous drugs as new users, after having legally tried the drug, may go on to seek greater "kicks" from more potent dangerous drugs or narcotics.

A number of arguments were put forth in favor of abolishing the present laws proscribing the use of marijuana.

1. Marijuana does not lead to anti-social conduct. Since any harm resulting from the use is to the individual user and not to society in general, it is not a proper subject for criminal sanctions. The enforcement of the present laws diverts the already overtaxed resources of our law enforcement agencies from their more important job of protecting society from anti-social conduct.

2. The current widespread violation of the present laws regarding the use of marijuana creates disrespect for law in general. First, a person violating the present marijuana laws tends to rationalize his position on the basis that he is required to obey only "good laws" and not those that are, in his opinion, "bad laws." Second, this disrespect for the law is not limited to those persons directly breaking the marijuana laws but has spread to those charged with the enforcement of laws proscribing its use. Critics of the present law point out that in the case of all victimless crimes, law enforcement officials, in their zeal to build a case against the violator, often resort to unconstitutional and illegal methods of gathering evidence in order to obtain a conviction.

Third, such present state laws which treat marijuana as a narcotic, when in fact it is not, in the pharmacological or scientific concept of the word, are a major factor in creating a credibility gap which separates and alienates many of our young people from their elders. Because much of the information which has been disseminated in the past, concerning the dangers of marijuana, is false, it is more difficult to educate young persons concerning the actual dangers of using true narcotics, such as heroin, or dangerous drugs such as LSD.

3. Because marijuana can only be purchased illegally, it necessarily exposes the user and society to a number of adverse side effects of the illicit sale of the drug. Often the user does not know what he is purchasing from an illegal dealer and thus he may be getting something more harmful than marijuana. Since the dealer is likely also to be selling narcotics or other truly dangerous drugs, the buyer is exposed to other substances which have been proven physically harmful or which may cause true anti-social conduct on the part of the user. The fact that a black market exists also creates a climate favorable to organized crime and the evils that go with it.

4. The present law subjects the convicted marijuana user to the possibility of having a felony record. A conviction, and its associated possible incarceration, may cause more social and psychological damage to the individual and society than the use of the drug itself.

5. The argument that the casual use of marijuana takes away the user's motivation, initiative or inhibitions to the extent that its legalized use would jeopardize our current American society and the free enterprise system is based on a false premise. Marijuana is not the cause of much of the current dissatisfaction with our society so much as it is a symptom of that dissatisfaction. Although marijuana is commonly associated with long-haired unmotivated youth, its use is no longer uncommon among highly motivated business and professional members of our society.

The report of the National Commission on Marihuana and Drug Abuse (Shafer Report) became available after your Marijuana Committee report had been submitted to and while it was being considered by the Board of Governors. The Shafer Report is a comprehensive, in-depth review of the status of marijuana with recommendations that include the first recommendation unanimously approved by your Committee.

VI. RECOMMENDATION RELATING TO THE USE AND POSSESSION OF MARIJUANA

Based on available medical and sociological data, legal sanctions governing the use and possession of marijuana are inappropriate.

The Committee, therefore, unanimously recommends that there be no criminal or legal sanctions for personal use or possession of marijuana.

VII. RECOMMENDATIONS RELATING TO THE LEGALIZED SALE AND DISTRIBUTION OF MARIJUANA

A. Majority Opinion and Conclusion

In a free society, criminal laws can only be justified on the basis that they proscribe some form of anti-social conduct. The present laws proscribing both the use and sale of marijuana are not justified on that basis.

The Minority report concurs that there should be no legal sanctions for the personal use and possession of marijuana, but members of the Minority do not feel that the sale of marijuana should be legalized.

The use of marijuana is already widespread. There is no evidence that its use will be any more widespread if the sale of it is legalized. If the Minority's view were adopted, the black market for marijuana with all of its attendant evils would still exist. The marijuana user would still be purchasing from an illicit seller who also may be selling truly dangerous drugs. The buyer would still have no way of knowing that the "marijuana" he was buying was mixed with something more harmful; the failure to legalize the sale of marijuana could present a greater health hazard than the legal marketing of the drug subject to proper quality controls. So long as there is a profit to be made in the illegal sale of marijuana, it is an invitation to organized crime to expand its activities in the black market. Because the user would still be forced to purchase from an illegal source, the disrespect for law that the present marijuana laws foster would still exist.

The Shafer Report adopted the position of discouraging the use of marijuana. Your Committee unanimously agrees with this position. However, the Shafer Report takes the position that legalization of sale will aggravate the current situation by giving the impression that it is approving the use of marijuana. They argue that they *think* marijuana use may be a passing fad and to take steps which might seemingly approve the use of marijuana would be undesirable. There is certainly no evidence that the use of marijuana is a "passing fad". There is significant experience to show that the illegal sale of marijuana contributes to organized crime and to the exposure of the purchaser to hard drugs. Unfortunately, the Shafer Report did not consider this argument at all.

The Majority of the Committee is of the opinion that the present evils resulting from the black market sale of marijuana can only be avoided by legalizing its sale under appropriate quality controls. Sales of marijuana could then be taxed and the money used to educate the public against all forms of drug abuse.

B. Majority Recommendation

The majority recommends that the manufacture and sale of marijuana be legalized and controlled by the state.

Respectfully submitted,
Ernest Bonyhadi
Fred M. Buchwalter
Phillip D. Chadsey
William Gittelsohn
Frederick A. M. Kingery, M.D.
George D. Leonard *and*
Charles M. Grossman, M.D., *Chairman for the Majority*

C. Minority Opinion and Conclusions

The Minority of your Committee is concerned with the impact of widespread legalized marijuana use on the productivity and material well-being of society. It is the Minority's judgment there is no compelling personal or social reason for legally effecting broader consumption of yet another intoxicant by members of society. For, in the final analysis, marijuana is nothing more or less than an escapist commodity. It is imperative that the tradtional values that made this country great are preserved, and those evils and values that undermine its progress are discouraged. Keeping in mind that there is no legitimate use for marijuana, involvement and motivation—not escapism—need to be encouraged.

For the first time in history exhaustive and heavily funded research into the medical aspects of marijuana is being undertaken. While the medical evidence is conflicting at this point, it is generally agreed that the typical amount of marijuana taken in the United States (1 to 1½ cigarets about twice a week) is not physiologically harmful. However, medical consensus is that marijuana, the drug, poses some danger for the individual user, either physically or psychologically. The only major disagreement in the medical community is about the degree of such danger[1]. Recurrently, almost every authority, society or commission in the field of medicine presently advocates the need for more research into the effects of marijuana use.

Heretofore, most medical studies have only covered a short-term use experience. But what of chronic or protracted use by the individual? Dr. Louis J. West, Chairman of the Department of Psychiatry at University of California at Los Angeles, states: "It is my belief that a percentage of regular users—I don't know what percentage and I don't know how to identify them in advance—will be adversely affected in terms of mental health by continued use of the drug"[2]. Why then rush to judgment on the question of legalizing marijuana? First let the results of the important medical research being done be known and let the Report of the National Commission on Marihuana and Drug Abuse (Shafer Report)[3], released this past month, be analyzed and commented upon by the experts.

Medically, then, the fact that presently there are few indications marijuana is seriously harmful when taken in moderate amounts does not mean that on-going research may not in the future reveal reasons for avoiding it completely. For if time and such research bear out Dr. West's belief that marijuana slowly exerts a personality or behavior change in some users, it will be by far the strongest argument yet against marijuana use—at least for those who hold the traditional values of motivation and achievement.

In discussing the legal aspects of marijuana use, the Majority states that . . . "Before the present proscriptions could be abolished and the use of marijuana legalized, the United States may either have to withdraw unilaterally from the Single Convention on Narcotic Drugs or seek appropriate amendments to its binding provisions". Suffice it to say that, because this would have to be done and the whole federal statutory scheme relative to the use and possession of marijuana amended before the drug could be legalized in this country, the practical — and political—likelihood that this would ever occur seems remote. To your Minority the recommendation that marijuana be legalized is not realistic.

According to the Shafer Report, 41 percent of the adults and 45 percent of the youths who have ever used marijuana reported in the National Survey authorized by the Marijuana Commission that they no longer use the drug. It is suggested that the present interest in marijuana is faddish and transient and will diminish in time of its own accord.

But the adoption of a regulatory scheme at this time legalizing marijuana would signify approval of its use and would institutionalize the availability of the drug. Your Minority believes use of marijuana should be discouraged.

Further, your Minority rejects a total prohibition scheme as it exists in the country today. The Minority does not view marijuana use as such a grave problem

[2]"Marijuana: Does it change personality, conduct of user?", Los Angeles Times, January 10, 1972, article by Harry Nelson, Times Medical Writer.

[3]National Commission Report, supra.

that individuals who smoke it, and posessess it for that purpose, should be subject to criminal procedures. No sufficiently compelling social reason, predicated on existing knowledge, justifies intrusion by the criminal justice system into the private lives of individuals who use marijuana. This is primarily why the Minority concurs with the Majority of your Committee on the first recommendation.

On the other hand, it also rejects at this time the regulatory or legalization scheme offered by the Majority because it would institutionalize availability of the drug which has uncertain long term effects and which may be of transient social interest. It is submitted that, based on present knowledge, current legal sanctions relating to social use of marijuana are inappropriate, but temporal consideraions dictate that a decision be deferred on full legalization of the drug. In a word, to decriminalize the mere use of marijuana is one thing, but to recommend its complete legalization at this time is quite another.

D. Minority Recommendation

The Minority of your Committee rejects the second proposal of the Majority and recommends as follows: the cultivation or sale or possession for sale of marijuana (in amounts of more than one ounce) be treated as either a felony or a misdemeanor, within the discretion of the court.

Respectfully submitted,
A. Leighton Platt
Donald W. Green, III
For the Minority

Approved March 3, 1972 by the Research Board for transmittal to the Board of Governors.

Received by the Board of Governors March 27, 1972, and ordered printed and distributed to the membership for discussion and action on April 21, 1972.

[From the New York Times, Dec. 18, 1973.]

Oregon Has Not Become a Haven for Pushers Despite Nation's Most Liberal Drug Law

Portland, Ore., Dec. 15 (AP)—About nine weeks ago, Oregon abolished jail terms and heavy fines for possession of an ounce or less of marihuana, making the state's drug law the nation's most lenient.

The liberalization of the law has produced no startling changes. Possession of marihuana is still illegal, but now it is treated more like a traffic violation than a crime. A citation is issued and the maximum penalty on conviction is a $100 fine, regardless of the number of previous convictions. There is no criminal record.

The maximum penalty formerly was a year in prison and a $1,000 fine for the first offense, and 10 years and $2,500 for repeats.

There is no evidence that the state has become a haven for drug users and pushers, as opponents of the measure had warned.

Those who sell marihuana say that its price, supply and demand are following seasonal norms.

CHANGING ATTITUDE

For the most part, policemen, prosecutors and judges are pleased with, but not excited by the liberalization. They say the law has simply caught up with society's changing attitude toward the casual use of marihuana.

"It's a good thing," said Bill Youngman, senior deputy district attorney for Multnomah County, which includes Portland, the state's largest city. "It was getting to be hell prosecuting those cases. Marihuana use had become to common that the grand jury just wouldn't indict and when they did, the juries wouldn't convict. We were losing our credibility with the courts."

"I think this law is going to work out very well," said Michael Bailey, the Multnomah County prosecutor who handles most marihuana cases. "It's a clear statement that the legislature wants a very small amount of our resources devoted to this area. I think in a few years complete legalization of marihuana may follow suit."

"Yes, this is a step toword legalization," said Sgt. Carl Dunafon of the Portland Police Department's narcotics detail. "And I oppose it. The law is too liberal. We don't have enough information to know the exact effects of this dangerous drug and here we are trying to legalize it."

Mr. Bailey said about 40 citations had been issued in the county for marihuana possession since the new law took effect Oct. 5—"mostly to teenagers, street people, hippies, the ones who smoke in public places."

He said practically all those to whom citations have been issued have pleaded guilty and accepted a usually light penalty.

Stiff criminal penalties for sale of any amount of marihuana, and for possession of large quantities of marihuana and other drugs, remain in force. Hashish, a more potent derivative of the marihuana plant, was inadvertently included in the new law. Legislative leaders say this was an oversight and will be corrected during a special session early next year.

TOO EARLY TO TELL

"It's far too early to tell what the effect of the law is going to be on the market," said a Portland dealer who handles large quantities of marihuana. "The stuff is getting easy to come by again because of the harvest in Mexico. And the quality is going up. This is the best tme to buy so I don't know how much of the increase is due to the law."

In Lane County, home of the University of Oregon, District Attorney Pat Horton said he was using the present system almost a year before the liberalized law took effect.

"There's been a saving of time and money," he said. "The average time for a policeman to arrest, lock up and process a person is 40 minutes. That's 40 minutes the cop is not on the street protecting life and property."

Mr. Horton foresees the eventual legalization of marihuana in Oregon, but with state controls on price and supply like those on liquor.

There is not total agreement.

"All this law really is is a license to sell," said District Attorney Doye Schiffman of Douglas County, a less populous region in the southwestern part of the state. "The pusher can go on his merry way selling marihuana, and as long as he never carries more than a lid an ounce at one time . . ."

In the eastern Oregon town of Hermiston, a move is already under way to restore criminal penalties for possession.

"We don't know to what extent marihuana affects the brain, but it very definitely does," said Susan Roylance, 31-year-old mother of seven and head of the Committee Against Liberal Drug Laws.

[From Oui, August 1975]

MARIHUANA FINDS PEACE IN OREGON

(By Tom Mareman)

The day he signed the bill into law, making his state the first in the nation to ease its penalties for possession of small amounts of marihuana, Oregon Governor Tom McCall, a Republican, expected hell from the people of his state. With the stroke of a pen, he had made, in effect, possession of one ounce or less of marihuana no longer a crime but merely a civil violation—punishable by a fine of $100 or less. The governor was sure, as he later said, that his actions in supporting and signing the bill were way ahead of public sentiment at the time.

So he braced himself for a siege of public criticism. Expecting an avalanche of mail, he had printed up a large stack of replies that outlined the whys and wherefores of his decision. Some lawmakers who'd supported the bill were also uneasy, fearing they'd gone too far; others began to wonder, unhappily, about their chances for re-election. The bill that passed both houses—by a margin that was nowhere near as close as many had predicted—failed to make a distinction between marihuana and hashish and, as a result, McCall's attorney general advised him not to sign it. (This lack of distinction between marihuana and hashish was changed three months later by a special session of the legislature.) "I went ahead and signed it," McCall says now, "because I knew we'd never get there again." On the surface, anyway, it took tremendous guts, even for Tom McCall, the most popular governor Oregon has ever had.

But maybe the citizens of the state were already there. Despite a lot of press coverage all over the state, the new law decriminalizing marihuana failed to generate much controversy. The siege of criticism many had expected somehow, mysteriously, never occurred. All was quiet on the streets of Salem, in and around the capitol building. Supporters of the bill, Democrats and Republicans alike, were amazed.

So was the governor. The few letters he got were divided almost equally between supporters and critics.

What Tom McCall did, of course, is something that is just now beginning to happen in other states. California, Colorado, New York, Connecticut and New Jersey, among others, are all considering laws modeled to some extent after Oregon's. So is Congress. Politicians and lawmakers are looking at the Oregon "experiment" with both curiosity and amazement. They're not sure if the marihuana law is some kind of comic error—enacted by a kooky state legislature and a sympathetic governor—or what. They don't understand the place and its people.

Oregon conjures up pictures of lumberjacks chopping down big trees; of country hicks, with bulging Adam's apples, walking around with Pendleton shirts on their backs and horse manure between their toes; of dairy farmers in bib overalls, out to pasture, idly tending to their cows; of Okies migrating west from the Dust Bowl during the last days of the Great Depression in search of something better. Oregon brings to mind images of Paul Newman, in the movie version of Sometimes a Great Nation, floating down-river on logs, middle finger extended upward defiantly, a rebel and strikebreaker; of Ken Kesey spaced out on his farm near Springfield, a culture hero gone to seed; of Wayne Morse, the late Senator with the shock of white hair and fiery tongue, orating, long before anybody was quite willing to listen, on the evils of a distant war in Asia.

The national image of Oregon is both true and false—true because you will find loggers and farmers and Ken Kesey; false because the image is just that—an image. It doesn't tell much of anything beneath the surface, like why a state that prides itself on a kind of 19th Century rugged individualism would vote to decriminalize marihuana, why conservatives in the legislature—like Stafford Hansell, a Republican hog former from eastern Oregon—would support such a law and why citizen reaction to its enactment would be far from outrage. All those things go much deeper than what is presented on TV or in the papers and newsmagazines. Oregon is watched through the eyes of the media, yet rarely understood—much less felt.

A recent survey commissioned by the Drug Abuse Council, in Washington, D.C., offers a general idea ofhow Oregonians now feel about the marihuana law. The survey was conducted by a Portland marketing-research firm one year after the law went into effect in October 1973. It is based on interviews with 802 adults in the state. The results show that 58 percent of the public either approve of the new law or want it liberalized even further; 39 percent favor returning to stiffer penalties. (Practically all of the people in this 39 percent have never used marihuana.) The survey shows, moreover, that there has been no significant increase in the number of people smoking grass and that of those who do smoke, 40 percent report a decrease in consumption, despite the law.

Thus, the extent of marihuana use in Oregon (nine percent of state residents are current users, 19 percent have experimented) is not significantly different from that of the country as a whole (eight percent are current users, 18 percent have experimented). Interestingly enough, those in Oregon who do not smoke grass give the following reasons: 53 percent are "simply not interested," 23 percent cite "fear of health consequences," two percent point to the "unavailability of marihuana" and four percent blame "fear of legal prosecution." The remaining 18 percent are, for the most part, undecided. The criminal law, therefore, plays only a minor part in somebody's decision to smoke or not to smoke.

But the question is, how is the law working out in practice? Not too surprisingly, you won't find very many Oregonians who are doing the asking. Marihuana hardly makes news in the state anymore. Nobody talks much about it these days, maybe because they've got other things on their minds, like unemployment, lumber mills shutting down, farmers burning their fields every summer in the Williamette River Valley—polluting the air horribly.

If you ask cops around the state, they'll tell you almost to a man that marihuana is more "evident." Which is their way of saying that weed is more visible. You may see somebody taking on a joint openly in a bar or tavern; or you may see people smoking at a rock concert or a party. Yet cops like Robert Scotton, a narcotics officer with the Portland police, will add, "If 'evident' means there's more use—well, then that's a cognitive leap a person takes on his own." Scotton seriously doubts if usage has increased.

If you ask District Attorney J. Pat Horton, of Lane County, which encompasses the Eugene-Springfield area, you'll learn that he's pleased with the new law for a number of reasons: a shift in police priorities away from petty dope busts to more serious crimes, reduced caseloads in the courts, a more respectful attitude among kids toward cops. "By any measurable standard, the decriminalization of marihuana is working well," says Horton. Handsome, young, articulate, Horton is a strong advocate of the present law and has testified before the U.S. Senate urging Congress to adopt a national policy based on the Oregon model.

In the high schools, there are fewer and fewer problems with dope; kids don't come to school loaded—as they did in the past. They're very cool about smoking grass. "It's no big deal," you'll hear, "as long as you aren't, like, blatant about it." Besides, drinking has come back—if it ever really went away—in schools and on college campuses. Ask Stephen Kafoury, the Democratic representative from Portland who, along with Hansell, led the fight for the new law. He'll tell you: "We didn't expect any changes to occur because of the new law. People were or were not smoking regardless of its illegality before, so why should that pattern change?"

Kafoury, who has a strong following among young people, is now sponsoring a bill to decriminalize the cultivation of up to ten marihuana plants and the transportation and sale of up to one ounce of grass. Tom McCall, now former governor (the office in Oregon is limited to two consecutive terms), says that he is satisfied with the way the present law has been working out. "It's the fullest, most rational breakthrough on this very emotional issue," he says. "That's why it's important, and that's why we should stick with it."

What the law does—and it's important if you're caught with one ounce or less of marihuana—is eliminate any criminal-arrest record. If you're caught in Oregon, a cop can't arrest you, he can only cite you, meaning that you simply appear in court and pay your fine, usually $50 or less. Horton says, "The people who come into the courtroom now accused of selling narcotics are traffickers and profiteers —professional criminals—not young professional people." Marihuana, of course, isn't legal in Oregon; you can still be busted for transporting, promoting, cultivating or furnishing (selling) on a felony or a felony-misdemeanor charge. The Catch-22 is:

It's OK once you have marihuana, but just don't let the cops catch you getting it. Why the official $100 fine? Says Kafoury, running a hand through his thick brown beard, "One hundred dollars was what most people were being fined anyway before the law, so we decided to keep that. But the main thing now is that you don't get an arrest record." As for sticking with it, as McCall suggests, people in Oregon appear to have every intention of doing so. Resistance to the new law has been minimal, with one possible exception. A group of citizens from the city of Hermiston organized a petition drive during the last state election in order to repeal the law. They needed 45,000 signatures to get the measure on the ballot. Despite a statewide campaign, they were able to muster only about 15,000 signatures. The petition never made it.

The law is popular politically. "It's not the old pull-down-the-shades-and-lock-the-door routine," kids who smoke will tell you. Grownups, too, are far less paranoid about those who smoke, about the menace of long-haired, weirdo freaks, dope fiends high on something, who have come to take away their daughters—or whatever the grown-up fantasy was. "Used to be that somebody who smoked marihuana was considered a creep or something," says Sergeant Bert Moreland, a Eugene cop. "Now you've got respectible middle-class people who smoke." The reduction of paranoia has had another effect, too. Just walk the streets of Portland at night, of reefers or a lid, used to be one way a cop could intimidate you, maybe prove his stripes, and maybe shake you down for long hair, your appearance or whatever. Usually, the bust was a waste of time for the cop. He knew it, too. He knew you'd get off with just a fine and, possibly, a lecture from the judge. But it was the hassle involved—like getting bounced around, booked, fingerprinted, maybe even thrown into the slammer for a night or two. That's what got to you—and the cop knew it. Busts for grass had their own ritual, something repeated dozens of times.

But things are changing. There are still cops like Lieutenant Harold Berg, assistant director of the criminal division with the state police in Salem, who in one breath will tell you. "We'll use whatever means necessary to enforce the law," and then say, "Now, I don't want you to get the idea that I'm a red-neck cop or something'." Still, one girl, in her mid-20s, who'd moved up to Oregon from California, remembers the time not too long ago when she got busted for grass. It happened in a small town out on the Coast. "The cops just weren't into bustin' people," she recalls. "They were really friendly, helpful. This one cop didn't exactly know what to do, like, how to write out a citation. I was scared, bummed out. But he looked at me real friendly and said, 'What are we going to do about you people who come out here from the valley and get stoned?' "

The narcs, of course, are still around, hanging out on the street under various covers, working their own show, waiting for hours, maybe even days, just for a buy. In Lane County, at least, according to D.A. Horton, they don't buy marihuana anymore, the emphasis now being on hard drugs such as coke and heroin. In Portland—Multnomah County—it's pretty much the same. "Marihuana activity in the police department is nil," says police chief Bruce R. Baker.

Most cops will say that they don't agree philosophically with the new marihuana law. If alcohol is already a problem, they say, then you're just asking for more trouble by reducing the penalties for possession of grass. Yet the criminal law hasn't been a deterrent in the past and some cops are aware of that "Increasing the punitive measures," says Baker, "doesn't act as a deterrent in the narcotics trade."

In terms of cops and their relationship to kids since the law went into effect, it's an unusual situation. If you ask Lieutenant Berg about his relations to kids on the street, if the scene has improved, he'll look at you as though you were speaking in Swahili and turn the question around: "What part of the country are you from? There's some alienation among youth here, yes, but not to the extent you find elsewhere. Kids here have more respect for police."

At some Eugene soda bars, cops pass through from time to time—usually rookies working in pairs—take a quick look around, maybe say hello if they're in a good mood, then leave. There is little, if any, overt hostility toward them. The kids mind their own business, play cards, arm wrestle, listen to the jukebox, whatever—without getting rousted. Sometimes they even smoke grass in these places, surreptitiously, like, late at night when it's crowded beyond belief and rock is heavy in the air. The cops are hip to what's going on—and so are the kids—but they won't hassle them if they're cool. Mainly, when they pass through on patrol, they're either looking for somebody or ready to break up a fight if some rummy gets drunk and starts a brawl.

On weekends, these kids may cruise Willamette Street, the local "gut," looking for some kind of action, a perpetual re-enactment of the teen Fifties. Or they may walk the mall in downtown Eugene, which is very big on weekends, especially if there's a break in the weather and the sun comes out. Toking on a joint in public as you walk the mall isn't considered very mellow; you know you can smoke dope now without the fear of being thrown into the slammer, so why flaunt it?

"Man, the revolution is over and we won," says Bobby Sky, who used to hang out with Kesey and his regrouped band, the Merry Panksters. In a sense, Sky, with his shoulder-length hair and very casual manner, is right. The great psychedelic wars that Keysey and his Pranksters fought in the Sixties *are* over. What's left to rebel against, particularly in Oregon? Parents go out on certain nights and listen to rock music with their kids; college students with beards and long hair participate in lengthy political debates with legislators in Salem, and rarely, if ever, feel as though they have no voice in local government; cops make very polite dope busts; guys with shoulder-length hair and rep ties work in straight jobs for law firms, big companies, government agencies—and smoke dope on weekends. Hip kids have taken on straight jobs without losing whatever it was that made them hip in the first place. Conversely, many straight people—lawyers, doctors, teachers—have taken on hip values, though not necessarily hip appearances. As one girl who's grown up in Oregon says, "Everybody is fittin' right in."

Dope dealers, however—at least those who are willing to talk—are either cynical about the new law or curiously indifferent to it. Things, after all, haven't changed much for them. What they're involved in—buying and selling for profit—is, of course, still illegal. Though undercover narcs are still on the street looking for big buys, these dealers (who deal modestly in kilos, not tons) are not about to sell indiscriminately, without first checking out something about their clientele. They like to think that narcs are putting all their efforts into hard-drug busts, but at the same time, they're not so sure. If you're a dealer, paranoia follows you wherever you go. You still hide, they still seek.

The emphasis nowadays among dealers is on quality—a higher grade Mexican or Colombian grass, which sells for $20–$40 per ounce, often more, depending on the season. The market demands better shit; people want quicker highs, like a couple of hits and you're *there*, instead of those times in the past when you'd sit around for what seemed like hours toking, nauseated, on bad weed. Quicker highs obviously cost more.

To cut costs, more people are saving their seeds and growing their own. Cultivation is up, even though it's illegal under the present law. Scotton, the narcotics cop, says, "There's more cultivation; we make more arrests for that." Home-grown weed, of course, may not be as good as what's imported and it can be a lot of work, because the climate isn't exactly suited to cultivation. So cultivators have to go the heat-lamp route. Most of the grass in Oregon, naturally, comes from Mexico through California. Distribution, narcs say, is being made lately in smaller and smaller quantities. "We've seen fewer kilo blocks." Scotton will tell you, "in relation to quantity than we have in the past, which indicates that if it's coming from Mexico, it's not being packed the same."

As for enforcement of the new law, there are indications that it hasn't been handled uniformly throughout the state. It's not all sweetness and light. Gary Gortmaker, the D.A. for Marion County, which includes the state capital, has reportedly refused to allow cops in his county to issue citations. He maintains that anyone cited for marihuana possession can't be prosecuted later for more serious offenses stemming from a dope bust. What Gortmaker is doing, in effect, is busting people for transporting if they are caught smoking in a car, parked or moving; for furnishing if they are seen by a cop passing a roach to somebody else; for remaining if they are caught in the same house where people are

smoking. All of the above carry felony—or, in the latter case, misdemeanor—charges.

In a confidential directive to police, Gortmaker has instructed his subordinates that people found possessing less than one ounce of marihuana be arrested and taken into custody, rather than merely cited to appear in court. As a consequence, people are coming out with felony arrests on their records for what the legislature has said should be only a violation. Gortmaker has refused to either explain or justify his policy to anyone. He did tell one reporter, however, that "the word decriminalization is a misnomer dreamed up by somebody. Something is either legal or not legal—criminal or not criminal."

Lawmakers such as Kafoury are angry about Gortmaker"s independent policies, though they admit there's not much they can do about them. Official state policy is one of discouragement of marihuana use, as witnessed by the stiff penalties in effect for sale and distribution. Whenever Gortmaker"s policies are mentioned, Horton, Hansell and McCall shake their heads in disbelief, They're all aware of the situation—which a number of cops in Gortmaker's county are not too pleased about, either—yet they are really powerless to take any kind of action.

Outside Marion County, middle-class parents see the new law as working well, mainly because their kids no longer come away from busts with arrest records. Ease up on the law and save your kid; find ways for him to get involved in the system without becoming cynical about the law. That's part of the social consciousness of the state of Oregon—a kind of belief that if the system is to work, it has to be responsive. If you ask people about the consciousness of the state, in fact, they'll look at you and say, "The Oregon story." Just that. The Oregon story is a notion put forth by Tom McCall. In terms of the marihuana law, he says, it means "pragmatism in the area of hysteria. I predict that other states—if we can hang on to the law, and our experience would indicate that it should be hung on to—will follow suit, because it just makes good sense."

LAW & JUSTICE

Oregon's Marijuana Decriminalization: One Year Later

WHAT ARE THE RESULTS OF ABOLISHMENT OF CRIMINAL PENALTIES FOR POSSESSION OF MARIJUANA?

By Robert R. Carr
Senior Program Officer,
Drug Abuse Council, Washington, D.C.

A SURVEY taken in the state of Oregon one year after it had abolished criminal penalties for simple possession of small amounts of marijuana revealed that a majority of citizens favor this new approach, and that the number of individuals using marijuana has not significantly increased with the removal of criminal sanctions.

Oregon is the first of the 50 states to abolish criminal penalties for possession of one ounce of marijuana or less, and to replace them with a maximum civil fine of $100. The independent Drug Abuse Council* commissioned a survey in October, 1974—the first anniversary of the new legislation—to assess what changes occurred in marijuana usage during that year, and to find out what impressions Oregonians have of their new law.

The Oregon law received bipartisan support in both houses of the legislature and became effective in October, 1973, after being signed by Gov. Tom McCall, a Republican. The Oregon model is similar to the approach recommended by the National Commission on Marijuana and Drug Abuse—an official policy of discouragement of marijuana use by the imposition of a civil sanction, with the elimination of criminal penalties.

The Commission's First Report, *Marihuana: A Signal of Misunderstanding*, issued in March, 1972, recommended that possession of marijuana for personal use no longer be a criminal offense and that casual distribution of small amounts of marijuana for no remuneration, or insignificant remuneration not involving profit, no longer be an offense.

The new laws on marijuana use or possession do not "legalize" marijuana in Oregon any more than fines for traffic violations make such violations "legal." The laws do "decriminalize" the use or possession of one ounce or less of marijuana. Conviction of the offense is neither a misdemeanor nor a felony, and no imprisonment or fine in excess of $100 can be ordered.

It was feared by some that the adoption of such an approach would lead to a dramatic increase in marijuana use, and that the state might even be overrun by hordes of hippies. Since policy-makers at both the national and state levels are looking at the Oregon experience to guide them in their own policy determinations, the Drug Abuse Council, through its survey, sought to answer some of the questions raised by the decriminalization of marijuana.

The survey was conducted by Bardsley and Haslacher, Inc., a marketing research firm in Portland, Ore., and consisted of several questions asked as part of a longer, regularly scheduled survey of public opinion on a variety of issues. Field work for the study was conducted between Oct. 17 and 24, 1974. The sample consisted of 802 personal, face-to-face interviews with a representative sample of adults 18 years or older.

The results of the survey are presented here in three parts: marijuana usage —ever used and presently use, frequency of use, how long used, and changes in use; reasons for present non-use of marijuana; and attitudes toward the new law and other legal alternatives.

Marijuana Usage

Two out of every 10 Oregon adults (19%) have at least tried marijuana, with one out of every 11 (nine per cent) reporting that they currently use marijuana. A sharp difference in marijuana usage, both ever used and currently use, is seen between younger adults and older adults, between men and women, and between educational levels. Of adults 18 to 29, 24% reported that they currently use marijuana, as compared to five per cent between the ages of 30 and 44, and less than one per cent of those over 45.

Over four times as many men (13%) as women (three per cent) said that they currently use marijuana. Of those who have completed college, 12% reported currently using marijuana, compared to six per cent of those with a high school education, and less than one per cent of those with a grade school education or less.

The National Commission on Marijuana and Drug Abuse classified marijuana users according to frequency of use: Experimental—at least one trial to once a month or less; Intermittent—two to 10 times monthly; Moderate—11 times monthly to once daily; Heavy—several times daily; and Very Heavy—almost constant intoxication with potent preparations, brain rarely drug-free.

The Oregon survey data indicates that 54% of the adults who have ever used marijuana reported that they no longer use it; seven per cent use marijuana sporadically. These persons can be characterized as experimental users.

Of the adults who have ever used marijuana, 14% can be designated in-

* The Drug Abuse Council, located in Washington, D.C., was established in 1972 by a consortium of private foundations to serve as an independent source of information, policy evaluation, and research funding in the field of drug use and misuse.

termittent users. They continue to use marijuana from two to three times per month to once per week. Some 18% of adults are moderate users, who continue to use marijuana a few times a week to once daily.

Finally, seven per cent of adults who have ever used marijuana are heavy users, using marijuana more than once daily. No distinction was made in the survey between heavy and very heavy users.

It appears that the number of individuals using marijuana has not significantly increased in Oregon during the year following removal of criminal penalties for simple possession of one ounce or less. Of those currently using marijuana, only six per cent report that they have used it for less than one year, while 91% have used it for more than one year. All of the less-than-one-year users are between 18 and 29 years of age.

Of those individuals currently using marijuana, four out of every 10 reported a decrease in usage during the first year of the Oregon decriminalization law, while one of every 20 reported an increase in usage. More than one-half (52%) of current users reported no change in consumption during the same period.

Reasons for Present Non-Use

Those individuals who reported that they do not currently use marijuana—both those who have never used it and those who have stopped using it—were asked to choose the one reason for their present non-use: possibility of legal prosecution; not available; not interested; marijuana may be dangerous to my health; or other reason.

Lack of interest was the most important reason chosen for not using marijuana by both those who have never tried it (54%) and by those who have tried, but stopped (51%). Possible health dangers were cited by 23% of never-users and by 12% of ever-users as the most important reason for not currently using marijuana.

Both the possibility of legal prosecution and the lack of marijuana availability ranked low as reasons for not currently using. Legal prosecution was named by four per cent of never-users and by seven per cent of ever-users, while not available was named by only two per cent of never-users and by one per cent of ever-users.

Attitudes Toward Marijuana Laws

A majority (58%) of Oregon adults favor the elimination of criminal penalties for the possession of small amounts of marijuana. Approximately three out of every 10 residents (32%) approve of their state law that makes simple possession of marijuana a civil "offense"—akin to a parking ticket—carrying a fine, but no jail term or criminal record; 11% favor changes in the law to make both sale and possession of small amounts of marijuana legal; and 15% favor changes in the law to make possession of small amounts and use in private legal.

Young adults—aged 18 to 29—take a more lenient view on the four legal choices regarding sale and/or possession of small amounts of marijuana. The division on legal alternatives is sharp between those who either have used or currently use marijuana and those who have never used it. Of all of those who have never used marijuana, 50% approve of the law as is or more lenient options, while 46% favor stiffer penalties, the overwhelming number of which came from the never-used marijuana group and from those 30 years of age or older.

ATTITUDE TOWARD LEGAL ALTERNATIVES

First Choice	Civil Penalties, As Is	Possession of Small Amounts Legal	Sale and Possession of Small Amounts Legal	Stiffer Penalties	Undecided
Total Adults	32%	15%	11%	39%	3%
By Age					
18-29	36%	26%	17%	19%	2%
30-44	38%	13%	8%	40%	1%
45-59	25%	13%	7%	51%	4%
60 and over	27%	5%	9%	53%	6%
By Usage					
Have used	26%	37%	29%	7%	1%
Never used	33%	11%	6%	46%	4%

Observations

The Oregon survey seems to indicate that the number of individuals using marijuana did not significantly increase in Oregon in the year after its decriminalization law went into effect, and, of those using marijuana, a large percentage reported a decrease in consumption, while only a small number reported an increase in use. Lack of interest or health concerns were the primary stated reasons for either non-use or cessation of use, while lack of marijuana availability or legal sanctions were peripheral concerns.

A majority of Oregon residents favor either their new law treating simple possession of one ounce or less of marijuana similar to a traffic ticket or changes in the law to remove all legal sanctions for simple possession of small amounts.

Significant divisions in both marijuana usage and attitudes toward marijuana law appeared among age groupings. Marijuana usage among Oregon adults is by far the heaviest in the 18- to 29-year-old group, which also favors the more lenient legal approaches.

The decriminalization approach is rapidly gaining support at the national and state levels. Legislation to remove criminal penalties for simple possession of marijuana has been introduced in the U.S. Congress by Sen. Jacob Javits (R.-N.Y.) and Rep. Edward Koch (D.-N.Y.).

California, Maine, and Colorado have recently substituted fines in place of jail sentences for possession of small amounts of marijuana, and several other states are presently considering such an approach. The Alaskan Supreme Court declared criminal penalties for marijuana possession to be an unconstitutional invasion of privacy, and the Alaska legislature approved a bill, signed by the governor, which decriminalizes private marijuana possession.

National surveys show similar use and attitude patterns among adults as among those in Oregon, and, further, indicate an even more lenient attitude toward marijuana laws among the youth who will be reaching voting age in the next few years. If younger adults maintain the attitudes they now have as they grow older, and if marijuana usage continues to remain at its present level or increases in subsequent "younger adult" groups, we can expect to find an ever-increasing acceptance of marijuana in the years ahead. If that happens, we will find increasing pressure for removing all legal sanctions for marijuana use and possession.

PENNSYLVANIA

[From the Philadelphia Bulletin, Aug. 17, 1975]

EASING OF MARIJUANA LAW URGED

PENNSYLVANIA DRUG COUNCIL SUGGESTS CITATIONS INSTEAD OF ARRESTS

(By John Benditt)

It's an ordinary August evening in center-city Philadelphia—quiet, hot and muggy. A hip young couple in their twenties stroll through Head House Square, casually passing a joint back and forth.

They cup their hands to hide the red glow of the marijuana cigaret, but it just isn't their night. A cop passing in his blue cruiser spots them.

But instead of jumping out, slapping on the cuffs, and taking the young smokers down to the Roundhouse, the cop takes out his well-worn ticket book and writes out a citation.

A pot-smoking ticket?

Such an incident could actually take place by summer if some of Pennsylvania Governor Shapp's advisers convince the Legislature in Harrisburg to accept their plan.

The Governor's Council on Drug and Alcohol Abuse has submitted an 80-page "Marijuana report" recommending that possession of small amounts of marijuana be "decriminalized."

The report urges that possession of small amounts of marijuana for personal use be made a civil offense, much like a traffic citation.

Offenders would have no arrest record, and would not face the risk of a criminal record if convicted.

There has been a rising number of pot arrests every year in Pennsylvania (9,616 in 1973) but the Council's report says the marijuana laws don't prevent anybody from smoking the weed.

Regardless of the laws, the report claims, about one in five adult Pennsylvanians will smoke marijuana some time during this year.

And present pot laws continue to cost Pennsylvania taxpayers in the neighborhood of $10 million in law enforcement costs a year, the report adds.

Council officials say they have already drawn up a bill providing for decriminalizing marijuana possession. Several legislators, they say, have already said they were interested in sponsoring the bill in the next session of the Legislature.

If the bill becomes law, possession and use of less than 30 grams of marijuana, roughly an ounce, would become a civil offense, with a maximum fine of $100. Selling pot would remain a criminal offense.

Under current Pennsylvania law, the maximum penalty for possession of less than 30 grams of pot is $500 and 30 days in jail.

YEAR AND $5,000

For possession of larger amounts, or for selling marijuana, the penalty now is up to a year in jail, and a $5,000 fine.

Similar "traffic-ticket" pot laws are already in effect in Alaska, Oregon, Colorado and California. "Ticket" laws are being considered by legislatures in Michigan, New Jersey, New York, Washington and Wisconsin.

The chairman of the Governor's Council, Dr. Richard E. Horman, a clinical psychologist, explains he has done an about-face on pot law in the last few years.

In 1970, Dr. Horman was the author of a strongly anti-marijuana book, "Drug Awareness," and a supporter of criminal penalties for pot smoking.

I WAS SO CONSERVATIVE

"Governor Shapp had misgivings about appointing me to the Council because I was so conservative," Horman said recently.

Now, Horman thinks "it's absurd to think that the law has any effect on marijuana smoking. You can't prohibit people from using something they can grow in the backyard."

His report figures seem to bear him out. A study made by the council found that 19.2 percent of Pennsylvanians over 15 use pot once a year, and 4.2 percent use it more than three times a week.

And the overwhelming majority of non-smokers said they don't smoke because of possible health hazards, not because of the existing laws.

HEDGES ON HEALTH

The report itself hedges on the possible effect of marijuana no health. There is no "conclusive evidence," it says, that "marijuana use is significantly hazardous to health."

"On the other hand," it adds, research "has not demonstrated a conclusive margin of safety, either."

"Most people know they're not going to get busted now," Dr. Horman said recently in explaining why marijuana smoking continues to increase in Pennylvania.

And although the report estimates less than one in 100 pot smokers in Pennylvania will be busted this year, the marijuana laws are costing an estimated $9.2 million in 1972.

COULD BE BETTER SPENT

Council officials believe that the amount it costs to arrest and prosecute pot smokers every year could be better spent elsewhere.

Locally, some law enforcement officers agree with them. Michael Byrne, chief of screening and diversion in the office of Philadelphia District Attorney Emmett Fitzpatrick, says "If we've got to choose between arresting murderers, rapists, robbers and pot-smokers, we might just say, 'No, we're not going to arrest the pot-smokers.' "

The Governor's Council report admits that most Pennsylvanians don't want to liberalize the pot laws—they want to toughen them.

In a survey conducted for the council by Oliver Quayle and Company, a private survey firm, 57 percent of the adults who were asked said marijuana laws should be stricter. (Republicans were tougher than Democrats or Independents).

But the same survey showed that more than half of those who thought the laws should be tougher were "not at all familiar with the present marijuana laws."

"You have to remember," Dr. Horman says, "this is a very agrarian state, and it reflects the type of norms you'd find in, say, Nebraska."

RELAXING MARIJUANA BAN WILL AFFECT PHILADELPHIA LITTLE

Even if the Governor's Council on Drug and Alcohol Abuse persuades the Legislature in Harrisburg to "decriminalize" marijuana, it won't make much difference in Philadelphia.

The office of District Attorney F. Emmett Fitzpatrick has a long-standing policy of not prosecuting those arrested with small amounts of marijuana.

"In most cases, when small amounts of relatively harmless narcotics are used, we withdraw prosecution, and that's it," Fitzpatrick says.

Philadelphia police still make arrests for any amount of marijuana possession, but cases involving small amounts are dropped when the suspect is brought to the Police Administration Building, 8th and Race sts., a spokesman for the district attorney's office said.

Because no separate records are kept for marijuana arres s and prosecutions, the district attorney's office does not know exactly how many people were prosecuted last year for possession of small amounts of marijuana.

But Michael Byrne, chief of screening and diversion for the District attorney's office here said "I know of none", when asked how many Philadephians went to jail last year for small amounts of pot.

COMMONWEALTH OF PENNSYLVANIA
GOVERNOR'S COUNCIL ON DRUG AND ALCOHOL ABUSE
NO. I RIVERSIDE OFFICE CENTER, SUITE "N"
2101 NORTH FRONT STREET
HARRISBURG, PENNSYLVANIA 17110

MILTON J. SHAPP
GOVERNOR

RICHARD E. HORMAN Ph. D.
EXECUTIVE DIRECTOR

September 11, 1975

The Honorable Birch Bayh
Chairman, Senate Subcommittee to
Investigate Juvenile Deliquency
363 Russell Senate Office Building
Washington, DC 20510

Dear Senator Bayh:

It is my understanding that your subcommittee will be acting on legislation to decriminalize marihuana (S. 1450) in September and October.

After an intensive seven-month study, the Governor's Council recommended in July 1975 decriminalization of simple possession of marihuana in Pennsylvania. Proposed legislation to implement that recommendation has been drafted within the report (see enclosure) and will be introduced into both the House and the Senate during the last week in September.

I, therefore, strongly urge that you respond favorably to Federal legislation which would remove the criminal penalties applied to simple possession of marihuana.

Sincerely,

Richard E. Horman, Ph.D.

Enclosure

Marihuana Report

As submitted to Governor Shapp and the Pennsylvania General Assembly • Commonwealth of Pennsylvania
July, 1975

The Governor's Council
ON DRUG AND ALCOHOL ABUSE

MILTON J. SHAPP
Governor

RICHARD E. HORMAN, Ph.D.
Executive Director

COMMONWEALTH OF PENNSYLVANIA
GOVERNOR'S COUNCIL ON DRUG AND ALCOHOL ABUSE
NO. 1 RIVERSIDE OFFICE CENTER, SUITE "N"
2101 NORTH FRONT STREET
HARRISBURG, PENNSYLVANIA 17110

MILTON J. SHAPP
GOVERNOR

RICHARD E. HORMAN Ph. D.
EXECUTIVE DIRECTOR

August 1975

To the Governor and General Assembly of the Commonwealth of Pennsylvania:

The concern associated with the extensive use of marihuana by Pennsylvanians prompted the Governor's Council to thoroughly examine and collect the pertinent material related to this dilemma.

In March 1975 my staff prepared "Marihuana: A Discussion Paper" to stimulate a debate about the effects of the 1972 Controlled Substance, Drug, Device, and Cosmetic Act. The paper was prepared because we were under the impression the Act did not significantly affect marihuana use.

This report is an extension of the discussion paper and includes our findings and recommendations. It may be thought of as exhaustive in its completeness; however, we could not justify our recommendations for altering the drug laws without systematic scrutiny of all available facts.

The report represents over seven months of research and analyses on marihuana use and the implications of this use to social policy makers.

We respectfully submit this report to you for review, discussion, and consideration.

By Direction of the Council,

Richard E. Horman

Richard E. Horman, Ph.D.

The Governor
The President of the Senate
The Speaker of the House

A. Summary of Testimony from Public Hearings

B. Verbatim Text from "Cannabis and the Criteria for Legislation of a Currently Prohibited Recreational Drug: Groundwork for a Debate" by Dr. Griffith Edwards

INTRODUCTION

In March 1975 "Marihuana: A Discussion Paper" was prepared by the staff of the Governor's Council on Drug and Alcohol Abuse in an attempt to evaluate the impact of the existing marihuana policies in the Commonwealth of Pennsylvania. The report explored the attitudes of the Pennsylvania public toward marihuana, the impact of current laws, the health research controversy, and law enforcement. This second and final edition is an extension of that report.

The first report in March was necessary in order to define and clarify all the issues surrounding marihuana in Pennsylvania. Only after analyzing the situation methodically could the Governor's Council consider offering concrete alternatives to the existing laws.

It is our position that three years is a responsible length of time to wait in order to evaluate the effect of the legislative policies passed in 1972 (Act 64).

Through public hearings that resulted in several hundred pages of testimony, we solicited opinions and direction from public officials, community organizations, lawyers, drug program personnel, students, and health officials. (Summaries of the testimony are included.)

As published in the first report, we initiated a statewide public opinion poll (Oliver Quayle and Company, Inc.) to ascertain public usage of marihuana, frequency of use, attitudes toward changing the present law, and knowledge of existing laws as they pertain to marihuana.

In addition, when criminal statistics were unavailable, we conducted a separate survey to all the district attorneys in order to obtain visibility on the usage of judicial alternatives to incarceration as applied to cases involving marihuana.

This expanded and final edition focuses on Pennsylvania's experience with marihuana. It compiles all the present pertinent data and includes recommendations for responding to this social dilemma.

# # #

MARIHUANA POLL: ATTITUDES & USAGE

In a poll conducted in February, 1975, by Oliver Quayle and Company for the Governor's Council on Drug and Alcohol Abuse, the following highlights the results compiled from the 1200 people interviewed:

1. THE MAJORITY OF ADULTS (57%) BELIEVE THE EXISTING MARIHUANA LAWS SHOULD BE STRICTER. HOWEVER, 61% (OF THE SAME 57%) ARE NOT AT ALL FAMILIAR WITH THE PRESENT MARIHUANA LAWS AS THEY EXIST TODAY.

The majority of people who stated they were very knowledgeable or quite familiar with the law felt the marihuana laws should remain the same or become more lenient (49%); whereas, 45% of the people in the same category felt they should be stricter.

Past and present marihuana users disagree sharply with non-users --60% of those who have tried marihuana favor a more lenient law.

An analysis by party affiliation demonstrates that Republicans are the most conservative, with Independents and Democrats leaning slightly toward lenient restrictions.

The majority of all demographic groups favor stricter laws (even among the young and college educated).

Only 1/3 of all adults between 18 and 25 years of age and 1/3 of adults with some college or a college degree favor more lenient laws. Yet, as many people from the same group favor stricter laws.

(In contrast to these statistics, the Drug Abuse Council, Inc., Washington, D.C., released in February, 1975, the results of a national survey of marihuana use and attitudes. The survey showed 39% favor eliminating criminal penalties for sale/possession/private use of marihuana, and 40% favor stricter laws.)

As stated previously, the majority of those people interviewed opposed any leniency of the law. However, 52% opposed the removal of criminal offenses of a small amount of marihuana; whereas 80% opposed legalization (complete authorization of use) of possession and sale of a similar amount.

2. ONLY 4% OF PENNSYLVANIANS OVER 18 YEARS OF AGE REPORT THAT THEY NOW USE MARIHUANA, WHILE ANOTHER 11% REPORT PAST USAGE.

	Percentage of All Adult Residents
Ever Used Marihuana	11%
Currently Use Marihuana	4%
Used Marihuana in the Past	7%
Never Used Marihuana	87%
Refused to Answer	2%

If it is assumed that those who refused to answer have indeed tried marihuana, then a total of 13% of the State's adults have had experience with it.

Some 55% of current users smoke marihuana at least once a week, but only 17% smoke it once a day or more. It is likely that usage was understated somewhat due to the nature of the telephone

interviewing.

(In contrast to the 11% figure drawn by Quayle with a telephone survey, the Governor's Council on Drug and Alcohol Abuse conducted a personal survey in 1973 of the prevalence and intensity of marihuana use in Pennsylvania. This study found that 19.2% of the population over 15 years of age used marihuana at least once during that year and 4.3% reported current usage of three or more times a week.)

There is some evidence to indicate that usage is indeed understated here. The Drug Abuse Council, Inc. conducted a survey of the national adult population in October, 1974, and found, with personal interviewing, that 18% had used marihuana at some time. Similarly, two surveys of the nation's 18 and older population conducted by the National Commission on Marihuana and Drug Abuse in 1971 and 1972 found, again in personal interviewing, that 15% and 16% respectively had tried marihuana. While it may be hypothesized that usage in Pennsylvania may be lower than on the West Coast or in the Northeast, it seems reasonable to suppose that it would not be lower than the national average.

3. AS EXPECTED, EXPERIENCE WITH MARIHUANA (11%) TENDS TO BE HIGHEST AMONG SINGLE MEN UNDER 35 YEARS OF AGE (BUT ESPECIALLY THOSE UNDER 26) AND WITH SOME EDUCATION BEYOND HIGH SCHOOL.

Recent college students are particularly in the majority, whether they are still in school, have dropped out, or graduated.

In contrast, relatively low experience is acknowledged by women, those who are 35 years of age or older, the widowed (who tend to be older), those with the least education, housewives, and Republicans.

4. WHEN THOSE WHO HAVE NEVER TRIED MARIHUANA (87%) WERE ASKED TO EXPLAIN THE REASONS FOR NON-USE, THE DOMINANT EXPLANATIONS WERE FEAR OF POSSIBLE HEALTH DANGERS AND A SIMPLE LACK OF INTEREST.

There were few and minor differences in the reasons cited by members of various demographic groups. Adults between 18 and 25 tend to cite fear of legal repercussions more than average, but less likely to report lack of opportunity. They were also more inclined to mention that they feel no personal need for it.

Health fears were most frequently cited by those with the least education, while those with some college or more were significantly less concerned about possible health hazards.

Lack of interest was the most frequently cited reasons among those with some college education (who tend to be young and presumably have opportunities to try marihuana).

MARIHUANA: THE LAW AND CRIMINAL PENALTIES IN PENNSYLVANIA

Prior to April, 1972, the criminal penalties for possession, sale, dispensing, or giving away of marihuana were defined under the "Drug, Device and Cosmetic Act," Act of September 26, 1961, (P.L. 1664).

Marihuana was then defined as a "narcotic drug" and all offenses which involved possession or delivery of marihuana were treated as a felony, and--except for the first offenders--prison sentences were mandatory.

Prior to 1972, no distinctions were made between possession, selling, distribution, or giving away of marihuana.

Penalties were the same regardless of the amount of marihuana involved. Therefore it made no difference whether or not someone was arrested for possession of one marihuana cigarette or ten pounds of marihuana. The penalties for simple possession of marihuana ranged from imprisonment of 2 to 5 years for the first offender to mandatory imprisonment for a third offender of "separate or solitary confinement at labor of not less than 10 years and not exceeding 30 years."

All this changed in June, 1972, when the "Controlled Substance, Drug, Device and Cosmetic Act," Act of April 14, 1972, (P.L. 233, No. 64) (hereinafter "Act 64") became law.

Act 64 established Schedules I-V of the controlled drugs (such as marihuana, opium, LSD, cocaine) and provided penalties for offenses under each schedule. Except for a small amount of marihuana, the penalties for sale, giving away, or possession are the same as

for LSD, barbiturates, and amphetamines.

Marihuana and hashish were defined* as Schedule I non-narcotic drugs. Furthermore, the legal distinction was made only between simple possession (misdemeanor) and possession with intent to deliver (felony). Selling and cultivation of marihuana is treated the same as possession with intent to distribute. No distinction is made.

Maximum Pennsylvania Penalties Act 64	1st Offense	2nd and Subsequent Offenses
Simple Possession (Misdemeanor)	30 grams**or less of marihuana or 8 grams or less of hashish, 30 days and/or $500.	Same Penalties
	Over above amounts, 0-1 year and/or $5,000	Same Penalties
Possession With Intent to Distribute (Felony)	0-5 years and/or $15,000	0-10 years and/or $30,000

* Act 64-Section 4 (1).
Schedule I

"In determining that a substance comes within this schedule, the secretary (of Health) shall find: a high potential for abuse, no currently accepted medical use in the United States, and a lack of accepted safety for use under medical supervision."

**30grams constitutes just over one ounce or comparable to the weight of tobacco in a package of cigarettes.

ALTERNATIVES TO INCARCERATION

In addition to traditional probation, three alternatives to prison for adults exist in Pennsylvania today:

1. Accelerated Rehabilitative Disposition (ARD)
2. Section 17 (Act 64) - Probation Without Verdict
3. Section 18 (Act 64) - Disposition In Lieu of Trial

ACCELERATED REHABILITATIVE DISPOSITION (ARD)

The basis for the ARD programs originally developed in Philadelphia in 1971. The next year this alternative was incorporated into the Pennsylvania Rules of Criminal Procedure. This program is aimed at the first offender charged with a less serious offense (e.g. possession of drugs, stolen property, public intoxication, trespassing).

In 1973, 95% of the 8,635 pretrial disposition cases were referred to ARD (6,831 of these cases were from Philadelphia County) from the criminal courts (figure excludes juvenile court).

An ARD program as established within the counties is generally an extension of the Probation Department where supervision is minimal. When a person is accused of a crime which the local district attorney and presiding judge agree is suitable for ARD, the defendant is given the opportunity to enter the ARD program and if the probationary period is completed without the defendant having committed an additional offense, the charges will be dismissed and the record will be expunged. At the same time, the defendant agrees to waive his rights to a speedy trial and statute of limitations.

In a survey sent to the 67 district attorneys in January, 1975, by the Governor's Council on Drug and Alcohol Abuse, 47 replies (of the 49 returned) stated their counties have established an ARD program. However, only 31 counties utilize the program for marihuana offenses, which in 1974 totalled 452 cases.

(The total figure of 452 does not include Philadelphia County because records there were not categorized according to the offense. The Philadelphia District Attorney's Office has informed the Governor's Council on Drug and Alcohol Abuse that due to the tremendous number of cases, the Philadelphia District Attorney's Office usually drops any charges for possession of marihuana when it involves 30 grams or less. Section 17 was typically applied to college students convicted of selling a relatively small amount of marihuana, and Section 18 was used less extensively.)

In 1974, however, 10,823 cases were diverted prior to trial. Of these, 1,303 were drug violations with 631 persons placed in ARD, 646 persons given Probation Without Verdict, and 26 cases processed on Disposition in Lieu of Trial.

According to the Council survey, the majority of district attorneys do NOT choose to recommend ARD for marihuana offenses. Also, in spite of expungment mandated by law (Section 19, Act 64), we know of only three counties which substantially comply with the statute (Philadelphia, Allegheny, and Centre counties).

SECTION 17 (Act 64) - PROBATION WITHOUT VERDICT

This section permits the presiding judge at the time of a

hearing to place certain persons on a special period of probation with certain stipulations (e.g. attendance in a treatment and rehabilitation program). This is only offered to offenders who have no prior drug convictions under Act 64 and who decide to plead guilty or nolo contendere or who are found guilty at the time of the trial.

Excluded from this section are nondrug abusers who are charged with delivery or possession with intent to deliver.

Unlike ARD prescribed by the Pennsylvania Supreme Court Rule, it appears the concurrence of the district attorney for treatment under this section is not necessary.

After a person successfully completes his probation, the court then discharges him and dismisses the charges against him. Furthermore, Section 19 (Act 64) requires the court to expunge the record of those people who have satisfactorily completed Section 17 probation. As stated earlier, in the vast majority of counties, this procedure is not complied with as anticipated when the law was enacted.

According to the 1974 survey, the 23 counties (excluding Philadelphia County) who utilize Section 17 placed a total of 844 marihuana cases on "Probation Without Verdict."

Furthermore, 24 counties choose not to utilize this section as provided in Act 64.

SECTION 18 (Act 64) - DISPOSITION IN LIEU OF TRIAL

This section provides an alternative for the drug abuser who has been charged with a non-violent crime and who has requested

83-313 O - 77 - 43

treatment prior to the trial.

At this time a court-appointed physician experienced in the field of drug abuse is selected to examine the defendant and may recommend that the charges be withdrawn or held in abeyance in order that the defendant may enter into a drug abuse treatment program.

Implementation of the physician's recommendations is at the discretion of the local district attorney with the court's approval.

As indicated by the 1974 survey, Section 18 is used on a limited basis. Of those polled, eleven counties (including Philadelphia County) use this section and 37 counties do not.

In conclusion, the Pennsylvania Supreme Court and the Pennsylvania General Assembly have provided constructive alternatives for both the citizens of Pennsylvania and the judicial branch of government. As demonstrated in this section, the use of alternative dispositions is far from uniform across the Commonwealth. There is a great deal of truth in the philosophy: In Pennsylvania if you are charged with drug violations, the outcome of your case may well depend on where you are arrested.

The goal is to insure that the use of alternatives to incarceration is uniform to the largest extent possible and to devise a comprehensive program which utilizes the best features of the three described from the law enforcement and treatment viewpoints.

# # #

MARIHUANA LAW ENFORCEMENT

The number of arrests for marihuana violations is steadily rising each year. Whereas 283 marihuana arrests are reported for 1965, this figure grew to 6,898 arrests in 1972. After the "Controlled Substance, Drug, Device and Cosmetic Act" (hereinafter "Act 64") became effective, marihuana arrests soared to 9,616 in 1973, representing 63% of the total narcotic and other drug arrests that year.

A summary of these records for the period 1965-1973 is presented in Figure 1, which was modified from Crime and the Pennsylvania Criminal Justice System, Governor's Justice Commission. This data includes arrests by both State and local enforcement officers for both levels of violations in connection with marihuana; i.e. simple possession, possession with intent to distribute. The modifications include the addition of records for 1973 obtained from the Pennsylvania State Police and the United States Drug Enforcement Administration.

As indicated in the chart, marihuana arrests account for increasingly greater proportions of the total drug arrests each year.

Figure 2 presents national statistics, excluding Federal arrests, for 1968-1972. The number of State and local arrests cannot be compared to the national Uniform Crime Report statistics because Federal law enforcement agency figures are excluded. The percentages of marihuana arrests, however, outline the same trend with heroin

Figure 1

OFFICE OF DRUG LAW ENFORCEMENT

The Office of Drug Law Enforcement (hereinafter "the Office") was established in the Pennsylvania Department of Justice in 1973 to coordinate and direct the enforcement of Act 64 on the State level. This office oversees the activity of the State Police Strike Force, which was created in January, 1972, in response to the increasel need for specialized enforcement efforts for drug offenses in the State. As of February, 1975, 84 officers are assigned to the Strike Force.

Presently, the Bureau of Drug Control which functions under the Office has 115 enforcement personnel, 100 of whom are narcotics agents. When the regional office structure is fully operational, there will be 8 local strike force offices shared by the Bureau of Drug Control and State Police Strike Force personnel. At that time,

the arrest statistics will be a single total for the cooperative enforcement efforts under the Office.

The drug arrest statistics, 1971-1974, for all State law enforcement officers appear in Figure #3 below.

FIGURE #3 - MARIHUANA ARRESTS BY STATE POLICE AND NARCOTICS AGENTS

	Total	Office of Drug Law Enforcement **					
		State Police Strike Force		Bureau of Drug Control & Predecessors		Other State Police	
1971	1,484	-----		294		1,190	
				sale 77	poss 217		
1972	1,358	-----		330		1,028*	
				sale 173	poss 157		
1973	1,762	-----		281		1,481*	
				sale 237	poss 44	sale 445	poss 1,036
1974	2,244	641		277		1,326 See Appendix	
		sale 577	poss 64	sale 267	poss 10		

Statistics compiled from arrest data from Joseph Reiter, Esquire, Special Deputy Attorney General
*State Police Strike Force arrests are included.
**Strike Force does not operate in Philadelphia.

The rise in marihuana arrests from 1,358 in 1972 to 1,762 in 1973, and 2,244 in 1974, reflects the Statewide increase in marihuana arrests cited earlier.

The arrest statistics from the Bureau of Drug Control for two years after Act 64 took effect indicate that after the legal distinction was made between possession and possession with intent to distribute, the special State drug authorities emphasized the distribution charge which is a felony offense.

Of the marihuana arrests in 1973 initiated by the Bureau of Drug Control, 237, or 84.3%, were for felony offenses. In 1974, 267, or 96.4%, were felony arrests.

Regarding court disposition of the above arrests, the Office of Drug Law Enforcement's conviction rate for felony offenses is 80% to 90%.

The rate of conviction for all narcotics sales offenses processed in the Pennsylvania courts in 1973 is 69% (Pennsylvania Criminal Court Dispositions, 1973, Department of Justice, Bureau of Criminal Justice Statistics). That is 69% of all defendants processed for felony offenses. If the Statewide percentage conviction rate of all those arrested for the felony could be calculated, it would be lower.

For simple possession offenses in the same year, only 42% of the cases processed resulted in convictions.

Seemingly, 9,616 marihuana arrests for 1973 represent a significant law enforcement effort by local and State officers. This enforcement effort, however, may not represent a large inroad into the incidence of marihuana use as the 1973 incidence and prevalence study of drug use conducted by the Governor's Council on Drug and Alcohol Abuse estimated that 350,000 Pennsylvanians over age 15 are "high intensity" users of marihuana.

If these figures are accurate, then this enforcement effort reaches less than 3% of its target population. The objectives of recent State enforcement efforts, however, have been to contain the

distribution of marihuana. The same survey cited above also estimates that 19.2% of the population of Pennsylvania used marihuana during 1973. This suggests that a significant impact on marihuana distribution has not been made.

PENNSYLVANIA LAW ENFORCEMENT COSTS

Although it would be useful for a complete evaluation to know the expenditure involved in the effort to enforce the laws against marihuana possession and distribution, such a cost assessment has not been conducted in Pennsylvania.

The State of California, however, has compiled the expenditures associated with marihuana law enforcement. The figures may provide a crude estimate of the expenditures realized in Pennsylvania. A detailed study of marihuana enforcement costs was conducted in California for the period 1960-1972. California, with a population of 20 million people (1970) as compared to Pennsylvania's 11.8 million, is the highest ranking state for marihuana offenses. For example, the California arrests of 10,002 in 1965 surpasses Pennsylvania's arrests of 9,616 for 1973.

Seven years ago more than half (50,000) of the nationwide marihuana arrests were made in California. The annual cost to California for the enforcement of marihuana laws rose from $8 million in 1960 to $72 million in 1968.

If one could speculate that criminal justice expenses are similar in both states, the estimated average cost per arrest of California marihuana enforcement can be used to derive a Pennsylvania estimate. The cost per arrest in California was $1,630 before 1969.

Reduction of penalties and changes in enforcement procedures brought the California cost per arrest estimated down to $1,340 after 1969. If the Pennsylvania expenses are taken as comparable to California's ($1,340), Pennsylvania's 1972 marihuana arrests would have an estimated enforcement cost of $9.2 million.

CRIMINAL PENALTIES UNDER CURRENT MARIHUANA LAWS IN OTHER STATES

The most notable feature of marihuana laws in the United States is the widely disparate treatment of offenders and offenses.

For first offenses, maximum penalties range from imprisonment up to 15 years or fine of $10,000 (Rhode Island) to legal possession of up to one pound of marihuana in the home in Alaska. For subsequent offenses of simple possession the penalties range from life imprisonment (Indiana) to 14 days and/or $1,000 fine (Nebraska).

Some important trends have emerged in all states in recent years. Most states have reduced penalties for possession, formalized a policy of lenience toward first offenders, and eliminated minimum mandatory sentences.

These trends are most apparent in connection with possession of marihuana, which at least for small amounts, is a misdemeanor in 45 states (Rhode Island continues to punish these offenders as felons). Three states, however, still make no distinction between marihuana and narcotics.

Another important trend is the special legal treatment accorded the first offender. In 32 states (including Pennsylvania) a conditional discharge is permitted for first time offenders. A conditional discharge permits the release of an offender before formal adjudication. If the conditions are met, the case is dismissed and the defendant discharged. In most states, these discharges are awarded at the discretion of the judge. In Massachusetts and West Virginia the conditional discharge of first offenders is mandatory.

A final emerging trend is a graduation of penalties administered for possession offenses. Most states now make distinctions according to the amount

of marihuana possessed, and administer a graduated severity of penalties corresponding to the amount of marihuana possessed.

In the tables on the following page, state and Federal penalties for possession of marihuana are described. These tables were prepared by the National Organization for Reform of Marihuana Laws and are current as of July 1975.

The Federal Law

The Controlled Substances Act of 1970, Pub. Law 91-513 (Oct. 27, 1970).

OFFENSE	1st Offense	2nd Offense	Subsequent Offense
Simple possession	0-1 year, $5,000*	0-2 years, $10,000	Same
Possession with intent to distribute	0-5 years, $15,000	0-10 years, $30,000	Same
Sale or distribution	0-5 years, $15,000**	0-10 years, $30,000	Same
Sale or distribution to a minor	0-10 years, $30,000	0-15 years, $45,000	Same

*For first offender, court has discretionary authority to defer proceedings and place defendant on probation, which, if successfully discharged, avoids an adjudication of guilt. For offenders under 21, court has further discretionary authority to completely expunge the records.

**Distribution of a "small amount of marijuana for no remuneration" is to be treated the same as simple possession.

Penalty Provisions for Major Marijuana Offenses
(All fines are represented as maximum amounts possible)

A. POSSESSION

	1st Offense	2nd Offense	Subsequent Offense
Alabama	0-1 year/$1,000	2-15 years/$25,000	...
Alaska	Possession of up to one pound in a private home for personal use is legal. Possession of one ounce in public: $100. Possession while driving a motor vehicle: $1,000. Public consumption: $1,000.		
Arizona	0-1 yr. in county jail and/or $1,000 or 1-10 yrs. and $50,000	2-20 yrs. and $50,000	5 yrs.-life and $50,000; parole possible after 5 yrs.
Arkansas*	0-1 yr. and/or $250	0-1 yr. and/or $250	2-5 yrs.
California	one oz.: $100 (Transporting or transfer without consideration same as possession of 1 oz.)		
Colorado	more than one oz.: 6 months/$500		
Connecticut	Non-public possession of one ounce: $100 fine. Public display or consumption: 15 days and/or $100. Possession of over one ounce for personal use: Misdemeanor 1 yr. maximum and/or $500. 0-1 year and/or $1,000 or up to 3 years in custody of commissioner	...	...
Delaware*	0-2 yrs. and/or $500	0-7 yrs. and/or $500	...
Florida	Less than 5 grams, 0-1 year and/or $1,000; More than 5 grams, 0-2 years and/or $1,000	0-2 years and/or $1,000	...
Georgia	0-1 year and/or $1,000 for up to 1 oz.; 0-2 years and/or $2,000 for over 1 oz.	0-5 years and/or $5,000	...
Hawaii*	Up to 2 oz., 0-30 days and/or $500; 2 oz. and over, 0-1 yr. and/or $1,000; 1K and over, 0-5 yrs. and/or $5,000	...	...
Marijuana Concentrates	Up to ⅛ oz., 0-1 yr. and/or $1,000; ⅛ oz. and over, 0-5 yrs. and/or $5,000; 1 oz. and over, 0-10 yrs. and/or $10,000	...	...
Idaho	0-6 months and/or $300	...	...
Illinois*	Amount		
	Less than 2.5 grams, 0-90 days	...	...
	2.5 to 10 grams, 0-180 days	...	...
	10 to 30 grams, 0-1 year	1-2 years	...
	30 to 500 grams, 1-3 years	2-6 years	...
	Over 500 grams, 1-5 years	2-7 years	...
Indiana	Less than 25 grams or 5 grams hashish, *1 year and/or $500* Over these amounts,	2-15 years and/or $3,000	...
Iowa*	*2-10 yrs. and/or $1,000*	0-18 months and/or $3,000	...
Kansas*	0-1 yr. and/or $2,500	0-10 yrs. and/or $5,000	...
Kentucky*	0-90 days or no more than $250	...	...
Louisiana*	0-1 year and/or $500	0-5 years with or without hard labor and/or $2,000	0-20 years hard labor
Maine	Up to 1½ oz: Max. $200 civil fine. Over 1½ oz.**: Max. 1 yr. — No fine.		
Maryland*	0-1 year and/or $1,000	0-2 years and/or $2,000	0-2 years and/or $2,000
Massachusetts*	0-6 months/$500	0-2/$2,000	...
Michigan*	Up to 2 oz., 0-1 yr. and/or $1,000	0-2 yrs. and/or $2,000	...
Minnesota*	Under 1.5 oz., 0-1 year and/or $1,000; Over 1.5 oz., 0-3 years	0-6 years and/or $6,000	...
Mississippi*	Under 1 oz., 0-1 yr. and/or $1,000; Over 1 oz., 0-3 yrs. and/or $3,000	Under 1 oz., 0-2 yrs. and/or $2,000; Over 1 oz., 0-6 yrs. and/or $6,000	...

* Conditional discharge for first offense possession

**Persumed for resale.

	1st Offense	2nd Offense	Subsequent Offense
Missouri*	Under 35 grams or 5 grams Hashish, 0-1 year and/or $1,000; Over these amounts, 0-5 years and/or $1,000	0-5 years and/or $1,000	. . .
Montana	Up to 60 grams marijuana or 1 gram hashish, 0-1 yr. and/or $1,000; if shown to be habitual user then committed to rehabilitation institution; 0-5 years or rehabilitation for over 60 g.	0-3 yrs. and/or $1,000	. . .
Nebraska	Less than 1 pound, 7 days in county jail to be held separately and/or $500, Over 1 pound, 0-6 months in county jail or 1 year in prison and/or $500	Under 1 pound, up to 14 days and/or $1,000; Over 1 pound, 0-1 year in county jail or 2 years in prison and/or $1,000	. . .
Nevada*	Under age 21 and under 1 oz., 0-1 yr., $1,000 and suspension of driver's license or 1-6 years, $2,000; Over age 21, 1-6 yrs. and $2,000	Under age 21 and under 1 oz., 1-6 yrs. and $2,000; Over age 21, 1-10 yrs. and $2,000;	Under age 21 and under 1 oz., 1-10 yrs. Over age 21, 1-20 yrs. and $5,000
New Hampshire	Less than 1 pound, 0-1 year and/or $500; Over 1 pound, 0-5 years and/or $2,000	Less than 1 pound 0-3 years and/or $1,000; Over 1 pound, 0-10 years and/or $5,000	. . .
New Jersey*	Under 25 grams or 5 grams hashish, 0-6 months , Over 25 grams, 0-5 years and/or $15,000	. . .	. . .
New Mexico*	Under 1 oz., 15 days and $50-$100; 1-8 oz., 0-1 yr. and/or $100-$1,000; Over 8 oz., Determination of length of sentence to be made by Corrections Department (4th Degree Felony)	0-1 yr. and/or $100-$1,000	. . .
New York*	Less than 25 cigarettes or ¼ oz., 0-1 yr.; 25-99 cigarettes or more than ¼ oz., 2½-7 yrs.; Over 100 cigarettes or more than 1 oz., 5-15 yrs.	. . .	. . .
North Carolina*	Less than 5 grams marijuana, 1 gram hash, 1/100th gram THC, 0-6 mos. or $500; Over above amounts, 0-5 yrs. and/or $5,000	Less than 5 grams marijuana, 1 gram hash, 1/100th gram THC, 0-2 yrs. and/or $1,000; Over above amounts, 5-10 yrs. and/or $10,000	Less than 5 grams marijuana, 1 gram hash, 1/100th gram THC, 0-5 yrs. and/or $5,000; Over above amounts, 15 yrs.-life and/or $15,000
North Dakota*	0-1 year and/or $500	. . .	. . .
Ohio	0-1 year and/or $1,000	1-10 years	. . .
Oklahoma*	0-1 year	2-10 years	. . .
Oregon*	*Up to 1 ounce, $100*	. . .	. . .
Pennsylvania*	Under 30 grams marijuana or 8 grams hashish, 30 days and/or $500; Over above amounts, 0-1 yrs. and/or $5,000	. . .	. . .
Rhode Island	0-15 yrs. and/or $10,000	0-20 yrs. and/or $10,000	0-30 yrs. and/or $10,000
South Carolina*	Under 1 oz. or 10 grams of hashish, 0-3 months and/or $100; and/or $1,000	Under 1 oz. or 10 grams of hashish, 0-6 months amounts, 0-1 year and/or $2,000	. . .
South Dakota*	Less than 1 oz., 0-1 year in county jail and/or $500 , Over 1 oz., 0-5 years and/or $5,000	0-15 years and/or $10,000	0-40 years and/or $20,000

* Conditional discharge for first offense possession

	1st Offense	2nd Offense	Subsequent Offense
Tennessee	Commitment to a state-operated drug treatment facility or community mental health center or, at the discretion of the court, up to 11 months, 29 days and/or $1,000	0-2 years	. . .
Texas	Up to 2 oz.—0-6 months and/or $1,000; 2-4 oz.—0-1 year and/or $2,000; Over 4 oz.—2-10 yrs., $5,000	10 years to life	. . .
Utah*	0-6 months and/or $299	0-1 year and/or $1,000	0-5 years in penitentiary
Vermont	Under 25 cigarettes or ½ oz., 0-6 mos. and/or $500	0-2 yrs. and/or $2,000	. . .
Virginia	0-12 months and/or $1,000	0-12 months and/or $10,000 or 2-20 years and/or $10,000	. . .
Washington	Under 40 grams, 0-90 days and/or $250; Over 40 grams, 0-5 yrs. and/or $10,000	Over 40 grams 0-10 yrs. and/or $10,000	. . .
West Virginia*	90 days-6 months and/or $1,000*	3-12 months, $2,000	. . .
Wisconsin*	0-1 year in county jail and/or $250	. . .	. . .
Wyoming*	0-6 months and/or $1,000	0-6 months and/or $1,000	0-5 years and/or $5,000
District of Columbia	0-1 year and/or $100-$1,000	0-10 years and/or $500-$5,000	. . .

*Conditional discharge for first offense possession

NEW CHANGES IN OTHER MARIHUANA LAWS

Various cities and states have already chosen to remove criminal penalties for simple possession of marihuana. It should be noted that by removing criminal penalties for simple possession, cities and states are not "legalizing" marihuana.

On October 6, 1973, Oregon abolished criminal penalties for simple possession, substituting civil fines of up to $100. To sell marihuana, to grow, or to possess marihuana with intent to sell remains a felony in Oregon; by decriminalization we refer to social use and personal possession.

One year after the new legislation, two evaluation studies have been conducted to ascertain the impact of the revised statutes. One study conducted by the Oregon State Police indicated a 62.1 percent rise for 1973 in the total marihuana arrests for the state. For comparison the total nationwide arrests increased 43 percent over 1972; and Pennsylvania 1973 arrests increased 40 percent over the previous year. No comparisons are yet available for 1974, however.

In another study of the Oregon law, the Drug Abuse Council, Inc. observed that 58 percent of all respondents favor the present law or more liberal statute; only 39 percent thought the present law was too lenient.

In May 1975, the California legislature gave final approval to a measure which ends the arrest and jailing of persons charged with possession of small amounts of marihuana. The new law (effective January 1, 1976) calls for a civil fine not to exceed $100 for possession of up to one ounce of marihuana. Possession of more than an ounce will be punishable by a maximum of six months in jail and/or a $500 fine. Penalties for transporting or

transfer without renumeration are the same as simple possession of one ounce.

The Alaskan legislators approved a bill in May 1975 establishing a civil fine of no more than $100 for possession of up to one ounce of marihuana. A subsequent ruling by the Alaska Supreme Court, in effect, legalized possession of up to one pound of marihuana for personal use in a private home. The landmark decision was based on a test case which charged that penalties imposed for possession in a home violated the Constitutional guarantees of privacy.

The new Colorado law also distinguishes between private and public marihauna possession. Under the law passed on June 19, 1975, non-public possession of up to an ounce of the drug is punishable by a maximum fine of $100. Public display or consumption of marihuana is subject to a maximum 15 day jail term and/or a fine of $100. Possession of more than one ounce remains a misdemeanor under Colorado law.

The most recent decriminalization legislation in the nation was signed into law on June 18, 1975, in Maine. The new law punishes possession of up to one and one-half ounce of marihuana by a civil fine not to exceed $200. Amounts of the drug over one and one-half ounce are presumed to be intended for sale and offenders are subject to a one year jail term. The new measure will become operative on March 1, 1976.

The so-called "parking ticket" model was first introduced in Ann Arbor and Ypsilanti, Michigan. In 1973 the two neighboring cities approved a referendum providing for a maximum $5 fine for simple possession of marihuana. The city of Ann Arbor originally passed the ordinance in 1971. It was partially

invalidated by a district judge in 1972 and repealed by the city council in early 1973. Later that year, however, the "parking ticket" model was reinstated by a citizen referendum.

Federal decriminalization measures have been introduced in both the House of Representatives and the Senate. The Marihuana Control Act of 1975 was introduced simultaneously on April 17, 1975, in both chambers by Representative Ed Koch and Senator Jacob Javits (S.1450/H.R.6108). The bill based on the Oregon model, calls for a maximum civil fine of $100 for possession of an ounce of marihuana.

Representative Ed Koch (D-New York) has reintroduced (first introduced in 1972) the Javits-Koch bill (H.R. 561) which would completely decriminalize the possession of marihuana for personal use. This legislation reflects the recommendations of the National Commission on Marihuana and Drug Abuse.

THE PHYSICAL EFFECTS OF MARIHUANA

The current status of marihuana research is characterized by confusing controversies. Scientists have uncovered a wealth of information indicating that marihuana has a broader range of effects on the body than previously believed. In addition to the well known sensory alteration effects, marihuana is known to influence many biochemical functions. Some of these functions are vital to normal development, growth, and resistance to disease. On the other hand, current research does not offer a clear-cut answer to what hazards, if any, are incurred by the use of marihuana.

The greatest source of new information derives from experimentation on animals. Although animal studies contribute greatly to our understanding of drug action, they pose serious difficulties for interpreting drug safety in humans. In most animal studies, extremely large doses are employed. In some cases the doses used are equivalent to smoking 800 marihuana cigarettes daily. In many cases testing is conducted in artificial situations (e.g. tissue cultures) which leave doubt about drug action in the body. Because the life span of experimental animals (e.g. rats, mice, rabbits, monkeys) is relatively short, most of these studies only investigate short term effects. In general, animal studies are best considered preliminary research leading the way to "clinical studies."

Human research to date has not demonstrated conclusive evidence that marihuana use is significantly hazardous to health. On the other hand, this research has not demonstrated a conclusive margin of safety either.

During the past five years a large research effort has resulted from

the Department of Health, Education, and Welfare funding and reporting on the support of marihuana research. Each year the National Institute of Drug Abuse collaborates with prominent scientists to view the current research in an annual report submitted to the United States Congress. The information presented below highlights the contents of the Fourth Annual Report, Marihuana and Health, 1974.

"Previous editions have discussed in detail marihuana and its relationship to the use of other drugs. Prior use of alcohol and tobacco in youthful groups is closely associated with later cannabis use. Contrary to popular opinion, there is little evidence to support the contention that marihuana use displaces the use of alcohol and other drugs. Those who use marihuana are also likely to use alcohol--often simultaneously. Moreover, marihuana users as compared to nonusers are more likely to use or have used other, both licit and illicit, psychoactive drugs. The more heavily a user smokes marihuana, the greater the probability he has used or will use other drugs. It has been suggested that such use is related to "drug use proneness" and involvement in drug using subcultures rather than to the characteristics of cannabis, per se.

"No human research has been reported which demonstrates that disease resistance is significantly impaired by marihuana use; studies of possible genetic damage have thus far shown contradictory results.

"Two aspects of delta-9-THC which have recently been investigated may prove to be of importance in future therapeutic applica-

tion of the drug. There is a preliminary evidence that delta-9-THC delays rejection of skin grafts in rats suggesting a possible usefulness in organ transplant surgery. A second aspect, the inhibition of solid tumor growth in mice, may also eventually prove therapeutically useful in the treatment of human tumors. It should be reemphasized that this preclinical work is highly preliminary and the treatment possibilities are only speculative at this time.

"One interesting finding in animal behavioral studies is that marihuana (at least in short term administration) in a variety of animal species has been found to reduce expressions of aggression. This observation is consistent with the widespread clinical impression that marihuana in humans, unlike alcohol, tends to reduce aggressive behavior rather than to potentiate it.

"Evidence that marihuana has a detrimental effect on driving performance, especially as the dose increases, continues to mount. It has been found to increase both braking and starting times, to adversely affect attention and concentration abilities and to detract from performance on a divided attention task, all of which are presumably involved in driving.

The third report on Marihuana and Health indicated that "there continues to be little evidence from human case reports and research studies that cannabis preparations have either a significant teratogenic effect or have any significant effect

on chromosome breakage." In one more recent study of marihuana users an increase in chromosomal abnormalities was found while in another study utilizing known dosages of pure cannabis preparations no drug-related increase was found.

"Preliminary evidence in one study of chronic American marihuana smokers indicates that levels of the male hormore testosterone may be lowered in chronic users. This study reported that six of the twenty young men studied had reduced evidence of fertility (lowered sperm counts) and two were impotent. Testosterone levels in this group were significantly lowered though they remained within what are generally regarded as normal limits, and promptly increased upon discontinuing marihuana use. Preliminary findings from two other studies of young male subjects were inconsistent; one found a depression in serum testosterone levels, another did not. The significance and implications of these findings will require further study.

"In one large scale study of undergraduate student use comparisons were made between nonusers (including those who had done a limited amount of experimentation), occasional users and chronic users (those who had used three or more times a week for three years or more or for two years if use was almost daily). No statistical differences in academic performance were found nor was there any evidence of reduced motivation. It should, of course, be noted that some chronic

users who dropped out may have been excluded. As yet, however, there is no evidence that in a college population use is typically accompanied by impaired performance or motivation. Another study of moderately using medical students who had used regularly for three or more years and who were matched with nonusing medical students for intelligence, found no difference on an extensive battery of neuropsychological tests.

"To date, well controlled studies demonstrate few differences in psychopathology in carefully matched samples of users and nonusers.

"While cannabis is a drug of very low toxicity it has, at the same time, limitations due to the psychological effects and possible tolerance to its effects developing over time.

"A preliminary study of the possible therapeutic use of marihuana has explored several possible facets of the action of THC with a group of cancer patients. This preliminary work suggests that THC may be valuable in reducing the need for other pain reducing drugs in acting as an anti-emetic, in retarding weight loss and for its tranquilizing and mild mood elevating properties. Whether these initially observed effects will prove useful over more extended periods of use with larger numbers of patients is not known at this time. It is, however, reported that the side effect of intoxication sought by street users was not troublesome--it was not experienced by the patient sample studied. The researchers interpret this as an

indication of the importance of personal expectation (the "set" of the user) in determining one's subjective response. It is noteworthy that Jamaicans who use the drug primarily as a work adjunct and to relieve the discomfort of arduous conditions also do not characteristically report the "high" sought by American recreational users!"

Dr. Griffith Edwards Report

Dr. Griffith Edwards, director of the Addiction Research Unit at the Maudsley Hospital, London, England, has recently published a comprehensive 62-page review of the entire marihuana controversy. Entitled, "Cannabis and the Criteria for Legislation of a Currently Prohibited Recreational Drug: Groundwork for a Debate," it appeared in the Acta Psychiatria Scandinavica, Supplementum 251, 1974. In this report Dr. Edwards not only summarizes all relevant research to date, but attempts to weigh the evidence and, although it is yet incomplete, he arrives at the most reasonable conclusions possible in the current state of our knowledge.

Because presentations on this complex problem which are crucial, comprehensive, and judicious are not common, an attempt will be made here to summarize Dr. Edwards' views. In addition, certain sections of his report will be provided verbatim in Appendix B. The full text of Dr. Edwards' report is available through the Governor's Council office for those who may wish to study it carefully.

Dr. Edwards notes that the marihuana controversy must be viewed against a background of more general social developments which are contradictory in nature. On the one hand, there has been an increasing drive in recent years toward the freedom and automony of the individual. The individual is increasingly viewed as having the right to do as he wishes, and the constraints upon that right are viewed as being less and less. One of the consequences of this movement has been a less stringent view of the use of drugs, particularly marihuana.

On the other hand, an increasingly sophisticated methodology has been applied to the testing of drugs prior to public use. This has resulted in

higher and higher standards being developed before any drug is released by the government for use by the general population. Such high standards were responsible for the extremely fortunate refusal of the American government to approve the use of Thalidomide, an action which safeguarded thousands of infants from developing severe deformities.

Increasing caution in the availability of drugs has resulted from this experience, as well as such related substances as pesticides and food additives.

Dr. Edwards concludes that where government provides testing and evidence that a particular drug has been found to be safe under specified circumstances, the onus to prove that marihuana is safe under specified circumstances rests with the people who use it rather than a government agency.

> "The assumption is made that the substance is guilty until proven reasonably innocent, and the implication is that the onus of proving innocence lies with those who would wish to see the drug legalized."

Throughout the balance of the report, Dr. Edwards weighs this evidence. His conclusions are presented on pp. 46-50.

A ten-point summary of research data it presented which particularly stresses the large number of essential facts about marihuana which are not known. For example, the chemistry and pharmacology of the drug are as yet incompletely understood, though more is now known than was the case five years ago. This and the many other gaps in substantive, scientific knowledge about marihuana are reviewed. On the basis of this material, two possible but opposing positions on marihuana are suggested.

One position is that "the damage done by continuing prohibition is so much more unacceptable than the likely risks of cannabis-induced damage, that repeal should be legalized forthwith." Dr. Edwards points out that this position does not (and, in the current state of knowledge, cannot) deny the possibility that the drug may prove to be harmful, but merely holds that other considerations are more important.

The alternative position, which is favorable for prohibition or modified prohibition (decriminalization) holds "that cannabis is a substance still inadequately tested for safety, and with the provisional test evidence worrying . . . in these circumstances an ending of prohibition would be an irresponsible act which might inflict--we would certainly underline the 'might'--considerable health damage on present and future generations." Dr. Edwards adds that this recommendation is "entirely compatible with the recommendation that the stringency of the law should be modified, providing that the modification is not too abrupt, and subsequent monitoring does not show that this degree of relaxation results in an upsurge of use."

The problem, then, is to choose between these two viewpoints. Dr. Edwards emphasizes throughout his paper that this choice cannot be made on the basis of current evidence on the effect of marihuana on health though that evidence is an important factor in both positions. The reasons is that this evidence simply is not complete enough at the present time to be the decisive factor. Rather, the value judgements of those in a position to make such decisions will necessarily determine which position is finally adopted.

TREATMENT AND REHABILITATION OF MARIHUANA USERS

Although marihuana does not lead to physical dependence, a significant number of marihuana users have sought help from tertiary* drug treatment facilities in Pennsylvania. The Uniform Data Collection System of the Governor's Council on Drug and Alcohol Abuse provides a preliminary, and as yet, incomplete characterization of these treatment activities.

In November and December, 1974, 148 tertiary drug treatment facilities (slightly less than half) submitted records of 9,935 clients currently receiving some form of treatment. Of these cases, 1,679 (16.9%) report marihuana as a component of the clients' drug history.

In 656 cases (6.6%) marihuana was indicated to be the "major" problem. Twenty percent of these clients in this category entered treatment due to legal pressure.

Counseling is the primary form (89.3%) of treatment given to the majority of clients admitted to a tertiary drug program (See Figure #4). And in most cases, treatment for marihuana abusers occurs on an outpatient basis (83.3%).

---

*Tertiary drug treatment facilities are aimed at dealing with those persons found to have chronic patterns (as pposed to experimental) of drug or alcohol use or abuse.

RECOMMENDATIONS

In its examinations of this issue, the Governor's Council on Drug and Alcohol Abuse voted unanimously to recommend that:

A. Criminal penalties be removed for the simple possession of a small amount of marihuana or hashish. (Simple possession of a small amount of marihuana is considered as 30 grams or less; a small amount of hashish is considered as eight grams or less.)

B. A civil penalty consisting of a maximum fine of $100.00 for the simple possession of a small amount of marihuana or hashish replace the present system of criminal penalties.

C. Penalties for possession with intent to sell, manufacture, or delivery of over a small amount of marihuana or hashish will remain the same.

D. The use of marihuana or hashish be actively discouraged.

E. A factual and realistic education policy concerning marihuana aimed toward young adults should be implemented.

On the basis of the above recommendations, the Governor's Council on Drug and Alcohol Abuse suggests to the Governor and the General Assembly the following legislation:

Removal of criminal penalties for marihuana offenses have been supported by the following organizations:

American Bar Association

New York State Bar Association

Philadelphia Bar Association

Consumer Union, Publishers of Consumer Report

National Conference of Commissioners on Uniform State Laws

American Public Health Association

National Advisory Commission on Criminal Justice Standards & Goals

National Council of Churches

American Medical Association (Governing Board)

National Education Association

National Commission on Marihuana and Drug Abuse

Central Conference of American Rabbis

B'nai B'rith

Canadian Commission of Inquiry into the Non-Medical Use of Drugs

San Francisco Committee on Crime

Mayors Advisory Committee on Narcotics Addiction (Washington, DC)

John Finlator, Retired Deputy Director
Bureau of Narcotics and Dangerous Drugs
U. S. Department of Justice

National Review

AN ACT

The General Assembly of the Commonwealth of Pennsylvania hereby enacts as follows:

Section 1. The Act of April 14, 1972, (P. L. -, No. 64) known as "The Controlled Substance, Drug, Device, and Cosmetic Act" is amended as follows:

Section 13. Prohibited Acts; Penalties --

(g) Any person who violates clause 31 of subsection (a) /is guilty of a misdemeanor and upon conviction thereof/ shall /be sentenced to imprisonment not exceeding thirty (30) days, or to/ pay a civil penalty not exceeding /five hundred dollars $500.00/ one hundred dollars $100.00 /or both/.

"APPENDIX A"

A SUMMARY OF PUBLIC HEARING TESTIMONY

In May 1975, the Governor's Council on Drug and Alcohol Abuse held three public hearings in Philadelphia, Scranton, and Centre County (Penn State University) in order to gather information and insight into the issue of marihuana from educators, law enforcement personnel, community groups, lawyers, drug program personnel, and health officials.

The panel which heard testimony and addressed questions were: Dr. Richard E. Horman, executive director of the Governor's Council on Drug and Alcohol Abuse; Susan J. Hathaway, Special Assistant and Director, Public Education and Information, Governor's Council on Drug and Alcohol Abuse; Peter S. Pennington, deputy executive director of the Governor's Council on Drug and Alcohol Abuse; and Joseph Reither, Esquire, Director, Bureau of Drug Law Enforcement, Department of Justice.

SUMMARY OF TESTIMONY

Heard at

Salon H, Commonwealth Ballroom

Marriot Inn

City Line Avenue

Philadelphia, Pennsylvania

Thursday, May 8, 1975

Statement of Stanley Kubacki, Esquire
Judge, Court of Common Pleas
Philadelphia, Pennsylvania

Statement of Keith Stroup, Esquire
Director, National Organization for
Reform of Marihuana Laws

Statement of F. Emmett Fitzpatrick, Esq.
District Attorney
Philadelphia, Pennsylvania

Statement of Mathea Falco, L.L.B.
Special Assistant to the President
Drug Abuse Council
(on behalf of Thomas Bryant, President
Drug Abuse Council, Washington, DC)

Statement of Sister Madeleine Boyd
Director and Educator
Shalom

Statement of Arthur Lewis, Regional Director
Drug Enforcement Administration
Philadelphia, Pennsylvania

JUDGE STANLEY KUBACKI
Judge, Court of Common Pleas

Judge Kubacki expressed in his testimony that he opposed the removal of legal sanctions on the possession of marihuana. However, in response to questions from the panel, Judge Kubacki indicated he would have no objection to the application of civil penalties as it relates to the marihuana issue.

Specifically, Judge Kubacki stated he would agree with the appropriateness of a civil penalty for a first offense for possession of a small quantity of marihuana below 30 grams. In the instance of a second offense, he expressed disagreement with the use of a civil penalty as opposed to criminal penalties.

Judge Kubacki went on to say the courts are not effective in dealing with marihuana possession cases at the present time. Each one of these cases, he said, properly requires a great deal of individual attention. Typically these cases result in a probationary sentence and probation officers are flooded with work that this attention is not available.

Judge Kubacki expressed concern that young people are maintaining criminal records and indicated that in instances of possession of small amounts it should not be made part of the criminal record. In Philadelphia, Judge Kubacki stated that he knew of no one who went to jail for having possession of small amounts of marihuana.

# # #

"And I believe it is Oregon where they do not--but there is a (civil) fine. It is transferred to the civil side of the court. I believe it is about $100 fine.

I would have no objection to this. But I would stay on top of the problem. But I would certainly have no objection."

(In reference to the accumulation of criminal records by young people for the possession of small amounts of marihuana:)

"For this, yes. I would agree with this. I don't think it should be made part of the criminal record, if this is all that there is."

(In reference to penalties for second offenses of marihuana possession:)

"Maybe on the second one, Doctor, it should no longer be on the civil side of the court."

"Yes . . . I have been in a drug court. And I must say, the experience is not very satisfactory for the reason that there is such a flood of this in the courts.

And as a result of this, there is a pretty cavalier attitude on the part of everybody toward it, and just moving it along. And very little or nothing is done for people who are involved in drugs."

"I do not know this for a fact. But you get a visceral reaction in the courtroom after listening to testimony.

And I have a strong feeling that the police also make a judgement. That is part of the filtering system."

# # # #

KEITH STROUP, ESQ.
Director
National Organization for the Reform of Marihuana Laws

Mr. Stroup stated that NORML supports a policy of discouragement toward the use of marihuana, but unalterably opposes the use of criminal penalties to accomplish that end.

He claimed there are certain costs inevitable with continued criminal prohibition. Stroup estimated the 420,000 arrests for marihuana offenses in 1973, the majority of which were for possession, cost around half a billion dollars. In addition the policy of criminal prohibition, Stroup suggests, produces a lack of respect for the legal system. Criminal penalties do not seem to have an effective deterrent effect. Stroup supported this claim by point out that the greatest increase in marihuana use occurred between 1956-1970, during the period of the country's strongest marihuana laws. He offered further recent evidence from a survey conducted by the Drug Abuse Council which reported only six percent of the nonusers in Oregon gave law enforcement reasons as a deterrent and only 12 percent in California stated the same reason where the penalty is a felony with a maximum ten year jail sentence. Finally, Stroup expressed concern that a significant portion of the population (13 million regular marihuana smokers) should not be treated as criminals when the only distinguishing characteristic of this group is that they perfer smoking marihuana to drinking alcohol.

Stroup suggested that there are three possible courses of action regarding the marihuana issue: The first, to continue criminal prohibition despite its costs and ineffectiveness; second, to legalize marihuana, which is untenable because of the political climate and precluded by the United States participation in the Geneva Treaty of 1961; and third, to decriminalize mari-

huana by imposing civil penalties rather than criminal penalties.

Stroup pointed out that there are many advantages to the civil citation arrangement. Applying civil penalties, he stated, still displays an official policy of discouragement, but removes the unusually harsh penalties and other disadvantages of criminal prohibition. The citation system, he claimed, would not remove the policeman from the street for several hours at a time as occurs in an arrest situation, nor would it produce the extravagent court costs for processing offenders. And finally, he stated, this approach has been shown to be preferred by the citizens of Oregon after one year of experience with the new law: 58 percent favored while 39 percent opposed the new law.

Mr. Stroup recommended that Pennsylvania adopt a partial decriminalization of marihuana by implementing a civil citation approach for possession of small quantities. He further recommended that it is the responsibility of the government to explain the law to its populace so that the new law is not interpreted as a permissive policy.

# # #

"NORML supports the discouragement policy toward the use of marihuana, and as far as that goes, toward the recreational use of all other drugs, too."

"However, if he only gives a citation, a policeman may spend two or three minutes time, and he is right out on the street. He never leaves the street.

That means basically that he is out there doing the job he is suppose to be doing."

"Now, of the 91 percent of the people who do not smoke marihuana in Oregon, despite the lack of criminal sanctions, we found that only six percent of the non-smokers gave law enforcement reasons as a deterrent."

"One, of course, is continued criminal prohibition. That is the system we have had for 35 years in this country.

Now, there are certain costs that are inevitable in that system. The most obvious one is that a lot of people are going to be saddled with arrest records."

"However, if you take those figures and multiply them times the 400,000 arrests, you see that we are spending somewhere around a half a billion dollars every year in this country on law enforcement resources."

"And only 12 percent, even in a state (California) where it is still a ten-year felony, only 12 percent of the non-users gave law enforcement reasons as a deterrent."

"I would suggest quite the contrary. The greatest increase in marihuana use this country has ever seen occurred between 1956 and 1970.

And those years, those 14 years, were the 14 years that we had the strongest penalties we have ever had in this country."

# # # #

F. EMMETT FITZPATRICK, ESQUIRE
Philadelphia District Attorney

Mr. Fitzpatrick offered no specific recommendations regarding amendment of "The Controlled Substance, Drug, Device, and Cosmetic Act." The majority of Mr. Fitzpatrick's testimony focused on finding solutions to remedy the total spectrum of drug abuse. According to Fitzpatrick the solution to the narcotics problem lies in offering more responsive treatment and rehabilitation. He pointed out that none of the courts: Criminal, Civil, Equity, and Orphans, have had an effect upon the narcotics problems.

Mr. Fitzpatrick expressed opposition to the use of civil penalties for possession of small amounts of marihuana for two reasons: First, decriminalization of marihuana does not offer a solution to the problem of drug abuse; and, second, the present law allows sufficient flexibility for a prosecutor to prosecute a person found with a minimal amount "for reasons best known to himself and law enforcement authorities." In practice, however, Fitzpatrick has seemingly decriminalized marihuana in Philadelphia as evidenced by his statement: "In most cases when small amounts of relatively harmless narcotics are used we withdraw prosecution and that's it."

Mr. Fitzpatrick urged the Council to develop more treatment centers, encourage treatment centers to examine offenders to determine if treatment can help, and to make these treatment centers aware to the prosecutors in the State. He could not, however, speculate on the possible financial impact this program would have upon the State.

# # #

"It is my feeling when I first was elected District Attorney that we could no longer afford the luxury, particularly in light of Rule 1100 of the Supreme Court requiring us to bring cases to trial within 180 days . . . of trying in criminal courts individuals who were charged with minor offenses."

"Now, I have taken it upon myself in certain first offender cases . . . to just withdraw prosecution and say we are not going to prosecute at all. Just go your way and say no more."

"I would not want to fill up treatment centers with people who are no more than first or second-time experimenters who do not have a problem that treatment centers can cure."

"I urge you, if there is to be any legislative change, to make the discretion of the prosecutor as broad as possible, because there are indeed other factors which go into whether or not a case should be sent to a rehabilitative program or should be brought to Court."

There may very well be an instance of an individual, an extremely hardened drug supplier, who is found with a minimal amount. But a prosecutor might very well wish to prosecute in his particular area for reasons best known to himself and law enforcement authorities."

"I would first of all urge you and your Council to encourage the development of treatment centers run by competent medical personnel."

"I would urge you, secondly, in the development of any of these centers, to make it a prerequisite that the centers themselves or the treatment authority tell the law enforcement authorities in each individual case that they have examined as well as they think they must the particular

defendant can benefit from rehabilitative procedures."

"I would invite you, thirdly, to recommend to the prosecutors throughout the State that these facilities either are available or let them know when (they will be established)."

"The fact of the matter is that the Courts: Criminal, Civil, Equity, Orphans, have had precious little effect upon the narcotics problem."

" . . . I do not believe that a procedure such as either calling it civil or issuing a summons or allowing someone to pay a small fine immediately rather than undergo a criminal trial is as effective a procedure in solving the overall problem."

# # # #

MATHEA FALCO, L.L.B.
Special Assistant to the President
Drug Abuse Council

Ms. Falco testified the Drug Abuse Council supports the recommendations of the National Commission on Marihuana and Drug Abuse which states that possession of marihuana for personal use or casual distribution without remuneration should not be sanctioned under criminal functions. The Drug Abuse Council maintains an "official policy of discouragement of use by civil functions."

Ms. Falco described some of the studies conducted by the Drug Abuse Council which led to the formation of their official policy.

1. Approximately 29 million Americans have tried marihuana and over 12 million use it regularly.
2. Decriminalization of marihuana in the State of Oregon has not resulted in a significant increase in use.
3. The majority of the population in Oregon favor the civil citation system.
4. Nonusers from Oregon and California cite lack of interest and health hazards as primary reasons for not using marihuana, while fear of prosecution ranked very low.
5. The consensus of distinguished scientists participating in a conference sponsored by the Drug Abuse Council (January 1975) is that the current state of medical research is not adequate to determine the extent of hazard or lack of hazard connected with marihauna use.

Ms. Falco suggested that altering social policy cannot depend on the finality of all accumulated medical data.

CONTINUED

20 OF 33

There are actually two problems she stated: a health problem and a criminal problem. She pointed out other substances of known hazard (e.g. alcohol) are controlled without confusion of the health problem and criminal problem. She exemplified this by pointing out that people are prosecuted for committing criminal acts while under the influence of alcohol; however, people are not prosecuted for the simple or social use of alcohol.

# # #

"We support the recommendations of the National Commission on Marihuana . . . they recommended that possession of marihuana for personal use no longer be a criminal offense, and that casual distribution for no remuneration, or insignificant remuneration not involing profit, no longer be an offense."

"What I would suggest is that we cannot afford to wait until all of the medical evidence is in concerning the effects of marihuana in determining an appropriate social policy."

"Alcohol is by far and away our nation's number one public health drug probelm . . . but we do not jail those who simply use alcohol. We do confuse potential health hazards with criminality.

Instead we invoke criminal sanctions for criminal acts committed under the influence of alcohol."

"There are two problems: a health problem and a criminal problem, and you would call it a social policy problem.

And they are just no more automatically synonymous or linked in the case of marihuana that they are in the case of alcohol or any sort of other--lots of other--substances that can be harmful."

"We are definitely against young people having criminal records for possession of small amounts. It just doesn't make any sense."

"We support criminal penalties for trafficking . . . (however) sharing of a small amount of the drug among friends, obviously not.

But for sales and transfers involving substantial profit, we support penalties."

# # # #

SISTER MADELEINE BOYD
Director and Educator, Shalom
(Prevention Program)

Sister Madeleine stated the penalty involved for simple possession cases far outweighs comparable penalties for other victimless crimes. A system of civil fines similar to the Oregon State Model, in her opinion, would be more effective and justified than the present system in Pennsylvania.

She pointed out that under the present judicial system, where one uses marihuana may be more significant than whether one uses marihuana. Penalties for the same crime vary from a jail sentence to a permanently damaged record of personal integrity, to discharge with no further consequences, all of which depend on the county. The implementation of the Oregon model, she suggested, would eliminate the discretionary interpretation allowed under the present system. It would enhance respect for the criminal justice system among youths; would eliminate 90 percent of the current marihuana arrests; would "free up" law enforcement efforts; would eliminate much of the cost of the present system; and might prove a more effective deterrent.

Sister Madeleine stated that criminal sanctions on possession of marihuana do present difficulties in dealing with the problems of youths.

From her professional experience in drug and alcohol prevention, Sister Madeleine suggested "decriminalization of marihuana will free parents, educators, community leaders, and police to work toward more enlightened solutions where marihuana use is symptomatic of deeper problems."

# # #

"In those cases where simple possession of marihuana results in a jail sentence, the penalty far outweighs comparable penalties for other victimless crimes.

My experience in working with thousands of young persons . . . has convinced me that society could benefit by a change in the penalties for those caught using marihuana."

"A swift, fairly administered civil fine similar to the Oregon state model might prove a more effective deterrent to marihuana use."

"The serious inequities that exist as a result of the discretionary interpretation allowed under the present system jeopardizes the image of how justice is administered."

"Youths would no longer fear discussing marihuana with adults. Parents and teachers would not have to fear that handling the marihuana issue in a responsible way will be construed as abetting crime."

# # # #

ARTHUR LEWIS
Regional Director, Drug Enforcement Administration

The majority of Mr. Lewis' testimony described the history of marihuana use on an international scope, and the development of international agreements to control "trafficking" of a variety of illicit drugs. The primary efforts of the Drug Enforcement Administration (DEA) are the enforcement of laws directed at large "dealers" of controlled substances, rather than persons with small amounts of marihuana for personal use.

Lewis stated a close link between "trafficking" of marihuana and trafficking of other drugs, such as heroin. He felt, therefore, that a reduction in controlling marihuana "traffic" would jeopardize the control of other illicit drug distribution.

Mr. Lewis was asked if the DEA had taken a position on the Federal bill (S.B. 1450) introduced by U.S. Senator Jacob Javits (R-New York) to decriminalize small possession of marihuana. Lewis indicated, to his knowledge, neither the DEA nor the U.S. Justice Department has taken a position on this issue. He pointed out that, typically, the Office of the U.S. Attorney General declares the Federal government's position in these cases.

United States Attorney General Edward H. Levi was quoted in the Philadelphia Inquirer (May 30, 1975) regarding his position on decriminalization, "If I had to take one at this moment--and I haven't--I think most people agree that possession of small amounts of marihuana, whether it should be decriminalized or not, out to be downgraded in terms of penalty."

# # #

"Most people assume that our policy toward marihuana is harsh and can neatly be separated from our policy toward heroin . . . let me state that illicit traffic in marihuana is big business. It is no longer the casual transfer of the weed as it was before the 1950's."

"Thousands of pounds are being smuggled into this country by large, well-financed groups. In 1970, over two million pounds of marihuana was seized . . . seizures of hashish, the resin from the top of the plant, rose from 7,000 pounds in 1970 to over 50,000 pounds in 1974."

"There is a link between heroin traffic and marihuana which is vitally important. A lessening of United States efforts to enforce marihuana laws will weaken the determination of foreign governments to assist United States is bound by treaty obligations--the Single Convention on Narcotics of 1961--to control marihuana traffic."

"And it is just impossible. If you stretched hands and reached around the border of Maine to Mexico, you could never stop or interdict large amounts of marihuana coming into the country. It is virtually impossible to do that. You just don't have the forces to do it."

"The best that law enforcement can do, given the attitudes that some people do have about law enforcement, is sort of like stick its finger in the dike and hold on and holler help, then call for the stone masons to build the thing a little bit getter."

SUMMARY OF TESTIMONY

Heard at

Hilton Inn

225 Washington Avenue

Scranton, Pennsylvania

Wednesday, May 14, 1975

Statement of Thomas McNevin
NORML

Statement of Captain Frank Roche
Captain of Detectives
Scranton Police Department

Statement of Robert Schwartzberg
Assistant Director
Community Volunteer Services
B'nai B'rith

Statement of Doree Goodman
Executive Director
Lackawanna County Commission
on Drug and Alcohol Abuse

THOMAS McNEVIN
Scranton, NORML

Mr. McNevin's testimony basically consisted of the text of a petition circulated by a group of NORML sympathizers in the Scranton area and signed by approximately 1,000 persons. The opening statement of this document called for "an immediate end to the criminal prohibition of private marihuana use."

The petition maintained that criminal laws dealing with marihuana use are "ineffective as a deterrent, unreasonably severe, scientifically unwarranted, and disparate in their nature and enforcement."

McNevin cited a number of official research studies which reportedly concluded that marihuana presents no significant threat to public health or society. Issuing agencies include the United States Department of Health, the National Commission on Marihuana and Drug Abuse, and the Canadian Commission on Inquiry into the Non-Medical Use of Drugs. Based on these reports, McNevin said medical risk incurred in the private use of marihuana may be categorized as "informed individual choice permitted in a free society."

NcNevin, still reading from the petition, said current governmental controls over marihuana use encourage invasion of privacy. The petition also pointed to the possible danger of "violation of individual rights and liberties by overzealous law enforcement personnel."

Mr. Joseph Reiter, Esquire, Director of the Bureau of Drug Law Enforcement, cited information contained in the Shafer Commission Report which stated a consensus of physicians surveyed by the Commission considered marihuana a dangerous drug. When asked whether he was in agreement with that opinion, McNevin said every drug was potentially dangerous, whether licit or illicit.

# # #
58

CAPTAIN FRANK ROCHE
Captain of Detectives
Scranton Police Department

Early in his testimony, Captain Roche indicated his opposition to any proposed change in the Commonwealth's current marihuana laws. He said the present law contains adequate safeguards for what he called "the first time user" against acquiring a police record.

According to Roche, his main concern is not with marihuana smoking, as such. Rather he indicated a worsening situation in the Scranton area involving derivatives of marihuana, such as hashish and THC.

Captain Roche indicated he was aware that marihuana itself is not an addicting drug. He also expressed doubt that marihuana is responsible for a progression to harder drugs. He blamed this progression on peer pressure among young people.

Much of Roche's arguments were based on his belief that increased use of stronger derivatives of marihuana would lead to "victimization." He said decriminalization of marihuana would "open the door" to increased drug use.

Concerning the legal process of marihuana offenders, Roche said Scranton police "just don't have the time . . . to devote to going out and getting the marihuana users." Roche said it is "a waste of police time; a waste of court time" to prosecute persons possessing small amounts of the drug.

According to Roche, current laws allow prosecutors and judges to use discretion in various cases. In Scranton, said Roche, authorities can refer an individual to an Accelerated Rehabilitative Disposition (ARD) program, or

totally dismiss charges against a small possessor.

Roche also said he is opposed to the passage of U. S. Senate Bill 1450 which would decriminalize possession of one ounce or less of marihuana. The captain said he would, however, favor state legislation to reduce the classification of possession of 30 grams or less of marihuana to a summary offense, thereby putting these cases within the jurisdiction of a district justice or magistrate.

# # #

". . . I am also aware that marihuana in itself is not an addictive drug. However, to say that some younger groups, within their own peer groups, are more or less forced by their own peer group to try the marihuana plant or the marihuana cigarette, it can--I am not saying that it does--but it can lead to pressure from the peer group to try a more dangerous type of drug, and this is what my concern is."

". . . I think that the present law of the State of Pennsylvania relevant to marihuana are quite adequate."

"What I am saying is that the derivatives from the marihuana plant are causing us a problem. We are being stormed right now with a great deal of violation with the THC business . . ."

"If we run across somebody with 30 grams or less, a young individual, we will try and contact their parents and let their parents handle it. And we feel that 30 grams or less is a waste of court time, it is a waste of police time, and we feel that if it is for a person's own use and he is not turning around and selling it, he is not profiteering from it."

"We know the consequences of putting a tag on an individual, a criminal tag on somebody of being a drug user or a drug seller. And I make no distinction between this; I have no sympathy for the seller of drugs. But the drug user is a victim of his peer group; is a victim of his environment."

# # # #

ROBERT SCHWARTZBERG
Assistant Director of
Community Volunteer Services
B'nai B'rith

Mr. Schwartzberg, representing the national office of B'nai B'rith, read a 1973 resolution passed by the organization's Board of Governors which states "current penalties for use and/or possession (of marihuana) are out of proportion to the known facts." The resolution adds, "B'nai B'rith believes that the criminal penalties against the use of the drug are totally unrealistic." According to Mr. Schwartzberg, this policy "is now representative of the response or attitude toward drug abuse that the entire B'nai B'rith nationally has taken."

The B'nai B'rith policy agrees with medical findings disproving "the earlier notion that marihuana is physically addicting or dependence producing." In light of these findings, the organization states its opposition to penalties imposed by current marihuana laws that "can and do scar the lives of those who would otherwise be regarded as law-abiding citizens."

Commenting on the resolution, Schwartzberg said his organization "would like to see all states adopting something similar to the Oregon Plan . . ." which reduced marihuana possession to a citation offense. Under questioning, Schwartzberg said new marihuana laws are needed to protect young people from acquiring a criminal record. According to the B'nai B'rith representative, such a record is unwarranted for what he called a "victimless crime." He said current Pennsylvania provisions for expungement of criminal records are not adequate protection because "even if there is a law on the books calling for expungement under certain circumstances, I question the

ability of the state to see that the local counties are following the law."

Schwartzberg opposed the notion that current marihuana laws serve as a deterrent to drug use. "I think that efforts to deterrents or the history of the efforts of states all over the country . . . have been a waste of money and time."

# # #

"The known consequences of incarceration and a felonious criminal record far outweigh the minimal dangers presented by the use of marihuana. In many ways, the enforcement of present marihuana laws impose the very kind of cruel and unusual punishment that the Constitution of the United States specifically forbids."

"I don't dismiss any of these (medical research) reports. Quite frankly, I think the more reports we get, the more it points up to the inability to put a label on marihuana, because the more reports that there are the more contradictions there are."

"I am saying, yes, the state has an obligation to educate the public to what the facts are. I am against the state telling the public whether they should or shouldn't smoke (marihuana)."

# # # #

MS. DOREE GOODMAN
Executive Director
Lackawanna County Commission on Drug and Alcohol Abuse

In her formal opening statement to the Governor's Council panel, Ms. Goodman proposed "Pennsylvania follow the lead of Senators Javits, Cranston, and Brooks in the U.S. Senate, and states such as Oregon, in decriminalizing the personal possession of small amounts of marihuana and in substituting for a criminal penalty a minimal civil fine."

She also advocated an end to criminal penalties for non-profit transfers of small amounts of the drug.

Although public policy should be to discourage the indiscriminate use of drugs, said Goodman, "we should trust mature and intelligent persons to make intelligent decisions regarding chemical use." She continued, "It appears to me that we cannot legislate morality, that laws in and of themselves do not deter people from abusing and/or harming themselves."

Goodman questioned the amount of time and money spent by the criminal justice system dealing with victimless crimes. She suggested a change in the marihuana laws would "relieve some of the burden on the courts and public defenders and other related offices."

According to Goodman, "by labeling and stigmatizing and incarcerating young persons through the criminal process, we appear to be doing them more damage and narrowing their options even more than the personal use of marihuana." She said many young persons who have been arrested for drug violations are avoided by "straight" teenagers, thus forcing them even farther into the drug culture. This occurs, said Goodman, in spite of the fact that the individual may previously have been a casual experimenter with marihuana.

Under questioning by panel members, Goodman said treatment procedures for marihuana abusers consist largely of individual and group counseling. According to her statistics, 44 percent of the marihuana users undergoing treatment in Lackawanna County were referred by the criminal justice system. Referring to these statistics, she said, "in many cases the treatment may be ineffective because treatment itself may not even have been warranted . . . because there may not really have been any behavior to change in the first place." She said many casual experimenters opt for mandatory treatment as the only alternative to involvement with the criminal justice system and the acquisition of a criminal label.

# # #

" . . . I still believe that laws in and of themselves, the legislation, is not effective in preventing persons from using marihuana, and that we cannot really legislate against use or legislate morality."

"Let me raise one other question . . . and that is whether in a society that is as drug oriented as ours, where the media encourages the use of chemicals from morning to night, it becomes reasonable to rule out the use of any chemical as illegal."

"Criminal penalties for use and possession appear disproportionate to the degree of mental and physical risks involved."

" . . . it appears to me indefensible to equate marihuana with hard narcotics under the criminal law."

# # # #

SUMMARY OF TESTIMONY

Heard at

Hetzel Union Building

University Park Campus

Pennsylvania State University

University Park, Pennsylvania

Wednesday, May 21, 1975

Statement of Dr. Lee Upcraft, Director
Residential Life Program
University Park Campus
Pennsylvania State University

Statement of Joe Seufer, Student President
University Park Campus
Pennsylvania State University
(accompanied by Steven Rudman, State Coordinator
Penn State Organization for the Reform of
Marihuana Laws)

Statement of Dr. John Hargleroad II, Director
Health Services
University Park Campus
Pennsylvania State University

Statement of Charles Brown, Esquire
Centre County District Attorney

Statement of Alan Ellis, Esquire
Counsel
Pennsylvania Branch NORML

Statement of Joseph Diament
On Drugs, Incorporated
State College, Pennsylvania

DR. LEE UPCRAFT
Director, Residental Life Program

Referring to a "consensus view of our residence hall staff concerning drug and alcohol abuse," Dr. Upcraft said, "we see no particular advantage in changing the current (marihuana) laws." According to Upcraft, decriminalization would result, "at least temporarily and possibly permanently," in the increased use of marihuana. Increased use, said Upcraft, would lead to increased abuse and the University does not maintain the facilities to deal with police and treatment problems which might be created by increased marihuana use.

Although he opposed decriminalization, the administrator said "classifying possession of small amounts of marihuana as a misdemeanor may be too strong a punishment." Again, speaking on behalf of his staff, he said "the penalties for marihuana should be consistent with other drugs of similar impact, such as alcohol."

On the Penn State Campus, said Upcraft, the number of marihuana cases handled by the University Police and the school's discipline system has remained relatively stable while alcohol-related incidents have increased "by over 100 percent in the last three years." He said residence hall staff members believe marihuana use has actually declined in recent years for several reasons: (1) many students had experimented with the drug in high school before coming to college, (2) the price of marihuana has increased, and (3) the risk of detection and disciplinary action is greater with marihuana than alcohol.

Alcohol has become the University's chief drug problem, according to Upcraft. He called for state action to lower the drinking age to 18. He said

it is "inconsistent to declare college students as adults for all other purposes except alcohol consumption. The net result is underage drinking takes on more importance than it should for young people."

# # #

"Marihuana does not present a large, serious problem to our residence hall staff, nor to students. Decriminalization runs the risk of introducing more serious problems than we currently experience."

"It is not consistent to treat underage alcohol consumption as a summary offense, and possession of marihuana as a misdemeanor."

"I don't necessarily see that much of a connection between the law enforcement efforts and the decline in marihuana usage. I see it more as a student cultural phenomenon. It is just not as exciting. It is not as cool. The peer group is just plain not reinforcing that behavior as it did in the late 60's and early 70's."

"It is quite possible that someone who is caught in possession of marihuana could be both sanctioned or punished through the (University) discipline system as well as being prosecuted in the courts."

# # # #

JOE SEUFER
Student President

STEVEN RUDMAN
Student Coordinator, NORML

Mr. Seufer began his testimony with an enforsement of the NORML position concerning decriminalization of marihuana. "I believe the decision to smoke marihuana is a private, personal one," said Seufer, "and should not be dictated by law." He said present marihuana control laws do not deter usage, "although they continue to label a significant minority of American citizens as criminals."

Seufer cited results of a survey initiated by Pennsylvania NORML where interviews taken from a random sample of 450 students revealed, next to alcohol, marihuana was the most frequently used drug on campus. Fifty-five percent of Penn State students consider themselves regular marihuana users, according to the study.

He blamed government, in general, for creating "myths" that marihuana use would lead to "violence, rape, and murder in the public." "America'a youth lost respect for all institutions and became alienated" when older citizens attempted to impose their values on them, according to Seufer.

Rudman disagreed with the idea of mandatory rehabilitation or counseling for persons convicted of marihuana-related offenses. "I don't think the use of marihuana mandates any type of counseling," he said.

Rudman blamed much of the misunderstanding about marihuana on inaccurate drug education programs. He said students know from personal experience in many cases, that scare tactics employed in some programs provide "fallacious" information. Programs of this type, he continued, cause students to ignore official sources of information about dangerous drugs.

# # #

SEUFER

"There is a need for reform whenever a law ceases to be of social usefulness. The time has come for clearing the air of misinformation and emotion, enabling a basis to be developed for a rational social policy regarding marihuana use. The time has come to decriminalize marihuana possession in Pennsylvania."

"Not only do states have disparate laws and policies, but each county in Pennsylvania treats marihuana violations differently. Thus, where a person is arrested is very important."

"Marihuana decriminalization may very well help to bring back a united homogeneous feeling in the country."

RUDMAN

"In my opinion, alcohol is much more dangerous than marihuana."

"I believe, in our society, there should be no laws restricting what an individual wants to do to his own body."

# # # #

DR. JOHN HARGLEROAD II
Director of Health Services

"On the matter of decriminalization of marihuana, it was the consensus of the group that it should be decriminalized. It is our opinion that its use is socially acceptable by those that we have contact with, the law is not effective in prohibiting its use, and the dangers do not warrant such penalties," stated Dr. Hargleroad who presented the opinions of approximately twenty members of the University Health Services staff in his opening statement.

According to Hargleroad, staff members agree marihuana is not an addicting substance and interruption of use does not cause any type of physical withdrawal symptoms. One staff psychiatrist noted he had never seen a psychotic reaction to marihuana use.

Hargleroad estimated that some 50 percent of the Penn State student body has had some experience with the drug. Explaining the most common circumstances of student marihuana use, he said, "It seems to be the consensus that marihuana was used most frequently in a group social setting one to three times a week, but may on occasion be employed in a solitary setting."

University drug control efforts, Hargleroad said, should consist mainly of more effective drug education programs. He said individuals should be allowed to make independent decisions about drug use without criminal prohibition.

Hargleroad said University Health Services personnel treat a large number of students for the effects of alcohol and various drugs. "Marihuana

has been different," he concluded, "in the effect that we have never had a student come in with the complaint that they had had ill effects from the use of marihuana."

# # #

"As a physician here on campus, I would like to make available to any potential user as much information as we can do so, and then let him judge whether he wants to take the risk . . . I don't think, as a physician at a university, that I should act in any other way."

"I am not sure that I would want to be placed in the position of saying I would like to see prohibition of every agent which is harmful to a person's body."

"Well, can you tell me how the decrease of testosterone is going to endanger somebody else?" (On the possibility that law should be based on medical reports such as those indicating lowered testosterone production caused by marihuana use.)

" . . . I testified that I do not know of bodily harm that was done by the use of marihuana, certainly in our experience."

CHARLES BROWN, ESQ.
Centre County District Attorney

In his formal statement to the Governor's Council panel, Centre County District Attorney, Charles Brown, said, "I am suggesting that use of marihuana not be a crime: felony, misdemeanor, or summary offense." He further suggested "that possession of an amount which is deemed to be for use only, be no more than a summary offense."

Brown said law enforcement officials do not have the resources to pursue cases of possession of small amounts of marihuana. Enforcement efforts in Centre County are concentrated on "the so-called pusher or dealer, someone who is making a profit from the distribution of marihuana." He said current marihuana provisions impose a burden on police, prosecutors, and the courts.

" . . . if the legislature of Pennsylvania would decriminalize use, possession, and distribution of marihuana, law enforcement personnel would gladly turn their attention to the more serious matters of crimes against persons and property."

Brown, president of the Pennsylvania District Attorneys Association, said "I do find a feeling generally among the district attorneys that, frankly, they have more important things to do than to prosecute through the courts persons involved with small amounts of marihuana. And they certainly feel that way with regard to its use."

Asked whether he thought legislators might not support decriminalization legislation because of fears of not being reelected, Brown said, "that was also the feeling about the income tax. And then, all of a sudden in Pennsylvania,

everybody running for election was in favor of an income tax."

# # #

" . . . there is a feeling--not much more positive than that, however--among the public and law enforcement officials that the use of marihuana does not seriously affect a person's health."

" . . . use of marihuana is still being punished as a crime and should not be so."

"It seems to me that we are heading toward handling the matter of marihuana use, possession, and delivery much as we do cigarettes and alcoholic beverages."

# # # #

ALAN ELLIS, ESQ.
Counsel to Pennsylvania
National Organization to Reform Marihuana Laws

Mr. Ellis, an attorney specializing in narcotics law, supported "the removal of criminal sanctions for the possession of small amounts of marihuana for personal use." He also endorsed the plan for decriminalization proposed by the National Commission on Marihuana and Drug Abuse.

According to Ellis, current marihuana laws "breed bewilderment and contempt for the law: and "engender disrespect for all laws and distrust of both the agents and institutions of government." He said his contempt on the part of young people stems from selective enforcement of the laws based on unpopular lifestyles or political beliefs.

Current marihuana laws "destroy the credibility of drug education programs which seek to inform users of the very real dangers of hard drug use." As long as marihuana use is categorized as criminal, said the attorney, experimentation with more dangerous and illicit drugs is "inevitable."

"The actual and potential threat to the individual's economic and social interest posed by an arrest record has been well documented," said Ellis. Whether an individual is convicted or not, the mere fact that he has been arrested is enough to discourage a potential employer, he added. Ellis said he has knowledge of students who dropped out of school "for the sole reason that they feel this (criminal) record will effectively preclude their getting meaningful future employment (which) would otherwise be available to them as a college graduate."

Ellis called for the institution of a system of civil penalties for marihuana possession similar to that operating in Oregon. He opposed the

the classification of marihuana possession as a summary offense because "Rule 100 of the Pennsylvania rules of criminal procedure labels a summary offense as a criminal offense."

# # #

"I respectfully urge you to recommend the introduction and passage of a bill providing for decriminalization of marihuana here in Pennsylvania."

"I am not in favor of treating people who choose to freely use marihuana as criminals. They are not criminals . . . they are otherwise law-abiding citizens who, but for the fact of the marihuana laws, would never appear in the criminal justice system."

"So long as marihuana is listed as a Schedule I drug along with LSD and cocaine . . . lumping it along with more dangerous drugs, there is a risk the marihuana user might turn to these drugs."

"Even if we were to find out tomorrow that marihuana is as harmful as alcohol and tobacco, I would still fully support the decriminalization of marihuana insofar as it relates to those people who freely choose to use marihuana on a personal basis."

JOSEPH DIAMENT
On Drugs, Inc.

In his opening statement, Mr. Diament said On Drugs, Inc., a crisis intervention and information center, "does not at the present time have a stand on the legalization issue." "This is based on our desire to avoid alienating any segment of our client population," he added. Diament said his testimony would consist, rather, of a report of his agency's experience with marihuana-related cases.

According to the agency's records, marihuana is often mentioned by clients when asked to list drugs they use or have used. However, Diament said, very few clients have ever sought On Drugs' services solely because of marihuana use.

"It is the consensus of the agency's staff," Diament continued, "that marihuana has been the least problematic drug within our client population."

Diament said some marihuana-related cases involve resolution of family disputes caused by use of the drug by a young person. Parents are usually more concerned about the legal consequences of a drug arrest and their impact on the child's future than by direct effects of the drug, he stated. "An additional fear is the 'crowd' that the son or daughter must consort with in order to partake in an illicit activity," Diament said.

"APPENDIX B"*

"Favorable to Legalization"

An entirely legitimate value-interpretation of the evidence assembled in this paper is that the damage done by continuing prohibition is so much more unacceptable than the likely risks of cannabis-induced damage, that repeal should be legalized forthwith. The convinced and honest protogonist of repeal will perceive the assembled evidence and the listed major uncertainties as accurately as the convinced and honest prohibitionist: the man who favors repeal will, however, give high value weighting to decriminalization and individual liberty. Such is an entirely legitimate stance: in the light of present evidence it would, however, be illegitimate for that man to take up the position that cannabis is of proven harmlessness. His position is coherent only if he accepts the entirely open possibility of health risk and then states that in his value system that possible risk weighs less than his regard for civil liberties. He would though be quite foolish to argue that because science has not yet come through with convincing evidence that cannabis damages the individual, and because speculative extrapolation cannot establish the likely prevalences of damage in the post-prohibition situation, therefore, the risks of damage and high damage prevalence have been ruled out. A repeal argument based on the dismissal of the possibility of risk can in light of present (and very imperfect) evidence, no longer be considered a tenable position. Neither is it convincing to argue that repeal could be on an experimental basis: there are few if any historical examples of a recreational drug use, once legalized, subsequently being effectively prohibited.

"Favorable to Prohibition or Modified Prohibition"

Anyone who surveys the established facts (and the lacunae), with a cast of mind which by habit takes the Public Health perspective--and particularly a "safety of drugs" perspective--will probably conclude that cannabis is a substance still inadequately tested for safety, and with the provisional test evidence worrying. He would argue that in these circumstances an ending of prohibition would be an irresponsible act which might inflict--he would certainly underline the "might"--considerable health damage on present and future generations. If his position were to be as honest as the honest advocate of repeal, he would, however, have to admit that he, also, was weighing the evidence in terms of his personal value judgements; he could not legitimately deny that prohibition inflicts some costs, but he openly makes the choice to give more weight to health considerations. Such a Public Health stance is, of course, entirely compatible with the recommendation that the stringency of the law should be modified provided that modification is not too abrupt, and subsequent monitoring does not show that this degree of relaxation results in an upsurge of use.

The man who recommends that the Public Health view be taken will also undoubtedly plead that more research be done. He will reject the taunt that a prohibitionist lobby is always stalling for time by asking for "more research," and he will regard as uninformed the argument that if there were anything that research could prove there would by now be proof positive; in matters as complex as these,

research is not something which can be too hurried, or held to a promise of "giving the answer" within any limited space of time. A listing of what might seem the most pressing research needs is set out in an appendix."

8 Conclusion 62

1 The Setting

On the night of May 28, 1973, just a few hours before it adjourned, the Texas Legislature approved a comprehensive revision of the state's drug laws, in which first-offense possession of up to four ounces of marijuana was reduced from a felony to a misdemeanor. Since forty-eight states and the District of Columbia had already made some form of first-offense possession a misdemeanor, the Texas vote did not seem particularly newsworthy. If anything, it seemed long overdue, and many Texans who had championed this issue over a period of two and a half years felt the same way. They couldn't quite convince themselves that they had scored an important legislative victory. To them, it was more a case of having at last pulled the mule out of the mud. But in another sense the new Texas law *was* newsworthy, because Texas had been the only place in the United States (some said in the world) where a person convicted of possession of marijuana could be sentenced to life imprisonment.

Why Texas? Nobody really knows. Part of the reason was that for forty-two years, between 1931 and 1973, Texas law had considered marijuana a narcotic. So whenever penalties for possession of narcotics were raised—always in the vain hope that tougher penalties on users would stop the flow of drugs—marijuana went along for the ride. This was exactly what happened in 1955 when the legislature raised the maximum penalty for possession of a narcotic from ten years to life imprisonment. (The minimum penalty was always two years.)[1] Some felt that U.S. Senator Price Daniel, who had been conducting national hearings on drug traffic and who later became governor of Texas,

[1] It should be noted that in Texas judges (or juries) sentence offenders to specific terms—a fixed number of years between the minimum and the maximum time allowable by statute. At least one state, California, uses indeterminate sentences whereby judges sentence offenders to prison but prison officials subsequently decide how much time beyond the minimum sentence offenders should serve. Thus, someone sentenced to a term of two years to life in California may be adjudged ready for release in two years, while someone convicted under Texas' old marijuana possession law, which carried a two years to life penalty clause, could be sentenced to a fixed term of any number of years between those extremes.

had something to do with the life sentence. Daniel, however, denied any influence and pointed out that while federal law also regarded marijuana as a narcotic, the maximum penalties contained in his 1956 federal drug law were much lower than those contained in the 1955 Texas law: five years for the first offense, ten years for the second, and twenty years for the third. Possibly Allan Shivers, governor of Texas from 1949 to 1957, knows the reasons behind the 1955 law, but he was unavailable for interviews. That left only one district attorney who was willing to venture an opinion. His guess was that penalties were raised because it was a safe as well as a visible political act, and because most of those affected were Mexicans and few of them voted.

Wherever the truth lay, Texas had certainly come a long way since 1905, the year of the state's first drug law ("An Act to regulate the sale of cocaine and other drugs"), a law in which marijuana was not even mentioned. Marijuana was mentioned, however, when the law was amended in 1919. Transfer and sale for non-medical purposes were regarded as misdemeanors and they carried penalties of not more than one year in jail and/or fines of $25 to $200. But possession of marijuana still was not listed as an offense.

Most likely the legislators did not approve of marijuana use, and most certainly they did not approve of the people who used it. For a number of years marijuana had been considered a problem in border towns such as El Paso, where a 1914 ordinance banned both possession and sale. El Paso had been characterized as a "hotbed of marijuana fiends," and use was described as common not only among Mexicans but also among "Negroes, prostitutes, pimps and a criminal class of whites." [2] But on a statewide basis, marijuana just didn't arouse that much interest. The legislature followed the pattern of restraint established by a Texas criminal appeals court in an 1897 alcohol case when the court prohibited the state from interfering with "the citizen's fundamental right to use his own property as he pleases, not injuring another person." (*Ex parte* Brown, 38 Tex. Cr. R. 295.)

But by 1923 the legislators began to change their minds, and Texas' drug laws were amended to include possession with intent to sell—as a misdemeanor. Yet the *Austin Statesman*, which normally gave heavy coverage to legislative sessions, barely noticed the change. "The McMillan Senate bill," the *Statesman* reported, "amended the anti-narcotic law so as to make unlawful

[2] Richard J. Bonnie and Charles H. Whitehead II, *The Marijuana Conviction: A History of Marijuana Prohibition in the United States* (Charlottesville: University Press of Virginia, 1974), p. 34.

the possession for the purpose of sale of any marijuana or other drugs. Marijuana is a Mexican herb and is said to be sold on the Texas-Mexican border." [3]

For the next eight years nothing happened. Then in 1931 marijuana was classified as a "narcotic" drug, and simple possession was included as an offense. It was made a felony and carried the same penalty as sale: up to five years in prison and/or fines of up to $2000. A second conviction for either offense was punishable by one to ten years and/or fines from $1000 to $5000. Possession with intent to sell was dropped as an offense.[4]

Six years after that, in 1937, Texas followed the national trend and adopted its own Uniform Narcotic Drug Act. The old laws were repealed and new ones written. Possession and sale of marijuana were both raised to two to ten years and no fines, just like all the other "narcotic" drugs. No penalties were listed for second and subsequent offenses, an omission the legislature corrected in 1953 when it made second offenses punishable by anywhere from five to twenty-five years and third offenses punishable by ten years to life imprisonment—the first time the life sentence penalty appeared in Texas' drug laws. Before the 1953 legislature adjourned, however, the life sentence appeared a second time, for a new offense which was added that year: any adult who in any way involved a person under nineteen years of age in the sale of or other transaction in narcotics (including marijuana) would receive a sentence ranging anywhere from five years to life imprisonment. Second or subsequent convictions would carry a penalty of ten years to life. The legislature also added a third amendment in 1953. Possession of a "contrivance used in smoking a narcotic drug" (pipes, roach clips) became a felony and carried the same two to ten year penalty.

Finally, in 1955, life imprisonment became the maximum sentence for possession, and a single penalty of ten years to life was adopted for all second and subsequent offenses. Two years

[3] *Austin Statesman*, June 19, 1923.

[4] Possession with intent to sell was useful to prosecutors only so long as the penalty for simple possession was lower than the penalty for sale, or, as in Texas between 1919 and 1931, when simple possession wasn't considered an offense. Since possession with intent carried the same penalty as sale, prosecutors used this charge when they suspected a person was selling marijuana but couldn't actually prove it, or when a person was arrested with more marijuana in his possession than the police felt he normally would have for his own personal use. However, when the 1931 legislature made it possible for a person charged with simple possession to receive the same sentence as a person charged with sale, the reason for having a separate possession with intent law no longer existed. Critics of the possession with intent law, who once claimed it permitted prosecutors to obtain sale convictions without the proper evidence, now began arguing that possession should not carry the same penalty as sale.

after that the maximum penalty for a second conviction on charges of involving persons under nineteen in narcotics transactions was changed from life imprisonment to life imprisonment or death. In 1961 the legislature made its last changes in the narcotics law: the penalty for the sale of narcotics was increased from two years to life to five years to life; second or subsequent sale offenses brought penalties of ten years to life; and the involvement of minors offense was amended to include twenty-year-olds.

Although apparently no efforts were made within the legislature to liberalize marijuana laws during all this time, numerous court cases between 1959 and 1972 sought to have possession and sale convictions overturned, as abridgments of the Eighth Amendment (cruel and unusual punishment) and the Fourteenth (lack of due process, resulting from the irrational classification of marijuana as a narcotic). None were successful. In each case the appeals judge held, as did U.S. District Judge William M. Taylor in 1970, that while the classification "may or may not be wise or desirable," the state of Texas did have the right to classify marijuana as a narcotic.

2 The 1971 Legislature

With the exception of other "narcotic" offenses, possession of marijuana was the fourth most serious offense a person could commit in Texas, ranking just below rape, robbery by firearms, and murder with malice. Those three carried maximum penalties of life imprisonment or death, whereas marijuana possession carried only a maximum of life. By comparison, the maximum penalty for possession was much more severe than the penalties for numerous other crimes of violence or property. The stiffest maximum for crimes of violence, other than the three just mentioned, was twenty-five years for assault with intent to murder and for kidnapping. Castration had a fifteen year maximum; resisting arrest with arms, a ten year maximum; and administering poison, assault with a prohibited weapon, disfiguring, and murder without malice, five year maximums. Twenty-five years was the most anyone could receive for a crime against property—in this case extortion. Arson and destruction of private property valued at over $50 drew twenty year maximums; burglary a twelve year maximum; embezzlement, swindling, and theft of property valued at over $50, ten years; and forgery carried a seven year maximum penalty.

Nor was the life sentence for possession just for show, an ultimate penalty kept in the background but never used. Indeed, on the night the legislature approved the conference committee's compromise version of the House and Senate bills, some thirteen people were serving life sentences for possession of marijuana. None, however, was the classic stereotype of the marijuana debates—the nice young kid who, never even late for breakfast, smokes one marijuana joint out of curiosity and winds up serving a long prison term. "If there was a case like that," said Griffin Smith, Jr., the thirty-year-old Austin attorney who played a major role in marijuana reform, "you can bet we would have used it." Instead, all thirteen had some kind of prior criminal record, drug or otherwise. Three were serving concurrent sentences for other offenses. Seven had served time before on marijuana charges. That left three who, though not new to prison or to the police, *were* first offenders when it came to marijuana, including one who was serving a life sentence because he had a penny match-

book of marijuana in his possession when he was arrested in 1962.

The thirteen marijuana "lifers" were not the only ones serving long sentences. Seven people were in for 50 years or more (one of them for possessing ten marijuana cigarettes); ten were serving 31 to 40 years, five were in prison for 26 to 30 years, and twenty had received sentences of 21 to 25 years. But, said the prosecutors and law enforcement officials familiar with the cases, more often than not these people, like those serving life sentences, either had been convicted of multiple charges or they were found to have marijuana in their possession when arrested on suspicion of a more serious offense, such as breaking and entering, burglary, or selling drugs. "In many of these cases," said a former prosecutor who is now a legislator, "when you check out the stories you find the people aren't as innocent as they, their families, or their friends claim. You find three or four different indictments. Or you find somebody who got twenty-three years for having one cigarette but who actually was arrested with scales and other equipment. I had a case like that, and this person wasn't just using marijuana. He was in business. He was manufacturing it and selling it. Then he made a mistake by refusing a lawyer; he handled his own defense and argued that marijuana should be legalized. Obviously the jury disagreed. But we weren't railroading anybody. We were just frequently in the position where you had to make a gut judgment that a guy either is okay or he's a bad egg. And that's when you decide whether to use the marijuana charge, and if you do it's because it's the easiest charge to make."

That was precisely the point at which many prosecutors and the early (1970) advocates of marijuana reform parted company. In the reformer's view, a law that put prosecutors in that position in the first place was a bad law, because inevitably it would lead to situations where the possession law would be used for long-term preventive detention, for getting dubious or potentially dangerous characters off the streets, perhaps even as a way of removing people believed to have a disruptive political or social effect on a particular community. A case that combined all these elements was the 1968 case of Lee Otis Johnson.

Johnson was a Student Nonviolent Coordinating Committee (SNCC) field organizer who first came to public attention in 1967 as a twenty-seven-year-old student protest leader at Texas Southern University in Houston. Raised in one of the city's five black ghettos, he wound up in prison on a stolen car conviction while still a teen-ager. Once there, however, he passed his high school equivalency exam, and when released he enrolled at Texas

83-313 O - 77 - 46

Southern. He quickly became disenchanted with college, and when the dean announced the names of all male students not in the academic upper-fifth were being sent to their draft boards, Johnson joined the protest and was instrumental in widening it to off-campus locations, activities, and confrontations. The protest dropped off, but after Johnson was arrested on a $25,000 peace bond, set to keep him from demonstrating on the TSU campus, it began anew. Shortly thereafter, in March 1968, Johnson met a man who turned out to be a police undercover agent, and, said the agent, Johnson gave him one marijuana cigarette and warned: "Don't let the police catch you with it or it'll get you twenty years." None of this information became public, however, until two months later when Johnson criticized Houston's mayor and police chief at a memorial rally for Martin Luther King, Jr. Within two days he was arrested and charged with possession and sale of marijuana.

Reporting on the trial, Molly Ivins of the *Texas Observer* wrote:

> Defense moved for a change of venue, but the judge refused. Of the 40 persons impaneled for the jury, 14 said they had read or heard of Johnson before the trial began. The defense used nine of its 10 preemptory challenges to eliminate such veniremen and then petitioned the judge for extra challenges. The motion was denied. Four members of the jury panel who were familiar with Johnson's reputation wound up on the jury, one of them as foreman. The prosecution struck all the black veniremen.[5]

After all the evidence had been presented, the jury deliberated for only thirty minutes, twenty minutes one day and ten minutes the next. Their decision: Johnson was guilty of selling marijuana (Texas law did not distinguish between casual transfers and sale for profit) and would serve thirty years in prison for giving that one marijuana cigarette to the undercover man. (A few years later, in 1972, a federal judge ruled that racial tension in Houston had prevented Johnson from receiving a fair trial. He ordered the state either to conduct a new trial within ninety days or to release Johnson. The state released him. He had served slightly more than four years.)

Though Johnson never was convicted on the possession charge, his case became an early rallying point for marijuana reform. Still, Johnson was a black, and Texas wasn't going to change its marijuana law because blacks and Chicanos were serving time for possession of marijuana. The legislature might, however, change the law if large numbers of middle-class kids were arrested, convicted, branded as felons and sent to prison. "Nice

[5] " 'Pot' Giver Gets 30-Year Taste of Texas Justice," *Washington Post*, November 29, 1970.

young kids" were much more heavily into marijuana than before, and while prosecutors said they often dropped charges or recommended probation for first offenders, the specter of imprisonment still hung over these youngsters and their families. The reformers thought this was a good argument, but it wasn't good enough, and in 1971 Texas' first effort to reduce the penalty for first-offense possession of marijuana from a felony to a misdemeanor died on the floor of the House of Representatives.

Had a major political figure endorsed marijuana reform, perhaps the change would have come on the first try. But at this early stage, with public attitudes ambiguous at best, no big name politician was going to take a chance on the marijuana issue. There simply was too much to lose and not enough to gain. Even if you won, some of your supporters were sure to go away mad. Better to wait until the balance of opinion tilted one way or the other.

One politician who might have made a difference was Ben Barnes, thirty two years old, lieutenant governor of the state, "boy wonder" of Texas politics, and heir to the John Connally mantle. In March 1970, while touring state drug abuse facilities, Barnes had become the first state official to talk openly about marijuana reform. He never said what his personal views were, but he did urge the 1971 legislature to consider reducing the possession penalty from a felony to a misdemeanor. Such a move, said Barnes, might "provide more reasonable punishment for these kids [experimenters] and result in more kids being punished." He also pointed out that convictions for driving while intoxicated had increased 400 percent after that offense was reduced from a felony to a misdemeanor in 1947. Barnes' comments stirred some controversy, and in April, as his political opponents began to argue that the misdemeanor penalty would lend an air of respectability to marijuana and encourage youngsters to try it, Barnes took another tack and suggested that judicial discretion—letting judges decide case by case between a felony and a misdemeanor—might be more suitable for first-offense possession cases. "By June," said one observer, "you couldn't pry his March words out of him."

Barnes' defection meant that the entire burden of getting marijuana reform through the legislature rested pretty much on the shoulders of the chairman of the House Committee on Agriculture, Representative Raul Longoria, a forty-nine-year-old Democrat who for eight years had represented a predominantly Chicano (70 percent) district of small towns and cities in the south Texas Rio Grande Valley. Like Barnes, Longoria had begun talking about marijuana reform in 1970; but unlike Barnes, Longoria's

position was both clear and unequivocal. "You can't imagine what it was like down here," Longoria said of his district. "The DA didn't want probation for anyone convicted of a drug offense. I represented some people in marijuana possession cases and the only time I got probation was when a kid was put on probation for *ten* years because he had *one* cigarette. I just thought kids who experiment ought to have a second chance." So in the course of his campaign for reelection, Longoria told his constituents that he would introduce a marijuana reform bill in the next legislature.

As expected, young people in the district were with him. The middle class was not. Neither were the older people. Nor was the opposition based on ethnicity. Older and middle-class Chicanos felt the same as their Anglo counterparts, Longoria reported. "The reaction was very bad from the middle class and older people," he recalled. "They thought it was horrible. But I felt that if I could spend enough time with people explaining this to them they would understand and would support me."

Longoria stuck to two main points while attempting to sway his reluctant constituents. The first dealt with research. While opponents of marijuana reform were arguing that not enough research had been conducted to determine the safety and long-range effects of marijuana, Longoria contended that enough *had* been done to strongly suggest that marijuana was not as harmful as cigarettes. "Yet here we are smoking cigarettes when we know it's going to kill us," Longoria said in response to his critics. The second point dealt with his own youthful experiences, and, by implication, those of his middle-aged and older constituents. "When we were young," he would tell his audiences, "we smoked cigarettes behind the barn and we went across the river to get tequila to see how it tasted. Kids today are doing the same things with marijuana." The net effect, Longoria would conclude in his talk, was a double standard: one for the older generation, another for the younger. Longoria didn't favor legalizing marijuana, he told his district, but as long as first-offense possession remained a felony and a person conceivably could receive a life sentence for possessing just a single marijuana cigarette, then young people were "justified" in complaining about a double standard. Furthermore, he said, since marijuana use would continue to rise—that was simply a "fact of life"—one could anticipate increased alienation of young people from the legal and political systems if no changes were made.

Longoria thought he had won his case because the voters elected him to a fifth term in the Texas House of Representatives, and he interpreted his victory as at least partial proof that a

politician did not have to fear the marijuana issue, that it did not have to be as controversial, dangerous, or emotional an issue as many legislators either thought it was or chose to make it. Buoyed by this outcome, Longoria introduced his bill when the legislature convened. It reduced first-offense possession to a misdemeanor and established penalties of ten days to two years (the maximum for a misdemeanor in Texas) and/or fines from $25 to $1000. That was all the bill did. Second and subsequent offenses for possession remained felonies, punishable by two years to life in prison. There was no change in either the law governing sale and distribution of marijuana or the law regarding involvement of minors in sales or other transactions. Penalties here were still five years to life. Though Longoria said the bill was more "conservative" than he would have liked—his personal preference was to make misdemeanors of all offenses involving adults, including sale—he felt that circumstances dictated the less sweeping approach. "I felt we couldn't pass anything more and that we would be lucky to get this," he said. "Texas is divided into so many sections, and it has so many pockets of conservatism, that what might be popular in one part of the state just isn't popular in another. So I just tried to draft a bill that would protect young people who otherwise would have been in serious trouble because of their curiosity."

Longoria believed his bill was "mild enough" to gain some support in both the House and the Senate. But he had to extend himself to find eight House co-sponsors, and he couldn't find a single senator who would even introduce the bill. He did have a promise from Ben Barnes that if he (Longoria) got the bill through the House, then Barnes would get it through the Senate where he was presiding officer. But that was all.

Five other marijuana bills were introduced in the House. The most liberal was Representative Frances T. (Sissy) Farenthold's proposal that Texas adopt the same penalty Nebraska had adopted, a maximum of seven days in jail for first-offense possession. The most rigid was Representative Walter ("Mad Dog") Mengden's bill to invoke the death penalty in cases where a person was convicted of possessing more than two marijuana cigarettes (five grams). A middle-ground proposal by Representative Curtis Graves of Houston would have classified marijuana as a dangerous drug instead of a narcotic and used the penalties contained in the Dangerous Drug Act: thirty days to two years and/or fines of up to $3000 for possession and two to ten years for sale. A fourth bill would have sealed the records of persons convicted only once of marijuana possession, provided the individual was under twenty-five years of age at the time, was convicted for possession of two ounces or less, received a probated

sentence, and had no further felony conviction. According to Representative Honore Ligarde of Laredo, sponsor of this bill, its purpose was to permit people who met these conditions to say that they had never been convicted of a felony. And the last bill, introduced by Representative Bob Salter of Waco, would have made possession a misdemeanor only for those people who identified the person from whom they received the marijuana. Salter indicated that he would have preferred to make first-offense possession in general a misdemeanor but that his constituents wouldn't support a lowering of the penalty without some strict limitation.

All the bills were referred to the House Criminal Jurisprudence Committee. Only Longoria's survived. There had been three changes in the bill. One reduced jail sentences for first-offense possession from ten days to two years to seven days to six months. A second increased the minimum fine for first-offense possession from $25 to $250. The third limited misdemeanors to cases involving sixteen ounces or less. Anyone convicted of possessing more than sixteen ounces would be "presumed" to possess with intent to sell and be subject to a felony penalty of five years to life.

House protocol did not extend to the floor of the House, however, and for all practical purposes Longoria's bill was dead the moment the Speaker of the House, Gus Mutscher, called it up for debate at the unlikely hour of 10:40 on a Friday night. Astonished and surprised, his staunchest supporters having already left for the weekend, Longoria found himself unable to recruit even a single person to work the floor with him. Literally in despair, he had to stand by and watch the House "gut" his bill. The dividing line between a possession misdemeanor and a possession felony was dropped from sixteen ounces to two ounces. The maximum sentence for possession with intent to sell was raised from five years to twenty-five years. The minimum penalty for sale went from five to ten years. Then came the killer amendment. The entire misdemeanor section was eliminated. In its place was a provision permitting defendants—after they had first stood trial on felony charges—to petition the court for a reduction in sentence. The lower sentence, a misdemeanor, could be anywhere from ten days to two years and/or fines ranging from $250 to $1000. Not everyone would be eligible, however. Courts could only act when the person making the request (1) was under twenty-one, (2) had been convicted of possessing less than two ounces, (3) could prove that he had used marijuana "for the purpose of experimentation," and (4) could prove that he had never used marijuana prior to the time of his arrest. As Griffin Smith, Jr., staff aide to the Senate Constitutional Amendments

Committee, noted some months later in a *Texas Observer* article on the marijuana bill, this particular amendment was "an open invitation to perjury. Not more than three or four persons, if that many, have been convicted in Texas under such circumstances. The only young people likely to save their skins using [this] proposal were those who had so much contempt for the system that they would unhesitatingly lie to the court." [6]

One amendment did pass with Longoria's support. By a vote of 60 to 56 the House approved a system whereby persons between eighteen and twenty-one who were charged with marijuana felonies could, if they met probation conditions imposed by a judge, have all charges dropped and records expunged after twelve months. But by then the fight was all over. And a few minutes after 1 A.M., when even Longoria had lamely praised the bill as "a start" (hoping that if it passed, the Senate would amend everything below the enacting clause and write a better bill), the House undid everything it had done that night and voted to kill House Bill 549 as amended. The vote was 63 to 51. Thirty-six members were either absent or not voting.

Longoria could have asked the House to reconsider. Several legislators expressed regret at the bill's defeat, and, according to some reports, half the House was prepared to support the bill if it came up again. But the vote would have been on the defeated bill, not on Longoria's original measure. Longoria would have none of it. In his view the defeated bill "wasn't worth the paper it was written on." He refused to give the House members who opposed his bill a second chance to pass a "meaningless" bill. Besides, Governor Preston Smith had given every indication that he would veto any marijuana reform bill that crossed his desk. "I went to see the governor before I made any decision," said Longoria, "and I asked him if he would sign it if it passed. He said he couldn't tell me what he would do but that he had made a commitment against lowering possession penalties. I decided it was better to let the bill die a natural death."

3 The Senate Interim Drug Study Committee 1972

Marijuana wasn't the only drug issue before the 1971 legislature. A related question was whether the penalty for possession of LSD and other hallucinogens, only a misdemeanor in existing law, would be raised to the felony level. A special House subcommittee studying the psychological problems of youth had recommended this action on the grounds that it didn't make much sense for possession of LSD to be a misdemeanor when possession of marijuana was a felony. Such a bill was introduced and it passed both houses without debate or objection.[7]

Griffin Smith, who had been active in drug reform in both the House and the Senate, saw in the marijuana and LSD votes more than an isolated instance of what he felt was irrational behavior on the part of the legislature. To him, the votes were a stunning reminder that Texas' drug laws had never been subjected to any systematic analysis or evaluation. While other states were adopting some version of the Uniform Controlled Substances Act,[8] Texas wasn't even doing that. It still limped along with a potpourri of laws, some thirteen in all, each written and amended at a different time and for a different purpose. Obviously the situation wasn't going to change until the legislature met again in January 1973, if indeed it changed then. But the appointment of a special study group could at least keep the issue alive and in the public eye for most of 1972. Smith drafted a resolution establishing a five-person Senate Interim Drug Study Committee, which Senator Don Kennard of Fort Worth, chairman of the Senate Public Health Committee, introduced. The resolution passed. Kennard was

[7] Afterwards, some legislators claimed that they didn't know what they were voting on because the bill's title, "An Act relating to the definition of dangerous drugs," made no mention of a penalty increase. This was true. What happened was that the bill's sponsors succeeding in placing the bill on a special calendar used to pass non-controversial measures in rapid succession during the closing days of the legislature. Once the bill was on the local and consent calendar, nobody gave it a second look.

[8] A model act drafted by the National Conference of Commissioners on Uniform State Laws.

named chairman; Barbara Jordan, who was elected to the U.S. House of Representatives in the fall of 1972, was also a member; Griffin Smith was named committee counsel.

The Kennard Committee's charge was to investigate a wide range of drug problems and issues, including treatment, research, education, and the social impact of drugs, as well as the drug laws themselves. But marijuana quickly became a priority item. ("These laws," Griffin Smith wrote in his first staff memorandum, "affect many more Texans than any other aspect of the drug laws, and . . . they are now more grossly disproportionate to the laws of other states and of the federal government than are our other drug laws.") The first job was to collect, compile, and publish whatever data had been developed throughout the state as well as whatever data could be developed. Smith and J. Alan Holman, the committee research director, assigned themselves this task. The result was a pamphlet entitled *Marijuana in Texas*,[9] a document that became a best seller of sorts, going through three printings between March and September 1972, despite the fact that its authors felt record-keeping deficiencies in the Texas criminal justice system and a plain paucity of information about marijuana use among non-student adults prevented the report from being as complete as it should have been.

Marijuana in Texas comprised two papers. The first, written by Holman, dealt with the extent of marijuana use in Texas. One question he focused on was whether marijuana use was a youth and student phenomenon or whether its use was more broadly based. There wasn't much data to go on—just one two-year-old survey. In November 1969 The Texas Poll asked a cross section of Texans twenty-one years and older the following question: "We are not interested in specific names, but just to get an idea of how many use it, do you happen to be acquainted with anyone who is a marijuana user?" Nearly one out of every five persons polled—19 percent in all—said they knew someone who used marijuana. When the data was broken down into age brackets, 37 percent of the twenty-one to twenty-five-year-olds said they knew a marijuana user; 23 percent of those in the twenty-five to thirty-four age bracket; 16 percent of those in the thirty-five to forty-nine-year-old bracket; and 14 percent of those who were fifty years or older.

The findings could only be classified as indirect evidence. Yet Holman maintained that they were sufficient to support the contention that, while marijuana is surely most prevalent among the relatively young, its use is not isolated to the student sector of

[9] *Marijuana in Texas: A Report to the Senate Interim Drug Study Committee*, 62nd Texas Legislature, State Capitol, Austin, Texas, March 1972.

the population, or even to that of the youthful." The Texas Poll survey, Holman continued, "at least elevates the possibility that marijuana use is more prevalent among Texas adults than many might tend to believe."

To support his position that marijuana use was not merely a student phenomenon, Holman drew upon survey data from two other states: one survey was conducted in an unnamed California city in 1967 and 1968; the other data came from a 1970 survey of New York State. Although the California data Holman cited applied only to men, it showed the same pattern with respect to age and use as did The Texas Poll. Use was most prevalent among people in their late twenties; it decreased as people got older, but remained at 25 percent for the thirty to thirty-four-year-old age bracket, and at 15 percent for those between thirty-five and fifty-four. Holman cautioned Texans against discounting the California data as not applicable to Texas because his observation was that student marijuana use in Texas showed trends similar to those found in California during the middle and late 1960s. "Such information must not be discharged as completely irrelevant to the drug scene in Texas," he wrote, "for it might provide a glimpse of where Texas may be in the not-too-distant future, at least in regard to the spreading use of marijuana."

The New York survey, he said, deserved the "greatest attention," because it was the most comprehensive drug use survey ever conducted. Based on what Holman believed to be "a scrupulously drawn" stratified sample of all New York State inhabitants over the age of thirteen, it reported that of the half million "regular" users of marijuana in the state, almost 30 percent were over twenty-five. Moreover, students were *not* the most regular users of marijuana. Employed persons were. Employed students were not even counted in this group, and it still totalled 36 percent of all regular marijuana users in the state.

Holman's conclusion was the following:

> It is admittedly difficult to discern, on the basis of such information as that provided above, exactly how prevalent marijuana use is among Texas' general adult population, particularly among the state's non-student citizenry. However, those data which are available—whether they be the results of The Texas Poll, surveys from California, or New York's comprehensive drug use survey—seem to lead to one inevitable conclusion: that marijuana use in Texas, while surely most prevalent among young, secondary and collegiate students, is not simply an incidence of one's being young or of one's membership in a student community; rather, use of the drug is becoming increasingly common in other quarters and among older members of our society as well.

Holman also focused on student use, for which more data existed, and recapitulated various drug use surveys conducted among

junior and senior high school students in Dallas, Houston, Fort Worth, San Antonio, Galveston, and Texas City between 1969 and 1970, and at both the University of Texas and the University of Houston in 1970 and 1971. From these he drew a number of summary points, some old, some new, and all capable of being used as ammunition by both those who favored marijuana reform and those who opposed it.

The key conclusions were these:

- Among junior and senior high school students marijuana use was highest among those who lived in large metropolitan areas, such as Dallas and Houston, where perhaps one-fourth to one-third of all students had used the drug.

- Marijuana use was considerably higher among Texas college students. In the spring of 1971, 46 percent of the students polled at the University of Texas said they had used marijuana at least once. That amounted to some 18,000 students.

- Recent increases in marijuana use had been "unusually rapid." Among Dallas high school students it had nearly doubled in just a year and a half, rising from 14 to 26 percent, and at the University of Texas it had increased from 36 to 46 percent in one year.

- Simple "experimentation" did not "adequately explain" these increases, because "a sizeable percentage" appeared to be using marijuana on a regular basis.

- There was a tendency for marijuana use data to be underestimated rather than overestimated.

- Marijuana use in secondary schools increased with grade level, educational level, and affluence, and was more prevalent among whites than Chincanos and more prevalent among Chicanos than blacks.

- There was "some evidence" to support the argument that student users "usually obtain" marijuana from their peers rather than from adult "pushers."

Finally, Holman sought to come up with "some sort of estimate" with respect to the total number of Texans who had used marijuana, realizing, as he put it, "that the results of such an endeavor must necessarily be regarded as speculative." Extrapolating from a soon-to-be-released National Commission on Marijuana and Drug Abuse (Shafer Commission) report that said that 14 percent of all Americans between the ages of twelve and seventeen had used marijuana, and a 1971 Gallup Poll that reported some 51 percent of the nation's college students as having used the drug, Holman estimated that there were at least 450,000 student users

in Texas (some 18,000 less than a straight extrapolation from the Shafer Commission report would have shown). Using this as "a point of departure or a minimal base," he then projected that between 800,000 and 1,000,000 Texans had used marijuana, and that many of these were either using it presently or on something approaching a regular basis. This was, said Holman, a conservative estimate, because if one took another figure from the Shafer Commission report—the statement that roughly 12 percent of the American population had used marijuana—and applied it to Texas, there might be as many as 1.4 or 1.5 million Texans who had used marijuana at least once.

Holman's analysis laid a foundation. The principal paper in *Marijuana in Texas* was, however, Griffin Smith's, on the position of marijuana in Texas criminal law.

Smith began by recounting two of the more familiar facts about marijuana's place in the Texas criminal code: sixty-three milligrams—one-twentieth of one cigarette—was sufficient to support a posession conviction; and a first-offense possession, the most minor marijuana offense, had a stiffer penalty than that for nearly every crime of violence and for *all* crimes against property. He then challenged the assertion that few people actually went to prison for marijuana offenses. Texas Department of Corrections data, said Smith, showed that of the 1,892 people serving time for drug offenses, 800 (42 percent) were in prison because of marijuana. Most of them (691 or 86 percent) were there on possession convictions. Nor was it true, Smith continued, that first offenders didn't go to prison. More than half of all those serving time for marijuana *were* first offenders (446), and 84 percent of all first offenders were in for possession (375).

Some people had argued that the courts were at least lenient with young people. Not so, said Smith: 245 persons under the age of twenty-two were serving first-offense convictions for marijuana. Of these, 195 were in for possession. First offenders who were between seventeen and twenty-one, Smith went on, accounted for 30.6 percent of all the people serving prison sentences for marijuana. If one looked at the other variables, such as sex, education, and ethnicity, one found that 96 percent of all offenders serving time for marijuana were male; that the majority of those serving time had not gone beyond the eighth grade in school; and that blacks, who comprised 12 percent of Texas' population, accounted for 37.5 percent of the imprisoned marijuana offenders. Data on Chicanos was somewhat more balanced. They accounted for 15 percent of the state's population and 19 percent of the inmate population. But whites, who totaled 73 percent of the overall population, represented only 43.5 percent of those sent to prison on marijuana convictions.

And what of the prison terms themselves? According to Department of Corrections data, only 13 percent of the people serving time for marijuana received the two-year minimum sentence, while some 66 percent received sentences of at least five years. "The length of a sentence," Smith wrote, "rests largely in the unbridled discretion of prosecutors, judges and juries. Amid the chaotic and inconsistent treatment of these cases, only one central fact remains: in Texas marijuana offenders still go to prison by the hundreds." By comparison, said Smith, in California, where judicial discretion prevails, 95 percent of all cases were classified as misdemeanors, and only 1.7 percent of those who were convicted on felony charges actually went to prison. The same liberalizing trend could be seen in other states. Massachusetts and New Jersey courts tried to avoid jail sentences altogether and regularly placed offenders on short periods of probation. Nebraska judges commonly imposed a $50 or $100 fine for first offenses, the same penalty they imposed for underage possession of alcohol. Tennessee law permitted first offenders to receive rehabilitation treatment rather than be fined or sent to jail.

In the two Texas counties from which sentencing information was available, Smith found some indication that the pattern in Texas might be changing. Both places reported that probation was more frequent than prison. Some 259 persons were convicted on possession charges in Tarrant County (Fort Worth) between 1968 and 1971. They received 322 years in prison and 836 years on felony probation. Eighty-six persons were convicted of possession in Lubbock County during the same period. They received 27 years in prison and 454 years on probation. However, in every instance the felony conviction remained part of the individual's permanent record. "The fact that these sentences are often probated," Smith wrote, "does not, of course, alter their length or their fundamental severity." Meanwhile, in Tennessee, Oklahoma, and Massachusetts, a judgment of guilt wasn't even being entered on a person's record, and all evidence of the charge was expunged at the completion of the probationary period.

Yet, in Smith's judgment, "the most startling" statistics were those that showed the county of residence for convicted marijuana offenders. In most cases individuals are tried in their county of residence, and, said Smith, "remarkable discrepancies" could be seen between various Texas counties as to how they regarded marijuana offenses. Dallas County, for instance, contained 11.9 percent of the state's population and El Paso County 3.2 percent. But Dallas County sent 234 people to prison (30 percent of all marijuana offenders in the state serving time, including half of

those sentenced to thirty years or more), while El Paso County sent only two. Sometimes neighboring counties showed "sharply divergent" patterns. Jefferson County (population 244,000) imprisoned twenty-one people, and adjacent Orange County (population 71,000) none. One pattern that emerged was that a marijuana user in north Texas stood a much greater chance of going to prison than one in south Texas. In the fourteen Rio Grande Valley counties bordering Mexico, from El Paso to Brownsville (population 800,000), only ten persons were imprisoned for marijuana; by contrast, Potter County (Amarillo), with a population of 90,000, imprisoned twelve.

The difference, Smith said, was not in usage; it was in enforcement. And although he wrote that, generally speaking, data on marijuana sentences "tell a story of discrimination in almost every conceivable way," with the probability of prison being "heavily influenced by a user's sex, his race, and his county of residence," he was not willing to lodge a specific charge of discrimination. Instead, he blamed the law:

> It should be emphasized that in most cases the differing treatment of marijuana offenders does not seem to be attributable to deliberate discrimination, or to discrimination against persons on account of their political or social views. What exists is simply a wide difference of attitudes among persons involved in the criminal justice system from county to county across Texas. Some prosecutors, judges and juries simply seem to regard marijuana violations as much more serious offenses than do their counterparts in other counties. Similar variations in attitudes probably could be found for other offenses as well. What makes them so noteworthy in the case of marijuana is the fact that Texas law permits an enormously wide range of penalties for these offenses, ranging from probation to life in prison. There is thus no check, no restraint, on the natural tendency to impose a widely scattered range of penalties; indeed such differences are encouraged by the broadness of the law.

Finally, Smith presented some data to document what he called the "astonishing waste of manpower and resources" that were being employed throughout the state "in a losing effort to combat marijuana usage." According to Smith, marijuana arrests accounted for more than half the total drug activity in four major cities—Houston, Fort Worth, Dallas, and Austin. In Dallas and Fort Worth, two cities whose records distinguished between possession and sale offenses, the overwhelming number of arrests were for possession. Data on whether those arrested were first offenders was not available in the larger cities. It was, however, in the smaller ones. Arlington reported 223 possession arrests between 1968 and 1971; 70 percent were first offenders. Longview had 70 possession arrests; 68 of them, or 97 percent, were first offenders. Texarkana had had 42 possession cases since 1966;

45 were first offenders. Because statewide data were unavailable, Smith, like Holman before him, cited California statistics. Eighty percent of all adult marijuana offenders and 98 percent of all juvenile marijuana offenders in California had no previous involvement with the criminal law, other than minor offenses such as traffic violations, before being arrested on marijuana charges.

The same pattern prevailed for indictments and convictions in the two counties that were able to provide such information—Tarrant and Lubbock. More than half of the drug indictments and convictions were for marijuana. Fifty-two percent of Tarrant County's drug indictments and 58 percent of its drug convictions between 1968 and 1971 were for marijuana. In Lubbock County during the same period, 62 percent of the drug indictments and 75 percent of the drug convictions were for marijuana. In 1971 alone, marijuana accounted for 84 percent of all drug convictions in Lubbock County.

As a result of this emphasis on marijuana, said Smith, police effort at controlling heroin and other "insidious" drugs had been "less effective than it might otherwise have been." He also questioned "whether law enforcement against hard drug traffic can ever be fully effective so long as the major portion of prosecutorial activity in drug cases is consumed by marijuana offenses." Furthermore, he said, the state of Texas was spending $39,030 a month and $468,300 a year simply to imprison people convicted of possessing marijuana.

In his summary, Smith argued that present marijuana laws were outdated and ineffective. "Those who contend that the use of marijuana should remain a felony," he wrote, "argue that if the evidence is uncertain, the status quo should be maintained. But the laws making marijuana a felony were enacted when legislators assumed that its dangers were far worse than a dispassionate examination of the evidence now available warrants. *If that evidence would not warrant enactment, now, of the felony prohibitions against marijuana use, it cannot justify their retention.*" (Emphasis in original.)

If the marijuana laws were working, Smith went on to say, then at the very least they should have resulted in less marijuana use in Texas than in most other places. But, he said, marijuana use in Texas "appears" to be about the same as it is in other states and may even be higher than in states with lower penalties. A second way of evaluating the laws was to see whether they had reduced the flow of marijuana that came across the Mexican border. They had not. Smith quoted a Bureau of Narcotics and Dangerous Drugs letter to the committee that said: "It appears the felony possession penalties in the present Texas drug laws

have not had an appreciable effect on reducing the flows of illegal drugs across the Mexican border."

Smith then focused on Nebraska, the state that had adopted a seven-day maximum penalty for first-offense possession back in 1969 and had reaffirmed it in 1971 by a unanimous vote of the legislature. He visited Nebraska for the Kennard Committee in January 1972. Law enforcement officials there told him that the liberal possession law had not resulted in any greater increase in use of either marijuana or hard drugs than that which was occurring in neighboring states with a one-year misdemeanor penalty. "Nebraska," wrote Smith, "has not become a 'haven' for marijuana users, nor a magnet for heroin addicts." Data from Nebraska, he said, also "indicate" a lower rate of marijuana use than in Texas, even though the *Cannabis sativa* plant grows wild over thousands of acres across Nebraska.

In conclusion, Smith discussed the policy recommendations open to the committee. Legalization, he said, was out. Though it would alleviate some of the most serious problems associated with marijuana, including underworld involvement in the marijuana distribution system, legalization was "not a realistic possibility for Texas at this time." Moreover, he said, a state could not legalize a substance which it was a crime to possess under federal law.

Judicial discretion was a possibility. It had the advantage of convenience but the disadvantage of not distinguishing between two "very different types" of acts—possession and sale. From Smith's perspective, the trouble with judicial discretion was that it purposely retained "an artificially high" penalty for possession in order to provide a mechanism for convicting persons for sale when the authorities suspect they are "sellers" but cannot prove it. This alternative, said Smith, "violates the historic legal precept that a man is innocent until proven guilty."

Misdemeanor jail sentences were a third possibility. They maintained the criminal sanction against the use of marijuana without labeling convicted users as felons. Although some forty states had passed misdemeanor laws carrying maximum penalties of one year in jail, in Smith's judgment the length of sentence bore "no significant relation" to success in deterring marijuana use, and therefore the Nebraska seven day maximum penalty "appears adequate." The Nebraska penalty also had been recommended by the U.S. House of Representatives Select Committee on Crime. Other "viable alternatives" to the one year maximum, said Smith, were New Mexico's penalty (15 days), Pennsylvania's (30 days), and Massachusetts' (6 months with automatic probation).

The next alternative—establishing misdemeanor fines—was a way of continuing to express official disapproval of marijuana use

while insuring that nobody would go to jail for merely possessing the drug. Smith said that many states were "beginning to rely heavily" upon this procedure and that in some states the fine was equivalent to the fine for underage possession of alcohol. Misdemeanor fines also had received support from the staff of the National Commission on Reform of Federal Criminal Laws. In its Study Draft of a New Criminal Code, the staff proposed that possession of marijuana for personal use should be considered an infraction. Persons so charged would be placed on probation, receive a conditional discharge,[10] or be subjected to a maximum fine of $500. The April 1970 Interim Report of the LeDain Commission of Inquiry into the Nonmedical Use of Drugs (the Canadian national commission) made a similar recommendation. Pending approval by the commission in its final report, the interim report said that possession should not be subject to criminal penalties and suggested a $100 maximum fine for this offense.

Decriminalization was the last alternative. The removal of criminal penalties, said Smith, was "the most substantial step" any state could take. Such action was not without precedent. During prohibition only five states prohibited possession of alcoholic beverages for private use in the home although the sale of alcoholic beverages was forbidden. Two prominent national organizations had already recommended decriminalization. Both the National Commission on Marihuaana and Drug Abuse and the American Bar Association's Committee on Drug Abuse had proposed that there be no criminal penalties whatsoever for possession for private use in the home. A decriminalization policy, Smith said, rested on two premises. First, the social and medical effects of marijuana have not been proved to be so serious or harmful that they warrant making criminals of people who merely use the drug. Second, marijuana has not been shown to be safe enough for the state to permit it to be sold and distributed legally. Decriminalization might, as its opponents argued, encourage greater use of marijuana. But its proponents contended that current laws had not discouraged use, and in any event that the costs of criminalization outweighed the disadvantages that might occur from increased use.

Smith also felt that penalties for sale and distribution of marijuana needed "additional attention" in Texas. Noting that many states, and the federal government, treated nonprofit transfers of small amounts as misdemeanors, he said the life sentences presently permissible under Texas law for sale of marijuana were,

[10] Conditional discharge differs from probation in that no judgment of guilt is entered if the person satisfactorily meets the conditions imposed by the court. People are placed on probation only after a judgment of guilt has already been entered on their records.

83-313 O - 77 - 49

like the possession penalties, "grossly out of line with other states." The federal maximum was five years. Among states that had revised their drug laws the usual maximum was three to five. Only ten states permitted sentences longer than ten years. "The central question now facing this Committee and the Texas Legislature," Smith summarized, "can be put this way: In view of the present state of knowledge about marijuana's medical and social effects, should a person go to jail merely for using it? The consensus of medical and legal authority in the English-speaking world answers this question overwhelmingly in the negative."

Griffin Smith's judgment that marijuana reform was the drug issue uppermost in most people's minds, regardless of how they felt about it, proved to be correct. One of the first signs came during the public hearings the Kennard Committee held in the spring of 1972. Nearly every witness who testified wanted to talk about marijuana even if he had been invited to speak on other matters. There were some rumblings to the effect that Kennard was "staging" the hearings, inviting only people who agreed with him. Still, the general support for marijuana reform that Longoria had failed to find in the legislature a year ago was now being generated in public hearings. Thus, in Houston, Mrs. James Tinsley, chairperson of the Houston School Board, and Dr. George Beto, director of the Texas Department of Corrections, advocated reducing the possession penalty to a misdemeanor, with Dr. Beto's remarks receiving the most attention because he charged that the state's harsh drug penalties made Texas the "laughingstock" of the nation. "We have," Dr. Beto told the committee, "an increasing number of these young middle-class marijuana offenders in the Department of Corrections, and my personal association with them indicates to me that there is not a clear cut conviction in their minds and hearts that they've done anything wrong. They don't propose to change their manner of living once they come out of the penitentiary because they don't see anything wrong with what they are doing. And to send them to the penitentiary with the idea that we're going to rehabilitate them is I think a vain hope."

In Dallas, marijuana reform was advocated by Dr. Charles O. Galvin, dean of the Southern Methodist University law school and a member of the National Commission on Marihuana and Drug Abuse (Shafer Commission). Accompanied by commission staff, Dr. Galvin reiterated the commission's recommendation that both private use and public possession of under one ounce of marijuana be decriminalized or legalized, but that the law prohibiting the sale of marijuana remain in effect. Dr. Galvin said the Shafer Commission was working to "demythologize" the subject of marijuana, and that if the Texas legislature was to find a reasonable

solution "there needs to be a rational and unemotional discussion of the problem."

Support for marijuana reform could also be found outside the Kennard Committee hearings. The legislature was going into special session in June 1972, and in April the board of directors of the State Bar of Texas approved a resolution asking Governor Preston Smith to seek a reduction of first-offense possession to a misdemeanor. (He didn't.) Meanwhile, police chiefs in some of the larger cities were admitting in private that they wanted to see the possession law changed because of the manpower hours they were wasting trying to enforce that law, and several said it in public. Still there was opposition. After the Bar's directors approved their resolution, Texas district judges voted 26 to 25 to kill a similar resolution. And a committee of Texas district attorneys wasn't quite willing to see the penalty reduced. They advocated revising the state's criminal code to include judicial discretion.

Nonetheless, marijuana reform was on the verge of becoming respectable even if nobody could quite agree on the specifics. To a large extent this was happening because many people in the criminal justice and law enforcement systems felt the existing law would soon be unenforceable. Some juries already were refusing to convict for both possession and sale, or else they were making decisions prosecutors found totally irrational, freeing one person found with one-hundred pounds of marijuana and sending to prison for ten years another person who had five pounds. A partial explanation was that in Texas a defendent could choose not only whether he wanted to be tried by a judge or jury but which of the two he wanted to pronounce sentence if he were found guilty. That situation, said the prosecutors, had been aggravated by the reluctance of many working-class and older people to accept jury duty. More and more juries were composed of young people with lots of leisure time on their hands.[11]

By the end of 1972, the central question, as Griffin Smith had noted earlier, wasn't whether the 1973 legislature would accept marijuana reform. It was whether the legislators would accept the reform being proposed by the Kennard Committee. If they did, then Texas would go from one extreme to the other—from

[11] This matter of jury behavior reached a peak in the U.S. District Court in Laredo on February 2, 1973. A ten-man, two-woman jury acquitted a taxi driver charged with possession of 134 pounds of marijuana, who reportedly admitted to every element of the charge in his testimony. An enraged federal judge told the jurors that in his twenty years on the bench he had never seen "a more stupid, illogical and ill-advised verdict," that this type of decision was "responsible, in my judgment, for the increasing crime rate everywhere," and that he would never permit any of the twelve jurors to serve again in his court. ("Judge Assails Jury Clearing 'Pot' Defendant," *Washington Post,* February 3, 1973.)

having the nation's harshest penalty for possession of marijuana to having the nation's softest. The Kennard Committee's final report had proposed a policy of decriminalization which, besides being a step no other legislature had taken, went beyond the one-ounce limit advocated by the Shafer Commission. It sought to decriminalize all private possession of any amount by an adult and all public possession of less than three ounces by an adult. "This is not 'legalization,' said the report, "any more than alcohol was legalized under similar regulations during prohibition. It is simply a recognition that while we do not yet know enough about marijuana to make the irreversible decision of institutionalizing its sale, we do know enough to say that individuals who simply use it should not be treated as criminals." [12]

Sale, however, would remain a felony, as would the sale, gift, or transfer of any amount to a minor. But the maximum penalty for any marijuana felony was to be only three years and/or fines of up to $2000, instead of life imprisonment with no possibility of fines. Casual transfer of marijuana among adults was not considered an offense of any kind.

Possession of more than three ounces with intent to sell was also to be a felony, but possession of less than three ounces with intent to sell was a misdemeanor, punishable by maximum penalties of six months in jail and/or fines of up to $1000. For many years possession with intent to sell had not been an offense in Texas. The Kennard Committee proposed reestablishing it for two reasons. First, to indicate that a person who possessed a drug with intent to sell was "logically no different than a person who had completed his sale." Second, to give prosecutors a reason for supporting a lower penalty for simple possession. In the absence of a possession with intent law, prosecutors had argued that they needed stiff possession penalties to cover those cases where people were known to be selling marijuana but where the prosecutors never had enough evidence to prove the case conclusively.

Other marijuana penalties proposed by the Kennard Committee were these:

- Simple possession of more than three ounces by an adult in public, or smoking or other ingestion of marijuana in public: misdemeanor fine ($100 maximum). (Two years to life in existing law.)

- Simple possession of any amount by a minor: misdemeanor fine ($100 maximum) and/or work assignment. (A delinquency

[12] *Final Report: Senate Interim Drug Study Committee,* 62nd Texas Legislature, State Capitol, Austin, Texas, January 1973, p. 24. Texas had prohibited the sale but not the possession of alcohol.

charge in existing law, with the possibility of confinement in the juvenile reformatory.)

• Cultivation of the marijuana plant: misdemeanor jail sentence (six months maximum) and/or fine ($1000 maximum). (Two years to life in existing law.)

In a marijuana-related recommendation, the committee proposed an end to vehicle seizure and forfeiture in cases of simple possession of a controlled substance. The law, the committee said, should be used only against vehicles actually involved in carrying illegal drugs and against vehicles which had been structurally altered to make it easier to conceal those drugs. Like the federal government and many states, Texas had a vehicle forfeiture law aimed at removing from circulation those vehicles used in drug traffic. But according to the committee, in recent years the law had only been used in marijuana possession cases. "In not a single instance (during an eight-month period that ended in June 1972), said the report, "has the forfeiture law been used against hard drug possession or traffic. Even more astonishingly, in not a single instance has it even been used against the marijuana traffic. Despite the fact that the commercial marijuana traffic passing through Texas is measurable in the hundreds of tons annually, only two seizures were recorded for amounts in excess of one ounce, and these were for five ounces and one pound. The remainder involved the equivalent of no more than ten cigarettes and some involved less than one cigarette."

One committee member, Republican Senator O. H. (Ike) Harris of Dallas, refused to sign the report, but no minority views were submitted. Instead, the report noted that "a minority" felt that Texas should continue to prohibit marijuana through the sanction of criminal law, while imposing fines of $100 or $200 in most instances, but that the majority opposed this position. *"We cannot see,"* the report said,

any justification for imposing a jail sentence—much less a prison sentence—upon someone whose only offense has been the personal use or possession of marijuana. No witness who has appeared at our hearings has offered any rational explanation of why a jail sentence is an appropriate penalty for such behavior, and we do not believe that such an explanation can be made. The Committee would default on its obligations to the 63rd Legislature if it recommended placing individuals behind bars for smoking marijuana, in view of the glaring absence of logical justification for doing so. We recognize that the proposed changes constitute an abrupt and sweeping shift from the way we in Texas have previously punished this activity; but we cannot justify a misdemeanor jail sentence as a halfway measure to conceal the fact that our existing marijuana laws have been a brutal and tragic error. (Emphasis in original.)

4 The Governor's Bill 1973

The Kennard Committee's marijuana recommendations received so much public attention there was a tendency to forget that the report contained many other proposals which, while not as unique to the nation as the marijuana measures, still represented fundamental and dramatic changes for Texas.

To begin with, all offenses for simple possession, regardless of the substance involved and regardless of whether it was the first, second, or third offense, were classified as misdemeanors and carried a maximum penalty of six months and/or $1000, or civil commitment to a treatment program. Amphetamines, methamphetamines, and barbiturates already were misdemeanors on first offense, but the penalty was stiffer (thirty days to two years and/or fines of up to $3000) than what the Kennard Committee had proposed, and second offenses carried felony sentences of two to ten years. The minimum second-offense penalty for possession of heroin, opiates, and cocaine also was higher (ten years instead of five).

In proposing these actions the committee said it was following federal law and the professional judgment of Dr. George Beto, the director of the Texas Department of Corrections who had recommended misdemeanor penalties for drug possession offenses at the committee's hearings. That it was following Dr. Beto was true enough. "Some people," he had testified, "labor under the wholly false impression that severity of punishment is a deterrent to crime. It's my considered opinion that the severity of punishment has little to do with deterrence." That it was following federal law was only partially true. The Federal Controlled Substances Act of 1970 did indeed categorize all first-offense possession as a misdemeanor. Second-offense possession, however, was a felony and carried maximum penalties of two years in prison and/or fines of up to $10,000.

The committee acknowledged that the legislature might balk at reducing possession of heroin to a misdemeanor. But that was

the only point on which it was willing to give, as the following paragraph from the report made clear:

If the Legislature wishes to retain felony penalties for simple possession of any drugs, it is our opinion that the *only* drug which should carry such severe consequences is heroin. A penitentiary sentence does little or nothing to help the drug user, but it does keep him off the street, and in the case of an expensive addictive drug like heroin, society may reasonably feel that the reduction in criminal activity justifies putting the sick addict behind bars and forgetting him. (Emphasis in original.)

The committee then drew a bead on the 1971 legislative action that raised possession of hallucinogens, particularly LSD, from a misdemeanor to a felony.

Such considerations clearly do not apply, however, to the simple possessor of inexpensive or non-addictive drugs, since such an individual rarely if ever must resort to crime to insure his supply of the drug. *We emphatically reject the notion that simple possession of hallucinogenic drugs, including LSD, be treated as a felony.* We consider LSD to be a highly dangerous drug for some persons; but the fact that it is dangerous does not mean its possession should be a felony. It is one thing to send a heroin user to prison simply to keep him off the street and prevent him from committing further crimes. It is quite another to take a young user of hallucinogenic drugs whose drug-taking is not associated with criminal activity and send him to Huntsville to make mops. A felony penalty can conceivably be justified as a primitive but effective way to protect society from the crime an addict can commit; it can never be justified as a way of protecting an LSD-user from himself. (Emphasis in original.)

The Kennard Committee also proposed reductions in most penalties for manufacture, delivery (sale), and possession with intent to deliver. Obviously these changes occurred because a majority of the committee felt them necessary. But their roots could be traced to a committee decision to recommend two separate drug schedules. One was a *regulatory* schedule in which drugs were classified according to medical usefulness and potential for abuse—essentially the same classification found in the Uniform Act and adopted by the federal government and by most states. The other was a *penalty* schedule in which drugs were classified according to social impact and relative harmfulness and in which heroin was placed in a category by itself; amphetamines, methamphetamines, opiates, and cocaine were placed in a second category; and barbiturates and hallucinogens were placed in a third category.

Heroin sale penalties were two years to life and/or fines of up to $20,000 for the first offense and $40,000 for the second offense. The maximum penalty of life imprisonment was a carryover from

existing law, but the two-year minimum was a reduction from the existing penalties of five years for the first offense and ten years for the second. The fines were new. At the time, Texas law did not include any fines as penalties for offenses involving manufacture and delivery.

Penalties for sale of the second category of drugs (amphetamines, methamphetamines, opiates, and cocaine) were two to ten years and $10,000 for the first offense and two to twenty years and $20,000 for the second. Amphetamines and methamphetamines already carried a two to ten year penalty, but the twenty year maximum for second offense was new. Penalties for opiates and cocaine, however, were drastically reduced. Existing law set them at five years to life for the first offense and ten years to life for the second.

Barbiturate and hallucinogen sale penalties were two to five years and $5000 for the first offense and two to ten years and $10,000 for the second on the Kennard report. Both were two to ten years in existing law.

In addition to these penalties, the Kennard report also included a recommendation that Texas adopt the "continuing criminal enterprise" provision found in federal law as a means of cracking down on the "ringleaders" of the organized heroin traffic. Unlike federal law, however, the recommendation was limited to heroin offenses. Penalties proposed were ten years to life for the first offense and twenty years to life for the second, with no prospect of parole or probation and with forfeiture of all property used in the enterprise, as well as all profit gained. Three more provisions new to Texas law were conditional discharge for first offenders, expunction of records, and resentencing.

Conditional discharge, which already existed in federal law and the laws of thirty states, was a way for first offenders to avoid criminal records and was mandatory in cases of first-offense possession by a minor. Under the terms proposed by the Kennard Committee, individuals with no prior drug offense other than simple possession would have all proceedings dismissed following completion of a probationary period not to exceed two years. No judgment of guilt would be entered in a person's record during the probationary period.

Expunction, a procedure for deleting criminal records, would be available to (*a*) first offenders who received conditional discharge, (*b*) minors who were convicted of marijuana possession and who committed no further drug offense for at least six additional months, (*c*) people found not guilty of possession or delivery charges, and (*d*) people convicted of first-offense posses-

sion of marijuana under existing law who had served their sentences.

The resentencing provision specified that any first offender convicted under previous law and still serving time could petition the court of original jurisdiction for resentencing under the new penalty provisions for the same offense. In other words, a person who had served six months of a two year possession sentence could ask the court to set him free on the grounds that he already had served the maximum sentence under the new law (assuming the Kennard proposals passed). The committee said it found "nearly unanimous agreement" with this position. "We should not," the report said, "permit individuals to languish in prison for many years when others who now commit the same act do not face prison at all." Courts, however, were required to determine whether individuals petitioning for resentencing had been convicted of simple possession or of possession with intent to deliver, and then to resentence them accordingly.

In the Kennard Committee report, these and all other recommendations—those relating to the regulation and inspection of the licit drug industry as well as education, research, and treatment—were to be the composite parts of a single piece of legislation, the Texas Controlled Substances Act. And a new agency, the Texas Drug Abuse Authority, was to administer the new act. Though aware of the "undesirability of creating yet another state agency," the committee felt "the eventual result" of this change would be to reduce, rather than to proliferate, state agencies. Moreover, the new agency had distinct advantages in the area of registering, regulating, and inspecting those people, businesses, and institutions licensed to deal in controlled substances. "Because," the committee noted, "this procedure requires a centralized registering and record-keeping agency—one which is able to note the transfer of controlled substances from one element in the chain of distribution to another—we have concluded that the power of registration should not be vested in any existing professional regulatory board but should instead be placed in a new, neutral state agency. Our professional licensing boards represent existing vested interests, no one of which should have registration power over persons outside its profession."

Yet the significance of the Kennard Committee's non-marijuana proposals went beyond the fact that they represented the first attempt to develop a comprehensive approach to drug legislation in Texas, or that they were much more liberal than many existing laws. A more compelling reason for paying attention to the Kennard proposals was that Dolph Briscoe, the newly-elected gover-

nor of Texas, had said he would support marijuana reform *only* if it occurred within the context of an overall revision of the state's drug laws.

Briscoe, a forty-eight-year-old rancher and banker from Uvalde, had been a state representative in the 1950s and an unsuccessful candidate in the 1968 Democratic gubernatorial primary. He was the surprise winner of the 1972 primary and went on to defeat former Republican State Senator Henry C. (Hank) Grover by 100,000 votes, a close election by Texas standards. Lieutenant Governor Ben Barnes had been the Democratic favorite, but both he and the incumbent governor, Preston Smith, were damaged by the Sharpstown case, a stock swindle that rocked Texas politics that year and put the voters in a turn-the-rascals-out frame of mind. Barnes and Smith finished a low third and fourth, respectively (18 and 8 percent). Representative Frances T. (Sissy) Farenthold of Corpus Christi, the liberal candidate, was second with 28 percent, just enough to force Briscoe (44 percent) into a runoff, which he won by 210,000 votes.

As a campaign issue, marijuana reform lacked the "sex appeal" of Sharpstown and other issues. Still, all four Democratic candidates had gone on record as favoring a change in the existing law. As expected, Farenthold's position was the most liberal. She wanted the Nebraska-type law she had first proposed during the sessions of the 1971 legislature—a maximum penalty of only seven days for anyone convicted of first-offense possession. Barnes also reiterated his 1971 position, making possession of small amounts for personal use a misdemeanor, and as the campaign progressed he offered up the alternative of judicial discretion, just as he had in 1971. His campaign brochure, though, stopped short of stating just what he would do if elected governor. "I do not believe," it quoted him as saying, "that the solution to the drug problem is to throw all of those who have experimented with marijuana in jail. I feel that felony punishment for drug experimentation is too severe." Governor Smith, who had actively campaigned against marijuana reform two years earlier and had hinted to Representative Longoria in 1971 that he might veto a marijuana reform bill, finally came around and reversed his position. He said he would support reducing the felony penalty to a misdemeanor. But he did it so quietly that later many journalists in Texas couldn't remember whether Smith even took a position on marijuana reform. Briscoe completed the picture by acknowledging, during the course of interviews, that he was interested in a quantitative approach to marijuana reform so that the possession law would distinguish between users and "pushers." He also laid down his condition—marijuana reform only as part of a comprehensive rewriting of the state's drug laws. Briscoe's campaign

brochure contained a quote about drug abuse but did not mention marijuana specifically: "[drug abuse] is unfortunately a growing problem in our state. We must not degenerate into a drug society. Therefore, there will be no coddling of drug pushers and addicts. We must work with first offenders to help them understand the problem, but the hardened criminal must be prosecuted to the fullest extent of the law." Hank Grover, the Republican candidate, had regularly voiced his approval of the status quo and said he would veto any marijuana reform bill that crossed his desk as governor.

As Briscoe's campaign statements indicated, he was taking a tougher position on drug legislation than the Kennard Committee had taken. And when he next spoke out on the subject, in a January 17, 1973, address to the legislature, he fleshed out the themes he had outlined in the campaign. The primary purpose of the drug legislation he would submit, Briscoe told the legislators, would be to crack down on pushers, to "expunge" them from society, as he put it. "A pusher who provides the means of subjecting an individual to the living death of heroin addiction might more kindly have shot the user in the temple," Briscoe said. He also wanted to restrict the use of drugs. "To the extent we can do so, within the confines of the Bill of Rights," he continued, "we simply must stop the use of dangerous drugs. . . . it is very important that the scale of penalties be structured to hinder, rather than encourage the traditional climbing of the ladder from marijuana and other less dangerous substances to hard drugs. In this connection, our efforts must be, while strengthening the penalties and improving the ability to relieve society of those at the top of the ladder, to encourage those who are beginning at the bottom to muster their will and stop the ascent."

Then came marijuana: "After we have a complete revision of our drug laws, after we have acted to cut off the drug supplies, after we have agreed on effective methods of dealing with pushers *in the harshest way we can,* then, and only then, should we consider a reduction of the marijuana penalty for first possession of *small* amounts of marijuana." (Emphasis in original.)

In February Governor Briscoe introduced his comprehensive drug bill. At a press briefing he reminded reporters that the legislation was written to "complement" the 1970 Federal Controlled Substances Act so that Texas law would "interlock" with federal law. He promised to "lobby hard—to work with all of the resources at my command." He also said he would appoint a blue ribbon task force to make "a continuing study of the drug problem and its possible solutions, including education, treatment and rehabilitation." But the "pushers" and the general availability of illegal drugs still were the governor's main priorities:

Texas is facing a tragic drug abuse problem and we must act promptly and decisively if we are to protect our children against the callous drug pushers, if we are to cut off the street corner supplies of illegal drugs, and if we are to remove the users of heroin and other harmful drugs from our streets.

My bill is designed to provide our law enforcement officials with the authority they need to control this trafficking in illegal drugs. This is the root of the drug abuse problem, and we are proposing the steps necessary to cut off the tentacles which are threatening to ruin the lives of thousands of Texans.

We must have the strict laws and harsh penalties against the drug pushers—those dealers in drug addiction and death—which my bill provides. The drug pusher shows no compassion when he approaches a youngster and offers to sell drugs to the child—and we will show no leniency when that merchant of despair is caught and brought before a court of law.

The bill provides the most severe penalties against those who would illegally traffic in drugs—either by the manufacture or the delivery of drugs.

Briscoe was true to his word. While the Kennard Committee recommended reducing most penalties, the governor proposed across-the-board penalty increases for all offenses, except for the possession of heroin, the opiates, and cocaine.

The most dramatic change involved possession of amphetamines, methamphetamines, and barbiturates. Misdemeanors in existing law, they were raised to felonies in Briscoe's bill, with the penalty for amphetamines and methamphetamines two to twenty years and no fines, and the penalty for barbiturates two to ten years and/or fines of up to $5000. Possession of hallucinogens, which the 1971 legislature has already boosted from a misdemeanor to a two to ten year felony, had a twenty year maximum penalty in the Briscoe bill. Possession of heroin, opiates, and cocaine, two years to life offenses in existing law, was dropped to two to twenty years.

In the area of manufacture and delivery, the Briscoe bill increased the heroin, opiate, and cocaine minimums from two years to sixteen years and kept life imprisonment as the maximum penalty; it raised amphetamines, methamphetamines, and hallucinogens from two to ten years to five years to life; and it increased the maximum for barbiturates from ten years to twenty years. The barbiturate minimum stayed at two years. Again there were no fines, just as there were none in existing law. Possession with intent to deliver—and Briscoe wanted this offense reinstituted as much as Kennard—carried the same penalties as the other two offenses.

Just as Kennard's penalty reductions could be traced in theory to a separate drug schedule for penalty purposes, so Briscoe's increases could be traced in theory to the absence of one. Hallucinogens, Schedule I non-narcotics on the regulatory schedule, were not changed for penalty purposes, while amphetamine and methamphetamine penalties were stiffer than they might have been, because Briscoe's bill raised these substances from Schedule III substances, their position in the Uniform Act, to Schedule II non-narcotics in the new legislation.

The tone of the Briscoe bill softened when it came to marijuana (a separate classification in both the Kennard and Briscoe proposals). None of the provisions went as far as the Kennard report had recommended, but compared with existing law the Briscoe bill represented major change.

Eight ounces was to be the dividing line between a misdemeanor and a felony. Anything at or below eight ounces would be a misdemeanor, subject to a maximum penalty of one year in jail and/or fines of up to $2000. If, however, a person had more than eight ounces, then, said the Briscoe bill, "it is presumed that the marijuana was possessed with intent to deliver it." Anybody so charged had the opportunity to rebut the presumption in court. But if the charge stuck and the person was convicted, he was a felon and faced a prison term of from two to ten years—a considerably stiffer penalty than the federal maximum of five years for roughly the same offense, but still lower than the two years to life for possession and the five years to life for delivery under existing Texas law. The presumption also applied to *mixtures* of marijuana and other substances whose total weight was more than eight ounces. As in federal law and most state law, the misdemeanor penalty was limited to first offenses only. Second and subsequent possession offenses of eight ounces or less carried prison terms of two to ten years and/or fines of up to $5000.[13]

When the Briscoe bill had dealt with marijuana and got back to the more general provisions, the "get tough" approach reappeared, even though these provisions had a direct bearing on marijuana. All in all, there were six. Only one lowered a penalty; another maintained an existing penalty; a third created a new offense; and three increased penalties.

[13] Eight ounces seemed like a high cutoff point in view of Briscoe's statement that he favored reducing the penalty for first-offense possession of "small amounts" of marijuana. However, his staff felt that eight ounces was a better cutoff point than four ounces or two ounces because an individual conceivably could have eight ounces of marijuana for his or her own personal use. Anyone who had more than eight ounces, the staff believed, possessed it for purposes of sale, gift, or transfer.

Possession of paraphernalia was the offense with the reduced penalty. In existing law, possession of any device or contrivance, from a hypodermic needle to a smoking pipe or a roach clip, was a felony, punishable by a prison term of two years to life. The Briscoe bill split this single offense into two offenses, one a felony, the other a misdemeanor. Possession of any instrument used for the "administration by subcutaneous injection" of a Schedule I, II, or III substance was a felony, carrying a penalty of two to twenty years. Possession of smoking paraphernalia was a misdemeanor, carrying maximum penalties of six months in jail and/or $1000 in fines. (The Kennard bill treated the former offense as a misdemeanor and did not even include the latter as an offense.)

Vehicle forfeiture was the carryover from existing law. Briscoe's provision did not contain the two recommendations made by the Kennard Committee: that forfeiture be limited only to vehicles that had been structurally altered to conceal controlled substances and that it not include cases of simple possession. Instead, it provided for the forfeiture of "any conveyance, including aircraft, vehicles, vessels, trailers and railroad cars . . . used or intended for use to transport or in any manner facilitate the transportation" of any controlled substance.

A provision regarding the maintaining of premises was new to Texas law. This established penalties of two to ten years and/or fines of up to $5000 for those who maintained any kind of premises "resorted to by persons using" controlled substances, or used for "keeping and selling" controlled substances. Aimed at eliminating pot parties, this provision was due in part to the fact that the Texas Court of Criminal Appeals had been overturning possession convictions of people who had attended pot parties but had been in an adjoining room, away from the marijuana. The Uniform Act had a similar provision but federal law did not.

The three offenses with increased penalties were manufacturing controlled substances, distributing to a minor, and repeat offenses.

By definition, manufacturing meant the "production, preparation, propagation, compounding, conversion or processing" of a controlled substance, and "production" meant the "planting, cultivating, growing, or harvesting" of a controlled substance. So the "cultivation" of marijuana, a two years to life offense in existing law, was raised to five years to life (the penalty for manufacturing) in the Briscoe bill.

Distribution to a minor underwent a slight change in definition as well as an increase in penalties. Under existing law, anyone

twenty-one years or older who made narcotics (including marijuana) available to a minor, or who involved a minor in making narcotics available to a third person, faced a prison term of ten years to life. The Briscoe bill said that anyone twenty-one and over found guilty of "delivering" a controlled substance to someone under eighteen would receive a prison sentence of sixteen years to life.[14]

Theoretically, repeat offenses were covered under the enhancement provisions of the Texas penal code and would be covered under the proposed new code. But the existing narcotics law included its own enhancement penalties. Any second or subsequent offense involving marijuana was a ten years to life prison term. The Briscoe bill made these penalties tougher. Anyone found guilty of a second felony of any kind, drug or otherwise, including "any felony under a prior law repealed by this act," received the maximum sentence for the drug offense if convicted. In other words, since possession of marijuana with intent to deliver was a two to twenty year felony, a second conviction on the same charge was an automatic twenty years. A second conviction for distribution to a minor, or a first conviction on that offense after a previous conviction for another felony, meant an automatic life sentence, since the penalty was sixteen years to life. Cultivation of marijuana was also an automatic life sentence the second time around, because manufacture carried a five years to life penalty. In addition, all third offenses carried an automatic life sentence.

Finally, the Briscoe bill instituted procedures for licensing and regulating the manufacture, distribution, and dispensing of controlled substances. Diversion—the channeling of drugs from legal to illegal sources—had become "a very significant" issue to Briscoe, and the Department of Public Safety (DPS) had about thirty cases, mostly involving pharmacists or physicians, under investigation at the time Briscoe's staff began to prepare the drug bill. For the most part Briscoe followed the Uniform Act provisions, with the only limitation being the amount of money and manpower available to enforce this section. However, the Brisco bill did include one important change. In the Uniform Act, in federal law, and in most state law, warrants were needed before state agents could inspect the records and premises of a licensee. But in May 1972, in a case involving registration and regulation of firearms (U.S. v. Biswell, 406 U.S. 311 [May 1972]), the U.S. Supreme Court ruled that agents need not obtain warrants in order to conduct administrative inspections so long as

[14] In 1973 the legislature dropped the legal age for an adult from twenty-one to eighteen.

the inspections were limited to matters previously specified in the registration statutes. The federal Bureau of Narcotics and Dangerous Drugs (BNDD) had begun to follow this interpretation in its own inspections, and Briscoe's drafters, working with BNDD personnel, decided to formalize the policy by writing it into law. The clause requiring warrants was dropped and a provision added that made it impossible for anyone to receive a license unless he signed a consent form granting the DPS "the right" to inspect his records and premises.

Two days after the Briscoe bill was introduced, Kennard held a press conference at which he announced that Senator Chet Brooks of Pasadena and Representative Andy Baker of Galveston, a fifty-eight-year-old grandfather who favored legalizing marijuana, would co-sponsor the committee's bill.[15] The Brooks-Baker bill differed from the committee proposals in only one respect: possession of heroin was a felony instead of a misdemeanor, with maximum penalties of three years and $2000. The main news at the press conference was what Kennard had to say about the Briscoe bill. He called it "an out-and-out fraud" as a drug reform package. In a statement aimed at parents, Kennard criticized nearly every one of Briscoe's marijuana and marijuana-related provisions, including the following:

- The one year maximum jail sentence for first-offense possession. ("What does jail have to do with marijuana?")

- The penalties for possession of roach clips and smoking pipes. ("The governor's bill would not only let your son be locked up for a year as a first offender; it would add another six months for each and every pipe or clip he possessed. He wouldn't even have to *use* them—all he has to do is *intend* to use them, and there's another six months or twelve or more.") (Emphasis in original.)

- The broadly defined delivery offense which did not distinguish between actual sale for profit and casual transfer of small amounts. ("Marijuana is a social drug like alcohol. You don't smoke it alone. But the moment your son hands that cigarette to his best friend, the governor's bill says he is a felon. It treats him as harshly as the biggest pusher in Texas. Your son can go to the penitentiary for up to twenty years just for handing that cigarette to his friend.")

- Repeat offenses. ("If your son is convicted again of nothing more than possessing marijuana, he must be sentenced to a

[15] After twenty years in the House and Senate, Kennard was defeated in the 1972 Democratic primary over matters having no relation to marijuana or drugs. He moved to Austin and remained active in drug legislation.

minimum of ten years in the penitentiary. If this had happened in one of our neighboring states like Nebraska, for example, he could get off with fourteen days as a second offender.")

- Maintaining premises. ("If you go ahead and give your son permission to smoke at home, you are committing a felony yourself. You can get two-to-ten years in the penitentiary, plus a $5000 fine, for letting your youngster smoke in your home. P s, of course, the penalty he himself gets. Is this reform, or is this an obsession?")

- Vehicle forfeiture. ("The state needs not even prove beyond a reasonable doubt that the cigarettes in your son's pockets were actually marijuana. Your car can be taken away—lock, stock and barrel—even if he is found not guilty.")

Kennard also attacked the Briscoe bill because it lacked provisions for resentencing and expunction of records; because it didn't distinguish between the big-time heroin dealer engaged in organized criminal enterprise and the small-time pusher who sold to support his own habit; because it granted the DPS, a law enforcement agency, the power to conduct drug education programs and to supervise drug research; and because it forced doctors to agree to inspections without warrants before they could obtain licenses to prescribe amphetamines, barbiturates, and other drugs.

"Do you think this is 'reform?'," Kennard asked. "Do you think this sort of penalty structure really represents the best we can do with marijuana? Does it show any comprehension of how marijuana actually exists as a social drug? Does it reflect any awareness of the scientific knowledge we have about marijuana? What good purpose is served by tinkering around with something called the 'first-offense penalty for possession of small amounts of marijuana' in a bill that slips these indefensible evils between its pages? The governor's bill is a publicity stunt to give the illusion of marijuana reform while it raises the penalties for simple possession of other drugs to ridiculous heights and turns over the bulk of our drug control effort to the police.

"Has the day come," Kennard went on, "that the police can conduct searches without a warrant in the name of drug control? Has the day come that the possession of a diet pill or a barbiturate—something that now carries a penalty of as little as thirty days—shall be punishable by life imprisonment? [16] Has the day come when the Department of Public Safety shall be vested with

[16] The scenario Kennard envisioned was a housewife who occasionally shared her diet pills with a neighbor. Technically, that was possession with intent to distribute, and it carried a maximum sentence of life imprisonment.

83-313 O - 77 - 50

the power to conduct drug education programs and supervise our drug research? The governor's bill does all of these things. It is a dangerous bill because it pretends to be something it is not. It pretends to be a reform of our drug laws. In reality, it perpetuates a criminal law approach that reeks of failure. If it is not a step in the direction of a police state, it will do until something else comes along."

Coming from a man who had tried to avoid emotional responses to drug problems and issues, and who had praised his own bill for "not succumbing to hysteria," Kennard's statement was startling to say the least. But, said Kennard, Briscoe's bill angered him, and he was willing to be dramatic—melodramatic even—to focus attention on what he felt was wrong with the Briscoe bill. Kennard didn't really quarrel with Briscoe's personal views, he said some time later in an interview. His quarrel was with the way, in his judgment, Briscoe and his staff had used the marijuana issue. As Kennard saw it, Briscoe, having supported George McGovern at the Democratic National Convention, needed to stake out some solid conservative positions to cut down his losses among Texas Democrats. Given the weakened political positions of Barnes and Preston Smith, Briscoe became, either actively or by default, a rallying point for all those who wanted to keep change to a minimum and maintain a hardline approach to drugs. What made this particularly distressing to Kennard was his feeling that the 1973 legislature might have been persuaded to accept decriminalization of marijuana if "the governor had exercised some skilled leadership in this direction instead of depending for guidance on a staff that lacked any real knowledge about drug problems and issues."

Kennard based his surmise on statements contained in the campaign biographies of House and Senate candidates and on some post-election polls and interviews that appeared in Texas newspapers. The *Dallas Morning News,* for example, reported that marijuana reform was the only issue on which members of the 63rd Legislature were in almost total agreement. The *News* had sent questionnaires to members of the new legislature, and 77 of 78 who responded said they favored reducing the first-offense penalty to a misdemeanor. The *Houston Chronicle* reported that during a televised bipartisan caucus the Harris County delegation "overwhelmingly" supported reducing the penalty for first-offense possession. United Press International sent out a story saying that 36 of 51 legislators favored a penalty reduction.[17] And a survey by the recently formed Texas office of the National Organiza-

[17] "Prospects Appear Excellent for Reduced Marijuana Penalties," *Dallas Morning News,* January 21, 1973; "Agree on Penalty Reduction," *Houston Chronicle,* January 5, 1973; UPI, quoted in *Dallas Morning News,* January 21, 1973.

tion for the Reform of Marijuana Laws (NORML) claimed that 27 of 29 senators and 77 of 80 representatives (there are 31 senators and 150 representatives in the Texas legislature) opposed the present felony penalty.

Though not conclusive, Kennard said the surveys and polls indicated much broader legislative support for marijuana reform than he thought existed. Furthermore, this was literally a "new" legislature. In the wake of Sharpstown, the voters had done a wholesale job on their elected representatives as well as on their gubernatorial candidates. Fully one-half of those senators and representatives who came to Austin in January 1973 had been elected for the first time, with many liberal Democrats replacing conservatives in both the House and the Senate.
But Roy Coffee, Jr., a thirty-five-year-old attorney who had been Briscoe's Dallas campaign manager before becoming his chief legislative aide, doubted that legislative support for marijuana reform was as substantial as Kennard seemed to think. Those newspaper accounts, said Coffee, focused mostly on urban legislators, while Texas remained heavily rural in spirit if not in fact. Many legislators, from small towns and cities as well as rural districts, wanted no change at all. In their view they had no marijuana "problem," and the reason they didn't was the deterrent effect of the two years to life penalty. Still other legislators, said Coffee, polled their districts and found strong sentiment for keeping the felony penalty. (As late as several weeks into the session, Representative Tim Von Dohlen, age twenty-nine, a pharmacist and attorney from Goliad who was the primary House sponsor of the Briscoe bill, asked 7,000 of his 77,000 constituents if they favored reducing the penalty for possession of marijuana from a felony to a misdemeanor. About 1,000 replied; those who did were two to one *against* any change. Von Dohlen conceded that the phrasing of the question influenced the vote. Had he asked if they felt it was fair for someone to receive a life sentence for having a single marijuana cigarette, the results probably would have been reversed. But Von Dohlen felt *that* question would not be "truly representative" of the marijuana issue either.)

What Kennard saw as narrow political manipulation of an issue, said Coffee, was in fact an accurate assessment on Briscoe's part of how the public and the legislature viewed marijuana. They probably could be persuaded to accept some kind of misdemeanor penalty for first-offense possession if someone they trusted proposed it, and if they were convinced that it was not the first step on the road to legalization. That meant forgetting about decriminalization, because, said Coffee, no matter how often Kennard or anyone else insisted that decriminalization was

not legalization, the public knew it was the first step in that direction and so did the legislature.

Liberals too had put the lid on the decriminalization issue. Anthony Friloux of Houston, president of the Texas Criminal Defense Lawyers' Association, provided an early indication in January when he told reporters that he liked the overall Kennard approach but feared that the decriminalization provision might kill the whole bill. Then Senator Chet Brooks, who had assumed Senate sponsorship of the Kennard bill, pretty well disposed of it in February, when he said, "I don't think the political climate is ready for decriminalization. But at least this will allow a full discussion of it." Not surprisingly, the one event that did not occur during the next three months was the "full discussion" of decriminalization Brooks had mentioned.

5 The House

The Briscoe and Kennard (Brooks-Baker) bills presented the Texas Legislature with a clear-cut choice, because the two men, despite their common goals of reducing the penalty for first-offense possession of marijuana and of seeking a comprehensive revision of Texas' drug laws, came at drug legislation from very different perspectives. Simply put, theirs was the difference between social control (Briscoe) and social change (Kennard), between accepting public opinion as it was (Briscoe) and trying to stimulate changes in public attitudes (Kennard). Thus, while Briscoe was calling for overall efforts to "expunge the pusher from our society," Kennard insisted that the law distinguish between the street addict who sells to support his habit and the big-time heroin dealer who sells only for profit. And when Briscoe argued that stiff felony penalties for all drug possession offenses except first-offense possession of marijuana would discourage people from "climbing the ladder" to more potent and dangerous substances, Kennard countered by saying felony penalties were "seldom if ever appropriate for a drug user." Moreover, Briscoe's proposal to have the Department of Public Safety, a law enforcement agency, supervise drug registration, licensing, education, and research drew from Kennard the reponse that a new "independent" and "neutral" agency should be created to oversee and administer these and other drug policies and activities. Last but by no means least, the Briscoe proposal to maintain criminal penalties for possession of marijuana was met with the Kennard proposal to end criminal penalties entirely for adult possession of small amounts.

The Kennard approach had many supporters in both the House and the Senate. But in the House, at least, the governor was in full control even though things almost got out of hand at one point. The extent of the governor's control was learned the hard way by a group of first-term liberals who decided to make marijuana reform their major legislative activity of 1973.

Led for the most part by urban legislators in their twenties and early thirties, the liberals had rallied around a bill introduced by Representative Jim Mattox of Dallas. Though technically not a decriminalization bill, the Mattox proposal was a first cousin of

the Kennard bill. It contained no jail sentence at all for adult possession of three ounces or less of marijuana, and a six-month maximum for possession of three to eight ounces. Fines were limited to $500 for the smaller amounts and $1000 for the larger ones.

The liberals seemed to be making some headway too, because a special seven-person legislative subcommittee appointed to handle drug legislation agreed, at the liberals insistence, to consider the Mattox bill when it began rewriting Briscoe's marijuana provisions. But three days after that agreement was reached, Representative Robert Maloney of Dallas, a Briscoe co-sponsor, introduced a Briscoe-backed substitute bill of his own.

The Maloney substitute differed from the original Briscoe bill in the following respects:

1. It changed the penalties for possession of marijuana by providing something for everyone: for conservatives a stiffer penalty for the larger amounts (up to two years and/or fines of up to $2000 for possession of four to eight ounces); and for liberals a softer penalty for the smaller amounts (up to six months in jail and/or fines of up to $1000 for possession of four ounces or less—lower than Briscoe's single penalty of one year and/or $2000 for everything, but not as liberal as Mattox' proposal that possession of three ounces or less not carry any jail sentence at all and be punishable only by a fine not to exceed $500).

2. It eliminated the provision that anyone who possessed more than eight ounces was "presumed" to possess with intent to deliver and established a penalty of two to ten years and/or $5000 for possession of more than eight ounces. In Maloney's judgment, the presumption clause was on shaky legal ground because it placed the burden of proof on the defendant instead of on the state, "where it belonged."

3. It added the category of casual transfer by making delivery of one-fourth of an ounce or less of marijuana without financial remuneration a misdemeanor, with the punishment six months in jail and/or $1000. "I don't believe," said Maloney, "the governor ever intended that a person who gives one marijuana cigarette to a friend should go to prison as a felon. This was an oversight and it was not intentional."

4. It reduced the minimum penalties for manufacture and delivery of all Schedule I and II substances, both the narcotics (heroin, opiates, and cocaine) and the non-narcotics (hallucinogens, amphetamines, methamphetamines). Briscoe had asked for minimum narcotic penalties of sixteen years. Maloney, a former

prosecutor, feared that because in Texas anyone sentenced to fifteen years or more was not eligible for bail while on appeal, juries would refuse to convict if this penalty was not changed. He dropped the narcotic minimum to five years and the non-narcotic minimum from five to two years "in order to maintain the distribution between a narcotic and a non-narcotic."

5. It eliminated the provision for repeat offenses. Maloney felt these penalties were "too severe" and that repeat offenses could be covered just as well in the proposed penal code revision where each subsequent offense was a step higher than the previous one.

6. It eliminated the provision regarding distribution to a minor. "We had a law like that on the books for a long time," said Maloney, "and it was totally unworkable. I don't recall a single case being prosecuted under it. The only way you could do it was by having underage undercover agents." The bill's delivery provision, Maloney added, was broad enough to cover distribution to a minor.

7. It transferred drug education programs from the Department of Public Safety to the Department of Community Affairs. Public acceptance of drug education programs would be greater, said Maloney, if they were conducted "outside the jurisdiction of a law enforcement agency."

Though Maloney's substitute bill included some changes the liberals wanted, it did not include the ones they wanted most—resentencing, a less inclusive vehicle forfeiture law, elimination of the maintaining premises provision (the anti-pot party clause), establishment of misdemeanor penalties for possession of amphetamines, methamphetamines, hallucinogens, and barbiturates, and above all, no jail sentences for possession of small amounts of marijuana.

More to the point, however, was the fact that the liberals were now as angry about tactics as they were about substance, because the Maloney substitute bill had caught them completely off guard. Until Maloney introduced it in an evening meeting of the subcommittee they had neither seen it nor heard of it, they said. Ron Waters of Houston, twenty-two, author of a limited legalization bill and a liberal member of the subcommittee, asked for a delay so that he and Representative Sara Weddington of Austin, the other subcommittee liberal, could study the new bill. But he lost on a tie vote of three to three. Next he offered some amendments, all of which were written on the spot because his own were still in the hands of the legislative counsel. Those that subcommittee chairman Felix McDonald didn't reject as incorrectly written were defeated by a three to three vote. The

amendments included resentencing, a less inclusive vehicle forfeiture law, and decriminalization of small amounts of marijuana. Then came the final vote. The Maloney substitute bill passed, three to two, with Waters and Weddington on the losing side.

Afterwards, Waters told reporters that the governor's staff had "railroaded" the substitute through the subcommittee. He said it had been drafted at "secret" meetings and "without the participation of some members of the subcommittee." Such actions, Waters charged, violated "the spirit of the 'open meetings' law." (The "open meetings" law did not extend to legislative committees, and House rules only required public notice of "formal" subcommittee meetings.) Roy Coffee, Briscoe's chief legislative aide, denied everything. He said the earlier meetings—one the night before and one the morning of the subcommittee meeting—were only informal gatherings, not legislative sessions, one involving nothing more than breakfast. The five legislators in attendence backed him up. Waters and Weddington weren't invited, said Coffee, because they indicated no interest in discussing the governor's bill.

The liberals' response was quick and dramatic. A week later they teamed up with hardline conservatives who wanted no change in the present law to kill the Maloney substitute bill at the full committee meeting. The vote was 12 to 9, with one vote to kill coming from Representative Craig Washington of Houston, a co-sponsor of the Briscoe bill. (A liberal and a black, Washington had agreed to co-sponsor because he felt he would have "a better chance to correct positions I disagreed with.") At that point Coffee said marijuana reform was dead, and that he personally had no qualms about letting the liberals take the blame. "I don't see what more the governor's office can do. . . . There are other bills that need our attention. We just don't have any more time to give to this one." (The vote came on April 11, with adjournment scheduled for late May.)

Nevertheless, the liberal gamble seemed to pay off. Within a few days the two sides came together to work out a compromise bill, even though each insisted the other had initiated the meeting. The compromise, offered by Mattox and Maloney as a substitute to the original Briscoe bill still pending in committee, retained the basic framework of the Briscoe bill and included four of the seven changes found in the Maloney substitute bill: it transferred the drug education authority to the Department of Community Affairs; it eliminated the provisions regarding repeat offenses and distribution to a minor; and it reduced the casual transfer of marijuana from a felony to a misdemeanor.

In addition, the new bill dropped the maintaining premises provision; it eliminated altogether possession of smoking pipes and roach clips as an offense; it lowered possession of paraphernalia for subcutaneous injections from a felony to a misdemeanor of two years and/or $3000; it prohibited vehicle forfeiture in cases involving simple possession of controlled substances; it omitted marijuana from the definition of "manufacture," an exclusion that protected people who grew small amounts; it prevented physicians and others from being forced to reveal the names of people enrolled in their treatment or research programs; and it excluded unharvested peyote "growing in its natural state" from being seized by state agents, a provision aimed at making life easier for the American Indians who used peyote in religious ceremonies.

But the key provisions were the possession and delivery penalties. Possession of marijuana carried a maximum penalty of six months and/or $1000 (Briscoe had asked for one year and/or $2000). And since the compromise bill did not specify a cutoff point for possession misdemeanors, it was generally assumed that this penalty applied to any amount kept for personal use. A second or subsequent possession conviction, however, was a felony and punishable by two to ten years and/or fines of up to $5000. But a judge could set aside such a felony verdict and impose a misdemeanor penalty at the time of sentencing if he felt "such judgment would best serve the ends of justice." Delivery or possession with intent to deliver marijuana also were felonies and carried the two to ten year penalty. They had been two to twenty years in the Briscoe bill and in the Maloney substitute.

With respect to possession and delivery penalties for other drugs, the compromise bill brought many back to where they were before Briscoe proposed his across-the-board increases. The exceptions, obviously, were those penalties Briscoe had either lowered or not raised in the first place and those that Maloney had reduced in his substitute bill. Thus, possession of Schedule I and II narcotics (heroin, opiates, and cocaine) remained at two to twenty years because Briscoe had reduced them from two years to life. But possession of amphetamines, methamphetamines, and barbiturates, raised to felonies in the Briscoe bill, remained misdemeanors in the compromise and carried the existing maximum penalty of two years and/or $3000. Possession of hallucinogens, two to twenty years in the Briscoe and Maloney bills, was reduced to two to ten years.

The same general pattern prevailed for penalties involving manufacture, delivery, and possession with intent to deliver. Barbiturates, two to twenty years in the Maloney substitute, were brought back to the current penalty of two to ten, while amphetamines,

methamphetamines, and hallucinogens, also two to ten years in existing law but raised to two years to life in the Maloney bill, were reduced to two to twenty years. The maximum penalty for heroin, opiates, and cocaine showed only an insignificant reduction—from life to ninety-nine years.

Resentencing was missing, but it was added in committee over the strenuous objections of Tim Von Dohlen, primary House sponsor of the Briscoe bill. Instead of applying to all drug offenses, however, resentencing was limited to marijuana offenses. Then on April 27, 1973, sixteen days after the House Criminal Jurisprudence Committee killed the Maloney substitute bill, it approved the Mattox-Maloney compromise. The vote was 12 to 5, and the liberals, elated by the result, felt they had regained the initiative.

In their excitement they forgot to ask themselves whether the governor's people had set them up for a fall, agreeing to provisions Briscoe didn't want as a means of getting a bill onto the House floor where it could be amended or where still another substitute could be offered. According to one Briscoe co-sponsor, that was precisely what had happened. Yet the liberals didn't seem to catch on until, six days later, Von Dohlen offered a Briscoe-approved substitute on the House floor. The House agreed, 85 to 59, to table the compromise and take up the substitute.

Actually, the Von Dohlen substitute didn't contain all that many changes. But once again, those it did contain were the ones the liberals wanted least. Misdemeanor penalties for possession of marijuana were limited to four ounces or less, half what they had been in the Briscoe bill, although Von Dohlen did retain the Mattox-Maloney penalty of six months and/or $1000, as well as their provision permitting persons convicted of possession felonies to receive misdemeanor sentences. Resentencing was dropped. ("This was not," Von Dohlen and other co-sponsors said in a joint statement, "within the bill's original purpose and is an encroachment on Executive authority.") Possession of methamphetamines—"speed" had become a great concern of some legislators—was kicked back up to a felony after the Mattox-Maloney bill had reduced it to a misdemeanor. The definition of "manufacture" again included marijuana. And an amendment was added changing certain provisions of Texas law to conform with the Von Dohlen substitute bill.

Caught asleep at the switch for the second time in five weeks, the liberals tried desperately to find something the rest of the House would buy. But when Craig Washington offered a series of amendments aimed at increasing the four ounce cutoff point for possession misdemeanors—he started at twelve ounces and

worked his way down to five—he lost by votes of 111 to 21, 112 to 20, 110 to 22, 106 to 28, and 104 to 30.

Washington lost again, 77 to 50, when he tried to convince the House to accept conditional discharge and expunction of records for first offenders. But he did persuade the House to replace Von Dohlen's civil standard of proof (preponderance of evidence) for vehicle forfeiture cases with the more stringent penal standard (beyond a reasonable doubt); and he won a narrow victory, 67 to 62, when the House restored resentencing even though Briscoe opposed the provision on constitutional grounds and promised instead to request the Board of Pardons and Paroles to review the cases of all first-time marijuana offenders convicted prior to enactment of the new law and still serving time in Texas prisons. In addition, the liberals were on the winning side when the maximum penalty for second-offense possession of marijuana was not increased from ten to twenty years (74 to 64); and they voted with Von Dohlen and Maloney to kill life sentences without parole for second offenses involving manufacture or delivery of heroin, opiates, and cocaine (73 to 59), and automatic life sentences with no parole for twenty years for second offenses involving manufacture and delivery of marijuana (93 to 38).

Whatever satisfaction the liberals took from these votes was short lived, because the House, in a "get tough" mood, and with the support of Von Dohlen, Maloney, and all of Briscoe's regular cosponsors, dropped the cutoff point for marijuana misdemeanors to one ounce or less (80 to 57); raised the maximum for delivery and possession of marijuana with intent to deliver from ten to ninety-nine years (118-11), virtually the same penalty that currently existed; and reinstated selling or offering to sell marijuana to a minor as a felony offense, while setting the penalty at five to ninety-nine years (116 to 13), another return to the harsh existing law. The House also approved amendments that increased the maximum penalty for possession of heroin, opiates, and cocaine from twenty to ninety-nine years (75 to 59); raised the penalty for manufacture and delivery offenses involving methamphetamines and LSD from two to twenty years to five to ninety-nine years (115 to 13); and established automatic life sentences with no parole for at least twenty years for second offenses involving manufacture and delivery of heroin, opiates, and cocaine (124 to 7).

The vote on final passage was 97 to 38, and the liberals were furious. Earlier, they had complained that Briscoe's staff was just tossing them bones whenever they agreed to add, delete, or amend a provision, merely ridding themselves of parts of the bill they planned to scuttle anyway. Nowhere, argued the liberals,

did they see evidence of "a serious attempt" at compromise on the part of the governor's people. Instead, everything was an ultimatum. Said one liberal legislator: "They didn't come right out and say it, but the message was loud and clear: it's our way or no way." Now, however, the liberals charged Von Dohlen and Roy Coffee with sabotaging the marijuana provisions. These two men, said an angry Jim Mattox, "frightened the House into believing a vote to liberalize marijuana laws or any other drug penalty was a vote to turn drug pushers loose on every playground and schoolyard in the state." Von Dohlen and Coffee ignored the accusation. "Nobody sabotaged anything," said Coffee. "They just didn't have the votes, and they were never able to accept that fact."

6 The Senate

In the Senate the situation was completely reversed: the liberals were in command and the governor's people were crying foul. Three explanations given for this turn of events (on paper the Senate was more conservative than the House) were the Senate's need to assert its independence from both the governor and the House, Kennard's continuing influence among his former colleagues, and the impact on conservatives of testimony presented by Richard C. Cowan, a Texan who was a charter member of Young Americans for Freedom (YAF) and a contributor to William F. Buckley's *National Review.* "The laws make criminals out of persons who otherwise would not be," Cowan had said. "While it may be reasonably argued that the people should obey the law the fact is that they are not, and petulance on the part of the legislators will only aggravate the problem."

The fourth reason was Senator Jim Wallace, age forty-five, of Houston. That really got under the skin of the governor's people, because Wallace, a moderate Democrat, was Briscoe's "liberal" co-sponsor in the Senate. (Briscoe's "conservative" co-sponsor, Senator H. J. (Doc) Blanchard of Lubbock, became ill just after the bill's introduction and never fully regained his health.) On two separate occasions strong negative words from Wallace might have killed, or at least weakened, the liberal substitute bill being offered by Senator H. Tati Santiesteban of El Paso, chairman of the subcommittee that handled the drug legislation. But both times, first in Santiesteban's Criminal Jurisprudence Subcommittee and then at the full Jurisprudence Committee, Wallace remained silent. The reason? The substitute was his own creation. It had been co-authored by Bob Shults, Wallace's chief aide, and Griffin Smith, author of the Kennard bill, and then had "found its way" to Santiesteban.

Ironically, Wallace hadn't planned to play an active role in drug legislation in 1973. An attorney, he had represented people charged with possession of marijuana, including the children of friends, but his primary concerns lay elsewhere: improving the environment, reforming the state's insurance laws, and revising the workman's compensation program and the probate court system. Wallace had earned a solid reputation as a serious and

effective legislator during his first term, so much so that both Kennard and Briscoe sought him out as a sponsor. Though more sympathetic to the Kennard philosophy on drug legislation than to Briscoe's, Wallace turned Kennard down ("I had no specific single reason not to sponsor the Kennard bill. I just wasn't sure I wanted to get involved in that particular fight."), and then a few weeks later said yes to Briscoe ("In all probability, a measure that the governor put his force behind was going to pass at some point."). However, he did reserve for himself the right to make whatever changes were "necessary to pass a good bill."

Wallace knew that he wanted to liberalize Briscoe's marijuana provisions. But the more he and Shults studied the Briscoe bill the more changes Wallace wanted to make. Like the House liberals, Wallace was troubled by the stiff felony penalties for possession of amphetamines, methamphetamines, barbiturates, and hallucinogens; the repeat offenses provision; the all-inclusive vehicle forfeiture clause; the lack of any resentencing mechanism; the broad definition of "delivery"; and the general potential he felt the bill contained for the abuse of individual rights by law enforcement officials. Wallace also questioned the sweeping authority the Briscoe bill gave to the Department of Public Safety, partly because the DPS director told Wallace he did not want his agency to register and license doctors and druggists.

But Wallace had another reason for letting Shults work with Griffin Smith on the substitute bill. The Jurisprudence Committee had been holding hearings on the Briscoe and Brooks-Baker bills, plus four marijuana bills introduced by individual senators. As in the House, they were general hearings in which both sides rolled out their big guns. For those who wanted to keep change to a minimum, the big guns were Dr. Gabriel G. Nahas of New York, author of *Marijuana—Deceptive Weed,* and Dr. Ernest S. Barratt, director of the Behavioral Sciences Laboratory of the University of Texas at Galveston. Both men listed a number of ill effects which they said marijuana could cause, such as impairment of memory, judgment, and the ability to concentrate; general mental deterioration; liver disorders; accelerated heartbeat, particularly dangerous, they said, to middle-aged men; and apathetic and lethargic behavior. Nahas also said that contrary to the contention of most studies, some marijuana users do develop tolerance to the drug and do either increase their dosage or advance to harder drugs. The liberals countered with Dr. David Lewis of the Harvard Medical School, speaking as a representative of the American Public Health Association, who urged the committee not to heed unsubstantiated experimental results, and John Finlator, former deputy director of the BNDD, who said he favored legalizing the private use of marijuana because criminal

penalties against marijuana use were "simply not effective as a deterrent." Committee liberals also circulated a review of Dr. Nahas' book by Dr. Lester Grinspoon, author of *Marihuana Reconsidered,* that said the Nahas book was full of "half-truths, innuendoes and unverifiable assertions."

The hearings didn't focus on the strengths and weaknesses of individual bills. Those would be taken up at working sessions of Santiesteban's subcommittee and then again at the full committee. (In Texas, Senate committees hold hearings both before and after subcommittees.) By the time the hearings ended, though, Wallace felt the Briscoe bill had split the committee right down the middle, that the division was strong and deep, and that unless someone proposed an alternative that was not viewed as either a Briscoe bill or a Kennard bill, one of three events would occur: stalemate; a bruising Senate battle like the one already under way in the House; or, because broad support existed within the committee to reform marijuana laws, a move to pass one of the four marijuana bills and forget about everything else. Since Wallace found all three possibilities unacceptable, he finally agreed to let Shults see what he could work out with Griffin Smith.

Smith suggested that the compromise bill include such provisions from the Kennard bill as the development of a separate schedule for penalty purposes, with heroin in one category, amphetamines, methamphetamines, opiates, and cocaine in a second, and barbiturates and hallucinogens in a third; misdemeanor penalties for simple possession of all controlled substances except heroin; establishment of a new and independent drug agency; limiting vehicle forfeiture to vehicles structurally altered to conceal controlled substances; dropping the requirement that in order to distribute controlled substances physicians or pharmacists agree to inspections without warrants; and including a resentencing provision that would apply to all controlled substances. He also urged that marijuana possession penalties be limited to fines only (no jail sentences) and that the penalties for hashish be the same as the penalties for marijuana.[18]

Shults felt that Wallace would accept these provisions but he doubted the Senate would, and he was positive that Briscoe wouldn't. Since Wallace's purpose, said Shults, was not to cut Briscoe out of the picture but to keep him in, he decided not only to exclude hashish from the definition of marijuana but to offer

[18] The Kennard bill followed the Uniform Act by including hashish—a stronger form of the *Cannabis sativa* plant—in its definition of marijuana so that the penalties would be the same. The Briscoe bill, however, excluded hashish from its definition of marijuana and listed it instead with the hallucinogens.

some less liberal counterproposals as well. These then became the basis of the substitute bill. They were as follows:

- Thirty days in jail and a $200 fine would be the maximum penalty for possession of up to four ounces of marijuana and for casual transfers, officially known as distributing one-fourth of an ounce or less without financial remuneration.

- Six months and/or $1000 would be the maximum for possession of four to eight ounces of marijuana.

- A separate drug schedule for penalty purposes would be established, but heroin, opiates, and cocaine would all be in one category, while amphetamines, methamphetamines, barbiturates, and hallucinogens would be grouped together in a second category.

- Possession of amphetamines, methamphetamines, barbiturates, and hallucinogens, felonies in the Briscoe bill, would be reduced to misdemeanors punishable by no more than one year in jail and a $2000 fine, which was double the penalty contained in the Kennard (Brooks-Baker) bill.

- Possession of heroin, opiates, and cocaine would remain felonies and would carry the two to twenty year penalty found in the Briscoe bill, and fines of $10,000 would be added.

- All possession offenses would have to involve "a usable quantity" of a controlled substance.

- Authority to administer the act would be transferred from the Department of Public Safety to the Department of Community Affairs, a quasi-cabinet-level agency located in the governor's office. This would remove the program from a law enforcement framework but still permit the governor to retain direct control.

- Vehicle forfeiture would be limited to possession of eight ounces or more of marijuana, and, in any case, marijuana or otherwise, the state would have to meet the more stringent penal standard of proof, the same provision the House adopted at a later date.

- Inspections without warrants could occur only with respect to "the records required to be kept by the registrant under this Act," and not, as in the Briscoe bill, to any and all records found on the premises.

- Resentencing would apply only to marijuana offenses.

Wherever possible, Shults tried to include Briscoe or Maloney provisions. The eight-ounce cutoff point for marijuana misdemeanors was an example. Another was the penalty of two to ten years and/or $5000 for possession of more than eight ounces of

marijuana. Manufacture, distribution, or possession with intent to distribute heroin, opiates, and cocaine had only a trivial difference, a penalty of two to ninety-nine years instead of the two years to life penalty found in the Maloney substitute bill. And Shults and Smith went along, of course, when Maloney eliminated repeat offenses, distribution to a minor, and the presumption clause for possession of more than eight ounces of marijuana.

But Shults and Smith eliminated some other offenses, such as maintaining premises (the anti-pot-party clause); possession of marijuana with intent to distribute; possession of smoking pipes, roach clips, or other marijuana paraphernalia (the penalty for possession of syringes or other instruments used for subcutaneous administration remained, but it was reduced from two to twenty years to two to ten years, and at least "a trace" of the controlled substance had to be found on the instrument); filling prescriptions for narcotic drugs three days after the prescription was issued; limiting peyote use in religious ceremonies to people who had at least 25 percent Indian blood, a distinction Shults and Smith felt was unconstitutional as well as impossible to determine; and using a possession of marijuana conviction as the basis for removing or suspending a drug license.

Added to the draft were resentencing; another clause permitting people appealing drug convictions to be sentenced under the provisions of the new law; the Mattox language that allowed persons convicted of marijuana felonies (possession of more than eight ounces and distribution) to receive misdemeanor penalties if the court felt they had not acted for profit or to "further commercial distribution"; a provision from existing law not found in the Briscoe bill which prevented the testimony of a single person from being accepted as proof of sale or an offer to sell; the Mattox-Maloney prohibition against furnishing the name or identity of persons enrolled in treatment or research programs; some language that made it possible for licensed researchers to obtain the drugs they needed, particularly LSD; and a definition of "manufacture" that resulted in cultivation of marijuana being treated as a possession offense rather than a sale offense.

Finally, the substitute bill set a penalty of two to ten years and/or fines of up to $5000 for manufacture, distribution, and possession with intent to distribute offenses involving amphetamines, methamphetamines, barbiturates, and hallucinogens. If, however, a person could prove to the satisfaction of the court that he or she did not act for profit or to further commercial distribution, then the sentence could be reduced to one year and/or $2000.

Although Shults and Smith put their substitute bill together the weekend after the House killed the Maloney substitute bill and

83-313 O - 77 - 51

a week after Shults told the governor's liaison man with the Senate, Mark White, that the Briscoe bill was stymied in committee, Coffee said the Shults-Smith draft was totally unacceptable to the governor. That left Wallace in a difficult position. He liked the draft well enough, but as primary sponsor of the original Briscoe bill he didn't think he could introduce the substitute so long as the governor opposed it. That was when the substitute "found its way" to Santiesteban. A week later, Santiesteban's drug subcommittee met to decide on a drug bill. Though not a member of the subcommittee, Wallace was present. Santiesteban asked Wallace if he knew any reason why the subcommittee should not adopt the substitute bill. Wallace shook his head to indicate that he didn't, and the substitute passed, three to one.

A week after that, the Senate Jurisprudence Committee approved the substitute bill by a vote of nine to four. This time, however, Wallace was under more pressure because he had a vote and because Briscoe had asked him to offer the Mattox-Maloney substitute on the Senate side. He did, but he didn't say much in behalf of the Briscoe-supported bill, and he lost by two votes, eight to six. Wallace also voted with the minority when the committee accepted the Santiesteban substitute by an eight to six vote, and when the committee accepted the amendment of Senator Oscar Mauzy, a member of the Kennard Committee, to reduce the penalty for possession of up to four ounces and for casual transfers from thirty days and $200 to just seven days and $200. But when the vote was taken to send the Santiesteban substitute bill to the floor of the Senate, Wallace switched sides and voted with the majority.

Briscoe's people continued their efforts as the full Senate met to take up the Santiesteban substitute. Again at Briscoe's request, Wallace offered the marijuana provisions contained in the Mattox-Maloney substitute, which, ironically, had been defeated on the floor of the House. They lost in the Senate as well, but for different reasons. Then Senator Bill Meier, age thirty-two, who had defeated Kennard in the 1972 Democratic primary, offered the House bill for the governor, but with much more liberal marijuana provisions than the House had approved. That lost too. Some other attempts at toughening up the Santiesteban bill were also unsuccessful. In fact, the only changes the Senate accepted were a couple of liberalizing amendments offered by Senator Bob Gammage of Houston. One added conditional discharge and expunction of records for first offenders, and the other was the amendment which said that possession of marijuana "shall not be considered a crime involving moral turpitude." No vote was recorded on either amendment, but the vote on final passage was 22 to 9.

7 The Conference Committee

By the time the conference committee met in mid-May, the polarization of the two sides had become so pronounced that nobody was sure what would happen to the marijuana provisions, let alone the entire bill. The governor's staff, angry because the Senate had sharply reduced marijuana penalties and established misdemeanor penalties for possession of all amphetamines, methamphetamines, barbiturates, and hallucinogens, claimed the Senate was ready to pat you on the back if you used drugs, while the liberals were convinced that Briscoe had sold out completely to the law and order types. "Do you realize," asked one opponent of the Briscoe-backed House bill, "that if this legislation passes, Texas will be the only state in the country other than Mississippi where the police are in charge of drug registration and licensing?"

Texas did indeed gain that dubious distinction, because Briscoe and Tim Von Dohlen, his floor leader in the House, wouldn't budge an inch on this provision. In fact, said Von Dohlen, if the conference committee removed this authority from the Department of Public Safety, he would speak against the final version when the House met to consider it. Neither Von Dohlen nor any other supporter of the Briscoe position was willing to settle for anything less than making the penalty for possession of LSD and methamphetamines the same as that for possession of heroin, opiates, and cocaine (two to twenty years, as it turned out).

The Senate conferees knew that if Von Dohlen opposed the conference committee report when it went back to the House—there were less than two weeks left in the session at this point—they could all pack up and forget about drug reform for another two years, until 1975 at the earliest. But possibly because Von Dohlen was adamant about what he wanted, the senators were prepared to go down the line for what they wanted—marijuana reform. And though they didn't think they could come away with the liberal provisions contained in the Senate bill, they let

it be known that they would not accept any conference committee bill in which the House did not meet them halfway on this issue.

This was exactly what happened. The cutoff point for possession misdemeanors was set at four ounces (it had been one ounce in the House and eight ounces in the Senate) and the following maximum penalties were written into law:

- Possession of up to two ounces: six months and $1000. (The House bill had the same penalty for one ounce, but anything over an ounce had been a felony.)

- Possession of two to four ounces: one year and $2000. (A felony in the House bill and a seven-day/$200 misdemeanor in the Senate version.)

- Possession of more than four ounces: two to ten years and $5000. (This felony penalty applied to anything over an ounce in the House bill but didn't take effect in the Senate bill unless a person had more than eight ounces.)

- Casual transfers (delivery of one-fourth of an ounce or less without financial remuneration): six months and $1000. (The House penalty was the same. It was seven days and $200 in the Senate version, and a felony in the original Briscoe bill.)

- Delivery (more than one-fourth of an ounce): two to ten years and $5000. (This was also the Senate penalty. After Briscoe proposed two to twenty years, the House raised it to two to ninety-nine years.)

- Reduction of sentence: all possession and delivery felonies could be reduced to misdemeanors at the time of sentencing if the court felt such action would "best serve the ends of justice." (This was the House language. In the Senate bill the reduction rested on a more specific concept—that the individual did not act "for profit or to further commercial distribution.")

Two activities listed as felonies in the House bill but not included at all in the Senate bill were also dropped by the conference committee. These were possession with intent to deliver (two to ninety-nine years) and delivery to a minor (five to ninety-nine years). In addition, the conference committee bill excluded marijuana from the definition of "manufacture," an omission that protected people who grew marijuana plants whose leaves weighed less than four ounces, though a person in this circumstance still was open to possession charges. The bill also included the Senate amendment stating that possession of marijuana should not be considered a crime of moral turpitude; and it agreed to limit marijuana arrests to people who possessed "a usable quantity"

of the drug, a Senate provision Briscoe accepted only for marijuana and not, as the Senate had intended, for all controlled substances. About the only thing missing was Senate language prohibiting a prior conviction for possession of marijuana (then a felony, now a misdemeanor) from being used as the basis for revoking or suspending a drug license.

The same pattern of accommodation extended to the rest of the provisions that eventually made up Texas' new comprehensive drug law. The House, for example, insisted that the penalties for manufacture and delivery offenses involving methamphetamines and LSD were non-negotiable, and they did in fact end up at five to ninety-nine years, almost exactly what Briscoe had wanted. (In the original bill the maximum penalty was life, just as it was for most other manufacture and delivery offenses.) And after the Maloney substitute bill reduced the minimum for manufacture and delivery of heroin, opiates, and cocaine from sixteen to five years, those penalties also passed untouched, with the maximum again being ninety-nine years. (The existing penalty was five years to life.)

Three other provisions from the more liberal Senate version were dropped from the final bill: these were expunction of records for first offenders, the limit on inspections without warrants, and a provision that excluded from prosecution on possession and distribution charges *all* members of the Native American (Indian) Church who used peyote in *bona fide* religious ceremonies, and not just those who had more than 25 percent Indian blood, as the governor's bill had specified. The Senate also lost what it felt was an important conceptual battle: retention, ironically enough, of the House provision that decriminalized illegal simple possession of narcotic cough syrups. In addition, the senators had no luck whatsoever in maintaining misdemeanor penalties for possession of hallucinogens or in killing a House provision that made it illegal for pharmacists to fill narcotic prescriptions, including codeine cough syrups, three days after the prescription was issued.

The Senate was not without some triumphs, however. Possession of amphetamines and barbiturates remained misdemeanors (Briscoe wanted them raised to felonies), and the maximum penalty was dropped from two years to one (in part because of a general revision of the Texas penal code). Manufacture and delivery penalties for these substances stayed at two to ten years and were not raised to the higher levels Briscoe recommended. Resentencing—in and out of the bill on two seperate occasions—finally stayed in despite the ruling of Attorney General John L. Hill that it represented legislative infringement on executive

power. Possession of marijuana paraphernalia (smoking pipes and roach clips) was altogether dropped as an offense, and the penalty for possession of syringes and other instruments for subcutaneous administration was reduced from a felony to a misdemeanor. Moreover, before any charge could be brought in this regard, at least "a trace" of the controlled substance had to be found on the instrument, a qualification not contained in the original Briscoe bill.

Other successes that could be considered either Senate or liberal victories included conditional discharge for first offenders; permitting judges to decide whether the police should destroy controlled substances seized as evidence, thus making it possible for researchers to obtain the drugs they needed; a provision from existing law, not found in either the Briscoe or the House bills, which prevented the testimony of a single person from being accepted as proof that another person had tried to sell him or her a controlled substance (valid proof had to consist of either a second witness or some other corroborating evidence); protecting physicians or other health practitioners from being forced to reveal the names or identities of people enrolled in their treatment or research programs; the elimination of the provisions relating to maintaining premises, repeat offenses, and distribution to a minor; and the inclusion in both the House and Senate bills of language that prohibited vehicle forfeiture in cases involving simple possession. Both bills also adopted the more stringent penal standard of proof (beyond a reasonable doubt) for these cases instead of the civil standard (preponderance of evidence) found in the original Briscoe bill, the Maloney substitute, the Mattox-Maloney substitute, and the Von Dohlen substitute.

Finally, there were some compromise provisions. The Senate succeeded in working a separate drug schedule for penalty purposes into the final bill, but it wasn't the schedule they really wanted because LSD and methamphetamines were listed with heroin, opiates, and cocaine instead of with amphetamines, barbiturates, and the other hallucinogens. As for administrative control over drug programs, research and education were transferred from the Department of Public Safety to the Department of Community Affairs, the quasi-cabinet agency in the governor's office. The liberals' joy over this move was tempered by the fact that the big prize—removing registration and licensing from DPS—had eluded them. And a liberal provision that permitted the courts to impose misdemeanor sentences on people found guilty of possession or distribution if the judge felt the individual did not act for profit or to "further commercial distribution," which at one time or another had applied to all amphetamines, methamphetamines, hallucinogens, and barbiturates, was limited in the

final bill to possession felonies involving amphetamines, barbiturates, and hallucinogens other than LSD.

Given the amount of disagreement over the drug legislation, it wasn't too surprising that the 63rd Legislature nearly adjourned without passing the conference committee bill. The Senate presented no problems and endorsed the bill by a vote of 24 to 7, two more votes than it had mustered for the Santiesteban bill. But some members of the House, led by Representative John Hoestenbach of Odessa, author of many of the "get tough" amendments added to the Von Dohlen substitute bill, were gearing up for a last-ditch effort. Hoestenbach himself complained that the conference committee had removed all the hardline provisions he had written, while one of his colleagues, Representative Wayland Simmons of San Antonio, contended that the bill virtually legalized marijuana. Simmons also took the floor to say that in his judgment the conference committee bill was soft on all other drugs too. "People in your districts," Simmons warned the House membership, "are not going to be able to hold enough jobs to buy toasters and television sets and put them in their houses for the burglars who shoot heroin to steal."

However, Represenative Von Dohlen kept his promise to support the conference bill, and in the process told the House that some penalties in the new bill were stronger than those contained in current law. A vote taken on Hoestenbach's motion to send the bill back to conference and appoint a new group of conferees lost, 80 to 60. The House then voted 84 to 58 to accept the conference committee bill . Two weeks later Briscoe signed the bill into law, and at last, on June 14, 1973, more than three years after Representative Raul Longoria (now a senator) first proposed reducing the penalty for first-offense possession of marijuana from a felony to a misdemeanor, Texas had itself a new marijuana law—and many other changes in its drug legislation as well, though the new act did not go into effect until August 27.

In the best of all possible worlds the conservatives would have preferred a tougher marijuana law, the liberals a softer one. The conservatives would have liked felony penalties for possession of amphetamines and barbiturates, while the liberals would have liked to see the penalty for possession of speed, LSD, and all other hallucinogens kept at the misdemeanor level. The conservatives also wanted the Department of Public Safety to supervise and administer the entire Act and not just the registration and licensing of doctors and druggists, whereas the liberals wanted the law enforcement agency out of the picture altogether. Nevertheless, each side had wrung from the other those provisions and changes it wanted most, by threat if not by persua-

sion, so although the bill wasn't perfect (what legislation is?), everyone connected with it was willing to concede, or perhaps had a vested interest in conceding, that the new drug law represented the best that could be done under the circumstances.

One question remained. Was resentencing for marijuana offenses constitutional or not? On October 10, some six weeks after the new law had gone into effect, the Texas Court of Criminal Appeals ruled that it was not. In a unanimous opinion, the five-man court held that resentencing was an infringement on the powers of commutation and clemency the state constitution granted to the governor, thereby rejecting the arguments of attorneys for Frank A. DeMolli that resentencing in no way interfered with these powers. (DeMolli, a University of Texas student, pleaded guilty in 1971 to possession of twenty-one pounds of marijuana and was sentenced to twenty-five years in prison. Under the new law he could not have been sentenced to more than ten years.)

Three weeks later, on October 31, the same day the court refused to reconsider its ruling, Briscoe asked the Board of Pardons and Paroles to review the cases of offenders who, though serving time for a marijuana possession felony, would have received a misdemeanor sentence if they had been prosecuted under the new law; in other words, people who were sent to prison for first-offense possession of four ounces or less and who were not also serving a concurrent sentence for another felony charge, drug or otherwise. The first seven people were not released until January 1, 1974. A month later, ten more were released. By May 14, 1974, a total of 95 persons had been identified, certified as having served the maximum sentence according to the provisions of the new law, and released. But because the new drug law did not include a provision for expunction of records, the felony conviction remained a part of each person's record even though such an act no longer was considered a felony.[19]

[19] Liberals complained that Briscoe dragged his heels on this issue and that the constant prodding of Representative Ronald Earle, age thirty-two, of Austin, was largely responsible for obtaining the release of those 95 individuals. Meanwhile, only one of the 95 had been sent to prison directly after trial and conviction. The remaining 94 had been placed on probation following their first conviction but had their probation revoked after being arrested a second time for simple possession.

8 Conclusion

When a legislature that has decided to change its state's marijuana law, and revise all its drug laws in the process, begins with two comprehensive bills that represent philosophical opposites, and then works its way through four other substitutes before finally passing a fifth substitute written by the conference committee, and when the marijuana provisions are a major feature of each of those substitutes, one possible explanation is that the state, being the forty-ninth in the country to change its marijuana laws, wants to be more than just a footnote to the other forty-eight.[20] But Texas ended up being just a footnote after all. It changed its marijuana law for the same reasons other states changed theirs, and it limited its changes to those already made by other states.

Basically, the law changed for two reasons. The first, as Griffin Smith noted in an article in the *Texas Monthly* of September 1973, was because "too many of the wrong kids were being arrested." He wrote:

> The story is really as simple as that. True, before the Legislature finally approved HB 447 a scant five hours before the 63rd session was gavelled to a close on the 28th day of May, the Capitol's chambers and committee rooms had been the stage for much soul-searching, courage, foolishness and villainy. But none of this would have happened had not marijuana jumped the tracks from the barrios and black neighborhoods to River Oaks, Highland Park and Alamo Heights [suburbs of Houston, Dallas and San Antonio, respectively]. The police in hot pursuit did not stop to notice that the rules were supposed to change too.
>
> [However], the state was peopled with good, solid, white middle-class parents who knew about that nice kid down the street, the Eagle Scout who made nothing but top grades in academics and deportment, whose parents were having to exhaust his college savings in lawyers' fees to defend him on a felony charge of having a marijuana cigarette in his car. Their anxieties were eventually, but duly, transmitted into law.

[20] At the time Texas passed its new marijuana law, Rhode Island was the only state in the country where first offense possession of marijuana was a felony. In late April 1974, however, the Rhode Island legislature reduced first offense possession to a misdemeanor.

The fact was not lost on the Legislature's black and chicano members, no mean connoisseurs of irony themselves.

The second reason was that in 1973, unlike 1971, most county prosecutors and district attorneys also wanted the law changed, because by then the two years to life penalty had become almost unworkable. Juries were simply refusing to convict, a clear sign to prosecutors that it was time to have a law the juries would respect and therefore be willing to implement. As the prosecutors saw it, nothing less than the integrity of the law itself was at stake, and no matter how much any individual prosecutor might dislike the circumstances that forced this situation, he had to support a reduction in penalties. An example is Robert O. Smith, the district attorney of Travis County (Austin) and president of the Texas District and County Attorneys Association. He testified before a House hearing that "Convictions of drug abusers are not, in my opinion, nearly as damaging to a person's future as is the unchecked continued abuse of drugs and I don't except marijuana from this indictment. When a person knows the legal consequences of his act and still chooses to commit the act, it is his responsibility and not the law's when he is called to account." But he supported the Briscoe bill.

This happened elsewhere, too. In Nebraska, one of the first states to change its marijuana law, prosecutors from Lincoln and Omaha were among the earliest and staunchest advocates of the misdemeanor penalty. And in New Mexico, local judges took up the cause when it appeared the outcome might be in doubt, because as judges they wanted a law they could believe in themselves.

Keeping middle-class kids out of prison and revising the law so that juries will respect it are acceptable reasons in anyone's book for changing a marijuana law. But a legislature might also decide to change the law because it felt prison or jail sentences were inappropriate for marijuana users; because it considered marijuana a relatively harmless drug from a medical point of view, particularly when compared with alcohol; because to continue criminal penalties would lead to further alienation of young people from the political and legal systems; or because marijuana use was judged to be more a matter of private morality than public morality.

Such reasons, however, would require legislatures to transcend the conventional concern of making the punishment fit the crime —that is, reducing the felony to a misdemeanor—and to consider instead the more fundamental and controversial issue of whether possession of marijuana should even be a crime in the first place. And though the Kennard Committee members and others hoped

that Texas might pass a decriminalization bill and thus, within a single legislative session, move from having the nation's harshest marijuana penalty to having the nation's softest (and from their perspective the most reasonable marijuana law in the country), Texas broke no new legislative ground. To be sure, Texas' four-ounce cutoff point for a possession misdemeanor was more generous than the cutoff point that existed in eighteen other states, though some of these states evened things out by having a shorter jail sentence than Texas. In addition, Texas' quantitative law [21] had the advantage of being less susceptible to arbitrary interpretation by prosecutors and judges than did the non-quantitative laws of twenty-three other states, though here again, some of these states—Massachusetts is the best example—were unusually lenient in enforcing the law. Moreover, the new Texas penal code did not contain any enhancement provision whereby a person arrested for a possession offense that was a misdemeanor the first time would be charged with a felony if he was arrested a second time. (Nebraska, Wyoming, Oregon, Georgia, and Massachusetts have laws similar to Texas in this respect.) Obviously it was of critical importance to anyone arrested and charged with possession of marijuana whether or not a state law was as liberal as Nebraska's (a maximum penalty of seven days in jail for possession of up to a pound) or as conservative as the laws of North Carolina and Florida (felony charges for anything above one-sixth of an ounce). But in conceptual terms these differences were only variations on a theme, because there wasn't a state in the country where marijuana was not governed by criminal sanctions.[22]

Why should decriminalization present so many difficulties for any legislature, and for the Texas legislature in particular? Partly because legislative change invariably comes a step, not a jump, at a time, and a small step at that; partly because many legislators

---

[21] A quantitative law is one that establishes a specific dividing line between a possession misdemeanor and a possession felony, such as one ounce, two ounces, four ounces, eight ounces, etc.

[22] In July 1973, two months after Texas passed its new law, Oregon became the first state in the nation to pass a decriminalization law. But the law was very narrowly drawn: it limited decriminalization to possession of only an ounce or less but still imposed a maximum civil fine of $100 for that amount; possession of more than an ounce remained a felony. By comparison, possession of up to four ounces is a misdemeanor in Texas.

In the spring of 1974 a New England legislature came close to being the second state to pass a decriminalization law. A House subcommittee had voted to decriminalize marijuana entirely, but the members reportedly changed their minds after the chairman conducted a private poll, an action which suggests first that decriminalization isn't the kind of issue that leads politicians to challenge traditional sources of power, and second that the people who tend to champion the issue most strongly may be somewhat lacking in political clout.

CONTINUED

21 OF 33

are still convinced that marijuana use leads to more potent and dangerous drugs (the domino theory may be dead in Southeast Asia, but it's alive and well in drug legislation); but mostly because there is no *political* reason to compel a legislator to vote for decriminalization, nothing that remotely resembles those felony records and prison sentences for middle-class kids that induce legislators to reduce the possession penalty to a misdemeanor. No wonder, then, that in Texas many representatives and senators decided, as Senator Chet Brooks did when he introduced the Kennard bill in the Senate, that "the political climate is [not] ready for decriminalization," and that the wisest (or safest) course for a legislator would be to avoid the issue altogether.

As for the new drug law's non-marijuana provisions, one liberal observer felt they could be summed up in three sentences. First, the legislature raised the penalty for the only two non-narcotic drugs its members could name, "speed" and LSD. Second, the legislature established harsher penalties for non-prescription drugs (LSD) than it did for prescription drugs such as amphetamines and barbiturates. Third, instead of basing its penalty schedules on knowledge of a drug's pattern of use and capacity for causing social harm, the legislature established penalty schedules that represented nothing more scientific or sophisticated than the extent to which most members personally disapproved of the various drugs and substances.

All of which is just another way of saying that in this instance the legislative process was not one in which open debate and a full discussion of the issues prevailed, but rather one in which most legislators acted on a subjective, and usually unarticulated, judgment about the kinds of changes they felt they and their constituents could live with. This was particularly true of the liberals who, in the end, supported many of Briscoe's non-marijuana provisions. They did in fact believe that a "get tough" drug bill was the only path to marijuana reform. But the main reason they went along with the governor was because they didn't want the voters back home to think *they* were "soft" on drugs. That was still the bottom line, and the experience of the Texas legislature in working its way through two bills and five substitutes during a period of three and a half months had underscored once again how pervasive this single fact of legislative life really is.

Publications

The publications series of the Drug Abuse Council are offered as an informational service to organizations and individuals engaged in formulating and assessing public policies, operating programs, and conducting research related to the nonmedical use of drugs in our society. Descriptions of individual publications appear on the following pages.

Orders and inquiries should be directed to Publications, Drug Abuse Council, Inc., 1828 L Street, NW, Washington, DC 20036. *Prepaid orders only** will be accepted..

	Per Copy	*Per Copy 10 or More of Same Publication*
Public Policy Series	no charge	
Monograph Series	$1.25	$.75
Special Studies	$1.25	$.75
Fellows Series	$1.25	$.75
Handbook Series	$2.25	$1.50

* Enclose with each order your check or money order for full amount, including $.25 additional for postage and handling.

Public Policy Series

PPS-1. A Perspective on "Get Tough" Drug Laws
A Drug Abuse Counsel staff report analyzing the ffects of stringent criminal sanctions on drug abuse and crime. The futility of overreliance on the criminal justice system to solve the complex problems of drug abuse is examined from historical and legal perspectives.

PPS-3. Heroin Maintenance: The Issues
A Drug Abuse Council staff analysis of this controversial subject includes discussion of general concepts, public policy options, specific modalities and anticipated problems. The Vera Institute of Justice proposal for experiments using heroin as inducement to treatment provides a case study.

PPS-5. Governmental Response to Drugs: Fiscal and Organizational
A comprehensive analysis of the issues and implications of the recent reorganization of federal drug abuse efforts and the requested 1975 federal drug abuse budget.

Monograph Series

MS-1. *Methadone Maintenance*: The Experience of Four Programs
Written for The Drug Abuse Council by journalist Paul Danaceau, this study is a descriptive analysis of the treatment process in clinics in New York City, Albuquerque, East Boston and New Orleans, highlighting common issues, problems and needs.

MS-2. Survey of State Drug Abuse Activities: 1972
An analysis of state drug abuse activities including objectives, priorities and needs as reported by state drug abuse officials during 1972. Designed to yield general information on state efforts, the survey was conducted with the International City Management Association and National Association of State Drug Abuse Program Coordinators. Included are analyses by state size and geographic region.

MS-3. Heroin Epidemics: A Quantitative Study of Current Empirical Data
One explanation of the spread of heroin use is provided through the application of mathematical models. The study provides a frame of reference for public policy analysis.

MS-4. The Retail Price of Heroin: Estimation and Application
This summary of research designed to develop estimates of heroin retail prices in selected U.S. cities is applied to problems associated with illicit narcotics use. Extensions of the analysis to other policy-related questions including the effectiveness of law enforcement policies are discussed.

MS-5. Employment and Addiction: Overview of Issues
New York City was the focal point for this investigation of addiction and employment-related issues. It explores employers' methods of relating to drug users and treatment programs' relationships with employment groups. Recommendations for further study and action are provided.

MS-6. The Organization of the United Nations to Deal with Drug Abuse
The origins of international drug controls and structure of the United Nations system form the background for this detailed study. Provided are analyses and summaries of core components of the United Nations including the Commission on Narcotic Drugs, Division of Narcotic Drugs, United Nations Fund for Drug Abuse Control, International Narcotics Control Board and World Health Organization.

MS-7. Occasional Heroin Users: A Pilot Study
A report on the psychological testing of 12 non-addicted heroin users. This reprint of an article published in the *Archives of General Psychiatry* is free of charge.

MS-8. Survey of City/County Drug Abuse Activities: 1972
A companion to the State Survey, this report describes drug abuse activities in cities and counties with populations exceeding 50,000 and 100,000 respectively. The study analyzes efforts in law enforcement, administration, education, treatment and rehabilitation.

MS-10. Recent Spread of Heroin Use in the United States: Unanswered Questions
Empirical evidence suggests new heroin use has sequentially "peaked" in U.S. communities from 1967 to the present. Shifts in peak use from large to smaller cities are discussed with implications for future drug abuse policy and planning.

Special Studies Series

SS-1. Morphine Maintenance, The Shreveport Clinic, 1919-1923
An in-depth study of the Shreveport, Louisiana, morphine maintenance clinic, based on clinic records and extensive interviews with Dr. Willis P. Butler, director of the clinic during the period of its existence.

SS-2. Drug Use, the Labor Market and Class Conflict
A historical survey bringing to light data which indicates that not only is the socioeconomic pattern of narcotics use the same as it was a century ago, but that the problem of widespread addiction is a recurrent and cyclical one.

SS-3. "High" States: A Beginning Study
A phenomenological study, written for the Drug Abuse Council by Dr. Norman Zinberg, describes the actual experience of intoxication with opiate and psychedelic drugs and places that experience within a social and psychologfical theoretical context.

SS-4. Pot Luck in Texas: Changing a Marijuana Law
Journalist Paul Danaceau's in-depth account of the political and legislative history of changing the most severe marijuana possession law in the country.

Fellows Series

FS-1. Major Newspaper Coverage of Drug Issues
A nationwide study of the reporters who cover drug stories, outlining some of the major problems both with newspaper management and the understanding of policy among reporters.

Coming Soon

FS-2. Police Chiefs Discuss Drug Abuse
The men who head police departments in the nation's 27 largest cities talk about their perceptions of all aspects of the drug problem.

FS-3. Street Status and the Drug Researcher: Issues in Paticipant-Observation
A narration of personal experiences of a sociologist conducting a community drug study.

FS-4. A Readers' Guide to the Drug Literature
A comprehensive survey of all major writings in drug abuse, pointing out the issues and general theoretical orientations affecting current policy.

Handbook Series

HS-1. Accountability in Drug Education, A Model for Evaluation
Designed for use by educators, administrators and researchers, this manual provides step-by-step explanations of program planning and assessment, keyed to the reader's level of involvement. Arranged in "workbook" fashion are sections discussing goal selection and outcome measurement including a compilation of recommended knowledge, attitude and behavior scales. Other sections provide useful information on the problems of test administration, considerations for scoring tests, and advice about using results to design more effective programs.

HS-2. Drug Program Assessment, A Community Guide
This study prepared for the Drug Abuse Council by the Urban Institute describes how community leaders can obtain systematic information of local drug programs' effectiveness, relating this to the planning process.

HS-3. Students Speak on Drugs, The High School Student Project
Nine student groups from across the country investigated illicit drug use in their local areas. Their findings and recommendations are detailed in this report. Problems encountered by the student researchers are also described.

Books

Federal Drug Abuse Programs
A report to the American Bar Association and the Drug Abuse Council describing Federal drug abuse activities through July 1972. Analysis and recommendations regarding policies and programs are included.

Army Drug Abuse Program: A Future Model?
This follow-up study to *Federal Drug Abuse Programs* focuses on one Federal agency's drug abuse efforts. The feasibility of replicating the military model is discussed. $2.

Coming Soon

Drugs: Administering Catastrophe
Graham S. Finney recounts his experiences as former commissioner of New York City's Addiction Services Agency in this report. A useful primer for program administrators, operators and persons interested in public decision-making, the lengthy study includes chapters on planning, program linkages, intergovernmental relations, uses of technology and the "numbers game."

[From the Washington Star-News, Sept. 11, 1975]

DRUG PANEL ASKS ASSEMBLY TO EASE VIRGINIA POT PENALTIES

(By Sheila Kast)

The Northern Virginia Drug Abuse Council has called on the Virginia General Assembly to wipe out criminal penalties for possession of small amounts of marijuana, a recommendation already stirring up opposition from a number of prosecutors.

If the general assembly follows the drug council's advice, simple possession of marijuana will be treated like most traffic offenses—a fine, but no jail sentence. Currently, possession of marijuana is a misdemeanor that carries up to $1,000 fine and a year in jail.

The drug abuse council was set up by the legislature to develop policies for controlling drugs in Northern Virginia. It advises both the State Drug Abuse Council which funnels federal and state money to drug treatment programs, and the Northern Virginia Planning District Commission.

"This group obviously has a great deal of credibility in the state," said Keith Stroup, director of the National Organization for the Reform of Marijuana Laws (NORML). "I would say the legislative effort (to decriminalize) is off and running."

However, the recommendation is running into opposition from Northern Virginia's prosecutors. Commonwealth's attorneys in Loudoun and Fairfax counties and the city of Alexandria said yesterday they oppose any further liberalization of marijuana laws.

"I have seen too many 13, 14 and 15-year-olds thoroughly screwed up by it," said Fairfax Commonwealth's Atty. Robert F. Horan Jr. "I don't know why we keep playing with this hypocrisy of 'decriminalization.' I don't see how you can say, 'Legalize it for the user, but not for the seller.' "

The council's recommendation, reached last night by a 10-2 vote with two abstentions, covers only "small amounts of marijuana for personal use." Council members stressed they wanted to discourage the use of marijuana "by means other than criminal procedures."

Stroup said it probably will take several years to convince the Virginia legislature to change its law. But he said he expects the D.C. City Council to decriminalize marijuana this year and the Maryland legislature to follow suit next spring.

The council voted 10–1 with 3 abstentions to urge local police and prosecutors not to take persons caught with marijuana into custody.

Instead, the council said, police should invoke an 18-month-old state law that directs police officers to issue a summons to appear in court—similar to a summons for a traffic offense—and to release the person immediately.

Police in Arlington and Fairfax counties said yesterday they are not using that law because another statute directs them to fingerprint and photograph drug offenders for the Central Criminal Records Exchange in Richmond.

"There is a conflict in the law," explained Arlington Police Lt. Walter Shoup. "In one section of the code it says you will get fingerprints, and the other says you will release on the scene."

Virginia Atty. Gen. Andrew P. Miller has ruled that there is no conflict. In an opinion issued in May 1974, Miller said police should immediately take a person arrested for a misdemeanor to the nearest police station, book him, then decide whether to release him with a summons to appear in court later.

But John Zwerling, a Fairfax lawyer, told the drug council last night that once a person is booked, he usually ends up being required to post bond before he is released.

"You cannot measure the trauma that person has gone through," Benjamin N. A. Kendrick, an Arlington lawer, told the council. "You are shackled . . . you are placed quite frequently in what they call a drunk tank or lock-up . . . You are subjected to all kinds of mental and physical abuse, and you can start with rape."

"For our purposes," answered council member Harold W. Vorhies, "whether that occurs 100 percent or 10 percent of the time, the important thing is that it does occur."

Because police stations are open 24 hours a day, Zwerling argued, persons possessing marijuana could go at their convenience for fingerprinting. Or police could carry pressure-sensitive paper to take prints, like the prints some stores take when one cashes a check, he said.

According to a report of the drug abuse council's staff, Northern Virginia jurisdictions spend about $250,000—about one-third the budget for their drug treatment programs—to arrest, oversee and treat people charged with possession of marijuana.

Arrests for simple possession of marijuana account for two-thirds of all drug arrests in Northern Virginia, the report said. Arrests for possesison have nearly doubled in four years—from about 650 in 1971 to more than 1,200 in 1974.

Six states have decriminalized the personal use of small amounts of marijuana, and 25 states are considering such legislation. Stroup told the council.

In Montgomery County, State's Atty. Andrew L. Sonner has announced he will not prosecute marijuana smoking in the home if no one complains about it. In the District, U.S. Attorney Earl J. Silbert announced last fall that his office would not prosecute anyone caught with less than five "joints," or marijuana cigarettes, but dropped the policy after sharp criticism from the U.S. Department of Justice.

WISCONSIN

[From the Milwaukee Journal, Nov. 14, 1975]

Drug Panel Backs Easing of Pot Laws

Madison, Wis.—The State Council on Drug Abuse, on a 7 to 1 vote, recommended Thursday that civil, rather than criminal, penalties should apply to the possession of small amounts of marijuana.

The recommendation would continue to make possession or sale of the drug illegal, however.

The council vote capped a lengthy study on the question by the technical group which advises the council, the Controlled Substances Board.

The board held a series of public hearings on the question of decriminalization and at a meeting last month, made the recommendation adopted by the council Thursday. The board's vote was 4 to 2.

MARQUARDT OPPOSED

Karl Marquardt, executive secretary of the State Pharmacy Examining Board, cast the only negative vote on the council. He had been one of two members on the Controlled Substances Board that had opposed decriminalization.

The other opponent, Dr. Darrold Treffert, superintendent of the Winnebago Mental Health Institute, urged the council to turn down the recommendation. He is not a member of the council, but was invited to give the board's minority report.

Rep. George Klicka (R-Wauwatosa), a council member, also voted against the proposal. He has not been confirmed as a member of the group, however, and his vote was treated as unofficial.

WILL GO TO LEGISLATURE

The recommendation will be forwarded to the Legislature, which has several bills that would decriminalize marijuana pending.

If approved by the Legislature and Gov. Lucey, Wisconsin would join five other states which have decriminalized marijuana possession, Atty. Gen. Bronson C. La Follette said. It would follow enactment of a law in 1969 in which the crime was reduced from a felony to a misdemeanor.

Contending that "we are a drug deluged society," Treffert argued that he was "not sure we need to sanction another drug for its use and abuse."

"At some point," he added, "we'll have to get closer to each other, rather than using drugs to do that."

HIGH COSTS PREDICTED

Treffert said he doubted that disrespect for authority from the young resulted from bad marijuana legislation; it is a harmful drug and there will be high costs for the expansion of facilities to treat drug abuse, he said.

Dr. Joseph Benforado, of the University of Wisconsin and chairman of the council, said, however, that laws which did not express the public good should be changed. The law, as it now stands, he added, is "an inappropriate bludgeon that harms at a time when healing is needed."

La Follette said there was a tremendous social cost under the law now. In 1974, he noted, about 80% of all drug related arrests were for possession of marijuana, which meant that a tremendous amount of time and energy was expended by law enforcement agencies.

MORE BASIC CRIMES

The Division of Criminal Investigation in the State Justice Department, La Follette said, favors decriminalization.

"We see it as an opportunity to let law enforcement devote more resources to solve what are more basic crimes in our society," the attorney general said.

A Lot Is Going to Pot

(An Editorial)

New insight into the widespread use of marihuana is found in a study issued by the Bureau of Narcotics and Dangerous Drugs. The study concludes that Americans smoke four tons of pot daily.

The sale of marihuana is big, though still clandestine, business. The author of the federal study, Dr. William McGlothlin of the University of Southern California at Los Angeles, says the annual bill for the stuff is 1.4 billion dollars. The dealers' profit is said to total 835 million.

Another point made in the report is of interest—particularly, no doubt, to those who indulge in the use of this euphoric drug. On the average, McGlothlin notes, a so-called ounce of pot sold in this country actually weighs just a bit over three-quarters of an ounce. This gives dealers a nice little bonus.

Questions as to the possibility of physical and psychological harm caused by marihuana, and as to the morality of its use, have been widely discussed over the past decade or so. From this controversy has emerged a growing but by no means overwhelming consensus that state marihuana statutes, most of them enacted before legislators had access to much hard information about the drug, are harsher than need be. The trend now is toward easing the penalties for possession of small amounts of marihuana, and there is even considerable public sentiment for legalizing possession and use of the drug and subjecting it to controls such as those applied to alcoholic beverages.

We believe that, on balance, this liberalizing trend is preferable to the harshly restrictive attitude that used to prevail. At the same time, we find it disturbing that so many young people smoke pot—either because it is the thing to do, or because they feel a need for its artifically induced euphoria. The report that Americans use four tons of marihuana a day, nearly 1,500 tons yearly, raises troubling questions.

[From the Washington Post, May 7, 1975]

Court Urges Emphasis on Violent Crime

(By Eugene L. Meyer)

The chief judge of the D. C. Superior Court said yesterday that law enforcement officials should reduce prosecution of "so-called victimless crimes" such as marihuana possession, gambling, prostitution and illegal liquor sales and concentrate instead on crimes of violence.

At a congressional hearing on criminal justice in the Washington area, Chief Judge Harold H. Greene lent his voice to what appears to be a growing sentiment in criminal justice circles. Given limited resources, some judges, prosecutors and defense lawyers have argued, prosecution of victimless crime must

be sacrificed to permit vigorous prosecution of more serious offenders such as murderers, rapists, robbers and burglars.

"It's a matter of emphasis," Greene explained later. "There are dozens of laws on the books which the police make very little effort to enforce, like adultery." Prosecutors, he suggested, could tell the police, "We prefer you concentrate on robbery cases," and drop charges for the "victimless crimes."

The result of this shift in emphasis, Greene said, would be more arrests for violent crimes and fewer for the minor ones, freeing misdemeanor judges to try the increased felony load. This can be accomplished without legislation legalizing or "decriminalizing" victimless crimes, Green said.

In recent months U.S. Attorney Earl J. Silbert ordered his assistants not to prosecute those arrested with small amounts of marihuana. Silbert's plan was supported by Greene and opposed by police officials before being overruled by Justice Department superiors.

Oregon and California have "decriminalized marihuana possession by subjecting offenders as they would parking violators; to a small fine. In D.C. Superior Court all victimless crimes" make up a third of the entire misdemeanor workload. Marihuana offenses account for one-fourth of victimless crime cases, which has led some judges to call for decriminalization of that offense here.

"The public," Greene testified yesterday at the first of 12 scheduled House District Committee hearings on the area's criminal justice system, "demands more action against robberies, rapes, murders, aggravated assaults and similar offenses, and that is where our priorities must be."

To this end, Greene said, the local courts should also be shorn of responsibility for trade offenses and most landlord and tenant disputes.

Persons charged with minor misdemeanors should be kept out of the courts entirely through special diversion programs, Greene said. However, he added, repeat major offenders, both juveniles and adults, should be imprisoned for longer periods of time.

Entering a national debate on whether such repeat offenders should be rehabilitated or kept in jail longer to protect the community, Greene asserted, "Some long-time recidivists simply cannot be rehabilitated."

Instead "of wasting funds on those whose past records show they are unlikely to be reformed," Greene said, the funds now allocated for their reformation should be spent on more effective probation supervision, work release and halfway houses for those who can be salvaged.

Testifying earlier, D.C. Court of Appeals Chief Judge Gerard D. Reilly cited police estimates that 25 per cent of each day's offenses are committed by recidivists.

Reilly critized the D.C. corrections department for "permitting unsupervised furloughs of convicted felons before even their minimum sentence expires," and for frequently assigning long-term prisoners to halfway houses "where custodial supervision is minimal" several months before they are eligible for parole.

Reilly and Montgomery County Juvenile Judge Douglas H. Moore Jr. both rejected the notion that recent crime increases can be attributed solely to the economic recession.

During the Depression, Reilly said, "unemployment became as high as 20 per cent and the economic hardship to the laid-off worker was not alleviated by unemployment compensation or welfare." Yet, he said, "crime statistics dropped and did not rise dramatically again until the affluent late 1950s and 1960s."

Judge Moore said there may be a correlation in big cities but he blamed any suburban crime increases on "a general breakdown in discipline in the homes and schools' ' and a belief by juveniles that nothing will happen to them if they get caught.

[From the Chicago Tribune, Aug. 3, 1975]

AMERICA'S GRASS SMOKERS LIGHT UP

(By Jerald terHorst)

WASHINGTON—Society, science and government are steadily becoming more tolerant of marihuana. Once regarded as the first step on the road to degradation, addiction, and crime, marihuana smoking seems likely to become as socially acceptable and as legally permissible as drinking hard liquor.

The changing attitude is perceptible almost everywhere. The first family's children have tried "grass," just as have many of their peers thruout the land. They are not now smoking it, according to Betty Ford, but the fact that she and the President can publicly acknowledge their children's experimentation speaks volumes about a new level of public tolerance.

A recent federally financed study failed to detect any serious or long-term effects of heavy marihuana smoking beyond those incurred by heavy tobacco smokers. Law enforcement officials at federal and state levels already are shifting toward the reduction or elimination of criminal penalties for marihuana use. America's cigaret makers, shrewd in the ways of business and merchandising, reportedly are preparing for the time of eventual legalization just as the liquor industry made ready for the repeal of Prohibition in 1932.

The most recent sign of the relaxed federal atmosphere toward marihuana occurred the other day with the Justice Department's choice of former Washington Police Chief Jerry V. Wilson to head the U.S. Drug Enforcement Administration. Wilson, who gained notoriety if not fame as the cop who cracked down on antiwar demonstrators during the Nixon years, favors a reduction of penalties for personal use and possession of small amounts of marihuana.

That is a vital first step toward the eventual "decriminalization" of pot smoking. In a recent column in the Washington Post, Wilson declared the "moderate sanction" against marihuana use "is perhaps the best way to retain a societal expression of disapproval for an infraction which few among us presently consider a serious crime."

Moderate sanctions are what we apply now against traffic law violators, public loiterers, and disturbers of the peace. Donald Santarelli, former head of the Law Enforcement Assistance Administration, and Dr. Robert Dupont, White House coordinator of drug abuse prevention programs, share Wilson's view. So do an increasing number of city and state officials.

Already this year, Alaska, California, Colorado and Maine have adopted laws making the possession of small quantities of Marihuana a civil offense rather than a crime. Nearly half of the state legislatures have debated decriminalization bills. Oregon began the trend in 1973, with a statute that treats the possession of less than an ounce of marihuana in almost the same fashion as traffic offenders are treated—subject to $100 fine but not to arrest.

Prompting the increased leniency and public acceptance has been a steady succession of medical studies debunking earlier notions that marihuana not only created an appetite for hard drugs like heroin but was itself a cause of mental deterioration, violence, and crime. Science is not saying that marihuana is good for you, but only that it is probably no more harmful than heavy consumption of alcohol or tobacco.

Additionally, the public's attitude has been reshaped by the hundreds of thousands of youths, at all levels of income and society, who have tried marihuana in the last two decades. Puffing a "joint" became fashionable among young Americans particularly during the 1960s as a means of defying the cultural values of their elders.

Now these teen-agers are adults, holding jobs, rearing families, voting in elections—in short, helping mold American society and setting its standards. Unlike older geenrations, today's young adults see nothing especially evil about pot smoking and resent the fact that the law generally deals more leniently with booze drinkers.

According to Wilson and other law enforcement officers, this helps explain why marihuana arrests are up—more than 421,000 last year. Most such arrests result from searches related to arrests on other charges. Nine out of 10 marihuana arrests are due to the abundance of the drug in the social community, not to any police crackdown on marihuana.

In that respect, today's marihuana scene is reminiscent of the Prohibition era of bootleg whisky, speakeasies, bathtub gin, and back yard stills. In time, the laws against marihuana will suffer the same public fate as the ban on drinking liquor.

[From the Washington Star-News, Oct. 16, 1975]

MARIJUANA SMOKED MORE, AND AT AN EARLIER AGE NOW

(By Michael Satchell)

What narcotics agents suspected, drug abuse experts feared and pot smokers knew in their hearts all along, has now been firmly established: marijuana has

joined alcohol and tobacco as widely used social drugs of choice for a large segment of the population.

Results of four major studies recently released by the National Institute on Drug Abuse (NIDA), make it clear that marijuana use is reaching new highs. The weed is being smoked by more and more youngsters, and at an earlier age. For many older teens and young adults, its use has evolved from sneaking the odd joint to the regular use of the drug.

The evidence from these and other studies seems clear and overwhelming. But on the question of whether marijuana smoking may be hazardous to one's health, the jury is still out and, say the experts, it will stay out for a couple of decades at least.

More than one in five of the nation's 14- and 15-year-olds smoked pot last year, double the number in 1972, according to the studies. Use among the 12- to 17-year-olds rose from 17 to 25 percent over the same two-year period. The studies also found that 6 percent of the nation's 3 million high schoolers smoked grass each day. And 56 percent of the 18- to 20-year-olds used the weed.

The "reefer madness" scare, begun in the 1930s and perpetuated almost single-handedly for three decades by Harry Anslinger who headed up the old Federal Bureau of Narcotics, has today become largely discarded and discredited. It dies hard, however.

Three months ago, for example, readers of a small newspaper in Southwest Virginia were treated to this account of the effects of pot, contained in a letter to the editor from Joseph Gabrys, a retired federal narcotics officer who lives in Arlington.

"They stripped themselves of all clothing and masturbated almost continuously; their habits became filthy, feces and urine being passed in the bed or on the floor. Some would sing at the top of their voice for hours. On seeing a nursing orderly or medical officer they would crawl abjectly along the floor and beg for more."

Gabrys, quoting from a 1949 medical account of Indian marijuana smokers in the British Army, added in his own words: "A stupid kid smoking even one marijuana cigarette can become so deranged that he will commit an act which borders on insanity. Marijuana in concentrated form is known as hashish . . . an Oriental word from which assassin is derived."

This approach, which five years ago would have been taken at face value by a lot of people, today is scorned by responsible drug prevention workers aware that such exaggeration simply reinforces the attitudes of skeptical young people who have heard adults cry wolf too often on the marijuana health issue.

Dr. Robert DuPont, for example, the head of NIDA and the government's top drug abuse expert, believes that "for people who use marijuana in moderate doses, in a safe setting and in a reasonable fashion, there is no evidence of harmful health consequences right now."

But DuPont adds the qualifier "right now" because he worries deeply about the long-term medical effects on the body. During the 1930s, he said, when the "evil killer" image of marijuana was being fashioned by the authorities, cigarettes were widely advertised as being a boon to good health and nicotine became a national habit.

"It took us 20 years to learn the truth about tobacco," DuPont said ruefully, "It may take us 20 or twice that to learn the truth about marijuana smoking."

The newest findings on the extent of its use in the United States startled DuPont, who confessed that "18 months ago, I was much more sanguine about marijuana. It seemed like a nonissue. I was preoccupied with heroin."

All along, he said, the common assumption had been that marijuana smoking was mainly an experimental experience, and that it would be used as a temporary alternative to alcohol or tobacco. But the newest findings show that it has joined, rather than replaced them, among America's popular recreational drugs.

As more and more evidence is accumulated on marijuana's apparent benign nature, people in DuPont's position find themselves in something of a bind when it comes to persuading the public that they shouldn't smoke grass—particularly in the face of established measures of damage from alcohol and narcotics.

The social costs of smoking and drinking have been estimated at $25 billion a year and 9 million alcoholics from one legal drug $10 billion from the other with all the attendant miseries of death, injury, disease and disrupted family life.

The pot lobby, chiefly the National Organization for the Reform of Marijuana

Laws, (NORML) points to this enormous cumulative effect on society and asks "why pick on us?"

Keith Stroup, NORML's executive director, says that the medical argument against marijuana smoking hasn't been a serious issue in the drive for marijuana decriminalization since the Drug Abuse Council and Consumer Reports labeled grass much less harmful than tobacco or alcohol.

"The medical issue is a red herring now," Stroup argues. "We have to convince legislators that the risk in smoking grass is a reasonable one. We don't say that pot is 100 percent safe, no drug is harmless. Adolescents should be discouraged from smoking it. Pregnant women shouldn't smoke it. But if you are a responsible adult, you should be allowed to make your own decision on whether grass is going to be harmful to you, and the overwhelming evidence is that it isn't."

An enormous amount of medical research has been done on marijuana and the National Institutes of Health funds about $5 million worth of clinical studies each year. It is generally agreed on both sides of the issue that the weed is not addictive, and is far less damaging to health than alcohol or tobacco. It is also a consensus of opponents and smokers that you shouldn't drive while stoned and that heavy smoking can lead to lung problems such as bronchitis.

Recent, highly publicized studies have found various risks associated with marijuana smoking—that it can cause chromosome damage in heavy users, that it causes brain damage, that it renders users more susceptible to infectious diseases, that it leads to deterioriation in bodily and mental functioning, and that it lowers the body's production of the male hormone testosterone and could produce temporary sterility.

Each of these findings was the result of clinical study by respected medical researchers, yet all but the testosterone study by Dr. Robert Kolodny have been challenged by other equally respected researchers.

NORML's battery of medical advisers have told Stroup that the Kolodny study is the only one that appears to be sound. Yet one of the latest studies of marijuana smoking to be made public—an extremely comprehensive battery of tests financed by the U.S. Army—found no evidence of lowered testosterone levels, a direct contradiction to the Kolodny findings.

Dr George Lundberg, professor of pathology at the USC Medical School in Los Angeles, is one of those who believe enough money has been spent on clinical research into marijuana's effects, and that funds should be switched to long-term studies of the drug's effect. He also finds pot relatively harmless.

Lundberg is best known for his computer check of 701,057 consecutive admissions to the L.A. County Hospital between 1961 and 1969 to look for patients hospitalized by marijuana use. He found nine.

"Five of them were people who tried to inject marijuana intravenously, and they all got sick as dogs," Lundberg said. "One person got sick at the stomach from ingesting it, The other three had smoked and were dizzy, confused and in a dreamy state. They got well quickly.

"How can you compare that to alcohol, for example. After heart disease and cancer, alcohol-related conditions are the third largest cause of death. I'm convinced that marijuana is less harmful than aspirin, or even caffeine. What we need to know now is what the cumulative effect is going to be on all the people who use pot."

The only sound clinical knowledge of long-term marijuana smoking is the so-called "Jamaica Study" commissioned by the National Institute of Mental Health and conducted on the Caribbean island between 1970 and 1972.

Most Jamaicans in rural areas smoke prodigious amounts of "ganja", an average of seven or eight joints a day of marijuana that is 10 times as strong as the average reefer smoked in the United States. The study of 30 heavy long-time smokers and an equal numbers of nonusers found no evidence that the smokers had suffered any damage except for a susceptibility to lung problems, the result of the smoking action rather than the chemical ingredients of the marijuana.

All of this is small comfort to a man like DuPont who has the unenviable task of trying to persuade a drug-oriented society that way to a better life is to ease up on the weed, whisky and nicotine.

Although DuPont has come as close as he politically can dare to endorsing marijuana decriminalization, he has hardened his position on the health risk of marijuana in the light of the latest findings that pot smoking is firmly established and spreading.

[From the Washington Post, Jan. 24, 1976]

Loosening the Laws on Marihuana

(By Richard J. Bonnie *)

A few months ago the administration's Domestic Council, in its White Paper on Drug Abuse, explicitly acknowledged that the Justice Department does not enforce the federal prohibition against possession of marihuana. Apparently believing that this was news, the press, including The Post, gave this statement front page coverage. But the nation's top drug law enforcement official had told the National Commission on Marihuana and Drug Abuse the same thing back in 1971.

In any event, the White Paper goes even further, explicitly ranking marihuana at the bottom of a scale of priorities among illicit drugs. In contrast to heroin, barbiturates and amphetamines, for example, the White Paper note that marihuana, as now used, poses little risk to the user or society.

Unfortunately, state and local police nevertheless arrest each year some half million persons, mostly between 18 and 25 years of age, for possession of small amounts of marihuana. In response, six states and many legislators in the other states are aiming to redirect local enforcement resources in accord with national priorities by withdrawing the criminal sanction from possession of marihuana. One would think that the administration would welcome such efforts.

But not only has the administration failed to endorse decriminalization at the state level; it has also failed to endorse repeal of the meaningless federal prohibition. This is no small point. The drug laws of virtually every state are modeled after the federal law. As long as marihuana possession remains a crime (up to one year in jail and-or a $5,000 fine) under federal law, many state legislators who might otherwise vote for reform will be hesitant to depart from apparent national policy.

Attorney General Edward Levi recently stated to the Chicago Tribune that the administration would continue to resist the decriminalization of the possession of marihuana for personal use on grounds of "symbolism," arguing that these reforms could cause other countries—Mexico in particular—to question the seriousness of this nation's commitment to prevent traffic in drugs. In turn, his argument goes, Mexico and other countries might be less forthcoming in our bilateral efforts to "clamp down" on the production of illicit drugs, especially heroin, and their importation into this country.

This argument is apparently the administration's last line of defense against what has become an overwhelming case for decriminalization. Evidently the federal government no longer contends—as it did when enacting marihuana prohibition in 1937—that cannabis use represents a serious threat to the public health, safety and welfare. Nor does the administration continue to espouse the escalation hypothesis so popular in the 1950s and 1960s—that marihuana use might lead to the use of drugs which do present such harm.

In 1972 and 1973, when scientific authority weighed in against exaggerated descriptions of marihuana's harmfulness, defenders of the status quo, including President Nixon, began to assert that changing the marihuana laws might have a domino effect, and over time would poison the attitudes of the American people toward the use of all psychoactive substances. Where there was certainty—all illicit drugs are bad—there now would be ambiguity. "The line against the use of dangerous drugs is now drawn on this side of marihuana," said Mr. Nixon in March 1973. "If we move the line to the other side and accept the use of this drug, how can we draw the line against other illegal drugs? Or will we slide into an acceptance of their use, as well?"

The Ford administration apparently recognizes the limitations of this symbolic argument as indeed it must in light of this nation's ambivalence toward use of alcohol—an intoxicating drug more harmful than marihuana by any criterion, and in light of the fact that some 15 million Americans use marihuana recreationally without harm to themselves or others. But now the Attorney General has concocted a new symbolic argument; he simply asserts that ameliorating a domestic law under which some five hundred thousand young Americans are arrested very year, will somehow have a deleterious effect on the

*The writer, an associate professor of law at the University of Virginia, was associate director of the National Commission on Marihuana and Drug Abuse (1971–73) and is a member of the National Advisory Council on Drug Abuse.

behavior of the governments of other nations. Mr. Levi apparently believes that Mexico and Turkey will doubt the seriousness of our efforts to curb the international traffic in illicit drugs, especially heroin, just because we refuse any longer to stigmatize our young people as criminals for possession of a joint.

I do not mean to ridicule the diplomatic aspects of domestic drug policy. But the Attorney General cannot be serious when he maintains that decriminalization can reasonably be regarded as a significant shift in our policy. The position recommended by the National Commission on Marihuana and Drug Abuse in 1972 and being so fervently sought by representatives of the organized bar, organized medicine, Consumers Union, the National Educational Association, the National Council of Churches and so on, is not that this nation adopt a policy of encouraging or approving the use of marihuana; indeed the reformers continually stipulate, as did the National Commission, that the appropriate policy is to discourage the use of marihuana. Nor do the reformers seek any modification of the essentially prohibitory approach toward the availability of marihuana, "decriminalization" does not, for example, refer to any modification of the laws against the commercial production, importation and distribution of marihuana, all of which are felonies under both state and federal law.

Changes in our domestic policy toward supply might have international repercussions; we are, after all, a signatory of the single convention on narcotic drugs. But the issue now on the public agenda—and the one to which Attorney General Levi was referring—is the wisdom of making criminals out of marihuana users, not marihuana traffickers.

The policy of criminalizing marihuana users has severely wounded the legal system, has eroded public confidence in criminal justice and has made mockery of respect for law. These laws are both unjust and inefficient. The case for decriminalization is overwhelming. And this is true for the same compelling reasons that convinced all but four of the United States not to go so far as to prohibit the possession of alcohol for personal use during the decade of alcohol prohibition.

Even if marihuana use is decriminalized, the U.S. government could continue to attempt to reduce the flow of illicit drugs into this country and to reduce trafficking in these substances within the borders of the United States; and the administration could devote to these tasks those law enforcement dollars commensurate with the priority which it attaches to supply-reduction. But it is not only ludicrous, but also disingenuous, to argue that the arrest and prosecution of an individual for possession of marihuana for his own use is an essential ingredient of this nation's anti-narcotics policy. To the contrary, the price that this nation pays by arresting five hundred thousand individuals each year for possession of marihuana for their own use is exhorbitant. To refuse to pay it any longer would not signal a retreat from current policy but would rather reinvigorate this nation's commitment to reduce the social cost of drug abuse.

Mr. Levi probably knows this. Even if we do not view the criminalization of marihuana use an an integral part of our anti-narcotics strategy, he would respond, the Mexicans do—or at least they say they do. Here we reach the bottom line. If the Mexicans really do view marihuana use and heroin trafficking as being of a piece, it is only because this nation convinced them, fallaciously, of this connection in the 1950s and early 1960s. Moreover, whether the Mexicans translate this misguided attitude into their domestic law is certainly none of our concern; is Mr. Levi really saying that we should permit the Mexicans to impose their imprudent politics on us? It does seem ironic that a criminal prohibition rooted in this nation's post-World War I prejudice against Mexican immigrants is now being perpetuated because of the Mexican government's objection to its repeal.

DRUGS, SYMBOLISM, AND MR. LEVI

(An Editorial)

In an interview several weeks ago with the Washington bureau of the Chicago Tribune, Attorney General Edward H. Levi was asked his views on the subject of decriminalizing marihuana. He answered that he was concerned about the

possible "symbolism" of the United States' decriminalizing pot while trying in our bilateral talks with other countries to end international traffic in hard narcotics. On the facing page, Prof. Richard Bonnie of the University of Virginia Law School deals with the logic—or lack of it—of the attorney general's position. What was striking to us was the manner in which the attorney general, who should speak with great clarity on such a matter, folded marihuana and heroin into one larger issue called drug trafficking. He made no clear distinction between our society's legitimate interest in keeping heroin off our streets and the continued criminal sanction for the possession of small amounts of marihuana for personal use. To quote the attorney general directly:

"One of the problems in the frequent suggestions that you really shouldn't worry about marihuana is that—and that it ought to be decriminalized, its use and so on—is that we're asking other countries to clamp down and at the same time that we're apparently indicating that as far as we are concerned, we don't think it's so serious."

What this country thinks is "so serious," as the attorney general should well know, is the fact of increasing reports of Mexican brown heroin flooding the streets of the cities and the schools of the suburbs. The Drug Abuse Task Force of the Domestic Council said the priority should be on stopping that traffic and the country's drug abuse resources should be directed to that end. To the extent that law enforcement personnel are still diverted to the wasteful arrest of half a million young pot smokers a year, the Task Force found those resources were misdirected. That the attorney general confuses those two separate issues is disturbing. The organized bar, the associations of prosecutors in several states, the Domestic Council Task Force and the legislatures in six states have made the distinction and the earth has not crumbled. Why the attorney general can't manage to make it is beyond us.

LATEST U.S. MARIHUANA STUDY MOSTLY GOOD NEWS FOR USERS

(By Michael Satchell)

The government's 5th annual Marihuana and Health Report to Congress may be the best news for pot smokers since Oregon became the first state to decriminalize marihuana possession two years ago.

For the first time the survey of new medical findings related to the marihuana and health issue contains no dire warnings that users of the drug face possible severe health consequences.

In fact, it reports that research conducted during 1975 had failed to support previous studies suggesting that smoking marihuana could lead to genetic damage, lower fertility rates or possible impotence.

The survey, which was released today, also reports on some promising new medical uses of the drug for cancer, asthma and glaucoma patients.

Dr. Robert L. DuPont, director of the National Institute on Drug Abuse which prepares the annual survey, stresses in the report that while the new survey "does not give marihuana a clean bill of health as some would hope, it does not support the fear and irrationality that still characterize some of the public debate about marihuana."

The government's top drug expert says continuing studies make it clear that marihuana intoxication, like getting drunk on alcohol, poses significant hazards. Just like drunks, people who are stoned on marihuana shouldn't fly airplanes, drive or operate industrial machinery, the report warns.

DuPont is known to privately favor scrapping criminal penalties for possession of small amounts of marihuana, and in the past he has ventured close to saying outright that he supports decriminalization.

What is holding him back is a fear that an endorsement of decriminalization by the government's chief drug spokesman will be misinterpreted as a message that smoking marihuana is medically safe.

DuPont has consistently stressed that the long-term effects of marihuana smoking still are not known, despite recent major studies of long-term smokers that show no damage to the users.

These federally funded studies of heavy long-time smokers in Costa Rica, Jamaica and Greece found no reductions in the ability of smokers to work,

nor any permanent or irreversible brain damage. They also cast serious doubt, according to U.S. researchers, on the theory that smoking lowers fertility. The NIDA report suggests that the numbers of persons studied in these recent surveys were not big enough to be conclusive.

The new report indicates that heavy smokers of marihuana can develop a physical dependency on the drug and a tolerance to its effects. New studies also confirmed the continually increasing use of the drug, mostly among young people. For the first time, a majority of the nation's 18- to 25-year-olds—some 53 percent—have now smoked marihuana, the report says.

"Unusual therapeutic promise" in the use of THC, the active ingredient in marihuana, was discovered in studies last year, the report continues.

A side effect of chemotherapy being given to cancer patients is extreme nausea and vomiting and standard anti-emetic drugs have been unsuccessful in preventing it. THC has been found to be effective anti-emetic for virtually all of the cancer patients receiving it in tests, the reports shows, adding that most of the patients also got "high" from the drug.

THC preparations have also been valuable in reducing internal eye pressure in glaucoma patients. And use of the drug was found to be effective in dilating pulmonary air passages and decreasing airway resistance in asthma patients. Because smoking is obviously a lung irritant, THC is being developed in aerosol form for bronchial patients.

MARIHUANA: CONGRESS NUDGED

(By Robert P. Hey)

A new government report on marihuana use adds more fuel to a congressional drive to substitute fines for jail sentences for those caught with marihuana, several congressional sources say.

The drive is moving so slowly that it is unlikely Congress will act this year, although one or more subcommittees or full committees may recommend it.

This year's election complicates the issue—and makes congressional passage even less likely. Most political observers believe that a politician who supports milder penalties for marihuana use generally loses more votes than he gains.

The new report on marihuana use, released Wednesday (Feb. 11) by the federal National Institute of Drug Abuse (NIDA), says marihuana use continues to be concentrated in young people aged 18 to 25. The study, NIDA's, fifth annual report to Congress on the issue, adds that overall use continues to increase.

The report says that research over the past year does not support earlier evidence about possible long-term health hazards from sustained marihuana use—a concern that weighed heavily in stalling congressional attempts to decriminalize the drug.

But neither does it completely clear marihuana of health effects. Various research studies have provided contradictory evidence thus far, all sides in the debate admit.

This report does not give marihuana a clean bill of health as some would hope," wrote Dr. Robert Du Pont, director of the drug abuse institute. "Nor does it support the fear and irrationality that still characterize some of the public debate."

The effort to change the present federal marihuana laws centers on the Senate. New proposals would affect only persons with one ounce of marihuana or less in their possession. Such a small amount indicates they intend it solely for their own use, say backers of decriminalization, and do not intend to sell it.

All proposals now being considered in Congress would retain jail penalties for persons with more marihuana, who would be assumed to be dealers.

Last spring the Senate's juvenile-delinquency subcommittee held hearings on removing the jail penalties in federal law for simple possession or use of marihuana, as some states already have done.

Subcommittee chairman Birch Bayh (D) of Indiana is among those favoring such a proposal. His view is that it is a needless stigma to give a young person a lifelong criminal record by convicting him of the comparatively mild criminal offense of smoking marihuana.

Senator Bayh favors Oregon's approach replacing jail penalties for possession or use of marihuana with fines of not more than $100.

Additionally, many feel too much police and court effort is diverted to arrest and prosecution of marihuana users.

But the Senate subcommittee, faced with opposition from full committee chairman James Eastland (D) of Mississippi, never voted last year on a decriminalization bill. This year it might, sources say.

One reason is that Senator Eastland, long concerned about health and criminal aspects of marihuana, reportedly now has softened his opposition. He may now favor giving marihuana use offenders no more than 15 days in jail or a fine—at the judge's discretion; present federal law permits up to one year in jail, and a fine of $5,000.

PRICE OF MARIHUANA SOARS AS ITS USE INCREASES AMONG THE NATION'S AFFLUENT

(By Les Ledbetter)

PALO ALTO, Calif., Feb. 11—Gold closed in London at $130.75 an ounce today, And an ounce of very potent marihuana went for $150 in New York City.

Here in this materially and physically lush college town south of San Francisco four days ago, three young persons who regularly use and sell marihuana said that "top grade smoke" sells here for as high as $1,500 a pound.

"A greedy dealer carefully selling small amounts of truly superior smoke can easily get $200 an ounce from some of the richer heads [smokers] around here if supplies are tight," said one woman who describes herself as a part-time seller or dealer in the San Francisco-Palo Alto area.

Marihuana prices have skyrocketed in the 1970's until now some ounces of the drug sell for as much as $350, largely because the sociology of marihuana smoking is changing and a new affluent group of smokers who can pay higher prices has emerged.

COLLEGE HABIT CONTINUED

The great majority of regular marihuana smokers are still teen-agers and college students who pay from $15 to $60 an ounce for the drug and usually buy from friends.

But interviews in 14 cities and towns around the country showed that there were growing numbers of 30- and 40-year-old professionals in law, business, medicine, finance and communications who have carried on the marihuana habit they acquired in college and graduate school and who have developed more refined and expensive taste.

"Ten years ago, nobody with a position in the community would smoke it," a prosecutor in the Houston District Attorney's office said. "Now," he added, "the affluent younger professionals are, especially those who smoked it in college."

William West, secretary of the Marihuana Reform League, a group of about 100 southern Californians who fight for decriminalization of the drug, echoed this view that prices and demands for potency were rising because the middle-class college students who took to smoking marihuana in large numbers during the 1960's were now becoming affluent and upwardly mobile.

"The generation of marihuana users is now moving up in society," said Mr. West in Los Angeles.

This view was supported by drug law enforcement officers interviewed as well as by sellers and users.

"Marihuana and cocaine are being used by the more affluent sectors of society," said Capt. Jerry Campbell of the Los Angeles Police Department's Narcotics Division.

"It used to be that only people in the poorest areas of the city and rock musicians and actors and actresses in Hollywood used marihuana. But, now," he continued, "we have doctors, lawyers, and businessmen using it.

"There have been cases of wealthy people here paying as much as $1,000 a pound for Aonagold (a very potent strain from Hawaii)," Captain Campbell added.

The younger, less affluent smokers in American society appear to be turning to alcohol and other drugs, those who were interviewed say, or these people with less money wind up smoking low potency marihuana bought from friends or grown at home or in the college dorm.

According to those interviewed, and according to High Times, the two-year-old "magazine of high society" that lists soft drug prices by location and quality much as major newspapers quote commodity prices, the prices of marihuana have doubled, tripled and quadrupled in the last five years.

Low potency strains, called "domestic" and "commercial Mexican" were said to have risen from $7 and $10 an ounce on the average in 1970 to $15 and $20 an ounce today.

The much more potent Caribbean and South American varieties—Jamaican and Colombian Gold have risen in price from $15 or $20 an ounce five years ago to $40, $60 and even $100 an ounce in 1976.

And the most exotic and highly potent Asian-grown strains, specifically "Thai Sticks," which were as cheap as $20 an ounce at the height of the Vietnam war, now command prices ranging from $200 to $350 an ounce in the United States.

Everyone in the Times interviews agreed that inflation was a major factor in causing even the lowest grades of marihuana to double in cost from about $7 an ounce in 1970 to $15 an ounce today.

LIKE "EVERYTHING ELSE"

Lieut. Edward F. Connolly of the Boston Police Department's Drug Control Unit, said: "The dealers want higher prices simply because of inflation. They have the market and can usually get the price they want."

And in Florida, Dade County Sgt. Dan Pagella said philosophically, "Prices are going up on everything else, why not marihuana?"

And a woman in Los Angeles who says she sells only to entertainment stars, said: "Most of these people couldn't care about the price. They're not your pot-heads who smoke every minute of the day. They smoke on social occasions or for relaxation or before sex and they want the best quality possible."

EMBARRASSMENT AVOIDED

Several users who conceded they had purchased marihuana at prices of $100 an ounce and more said they were paying the higher prices because in their new positions they could not or did not want to buy from "street" dealers or sellers with apparent criminal connections.

"You like to buy from someone on the same professional and social standing as yourself," said a lawyer from Long Island, "You don't want some long-haired freak coming to your office or home and embarrassing you, so you pay a little more to the high-class dealers and that's another very expensive middle man."

"The rule of thumb," said John E. VanDiver, western regional director of the Federal Drug Enforcement Agency, "is that every time marihuana changes hands, it doubles in price."

But some long-term users expressed the belief that individual greed and conspiracies by exporters in foreign countries and importers here were a prime cause.

A 19-year-old Austin, Tex., man who said he had been selling marihuana since he was 12, said:

"Five years ago, somebody would bring up a ton of marihuana and sell it for $50 a pound. But now, they'll go down to Mexico and score 50 pounds of real good weed and come back and sit on it and wait for a really good price."

In Ann Arbor, Mich., where possession of small quantities of marihuana has been punishable only by $5 fines, payable like a traffic ticket, for several years, one seasoned smoker asserted that sellers "are sitting on Mexican [strains] to drive the prices up."

"The dealers are making a killing," he said. He explained that only the more exotic and potent brands were readily available to him and that these had come to cost more and more over the last few years.

A 21-year-old University of Texas psychology and transportation major, who said he sells about 80 ounces of marihuana a month, said: "The very fact that the price is going up at all is outrageous. There's an increase in the number of smokers, an increases in the number of acres planted and the laws are becoming less stringent. The prices should be going down, not up."

"I think there's a possible conspiracy to hold back all the dope and drive the prices up," he added. "I don't think it's all law enforcement causing the increase."

But a dealer in Ann Arbor defended the rising cost of his illegal product, saying that seizures of large shipments and crashes of smuggling planes has been "enough to interrupt service."

"We're charging people for the additional risks," he said. "The drug agencies have tightened down at the border and they are trying to get the Mexican officials to be more cooperative."

Among the new group of affluent marihuana smokers, snobbery has also played a key role in raising prices according to several dealers.

"When I sell to a Madison Avenue ad man, a Wall Street broker, a hotshot lawyer or one of the wealthy playboys in this town," said a youthful New York seller, "they don't care whether an ounce costs $50 or $500 as long as it's the best available and as good or better than what their peers have."

"The high prices even make the drug more attractive," he added.

Most smokers and sellers interviewed concluded that in addition to inflation, greed and higher risk, the craving by the new affluent class for the most potent variety of marihuana available had caused prices to rise.

U.S. DRUG CHIEF SOFTENS MARIHUANA STANCE

Alcohol and cigarettes are far more dangerous to the health of the user than marihuana, the government's top official on drug abuse said yesterday.

Dr. Robert L. DuPont, head of the National Institute on Drug Abuse, also gave his personal view that civil penalties should be substituted for criminal prosecution of cases of possession of marihuana.

"There is no question that alcohol and tobacco are causing us far more health problems than marihuana does," he told a news conference called to discuss the government's fifth annual report to Congress on marihuana and health, released this week.

DuPont previously has avoided drawing comparisons among the three most widely used "recreational" drugs. Yesterday, however, he said that while none of the drugs is safe, marihuana lacks the "lethal effects" of either alcohol or tobacco.

Furthermore, said DuPont, young persons are more likely to take up alcohol and tobacco first, then move on to marihuana, than the other way around.

In a written statement, DuPont emphasized that the report concerns strictly the health aspects of marihuana use and does not reflect administration social policy.

He was asked what advice he had for the parents of teenagers who use marihuana.

"I would advise them not to get so terribly uptight, and talk with them about the consequences of their decisions," he said. "My advice is if they are not using (any of the three drugs), don't take it up.

"There are health risks associated with all of the drugs. If a young person does use (one of the drugs), I would encourage them to use less of it."

Heavy and steady marihuana use can cause respiratory problems like bronchitis, DuPont said, and its intoxicating effects can make driving and use of industrial equipment hazardous.

Despite these potential effects, he said, marihuana lacks the life-threatening overdose danger of alcohol and is more likely to cause health problems than cigarettes.

DuPont also said he favors doing away with jail sentences for possession of marihuana.

"Personally," he said, "my view is that we do not have to threaten young people with imprisonment to discourage use of marihuana."

The report reveals a continued increase in popularity of marihuana, especially among younger adults. Latest figures show that more than half the 27 million Americans between 18 and 25 have tried the drug at least once. This 53 percent figure compares with 48 percent in 1972.

Use of marihuana by persons under 18 is up even more sharply—from 14 percent in 1972 to 23 percent last year, the report shows.

The report is not "a clean bill of health" for pot, DuPont said, "nor does it support the fear and irrationality that still characterize some of the public debate about marihuana."

Some students of the legislative scene here thought that DuPont's "fear and irrationality" remark might have disturbed his HEW superiors in view of a consistently hard-line anti-pot stand by Sen. James O. Eastland (D-Mass.), the

senior member of the Senate and head of its Judiciary Committee, which must pass on all drug laws.

The report called for accelerated research on animals to learn more about a tumor-suppressing property that delta-9-THC (the active ingredient of pot) seems to have.

The report also acknowledged for the first time the therapeutic uses to which marihuana might be put. These include some applications well known to doctors for years, such as the drug's ability to reduce excessive pressure within the eyeball that make glaucoma a leading cause of blindness.

At present, marihuana cannot be used for medical purposes because the federal Controlled Substance Act lists it in "Catch-22" fashion as a substance for which there is no accepted medical use.

[From the Washington Star, Mar. 18, 1976]

THE STRAIGHT DOPE ON MARIHUANA

(By Judy Flander)

Is marihuana addictive? Is grass an aphrodisiac? Does smoking pot lead to the use of hard drugs? Is a driver under the influence of marihuana a menace on tre road? The answers to these (in order: no, no, no, yes) and nine other commonly-asked questions about marihuana are the nucleus of a television documentary tonight, "Grass Facts: A Primer on Marihuana" (WTOP-9 at 10 a.m.).

The initial part of the program, which clamly deals with some myths about marihuana, last an hour. Then, after a half-hour of regularly-scheduled news, it resumes as an open-ended audience-participation show. In addition to members of the studio audience who participate in a discussion with a panel of experts in the fields of education, drug abuse and legal and criminal justice, viewers can call in with questions and comments. Producer/director Marion Whigham says the program will run as long as viewers call in, even if the phones ring half the night.

If you want to try your hand with the 13 questions dealt with by the experts during the first hour of the show, you'll find them in an ad on the bottom of this page. Mark your answers and see how they stack up not only with those given by the experts but with those of the 863 Washington area residents who answered them as part of a pre-broadcast survey, given by the Bureau of Social Science Research. On an average, respondents answered only 6 of the 13 questions correctly.

The purpose of the questions, of course, is to give some insight into the general confusion and lack of information about marihuana. It is a confusion, as a Fairfax policeman points out, that makes it almost impossible for young people to make appropriate decisions about the use of the drug.

"Grass Facts" is skillfully done, low-key and unpreachy. In fact, there is no attempt to influence opinion other than to present the current scientific findings. The questions are answered by Dr. Thomas E. Bryant, president of the Drug Abuse Council, coproducers with WTOP of "Grass Facts," and others.

WTOP anchorman Max Robinson asks the questions, each of which are preceded by comments from people in the community: a computer expert, a Metro construction worker, a retired elderly educator, parents. Rep. Walter Fauntroy asks if the "nation is developing into a full-blown drug culture." A longhaired Georgetown street vendor who drives an ice cream truck in the suburbs in the summer tells of being hassled by police because parents erroneously assume he's pushing pot as well as popcicles.

Arlington school board president Anne Broder talks about the importance of young people, especially, needing to know "the realities of drug abuse"; an elderly couple express relief that they raised their children before marihuana use became widespread. The construction worker expresses the pragmatic belief that the schools should teach the real facts of life (he is referring to the reality of drug abuse).

There is some indication that the problem of marihuana is not one many people want to face. A WTOP spokesperson notes that "Grass Facts" is the rare documentary for which the station was unable to get even one sponsor. Yet the program is one that should be watched and probably will be watched.

[From the Philadelphia Bulletin, Aug. 12, 1976]

FINES FAVORED FOR POT SMOKERS

(By Robert W. Kotzbauer)

The chief of federal drug abuse treatment, research and prevention efforts says he favors levying fines against marihuana smokers rather than putting them in jail.

But Dr. Robert L. DuPont Jr., director of the National Institute of Drug Abuse (NIDA), says he disapproves of the term "decriminalization" used by most advocates of marihuana law reform to describe such a policy.

"That sounds too similar to legalization, and this I oppose," Dr. DuPont said at a press conference in Philadelphia yesterday.

"I support a policy of discouraging marihuana use by making it harder to get, by putting traffickers in jail," he said, adding that in fact there is now no federal prosecution of users or possessors of small amounts of marihuana.

Dr. DuPont, in Philadelphia to meet with local drug treatment and prevention officials, praised programs and services in the city as the most sophisticated and comprehensive in the Nation.

"Unquestionably, Philadelphia is a national leader in drug abuse treatment," he said, admitting that this is a subjective judgment based on number and quality of programs and not results.

There is no certain way to measure success, he said.

Illicit drug use is increasing again, according to Dr. DuPont, after a downward trend in 1972 and 1973.

He estimated that there are 400,000 daily users of heroin in the U.S. A survey of high school seniors across the nation last year, he said, found that 48 percent had used marihuana, 12 percent LSD, 9 percent cocaine and 2 percent heroin at least once.

John E. Riggan, executive director of Philadelphia's Coordinating Office for Drug and Alcohol Abuse Programs, estimated that there are 15,000 daily heroin users in the city, about one-third of whom are in treatment.

Riggan said there are 30,000 other serious drug abusers in the city, plus an estimated 160,000 problem drinkers and alcoholics.

While science has discovered no "miracle cure" for narcotic addiction, said Dr. DuPont, the encouraging trend during the last decade has been the huge expansion of treatment facilities. He said there are 241,000 persons in 3,800 drug treatment clinics across the United States.

[From the New York News, Sept. 5, 1976]

POTHEADS PUFFING FANCY GRASS

(By Dick Brass)

Every day, if official estimates are correct, America imports a staggering 20 tons of pot. It streams into every port and city by freighter, by cargo plane and on tractor-trailer trucks.

The habit of smoking pot has saturated every level of society and seems to be growing all the time. What began as a footnote to the 1960's youth culture is now a $6 billion industry. And with pot possession "decriminalized" in eight states already, grass may become as legal as, well, grass.

Consider these statistics:

The National Institute on Drug Abuse estimates there are 13 million regular pot smokers in the U.S., or about 8 percent to 9 percent of the adult population. In addition, 34 million or 19 percent of all adults have tried it.

Reflecting an increased demand and supply, pot seizures have almost doubled in the past year alone, according to the federal Drug Enforcement Administration. During the first half of 1976, 761,000 pounds of pot were seized by federal authorities in the U.S., up from 400,000 pounds for the same period last year. By contrast, less than 300,000 pounds were seized during the entire decade between 1960 and 1969.

Government agents, dope dealers and Senate investigators estimate that these seizures represent no more than 10 to 15 percent of the total imported.

Using the more conservative 10 percent figure, this means Americans will import a whopping 15.2 million pounds this year. Drug dealers and smokers figure the average nationwide price at $25 to $30 an ounce (the New York price runs $35 to $45), and at that rate Americans are spending $6 billion a year on pot. By comparison, they spend less than $3 billion on phonograph records..

Even the rolling paper and pot paraphernalia people are doing a booming business. Adams Apple Distributing Co., a Chicago-based rolling paper firm, figures it sold $6 million worth last year and expects sales of $10 million this year—most of it to pot smokers. High Times, a magazine aimed at marihuana users, is now more than two years old and boasts a circulation of 410,000. And there are two new magazines in the field: Head and Rush.

The Big Apple constitutes one of the world's largest marihuana markets where pot sells openly in some city parks. And tons of the stuff roll north weekly in what amounts to a massive, clandestine convoy.

"If it got to New York, the chances are that it came through New Jersey," complains Capt. W. J. Kennedy of the New Jersey State Police Narcotics Division. "They bring it through on all kinds of vehicles, trucks, rented trucks, vans, U-Hauls."

But even these vast quantities are apparently not enough to satisfy the burgeoning demand. For it so happens that this summer there has been a marihuana drought on the East Coast.

"It's probably the worst in the last 10 years," says Keith Stroup, a regular smoker and head of the pro-pot National Organization for the Reform of Marihuana Laws. "As marihuana's popularity increases, it gets worse. The supply is just not increasing with the demand."

Which is not to say that marihuana is unavailable. "Like the oil shortage, you can still get it—it just costs more," grumbled one law student in Brooklyn. Garden variety Mexican pot, for example, which cost him $25 to $35 an ounce last year now costs $50. And prices approaching $300 an ounce for potent, exotic types are not unusual, buyers complain.

In fact, with the general rise in pot popularity there has developed a whole class of gourmet smokers who buy only the best. "Like wine tasters, they can tell you the country, the field—even what side of the field a particular pot comes from," marvels Tim, a well-heeled dope dealer here who favors the best himself.

These exotic varieties from Asia and Africa enter the country in far smaller quantities than the grass grown in Mexico and on the Caribbean islands. Predictably, it costs much more; up to $300 an ounce for a single ounce of Congolese Black pot. Gold, the metal, is cheap by comparison.

What makes this expensive pot so popular is its potency. Much of the grass generally available a decade ago could be smoked all day with little more than dizziness. A single puff of some of today's more powerful varieties is enough to get the average smoker stoned.

Hard to believe? The active chemical agent in pot is something called THC (for delta-9-tetrahydrocannabinol). According to evidence presented last year by the Senate Internal Security Subcommittee, the pot puffed in 1965 averaged one-fifth of 1 percent THC. By 1970, Mexican dope averaging 1 percent to 1.5 percent THC was common. Now, foreign strains topping 5 percent are not unusual. One batch seized by federal agents reached 8.9 percent and that's strong.

But despite this jump in strength, more and more scientists seem to be giving pot a relatively clean bill of health— and a few even regard it as healthy.

Among it's salutary effects, researchers claim, pot can limit nausea, reduce anxiety among cancer patients and aid asthmatics as a bronchodilator in the form of THC. It can also apparently reduce internal eye pressure among glaucoma victims—and one glaucoma patient is suing the government for permission to use the stuff regularly.

To be sure, various studies have blasted marihuana for disrupting cell function, causing hormone problems, reducing disease-fighting response, dropping sperm counts and even swelling male breasts.

But a Department of Health, Education and Welfare report to Congress on marihuana this year points out that these claims have been neither proved nor disproved.

HEADED FOR LEGALIZATION

However dangerous or beneficial marihuana may be, it seems headed for eventual legalization. Since 1973, eight states have decriminalized pot posses-

sion—which means that users there are subject to a small fine rather than a jail term. These states include Maine, Colorado, California, Ohio, South Dakota, Minnesota, Oregon and Alaska. In Alaska, in fact, the state Supreme Court ruled that private possession in one's home is a constitutionally guaranteed right.

In New York, Gov. Carey this year proposed eliminating jail terms and substituting a maximum fine of $250 for people caught using or transfering without profit up to two ounces of pot. But this being an election year, political observers said that legislators were somewhat wary, so the proposal died in both houses of the Legislature.

According to Carey, "the costs of enforcing the marihuana law, both in financial and human terms, are staggering and diverts scarce law enforcement resources away from the pursuit of the real menaces to society: the violent criminals and the pushers of hard drugs." A News poll in February showed 52 percent of New Yorkers favored Carey's plan—37 percent didn't and 11 percent didn't know.

STILL RISK ARREST

"There will still be a dirty dozen states that will be slow to change," says pot lobbyist Stroup who—with funding from Playboy and High Times magazine—has fought hard for decriminalization as a first step toward legalization.

By 1978, the 32-year-old attorney predicts, half the states and the federal government will have decriminalized. Jimmy Carter, for the record, favors decriminalization. Ford opposes it.

Meanwhile, pot smokers still risk arrest and imprisonment in most states. According to FBI figures, 416,100 people were arrested for marihuana possession and sale in 1975. But for the first time in many years this figure dropped from the previous year, when arrests totalled 445,600. Stroup figures this trend will continue.

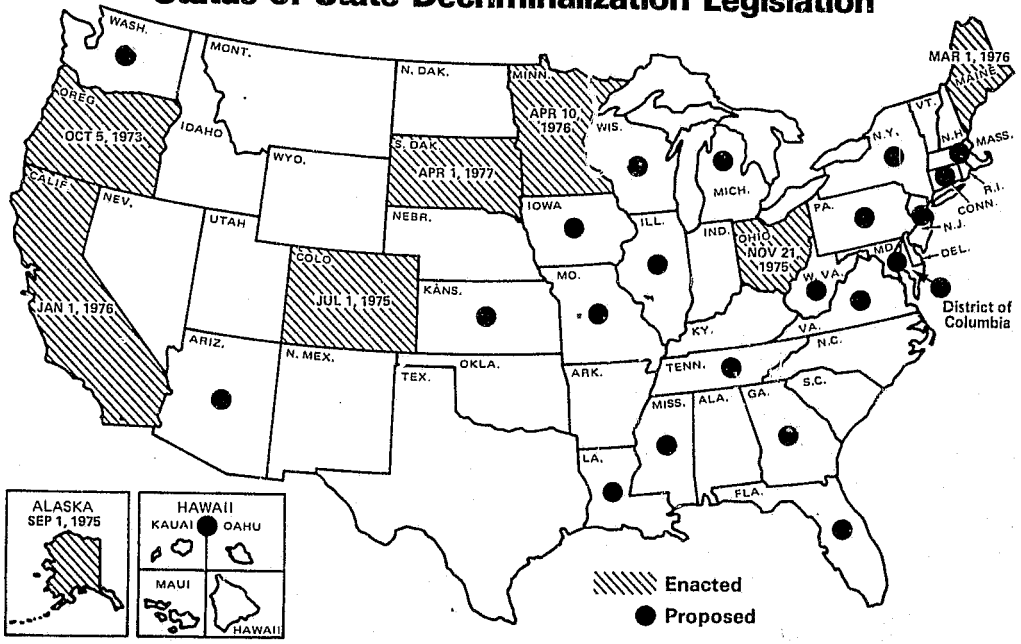
Locally, the tolerance and attitude is quite clear: In Manhattan, for example, District Attorney Robert Morgenthau rarely prosecutes pot charges. And last month, in what amounts to a policy change, Nassau County police decided to stop mass pot searches during rock concerts at the Nassau Coliseum.

Outright legalization is of course further away—years away, even Stroup concedes. And first the U.S. must resign as a signatory to a 1961 international drug agreement outlawing pot.

Even so, the die-hard opponents of marihuana decriminalization are complaining. David Martin, who heads the anti-pot effort of Mississippi Senator James Eastland's Internal Security Subcommittee, worries Americans are ignoring the dangers of the weed.

"I don't know why," he grumbles, "but the press consistently downplays the seriousness of the problem."

Possession of Marihuana: Status of State Decriminalization* Legislation



*"Decriminalization" is used to apply to all statutes or proposals providing that a person charged with a simple possession of a small amount of marihuana is not subject to arrest or imprisonment, nor left with a permanent criminal record, even though the offense may continue to be classified as "criminal" rather than "civil."

Source of information on pending legislation: National Organization for the Reform of Marihuana Laws. (NORML). All bills introduced during the current or most recent session of the State Legislature are indicated, even though receiving unfavorable action.

FEBRUARY 28, 1974.

THE HARRIS SURVEY—ALCOHOL BELIEVED MORE HARMFUL THAN MARIHUANA

Alcohol is rated "more dangerous for people to take" than marihuana by a 31–29 percent margin of the American people, while a full 30 percent see them as "equally dangerous." Thus, nearly two out of three seem to accept one of the principal arguments of those who say we have a double standard in dealing with these stimulants.

A majority (53–24 percent) say they "can see the time when marihuana will be used as much as alcoholic beverages in this country." Nonetheless, a more sizable majority opposes legalizing the sale of marihuana (70–23 percent) and also rejects legalizing the use of the drug (65–25 percent).

Adoption nationally of a new Oregon law which levies a small fine and no jail term on anyone caught with a small amount of marihuana in his possession is also opposed but by a much smaller margin, 49–36 percent.

Although attitudes toward marihuana have softened some over the past few years, most adult Americans by and large still take a rather firm line against its sale and use. Easily the strongest current for legalizing marihuana is the widespread conviction that alcoholic beverages, now legal in most parts of the country, are even more dangerous.

In late January, the Harris Survey asked a nationwide cross section of 1,594 households:

"Do you think marihuana or alcohol is more dangerous for people in this country to take?"

Alcohol or marihuana more dangerous?

	Total public (percent)
Alcohol more dangerous	31
Marihuana more dangerous	29
Both equally dangerous	30
Not sure	10

Alcoholic beverages are seen as just as dangerous and possibl yeven more dangerous than marihuana. In addition, a majority answered in the affirmative when asked:

"Can you see the time when marihuana will be used as much as alcoholic beverages in this country, or can't you see this happening?"

Will marihuana be used as much as alcohol?

	Total public (percent)
Can see	53
Can't see	34
Not sure	13

A plurality is also convinced that when the present younger generation grows older it will not give up the use of marihuana:

"When the present younger generation gets older, do you think they will continue to use marihuana, or do you think it is something young people will grow out of?"

Will young people use marihuana when they grow older?

	Total public (percent)
Will continue to use marihuana	44
Will grow out of it	38
Not sure	18

Despite the expectation that marihuana is here to stay, a solid majority still stands steadfastly opposed to legalizing either the sale or use of pot. The press section was asked:

"Do you think the (sale/use) of marihuana should be legalized or not?"

SHOULD SALE OR USE OF MARIHUANA BE LEGALIZED?

[In percent]

	Sale of marihuana	Use of marihuana
Favor	23	25
Oppose	70	69
Not sure	7	6

The number who oppose legalizing the sale of marihuana has declined from 79 to 70 percent of the public since 1972, but is still a decisive majority. The division on adopting Oregon's milder penalties for possession of marihuana is much closer, however:

"In Oregon, while it is still illegal to possess marihuana, the penalty for anyone having a small amount of marihuana in his possession is a small fine and no jail term. Would you favor or oppose adopting the Oregon marihuana law nationally?"

ADOPTING OREGON MARIHUANA LAW NATIONALLY

[In percent]

	Favor	Oppose	Not sure
Nationwide	36	49	15
By age:			
18 to 29	48	43	9
30 to 49	35	51	14
50 and over	27	53	20
By education:			
8th grade or less	19	50	31
High school	33	54	13
College	49	42	9

The division is sharp between young people under 30 who would favor such a law, by 48–43 percent, and those 50 and over who would oppose it, by a decisive 53–27 percent. The difference by education is equally wide: those with the fewest years of education oppose the Oregon law by 50–19 percent, but those with a college education favor it by 49–42 percent.

Equally sharp splits exist by size of place, with residents of big cities and the suburbs favoring the adoption of the Oregon law, but with small-town and rural residents opposing it.

Substantial shifts of public opinion will have to take place before legalized use of marihuana or milder penalties for using it will reflect the prevailing climate in the country. But there are visible signs that the public has resigned itself to the fact, legal or not, that the marihuana has joined alcohol as a more or less permanent part of life in America.

JANUARY 24, 1975.

PUBLIC OPINION POLLS CONCERNING MARIHUANA

(By Keith Stroup)

I have compiled a listing of the major public opinion polls concerning marihuana from our files. Please advise if there is other useful survey data of which you are aware.

I. PUBLIC OPINION CONCERNING THE SPECIFIC OREGON CIVIL-FINE TYPE OF DECRIMINALIZATION

1. Lou Harris, January 1974, national sample showed:
   35 percent support civil-fine approach.
   49 percent opposed.
   15 percent undecided.
2. Drug Abuse Council Survey, October 1974, national sample showed:
   39 percent support a civil-fine approach, or a more liberal one.

40 percent favor stiffer penalties.
13 percent want the laws to remain as they are.
8 percent are undecided.

3. D.A.C. Survey, October 1974, Oregon state sample only, showed:
58 percent support a civil-fine approach, or a more than liberal one.
39 percent stiffer penalties.

II. PUBLIC OPINION CONCERNING DECRIMINALIZING THE USER

1. George Gallup, national samples, (asked "Should the Use of Marihuana be Legalized?"):
October 1969—12 percent favor decriminalization; 84 opposed; and 4 percent undecided.
January 1972—15 percent favor decrimination; 81 percent opposed; and 4 percent undecided.
January 1973—16 percent favor decriminalization; 78 percent opposed; and
6 percent undecided.

2. George Gallup, college sample, Fall of 1970; 50 percent favor decriminalization, 44 percent oppose, 6 percent uncertain.

3. CBS News, national, telephone sample, August 1970:
12 percent favor decriminalization.
86 percent opposed.
2 percent undecided.

4. Lou Harris, January 1974, national sample:
25 favor decriminalization.
69 oppose.
6 percent undecided.

III. PUBLIC OPINION CONCERNING LEGALIZING SALE OF MARIHUANA

1. Lou Harris, January 1974, national sample:
23 percent favor.
70 percent opposed.
7 undecided.

2. Field Poll, California sample:
May 1969—13 percent favor; 84 percent opposed; and 3 percent undecided.
November 1973—32 percent favor; 66 percent opposed; and 2 percent undecided.

3. D.A.C. Survey, October 1974.
Natinal sample—16 percent favor, 76 percent opposed and 6 percent undecided.
Oregon sample—11 percent favor; 86 percent opposed; and 3 undecided.

4. Daniel Yankelovich (for the New York Times), New York City sample:
January 1974—34 percent favor; 57 percent opposed; and 9 percent undecided.

IV. RATES OF EXPERIMENTATION WITH AND USE OF MARIHUANA

1. D.A.R. Survey, October 1974:
National—18 percent have experimented; 8 percent are current users.
Oregon—19 percent have experimented; 9 percent are current users.

2. Marihuana Commission Surveys, national sample:
1971—14 percent have experimented; 5 percent are current users.
1972—16 percent have experimented; 8 percent are current users.

3. Marihuana Commission Surveys, college sample: 1972—66.9 percent have experimented.

4. George Gallup Surveys, national sample:
January 1973—12 percent have experimented.
January 1972—11 percent have experimented.
October 1969—4 percent have experimented.

5. George Gallup, college samples:
Spring 1974—55 percent have experimented.
Fall 1974—51 percent have experimented
Fall 1970—42 percent have expermented
Spring 1969—22 percent have experimented.
Spring 1967—5 percent have experimented.
Spring 1967—5 percent have experience.

6. CBS News, national sample: August 1970—6 percent have experimented.

[From the Congressional Record, Oct. 8, 1975]

On Decriminalizing Personal Use of Marihuana

Mr. Koch. Mr. Speaker. I would like to draw to the attention of my colleagues several events in the news which should bring Members, both Republican and Democrat, to the conclusion that it is time to ease the criminal penalties for the possession of small amounts of marihuana. First, a natioonwide survey commissioned by the National Institute of Drug Abuse, Department of Health, Education, and Welfare, has found that one in five Americans has used marihuana. That percentage may increase: A majority of Americans between the ages of 18 and 25 have sampled marihuana. Furthermore, substantially more Americans view both alcohol and tobacco as addictive while a lesser percentage views marihuana as addictive. But let me cite the most significant statistics: 52 percent of Americans now favor only a fine and/or a probation for possession of marihuana: 86 percent oppose the imposition of any jail penalty for this offense.

The Domestic Council appears to be following this lead. At the direction of the President, the Council's Drug Review Task Force undertook a priority review of the Federal effort in drug abuse prevention and found that since the "widespread recreational use" of marihuana has a "relatively low social cost," the Government has "deemphasized simple possession and use of marihuana in its law enforcement efforts." Furthermore, in ranking various drugs according to their potential for harm both to society and the individual, marihuana was found to be the least serious. While the Council did not make any recommendations, it did suggest that "Federal efforts in both supply and demand reduction should be directed toward those drugs which inherently pose a greater risk to the individual and to society—heroin, amphetamines, and mixed barbiturates—and toward the compulsive users of drugs of any kind," including alcohol.

If these reports have not persuaded the President to give support to the easing of the penalties for marihuana possession, then I would suspect that President Ford will listen to his son, Jack. My regard for Jack Ford, who I do not know, has increased because of this courage to speak so honestly about his use of marihuana. Do any of the Members here really believe that Jack Ford and millions of our young people like him should be liable to a jail term for personal marihuana use. Should they be considered criminals?

Do the Members of the House not agree that it is time to stop wasting our law enforcement resources on the prosecution and imprisonment of marihuana users. Let me put that waste in terms of dollars and cents. There are at least 13 million who smoke marihuana on a regular basis. If in one fell swoop we were to place those regular users in jail for 1 year, the cost to the American public at more than $6,000 per person per year, would be over $79 billion. Does anyone suggest that this is practicable? Yet equal application of the law would demand such action.

Should we not remove the threat of imprisonment from millions of Americans? I have introduced two pieces of legislation to correct this situation: H.R. 561 would decriminalize the possession of small amounts of marihuana—1 ounce, H.R. 6108 would impose civil fines for the possession of 1 ounce or less of marihuana. Twenty four Members are now cosponsoring either or both of these bills. This legislation would of course only affect Federal jurisdictions. But I believe that this action would be a catalyst for State action.

Six States have already adopted liberalized marihuana laws, the legislatures of most States are considering decriminalization legislation, and Senator Birch Bayh's Senate Subcommittee on Juvenile Delinquency has held hearings on a possible civil fine approach to reform of marihuana legislation.

The District of Columbia City Council has given preliminary approval of a bill similar to the civil fine approach that I have adopted in H.R. 6108. It is time to move on this issue. All events point in that direction. If you would like to cosponsor this legislation, I shall be reintroducing it on Thursday, October 23.

I am appending parts of the two reports which I have cited for the information of my colleagues:

A comprehensive nationwide survey commissioned by the National Institute on Drug Abuse, U.S. Department of Health, Education, and Welfare, recently sampled public beliefs, attitudes and behavior with regard to a wide range of legal and illegal drugs.

The data was gathered by Response Analysis Corporation of Princeton, New Jersey, from personal face-to-face interviews (3,071 adults, 952 youths) between November, 1974 and March, 1975. This data complements similar surveys by Response Analysis undertaken for the National Commission on Marihuana and Drug Abuse in 1971 and 1972.

I have included a brief summary of the survey results concerning marihuana.

TABLE I.—MARIHUANA AND HASHISH EXPERIENCE

[In percent]

WHITE PAPER FOR THE PRESIDENT: DRUG ABUSE

EXCERPTS FROM THE REPORT: MARIHUANA*

Marihuana is the most widely used illicit drug, with an estimated 20 percent of Americans above the age of 11—25 to 30 million people—having used it at least once. In short, marihuana has joined alcohol and tobacco as one of the most widely used drugs in the United States.

SUMMARY: DRUG PRIORITIES

Chart 12 ranks the various drugs according to the following criteria (1) likelihood that a use will become physically or psychologically dependent; severity of adverse consequences, both (2) to the individual and (3) to society; and (4) size of the core problem.

SUMMARY OF DRUG PRIORITIES

		Severity of consequences		
	Dependence liability	Personal	Social	Size of core problem
Heroin	High	High	High	High, 400,000.
Amphetamines:				
Needle	High	High	High	High,
Oral	Low	Medium	Medium	500,000.
Barbiturates:				
Mixed	High	High	High	Medium,
Alone	Medium	High	Medium	300,000.
Cocaine	Low	Low	Medium	Low
Marihuana	Low	Low	Low	Low.
Hallucinogens	Medium	Medium	Medium	Low.
Inhalents	Medium	High	Medium	Low.

Though the data are flawed and the rankings therefore imprecise, a clear pattern emerges.

Heroin ranks high in all four categories;

Amphetamines, particularly those injected intravenously, also rank high in all four categories;

Mixed barbiturates rank high three out of four categories;

Cocaine, hallucinogens, and inhalants rank somewhat lower; and

Marihuana is the least serious.

On the basis of this analysis, the task force recommends that priority in Federal efforts in both supply and demand reduction be directed toward those drugs which inherently pose a greater risk to the individual and to society—heroin, amphetamines (particularly when used intravenously), and mixed barbiturates—and toward compulsive users of drugs of any kind.

This ranking does not mean that *all* efforts should be devoted to the high priority drugs, and none to the others. Drug use is much too complicated and our knowledge too imprecise for that. Some attention must continue to be given to all drugs both to keep them from exploding into major problems and because there are individuals suffering severe medical problems from even a low priority drug, such as marihuana.

---

*A great deal of controversy exists about marihuana policy. On the one hand, recent research indicates that marihuana is far from harmless, and that chronic use can produce adverse psychological and physiological effects. Therefore, its use should be strongly discouraged as a matter of national policy.

However, in light of the widespread recreational use—and the relatively low social cost associated with this type of use—the Federal Government has been deemphasizing simple possession and use of marihuana in its law enforcement efforts for several years. For example, very few persons are arrested by Federal agents for simple possession and use; those who are charged with this offense normally are also being charged with some other, more serious offense as well. However, vigorous law enforcement aimed at major traffickers has been and should continue to be undertaken at the Federal level.

The task force endorses this moderate view and expects the lower priority that has been established for marihuana will also be reflected in our demand reduction efforts by the elimination of many non-compulsive marihuana users now in our treatment system.

However, when resource constraints force a choice, the choice should be made in favor of the higher priority drugs. For example:

In choosing whom to treat, we should encourage judges and other community officials not to overburden existing health facilities with casual users of marihuana who do not exhibit serious health consequences. (But, a person who is suffering adverse consequences because of intensive marihuana use should have treatment available.

In assigning an additional law enforcement agent, preference might be given to Mexico, which is an important source of both heroin and "dangerous drugs", rather than to Miami, where an agent is more likely to make a cocaine or marihuana case.

This drug priority strategy is essential to better targeting of limited resources and it will be further addressed in relation to supply and demand reduction activities in chapters 3 and 4. Further, the process of assessing the current social costs of drug abuse should be a continuing one, to ensure that resources are allocated on the basis of priorities which reflect current conditions and current knowledge.

JANUARY 26, 1976.

THE HARRIS SURVEY—CLOSE VOTE ON MARIHUANA LAW

Although the American people are against legalizing either the sale or use of marihuana, more and more believe that possessing small amounts of marihuana should not be a criminal offense.

In the most recent Harris Survey among 1,394 adults nationwide, only a 45–43 percent plurality opposes "penalizing anyone having a small amount of marihuana with a small fine and no jail term." (This lenient view is embodied in the Oregon law.) In 1974, a more substantial, 49–36 per cent came out against such token punishment for marihuana possession.

Part of the reason for this shift is that the American people see more dangers in the use of alcoholic beverages than in the use of marihuana. Seventy-one per cent view the problem of "heavy drinking" as very serious, while only 58 per cent feel that way about marihuana. This is a complete reversal of public attitude since 1969, when 73 percent viewed pot smoking as "very serious", compared to 53 per cent who felt the same about heavy drinking.

The same trend is evident when people are asked to choose between marihuana and alcohol as "more dangerous for people in the country to use." Although about three out of 10 feel both are equally dangerous, 35 percent single out alcohol, compared to 29 percent who choose marihuana. Back in 1969, a substantial 58 percent of the public felt that marihuana was more dangerous than alcohol was.

Nevertheless, there is no strong evidence that Americans now favor making the sale or use of pot legal. A 69–25 percent majority still opposes legalization of the sale of the drug, which represents virtually no change from 1974, when a 70–23 percent majority felt that way. A 66–28 percent majority is opposed to the use of the drug, compared to the 69–25 percent majority who felt the same in 1974.

Still, decriminalization has made real and measurable progress, judging from the very small margin by which the public opposes adopting the Oregon marihuana law nationally. Recently, the Harris Survey asked a cross section of 1,394 adults nationwide:

"In Oregon, while it is still illegal to possess marihuana, the penalty for anyone having a small amount of marihuana in his possession is a small fine and no jail term. Would you favor or oppose adopting the Oregon marihuana law nationally?"

ADOPTING THE OREGON MARIHUANA LAW NATIONALLY

[In percent]

	1975	1974
Total public:		
Favor	43	36
Oppose	45	49
Not sure	12	15

KEY GROUP ANALYSIS OF ATTITUDES TOWARD DECRIMINALIZATION OF USE OF MARIHUANA

[In percent]

	Favor	Oppose	Not sure
Nationwide	43	45	12
By region:			
East	50	37	13
Midwest	45	44	11
South	30	56	14
West	49	42	9
By age:			
18 to 29	59	29	12
30 to 49	43	45	12
50 and over	31	57	12
By education:			
8th grade or less	22	60	18
High school	40	48	12
College	56	35	9
By occupation:			
Professional	57	36	7
Executive	49	43	8
Skilled labor	37	54	9
White collar	47	39	14
By size of place:			
Cities	49	41	10
Suburbs	49	37	14
Towns	35	54	11
Rural	34	54	12

However, the closeness of that national division tends to cloak sharp differences between key groups of the public. On the one hand, people under 30, who primarily use marihuana, favor the Oregon law by better than two to one. But people who are 50 and over oppose nationalization of that law by almost two to one. Similarly, the college educated favor decriminalization by a wide margin, but those with less education stand opposed.

By region, three out of four sections of the country favor the Oregon law, but the South is adamantly in opposition. Finally, people who live in the big cities and suburbs tend to favor decriminalization, but small town and rural residents do not.

Over time, the younger, better educated and more urbanized groups appear to be gaining over the small town, older and less well educated people on this issue. But the division now is a stand-off, and the American people have not quite reached the point where they want to decriminalize the use of even small quantities of marihuana.

[From the Chicago Tribune, Jan. 26, 1976]

A Lenient Attitude On Pot Fines

(By Louis Harris)

Although the American people are against legalizing either the sale or use of marihuana, an increasing number believe that possessing small amounts of marihuana should not be a criminal offense.

In the most recent Harris Survey of 1,394, adults, nationwide, only a 45 to 43 per cent plurality opposes "penalizing anyone having a small amount of marihuana with a small fine and no jail term" [This lenient view is embodied in the Oregon Law.] In 1974, a more substantial, 49 to 36 per cent came out against such token punishment for marihuana possession.

Part of the reason for this shift is that the American people see more dangers in the use of alcoholic beverages than in the use of marihuana. Seventy-one per cent view the problem of "heavy drinking" as very serious, while only 58 per cent feel that way about marihuana. This is a complete reversal of public attitudes since 1969, when 73 per cent viewed pot smoking as "very serious," compared to 53 per cent who felt the same about heavy drinking.

The same trend is evident when people are asked to choose between marihuana and alcohol as "more dangerous for people in the country to use." Although about

3 out of 10 feel both are equally dangerous, 35 per cent single out alcohol, compared to 29 per cent who choose marihuana. Back in 1969, a substantial 58 per cent of the public felt that marihuana was more dangerous than alcohol.

Nevertheless, there is no strong evidence that Americans now favor making the sale or use of pot legal. A 69 to 25 per cent majority still opposes legalization of the sale of the drug, which represents virtually no change from 1974, when a 70 to 23 per cent majority felt that way. A 66 to 28 per cent majority is opposed to the use of the drug, compared to the 69 to 25 per cent majority who felt the same in 1974.

Still, decriminalization has made real and measurable progress, judging from the very small margin by which the public opposes adopting the Oregon marihuana law nationally.

Recently the Harris Survey asked:

"In Oregon, while it is still illegal to possess marihuana, the penalty for anyone having a small amount of marihuana in his possession is a small fine and no jail term. Would you favor or oppose adopting the Oregon marihuana law nationally?"

[In percent]

	1975	1974
Favor	43	35
Oppose	45	49
Not sure	12	15

[In percent]

	Favor	Oppoes	Not sure
Nationwide	43	45	12
By region:			
East	50	37	13
Midwest	45	44	11
North	30	56	14
South	49	42	9
West	49	42	9
By age:			
18 to 29	59	29	12
30 to 49	43	45	12
50 and over	31	57	12
By education:			
8th grade or less	22	60	18
High school	40	48	12
College	56	35	9
By occupation:			
Professional	57	36	7
Executive	49	43	8
Skilled labor	37	54	9
White cllar	47	39	14
By size of place:			
Cities	49	41	10
Suburbs	49	37	14
Towns	35	54	11
Rural	34	54	12

However, the closeness of that national division tends to cloak sharp differences between key groups of the public. On the one hand, people under 30, who primarily use marihuana, favor the Oregon law by better than two to one. But people who are 50 and over oppose nationalization of that law by almost two to one. Similarly, the college educated favor decriminalization by a wide margin, but those with less education stand opposed.

By region, three out of four sections of the country favor the Oregon law, but the South is adamantly in opposition. Finally, people who live in the big cities and suburbs tend to favor decriminalization, but small town and rural residents, do not.

Over time, the younger, better educated, and more urbanized groups appear to be gaining over the small town, older, and less well educated people on this issue. But the division now is a standoff, and the American people have not quite reached the point where they want to decriminalize the use of even small quantities of marihuana.

SUPPLEMENT II

Part 4—Legalization of Marihuana

THE QUESTION OF MARIHUANA LEGALIZATION

(By Dr. Gabriel G. Nahas, Columbia University)

Events of recent years have polarized the scientific community and related concerned groups in regard to marihuana legalization. On the one hand, there is a large group of highly respected scientists and physicians urging caution for reasons of public health. On the other hand, an equally well respected group of such individuals are urging legalization or decriminalization for reasons of civil rights. They are motivated in this regard in large measure by concern about excessively punitive measures which have been taken against innocous individuals who have smoked a little marihuana. In this concern I join them, and laud their motives, but I lament the means with which they are going about attempting to remedy this injustice. I also deem regrettable their overreaction to an unjust situation, which, if carried through, may result in the gravest of public health consequences as well as an injury and cost to society vastly greater than the ill they are attempting to remedy.

I mentioned two regrettable trends now in play by the so-called "legalization" group: their means and their overreaction. Let us take each one of these factors in turn.

First, the means. The legalization advocates are attempting to remedy a civil rights issue by proving that marihuana is an innocuous agent. Since in a free society individuals are free to do as they please in the personal use of innocuous agents, they argue, marihuana should be legalized. In doing so, they deliberately deny a growing body of evidence being accumulated by scientists of international reputation. Dr. Julius Axelrod, the noted chemist and Nobel laureate at the National Institutes of Health has demonstrated unequivocally that the active ingredients of marihuana accumulate in fatty tissues because of their high fat solubility, and in anyone other than the very occasional smoker, marihuana ingredients continuously accumulate in the fatty tissues of the body, most notably the brain and the sex glands where it is possible that damage may be done to mental and reproductive functioning. Nobody disputes the reality of this finding of accumulation in tissues.

There have been many other findings and counter-findings in the realm of the posible hazards of marihuana. These include, to mention only a few, horomonal imbalance, inhibition of spermatogenesis, chromosomal damage, increased formation of chromosome deficient cells, decreased cell division, apathy and motivation, the so-called "amotivational syndrome", interference with memory and speech, impairment of driving performance and so on. I could go on for quite some time. To each of these findings the legalization group has a variety of rebuttals, some negotiable, some palpalbly erroneous.

In a recent article in Consumers' Union Magazine, Mr. Henry Brecher and the Editors, in a follow up to their previous book, *Licit and Illicit Drugs* put forth a notable example of the type of irresponsible consumer journalism which is being used in these rebuttals by the legalization group. He first summarized the accumulating evidence incriminating marihuana as a possible dangerous drug, apparently using the recent preview which appeared in the publication *Science* entitled "Marihuana, The Grass is No Longer So Green". This is a summary of scientific articles which appeared in renowned scientific journals. These articles were subjected to careful scrutiny by the editors of these journals, which constitute, in essence, a jury of peers. He then proceeds to rebut this summary point by

point by using the Jamaica report, completed in 1970 by Rubin and Comitas. This study of the effects of chronic marihuana usage in Jamaica apparently is so vulnerable to criticism that not one word of it has appeared in a scientific journal, the conventional route for publication of work. Instead, one of the authors has finally arranged to have it privately printed by a European publishing house. When, in a recent debate on Canadian Broadcasting Company with Mr. Brecher, I confronted him with this unusual occurrence and other misinterpretations of fact in his article, he did not reply, but immediately told me that we medical researchers should be spending our time on the far more serious public health problems of alcohol and tobacco. Well, I do, work on alcohol and tobacco, for they are serious public health problems—and if marihuana is given the green light of legalization. I will have a third public health problem of major scope on my hands.

This gets me to the second issue, the overreaction of the legalization advocates. They pooh-pooh the possibility that legalization will lead to a widespread use of marihuana in this country, since it is already easily available and not a major problem. In doing so they demonstrate an abysmal ignorance of human psychology, which is particularly surprising inasmuch as one of their advocates is a noted psychiatrist. It seems he has forgotten some of his elementary lessons in psychiatry.

Any student of human psychology knows that every individual has within him a potential for a certain amount of anti-social behavior, whether he be a college student or the president of the United States. Certain constraints operate to contain that anti-social behavior within certain limits. Most imporant are the person's own inner constraints, or personal morality, and the outer constraints, namely the deterrents imposed by the law. There are vast numbers of persons with weak inner constraints who need adequate legal deterrents. The basic problem then, and the issue which the civil rights group should be confronting, is how to develop an adequate deterrent which is not excessively punitive but which will contain the marihuana problem as a small one until the scientific issues of whether or not it is hazardous can be resolved. They should be engaged in active negotiation with legal and law-enforcement agencies to find such a deterrent, not interfering with the work of scientists who are trying to clarify the issues. It seems to me that anyone who is rushing head over heels to legalize a foreign substance which, when taken in regularly, accumulates in large quantities in brain and sex glands, because a number of users have been excessively punished, is overreacting in the extreme and may create a situation far more dangerous and harmful than the one he hopes to remedy.

The legalization group points to the recent decriminalization in Oregon as a case in point of the validity of their view. Here, it is a matter of who do you believe. Certain groups reporting from Oregon report little increase. Others report a marked increase. The truth, no doubt, lies somewhere in between. But here, let us hoist Mr. Brecher by his own petard. In his book, *Licit and Illicit Drugs*, he has a curve showing the use of what he admits (and I agree) is a very dangerous agent—cigarettes. Since the introduction of the mild inhalable flue-cured cigarettes in the late 1800's, note that the usage increase in cigarette smoking is initially gradual, but over the years it builds up as usage becomes acculturated, until today, when we have the prodigious use of cigarettes that we have, with the associated enormous public health problem which has resisted all attempts to eradicate it. Mr. Brecher has completely ignored the time factor in marihuana! It seems he has a blind spot in this regard. And also, let us not forget that it took 80 years of scientific investigation in a technologically developed country like the U.S. to finally prove the damaging effect of tobacco cigarettes on the human body, and link their usage to cancer and heart disease. This should be a warning to all those who elect today to ignore the danger signals of marihuana.

If marihuana is legalized in this country it will gradually become acculturated and will join alcohol and tobacco as a third major public health problem in this country, perhaps the most dangerous, leaving users never free of its effects, possibly causing damage to brain, gonads and dividing cells. Once it becomes acculturated, it will be impossible to root it out, just as is the case with alcohol and tobacco. This has been the case in every other country where it is de facto or de jure legal. Why should it be different here? Surely the groups concerned with civil liberties should concentrate on fairer and more merciful justice and withhold judgment on legislation and the marihuana and health issue until

the scientific community has had an opportunity to clarify the health consequences, still wide open to debate at this time. Instead, they are doing a disservice to all by trying to push through premature legalization, a potentially dangerous and socially irreversible act, and by trying to rebut with questionable data the warnings of competent scientists.

What I have said represents not only my own personal opinions. Several of my colleagues from Columbia University, Dr. Henry Clay Frick, Dr. Robert Esser, Dr. William Manger, Dr. Gabriel Nahas, who have read this statement have concurred with it, and have chosen to sign it with me.

A "CEASE-FIRE" ON MARIHUANA

(An Editorial)

It is now estimated that 13 million Americans are regular users of marihuana and that at least 30 million have at some time experimented with the substance. About 35 years ago, when marihuana was identified by federal bureaucrats as a "killer weed," about 50,000 Americans were thought to use it. The result of its identification as a menace was that the Congress and the states made it either a felony or a misdemeanor to possess or sell it. The evidence now is that there may indeed be medically sound reasons for avoiding the use of marihuana, but none of those reasons justifies the severe criminal sanctions that exist in the federal criminal code and in those of most of the States.

In the last several years, that situation has been remedied in several states and more each year are amending their codes in face of the legal anomaly that now exists. Few would argue that marihuana is more of a health hazard than cigarettes or alcohol, yet more than 400,000 citizens a year are arrested for possession of marihuana, and some of them do more than a year in prison for their offense. Oregon has ended that anomaly, and California, Colorado, Minnesota and Alaska are about to follow suit in this legislative season. Maine, Massachusetts and New York are reconsidering their laws.

The question now facing the Congress is what should happen at the federal level. As matters now stand, possession of an ounce of marihuana is a federal misdemeanor carrying a penalty of one year in jail and a maximum fine of $5,000. A bipartisan group in the Senate, led by Jacob Javits of New York and including Edward Brooke of Massachusetts, Gaylord Nelson of Wisconsin and Alan Cranston of California, have introduced a bill intended to remedy the current situation. It would replace current severe penalties with something called a "civil fine" and it would not exceed $100. The penalties for sale of the substance as a profitable transaction would remain intact. Only simple possession and "not for profit" would be covered by the bill.

The senators said when they introduced the new legislation that the criminal penalties for possession "are so disproportionate to the degree of mental and physical risk involved that there can be no longer any justification for their imposition." They further argue that use is so pervasive, and the arrest pattern so capricious, "that fair and impartial enforcement and prosecution are impossible."

The sentiment of the legislation is laudable, but as a solution it is hazy. If, indeed, the sponsors believe the substance is relatively "benign," as they put it, then why a penalty at all? And why a penalty that is almost unknown in our legal system. There is virtually nothing else, with the possible exception of the customs code, that recognizes a "civil fine." The legislation would create a new category of offender and a new remedy for society, the "civil offender" and the "civil fine" as punishment. Yet, that is what several of the states are now doing, and what is proposed at the federal level.

The simple answer to the question of why this route is being taken out of the marihuana morass is that it is thought to be the only politically practical one. As one proponent put it, "This is a 'cease-fire' proposal. As it now stands, 400,000 smokers a year are being arrested and stuck with criminal records. Even though this bill is not the long-range answer, at least it will stop young people from going to jail." In short, this new proposal is a compromise intended to lift the criminal sanction, without taking the logical steps that will surely follow and ultimately lead to the day when marihuana is properly controlled through taxation and standards for quality, strength and age of legal usage. In the meanwhile, the Congress will argue over passage of a vague concept called "decriminalization," which is the same as saying there is half a crime. The half of the crime called "use" would no longer exist. The half called "sale" would continue as before to be a crime. If this bill is passed, it will be interesting to see how the courts view such a hybrid notion, but it appears to be the best the sponsors believe they do. Given today's climate of opinion, they are probably right.

[From the Washington Star-News, Dec. 2, 1974]

SAXBE WARNS ON "POT" USE

(By Orr Kelly)

Atty. Gen. William B. Saxbe said today the nation needs stronger programs to stop marihuana traffic.

But he added, "While arrests for personal use and possession will continue, our priorities should be directed toward restricting the traffic in marihuana and other drugs."

Saxbe's comments on the marihuana problem were in a speech delivered at the Governor's Conference on Criminal Justice in Sacramento, Calif. The text was made available at the Justice Department here.

"Those who advocate easing the bans on marihuana argue for the right of adults to do as they choose," Saxbe said. "But if you legalize marihuana, I just don't see any way to keep it from being made available to children—and used by them—in huge numbers."

"This is already a substantial problem. It would grow worse if the ban were to be eased. The question I think we should be asking ourselves is whether we want a society where 10-year-olds can buy marihuana at the corner candy store—and no one gives a damn. I do not think that should be the wave of the future," he declared.

Saxbe's position on marihuana became a controversial issue last month when he brought pressure on Earl J. Silbert, U.S. attorney for the District of Columbia, to reverse Silbert's position not to prosecute those found in possession of five or fewer marihuana cigarettes

"Unless and until our law are changed, what we need here are more intensive programs to stop marihuana traffic—plus effective rehabilitation and public education programs," Saxbe declared "A new, deeper realization is needed of the danger of drugs—and new public support for their eradication

"More personnel and funds are needed for enforcement and efforts against traffickers. There must be an equally high priority for prosecution—and constant pressure for tough sentences. Drugs contribute to street crime, and the profits reaped by organized crime in drug sales make possible a wide range of other illicit activities," Saxbe said.

[From U.S. News & World Report, Mar. 19, 1973]

A LOOK AHEAD FROM THE NATION'S CAPITAL

Full sweep of Richard Nixon's 1973 program finally is emerging nearly two months after inauguration. Extent of shake-up involved is surprising to many.

Take the President's March 10 radio broadcast on crime and drugs. He said he wants revision of the entire code of federal criminal laws and restoration of the death penalty for murder and treason. Congress was urged to act fast.

Heroin pushers would get at least five years in jail if the President has his way, major traffickers 10 years to life. Legalization of marihuana? Forget it. "Permissive judges" are criticized. Mr. Nixon's intent:

"I do not mean to be soft on crime; I mean exactly the opposite."

THE ROLE OF THE LAW IN DRUG CONTROL†

JOHN KAPLAN*

SELF-HARMING CONDUCT AND SOCIETY

The role of the law in drug control is intimately related to the broader problem of the place of the law in preventing an individual from engaging in conduct which can harm only himself. Before considering drug control, then, there will be several advantages in undertaking a lengthy discussion of the broader issue. Not only will this allow appreciation of the problem in a broader perspective, but it will facilitate an approach to the extremely emotional drug area by a less well travelled, quieter, and more rational route. It is, perhaps, a longer journey, but it should be a smoother one.

Typically the use of the law to prevent conduct which harms only the actor himself is distinguished from the use of the law as a means of preventing the individual from harming others, including society at large. In practice, however, this is not an easy distinction to draw, for there are few actions in which one can engage that threaten harm only to himself.

The purest example of laws aimed at such conduct are the statutes which require the driver of a motorcycle to wear a protective helmet.[1] It is true that one can argue that the helmet really protects others,

since it shields the motorcyclist from thrown pebbles which might make him lose control and injure innocent pedestrians or automobile drivers.[2] Though this approach makes the problem easier, it is disingenuous. As a result, many courts and commentators have refused to take it and have assumed that the helmet protects only the cyclist himself.[3]

Though the helmetless cyclist does not expose others to any appreciable physical danger, he does drive in a society that is committed to preventing people from dying of their injuries. Thus, rather than allowing the cyclist to die unnecessarily, society is prepared to undertake the enormous expense of treating him until he either expires or recovers. In Professor Robert Bartels' apt phrase, the helmetless cyclist exposes others to "public ward" harm—the danger of having to treat him should he not be killed outright.[4] It is on this theory that society feels it has the right to demand that he do his share to protect himself.

The expense and inconvenience that the helmetless driver may cause does not, however, stop at public ward harm. Insofar as his failure to wear a helmet results in his own injury, he may force society to assume the cost of his neglected responsibilities to others. Here the issue cannot be avoided by saying that it is all society's fault for not letting him die in the street at minimal cost, because his responsibilities must still be fulfilled. As an emotional matter, moreover, nonsupport justifications for laws which attempt to prevent self-harming conduct often command considerably more power than do public ward justifications. Thus, despite the enormous public ward justifications for halting alcohol abuse, one of the most powerful Prohibitionist posters contained a drawing of a saloon with the father drinking at the bar while his clean, but poorly dressed, little daughter stood in the doorway saying, "Father, Father, please come home. Mother needs you." The same public interest which underlies non-support laws, then, can also justify helmetless cyclist laws—at least in the case of those who owe someone a support obligation.[5]

4. R. Bartels, Better Living Through Legislation: The Control of Mind-Altering Drugs (unpublished manuscript).

5. The case of the helmetless cyclist prohibition, however, is both stronger and weaker than the more general non-support laws. It is weaker for two reasons. First, insofar as the law applies to those who do not owe anyone a support obligation or who leave a sufficient estate to meet

In addition to the public ward and non-support justifications for forbidding conduct which on first glance would appear to harm only the actor, a further justification exists which might be called the "modelling" justification. Modelling is the psychological term for the process by which one repeats a type of behavior one sees in others. Modelling of behavior may thus occur where the watcher first learns that the behavior which he had thought impossible can indeed be performed; where the watcher, by observing, learns how to do it; where he simply gets the idea from watching; or where he, for any one of many reasons, imitates the action.[6] It is true, of course, that the same values which underlie the freedom of communication may interfere with preventing the harm caused by modelling.[7] The individual who models the helmetless cyclist does so without coercion, and, apart from the indirect harms discussed, he harms only himself. Nevertheless, where those persons society tries to protect from modelling are children, the fact that the helmetless cyclist in a causal sense may have caused the modelling, which in turn might lead to injury, may be very significant. Children are regarded as much more likely than adults to model dangerous conduct, and we certainly acknowledge a greater responsibility to protect them from harm.

The final justification by which some may find social harm in conduct which appears to harm only the actor might be called the "categorical imperative" justification. This relies on the fact that although an act might harm only the actor if performed by relatively few people, it could cause harm to everyone if it were performed by

---

such obligations, it is obviously too broad. Second, the fact is that most helmetless cyclists do not suffer injury for want of a helmet. At most, they take the risk that in some small percentage of cases they will be prevented from fulfilling their support obligations. Even if legislators feel better able to evaluate this risk than the cyclist, it here seems a much weaker case for prohibiting one's wilful default on his support obligations.

On the other hand, the very fact that the helmetless cyclist does not intend to default on his support obligations, but merely takes a risk of not being able to meet them, is perhaps a reason for greater, not less, involvement by the law. There is ample evidence that many human beings discount the likelihood of low-probability harmful events more than does any rational legislature. *See* W. Edwards & L. Phillips, Man as Transducer for Probabilities in Bayesian Command and Control Systems (December 26, 1962) (unpublished paper presented at symposium of the American Association for the Advancement of Science, Philadelphia). The law might then rationally prohibit small risks while allowing greater ones on the theory that in the latter case the risk was sufficiently obvious that it could rely on the rationality of the risk taker, while in the former, intervention of the criminal law is necessary to cause a proper weighting of the risks.

7. *See generally* Roth v. United States, 354 U.S. 476, 484 (1957); Whitney v. California, 274 U.S. 357, 375-76 (1927) (Brandeis, J., concurring).

almost all. This justification is not heard in the helmetless cyclist case, but it is heard with respect to some sexual and drug laws.[8] The picture which is called to mind is that of a nation where most of the population is homosexual—in which case there would be an enormous population implosion with consequent economic catastrophe—or where most of the nation is "stoned" on drugs. It is undeniable that society has a strong interest in avoiding the economic disaster of so many withdrawn from productive work. In both cases, however, the justification is often attenuated by two facts. First, there is not generally any reason to believe that, in the absence of laws justified by categorical imperative reasoning, the forbidden conduct would in fact become so widespread—the taste that impels the action may be esoteric. Second, the fact that conduct might produce a social catastrophe if engaged in by almost all does not necessarily imply that the conduct will be in any way harmful to society if engaged in by a relative few. So long as the birthrate is felt to be too high, the practicing homosexuals who thereby reduce it do no harm at all, and the economies of scale in American industry are such that withdrawal of a reasonable number of producers and consumers will similarly have no detrimental effect. The categorical imperative justification, therefore, may be fallacious, or it may simply be one way of dramatizing a harm which actually exists, by multiplying it manyfold.

Secondary Harms and the Criminal Law

Unless it is necessary to distinguish among them, public ward, non-support, modelling and categorical imperative harms can all be subsumed under the heading of secondary harms. It is interesting to note that the majority of efforts to prohibit conduct which, on first glance, appears to harm only the actor himself are rationalized as a means of preventing secondary harms, rather than as efforts to protect people from their own folly.[9] Insofar as the law acts to penalize the actor who has not taken proper care of himself, it hurts rather

8. *See, e.g.*, Grinspoon, *Marihuana*, 221 SCIENTIFIC AMERICAN 17, 21 (Dec. 1969).

9. That is not, of course, to say that there are not situations where we are willing to invoke the law simply to protect people from self-inflicted harm. The juvenile court will imprison juvenile runaways under a *parens patriae* theory, Fox, *Juvenile Justice Reform: An Historical Perspective*, 22 STAN. L. REV. 1187, 1192-93 (1970), and those who are mentally ill will be civilly committed, even if they are dangerous only to themselves. While the person to be protected from himself is not under age, "ill," or a member of another group with a similar claim to sympathy, however, society acts for its own benefit rather than his. It must, therefore, still be able to point to a secondary harm to justify the law.

than helps him. To the extent that societal resources are expended to prevent people from simply harming themselves, moreover, a type of public welfare program is initiated. Such use of governmental resources to improve the lot of a minority is never popular and the case in support thereof is weak indeed where the minority is neither regarded as especially worthy nor desirous of the help.

No one argues today that all risks of secondary harm should be prohibited by the criminal law. The obvious secondary harm resulting from such almost universally performed acts as overeating or poor nutrition is the *reductio ad absurdum* of such arguments. The interesting question, then, is whether these types of harm are a sufficient reason for society to intervene in *any* case. The classic statement opposing intervention is that of John Stuart Mill that "[t]he only purpose for which power can be rightly exercised over any member of a civilized community, against his will, is to prevent harm to others. His own good, either physical or moral, is not a sufficient warrant."[10] Mill himself believed that an "indirect" harm, which would include the secondary harms discussed, was not a "harm to others" within the meaning of his statement.[11]

Unfortunately, one can read Mill's pronouncements again and again without discovering any substantial effort at a utilitarian calculus to support his position, and the closest Mill came to a general reason was a *reductio ad absurdum* argument. This was stated in two forms. First, that:

> [s]o monstrous a principle is far more dangerous than any single interference with liberty; there is no violation of liberty which it would not justify; it acknowledges no right to any freedom whatever, except perhaps, to that of holding opinions in secret, without ever disclosing them . . . .[12]

And second that:

> [t]he doctrine ascribes to all mankind a vested interest in each other's moral, intellectual, even physical perfection, to be defined by each claimant, according to his own standard.[13]

These arguments both focus on the lack of standards available once society undertakes to prevent a person from harming himself. The standards problem, moreover, is compounded when one attempts to value the incommensurable freedom of the actor to engage in the

11. MILL 94-99.
12. MILL 106.
13. MILL 107.

conduct of his choice. Merely because protecting the public from secondary harms could logically justify a vast range of governmental interferences with individual liberty, and merely because we could define secondary harms as including anything lessening the full development of an individual's perfection, this does not mean that such interference is always improper. The main deficiency with the *reductio ad absurdum* arguments is actually a practical one. In the great majority of cases, the individual's freedom will not be interfered with directly simply because such regulation would be impossible to enforce without the imposition of an absolute police state.[14] Indeed, the motorcycle helmet example is one of the few prohibitions on an individual's conduct that might be enforced at reasonable cost.

Mill's thesis can perhaps be better defended on a somewhat different ground. When the legislature makes a decision to protect society from secondary harms by criminalizing individual conduct, it generally overestimates the enforceability of its decrees.[15] Where the law's reach exceeds its grasp, it may impose serious costs upon society which can far outweigh the expectable good that complete enforcement might bring. For this reason, it could be argued that, as a prudential matter, we would be better off adhering to Mill's principle as a rule of legislative self-denial. In other words, once protection against secondary harms is begun, the difficulties of knowing which are appropriate occasions for legislative action are so great that it would be better to eschew the effort entirely.

Simple legislative misjudgment as to the enforceability of the law, moreover, is not the only problem. The issue of protecting one from harm to himself usually involves two sensitive political issues—the interrelationship between law and morals and the use of the law to stigmatize unpopular groups. As to the first, few people deny that there is a connection between morality and the law. Probably the majority agree with Professor Herbert Packer that, in general, it is a necessary condition of the proper use of the criminal law that the conduct prohibited be seen as immoral.[16] The words "in general," of course, are quite important. The helmetless cyclist statute, for example, if enforceable, may be a proper use of the criminal law even though there is nothing more immoral in helmetless cycling than in

14. PACKER 156, 270-72.
15. *See* Kadish, *The Crisis of Overcriminalization*, 374 ANNALS 157, 169-70 (1967).
16. PACKER 261-69.

mountain climbing. The real problem, however, is with the converse proposition—that the immorality of conduct is a sufficient condition for declaring it illegal. The proposition that the law may be used to enforce morality without any corresponding societal benefit, other than the reduction of that immorality, is complex.[17] The issue does not arise where there is harm threatened to someone other than the immoral actor, because then the reduction of harm to others would simply be regarded as a sufficient social benefit. Where no such harm exists, however, the law must be justified either as a method of protecting against secondary harms or as a means of reducing the frequency of the immorality itself. Both justifications are extremely elastic, and the ingenious legislator can usually find both in any conduct he seeks to proscribe. The significant point is that avoidance of secondary harm can easily provide a rationalization for prohibiting conduct which is widely felt offensive on moral, but not on other grounds. The fact is that most of the situations where the criminal law is used to prevent an individual from harming himself are situations where his conduct is also felt to be immoral. There is thus an ever present temptation to enforce a dominant morality without looking to see whether the conduct to be prohibited is sufficiently harmful in terms of secondary harms, or whether the law is itself enforceable; and it is for just this reason that political pressures may further compound legislative misjudgment. The desire to enjoy the political popularity which comes from opposing sin may push legislators into enacting laws which even further exceed the possibility of enforcement. But, Professor Packer's sage advice that "if a legislator can think of no better reason to proscribe conduct than that he (or his constituency) abhors it, he had better think twice about doing it,"[18] may, as a political matter, be difficult to follow—especially where the legislator has the additional justification of attempting to lessen secondary harms.

The second political factor which may exert popular pressure to extend laws aimed at secondary harms much further than is rationally justifiable in utilitarian terms involves the stigmatization of unpopular groups in society.[19] Studies of the coming of the anti-opium,[20]

alcohol[21] and marijuana[22] laws have, for instance, indicated that in each case the drug prohibition was only part of the story. A major part of the emotional effort to pass these laws was generated by a dislike for the groups which were, in the public mind, associated with the drug. The history of our drug control efforts includes the passage of other laws which had, and were intended—at least by a sizeable number of their supporters—to have, the effect of stigimatizing the Chinese (in the case of opium),[23] the urban Catholic (in the case of alcohol)[24] and the Mexican (in the case of marijuana).[25] The likelihood that in emotional times a legislature will use secondary harm justifications as a cloak for joining in the stigmatization of an unpopular group, as well as demonstrating its opposition to sin, is, perhaps, another reason for the adoption of Mill's view as a prudent self-restraining principle.

The likelihood that a law ostensibly attempting to protect against secondary harm will also be based on a labelling of conduct as immoral and an effort to stigmatize certain groups has one further consequence. Those at whom the law is directed may not agree that their conduct is immoral or that their groups are properly stigmatized and, in a host of ways, may make enforcement of the law even more difficult. Indeed, such laws may lead to resentment even where they are not based on the immorality of conduct or group stigmatization—take, for instance, the helmetless cyclist case. There is, moreover, no doubt that the vast majority of harms which an individual may do to himself—eating too much, exercising too much, not exercising enough, sky-diving or mountain climbing—are in no way forbidden by the law. As a result, in those atypical situations where the criminal law does attempt to make an individual take better care of himself, he will feel that he is unfairly treated as compared to all others who are not forced to take similar precautions. In a sense, he will be right. The laws requiring one to protect himself are little islands of criminal liability in a vast sea of freedom to injure one's self.

It should be noted finally that where the secondary harms with which we are concerned are limited to public ward and non-support

harms, it might be that a system of taxes or license payments would serve society's purposes better than would a criminal prohibition. These harms are, for the most part, monetarily calculable and actuarially predictable. All that need be done is to require insurance against the threatened harms as a condition of engaging in the proscribed conduct.[26] Where these insurance requirements are enforceable, Mill's principle might be defensible on a wholly different theory. The demands of Pareto optimality,[27] if not a respect for liberty, require that a prohibition not be used where the only harm to society is of the public ward and non-support type, simply because a narrower law could always be enacted preventing these activities only by those who had not made proper financial provision for the risks they were taking.

In any event, even if it cannot be proven that harm to the actor and secondary harms are never a sufficient reason for the legislature to prohibit conduct, it should be realized that the helmetless cyclist counter-example is an anomoly in balancing the advantages and disadvantages of such a paternalistic law. Helmetless driving is done in the open and the presence or absence of a helmet is extremely easy to determine. As a result, one would expect that this law could be enforced with relatively minor expenditures. This might not necessarily be the case. Under some conditions, the expenditures of enforcing the helmetless cyclist prohibition might exceed the saving to society in terms of secondary harm.[28] If this were the case, a rational legislature might repeal the law after a sufficient period of trial. The legislature could well decide that even though a rational calculus would, on first glance, favor forbidding helmetless cycling, the imperfections of the subjects of the law which prevented them from realizing their own best interests, tipped the balance against such a law.

The helmetless cyclist for yet another reason represents the sim-

26. In the case of the cyclist, he would be allowed on the road without a helmet only with an extra license plate signifying that he had made provision to compensate for any public ward or non-support harms his activity might cause.

27. "Pareto optimality" refers to the view that a change may be seen as desirable in terms of economic welfare only if it benefits someone without injuring anyone else. *See* J. DUE & R. CLOWER, INTERMEDIATE ECONOMIC ANALYSIS 461 (5th ed. 1966).

28. A situation might arise, for example, where the law had not been enforced for some while (and therefore) there were many helmetless cyclists on the road. It might then be fairly expensive to prosecute sufficient numbers of them to deter the remainder, since it would take time for the information that the law was being enforced to sink in. It is also conceivable that some cyclists might regard it a matter of principle not to wear a helmet, or, principles aside, feel that the thrill of going helmetless was worth the inconvenience of apprehension.

plest case where the legislature might attempt to protect an individual from the consequences of his own folly—because the prohibition works against the individual cyclist himself. A considerably different issue exists when legal threats are exerted not against the individual who is himself harmed by his conduct, but against someone else who also is in a position to avoid the harm.

Analytically, the use of seatbelts by motorists presents an issue quite similar to that of helmets by motorcyclists. There are, however, two major differences. First, a law which made criminal a motorist's or passenger's failure to wear seatbelts would obviously be almost impossible to enforce. Whether or not one is wearing seatbelts can only be determined from inside, or at least very close to, the automobile, and the difficulties of checking millions of drivers would be insurmountable. It is true, of course, that after an accident one might be able to determine which of the injured was not wearing seatbelts. It is hard to believe, however, that the criminal law operating at this time could exercise any substantial deterrent effect over and above the effect of the increased injuries.

The second difference is that in the case of the seat belt problem, power can be exerted upon the vehicle manufacturer. Requiring a motorcyclist to purchase a helmet may not help at all in getting him to use it. Indeed, the helmet is so easily separable from the motorcycle that checking to see whether the cyclist had a helmet would be no easier than checking to see that he was wearing one. Although a motorist cannot be made to wear a seatbelt, society can, on the other hand, make sure that he at least has the option to do so.[29] Laws requiring safety equipment are far easier to enforce against the automobile manufacturing industry than against the helmetless cyclist. There are so few automobile companies, what they sell is so public and they are so unlikely to act on principle, that there would be little difficulty in requiring seatbelts to be installed in each car sold.[30]

In all cases where an attempt is made to govern the seller, rather

---

29. *See, e.g.*, Act of December 13, 1963, Pub. L. No. 88-201, §§ 1-3, 77 Stat. 361, *repealed with savings provision*, Act of September 9, 1966, Pub. L. No. 89-563, § 117(a), (e), 80 Stat. 718, 727; National Traffic and Motor Vehicle Safety Act of 1966, 15 U.S.C. §§ 1381, 1397-98 (1970). The current regulations under the National Traffic and Motor Vehicle Act are set forth in Federal Motor Vehicle Safety Standards, 49 C.F.R. § 571.21 (1971).

30. If more than the preservation of the opportunity to wear seatbelts were desired, one could also require an airbag apparatus, a buzzer which would make an annoying sound whenever the car was driven with the seatbelts unfastened or even seatbelts somehow connected to the ignition so that the car could not be driven unless the seatbelts were used. Indeed, safety

than the buyer, it can be argued that concern is transferred from the prevention of harm to one's self (including secondary harms) to that of prevention of harm to others. This reasoning, however, would not have placated John Stuart Mill in the least. In referring to a prohibition statute which attempted to protect the consumer by restricting sale of alcohol, Mill said that "the infringement complained of is not on the liberty of the seller, but that of the buyer and consumer; since the State might just as well forbid him to drink wine, as purposely make it impossible for him to obtain it."[31]

It is true that the liberty of the automobile buyer is infringed when it is impossible for him to buy a car without seatbelts. Utilitarians, however, do not regard freedom as an absolute value before which all others must give way. Rather, it would be considered as one value among many and should the balancing of values favor an infringement of the buyer's freedom by a restriction on the seller, the utilitarian will not fail to impose that restriction merely because a direct restriction on the buyer would have been impractical.

Consensual Crimes and the Criminal Law

Both the one-party case of the helmetless cyclist, where the law seeks to operate directly upon the individual to make him take care of himself, and the two-party case of the factory installed seatbelts, where the law seeks to operate on the seller to force him to make the consumer take better care of himself, are classified under the same heading—"victimless" crimes. This term is somewhat unfortunate. First of all, if secondary harms are considered, there may very well be a victim other than the actor himself.[32] Second, the term victimless crime has a somewhat bad odor in academic circles. It has been used particularly with respect to the crimes of drunkenness, prostitution, abortion, gambling and drug offenses which have contributed so heavily to what Professor Sanford Kadish calls the crisis of overcriminalization.[33] Finally, in a very real sense, the victim of even a

equipment of this nature will be required in the near future. Passenger cars manufactured from Jan. 1, 1972 to Aug. 14, 1973 must be equipped with a seat belt warning system that activates an audible and visible warning for one minute if seat belts are not fastened. 36 Fed. Reg. 4600-08, 12858-60 (1971). The National Highway Traffic Safety Administration has also proposed regulations requiring that manufacturers install seatbelts with ignition interlocks during the period from Aug. 15, 1973 to Aug. 15, 1975. 36 Fed. Reg. 19254-55 (1971). After Aug. 15, 1975, all passenger cars are to be equipped with a passive restraint system (such as the "air bag"). *Id.*

knowing purchase of an automobile without proper safety equipment may be the purchaser himself if he is subsequently injured. In all probability, the term "consensual" is a better way to describe these crimes.[34] From a law enforcement point of view, the important thing about such crimes is that all parties consent to the transaction, and, regardless of whether they may later regret it, they do not bring the matter to police attention at the time.[35]

In any event, whether one calls the crimes victimless or consensual, it must be admitted that there are both an enormous number of them on the statute books and that most of them are not very controversial. Whenever the law goes beyond requiring mere disclosure—such as in the Flammable Fabrics Act,[36] building codes[37] and the laws against practicing law,[38] medicine[39] or plumbing[40] without a license—it is protecting the buyer of goods or services from himself, regardless of whether it acts upon him directly or upon the seller. Indeed, even those who most often decry victimless crimes in general are those most likely to demand that we do more "to protect the consumer." For instance, regulations requiring automobile manufacturers to add collapsible steering columns,[41] which protect only the buyer, although they would not command his loyalty at their prices in the market, are in fact attempts to add new victimless crimes. It is true that such enactments can often be defended as attempts to force the automobile manufacturers to take advantage of economies of scale in the manufacture of safety devices. In this case, then, the law can be regarded as a kind of subsidy to those who wish the safety equipment to be paid for by those who do not. Interestingly enough,

34. Consensual transactions, thus, are "victimless" in the sense that they are difficult to detect because of the absence of vocal victims. *See* PACKER 267.

Mill, in what some might regard as an orgy of consistency, also opposed heavier taxation of dangerous substances[42] and, hence, would clearly have opposed this type of measure to protect the consumer.

Although most people perhaps do not realize it, minimum wage laws[43] also fall under the general heading of consensual crimes. Of course, some may consider the wage-earner who works for less than the minimum wage as himself some kind of victim. The problem with this is that it rests on one of two theories. The first is that he would otherwise work for the higher, minimum wage. If this is true, his own foolishness is to blame, and the essence of victimless crime is protecting people from their own foolishness. The second is that he is working because he needs the money—necessitous men are not free men. The difficulty with this view is that the worker driven by economic necessity to work for less than the minimum wage is no more driven than the compulsive gambler or the drug dependent individual. Nonetheless, although he is willing in this sense to work for, and his employer is willing to pay him that wage, our laws attempt to prevent the bargain just as they would prevent a bargain reached between a prostitute and her customer or a bookie and his.

If one then supports rules outlawing sales of flammable fabrics, laws against practice of medicine without a license or bargains that violate the minimum wage law, he cannot denounce without qualification victimless crime. The real problem with victimless crimes, as Professor Herbert Packer has pointed out so cogently, is that some of them produce such enormous difficulties of law-enforcement that as a practical matter they do more harm than good.[44] In order to determine whether this is the case as to any particular crime, considerable care must be used to look at the effects of the criminal law and to attempt computation of the costs and benefits it brings about.

As an initial proposition, however, a number of generalizations can be made. First, where the law imposes its major burden on the individual to force him to protect himself, it will, in general, involve such difficulties of enforcement as to be unenforceable. Typically, the conduct will be private and will come to light only rarely, and then either because of the most intrusive type of investigation,[45] or after the harm that the law attempted to protect against has already been

done—in which case the law will be in the position of compounding that harm with criminal penalties against one already injured. Indeed, the helmetless driving law appears to be the only law designed to protect an individual from himself (or society from secondary harms) that is actually enforceable.

On the other hand, when the law attempts to protect individuals from harming themselves, or from causing secondary harm, by transferring its pressure from the individual actor himself to someone else—typically the seller of some commodity—it may or may not be enforceable at a reasonable cost. Where the law would impinge upon legitimate businesses which are not too numerous to watch and where it does not generate significant economic pressures toward its own violation, it may very well be enforceable. However, as the number of independent businesses which need to be watched increases and the economic incentive to violate the law increases, society comes more and more to the type of victimless crimes that have given the criminal system such a headache.

Finally, as Professor Packer has pointed out, in those areas of victimless crimes where, on the above analysis, the criminal law is most appropriate—it is also least needed.[46] Civil penalties, which are far more efficient to impose, will allow a better deployment of society's coercive resources. Moreover, as they will generally be imposed within the context of a business activity, they will involve far fewer dangers of invasion of the citizen's privacy than may occur if imposed upon individuals.[47]

There is one further objection that should be noted to all the laws thus far discussed. Given the present economic and political institutions, any attempt to protect individuals from themselves may sooner or later be used by the powerful economic interests thereby unleashed to lessen competition and to harm society as a whole. Certainly, a great deal of the recent literature concerning occupational licensing, building codes and the like supports this view.[48] Similarly, although automobile safety requirements are still in their infancy, there are already substantial allegations that the safety standards are being designed to protect American, and politically influential, automobile companies from foreign competition.[49] Finally, it has even been al-

leged that the helmet manufacturers have been far more influential than the analysis of secondary harms in securing helmetless cyclist legislation. Although one cannot call the case proven at this point, one can soften any zeal to protect against secondary harm by the realization that, given the apparent weakness of legislators and administrators, it is at least possible that the government itself actually needs the protection from its own folly which only a rigid adherence to Mill's principle could bring.

Discussion thus far has involved the kinds of conduct which are normally classed as protection against harm to one's self. Even where the law makes criminal the action of the seller, it does so as a means of preventing the buyer from injuring himself. Note, however, how all of the arguments previously considered change when attention is turned toward conduct that threatens harm to others. In the automobile case, for example, if concern were with automobiles with defective brakes rather than those without seatbelts, very different issues would arise. There would then be little hesitation to make it a crime to drive a car with defective brakes,[50] even though this might be almost as difficult to enforce, in the sense of catching a high percentage of violators, as would be a law against the failure to use seatbelts. Detection would not, first of all, be quite so difficult, because we would have someone other than the police to bring the matter to public attention—the one injured by a car with defective brakes. Second, it might very well be that after an accident which revealed the defective brakes, the criminal law would actually be able to increase the punishment significantly over that of the accident—at least in those cases where the driver was not himself hurt. Third, it cannot here be argued, as it was in the case of public ward and non-support harms,[51] that insurance could eliminate the need for such a law. It is one thing to say that the helmetless cyclist or seatbeltless driver can insure against the secondary harm caused; it is very different, however, to say that the driver with defective brakes can physically injure people and thrust the insurance on them in lieu of his own preventative measures. Fourth, if one engages habitually in conduct dangerous to others, it may be economical to imprison him, though it would almost certainly not be where the only concern was with reducing secondary harms.

50. *See, e.g.*, CAL. VEH. CODE § 40001 (West Supp. 1971); ILL. ANN. STAT. ch. 95 1/2, §§ 211, 234 (Smith-Hurd Supp. 1971); N.Y. VEH. & TRAF. LAW §§ 375.1, 375.32 (McKinney 1970).

51. See note 27 *supra* and accompanying text.

Finally, and, perhaps most importantly, where any activity threatens harm to the actor himself, his own sense of self-protection will generally lead him to act so as to minimize the harm to society as well as to himself. Thus, both the helmetless cyclist and the driver with faulty brakes will be restrained by self-preservation, since all that is necessary to make this restraint on behavior effective is that there be, in fact, a danger to the actor. Where an activity threatens harm to others only, however, there may be no such restraint and the criminal law may be the only force that makes the harmful activity unprofitable. This is probably the case in the widest range of criminal prohibitions which protect either the property or the person of others.

Drugs and Consensual Crimes

The interrelations between the felt dangers of drugs and the methods used to control them are, as will be seen, extremely complex. The basic problem, nonetheless, is familiar. The commonly heard argument on behalf of minimal drug control is that "it's my body and I can do what I want with it so long as I don't hurt anyone." This, of course, is simply another way of phrasing Mill's principle. Indeed, the entire problem of drug control is for the most part a special case within the problem of the regulation of conduct which harms only the actor himself. The dangers presented by most drug users are not too dissimilar from those of the helmetless cyclist, and the controls imposed upon sellers of automobiles without safety equipment are not too dissimilar to those placed upon sellers of drugs. Before going into the similarities and differences, however, a definitional problem must be discussed.

What Are "Drugs?"

A typical pharmacological definition is that a drug is a substance which, when taken into the body, alters the structure or function of any part of the organism.[52] Although this is a very broad definition, it is important to avoid too narrow a focus. Otherwise one incorporates concepts of medical helpfulness—that, for example, an amphetamine used as a diet pill under the supervision of a doctor is not a drug, but that when taken as a pep pill without prescription it is. Similarly, concepts of harmfulness must not be included. Otherwise

52. Modell, *Mass Drug Catastrophes and the Roles of Science and Technology*, 156 SCIENCE 346 (1967). *See generally* NOWLIS 5-7.

drugs may be classified according to their social utility—alcohol, for example, is often said not to be a drug simply because it is not harmful (which, of course, it is—or can be) and because of its wide social use.[53] Finally, the definition of what is a drug must avoid consideration of the legality of the substance. Legality is merely a social concept which has been applied to nature. To talk in general about how the law treats both legal and illegal drugs will require a discussion of an enormous range of substances—including coffee, tobacco, alcohol, the cyclamates, antibiotics, amphetamines, marijuana and heroin.[54]

The Damages Caused by Drugs

Social concern with drugs arises, of course, because of the feeling that they damage either their user or others. With respect to the damage to others there is a sizeable range of harms to consider. Contemporary scientific opinion implicates alcohol,[55] amphetamines,[56] and barbiturates[57] as playing a causal role in a significant number of assaults by their users by reducing inhibitions, weakening judgment or some other means.[58] Tobacco is another drug whose use poses a danger to non-users[59]—principally through loss of life and property from fires caused by smokers. Heroin also exerts sizable costs upon the non-user, since the addict will typically commit large numbers of property crimes to support his habit[60]—though, as will be seen, the law is itself a contributor to these crimes.[61] Finally, there are

60. BLUM 288-89, KAPLAN 240.

61. With respect to heroin, society has adopted a categorical imperative type of reasoning, see note 8 *supra* and accompanying text, and concluded that heroin is such a seductive and addicting drug that if it were freely available the enormous number of its users would produce a national catastrophe. As a policy choice, therefore, the law has been structured so that heroin is extremely expensive. This perhaps lowers the number of addicts in the society, but it considerably magnifies the damage they do to others.

the antibiotics, where danger to others arises because exposure to an antibiotic tends to generate strains of bacteria resistant to it.[62] Others are damaged, then, simply because they are deprived of a valuable—indeed, perhaps life saving—medicine. This may, of course, happen as a result of medical practice as well, but where the antibiotic is used promiscuously—and a conclusive presumption seems to have been adopted that it will be promiscuously used if not under medical supervision, and, perhaps less realistically, that it will not be so used if under supervision—this hazard is considerably increased.

Despite these instances where drug use may damage others, it is fairly clear that the overwhelming danger in drug use is the danger to the user himself. Thus, the number of homicides committed under the influence of alcohol is dwarfed by the death rate of the users themselves from cirrhosis and other alcoholism-related diseases.[63] The dangers of tobacco to its users in terms of lung cancer, emphysema and various circulatory diseases far outweigh the damage done by smoking-caused fires.[64] Even heroin, harmful as it is to society, is, under contemporary conditions, far more destructive to its users than to others.[65] And the cost of the antibiotic-resistant bacterium is typically borne by the first sufferer from the improper use of antibiotics.[66]

With regard then to the damage to the drug user himself, there is a widely used term: drug abuse. Drug abuse means simply the use of a drug so that it interferes with either the user's physical or mental health, or his adjustment in society.[67] It is important to understand that this is a definition which applies to both legal and illegal drugs. A classic example of just how the issue of the legality of a drug can interfere with the understanding of what is meant by drug abuse is provided by the American Medical Association. Until quite recently the AMA defined drug abuse as either the over-use of a legal drug so

as to impair one's physical or mental health or his adjustment in society, or any use of an *illegal* drug.[68] Such a definition merely incorporates legal standards into medical practice. It does not make a great deal of sense, for example, to define every marijuana user as a drug abuser while insisting that only the alcoholic, but not the social drinker, is an abuser of alcohol. The fact is that, as in the case of alcohol, at least some marijuana users, who use the drug in moderation, use it without any danger to themselves—aside, of course, from that of getting caught.

Indeed, one of the main fallacies in the present societal approach to the drug problem is that the illegal drugs are too often regarded as terribly dangerous and the legal drugs as perfectly safe. It is true, of course, that some drugs have a much greater potential for abuse than others, in that they injure a higher percentage of their users. But an injury produced by drug abuse is typically caused by a complex combination of the drug itself, the way it is used, the disposition of the person using it and the conditions under which it is used.[69] Some people, for instance, can apparently use heroin for quite a while without becoming addicted or otherwise harming themselves, though this would probably represent a very small percentage of users. There are, on the other hand, those who injure themselves with coffee, the "most legal" of our legal drugs. Though we cannot verify whether Honore de Balzac, as is sometimes said, really did die from excessive coffee use, it is indisputable that the coffee user may damage himself in various ways.[70] Some coffee users notice that their stomachs are always upset and that they have great trouble sleeping. Many of them stop using coffee; others just get used to having upset stomachs and insomnia, because coffee can be strongly habit-forming to some people.[71] It should be mentioned also that research on the genetic damage caused by various drugs has in the last five years pointed a considerably more suspicious finger at coffee than at several other drugs far more implicated in the public press.[72] Similarly unconfirmed, but

suspicious, findings indicate a possible connection between coffee drinking and cancer of the bladder.[73] Differences of degree and kind are, however, important and a legal system which made no distinction between heroin and coffee would leave a great deal to be desired.

It is possible that if more were known about drugs it could be said that it is not that some drugs are more dangerous than others, but rather that certain drugs are more dangerous to specific types of people. Moreover, with sufficient knowledge about both drugs and people it is possible that they could be matched as accurately as are diabetics and sugar. It might also be possible to define with some precision who will be injured by a given drug. Unfortunately, it transcends the limits of present knowledge to say more than that certain types of people seem more vulnerable to one drug than another, and, as a result, society tends to proceed by making general rules about drugs based in part upon a feeling as to their overall danger.

Models of Drug Control

In order to better understand the control of drug abuse, it will be instructive to note the various models that our society has adopted to control different types of drugs.

Coffee

Coffee may be sold and used in all nations, although at times its use has been punishable by imprisonment or death.[74] Although in many countries coffee bears a tax that is disproportionate to the taxes on other imported foodstuffs, in this country no legal effort is aimed at discouraging its use.[75] The fact that it is a drug which injures at least some of its users[76] seems to be reflected solely in non-legal, social controls -- for example, the sight of an eight-year-old having a cup of coffee is sufficiently remarkable to be remembered for some while.

Containing Caffeine, 15 CANCER 1261, 1261 (1962). Kuhlmann, Fromme, Heege & Ostertag, *The Mutagenic Action of Caffeine in Higher Organisms*, 28 CANCER RESEARCH 2375 (1968). In one study caffeine induced chromatid breakages in human cells *in vitro*.

74. BLUM 11-12.

75. *See* NOWLIS 113.

76. The dangers of "coffee abuse" are discussed at notes 72-75 *supra* and accompanying text.

Tobacco

The regulations on tobacco are slightly more onerous than those on coffee. It is taxed far more heavily than most other consumables,[77] its advertising is restricted,[78] and its sale to minors is purportedly forbidden,[79] though in fact no attention is usually paid to this last restriction. Recently, cigarette manufacturers were required to put a notice on the packages saying that "The Surgeon General Has Determined That Cigarette Smoking Is Dangerous To Your Health."[80] Finally, considerable amounts of money are spent to convince users of the harmfulness of this drug though nothing remotely approaching either the amounts taken in through the taxes on tobacco or the amounts spent by the cigarette industry to promote its sale.

Alcohol

To describe completely the present controls on alcohol would take a sizeable book. It is a drug which causes enormous social havoc[81] and is dangerous to a fairly sizeable proportion of those who use it.[82] To prevent its use altogether, the United States and several other western countries have, for brief periods, tried a prohibition which made the manufacture and sale—and in some countries the use—of alcoholic beverages a crime.[83] This type of control, however, has almost everywhere been abandoned and is used today only in certain Moslem countries where it is supported by a strong religious taboo.[84] Present methods of control are less ambitious but are generally regarded as more successful: the drug is sold through either a government monopoly or license,[85] which is restricted to those of good moral character, it is heavily taxed, and there are strong controls on its sale to those under the age of 18 or 21, depending on the state. Moreover, its

85. For an exposition of the detail of the licensing system, see KAPLAN 335-41. A licensing system for marijuana is discussed at length at notes 131-38 *infra* and accompanying text.

advertising is restricted and sale is forbidden close to schools or churches.[86] Furthermore, several states have "rationing" systems, while others have "posting" laws whereby a public official can determine whether an individual is abusing alcohol and thereby make it illegal for anyone to give or sell it to him. Finally, although in this nation little is spent to warn the public against the dangers of alcoholism, this method of control is not unknown.[87]

Cyclamates

The control of cyclamates exemplifies the next model of drug regulation—though this type of regulation is more commonly applied to conduct other than that associated with supply and use of drugs.[88] This is called the vice model because it is the type of legal regulation best known for its application to vices such as gambling and prostitution.[89] Where the vice model is applied to commodities or services which may injure their user, the seller is made guilty, but not the buyer. The theory behind this distinction is that sufficient control may be exercised over a product by using the criminal law to try to deter suppliers, without attempting to apply the criminal sanction to the far larger number of users.[90] Just as public policy demands the protection of motorists and passengers from traumatic injury caused by automobiles which lack seat belts or padded dashboards, through the exertion of pressure to prevent these dangerous instrumentalities from being sold, so it protects people from cancer of the bladder[91]—which they may get from dietetic soft drinks containing cyclamates (if they turn out to have a metabolism like a rat's and drink enormous quanti-

86. *See, e.g.*, CAL. BUS. & PROF. CODE § 25608 (West 1964); ILL. ANN. STAT. ch. 43, § 127 (Supp. 1971); N.Y. ALCO. BEV. CONTROL LAW § 64 (McKinney 1970).

87. France, for example, which has an even more acute problem than does the United States, devotes considerable effort to public information on its dangers. BLUM 240.

88. It has previously been discussed in connection with the laws which might make it criminal to manufacture or sell automobiles which were not equipped with seatbelts. See notes 29-30 *supra* and accompanying text.

89. *See generally* KAPLAN 315-30.

90. The explanation usually given for the differentiation is that the buyer is merely a victim who needs help not punishment, whereas the seller is guilty of the evil of exploiting the weaknesses of others. *Id.* at 316.

91. See 34 Fed. Reg. 17063-64 (1969), where the Food and Drug Administration found that cyclamates were not safe for use in food.

ties).[92] Probably the most interesting thing about the control of cyclamates is that it works.[93]

Antibiotics

The next type of drug control is that used for antibiotics—the medical model.[94] This model seems to be the preferred one for drugs which meet three conditions—drugs that have medical uses, that are capable of harming their user, and that are not especially sought by illegal users. Under the medical model, the medical profession is given control of the right to obtain the drug. The ordinary citizen can purchase it if and only if he has the permission of a physician who is given almost uncontrolled discretion as to whether he will make the prescription. If the physician approves, he will give the drug user a prescription which will allow a licensed pharmacist to sell the prescribed quantity. If the user does not have a prescription, but can still get someone to sell him the drug, he will commit no crime, but the seller will be guilty of a criminal offense—or, more significantly, if a pharmacist, he may lose his license.[95] In short, the cyclamate or "vice" model, punishing the seller, but not the user, is applied to medical drugs used without a prescription.

Amphetamines and Barbiturates

The amphetamines and barbiturates resemble the antibiotics in that they both have legitimate medical uses and can harm a certain percentage of their users. They differ, however, from the antbiotic-like drugs in that they are in substantial demand for non-medical, or recreational purposes. Although jurisdictions differ in how they treat this non-medical use, the modern trend has been to decide that the vice

92. The methods and results of the study which caused the removal of cyclamates from the FDA's "generally recognized as safe" (GRAS) list of chemical substances used as food additives are detailed in Price, Biava, Oser, Vogin, Steinfeld & Ley, *Bladder Tumors in Rats Fed Cyclohexylamine or High Doses of a Mixture of Cyclamate and Saccharin*, 167 SCIENCE 1131 (1970), which also discusses the history of research dealing with cyclamates, and the particular steps leading to their ban. The dispute as to whether the ban was required, or even prudent, has been intense. *Compare* Letter, Inhorn & Meisner, *Cyclamate Ban*, 166 SCIENCE 685 (1969) (expressing alarm that such a beneficial substance would be banned on such inconclusive evidence) *with* Letter, Epstein, Hollaender, Lederberg, Legator, Richardson & Wolff, *Wisdom of Cyclamate Ban, id.* at 1575 (that a substance without demonstrable matching benefits should be banned when it is possible it represents a long-run danger).

93. See p. 1094 *infra* and accompanying text.

94. *See generally* KAPLAN 330-32.

95. CAL. BUS. & PROF. CODE §§ 4227, 4350, 4363 (West Supp. 1971).

model is not sufficient. As a result, we have tended to treat the non-medical users of these drugs like the helmetless cyclists—that is, to deter them through the threat of criminal penalties.[96]

Marijuana and Heroin

Finally, there are the drugs such as marijuana and heroin which are subject to complete prohibition. Since these drugs have no "recognized" medical use, the medical model cannot be applied, and, because they are considered too dangerous, the vice, or cyclamate, model is also unavailable. As a result both sale and use of these drugs is criminal—without the safety valve provided by the amphetamine and barbiturate model where medical practice diverts a sizeable percentage of the drug use into legal channels.

Other Models

Two things should be noted about the models of legal treatment applied to these various drugs. First, although the differing treatments cover an enormous range, additional legal models could be devised. It has been suggested by some advocates of marijuana legalization who fear commercialization, for example, that the "flower children" model should be adopted.[97] By this model, all taint of commercialization would be removed by a law which permitted anyone to grow the drug for himself and use or give away as much as he wished. The only act that would be forbidden would be sale. Interestingly enough, this is a model which bears some relation to the treatment of prostitution--apparently, there are certain things that can be given away but should not be sold. On the other hand, the fact that the legal treatment of prostitution has not been what could be called one of the law's greater successes, may be a good reason to be cautious about adopting the "flower children" model.

Second, the assignment of drugs to the various categories, while to a certain extent determined by the dangers of the drug in question, is also subject to a host of other factors. Some forty years ago alcohol in the United States was treated according to a combination of various other models. It was available on prescription from a physician or for religious or sacramental purposes, but the manufacture,

97. Aldrich, Notes on Structuring Legal Sale of Marijuana to Minimize Abuse (Aug. 15, 1971) (mimeo publication by AMORPHIA).

sale, or even use outside of these, and a few other narrow exceptions, was criminal.[98] It is interesting to note that at this same time a marijuana extract was treated according to the medical model.[99] The assignment of models of control to drugs varies both from nation to nation and over time. Thus, heroin is treated under the medical model in England[100] today while in Sweden amphetamines are essentially prohibited entirely.

The question, of course, raised by the large variation in the models by which drug use is controlled is how a rational society should allocate drugs among the different methods of legal treatment. Rather than attempting to lay down a systematic decisional process, six principles will be presented which should be kept in mind when deciding which models should be applied to which drugs.

PRINCIPLES OF DRUG CONTROL

Principle I: It is hard, if not impossible, to justify a criminal law which punishes the drug user himself

As was noted in discussing the helmetless cyclist case, it is relatively rare for the criminal law to force a person to take better care of himself. The drug area is probably the major exception to this rule since with respect to all the commonly used illegal drugs, the user, along with the seller, is subject to the criminal law. However, while the helmetless cyclist case was unusual in that the high visibility of the violation made enforcement of the law a comparatively easy task, the exact opposite is true with respect to drug use. Even though attempts are made to make the proscription of drug use more easily enforceable by outlawing possession as a surrogate for the forbidden drug use,[101] possession of a small amount of a substance is extremely difficult to detect—except through search, which is an expensive, time-consuming and resented police activity. Indeed, possession of a drug by a user is close to the opposite pole of detectability from the case of the helmetless cyclist.

101. CAL. HEALTH & SAFETY CODE § 11500 (West Supp. 1971).

Moreover, since the overwhelming reason for applying the criminal law to the drug user is to protect him from himself, the law is caught in a conundrum. Insofar as the drug itself is dangerous, there is, all other things being equal, a better reason to try to discourage its use. To the extent that the criminal law is expected to deter this use, however, it is obviously least effective against those who are so oblivious to the consequences of their actions as to be willing to use the harmful drug in the first place. Those who can be influenced by the threats of harm imposed by the criminal law, on the other hand, will find such threats unnecessary since they are more likely to be deterred by the danger of the drug alone. Nor is the case for criminal treatment of the drug user any stronger in the case of less dangerous drugs. Here the strictures of the criminal law will be effective in discouraging use by potential users who would not be deterred by the lesser dangers of the drug. As the dangers of drug abuse grow less, however, the case for expending societal resources on the task of protecting users from themselves grows progressively weaker.

The major theoretical case for detering drug users from harming themselves, then, exists in the case of a drug which is in fact very dangerous but which is not seen to be so by the public. Presumably criminal prosecution might then supplement education. It turns out, however, that the criminal law is an anti-educative device, at least to those who are most likely to use illegal drugs.[102] They tend to oppose law enforcement to begin with and will tend to see such drug education simply as a means of getting them to obey the law. Moreover, the idea that legislators will know more about the dangers of drugs than those who use them has been refuted by every survey that has been conducted on the issue.

Similarly, none of the other purposes of the criminal law argue for its application to the drug user himself. Even assuming that the criminal law can reform drug users—a most unrealistic assumption based on today's knowledge—this is extremely expensive.[103] Even if the imprisonment and consequent reformation of drug users is seen as a method of avoiding secondary harms, any rational calculus will tell us that this is more expensive than enduring the secondary harms themselves. The disparity becomes even greater if it is recognized that

103. The cost of the marijuana laws, for example, is explored in KAPLAN 21-48.

any proper method of cost accounting will attribute the cost of efforts to arrest and convict all drug users to the "cures" of the relatively few who are actually caught or driven into treatment programs.

The argument for penalizing the drug user himself becomes even weaker when it is remembered that the alternative is not necessarily the allowance of completely uncontrolled sale and merchandising. As has been seen, there is a whole arsenal of other control strategies available.[104] The vice model, for instance, can typically restrict the supply almost as well as a complete prohibition at the considerably lower cost of enforcement which results from concentration on the much smaller number of traffickers, at least as compared with ordinary users.[105]

There are, however, at least in theory, two situations where one might wish to consider a criminal law applied to the drug user himself. First, the drug user could be considered a source of contagion who might be "quarantined" through use of the criminal law. There are, however, several practical defects in such a justification. Though it might make sense where there are few users of the drug, in this country the simple fact is that society is unable to catch nearly a high enough percentage of drug users to significantly impede this kind of contagion. Moreover, when they are caught the drug users are typically placed in a jail and exposed there to those most, rather than least, susceptible to the contagion. The threat of prosecution, furthermore, exerts strong pressure in driving drug users into a distinct subculture from which their recruiting efforts can be most successful. Finally, the mere act of prosecuting drug users gives them a publicity and dramatic appeal which may increase the attraction of the life style for those who are most susceptible to the very contagion against which the law is trying to guard.[106]

Second, it is conceivable that a drug might move such a high percentage of its users to crimes against others that use of the drug would be an accurate predictor of such conduct. In that case, drug use could be treated as an inchoate crime against others, not unlike recklessness on the highway or criminal attempt. Even John Stuart Mill conceded that mere drunkenness itself might be a crime in one

"who had once been convicted of any act of violence to others under the influence of drink."[107] If there were a drug which was sufficiently predictive of acts of violence, it might make sense to treat its possession like possession of a sawed-off shotgun. With all drugs known today, except heroin, any rationale based upon the risk of harm to others, let alone violent crime, is challengeable on factual grounds.[108] With respect to heroin, however, it can admittedly be argued that its use is a sufficient predictor of criminal acts, at least in those without any legal source of sufficient income to maintain a drug habit.[109] This is so notwithstanding the irony that it is the law itself that is an equal cause of the addict's crime. Methadone maintenance programs have, on the other hand, already shown dramatic ability to decrease the criminality of a sizeable percentage of heroin addicts,[110] and, at least until this type of solution is shown to be inadequate, it makes relatively little sense to use the far more expensive and less effective methods of punishing the drug user himself.

Principle II: Drugs do people good as well as harm

Because drugs do people good as well as harm, when one considers reducing the abuse of a drug through a legal measure, he should also consider the corresponding reduction of the drug's beneficial use which the measure will cause. Thus, even if a drug prohibition were effective at preventing all use of a drug, this may not always be a cause for satisfaction because the good the drug might have done may very well exceed the harm prevented by its suppression.

This principle has been most often discussed with respect to medical drugs—even though the medical model[111] seems best adapted to distinguishing between beneficial and harmful use, since it allows physicians to make the determination on a case by case basis. The problem also arises, however, with respect to the "new" drugs that are being tested for approval. It has been alleged that bureaucratic drug administration has imposed unrealistic and expensive testing

standards which must be met prior to putting a drug on the market.[112] Many observers have felt that although the protection afforded by these standards against another thalidomide disaster is very important, the harm done to society by unnecessarily keeping beneficial drugs off the market may outweigh the more demonstrable harm caused by allowing the prescription of potentially harmful drugs.[113] Whether or not these charges are correct, it must be remembered that the evaluation of medical drugs has been turned over to a bureaucracy and that there is a constant and strong tendency for a bureaucrat to prefer invisible to visible errors. Since he will suffer far less attack if he keeps a valuable drug off the market than if a drug he has passed does harm, the bureaucrat will always tend toward a caution which may be damaging to society as a whole.

It is even possible that this principle may have application to the cyclamates. There might be many people, for example, who should rationally take their chances on the relatively unlikely possibility of bladder cancer caused by cyclamates, rather than face the more certain health dangers of obesity. If the long-term health consequences of putting on too much weight are considered, it may be that the population as a whole would suffer greater injury from being overweight than from the threat of cancer in a small percentage of users.[114]

The cyclamates point up another aspect of this problem. With the possible exception of some medical "wonder" drugs, the good that a drug does will tend to be more widespread, but far less dramatic, than the harm. Even in the case of alcohol where the medical harm clearly outweighs the good, and in the case of marijuana where the issue is subject to acrimonious debate, there is no doubt that there are many people who avoid serious mental problems by relaxing and reducing anxiety with one or the other of these drugs. In the case of both alcohol and marijuana, then, one might still decide that complete

prohibition is the best social response if it could be made to work at a cost proportional to its benefits. However, one would then have to consider not only the social and financial cost of making the prohibition work, but the restriction of beneficial use as well.

Attention will be later focused on the often neglected point that the greater the number of users who consider their drug use beneficial, the harder it will be to make the prohibition work. At this point it is necessary only to note that prohibition may well discourage the beneficial use much more effectively than the harmful use. The person who is dependent on and desperately needs a drug is likely not only to be the one who will work hardest to get it but also the one most likely to injure himself with it. In some situations the law works well to keep people from using a drug who might benefit from it but is relatively ineffectual to prevent use by those who harm themselves.[115] The marijuana laws today, and, so far as can be told, the prohibition of earlier years, discouraged moderate use by older more stable and cautious members of society far more than they deterred the younger, more unstable and less forward looking, who in fact are much more likely to become abusers.[116]

Principle III: An important factor in the success or failure of any method of drug control is the degree to which the users want the drug

This is one major reason why when the government ordered cyclamates off the market they simply disappeared, whereas alcohol during prohibition, and marijuana more recently, did not. The cyclamates could be successfully barred in great part because most users really did not want them very much. They were only used to save calories, and calories could be almost as effectively reduced in other ways. Although cyclamates did not have the bitter after-taste of saccharine, a combination of saccharine and a small amount of sugar was a sufficient substitute for most people. Nor did cyclamates, unlike heroin for instance, produce either addiction or psychological dependence to make its users seek the drug at substantial personal cost. Consequently, the illegal seller of cyclamates did not have a very good market.

115. *See* KAPLAN 323-26. *See generally* R. STEFFENHAGEN & P. LEAHY, A STUDY OF DRUG USE PATTERNS OF HIGH SCHOOL STUDENTS IN THE STATE OF VERMONT (1969).

Compare marijuana or alcohol to the cyclamates. Both cause dependence,[117] though to only a relatively small number of users and they give considerable pleasure to a high proportion of the rest. The users of each of these "social" drugs do not, in addition, seem to recognize substitutes for their drugs, as was the case with cyclamates. They are not, then, presented with easily available alternatives so as to make unnecessary their efforts to procure alcohol or marijuana.

Principle IV: The technology of drug production and consumption is an important factor in the success or failure of a drug control measure

Where the technology of drug production and distribution is not difficult to overcome, drug control will be very difficult, but where that is not the case, the control will be far more effective. Take, for example, the cyclamates. Although they do not take a great deal of technology or invested capital, unlike amphetamines they are not easily divertible from normal chains of commerce; unlike marijuana, they are neither grown wild in nature nor produced in less developed countries beyond the effective reach of law enforcement; and, unlike alcohol, they cannot easily be distilled in anyone's basement from completely untraceable ingredients. Moreover, so long as cyclamates are consumed in cans of diet drinks selling for ten or fifteen cents each, it would hardly be economical to transport large quantities of such beverages illegally; a truckload of such diet drinks would be considerably less valuable than a pocketfull of heroin, a small suitcase full of marijuana or a car full of alcohol. Of course, if there were a sufficient demand for cyclamates, and if the technology of production were simpler, it might be that legitimate business would produce non-sweet soft drinks to which the illegal drug user could add his cyclamates—much as large amounts of cigarette papers and water pipes are now sold and which, for the most part, end up being used with illegal marijuana. Until this level is reached, however, the technology of production and distribution helps make the cyclamates an example of effective drug control.

Principle V: The social cost of a drug control law can be staggering

Insofar as a drug control law accomplishes its object of preventing drug abuse, it will typically not be very costly. In the case of the

117. KAPLAN 156-67, 270-76.

cyclamates, the only cost of preventing its harmful use is that a good deal of valuable use is also prevented—which, if more were known, might turn out to be perfectly safe. And where a drug is controlled by the medical model, its major cost is the amount of medical time and effort it takes to run the system which must be paid for by the drug user.

Where the drug control law is widely violated, however, its costs can rise staggeringly. The alcohol trade during prohibition not only led to the vast expansion of organized crime in America and enormous official corruption,[118] but it added a new danger to the health of the nation as well. Although alcohol distillers did not generally sell methyl alcohol mixed with their liquor before or after prohibition, during prohibition many bootleggers did and caused a sizeable number of injuries to the unfortunate people who consumed it.

Even if one supports the present prohibition of the heroin laws because of the fear of vastly greater heroin addiction, he must recognize that in so doing he pays an enormous price in addict criminality. A major effect of the heroin laws has been to create, in Professor Packer's term, a "crime tariff" which raises the price of the drug to many times what it would be in a competitive market.[119] It is the price of the drug rather than addiction itself which requires addicts to turn to crime. Crime is necessary not so much because heroin prevents the addict from holding down a legitimate job, but because only crime can permit the relatively uneducated addict to earn enough to feed his habit. Moreover, heroin is not only a very addicting drug, it is also a drug which causes a "tolerance"—a gradual increase in the amount necessary for the user to gain a constant effect.[120] This gradually socializes the addict into criminality and makes sure that his need increases as he becomes a more experienced criminal. Although many addicts support their habit through the sale of heroin, users cannot make a living by simply selling to each other. Sooner or later the community outside must be victimized through property crimes or the manufacture of new addicts—who in turn repeat the same process. Finally, the cost of the heroin laws in terms of police corruption and erosion of civil liberties is impossible to measure.

The marijuana laws, perhaps, best demonstrate the heavy costs

---

that may be paid for attempts to control drug use.[121] Some of these costs could, of course, be reduced by substituting the vice model for the present prohibition—and this would be the very least demanded by Principle I. Such a change would vastly reduce the enormous expenditure of resources used in processing users. The great majority, over ninety percent, of the 70,000 marijuana arrests made during 1970 in California were of users possessing only small amounts of the drug, and almost as large a percentage of the cost of processing offenders through the criminal system was spent upon users.[122]

It is hard to prove with equal precision the other costs of criminalizing the possession of marijuana—though we should expect fairly sizeable costs from a law which turns approximately one-third of young Americans into unrepentant criminals.[123] It cannot be proven, but it is suspected that no generation of young people since prohibition has grown up as profoundly distrustful of the police and the law enforcement apparatus as has our present younger generation. It certainly is undeniable that anyone who smokes marijuana cannot possibly consider the policeman as his friend and protector as many Americans were brought up to do. Indeed, if one could somehow graph the hostility of young people toward the police with the increasing use of marijuana, he would find two sharply increasing and probably parallel curves.

The police are by no means the only major institution of our society which has been alienated from the young by the marijuana laws. Examine, for instance, organized medicine. Just a few months ago, the President-elect of the American Medical Association was widely quoted to the effect that the Association had evidence that marijuana use caused impotence and birth defects.[124] Although he later admitted that he knew of no such evidence, he said that he had allowed the misrepresentations to stand because he wished to discourage marijuana use.[125] As he put it, "If I am taken out of context and it does some good, I don't mind." When asked about the loss of

124. The criminalization of marijuana may, in fact, be the single most unifying and recruiting agent available to the counter-culture of the New Left. *See* Bonnie & Whitebread, *supra* note 22, at 1098.

125. McCabe, *Clamor in the AMA*, San Francisco Chronicle, April 7, 1971, at 51.

credibility among the young caused by this type of authoritative misrepresentation, he said, "I'm tired of these phrases about credibility gap and such. We're talking about the morality of our country and the loss of respect of law and order and authority and decency."[126] In short, an attempt to support the marijuana laws led directly to the view that it was permissible to mislead young people in order to get them to respect authority and decency. Because of this type of well-publicized incident—as well as the almost equally well known lowering of scientific standards by the Journal of the American Medical Association to print articles exaggerating dangers of marijuana[127]—it is extremely unlikely that organized medicine will ever enjoy again the credibility with young people that it had before the marijuana laws became an issue—even on questions where it is not attempting to compel respect for authority.

These costs, which are for the most part attributable to the decision to make marijuana use criminal, do not exhaust the costs of the marijuana laws. Even the adoption of a vice model would still impose enormous costs upon society. Because of Principles III and IV, the law would almost certainly remain unenforceable and as a result, the marijuana laws would continue in several ways to contribute to the use of drugs which by any standard are far more dangerous than marijuana. Since drug education is the most important long-term solution to drug abuse,[128] the marijuana laws would continue to inhibit educating young people about the dangers of heroin, LSD, amphetamines, and other drugs. Although education as to drugs other than marijuana can be extremely factual and yet effective, the fact that drug education must also support the marijuana laws destroys a great part of its credibility.[129] The reason for this—as grasped intuitively by the President-elect of the American Medical Association—is that the only way to defend to young people the gross disparity between the legal treatment of marijuana and alcohol is to attempt to mislead them about the facts. The problem is that such attempts generally fail,

126. San Jose Mercury, March 25, 1971, at 17, col. 1.

127. *See, e.g.*, Kolansky & Moore, *Effects of Marihuana on Adolescents and Young Adults*, 216 J.A.M.A. 486 (1971). *See generally* BLOOMQUIST 225-30.

128. It is interesting to note that the Federal Bureau of Narcotics went to great lengths in the thirties to educate the public as to the purported evils of marijuana. This miseducation has had a lasting effect. *See* J. FORT, THE PLEASURE SEEKERS 69-71 (1969); Grinspoon, *supra* note 8, at 20-22.

129. Kaplan, *supra* note 84.

destroying in the process the factual and honest efforts to educate against the use of other more dangerous drugs.

Second, by forbidding the legal sale of marijuana society will continue, in effect, to give a monopoly on marijuana sale to drug pushers. This will continue to bring all those who would use marijuana into contact with a group which already risks severe penalties for selling it, and, therefore, has every incentive to deal in higher profit items such as LSD, amphetamines or heroin. One can liken this to what would happen if a monopoly of all coffee sales were given to one supermarket chain. Not only would their sale of coffee skyrocket, but so would sales of just about everything else because those who were in the store would be available for a hard sell on other products. It is no different with illegal commodities and, just as prohibition had to be repealed to get the "mob" out of the liquor business,[130] marijuana will have to be sold under license by legitimate businessmen to get the drug pushers out of the marijuana business.[131]

Principle VI: Marijuana is the key drug, and until substantial progress is made in controlling it, little real progress can be made on the other areas of drug control

In order to understand why a licensing system for marijuana is necessary, it must be remembered first that marijuana is by far the most widely used illegal drug in the nation; second, that it is typically the first illegal drug used by those who later use more dangerous drugs; third, that the popularity and relative lack of danger of marijuana tends to make all illegal drug-taking somewhat more respectable; fourth, that attempts to defend the legal treatment of marijuana, especially as compared with alcohol, have compromised the educational effort to reduce use of more dangerous drugs; and fifth, that the marijuana market has called into being an elaborate drug-dealing subculture which is instrumental in the sale of, and proselytizing for, other illegal drugs.[132]

One method of ending the central position of marijuana would, in theory, be to enforce marijuana laws and actually stamp out the drug. As previously discussed, however, this simply cannot be accom-

130. SINCLAIR 229-30, 415.

131. The requirements for such a licensing system are considered at length at notes 132-38 *infra* and accompanying text.

132. KAPLAN 44-45, 224-25.

plished within the constraints imposed by the police resources at hand, and the constitutional rights of privacy guaranteed to citizens. Indeed one can put the matter somewhat more strongly and say that, short of a complete police state, it will be impossible to enforce the marijuana laws sufficiently to change any of the five facts mentioned above.

The application to marijuana, however, of a licensing system similar to that presently applied to alcohol changes all five drastically. First, marijuana would no longer be the most widely used illegal drug in the United States; nor, for that matter, would it be the most widely used legal drug—alcohol and tobacco would still vie for that distinction. Second, marijuana would no longer be the first illegal, or the first legal, drug used by those who later use more dangerous substances. Third, marijuana, once classified with the legal drugs, would no longer reflect its popularity upon the illegal drugs. Fourth, the removal of the disparity between the legal treatment of marijuana and alcohol would allow more honesty in educating about both—while at the same time increasing the credibility of presently honest warnings about the more dangerous drugs. And, fifth, nothing will damage the illegal drug dealing subculture as much as exposure to honest competition by legitimate businessmen.

The Requirements of a Licensing System for Marijuana

Inasmuch as Principle VI is the most important application of the other five, it will be helpful here to sketch a model of a marijuana licensing system, as an illustration of the progress that may be made if one applies all of the principles toward a rational system of drug abuse control.

The administration of the licensing system would be turned over to an agency similar to the Alcoholic Beverage Control Commission. Indeed, the work of this agency would be so close to that presently performed by the ABC that control of marijuana would probably be added to its jurisdiction—perhaps by renaming it the Social Drug Control Agency (SDCA). The system of control, then, would provide that:

(1) Sufficient marijuana to meet the state's needs could be grown under license from the SDCA by a relatively small number of landowners. The United States National Institute of Mental Health has for several years now grown marijuana for research purposes on a

fairly large scale on its farm in Mississippi, and has been able to protect its crop from diversion and theft.[133] The SDCA would have to require similar precautions.

(2) Even in the early stages of marijuana licensing, it is likely that the competitive market will determine the price paid to the grower. The cost of producing it today is approximately one cent per ounce, while the market price of the same amount is approximately fifteen dollars. If, however, the number of licenses is, for security reasons, kept so low as to prevent a free market from operating, the SDCA should have the power to fix the price per ounce for different grades.

(3) Once the marijuana is grown, it would be sold to a packager-wholesaler licensed by the SDCA to test and mix different strength marijuanas to obtain a standard potency of 1.5 percent tetrahydrocannabinol—on the market today this would be regarded as "good grass." The mixture would then be vacuum packed (because marijuana loses its potency over a period of months when exposed to the air) in one-ounce containers as is pipe tobacco.

(4) Each one ounce "lid" would bear a tax of twelve dollars and be sold for about eighteen dollars in any store licensed to sell hard liquor. Thus, we would incorporate by reference all of the many restrictions on liquor stores—from the moral character of the seller to the spatial distance between schools and churches.

(5) At least in the early stages of the marijuana licensing, where it is important to proceed slowly and carefully, it would be illegal to sell less than a lid, or to sell marijuana for consumption on the premises.

(6) All advertising would be forbidden except that which is done within the liquor store.

(7) Each package of marijuana would carry a warning drafted by an expert medical committee, fairly stating the dangers, as well as the uncertainties of marijuana use.

(8) Sales to those under age would be prohibited under exactly the same type of regulations that now apply to hard liquor.[134]

(9) It would, of course, remain a crime to drive an automobile

133. McGlothlin, The Use and Effect of Cannabis 3, 4 (1971) (unpublished paper prepared for the Nat'l Comm'n on Marijuana and Dangerous Drugs).

134. The age for consumption of marijuana should be 18 rather than 21. The lower age is coming more and more to mark the line between the child and the adult. Needless to say, the alcohol law might have to be changed as well—though there are signs that this is happening and it is recommended by most authorities on alcoholism.

under the influence of marijuana. Although it is not presently scientifically possible to determine whether one is under the influence of marijuana, it is likely that such a test will soon be developed. If not, the SDCA should have the power to require that a biologically inert material be added to legal marijuana, which can be identified in body fluids during the period when driving might be dangerous. It should be understood, moreover, that while present research indicates that the marijuana intoxicated driver is more dangerous than the driver who has consumed no drug at all, he is much less dangerous than the drunk driver.[135]

(10) It would be a criminal offense to sell or possess marijuana outside the licensing system, and the selling of marijuana to one under age would be regarded as an aggravating factor.

(11) The growing of marijuana for one's own use would be permitted under strict regulation and taxation by the SDCA. Permission would be granted subject to the same types of rights of inspection as apply in the alcohol industry.[136] Violators would be treated as revenue offenders, but this by no means precludes a term of imprisonment in cases where commercial quantities are grown.

(12) The SDCA would be given power to raise or lower the tax on marijuana. It should have the power to lower the tax if it finds that advances in techniques of evading law enforcement have made bootleg marijuana a serious problem at the then present price; and it should have the power to raise the tax should it determine that more revenue can be derived from the sale of the drug without raising the price so high as to bring into existence an illegal market.

(13) This should be regarded as a "stripped down" licensing model. It might turn out for instance that the SDCA would be better off allowing more than one potency of marijuana. This might allow a marijuana user to use a less potent form of the drug if he wishes, while at the same time allowing the SDCA to make available a stronger variety if desire for it had been sufficient to create an uncontrollable black-market.

(14) In order to permit this licensing system to function, a federal law would have to be passed which does not forbid those activities necessary to the furtherance of the system. This would mean, for example, the federal law of possession and sale[137] would provide a

specific exception for marijuana marketed according to a state licensing system. In addition, as a matter of international law, the denunciation provision of the Single Convention on narcotics drugs would have to be activated and the United States Government would have to serve notice that it was exercising its option to withdraw from the Convention, at least insofar as the Convention prohibited licensed sales of marijuana.[138]

CONCLUSION

Society must not, of course, delude itself into thinking that a marijuana licensing system will solve all of the problems caused by either marijuana or, *a fortiori*, the other, more dangerous illegal drugs. But it will facilitate a beginning toward the application of the rational principles of drug control to the generic problem of drug abuse. By acting upon these principles, of which the marijuana licensing system is the necessary first step, society will not be approving of drug abuse; rather it will merely be demonstrating that there is a limit to the costs it is willing to suffer—notwithstanding a general commitment to save people from themselves. Until the marijuana laws are so modified, other forms of drug abuse legislation will be ineffective and costly, if only because new drug users will be socialized by the drug subcultures as fast as the legal system can cope with present users.[139]

Just as marijuana control is the first step in a more generally effective drug control system, the problem of drug abuse is but one facet of the broader problem of using the law to protect people from their own folly.[140] Preventing self-harming conduct, however, is a basically intractable problem because voluntarily entered activities impose significant secondary costs upon society.[141] The task of drug control laws, then, is to minimize the social costs of both the activities sought to be controlled and the laws enacted to control those activi-

138. Single Convention on Narcotic Drugs, [1967] 18 U.S.T. 1407, T.I.A.S. No. 6298, 520 U.N.T.S. 151, 204 (Multilateral Treaty Between the United States of America and Other Governments), New York, March 30, 1961, ratified by United States, 1967.

139. Thus, Richard Blum notes that "with pseudo solutions and oversimplifications, the real problems grow worse and nonproblems are increasingly defined as problems, such as cannabis (marijuana) use." BLUM 243.

140. The problem of self-harming conduct and society is considered in depth at notes 1-8 *supra* and accompanying text.

141. The nature of secondary harms associated with drug abuse are discussed at notes 9-31 *supra* and accompanying text.

ties. To say that we as a society have so far done an abysmal job of tackling that task, would be to considerably overstate our success. By turning to somewhat more basic principles, however, it is hoped that in the future we will do better.

THE LAW AND MARIJUANA

American Conservatives Should Revise Their Position on Marijuana

RICHARD C. COWAN

I AM GOING to start with a few assertions of facts that, for all I know that they will be challenged, I consider to have been established by responsible scientific inquiry:

1. Marijuana is non-addictive—I use the word technically.

2. The use of marijuana does not in itself lead to the use of heroin.

3. No one has ever died from an overdose of marijuana.

4. Marijuana *used in moderation* causes no identified physical or mental problems for individuals who are otherwise healthy.

5. Marijuana does not induce criminal behavior or sexual aberration. In fact, it tends in most users to inhibit violence.

6. Marijuana *in moderate use* has little effect on the driving ability of experienced users of it—the contrast with socially equivalent alcohol consumption is to the disadvantage of alcohol.

7. Long-term abuse (gross overuse) should be assumed to be harmful but in fact there is as yet no conclusive evidence to that effect.

8. The moderate use of marijuana does not lead to changes in social behavior or to a loss of motivation. It may correspond with an observable change in people's lives but it is not the cause of that change.

9. Twenty-five million people use or have used marijuana. Marijuana is readily available today to anyone of minimum ingenuity who looks for it.

These assertions are of course contrary to what most agencies of the government have been telling us for the past forty years. (NATIONAL REVIEW has frequently ventilated the official line on marijuana.) Whether you doubt my assertions or not, please read *Marihuana Reconsidered* by Dr. Lester Grinspoon and *Marijuana, The New Prohibition* by John Kaplan. Both authors began their research, by their own admission, disposed in favor of the current legal proscriptions. Both came to the conclusion that our present laws are doing no good and a great deal of harm.

If you read those books and disagree, fine. But if you do not read them and you continue to support (or even if you fail to oppose) sending thousands of young people to prison, you are acquiescing in their punishment out of ignorance. A harsh statement, but true, I think.

It is my thesis that:

1. *Conservatives should support enlightened drug education.* Existing marijuana laws are destroying the credibility of drug education.

The key to education is credibility. Contrast the statements above with the postulates of the conventional government position. In deference to conventional notions about public enlightenment, I wish I could say that "recent discoveries" are responsible for such facts as are more commonly acknowledged nowadays concerning marijuana. In fact, many of them were available to anyone who cared to look into the matter even when the present laws were promulgated in the 1930s.

Accordingly, I ask you: If you are a young person who has found by experience—yours and your friends'—that virtually everything you have been told about marijuana is totally untrue—wouldn't you question what they tell you about LSD, heroin, speed?

Drug abuse in our schools is a serious problem. Barbiturates and amphetamines and a variety of badly made, dangerously contaminated psychedelics are taking a fearful toll, even as parents and teachers rave along about marijuana. The point is *not* that the kids should be encouraged to use pot—certainly not: but that they should be told the truth about it.

The reasons why human beings should refrain from consuming drugs (including alcohol) during adolescence are undeniable. But the fact of it is that adolescents are going to drink the contraband beer, and smoke the contraband grass, and social reform should concern itself with the discrepancy between the law and the social usefulness of that law. The

Mr. Cowan is a charter member of YAF and is active in the campaign to decriminalize the use of marijuana.

present laws, I maintain, not only have not worked, they are counterproductive.

2. *Conservatives should encourage a uniform respect for the law.* At present, 25 million people have, by common estimate, smoked marijuana at least once. Among college students—especially at the prestigious liberal-arts universities—a majority have smoked marijuana, according to the relevant polls, at least once. A significant minority of these take marijuana with some regularity, especially on weekends.

What is it that American conservatives favor? Search-and-destroy young Americans—one-eighth of the entire population—who experiment with the forbidden drug? Inasmuch as no one in sight appears to be in favor of busting the University of Illinois—or Yale—or Ole Miss—and sending all the malefactors to jail, just what do we conservatives propose?

We are, by the current standards, raising a generation of presumptive criminals—because we have so defined them. The situation is aggravated by the necessary use of undercover agents who regularly practice entrapment. How else does one enforce laws against victimless crimes, concerning which no one files a complaint?

But the story gets worse when the harshness of the penalties is considered. In general, the sale and possession of small quantities of marijuana have been punished more severely than crimes against person and property.

In my native Texas, for example, the average sentence for possession is nine years. At least one man is serving life for possession of a matchbox-full.

Long sentences are *still* being handed out in many states.

Arrests for possession of marijuana rose tenfold from 1965 to 1970, to more than 188 thousand. The FBI recorded a continued increase in drug crimes last year, and unless there is a (most unlikely) decline it is likely that as many as 250,000 young people will be arrested on possession charges this year.

The laws are themselves scientifically indefensible insofar as they proscribe marijuana as a "narcotic stimulant to the central nervous system." Marijuana is in fact not a narcotic, and narcotics are not in fact stimulants. They are depressants. For many years, under the Uniform Narcotic Drug Act, marijuana was legally classified as a narcotic; *not* because it had ever been supposed that such a classification was scientific, but because, as one legislator put it in 1932, "there is a universal antipathy to the use of narcotics"; and it was "antipathy," rather than understanding, that the law was intended to create. The distinction between marijuana and narcotics was restored by the Controlled Substances Act of 1970, but several states still persist in lumping them together, as do many citizens.

Would you respect a law that defined yogurt as a "vegetarian meat product"?

Laws should make sense, they should be uniformly enforced, they should carry a punishment in proportion to the damage done by the offender, and they should have the effect desired (in this case the discouragement of the use of marijuana). Our marijuana laws meet none of the above specifications, and while there are those who obey them, only fools respect them.

3. *Conservatives should recognize bureaucratic incompetence in whatever guise.*

Most government programs start when a politician discovers a "national disgrace." A new department is set up, billions are appropriated—and sure enough, the problem gets worse.

Marijuana was little known in the Thirties, until it was "discovered" by Harry Jacob Anslinger, the longtime head of the Narcotics Bureau. At that time there were perhaps as few as fifty thousand users, mostly blacks and Latin Americans, plus a few bohemians and hippies.

After 35 years of propaganda and repression, the drug has been introduced to 25 million people. As bureaucratic fiascos go, not bad.

It is incredible that conservatives should continue to support the bureaucratic mess that comprises the marijuana laws.

It is even more incredible that at a time when the crime rate soars, the hard-pressed police, courts and prisons, should be burdened with 25 million putative marijuana criminals.

Finally, it is puzzling—and frightening—to suppose that American conservatives sanction a tissue of laws the effect of which is to cast lackadaisical marijuana users—if they are so unlucky as to be a) caught, by b) the wrong people —into prisons which they share with men of tempered felonious disposition. The law defines them as criminals; the enforcement of the law makes them such.

4. *Conservative leadership is essential to an effective reform of the laws.*

If the present trend continues, the use of marijuana will soon approach market saturation and the use of it will level off. However, as more and more of the population become users—and users grow older—it will be increasingly rare for a jury to convict or a judge to sentence a defendant for possession or even sale of marijuana. While this may be an improvement from a humanitarian point of view, it leaves thousands of Americans rotting in jail for what millions on the outside are routinely doing.

FOR SOCIETY as a whole it means widespread use of the drug, without any objectively sanctioned controls on strength (how strong before it becomes hash?), quality (adulteration with opiates is routine), or distribution to minors. Continued outlawing will mean the growth of a large criminal industry analogous to the fabled bootleggers, and all the social ills that result from such a situation.

It will mean that it will not be possible to discourage by taxation the use of hashish (which is to marijuana roughly what 100 proof rum is to wine). And—worst of all—it will leave marijuana distribution in the same hands as methadone, LSD, barbiturates, amphetamines, and even heroin.

Finally, when legalization does come—say ten or fifteen years from now at the latest (assuming conservative opposition), or in five years (with conservative acquiescence)—patterns of use and distribution will have been set, and control will be increasingly difficult to enforce.

If on the other hand conservatives support the fight for legalization, we can have effective and humane laws that will succeed where the present system has so dismally failed—in keeping the drug from children; in making the vital distinctions. A prudent relaxation of the law will make possible some realistic restraints. Those substances which are now promiscuously forbidden will cease to be promiscuously consumed; as society distinguishes between pot and heroin, its

children will be encouraged to learn the difference too. Moreover, gentler laws would soften the impact of their own violation: Under present laws, as has been pointed out, hard and soft drugs tend to circulate through the same channels; but under new laws, designed to regulate rather than to prohibit, even the younger teen-ager whose pot-smoking is still illegal will tend to get it from an older brother or friend who has legal access (much as he now gets beer), instead of from the specialist in illegal drugs.

5. Conservatives should take the lead in urging the decriminalization of individual use of marijuana.

The marijuana laws have encouraged a disrespect for the laws; they have destroyed the credibility of government; and, they have estranged the young.

The importance of marijuana to its youthful users is less the pleasure it gives the individual than the tribal value of it. The drug's use in the counterculture is analogous to the use of alcohol in the Establishment, as a social lubricant. Any attempt at interference with so fundamental a part of the new social life is doomed to failure in a free society.

6. The notion that marijuana can in and of itself, undermine the moral fabric of society is contrary to basic conservative philosophy.

The notion that the use of marijuana is, or leads to, moral degeneracy is not sustained by any scientific investigation of the drug.

However, a moral society, like a moral individual (or a healthy individual for that matter) will use a drug: for recreation (alcohol); to alleviate pain (aspirin); to help him face and fulfill his obligations through crises (tranquilizers); but so long as the individual loves his family, his country and himself, he is going to use drugs to further his objectives, not to undermine them.

The superstition that cannabis is responsible for the muddlement of the student generation goes contrary to established conservative premises.

The hysterical myths about marijuana that have led conservatives to condone massive programs of social engineering, interference in the affairs of individuals, monstrous bureaucratic waste, the alienation of youth whom we struggle to attract to our institutions—are a great and current social menace.

7. *How do conservatives justify the hard data*: over 250,000 young people arrested every year (seventy thousand in California alone), tens of thousands put in jail or prison for long periods, lives disrupted and even ruined, families divided, records besmirched, a life of ostracism?

This is being done in our name?

I, for one, bitterly resent this; but, more, I fear its consequences. If the effect on individuals is tragic, the effect on society is disastrous—disastrous for our institutions, the rule of law, political stability, even public health. This is not being done by the enemy without, but by those to whom *we* have delegated the power and the authority to defend us. They have been a party to superstitions that are as false in content as they are in tone, but we cannot just blame them.

If now that we know that we have been deceived, now that the evidence is there for all to see, our jails full, our youth increasingly alienated and confused, if in the face of all this we do not *take the lead*, how are we conservatives going to speak to America, and how is our America going to speak to the world—of freedom and charity? □

[From the Washington Star-News, Dec. 5, 1972]

A Conservative Approach to the Pot Question

(By James J. Kilpatrick)

In their current issue, the editors of National Review grapple with the matter of marihuana, but with deference to my conservative colleagues, I think they let the main conservative questions slip away.

The principal article, urging that marihuana be legalized, comes from Richard C. Cowan. Editors James Burnham and Jeffrey Hart take a generally opposing view. William F. Buckley, Jr., editor-in-chief, flatly supports Cowan. "I for one find his arguments not merely plausible, but overwhelming."

On the face of it, this is an astonishing position to be taken by the nation's leading journal of conservative opinion. Yet if we are prepared to accept the validity of certain assumptions advanced by the proponents of pot, the position is not astonishing at all.

The question is deeply troubling, but it is not unusual. The same issues are involved in such matters as homosexuality and pornography. And if the problem is turned upside down, one finds the same principles, applied in reverse, in such diverse matters as the automobile air bag and the fluoridation of public water supplies. The problem is to define the proper role of government in a free society.

The conservative philosophy holds, if I understand it correctly, that within certain limitations, a free people should be just that: Free. What are these limitations? They are the limitations fixed by the impact of my conduct on your rights. As a general proposition, conservatives hold that no human conduct should be prohibited by law unless that conduct causes positive harm to the innocent bystander or to society as a whole.

We see this proposition at work in a thousand ways. In theory, a man is free to build a glue factory; but he is not free to build it where it causes offense to his neighbors. The citizen is free to play his stereo; but he is not free to play it at full volume at 2 o'clock in the morning. A motorist is free to travel where he pleases, but he has to stop at the stop signs. An activist is free to harangue a crowd, but he cannot provoke a riot. And so on. In every instance, the test is simply the harm that is done.

When homosexuality was held in nearly universal abhorrence, a valid case could be made against the employment of homosexuals in sensitive government positions: They were subject to blackmail. The argument is of doubtful validity now. The justification for laws against pornography lies in the belief (a belief not susceptible to easy proof) that pornography corrupts society as a whole.

The other side of the proposition, as I say, lies in conservatives' hostility to laws that do not undertake to prohibit evil, but seek to compel good: The requirement for air bags, the fluoridation of public water supplies. But put those aside.

Getting back to the matter of marihuana: If criminal laws against the smoking of pot are to be justified, they have to be justified in terms of the harm that marihuana causes, not to the individual, but to society. There is some evidence, I understand, that marihuana tends to slow certain physical reactions, so that a driver under the influence of marihuana becomes a danger on the highway. Cowan flatly denies this. In any event, this is an argument against smoking-and-driving, not against smoking.

A second line of argument holds that the marihuana habit leads to heroin addiction; heroin is universally regarded as a serious social evil, imposing heavy burdens upon society as a whole. If this causative theory is true, this argument would suffice. Cowan and other serious students of the subject deny it absolutely.

These are the questions conservatives ought to be asking. Most persons of my generation are doubtless against marihuana. We equate it vaguely with sin and immorality. But I keep coming back to Mencken's law, that in the absence of provable social harm, when A undertakes by law to impose his moral values on B, A is a scoundrel. If conservatives are to be consistent in their philosophy, they probably should join Cowan and Buckley in urging that criminal sanctions against mere possession and use of marihuana be repealed.

[From the Congressional Quarterly, Sept. 2, 1972]

MARIHUANA

NIXON. "I am against legalizing marihuana. Now, with regard to the penalties on marihuana, that is a matter which I do think is open to a national recommendation with regard to more uniform standards. In some states they are extremely strict, and in other states they are quite lax. I believe that a penalty in some instance can have a detrimental effect in achieving our goal. But I do not believe that legalizing marihuana is in the best interests of our young people, and I do not think it is in the best interests of this country." (News conference, San Clemente, Calif., May 1, 1971)

MCGOVERN. " I have never favored legalization of marihuana—and I take a lot of heat on college campuses for that stand. I have said we don't know enough about its effect to legalize it, and in that stand I'm less radical than President Nixon's Commission on Drugs.

"I don't think younghters should go to the penitentiary for smoking marihuanna—I don't believe mere use should be a felony—but I have always opposed its legalization, and anyone who has bothered to look up my record knows that." (Speech at Fremont, Neb., May 6, 1972)

CONTEMPORARY DRUG PROBLEMS
A Law Quarterly Spring, 1972

Marijuana: tempest over pot

BY EDWARD A. WOLFSON, M.D., M.P.H., F.A.C.P. AND DONALD B. LOURIA, M.D., F.A.C.P.

Dr Wolfson, an Associate Professor and Vice-chairman, Department of Preventive Medicine and Community Health at the New Jersey Medical School in Newark, has written and lectured extensively on the nature of drug abuse and drug addiction. He is a consultant to the Special Action Office for Drug Abuse Prevention, Washington, D.C. and Director of the Division of Drug Abuse at the Medical College.

Dr. Louria is Chairman of the Department of Public Health and Preventive Medicine and Community Health at the New Jersey Medical School in Newark. He is the author of several books including The Drug Scene *(New York: McGraw-Hill, 1968) and* Overcoming Drugs *(New York: McGraw-Hill, 1971).*

It is difficult to comprehend in this day when mere possession of marijuana is a criminal offense that there was a time in the U.S. when extracts of cannabis (the generic name for marijuana, hashish and related compounds) could be purchased without a prescription in drug stores and also could be prescribed by physicians[1] for a number of medical reasons such as relief of headaches, menstrual cramps, as an aid to sleep, in epilepsy, as an analgesic potentiator, and in childbirth; in some hands, cannabis was the drug of choice for loss of appetite and mild depression in the elderly, not surprising in view of the fact that users of "pot" often describe a ravenous appetite and cannabis often results in mood elevation.

Cannabis has been used either as a medicine, as a psychedelic (mind-altering) or as hemp for about 3,000 years. Cannabis was allegedly known in ancient China and

was supposedly listed in the 2737 B.C. pharmacopoeia, but this may be legend[2] since few Chinese dates prior to 1000 B.C. can be accepted with confidence. Cannabis was introduced into India in about 800 B.C., early Indian use being primarily for religious purposes, the weed being a holy plant to some Hindus. By the 10th century, A.D., the use of cannabis had spread throughout the Mediterranean and Arab worlds; its use was not proscribed by Mohammed (570-632, A.D.), whereas the use of alcohol was absolutely prohibited. In the 12th century, A.D., "medical" applications were described, and in the 1830's it was incorporated into "modern" Indian medicine. Cannabis was introduced to medicine in the Western World in 1839 by a British physician who had served in India.

Snyder, Blum, and Fort relate fascinating stories about the use of cannabis in Moslem cultures;[3] it appears that cannabis was one of the first psychoactive drugs to become sensationalized. Just prior to the First Crusade, about A.D. 1090, a secret and fanatical Moslem cult, led by Hasan-i-Sabba (or Hasan iben-al-Sabbah), settled in parts of Persia, Iraq and Syria. Hasan trained his followers as an army and is "known for refining the practice of assassination as an art."[4] Although most philologists agree that the *concept* of assassination derives from Hasan, there is dispute as to whether the word "assassin" comes from Hasan or from hashish; indeed, the word "hashish" itself may be derived from Hasan. Blum outlines the controversy over whether Hasan's followers killed (1) because they were under the influence of hashish, (2) because they were promised a reward of paradise induced by hashish, or (3) because they were simply a violent and politically dangerous group who came to the attention of the West, including the Crusaders, and who were subject to romantic speculation because a drug they may well have taken (but which was new to the Westerner) was given a causal role for their political behavior, or (4) because they were simply a revolutionary group and were impugned with the hashish label by their conservative rivals.

It is not entirely clear whether Hasan's followers used cannabis solely or at all, or whether alcohol (probably wine) and/or opium were utilized. Assuming that cannabis was indeed used, one could assume that it was in the form of hashish. Comparing hashish to marijuana as commonly utilized in the U.S. today is comparing a glass of straight gin to a glass of beer! Of historical interest is the fact that the descendants of Hasan's group are the contemporary Israeli sect, the leader of which, the Aga Khan, claims direct descent from Hasan.

The source of this medicine, rope or psychedelic agent, depending on one's orientation, is the plant *Cannabis sativa,* a ubiquitous plant that grows like a weed under almost any climatic or soil conditions. Until recently, the psychoactive ingredients have been assumed to come almost exclusively from the female plant, but recent chemical analyses revealed that the active substances are present in both male and female plants.[5]

Specially cultivated plants grown in warmer climates produce more of the sticky resin that contains the bulk of the psychoactive material. In 1965, scientists in Israel[6] identified the major psychoactive ingredient tetrahydrocannabinol (THC), and were able to synthesize the material from basic chemicals. Whereas small doses of THC result in the usual marijuana mild high or euphoria, large doses mimic the psychomimetic properties of the true hallucinogens such as lysergic acid diethylamide (LSD). Parenthetically, there is no chemical resemblance between THC and any of the other psychedelics or hallucinogens.

Evidence is now accumulating from psychopharmacologists and neurophysiologists that mood and behavior are determined, at least in part, by the activity of cell centers in the limbic system and hypothalamic areas of the brainstem.[7] Leake hypothesizes that when these centers are "satisfied," there is a sense of satiation and often

concomitant muscular relaxation and sleep. Drugs acting on the central nervous system are basically of three kinds; those that will stimulate and increase the activity of the brain, those that will depress such activity, and, finally, those that will distort such activity. The distorting drugs are the hallucinogenic agents such as LSD. Although cannabis as it is generally used in the U.S. (marijuana) is a mild euphoriant it does not readily fall into any of the three categories. THC in appropriate dosages can be a "distorting" agent.

Marijuana, a Mexican term initially representing tobacco and only in the last century applied to cannabis, is a preparation of chopped leaves and usually contains a low THC content. The flowering leaves of ripe hemp exude the stricky resin which contains most of the THC. By scraping the resin (especially from the specially cultivated plant) and pressing it into blocks, one obtains charas, or hashish. Hashish is generally considered to be about five to ten times as psychoactive as marijuana and is the only cannabis derivative that has significant hallucinogenic potential.

The effects of milder psychedelics are an interaction between basic pharmacological properties, including dosage and the route of administration, the personality of the drug user, the setting in which the drug is taken, the expectations of the user, and the user's ability to recognize the effects. Observed and described reactions vary considerably from individual to individual, and in the same individual from exposure to exposure. The situation in regard to marijuana is further compounded by the fact that preparations vary widely from batch to batch and from season to season. Even in its purer form (hashish), cannabis is not addictive in the physiologic sense, and does not create physical dependence. It would appear that, despite the long history of cannabis use and present availability of THC, the facts surrounding the use of

marijuana, the consequences of its use, and the meaning of its use continue to lie largely in the realm of mythology.[8]

The effects—what marijuana does and doesn't do

Any sensible classification of drugs logically should follow along clinical or pharmacological lines. Since marijuana is not derived from the opium poppy nor is a chemical equivalent, does not produce sleep or stupor, and does not relieve pain, marijuana is not a narcotic (despite the fact that legally it is often thus associated)!

There is excellent evidence that marijuana causes some temporary impairment of coordination for complex motor activities, and that there is a distortion of depth and time perception.[9] Possibly related to this impairment in time perception is the transient loss or impairment of memory for recent events[10] which may last for 30 to 90 minutes. There appears to be a fixation on the present which frees many users from concern for the future or experience of the past. While one can revel in the "now," the sensation is described by some as unpleasant or frightening. In 1968, Weil and coworkers[11] reported a "double-blind" study (that is, neither the subjects nor the researchers knew, during a given session, whether the product being smoked was real or an inactive placebo) that showed that marijuana caused a moderate increase in heart beat rate, some redness of the eyes, and virtually no other physical effects. Contrary to popular belief, marijuana in conventional dosage does not dilate the pupils. This myth apparently derives from the tradition of smoking marijuana in a darkened room or being examined by the police physician in a darkened cell, since darkness per se causes pupillary dilatation.

Only recently have there been adequate placebos for clinical marijuana experimentation. The previous lack of

placebo for smoking that would fool virtually all chronic users of cannabis created serious problems[12] in interpreting experimental data since the results depend as much on nonpharmacological factors as on pharmacological ones; the subject's reaction depends as much on the set and setting as on the drug per se. Another major problem was the lack of standardization of the THC content in the test material (a reasonably good psychoactive sample contains about 1-1.5 percent THC). Additionally, the THC content of marijuana at room temperature decreases at the rate of 3-5 percent per month, and at 100° for one month, all the THC in a potent marijuana sample may disappear.[13] Because of the decrement in the psychoactive potency of marijuana, the United Nations' marijuana reference samples are kept under nitrogen and frozen to avoid deterioration.

Until recently there has been little information regarding the metabolism and disposition of THC, mainly because of the difficulty of assaying the compound. The recent availability of C-14 labeled THC of relatively high specific activity has made possible a study of the drug's metabolism in man[14] after intravenous injection. The plasma levels of THC, its retention in body stores, and the excretion of its metabolites revealed that, (1) the THC in plasma declined rapidly during the first hour, (2) the THC persists in plasma for more than 3 days, (3) the THC is completely metabolized in man, and (4) the radioactive metabolites are excreted in urine and feces for more than 3 days. Thus, THC and its metabolites persist in humans for longer periods than its clinical effects. If one assumes that a critical degree of tissue saturation or blood level must be attained before the user attains an effective psychoactive effect, it may explain in part the phenomenon of "reverse tolerance" noted in chronic users of marijuana (lower doses required for psychoactivity after repeated exposure).

Using purified THC, Isbell and coworkers at Lexington[15] verified that regardless of the route of administration, can-

nabis causes no significant changes in pupillary size. There were no changes in respiratory rate or systolic and diastolic blood pressures, pulse rates at rest were consistently elevated, and subjects developed reddening of the conjunctivae after large doses. In small doses, changes in mood, usually euphoria, were consistently reported. Increase in the dose several fold produced alterations in sense of time, in visual and auditory perceptions, depersonalization, and hallucinations (both auditory and optical) in most subjects. In occasional individuals, psychotic episodes occurred even with low doses.

A clinical syndrome of acute psychosis associated with use of cannabis has been reported by a variety of observers in Vietnam.[16] Each case was characteristic of acute toxic psychosis with organic features, and many had paranoid features as well. Factors unique to Vietnam and combat situations seemed to be important in addition to the quality of the cannabis per se. Vietnamese marijuana was reported by the Army Chemical Laboratory in Japan to be about twice as potent in resin content as that normally sold or found in the U.S. In addition, approximately 50 percent of the cannabis contraband seized in Vietnam contains opiates. Although opiates are not usually associated with acute psychotic reactions, it is not surprising that the cannabis derivatives used in the Vietnam milieu produce a stronger effect on the consumer.

Although the incidence of psychotic or significant adverse reactions is small considering the total number of exposures to cannabis, there are a number of reports appearing in the medical literature describing various mental abnormalities. Transient panic reactions and depression apparently occur with a greater frequency than many proponents of marijuana admit. Most psychiatrists feel that the adverse reactions probably occur more often in those with substantial underlying personality distrubances.

The so-called loss of motivation syndrome observed in a certain percentage of "potheads" or marijuana habitues, is probably related to the psychological dependence on a mind-altering substance and a commitment to a drug-oriented way of life.

In testing the neurological and electroencephalographic concomitants of the marijuana-induced "social high,"[17] only minimal (and probably insignificant) cerebral electrical and neurological changes have been demonstrated. The observation that vibratory sense appreciation was slightly increased after smoking marijuana would possibly lend credence to the statements made by users that sensory impressions are enhanced. This may lead one to believe that he is now endowed with artistic creativity. More likely the pleasure derived from the drug induced some decrease in critical judgment leading the subject to believe that he is performing better under the influence of the drug; unfortunately, these subjective feelings have not been buttressed by more dispassionate and objective observations.

Marijuana and driving

One cannot leave the subject of effects without discussing the relationship of driving to a marijuana "high." There is a genuine concern that driving performance may be altered while under the influence of "pot," since there is some impairment of coordination for complex motor activities and a distortion of depth and time perception.

Many cannabis proponents compare marijuana to alcohol, and this is especially true in regard to driving performance. In a frequently quoted study on the comparison of the effects of marijuana and alcohol on simulated driving performance of experienced marijuana smokers, subjects experiencing a "social marijuana high" accumulated significantly more speedometer errors than when under control conditions, whereas there were no significant differences in accelerator, brake, signal, steering and total errors. The same subjects intoxicated from alcohol accumulated significantly more accelerator,

brake, signal, speedometer, and total errors than under normal conditions, whereas there was no significant difference in steering errors. On the surface, this study is a damning indictment of driving while under the intoxicating influence of alcohol; the study virtually exonerates marijuana from significant deleterious effect in driver performance, concluding that "impairment in simulated driving performance does not seem to be a function of increased marijuana dosage or inexperience with the drug."[18]

There are, however, some serious defects in the study and in the conclusions, both implicit and explicit. To begin with, the study focused attention on the effect of smoking marijuana rather than the effects of THC. No standardized dose of psychoactive material was used; in addition, the amount of any drug that is absorbed through the mucous membranes when the route of administration is inhalation is extremely variable. The end-point for most marijuana users is a "high" or euphoria, and the set and setting play a major role, as well as the dosage. A potential bias in a study of this type is that the experienced user may either inhale less (or less deeply) and/or overcome his mild euphoria in order to influence the result of the study (the subjects were required to be experienced marijuana smokers who had been smoking marijuana at least twice a month for the past 6 months).

Despite any possible biases, there were more speedometer errors, not allowing a general conclusion that marijuana is totally innocuous. Furthermore, the dose of ethanol utilized in this study for an average 150 pound subject was equivalent to about 7 ounces of 86 proof liquor. Clearly, comparing unlike dosages of unlike substances makes it difficult to even attempt to draw valid conclusions.

Escalation — after marijuana what?

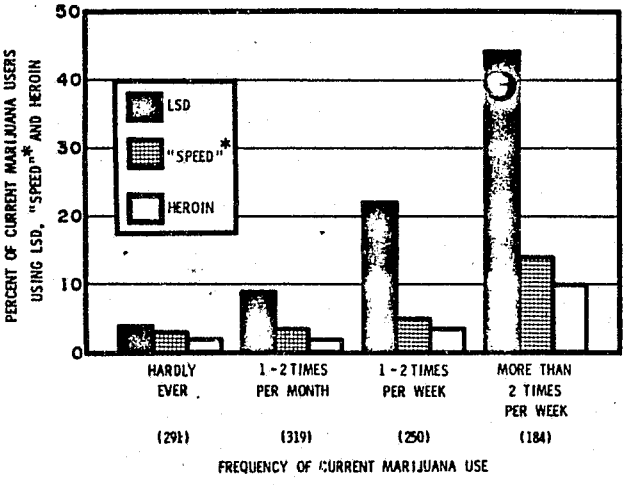
Clearly the incidence of acute untoward reactions to marijuana is limited (less than 1 percent) as is the incidence of adverse effects in those smoking repeatedly (almost surely under 5 percent). Consequently, the crux of the bitter marijuana polemic rests to a large extent on the issue of escalation from marijuana to other more potent mind-altering agents. For years the federal authorities suggested that the use of marijuana almost ineluctably led to the subsequent use of heroin. Such conclusions were obviously specious since millions of persons throughout the world use cannabis products but only a tiny percentage of these experiment with narcotics. But an insular focus on heroin is surely improper. Another relevant question is how frequently do marijuana users experiment with LSD, intravenous methamphetamine, mescaline, STP, MDA or any of the other potentially dangerous mind-altering drugs? A review of 20 major surveys indicates that approximately 1 in 5 marijuana users also experiment with more dangerous pharmacologic agents. Various sequential studies show that in the overwhelming majority of cases, marijuana experimentation preceded use of the other drugs. Thus Blum[19] found that hallucinogen users had prior marijuana experience in a ratio of 6:1 and that over 80 percent of heroin users had previous cannabis experience. Studies at the New Jersey Medical College[20] likewise showed that in the overwhelming majority of cases marijuana use occurs prior to hallucinogen or opiate use. Additionally, most surveys conducted in junior high schools show convincingly that marijuana use occurs at an earlier age chronologically than LSD experimentation.

The likelihood of using hallucinogens such as LSD can be directly correlated with the frequency of marijuana use. Thus, Goode[21] found that among those taking marijuana less than once a month, the likelihood of using LSD was 22 percent. In contrast among weekly users the percentage

using LSD was 49 percent and among daily smokers, an astonishingly high 82 percent experimented with LSD. The New Jersey Medical School studies revealed (see Fig. I) that among those using marijuana rarely there was a 4 percent chance of using LSD. Increase in frequency of cannabis use to once or twice a month increased the likelihood of LSD use to 9 percent; among those smoking at least weekly, 22 percent used LSD and 44 percent of marijuana users smoking at least two times each week admitted to the use of LSD. These two studies are buttressed by others, all indicating that the more marijuana used the more likely it is the individual will use a drug such as LSD. Furthermore, some recent reports suggest that 5 to 13 percent of repetitive marijuana users will experiment with opiates, a surprisingly high figure.

Figure 1

Percentage of 1044 current marijuana users in six suburban New Jersey high schools who currently use LSD, "speed",* and heroin, by frequency of current marijuana use



*"Speed" = Methamphetamine (Intravenous)

The available data would appear to warrant the following conclusions: (a) a substantial number of marijuana users will subsequently experiment with more dangerous drugs; (b) the likelihood of use of certain of the more dangerous agents can be correlated directly with the frequency of cannabis use; and (c) it would appear that if an individual does not use marijuana the likelihood of use of more dangerous agents is profoundly reduced.

Although the data suggest that the concept of escalation is valid, three clarifying points merit emphasis. First, marijuana is only a part of a continuum. Most studies, ours included, suggest that parental use of licit or illicit mind-altering drugs promotes subsequent illicit drug use in their children. Next in the chronological continuum is an inordinately permissive attitude of parents toward legal medicament use by young children or failure of parents to satisfactorily resolve problems brought to them by their young children when the children perceive such problems as important. At a slightly later age (preteen or early teenage), use of alcohol or cigarettes is related to later marijuana use; marijuana users are three to four times as likely to also be smokers and users of alcohol as appropriate controls. Thus, marijuana is only a step in a continuum that starts with the parental behavior, and for some young persons ends with the use of drugs such as LSD.

Second, the majority of marijuana users clearly do *not* escalate to more dangerous agents.

Third, the fact of escalation from marijuana to more dangerous drugs does not define the mechanisms thereof. Escalation could be due to physiological or biochemical reasons as yet unknown, curiosity, hedonism, peer group pressure, or underlying personality abnormalities. It also could be that use of marijuana and more dangerous drugs relates to the thrill of doing something illegal that carries only a small statistical risk of being apprehended. Finally,

escalation could occur because the individual selling illicit marijuana could be concomitantly supplying more dangerous pharmacologic agents.

Regulation or legalization?

It is crucial that society develop a rational approach to the cannabis problem. To single out marijuana as a symbol and apply sanctions that are anachronistic and based on incorrect assumptions is inappropriate, and at the very best, self-defeating. There is no reason to equate marijuana, a euphoriant, with potent hallucinogens, stimulants or opiates. It is likewise illogical in a democracy to punish marijuana users harshly on the grounds they might escalate to LSD or heroin. This controverts the legal principles upon which our American democracy was built, namely that the punishment should fit the present crime, not some potential future criminal act. Furthermore, the present laws make no sense because most marijuana users do not and probably will not escalate; thus, escalation, although important and a factor in our applying sanctions, occurs in a minority, not a majority of marijuana users.

There are basically four paths open to society: (1) Maintain the present restrictions; (2) Remove all restrictions (presumably this is what the proponents of legalization advocate); (3) Devise a new system of regulation; (4) Maintain the present framework and mitigate the harsh penalties.

Maintain the Present Restrictions. It would appear that maintaining the status quo is undesirable. Kaplan[22] argues that the disparity between the dangers of marijuana and the severity of the present laws against it is "unconscionable." In 1968, marijuana arrests accounted for one-quarter of *all* felony arrests in the State of California;

for 80 percent of the adults, it was their first arrest, as it was for 98 percent of the juveniles. The cost of applying the marijuana laws is astronomical and the benefits to society unclear. Because the potential punishment is often excessively harsh, law enforcement officials themselves frequently disregard the laws, preferring to ignore use or possession of the drugs, thus promoting disdain for our entire legal system. In other instances, the laws are applied only to those deemed undesirable or trouble makers and in some cases patently unjust and vicious sentences have been meted out for marijuana possession. At both federal and state levels the need for altering the laws to make the punishment truly consistent with the nature of the crime has been recognized and in most jurisdictions a reassessment of the marijuana laws is being made.

Remove all Restrictions (Legalization). The all-out proponents of marijuana often overstate their case in maintaining that cannabis is entirely innocuous since the preponderance of evidence is clearly against this point of view. To justify removal of all restrictions they argue that: (a) other intoxicants that are at least as dangerous (such as alcohol) are less restricted; (b) we are criminalizing respectable youngsters and exposing them to the criminal world; and (c) there are possibly 200-250 million users worldwide and 1-20 million users of marijuana in the United States and, therefore, marijuana use should be considered acceptable behavior. Clearly, however, because large numbers do something or believe something does not make that "something" desirable, necessary, or right. (Many years ago, everyone believed the world was flat.)

The legalization proponents quite correctly point out that there is an erosion of Protestant ethic and that we are now living in a hedonistic society. They say we shouldn't legislate against a chemical that the Chinese called the giver of delight, and the Indians called the heavenly guide — the soother of grief.

The proponents likewise point out the following: (1) Mr. Harry Anslinger in 1937 originally stated that there was no validity to the "stepping stone" (escalation) theory, but later enthusiastically embraced the association in order to justify the harsh laws; (2) there is no evidence marijuana induces violent behavior; (3) using marijuana does not cause sexual aberrations; (4) that we are a "drugged" society that too often turns to "better living through chemistry" and "recreational pharmacology"; (5) society has accepted the concept of taking a dried plant, putting fire to it, inhaling it, and polluting the atmosphere (the smoking of tobacco); (6) using marijuana is a crime without a victim; and (7) that we live in a tense, frustrating world in which a euphoriant such as marijuana is likely to be beneficial to many people.

The proponents make many valid points, but should accept the probability that marijuana use would increase markedly if marijuana were legalized; concomitantly, the number of persons suffering adverse effects would in all likelihood increase. And the following crucial questions are raised. Can society afford to add more intoxicants to its already burgeoning supply of mind-altering agents? Are we willing to accept the possibility of 1-2 million "potheads" in addition to our millions of alcoholics? Are we willing to accept the risk of escalation to more dangerous substances?

New System of Regulation. Kaplan summarizes the major thesis in opting for a completely new system of regulation: (1) the cost of processing marijuana offenders far outweighs the benefits to society; (2) too many juveniles are being criminalized, with jobs and futures jeopardized; (3) there is a growing disrespect for law in general. Most users of marijuana know that for each arrest there are hundreds not caught, and of those caught, most have their charge reduced (selective enforcement); (4) legal sanctions as presently constituted maintain the secretive drug culture

and "seller" contacts, and probably inhibit the users from turning to counseling; (5) the law enforcement apparatus is caught on the horn of a dilemma, with increasing hostility and resentment; and (6) increasing restrictions on the supply of cannabis will result in users turning toward more dangerous drugs with increasing frequency. Kaplan maintains that the illegality per se may lead to "harder" drugs, since the psychological association may make the use of the other drugs more respectable, possibly because marijuana users are already committed to a "serious" criminal act.

Those suggesting a new system of regulation reiterate that a decision not to criminalize does not necessarily represent approval. Marijuana can be recognized as a vice, whereby only selling or trafficking would be criminal, the user being free to use at his own risk. This model follows regulations relating to gambling or prostitution, under which the consumer is considered the victim and requires help. Recognizing that the cost of criminalizing marijuana users may be too great for society, following the "vice" model presumably would allow society to restrict the supply of all "illegal" commodities at a lower "cost" to itself.

The suggested approach is licensing the sale of cannabis as with alcohol. Quality and potency could be controlled, harsh penalties would be assessed against unlicensed sellers, age limits would be set and very strictly enforced, prices would be fixed, and the commodity would be highly taxed with the proceeds going either to enforcement measures against the more serious drugs or to drug abuse education. It is worth pointing out, however, that many of the proponents of the regulation approach ignore current adverse reactions to marijuana, are often facile about preventing use among the very young, and do not consider that escalation rates may remain high even if marijuana were legalized or regulated. Today the most abused drug among adolescents is alcohol, not marijuana. There are

some preliminary data suggesting adverse effects occur more frequently among the very young. "Regulation," like legalization, would result in increased prevalence of use among those aged 10-17 and would focus public attention on the adverse effects in this age group. Ultimately this might result in such a furor that society would reject "regulation" and return to an inordinately harsh legal approach. If marijuana is "regulated," a step close to legalization, abuse by those under age 17 or 18 would be a major problem.

Maintain the Present Framework but Mitigate the Penalties. The Indian Hemp Commission (1893-94)[23] dispassionately asked the proper questions of 1,093 witnesses in marked contrast to our 1937 congressional hearings. Their conclusions appear valid—cannabis is a euphoriant that is neither innocuous nor overly dangerous in its own right. The federal government and many states recently have recognized the inequities in the penalties and have attempted to soften the penalties against marijuana to allow for suspended sentences and permit expunging of first convictions from the record (to avoid condemning youngsters to a future in which they might have difficulty in obtaining licenses, gaining admission to certain professional schools, etc.). There does seem to be a reasonable middle ground between currently harsh laws and the dangers inherent in legalization or regulation. The advocates of this approach would have a punishment schedule somewhat as follows:

1. Possession of a moderate amount of marijuana or hashish on first or second conviction: assignment to a local hospital, poverty program, etc. for a specified number of evenings and/or weekends with automatic expungement of the sentence from public records upon its completion.
2. Possession of a moderate amount on third or subsequent convictions: a jail term not to exceed 90 days.
3. Sale of a small amount with no evidence of major financial

gain: judicial discretion but ordinarily to be treated as possession.

4. Sale: 1-10 years in jail with possibility of suspension, parole or probation, and education of the judiciary so that larger sentences are reserved for major importers and traffickers.

Such an approach would be fair to the user and society alike, would not unnecessarily criminalize young persons, would be constructive and would at long last make the punishment consistent with the nature of the crime. At this point in time, we favor this pathway but whatever the approach to marijuana, society must find pragmatic and sensible solutions; for if we cannot deal effectively with this substance, we will be incapable of placing the entire drug scene in its proper perspective.

U.S. Panel Calls for Private Use of Marihuana

(By Harry Nelson)

A 12-member National Commission on Marihuana and Drug Abuse Wednesday recommended that private possession of marihuana for personal use no longer be a criminal offense.

Public possession or distribution of small amounts of the drug, provided the purpose was not to make a profit, should be subject only to $100 fines instead of criminal action, the commission recommended.

In its report entitled "Marihuana: A Signal of Misunderstanding," the commission rejected both the present social and legal attitude of total prohibition and the other extreme of legalization.

It urged no prohibition against private use while at the same time retaining all laws making it a criminal act to produce or distribute marihuana for profit.

PRESIDENT OPPOSED

In Washington a White House aide said "President Nixon does oppose and still opposes legalization of marihuana."

The commission's chairman, former Pennsylvania Gov. Raymond P. Shafer, said Mr. Nixon gave no indication of whether he would support the commission's recommendations.

The commission was appointed by President Nixon and Congress 18 months ago to study the extent of marihuana use in the United States, the efficacy of marihuana laws and the physiological and psychological effects of the drug.

"Marihuana's relative potential for harm to the vast majority of individual users and its actual impact on society does not justify a social policy designed to seek out the firmly punish those who use it," the commission declared.

The commission said it suspects the "moral contempt in which some of our citizens hold the marihuana users is related to other behavior or other attitudes assumed to be associated with use of the drug.

"All of our data suggest that the moral views of the overwhelming majority of marihuana users are in general accord with those of the larger society."

However, use would still be discouraged in three main ways:

Law enforcement authorities would still make a concerted effort to reduce the supply of the drug.

The user would have to confine his use to the home.

Continuing efforts would be made by educators and others to discourage use.

PUBLIC POSSESSION INVOLVED

Other proposed legal changes:

Public possession of 1 ounce or less would not be an offense, but the marihuana would be considered contraband and subject to seizure and forfeiture.

Public possession of more than 1 ounce would be punishable by a fine of $100.

Distribution in public of small amounts not involving a profit or public use of marihuana would be punishable by a $100 fine.

Disorderly conduct associated with public use would be a misdemeanor punishable by up to 60 days in jail and $100 fine.

Driving under the influence would be a misdemeanor punishable by up to one year in jail and a fine up to $1,000.

In most states possession for personal use is a misdemeanor. In California possession can be either a felony or misdemeanor. In Los Angeles County it is most commonly adjudged as the latter.

The commission said it rejected total prohibition because "no sufficiently compelling social reason, predicated on existing knowledge, justifies intrusion by the criminal justice system into the private lives of individuals who use marihuana."

EFFECTS CITED

Legalization was discarded, the report said, because it would "institutionalize availability of a drug which has uncertain long-term effects."

Furthermore the commission said it suspects the present high level of interest in marihuana may be a fad.

The commission said there is little proved physical or psychological hazard at the dosage which is typically used in this country. For heavy, long-term users there is a health hazard, it said.

The commission noted that future policy planners might want to legalize the drug if scientists detect no long-term ill effects and if society's attitudes about marihuana change.

A major reason for the current tough public attitude about marihuana, the report states, is the threat that use of the drug is thought to present to the dominant social order.

"Use of the drug is linked with idleness, lack of motivation, hedonism and sexual promiscuity," the commission said. "Many see the drug as fostering a counterculture which conflicts with basic moral precepts as well as with the operating functions of our society.

"The 'dropping out' or rejection of the established value system is viewed with alarm. Marihuana becomes more than a drug; it becomes a symbol of the rejection of cherished values."

The commission then argued there is no rational basis for blaming marihuana for most of these fears.

"Little likelihood exists that the introduction of a single element such as marihuana use would significantly change the basic personality and character structure of the individual to any degree," the commissioners declared.

They said young people who can't cope with the pressures of adolescent development in ways which adults understand should not be "rejected, stigmatized or labeled."

Instead these youths should be given "support and understanding and the opportunity to participate in roles which have meaning for them and in ways which they feel comfortable." For some, marihuana eases the transition to adulthood "by helping them share their feelings, doubts, inadequacies and aspirations with peers with whom they feel safe and comfortable," the report said.

It said no conclusive evidence has been found demonstrating that marihuana by itself is responsible for academic or vocational failure, although it could be a contributing reason.

WORK PERFORMANCE

Although society has become increasingly disturbed by the stress of today's youth on "fun, pleasure and enjoyment," the commission found no evidence to suggest that the majority of youths are unwilling or incapable of productive and disciplined work performance.

"Where marihuana is concerned, society must try to understand its role in the lives of those who use it," the report said.

"The key to such understanding lies in the changes which have taken place in society within recent years and the effects these changes have had on succeeding generations of youth. The increased use of marihuana is only one of these effects . . .

"When the issue of marihuana use is placed in this context of society's larger concerns, marihuana does not emerge as a major issue or threat to the social order . . .

"It is unlikely that marihuana will affect the future strength, stability or vitality of our social and political institutions. The fundamental principles and values upon which the society rests are far too enduring to go up in the smoke of a marihuana cigaret."

LITTLE DANGER

As for physiological and psychological harm, the commission said there is little proven danger from the experimental or intermittent use (one to 10 times a month) which is typical in the country.

The commission declared there is no reliable evidence marihuana causes birth defects, chromosome damage, brain damage or aggressive behavior or that it can lead to death.

The commission also put down arguments that the drug produces physical dependence or that its use leads to hard drugs.

On the basis of a survey conducted last year the commission reported that about 24 million Americans have tried marijuana at least once and that about 8.5 million are still using.

The heavy user, and some moderate users, however, show strong psychological dependence. Some organ injury, especially diminution of breathing, is possible in the heavy user. Heavy long-term use may also produce specific behavioral changes.

Moderate use means 11 times monthly to once daily and heavy use is several times daily. By long term the commission means two to 10 years.

Clearcut behavioral changes and a higher incidence of biological damage occur in Asian and Middle East countries where users have been taking heavy doses for long periods.

But the commission said it is unaware of any similar pattern in this country.

Members of the commission, headed by Shafer, are Dr. Dana L. Farnsworth, former director of health services, Harvard University; Dr. Henry Brill, director of Pilgrim State Hospital, Brentwood, Long Island; Rep. Tim Lee Carter (R-Ky.), and Joan Cooney, president of Children's Television Workshop and producer of Sesame Street.

Also Charles O. Galvin, dean of Southern Methodist University law school, Dallas; Dr. John A. Howard, president of Rockford College, Rockford, Ill., and president of the American Assn. of Independent College and University Presidents; Sen. Harold E. Hughes (D-Iowa); Sen. Jacob K. Javits (R-N.Y.), and Rep. Paul G. Rogers (D-Fla.).

Also Dr. Maurice H. Seevers, chairman of pharmacology, University of Michigan; Dr J. Thomas Ungerleider, UCLA Neuropsychiatric Institute, and Mitchell Ware, Chicago attorney and former superintendent of Illinois Bureau of Investigation.

CRIMINAL LAW

In taking its stand against total prohibition the commission said the application of criminal law to the private use of marihuana possibly is unconstitutional.

It cited a number of legal precedents, including an overturned Connecticut law forbidding the use of contraceptives, as being evidence that individual privacy in certain circumstances is beyond the law.

It also reported survey results showing that law enforcement officers and prosecutors make only minimal effort to investigate and prosecute first offenders and possession cases.

Finally, it said, possession laws engender a disrespect in the young "who cannot understand why society chooses to criminalize a behavior with so little visible ill effect or adverse social impact, particularly when so many members of the law enforcement community also question the same laws."

The commissioner said legalization could "invest an otherwise transient phenomenon with the status of an accepted behavior. If marihuana were in already ingrained part of our culture, this objection would be dispelled. However, we do not believe this is the case."

HIGH RISK

The greater use which might result from legalization—an increase that might not otherwise occur—could produce a significant public health problem, the commission said.

The heavy users, who are the high-risk group, now number about 500,000 or about 2 percent of those in this country who have ever used marihuana. Inevitably this number—and the consequent physicial and psychological problems—would increase with legalization, the commission said.

Legalization would also maintain at a highly emotional level the debate between those on both sides of the issue "and perpetuate the tendency to perceive marihuana use as a symbol of the struggle between two conflicting philosophies."

[From the Los Angeles Times, Mar. 23, 1972]

BUSCH, DAVIS CRITICIZE LEGAL AMBIGUITY IN MARIHUANA REPORT

(By William Farr)

Dist. Atty. Joseph P. Busch and Police Chief Edward M. Davis Wednesday criticized the National Commission on Marihuana and Drug Abuse, saying that to enact its recommendations would cause a "schizophrenic legal situation."

Both top-ranking law enforcement officials also expressed the opinion that the commission had based its recommendations on inconclusive medical research.

The President's commission advocated "decriminalization" of marihuana and thus removal of criminal penalties for its use. The stand stopped short of outright legalization, however.

"Decriminalization will increase the market for illicit sales. It will establish a schizophrenic legal situation in which the use is legal, but the sale is illegal," Busch said.

"The user will be socially acceptable and the seller will be labeled antisocial. Users will be drawn into an even deeper contact with the counterculture forces," he added.

Davis echoed this criticism, saying:

CALLS REPORT AMBIVALENT

"The report appeared to be ambivalent in that it makes it a felony to grow and to sell marihuana while at the same time the commission held that to have marihuana in your own home for your own use was not a violation."

On the subject of marihuana research, Busch and Davis were again in concert although their statements were issued separately.

The district attorney said he believes "medical research into the habitual use of marihuana is highly inconclusive." Elaborating on this point, he said:

"Indications of liver damage, vascular brain damage, and ill effects on the immunity system and healing process—resulting from long-term use—have not been fully explored.

"Many medical researchers are not satisfied with the research studies conducted for the national commission. Habitual use of marihuana is our major concern—just as it is with any drug including alcohol.

"Criminal sanctions certainly discourage habitual use."

Davis said he was "amazed that the commission reached any findings prior to the time that an indepth study showing the psychological, physiological and pharmacological results were available."

He said he was disappointed in the commission's report and added he was opposed to any changes in California laws covering marihuana until further research had been conducted.

Busch did say that he favors modification of current laws so that there "will be minimal misdemeanor penalties for possession of small amounts of marihuana."

He also said that "minimal enforcement attention should be given to such possession."

CONSISTENT WITH ATTITUDES

The district attorney said he believes these policies "are consistent with present public attitudes."

Dealing further with the recommendation of decriminalization, Busch had this to say:

"Yet (decriminalization) does not take into account the impact of stronger strains of marihuana, as have been observed in Vietnam, the powerful extracts of marihuana, and marihuana which is laced with powerful synthetic drugs such as DMT and TCP.

"Finally, we must realize that decriminalization will not erase the failure of government to deal effectively with the marihuana problem. The fact that government in the past has subscribed to myths concerning marihuana and promoted fruitless propaganda programs does not justify decriminalization.

"The fact that research has been ineffective and federal funds have been spent in a wasteful shotgun manner does not justify decriminalization. I believe what we need is a realistic legal attitude and effective educational efforts based on conclusive research."

State Atty. Gen. Evelle J. Younger and Sheriff Peter J. Pitchess both delayed comment on the commission recommendations, saying they had not had an opportunity to study the full text.

[From McCall's magazine, Mar. 1972]

WHAT CAUSES MORE HARM, DRUGS OR THE LAWS AGAINST THEM?

(By Dorothy V. Whipple, M.D.)

To many, the title of this article will be shocking. However, an analysis of the existing situation in the U.S. leads to an unpleasant conclusion.

Since 1914, we have had laws against drugs, laws based on the philosophy that punishment will deter people from using or selling drugs. These laws have failed to accomplish their goals.

Drug use has grown enormously in spite of the laws. It has also spread to younger and younger members of society. The most recent estimates show that from 200,000 to 250,000 Americans are heroin addicts, and that marihuana smokers in this country are numbered in the tens of millions.

It is not only the failure of the laws, but the evils created by the laws themselves that compound the present dilemma.

The drug laws have helped create a black market in illegal drugs. Because the drugs in wide use are illegal, their potency and purity are not controlled. And their high price, especially heroin, has forced addicts to engage in crime to get money to pay for them.

The severity of the punishment for those young people convicted of drug crimes has wrecked many of their lives.

The impossibility of enforcing the drug laws has undermined respect for these laws and even for other laws.

The idea that the drug problem can be solved within the existing legal framework cannot be accepted by anyone who looks critically at the present state of affairs.

What are the reasons given for the present drug laws?

Laws against drugs are in the class of laws whose main object is to protect people against themselves. These laws were based on three suppositions:

1. That drug use causes damage to the individual's body and mind.
2. That drug users can be cured by being punished.
3. That nonusers can be frightened by the threat of punishment into never using drugs.
4. That drug-injured people are a menace to society.

Numbers 2 and 3 can be dismissed without further discussion. It is all to obvious that the current laws neither cure nor prevent drug use.

How about the damage caused by the drugs themselves?

Here we must talk about each drug separately. The least harmful, marihuana, does not cause physical dependence (sometimes called addiction). Its moderate use, as far as we know at present, causes relatively little harm to mature people.

Marihuana users are not a menace to society. However, even moderate use may be harmful to young teen-agers, because they are provided with a means of copping out on their problems instead of facing them and they fail to grow and mature emotionally. Excessive use doubtlessly interferes with a productive life, regardless of age.

Despite the severity of the present laws, however, the use of marihuana is increasing rapidly.

What can be done about this?

There are a number of possibilities involving some form of regulation:

1. *No restriction.*—Suppose all laws restricting marihuana were taken off the books. Enterprising Americans would go to work to entice as many people as possible to buy marihuana. Advertising campaigns would extol the virtues of pot smoking and imply that the full life must include drug experience. Surely this is not what we want.

2. *A licensing system.*—It has been suggested that marihuana be treated like alcohol. Manufacturers and sellers of alcohol are required to have a license. Restrictions are imposed on where and under what conditions the product can be sold. Age limits are imposed. Advertising is permitted.

3. *A new agency, created specifically to handle marihuana.*

This agency would be entrusted with the entire distribution of legalized marihuana. It might be a government agency, completely divorced from the Bureau of Narcotics and Dangerous Drugs, or it might be a nonprofit foundation or public corporation. It would import the crude product, process it, standardize it, and sell it. It would attempt to prevent the sale of the drug to juveniles. All advertising would be forbidden.

Anyone over eighteen would be permitted to buy limited quantities of pure standardized marihuana at a depot or a store. Buyers would be assured of the potency and purity of what they bought. They would not have to associate with black-market pushers who have other drugs with which to entice them. The black market in marihuana, with all its inherent evils, would soon disappear. Growers could sell their product legally to a legitimate outlet.

Would this kind of legal regulation increase the use of marihuana?

It might, at least for a time, but then again, it might not. The thrill of doing something illegal would be gone. How much this pushes kids into trying pot is completely unknown, though doubtless it is a factor. The evils associated with illegal marihuana would disappear, and these must be balanced against the use of the drug itself. Removing criminal penalties for use of marihuana and also permitting legal distribution of the drug does not constitute advocacy of its use.

The real hope of the future is in education. The problem of marihuana must be faced honestly if education is to be meaningful. If the facts presented are true and free from prejudice, intelligent young people will believe them, and many will act upon them.

If alcohol is legal, why not marihuana?

There are plenty of reasons for changing the marihuana laws without even bringing up the comparative dangers of these two drugs.

Alcohol is a dangerous drug in the hands of abusers. Society tried to make alcohol illegal. The experiment was a dismal failure. The evils of the law were great, but perhaps no greater than the evils of the marihuana law. Marihuana may be even less dangerous than alcohol. Both drugs are harmful when abused, and neither drug is good for young teen-agers.

Hasn't the President recently taken some action against drug use?

President Nixon is acutely aware of the problem. At his instigation, Congress passed the Comprehensive Drug Abuse Prevention and Control Act of 1970, which reduces, but does not eliminate, the penalties for first-time possession of marihuana. For subsequent offenses, the penalties are increased. While this law is a step in the right direction, it is nevertheless a tiny step. The drug is still illegal, and users of the drug are classed as criminals.

Section 601 of the law authorized the President to set up the National Commission on Marihuana and Drug Abuse. The first task of this commission is to submit a comprehensive report on marihuana, which is to include recommendations to the President on all aspects of the drug, including new legislation. The report is due to come out this month. The second task is a report on drug abuse generally. It is due March of 1973.

In May, 1971, when the commission was holding its first hearings, Mr. Nixon said that, should the commission recommend the legalization of marihuana, he would feel free to ignore their recommendation.

Three series of hearings were held, one in Washington, D.C., one in San Francisco, and one in Chicago. The first hearing was marked by a good deal of sarcasm from some members of the commission toward witnesses who stated that the dangerous qualities of the drug had been exaggerated.

As time went on, there was a perceptible change in attitude on the part of some of the commission members. The commission was told by so many knowledgeable experts, and told so frequently, that the havoc created by the laws exceeded any harm inherent in the drug, that attitudes changed.

What will the commission recommend?

It seems highly probable that the least the commission can recommend is that all the states reduce to a misdemeanor the offense of possessing marihuana, thus bringing state laws into conformity with federal law.

It may be this is as far as the commission will go since it is essentially a conservative group; however, it is possible that the commission will recommend eliminating all jail sentences for possession of marihuana.

If the commission should issue a majority report recommending the decriminalization of marihuana, this would be an enormous step forward. The members of the commission are intelligent people who, like many of the older generation of Americans, have reacted with horror to "dope." Many admit their attitude has been based more on emotion than knowledge. If the members of the commission can become convinced by facts and change their attitudes, perhaps the American electorate can also be convinced.

But decriminalization of the possession of marihuana, while an important step in the right direction, is not the whole answer. As long as the drug remains illegal, the black market with all its inherent evils will continue to flourish.

What can we do about heroin?

Unlike marihuana, heroin is capable of ruining the life of almost everyone who uses it. Heroin is sneaky. Almost immediately after the first injection, the user feels a blissful state of peace envelop him. His worries and tensions dis-

solve as if by magic. After a while he goes to sleep and dreams vivid, colorful, gorgeous dreams.

When he wakes up, the spell is gone; the world is as ugly and drab as ever.

The old worries come back. Why not try it again?

If the user stops with one or even a few doses, he will not get hooked. But the temptation is usually beyond his will to resist. "Just one more time" he feels will be okay. Before long, his body becomes so adjusted to the drug that he cannot function normally without it. The new fix fails to give him any of the hoped-for bliss. All it does is relieve the bad feelings of withdrawal.

As time goes on, the victim needs larger doses of his drug just to ward off withdrawal. He may get to the point where he needs three, four, or five fixes each day just to feel halfway normal.

His whole life becomes absorbed in getting his drug. He can seldom find a job that will pay enough, and he is unable to perform on the job, largely because of his preoccupation with getting his next fix. Ultimately most addicts are forced into crime.

Where does all the heroin come from?

Heroin is smuggled into this country in kilo lots (2.2 pounds). One kilo of pure heroin (1 million milligrams) yields 200,000 bags, each containing 5 milligrams of heroin plus 90 milligrams of powdered milk, sugar, or quinine. This is the usual single dose of the drug.

The actual price of heroin varies enormously, depending on the supply. In 1968 the usual price of a kilo of pure heroin was $8,000. (Recently a price of $40,000 was quoted.) The 5 mg. bags usually sell for $5 apiece, but the price can be doubled or trebled.

The profits in dealing in heroin are astronomical. The top importers make from 200 percent to 300 percent on their investment; the street peddler in a good location and with good connections can net $500 a day.

The Bureau of Narcotics and Dangerous Drugs, realizing that it is impossible to stop the smuggling of heroin, is now trying to reduce the amount of opium poppies grown. An extensive program to persuade Turkish farmers to stop growing poppies and grow other crops is now reduced in importance by the awareness of the Bureau of the poppy fields in Laos, Cambodia, and Thailand .

A federal agent said off the record, "I don't think we can ever stop anything as big as the heroin traffic. The Customs people seize more and more junk every year, the narcotic agents get more and more drug handlers, but no one who knows anything about this thinks we are making headway. The only solution is to stop the demand."

Then what can be done?

1. *Cure all addicts.*—The Narcotic Addicts Rehabilitation Act is based on this approach. Its successful accomplishment, however, is many years and many dollars in the future, if ever. The recent use of methadone for the treatment of heroin addiction is proving helpful, but even with methadone the elimination of all heroin addicts in the foreseeable future does not seem likely.

2. *Provide all heroin addicts with a cheap legal supply of the drug.*—Such a plan would take the heroin addict off the street. How many addicts would pay for a fix they could get for nothing? With stocks of heroin piling up on the pushers' hands, the importers and middlemen would soon find no market. Ultimately, the black market would wither away. This might even make the drug so unavailable that fewer and fewer new recruits would be enticed into the ranks of heroin addicts.

However, there would be enormous difficulties with such a scheme.

Clinics would have to be set up in areas where addicts could get to them. Careful records would have to be kept so that an addict could not go to several clinics and get additional amounts of drugs.

Addicts would have to be carefully screened. First, to make sure they really were addicts and, second, to find out how much drug they had been taking. Regular urine tests would help to determine the fact of addiction and the amount of drug necessary to maintain the addict in reasonable comfort.

Every dose of heroin would have to be administered in the clinic to make sure the addict did not try to sell it on the outside.

3. *Combination of heroin-maintenance and methadone-maintenance treatment.*—It is possible to combine the clinics. Heroin could be given to addicts at the same clinic where methadone was being used for maintenance treatment. The presence of ex-heroin addicts making a better go of life in a methadone-

maintenance program might induce other heroin addicts to make a serious try at abandoning heroin. However, no heroin addict who preferred to stay on heroin would be denied the drug, as it is such addicts who constitute the demand that maintains the black market.

Where would the clinics get their supply of heroin?

The government, or whatever agency operated the clinics, would import heroin legally or even offer to buy all the heroin in the country up to a certain date. Dealers convinced that their market was about to dry up might be willing to unload their supplies safely.

If the Bureau of Narcotics and Dangerous Drugs is correct in estimating that 2,000 kilos of heroin are smuggled into this country every year, it would cost the government a mere $16 million to buy it all (at an estimated rate of $8,000 per kilo).

Ultimately, when sales were made legal, agents from the organization that ran the American clinics could buy raw opium directly from farmers, process it into morphine, and then into heroin. By such an arrangement, not only would the American black market disappear but also the foreign market would come under legal control.

There would be monumental problems and costs. But the costs would not be as great as those of the present army of narcotics agents, Customs officials, police, jails, prisons, and courts who are so unsuccessfuly trying to cope with the situation.

Has supplying drugs to addicts ever been tried?

Yes, it has.

Great Britain had a problem with morphine abuse back in the early years of this century just as the United States had. In 1920 Britain passed the Dangerous Drug Laws which permitted addicts to obtain drugs from their doctors. The British considered drug addicts sick people who should be under medical care.

No black market developed in Britain because it was not needed to supply the addict with his drug. Nor did the British addict need to engage in crime to obtain money for his drug.

But hasn't the British system had problems?

Beginning in the early 1960s, British youth also took up the drug culture. British involvement with heroin, however, has always been minuscule compared with America. In 1960 Britain had 94 registered addicts in the entire country. By 1965 this number had increased to 521.

A commission found that some physicians were grossly overprescribing, and a few unscrupulous doctors were actually selling heroin prescriptions. Britain passed a new law.

The basic British philosophy that drug addicts were sick people in need of medical attention, not criminals in need of punishment, was not altered. Physicians were forbidden to prescribe heroin without a special license. Very few licenses were granted; special clinics were set up, instead, where heroin addicts could obtain their drug. It took a few years to get going, but in 1969 the Home Office indicated that for the first time the number of new heroin addicts had decreased.

The Home Office reports as "addicts" those individuals addicted to morphine, heroin, cocaine, pithidene, and methadone. In 1969, the total number in Britain was 2,881. Most of these were heroin addicts, but it is of significance to note that almost 500 were methadone addicts.

There is still a drug problem in Great Britain. But the basic British idea that drug addiction is a disease has resulted in confining this disease to a very small number of people. It has also prevented almost completely the development of a black market in drugs. Crime in Britain is not related to drug use.

Compared to the heroin situation in the United States, the British experience is remarkable. At its very worst, Britain had less than 3,000 hard drug addicts. In the city of New York alone, there are a minimum of 100,000 heroin addicts, and there is every indication that the number is increasing.

Why doesn't the U.S. use a system like the British?

Largely because the punitive approach to drug addiction has been ingrained in the American attitude. The Bureau of Narcotics and Dangerous Drugs opposes the British system. They have proclaimed it a failure. The Bureau ignores the fact that the British system operated successfully for 40 years. They cite the

rapid percentage increase in heroin addiction which descended upon Britain along with the new youth culture. The Bureau fails to mention the extremely small number of people involved, even though the percentage increase was great and they have ignored the recent decrease in the total number of addicts.

What alternatives are being suggested?

President Nixon's concern over the heroin problem, which he now describes as a "national emergency," has been caused by the shocking extent of heroin addiction among G.I.'s in Vietnam. The President has created the Special Action Office for Drug Abuse Prevention, which reports directly to him. This agency will coordinate all federal activities concerning drugs. It will work in the present legal framework but with greatly increased appropriations. All indications are, however, that it will follow the punitive approach of the present fight on narcotics, a fight which we have been losing for many years.

What does the future hold?

Slowly, a body of public opinion is growing up in this country that looks beyond the federal bureaucracy for its information. Thoughtful people, among them professors of law, sociology, medicine, economics, some public officials, a few members of Congress, and some judges, are urging basic changes in the drug laws.

As the sons and daughters of public officials are being arrested on drug charges, as some of them are being made very ill or even killed by overpotent or impure drugs, these men and women are taking a new look at the problem. Many are coming to the conclusion that our present approach will never solve the problems.

The time has come for this body of public opinion to find adequate expression in public policy. It is to be hoped that the final report of the Commission on Marihuana and Drug Abuse will reflect this growing change in the public attitude toward the drug dilemma.

MARIHUANA:

A SIGNAL OF MISUNDERSTANDING

The Technical Papers of the First Report of the National Commission on Marihuana and Drug Abuse

March 1972

(Extract pp. 513-530, Vol. I)

*History of Tobacco Regulation**

Since 1613, when John Rolfe introduced a successful experiment in tobacco cultivation in Virginia (Morison, 1965: 52) the leaf has assumed major social, industrial, economic and medical implications. Consequently, persons concerned with tobacco on a commercial or personal basis have been subject to a variety of different regulations over the past 360 years.

Tobacco has been attacked by social observers and medical authorities for the damage it has allegedly done to the social and physical condition of man. Yet it has also provided a substantial source of revenue to the state and Federal governments of the United States.

As is now the case with alcohol, tobacco has long been subject to regulatory controls over the quantity and quality of production. On the other hand, sumptuary laws affecting tobacco have been far fewer—and weaker—than those aimed at alcohol. In fact, there has never been a time when tobacco was prohibited throughout the United States although consumption under certain circumstances has been forbidden at various times in different jurisdictions.

Tobacco—associated today with smoking of cigarettes, and to a lesser extent, of pipes and cigars—has been popular at times for both snuffing and chewing. Indeed, until about 1870 cigarettes were relatively rare in the United States, and almost all tobacco consumed domestically was chewed during the mid-19th century (Gottsegen, 1940: 9–10).

Whatever the preferred mode of consumption, however, the commodity has always been the subject of debate respecting the appropriate governmental attitude. On the one hand, proponents of the leaf stress its social benefits and its economic and industrial significance. Some enthusiasts even endorse its alleged medical and psychological benefits. Opposed are those who cite the health hazards of smoking and others who are convinced of its immorality.

The motivation for regulation has come from both sides of the controversy. Most sumptuary restrictions were fostered by the latter group in an effort to suppress the habit. Those who seek to institutionalize and foster use of the drug focus on the regulation of the quantity and quality of production.

This section does not attempt to weigh the merits of the various regulatory schemes. Rather, it will trace from John Rolfe's day the three threads of regulation which have circumscribed both the producer and consumer of tobacco in the United States.

REGULATION OF PRODUCTION

In the opinion of King James I of England, tobacco was "loathsome to the eye, hateful to the nose, harmful to the brain" and "dangerous to the lungs" (Middleton, 1953: 93). Whether the King was prescient, or simply sensitive, was irrelevant

*This section is based in part on a paper prepared for the Commission by Jane Lang McGrew, an attorney from Washington, D.C.

in the 17th and 18th centuries, however, for tobacco rapidly became the mainstay of the Maryland and Virginia economies. Within seven years of John Rolfe's first imaginative experiment, Virginia exported nothing but tobacco and a little sassafrass to England (Middleton, 1953: 93–94). Almost as quickly, the leaf became the staple of the colony of Maryland and competition developed in Carolina as well.

In Massachusetts Bay, the product fared less well. The first general letter (April 17, 1629) from an official of the New England Company to the Massachusetts Bay settlers prohibited the planting of tobacco except in small quantities for medicinal purposes (Werner, 1922: 100). Next door in Connecticut, however, the colonists attempted to rival the southern planters with a local leaf. Indeed, the infant industry was coddled by the protectionist General Court at New Haven, which promulgated a rule in 1641 that:

> No persons within this jurisdiction shall [smoke] any other Tobacco but such as is or shall be planted within these [districts], except they have license from the Courte (Tobacco Institute, Connecticut, undated: 20).

Notwithstanding the royal attitude and the fear of certain patent holders of the London Company that Virginia had become a "colony founded on smoke" (Tobacco Institute, Virginia, 1971: 19; Middleton, 1953: 94), England encouraged the growth of the tobacco industry. Monopolies to import tobacco from the colonies were granted by the Crown to court favorites who soon prospered as a result of this trade.

In 1621, a bill was introduced which, according to one contemporary commentator, was "extremely remarkable": No tobacco was to be imported after the 1st of October, 1621, except from Virginia and Bermuda; and, after that day, none was to be planted in England. Although the act was initially defeated by the House of Lords, James I in 1922 himself granted the import monopoly to the Virginia and Bermuda companies and prohibited the domestic cultivation of tobacco (Brooks, 1952: 88).

The system worked well for the British importers, but the methods of financing they employed became onerous to the colonial planters. The tobacco was marketed by consignment to an English merchant who deposited the proceeds of the sale to the planters' accounts. Often, however, the high commissions charged and the cost of goods ordered by the Virginians in payment for their crop contributed to the growth of colonial indebtedness. The extension of credit to cover the deficiencies caused the debts to grow constantly, but the only alternative to the consignment system was to sell the product in the colony at a lower price (Middleton, 1953: 104–107).

Industrial competition in this market provided the impulse for certain regulatory relief. Importation of the Carolinian product into Virginia was forbidden by an act of 1679, amended in 1726 to prohibit importation by land as well as by sea. Nor was North Carolina permitted to export its tobacco from Virginia ports. In Great Britain, the Privy Council looked with disfavor upon such colonial legislation which threatened the financial well-being of the merchants and so disallowed the Virginia Act in 1731 (Middleton, 1953: 114–115).

Competition similarly induced both Virginia and Maryland to enact laws prescribing the dimensions of the hogshead in which tobacco was packaged in 1658. Vying for purchasers, the two colonies gradually enlarged the statutory size of the hogshead until, under edict from the Privy Council in Britain, Maryland was ordered to pass a gauge act establishing the size of the hogshead in the same dimensions as those fixed in Virginia.

Notwithstanding such legislation, however, the manufacture of hogsheads was still characterized by carelessness and irregularity until the warehouse inspection system went into effect in the 18th century (Middleton, 1953: 116–117).

It was not long before the colonial planters were faced with a more serious problem—overproduction—which was causing a decline in prices as well as quality of the leaf. In 1619, the first tobacco inspection law was passed by the Virginia House of Burgesses, ordering the lowest grade of tobacco to be destroyed and prohibiting "second growth" tobacco and the marketing of trash leaves.

This act was followed in 1621 by a more direct attempt to restrict production. Each cultivator was required to limit his growth to 1000 plants of nine leaves each. Although this order was soon rescinded as a patent failure, an act of 1629 permitted each planter to tend only 3000 plants with an additional allowance of 1000 for non-laboring women and each child (Brooks, 1952: 96).

Notwithstanding the statutory effort, the problem intensified. Virginia attempted to encourage the other tobacco colonies to reach agreements restricting plantings, but in Maryland, Lord Baltimore resisted. If planters were poor, he asserted:

> It is not from the low price of Tobacco, but from their owne sloth, ill husbandry and profusely spending their croppe in Brandewine, and other liquors (Robert, 1949: 11).

Carolina, Maryland and Virginia actually reached a decision to prohibit the planting of the staple from February 1667 to February 1668. This "stint" proved a less effective means of control

than the winds of 1667, which almost destroyed the crop ready for harvest that year (Tobacco Institute, Virginia, 1971:19).

Acts of God failed to provide an ultimate solution, however, and severe economic dislocation in Maryland and Virginia intensified. By 1681, the Virginia governor, Lord Culpeper, complained:

> . . . [T]hat which is more to us than all other things put together, and will be the speedy and certain ruin of the colony, is the low price of tobacco. The thing is so fatal and desperate that there is no remedy; the market is overstocked and every crop overstocks it more. It is commonly said that there is tobacco enough now in London to last all England for five years. . . . Our thriving is our undoing, and our purchase of negroes, by increasing the supply of tobacco, has greatly contributed thereto (Brooks, 1952: 112–113).

The failure of the Virginia Assembly to pass another act requiring a "stint" led the so-called "cutters and pluckers" to take the matter into their own hands in 1682 by burning both their own crops and the plants of their neighbors (Roberts, 1949:11). The riot stimulated legislative action in 1684 of a less helpful sort: the destruction of tobacco was made a criminal offense, subject to the death penalty (Brooks, 1952: 12).

Seventeenth century quality control laws proved no more successful in the effort to relieve the depression of the industry. Renewed efforts were made in early years of the next century, however. In 1713, the Virginia House of Burgesses established a warehouse system to enforce tobacco inspection. Forty public warehouses were created.

Strong opposition to the system led the Privy Council to disallow the act in 1717, but the ensuing depression of the 1720's was convincing evidence of the need for relief. Accordingly, the system was reinstated with British approval in 1730, complete with public warehouses and official inspectors (Middleton, 1953: 120–121).

The apparent success of the system appealed to Maryland, suffering also from a surfeit of tobacco. "Tobacco, our money, is worth nothing," wrote one Marylander in 1724, "and [there is] not a Shirt to be had for Tobacco this year in all our country" (Tobacco Institute, Maryland, 1971: 21).

Tobacco riots ensued when the Maryland Assembly initially refused to follow Virginia's example. One individual was moved to inform Lord Baltimore that no improvement in the economic state of the colony was possible until inspection laws were passed that "will prevent the sending to Market Such trash as is unfit for any other use but Manure" (Tobacco Institute, Maryland, 1971: 23). Accordingly, Maryland followed Virginia in the creation of an inspection system in 1747, and Carolina did likewise in 1754 (Brooks, 1952: 165).

Tobacco entirely dominated the economic and social structure of Virginia and Maryland. "Tobacco requires us to abhor communities or townships," wrote a 17th century governor of Maryland, "since a planter cannot carry on his affairs without considerable elbow room within his plantation" (Brooks, 1952: 98).

In Virginia, tobacco had gained such ascendancy that it was used as money. For example, when, in 1621, a cargo of twelve young women made its way to the colony, each one was valued at 120 pounds of tobacco leaf (Brooks, 1952: 93). By law, Virginia's ministers were paid in tobacco at 16,000 pounds annually in 1696. The law provided that:

> A competent and sufficient provision for the clergy will be the only means to supply this dominion with able and faithful Ministers whereby the glory of God may be advanced, the church propagated, and the people edified (Werner, 1922: 102).

Not until the Option Act was passed by the Virginia Assembly in 1755 could the clergy's fees be paid in either money or tobacco (Brooks, 1952: 167).

The regulation of tobacco in the colonies was devised in response to the industry with the intent to further the prosperity of the planters who dominated the economy. This theme continued to pervade all related regulatory efforts in the tobacco-producing states thereafter, as new practices developed in the marketing of the leaf.

The initial hogshead inspection system gradually gave way to the sale of loose-leaf tobacco by auction. In 1849 the Virginia Code recognized these methods in lieu of the sale of hogsheads of the leaf as provided in the 1730 Act. By 1865, the tobacco auction had completely replaced the earlier marketing techniques in Virginia (Tobacco Institute, Virginia, 1971: 28–29).

More than a half century later Maryland followed suit. In 1939, the looseleaf auction warehouse system was introduced to replace the hogshead system, and the conversion occurred almost overnight. The practices engaged in are regulated by the Maryland State Tobacco Authority, established in 1947 by law. The Authority itself is supervised by eight representatives selected by the Governor from the producing counties, the University of Maryland, the buyers and the sellers (Tobacco Institute, Maryland, 1971: 9–10).

The Federal Government came to recognize the significance of the tobacco industry in response to state pressures. Accordingly, since 1930, several bills have been enacted to aid the growers.

Enacted in 1935, the Tobacco Inspection Act directs the Secretary of Agriculture to establish quality standards and to designate auction markets (7 U.S.C. 511 (b) and (d)). The following

year, the Tobacco Control Act was passed, bestowing Congressional approval upon state compacts which regulate the production of tobacco, and subsidizing the expenses of the state commissions involved (7 U.S.C. 515). Thus, the two elements of initial colonial regulation were preserved: the encouragement of quality and the discouragement of quantity.

The latter objective was further implemented by the Agricultural Adjustment Act of 1938. Since that time, parity payments have been made to tobacco producers:

> In amounts which, together with the proceeds thereof, will provide a return to such producers which is as nearly equal to parity price as the funds so made available will permit (7 U.S.C. 1303).

In addition, the Secretary of Agriculture is authorized to set national marketing quotas respecting each kind of tobacco (7 U.S.C. 1312), to apportion the quotas among the states, and to allot the portions among the farms (7 U.S.C. 1314). Penalties are imposed for overproduction (7 U.S.C. 1314).

There is nothing subtle about these measures, of course. Their intent is obvious: to assure the economic stability of an industry which, as of 1960, provided the United States population with more than 150,000,000 pounds of manufactured tobacco for consumption annually (Heimann, 1960: 93), and which provided more than $4.8 billion in taxes in 1971 (USDA, Tobacco Situation, 1971b: 44).

During the same year, growers' gross receipts reached about $900 million (Tobacco Tax Council, 1970: 2), while cigarette sales alone grossed for the manufacturer and seller approximately $5 billion (Tobacco Tax Council, 1970: 53). The commercial motivation is sound enough if considered abstractly. When combined with the revenue incentive, however, it has largely obscured sumptuary controls.

REGULATION FOR REVENUE

Alexander Hamilton's tax package of 1794 proposed the first federal excise taxes upon tobacco products. To the distress of Philadelphia snuff manufacturers (Brooks, 1952: 146), however, the tax was restricted after serious Congressional debate to their product only.

James Madison led the opposition to a general tobacco tax; his views were summarized in the Annals of Congress on May 2, 1794:

> As to the subject before the House, it was proper to choose taxes the least unequal. Tobacco excise was a burden the most unequal. It fell upon the poor, upon the sailors, day-laborers, and other people of these classes, while the rich will often escape it (Robert, 1949: 100).

The legislative decision was probably tempered as well by considerations of the enforceability of the measure: snuff had to be manufactured, while quid and pipe tobacco were often homegrown leaf at the time (Heimann, 1960: 155). In any case, the snuff bill was ultimately enacted, modified, suspended and repealed, with small, if any, effect upon federal revenues.

The opportunity to distill tax money from tobacco was seized upon more vigorously at the time of the Civil War. On July 1, 1862, an ad valorem tax was imposed upon cigars for the first time. This tax was raised two years later when a separate tax upon cigarettes was also imposed (Werner, 1922: 358). (Even the Confederacy sought to levy a tax-in-kind upon tobacco crops, but was precluded from doing so by the inspection system which required the inspector to deliver the full amount of tobacco specified in the warehouse receipt (Robert, 1949: 117).)

Thereafter, the taxes were raised in 1865, 1866 and 1875. A temporary reduction followed, until the Spanish-American War necessitated further increases. Concurrently, taxes were levied upon smoking and manufactured tobacco and snuff, lest the burden fall unequally upon smokers (Werner, 1922: 559).

By 1880, the tobacco taxes had largely stabilized. At that time, they accounted for 31% of total federal tax receipts, or $38.9 million. Of this, 50% of the collections was derived from smoking and chewing tobacco, 49% from cigars and cheroots, and less than 2% from cigarettes (Heimann, 1960: 156).

Since that time, federal tax collections on tobacco products have risen almost annually. Between 1910 and 1920, they increased more than 500%, the greatest increase in any single decade. By 1970, they accounted for almost $2.1 billion, down slightly from the two preceding years (Tobacco Tax Council, 1970: 5).

Indicative of changing patterns of consumption, the taxes on cigarettes, as a percentage of the total federal tobacco revenue jumped from 13.6% in 1910 to 51.1% in 1920. By 1970, the percentage at 97.2% far outdistanced those revenues derived from other forms of the product (Tobacco Tax Council, 1970: 5).

Excise taxes have proved profitable and easy to collect. The revenue schemes are simple on both the federal (26 U.S.C. 5701 *et seq.*) and state levels. In the past, no justification for them has been deemed necessary since Madison's protest. No elaborate licensing or state monopoly system, such as those designed to control commerce in alcohol, has ever been imposed.

In 1921, Iowa became the first state to cash in on the crop directly by taxing cigarettes. By 1930, 11 other states had adopted the revenue measure (Robert, 1949: 256).

In 1950, 40 states and the District of Columbia taxed cigarettes. The rates ranged from one cent to five cents for a pack of 20 except in Louisiana which levied an eight cent tax on cigarettes. In 1958, Montana imposed an equivalent rate.

Between 1950 and 1962, 43 of the 47 taxing states raised their rates at least once. The frequent increase in cigarette taxes narrowed the gap between the rates in low tax states and higher tax states. In the 12-year period, the median tax rate rose from three cents to six cents per pack (Federal Trade Commission, 1970: 3); the maximum rate remained at eight cents in Texas, Louisiana, Montana and New Mexico, in contrast to the two cent rate in the District of Columbia and Kentucky.

The four leading states in terms of both production and relative dependence on the crop have been North Carolina, South Carolina, Kentucky and Virginia, the latter two being the only states in the history of cigarette taxation to decrease their taxes; the reduction was only .5 cent (from three cents to two and a half cents) in 1960 and 1961, respectively.

By 1966, Oregon became the 49th state to impose a tax on cigarettes; the rate was four cents per pack. Finally, in 1969 North Carolina imposed a cigarette tax—two cents.

The cigarette excise taxes continued to increase during the sixties. By 1970, the taxes ranged from North Carolina's two cents to Pennsylvania's 18 cents for a weighted average of 10.7 cents. Twenty-nine states levied taxes of 10 cents or more per pack (USDA, Tobacco Situation, 1971b: 40). Local governments superimposed further excise taxes on the state taxes, ranging from one cent to 10 cents per package (Tobacco Tax Council, 1970: iv).

By mid-1971, the range had widened further—Connecticut at 21 cents and North Carolina at two cents, the weighted average state tax being 11.1 cents (USDA, Tobacco Situation, 1971a: 7).

TOBACCO REVENUES

A peculiar relationship exists between production and revenue. In 1970, cash receipts from tobacco brought in $11 million for Pennsylvania; tobacco farmers and cigarette taxes amassed $194.6 million for the state. By comparison growers in North Carolina collected $576 million while the state collected only $13.4 million in cigarette revenues (USDA, Tobacco Situation, 1971b: 43).

The federal excise tax on a package of cigarettes is currently eight cents and has remained so since 1951. The *combined* state and federal tax was highest in Pennsylvania; 26 cents for 20 cigarettes, which was 58.2% of the retail price. Connecticut's 24 cents and Texas's 23.5 cents were close behind; the average for the United States was 46.8%.

To the Federal and state governments today, tobacco is a financial asset. The total federal and state revenue collected from all tobacco products in 1971 amounted to over $4.7 billion. Local governments excised the product further bringing the sum total to $4.8 million (USDA, Tobacco Situation, 1971b: 44).

From the years 1890 to 1930 cigarette tax collections from tobacco soared from approximately $1 million to over $339 million. By 1950, they exceeded $1.2 billion.

Totals for the years 1890 to 1970 are recorded in the following chart (Tobacco Tax Council, 1970: 5):

Years	Cigarette tax collections
1890	$1,100,000
1900	4,000,000
1910	7,900,000
1920	151,300,000
1930	359,800,000
1940	533,000,000
1950	1,242,800,000
1960	1,863,600,000
1970	2,036,100,000

REGULATION OF CONSUMPTION

Even as far back as the 16th century, smoking was considered to have medicinal value. Juan de Cardenas, a Spanish physician who lived in Mexico in the late 1500's, wrote that "Soldiers subject to privations, kept off cold, hunger, thirst by smoking and all the inhabitants of the hot countries of the Indies alleviate their discomforts by the smoke of this blessed and medicinal weed" (Wagner, 1971: 63-64).

During the recurrent epidemics of plague in the 17th century, it was widely believed that smokers were spared; it has been reported that men who attended the sick and accompanied the dead kept their pipes lit (Wagner, 1971: 63-64).

In 1614, one Scottish doctor praised the tobacco plant which:

> Prepareth the stomach for meat; it maketh a clear voice: it maketh a sweet breath . . . in a few words it is the princess of physical plants (Gottsegen, 1940: 87).

King James disagreed strenuously, and in 1604 ordered a substantial increase in the import duty on the leaf. Smoking, he wrote in "A Counterblaste to Tobacco", is:

> A custom loathsome to the eye, hateful to the nose, harmful to the brain, dangerous to the lungs, and in the black stinking fume thereof, nearest resembling the hor-

rible Stygian smoke of the pit that is bottomless (Brooks, 1952: 66, 71).

Another more passionate moralist wrote:

. . . imagine thou beheldest here a fume-sucker's wife most fearfully fuming forth very fountains of blood, howling for anguish of heart, weeping, wailing, and wringing her hands together . . . while she pitifully pleads with her husband thus: Oh husband, my husband . . .! Why dost thou so vainly prefer a vanishing filthy fume before my permanent virtues? (Brooks, 1952: 72).

Notwithstanding such alliterative literature, the habit of smoking increased in popularity, particularly in the colonies. A French visitor observed in 1656 that:

Large quantities of it [tobacco] are used in this country, besides what they sell. Everyone smokes while working and idling. I sometimes went to hear the sermon; their churches are in the woods, and when everyone has arrived the minister and all the others smoke before going in. The preaching over, they do the same thing before parting. They have seats for that purpose. It was here I saw that everybody smokes, men, women, girls and boys from the age of seven years (Robert, 1949: 99).

It was said that even in New England, women of the colony "smoke in bed, smoke as they knead their bread, smoke whilst they're cooking" (Gottsegen, 1940: 147).

In the tobacco colonies, of course, there was no attempt to restrict consumption of tobacco. It was, after all, their economic mainstay.

Officials in the northern colonies were less enthusiastic about the habit, however. In 1632, the General Court of Massachusetts Bay took the initiative and forbade smoking in public under penalty of a fine (Tobacco Institute, Massachusetts, 1971: 17). In 1638, the proscription was expanded to prohibit anyone from smoking in any inn or public house except in his own room "so as neither the master of the house nor any of the guests there shall take offense thereat which if they do, then such person is forthwith to forebear upon paying of two shillings sixpence fine for every offense" (Werner, 1922: 100).

This law was followed by another in 1646 which prohibited smoking except on a journey of five miles or more from any town. Nor could a citizen of the colony bring a pipe or tobacco into the precincts of the court (Werner, 1922: 100), although he might smoke at "the ordinary tyme of repast comonly called dynner" (Heimann, 1960: 83).

Plymouth colony was similarly strict. In 1638, a law was passed forbidding anyone from smoking on the streets. The following year, it was decreed that jurymen might not smoke, on pain of a five shilling penalty.

In 1641, even the importation of tobacco was forbidden, although the law was repealed a year later. A law passed in 1646 prohibited all from smoking, but exempted "soldiers in time of their training." And, finally, in 1669, it was ordered that anyone found smoking on the Sabbath within two miles of a meeting house would be fined 12 pence (Werner, 1922: 101).

The colony at New Haven, Connecticut, essayed a like series of statutes to regulate tobacco consumption. In 1646, the General Court decreed that:

No person under the age of twenty years nor any other that hath not already accustomed himself to the use thereof, shall take any tobacko, until he hath brough a certificate under the hands of [a physician] that it is usefull for him, and also, that he hath received a license from the court for the same. . . . None shall take any tobacko, publickly in the street or any open places unless on a journey of at least ten miles (Tobacco Institute, Connecticut: 20–21).

Within three years those laws were repealed (Werner, 1922: 102). However, it was further ordered in 1655 that:

No tobacco shall be taken in the streets, yards, or aboute the howses in any plantation or farme in this jurisdiction without dores, neere or aboute the towne, or in the meeting howse, or body of the trayne Souldiors, or any other place where they may doe mischief thereby, under the penalty of 84 pence a pipe for a time, wch is to goe to him that informs and prosecuts (Heimann, 1960: 83).

As a result of the regulation, snooping became a profitable undertaking. In the end, however, the laws were of no avail in suppressing tobacco.

By 1680, the governor of Connecticut recognized the significance of the leaf and reported that, "We have no need of Virginia's trade, most people planting so much Tobacco as they spend" (Heimann, 1960: 84). Indeed, by the early 18th century, New England-grown tobacco was being produced in great enough quantity for both domestic consumption and export (Tobacco Institute, Connecticut: 22–23).

Tobacco was not one of the major concerns of the 18th century either before or after the Revolution. Social reform was generally secondary to political issues. By the end of the century, however, Dr. Benjamin Rush had published his "Observations upon the influence of the Habitual use of Tobacco upon Health, Morals, and Property" in his collection of *Essays, Literary, Moral and Philosophical*. It appeared in 1798, and stressed the Doctor's thesis that smoking and chewing provoked drunkenness:

One of the usual effects of smoking and chewing is thirst. This thirst cannot be allayed by water, for no sedative or even insipid liquor will be relished after the mouth and throat have been exposed to the stimulus of the smoke, or juice of Tobacco. A desire of course is excited for strong drinks, and these when taken between meals soon lead to intemperance and drunkenness. One of the greatest sots I ever knew, acquired a love for ardent spirits

by swallowing cuds of Tobacco, which he did, to escape detection in the use of it. . . (Robert, 1949: 106).

There was little immediate response to Rush's dire warnings, although in the year his tract was published, Boston enacted a statute to prohibit the carrying of a lighted pipe or cigar in public streets—apparently with the intent to reduce the hazard of fire (Brooks, 1952: 245).

An anti-tobacco crusade was launched in the 19th century, although with considerably less fervor that its sister movement against alcohol. Among the leaders were Rev. George Trask who said tobacco and alcohol were Satan's twins; and the Rev. Orin Fowler, who declared in 1833: "Rum-drinking will not cease, till tobacco-chewing and tobacco smoking and snuff-taking shall cease" (Robert, 1949: 107). Another, Dr. Joel Shew, attributed delirium tremens, perverted sexuality, impotency, insanity and cancer to the effects of smoking and chewing (Brooks, 1952: 219).

The crusade waned as the pipe continued to attract adherents. From the 18th century on, the cigar too began to grow in favor, particularly after 1840. It is estimated that by 1850, the average number of cigars smoked was approximately 19 per capita. Within 10 years, the number had increased to about 26 (Gottsegen, 1940: 8–10).

Women smoked and chewed as well as the men. Indeed, Mrs. Andrew Jackson and Mrs. Zachary Taylor both smoked their pipes in the White House (Heimann, 1960: 90). And, of course, the other residents of the Capital engaged heavily in the practices of both chewing and spitting, to the extent that Charles Dickens, during his tour of the States, felt called upon to report that:

Washington may be called the headquarters of tobacco-tinctured saliva. . . . In all the public places of America, this filthy custom is recognized. In the courts of law, the judge has his spittoon, the crier his, the witness his, and the prisoner his; while the jurymen and spectators are provided for. . . . The stranger will find [the custom] in its full bloom of glory, luxuriant in all its alarming recklessness, at Washington (Brooks, 1952: 215–216).

Chewing and snuffing remained popular until the time of the Civil War. Thereafter, cigarette smoking was gradually adopted in North America, a habit indirectly acquired through the British from their Turkish and French allies during the Crimean War (Werner, 1922: 105).

By 1870, approximately 13.9 million cigarettes were smoked annually in the United States, or .36 per capita. Over the next 60 years, the number was to reach 976.91 per capita (Gottsegen, 1940: 28).

As more persons took to cigarettes, the zeal of reformers, which had ebbed during the Civil War, was renewed. Pamphlets, like those of the Temperance Movement, were published, urging abstinence from smoking:

"I'll never use tobacco, no;
It is a filthy weed;
I'll never put it in my mouth."
Said Little Robert Reed.
"It hurts the health; it makes bad breath;
'Tis very bad indeed.
I'll never, never use it, no!"
Said Little Robert Reed
(Brooks, 1952: 242–243).

During the period following the Civil War and prior to the formation of the American Tobacco Company in 1890, the anti-liquor forces continued to snipe at tobacco in all forms. A reformed drinker and temperance lecturer, John B. Gough, would pull from his pocket a square of tobacco, smell it as if it were a rose, cry out "Ah you black devil, I love you" and throw it away.

The anti-tobacconists were led by Lucy Gaston, the greatest warrior in the anti-cigarette campaign who was trained in the office of the Women's Christian Temperance Union and then moved over into the anti-tobacco movement in the 1890's. Miss Gaston encouraged children to wear anti-tobacco pins or buttons and organized armies of children to sing and preach to and against their smoking elders (Wagner, 1971: 40).

"All hostility to tobacco seems nowadays to be concentrated on cigarettes," noted *Harper's Weekly*, observing the scene in 1905 (Robert, 1949: 169). It was scarcely a startling revelation. Twenty years earlier, the *New York Times* editorialized that:

A grown man has no possible excuse for thus imitating the small boy. . . . The decadence of Spain began when the Spaniards adopted cigarettes and if this pernicious habit obtains among adult Americans the ruin of the Republic is close at hand . . . (Brooks, 1952: 253).

Miss Gaston witnessed some legislation victories. Between 1895 and 1921, 14 states banned the sale of cigarettes (Neuberger, 1963: 52). Even in the city of New York it was declared unlawful for women to smoke in public (Brooks, 1952: 271). Curiously, however, the city of Boston repealed its law which prohibited smoking in public in 1880 (Gottsegen, 1940: 153).

The apparent success of the prohibitionists revived the anti-tobacconists' enthusiasm. "Prohibition is won; now for tobacco!" pledged Billy Sunday. Miss Gaston also renewed her dedication and actually announced her candidacy for the presidency of the United States in 1920 on an anti-tobacco platform.

For many anti-tobacconists, when it became apparent that the elder generation may be lost, the

war against tobacco was focused on the youth of the country. The National Education Association pledged its membership to cooperate in efforts made in the city, state and nation to safeguard the health and morals of youth from cigarette smoking to the end that high ideals for American manhood may be preserved for the coming generation (Hamilton, 1927: 168).

The National Congress of PTA, in Atlanta, Georgia, in 1926 resolved "to lend its force to the cause of eliminating throughout the United States the use of cigarettes by minors and make this a special work for the ensuing year for the good of our youth" (Hamilton, 1927: 168).

It is for these reasons that the WCTU declared an educational war against tobacco, but declined to seek prohibitory legislation (Robert, 1949: 247).

The disenchanting experience of Prohibition, the omnipresence of the tobacco industry, the need for new sources of state revenues and the prevalence and popularity of cigarette smoking combined to frustrate the anti-tobacco campaign. Cigarettes did provide a new source of revenue. Federal income from tobacco taxes soared to new heights because of increased cigarette consumption and advanced rates.

In any event, by 1927, each of the 14 states which had enacted prohibitory laws against cigarettes had repealed them (Neuberger, 1963: 52). Immediately thereafter these states imposed taxes upon the once forbidden product (Robert, 1949: 256; Federal Trade Commission, 1970: 3).

STATE REGULATION

Only those laws which forbade the sale of tobacco products to minors remain on the books, a trend set by New Jersey and Washington in 1883 (Gottsegen, 1940: 155).

All but a few statutes restricting tobacco products to minors were enacted between 1916–1920, simultaneous to the development and popularity of the domestic-blend cigarette.

All 50 states had laws banning sales to minors by 1950. Since then, Georgia, Louisiana, and Wisconsin have repealed theirs leaving 47 states plus the District of Columbia with laws prohibiting sales to minors.

The most common age of restriction for cigarettes and tobacco products today applies to persons under the age of 18. In an effort to ensure stricter enforcement 11 states have lowered the age of restriction from 21 to 15 (Tobacco Merchants Association, 1971: 1–2). In contrast to this trend, however, the California Legislature in 1971 defeated a bill to allow school smoking areas and lowering the sale to minor restrictions to 15 years old (NIC Smoking and Health, 1971: 1).

According to a Special Report released by the Tobacco Merchants Association of the United States, the liability for infractions in all states is on the vendor and donor of cigarettes. In a few states, manufacturer and persons advising or compelling the minors to smoke, or owning the premise where such behavior occurs are also liable. However, in some states the infraction does not extend to the parent or guardian. Some states penalize the minor himself and others require that he divulge his source.

Most of the statutes that prohibit the furnishing of cigarettes to minors extend the ban also to one or more other tobacco products. Only 11 states restrict the sale "only" to cigarettes. The efficacy of such statutes, in the day of the cigarette machine, is subject to substantial skepticism.

A complete listing of existing state statutes concerning possession by and sales to minors follows (Tobacco Merchants Association, 1971: 3–4).

State	Sale to minors		Use or possession	
	Prohibited	Age	Prohibited	Age
Alabama	Yes	Minor	No provision	
Alaska	Yes	Under 18	No provision	
Arizona	Yes	Minor	Yes [1]	Minor.
Arkansas	Yes [2]	Under 18	No provision	
California	Yes [3]	Under 18	Yes	(4).
Colorado	Yes	Under 16	No provision	
Connecticut	Yes	Under 16	No provision	
Delaware	Yes	Under 17	No provision	
District of Columbia	Yes	Under 16	No provision	
Florida	Yes	Minor	No provision	
Georgia	No provision		No provision	

See footnotes at end of table.

State	Sale to minors		Use or possession	
	Prohibited	Age	Prohibited	Age
Hawaii	Yes	Under 15	No provision	
Idaho	Yes	Under 18	Yes [1]	Under 18.
Illinois	Yes [2]	Under 18	Yes [1]	Under 18.
Indiana	Yes	Under 16	Yes [1]	Under 21.
Iowa	Yes	Under 18	([6 7])	Under 18.
Kansas	Yes	Under 18	Yes	Under 18.
Kentucky	Yes	Under 18	Yes	Under 18.
Louisiana	No provision		No provision	
Maine	Yes	Under 16	No provision	
Maryland	Yes [3]	Under 15	No provision	
Massachusetts	Yes [2]	Under 18	No provision	
Michigan	Yes	Under 21	Yes	Under 21.
Minnesota	Yes	Under 18	Yes	Under 18.
Mississippi	Yes [3]	Under 18	No provision	
Missouri	Yes	Under 18	Yes	Under 18.
Montana	Yes	Under 18	No provision	
Nebraska	Yes	Under 18	Yes	Under 18.
Nevada	Yes [3]	Under 18	No provision	
New Hampshire	Yes	Minor	No provision	
New Jersey	Yes	Under 16	No provision	
New Mexico	Yes [4]	Under 18 [8]	No provision	
New York	Yes	Under 18	No provision	
North Carolina	Yes	Under 17	No provision	
North Dakota	Yes	Under 21	Yes	Under 18.[9]
Ohio	Yes	Under 18	No provision	
Oklahoma	Yes	Minor	([6])	Minor.
Oregon	Yes	Under 18	Yes	Under 18.
Pennsylvania	Yes	Minor	([6])	Minor.
Rhode Island	Yes	Under 16	Yes	Under 16.
South Carolina	Yes	Under 18	([6])	Under 18.
South Dakota	Yes	Under 18	Yes	Under 18.
Tennessee	Yes	Under 18	No provision	
Texas	Yes [5]	Under 16	No provision	
Utah	Yes	Under 19	Yes [1]	Under 19.
Vermont	Yes [5]	Under 17	No provision	
Virginia	Yes	Under 18	No provision	
Washington	Yes	Under 21	Yes	Between 18 and 21.[10]
West Virginia	Yes	Under 21	Yes	Under 21.
Wisconsin	No provision		No provision	
Wyoming	Yes	Under 18	No provision	

[1] Includes a prohibition against the purchase of cigarettes by minors (in Illinois without written order of parent or guardian), as well as use or possession.
[2] If other than by parent or guradian.
[3] However, inmates in State correction institutions 16 or over, with consent of parent or guardian, may be furnished tobacco and tobacco products.
[4] Eighteen and over, in junior college, if not permitted by governing board.
[5] Without consent of parent or guardian.
[6] Minors smoking or in possession of cigarettes are required to give source of cigarettes; use or possession not otherwise regulated.
[7] In addition, high school students may not smoke
[8] And any pupil of any school in State.
[9] Or a minor pupil in any school.
[10] Purchase or possession by misrepresentation of age a misdemeanor.

THE IMPETUS FOR FEDERAL SUMPTUARY REGULATION

The effect of smoking on health has been the subject of discussion for hundreds of years. Early participants in the tobacco controversy, beginning in the late 16th century, did not associate the use of tobacco with the production of cancers although they credited it with causing or curing nearly every other known disease.

Dr. John Hill, of London, a physician, botanist and prolific writer, first suggested the relation in 1761. In *Cautions Against the Immoderate Use of Snuff*, he reported six cases of "polypusses" related to excessive indulgence in tobacco in the form of snuff. One such "polypus" was described as a swelling in one nostril that was hard, black and adherent on a broad base. Painless at first, it later developed "all the frightful symptoms of an open cancer." Dr. Hill believed that this lesion could be fatal and placed the blame for its origin on tobacco. Dr. Hill has been noted as the first to report an association of tobacco with cancer (Redmond, 1970: 21).

In 1939, the first scientific study linking lung cancer with smoking was published. Between 1950 and 1954, 14 studies associating cigarettes and serious diseases were completed (Fritschler, 1969: 145).

At the present time, there is no government agency with clear jurisdiction over the health aspects of cigarettes. The Federal Trade Commission can act on matters of advertising and package information. The Food and Drug Administration concerns itself only with foods, drugs, solids, or liquids that are eaten or drunk. Tobacco is neither a food nor a drug under current legal definitions. Nor are cigarettes eaten or drunk; they are inhaled.

The 1890 edition of the U.S. *Pharmacopoeia*, an official listing of drugs published by the government, included tobacco. In later editions, tobacco was dropped. Former Senator Maurine Neuberger has claimed that the removal of tobacco from the *Pharmacopoeia* was the price paid to get support of tobacco-state legislators for the Food and Drug Act of 1906. The leaf was thereby removed from the jurisdiction of the FDA (Wagner, 1971: 74).

The first statement from the Public Health Service on the subject was made by its Surgeon General, Leroy F. Burney, M.D., in the *Journal of the American Medical Association* in November, 1959. The heart of this statement was that "the weight of evidence at present implicates smoking as the principal etiological factor in the increased incidence of lung cancer" (Diehl, 1969: 154).

In June, 1961, the American Cancer Society, the American Heart Association and the National Tuberculosis and Respiratory Disease Association jointly requested that a commission be appointed "to consider the responsibilities of government, of business and of voluntary agencies relative to the health hazards of cigarette smoking and to recommend a solution of this health problem that would protect the public and would interfere least with the freedom of industry and the happiness of individuals" (Diehl, 1969: 155).

On June 7, 1962, the then Surgeon General, Dr. Luther Terry, announced, with the approval of the President, that he was establishing an "expert committee to undertake a comprehensive review of all data on smoking and health."

The members of this committee were respected scientists who had previously expressed no opinion about the relationship of tobacco to health. All members were approved for appointment by the tobacco industry as well as by the American Medical Association and several national health agencies. Half of the committee members were cigarette smokers.

On January 11, 1964, after some 15 months of intensive study, this Advisory Committee to the Surgeon General issued its monumental unanimous report stating that "cigarette smoking is a health hazard of sufficient importance in the United States to warrant appropriate remedial action."

The committee stated unequivocally that "cigarette smoking is causally related to lung cancer in men; the magnitude of the effect of cigarette smoking far outweighs other factors. The data for women, though less extensive, point in the same direction." Air pollution was found to be a very minor factor in the cause of the disease, far outweighed by cigarette smoking.

The death rate from heart disease, the report noted, was 70 percent higher in cigarette smokers than in nonsmokers, and although there was not enough evidence to say positively that smoking causes heart disease, there was enough to assume that it is a cause and to take action against it.

Another conclusion of great importance was that "cigarette smoking is the most important of the causes of chronic bronchitis in the United States and increases the risk of dying from chronic bronchitis and emphysema."

The report analyzed the statistical, pathological, clinical, and experimental evidence in relation to smoking and other diseases. A total of more than 4,000 published reports were studied and more than 150 investigators were personally interviewed. "The result was the most comprehensive

and authoritative report on this subject ever made" (Diehl, 1969: 156).

THE HEALTH WARNING REQUIREMENT

At the time the Surgeon General's Report was published, no statute, administrative ruling or court decision required that cigarette packaging or advertising contain any statement about the dangers to health attributable to cigarette smoking.

After Trade Regulation Rule Porceedings in March and June 1964, the Federal Trade Commission concluded that cigarette advertising was deceptive (misleading) and that advertisers had a responsibility to warn the public of the health hazards of cigarette smoking.

To accomplish this, the Commission proposed that cigarette packages state the amount of tar and nicotine in the smoke of the cigarette which the package contains and that cigarette packages and cigarette advertising carry a statement such as: "Caution: Cigarette Smoking is Dangerous to Health. It May Cause Death from Cancer and Other Diseases."

This warning was to be required on cigarette packages beginning January 1, 1965, and in cigarette advertising beginning July 1, 1965. The tobacco industry first obtained a postponement of the effective dates of this ruling and then prevailed upon Congress to vitiate the ruling by passing the Cigarette Labeling and Advertising Act, requiring all packages of cigarettes sold in this country to carry the label "Cigarette Smoking May be Hazardous to Your Health," but prohibiting the Federal Trade Commission and state and local governments from requiring any other label on cigarette packages and any warnings in cigarette advertising at least until 1969.

A *New York Times* editorial called the Cigarette Labeling and Advertising Act of 1965 "a shocking piece of special-interest legislation—a bill to protect the economic health of the tobacco industry by freeing it of proper regulation" (Cigarette Labeling and Advertising, 1965). An article in the *Atlantic Monthly* described the political maneuvering behind this legislation under the title "The Quiet Victory of the Cigarette Lobby: How It Found the Best Filter Yet—Congress" (Diehl, 1969: 162).

Public concern attending publication of the Surgeon General's report, *Smoking and Health*, and the pending FTC regulations for warnings on cigarette packages and in cigarette advertising apparently convinced the tobacco industry that some action by Congress was inevitable.

Reportedly the industry decided to accept a weak label on cigarette packages provided that the legislation would prevent any regulation of cigarette advertising. This was accomplished by inserting into the proposed law the provision precluding the FTC and all state or local governments from requiring any warning on cigarette packages other than the one approved by Congress and also preventing any warnings in cigarette advertising.

At House and Senate committee hearings, committee members friendly to the industry attempted to discredit both the Surgeon General's Report and the testimony given by the Surgeon General, the Chairman of the Federal Trade Commission, and the representatives of various medical and health organizations. The tobacco industry then presented a number of physicians who testified that they disagreed with the conclusions of the Surgeon General's Advisory Committee and that in their opinion there was no real evidence that cigarette smoking is harmful (Diehl, 1969: 162).

Although this act temporarily prevented any requirement that tar and nicotine content be indicated on cigarette packages, the Federal Trade Commission did establish a laboratory to determine the tar and nicotine content of the smoke of cigarettes on the American market, making the results of these tests available periodically to the public.

The Cigarette Labeling and Advertising Act also required that about July 1, 1967, and annually thereafter the Federal Trade Commission report to Congress concerning the effectiveness of the warning label, and upon current practices of cigarette advertising and promotion, with "recommendations for legislation that are deemed appropriate."

After an intensive study the Federal Trade Commission made a detailed report to Congress with the following summary and recommendations: "There is virtually no evidence that the warning statement on cigarette packages has had any significant effect."

Sales remained constant and the industry continued to invest hundreds of millions of dollars in advertising; $200 million a year was being spent on radio and television alone in 1967; cigarette advertisers had become the single largest product advertisers on television accounting for about eight per cent of television advertising time (Wagner, 1971: 166).

THE FAIRNESS DOCTRINE

Another government agency had become concerned with cigarette advertising. The Federal Communications Commission is mandated to as-

sure that the airways, which belong to the public, are used in the public interest.

John F. Banzhaf, III, who has been called the "Ralph Nader of the tobacco industry" was responsible for the FCC's involvement in the cigarette advertising controversy. After viewing several cigarette commercials on television, Banzhaf concluded that "what he was seeing might be considered legally 'controversial'" (Wagner, 1971: 168). He then wrote to WCBS-TV in New York on December 1, 1966, requesting that he or some other responsible spokesman be given an opportunity to present contrasting views on the issue of the benefits and advisability of smoking.

Banzhaf's letter cited three commercials that presented the view that smoking is "socially acceptable and desirable, manly, and a necessary part of a rich full life." He asked free time roughly approximate to that spent on the promotion of the "virtues and values of smoking." CBS routinely turned down the request. He sent a second letter to CBS and submitted a formal complaint against WCBS-TV to the FCC in Washington.

The FCC, in a letter to the television station dated June 2, 1967, said programs it had broadcast dealing with the effect of smoking on health were insufficient to offset the effects of paid advertisements broadcast for a total of five to 10 minutes each broadcast day. "We hold that the fairness doctrine is applicable to such advertisements" the Commission said. They rejected Banzhaf's claim for equal time, however.

The FCC called on the station to provide free each week "a significant amount of time for the other viewpoint," thereby implementing the smoking education campaigns launched by the government under the cigarette labeling law. "This requirement will not preclude or curtail presentation by stations of cigarette advertising which they choose to carry." The FCC basically decided that it was not in the public interest for the airways to be used by radio and television to advertise cigarettes without some warning of the health hazards involved with smoking (Wagner, 1971: 169).

The FCC was deluged with requests to reconsider its action. The agency stood firm in its unanimous decision. As a result of the ruling many of the voluntary health agencies and the Public Health Service made available to the television and radio industries spot announcements and other program materials on the serious consequences to health caused by cigarette smoking.

The FCC's decision was upheld by the U.S. Court of Appeals on November 21, 1968; the court said the agency could indeed use its fairness doctrine to require free time for anti-smoking commercials. "The danger cigarettes may pose to health is, among others, a danger to life itself," the Court said.

> As the Commission emphasized, it is a danger inherent in the normal use of the product, not one merely associated with its abuse or dependent on intervening fortuitous events. It threatens a substantial body of the population, not merely a peculiarly susceptible fringe group. Moreover, the danger, though not established beyond all doubt, is documented by a compelling cumulation of statistical evidence (Wagner, 1971: 166-173).

(The cigarette manufacturers then asked the Supreme Court to review their case, but the high court turned down the request, leaving the appeals court decision standing.)

"Most observers agree that the dramatic entrance of the FCC into the smoking controversy was probably the most important single event during the three-year moratorium on requiring health warnings in cigarette advertisements imposed by Congress on the FTC" (Wagner, 1971: 175).

THE BAN ON ADVERTISING

Both the U.S. Public Health Service and Federal Trade Commission have annually reported findings to Congress since passage of the cigarette labeling law. The FTC recommended that the Act should be amended to: "Warning: Cigarette Smoking Is Dangerous to Health and May Cause Death From Cancer and Other Diseases."

Additionally, the FTC recommended legislation to require the same warning to appear in all cigarette advertisements and to require statements of tar and nicotine content on all cigarette packages and in all advertising.

Legislation to accomplish these objectives as well as the following were recommended by the FTC:

> Cigarette advertising on television and radio should be barred entirely. Alternately, cigarette advertising on television and radio should be limited as to hours in which it may appear; the extent to which it may appear; and the types of programs on which it may appear;
>
> Increased appropriations should be made to the Department of Health, Education, and Welfare for education of the public (especially young people) as to the health hazards of smoking;
>
> Appropriations should be made for research under the direction of the National Institutes of Health on the development of less hazardous cigarettes.

"By 1969, the stage had been set for a showdown over cigarette advertising and promotion" (Wagner, 1971: 190). The U.S. Government was increasing its efforts to discourage the sale of cigarettes. Post office trucks carried posters: "100,000 Doctors Have Quit Smoking."

The Surgeon General continued to release reports about the adverse health effects of smoking.

Dr. Daniel Horn, director of the National Clearinghouse for Smoking and Health, was urging doctors to deliver antismoking appeals to patients in their offices.

Movie personalities had become involved in the American Cancer Society's campaign called I.Q. (for "I Quit") that passed out lapel buttons and dispatched public speakers around the country to discourage the habit. Doris Day, Debbie Reynolds and Lawrence Welk refused to allow tobacco companies to sponsor their TV shows.

Two ad agencies—Ogilivy and Mather and Doyle Dane Bernbach—and a few radio and television stations would not accept cigarette business. Several magazines did not accept cigarette advertising as a matter of principle: *Reader's Digest*, the *New Yorker*, and *the Saturday Review*. The *Christian Science Monitor* had never carried cigarette ads; the *Boston Globe* announced in May, 1969 that it would no longer accept such advertising "because accumulated medical evidence has indicated that cigarette smoking is hazardous to health" (Wagner, 1971: 220).

In April 1969, a few weeks before the House Interstate and Foreign Commerce Committee was scheduled to open hearings on the FTC proposals, a series of bills were introduced in the House by representatives of tobacco producing states. One such bill, H.R. 7177, co-sponsored by all eleven of North Carolina's House delegation, proposed "to establish a comprehensive Federal program to deal with cigarette labeling and advertising with respect to any relationship between smoking and health."

Identical measures were introduced under the sponsorship of congressmen from Virginia, Maryland, Kentucky, and Florida. Some accounts of the activity on Capitol Hill during this period attribute these bills to the tobacco interests' intention "to prevent strengthening of the warning label and make permanent the ban on state and Federal regulation of cigarette advertising, which was due to expire on June 30. Passage of this legislation was the best tobacco interests could have hoped for under the circumstances" (Wagner, 1971: 205).

After testimony from both sides, the House Committee approved a stiffer health warning but prohibited regulatory action on cigarette advertising for six years and in other ways generally upheld the status quo.

The Senate Commerce Committee, on December 5, 1970, voted out a bill banning cigarette commercials from the air as of January 1, 1971. The FTC was prohibited from acting on cigarette ads in newspapers and magazines until the middle of 1972. The labeling provision in the Senate bill was weaker than that established in the House-voted measure, and the bill also precluded cigarette regulatory action by the fifty states and local governments.

In a session on December 12, a floor amendment was introduced which loosened the Committee's proposed restriction on the FTC by allowing the agency to require health warnings in advertising as of July 1, 1971. The bill also authorized the FTC to move sooner if it found that tobacco companies were switching from broadcast to print advertising so massively that it could be considered a "gross abuse." This bill also approved a new required health warning for cigarette packages—"Warning: Cigarette Smoking Is Dangerous to Your Health."

After Senate passage, the measure still had to pass a joint Senate-House Conference Committee where important differences between the two bills had to be reconciled.

The bill that emerged from conference differed only slightly from the Senate measure. The cautionary label to which the conferees agreed provides: "Warning: The Surgeon General Has Determined That Cigarette Smoking Is Dangerous to Your Health." "In a final concession to the broadcasters, the conferees agreed to delay for one day the blackout of cigarette commercials from December 31, 1970, to midnight January 1, 1971. That would give them a last shower of cash from the New Year's Day football bowl games" (Wagner, 1971: 216). It was estimated that the loss to television and radio stations would amount to about $220 million a year, or about 7.5% of their total advertising revenues.

President Nixon signed the Act on April 1, 1970.

Some observers marvel that the bill was passed "in spite of massive pressure that had been brought to bear against it and against the regulation of cigarette advertising generally, by the tobacco industry, the broadcasting industry, and the lobbyists and their political allies. This was a combination that for years had proved invincible against a counterforce of scientists and public health and public interest advocates who, armed with formidable statistics on the damage to health and life caused by cigarette smoking, had sought to protect consumers by requiring all cigarette advertising to provide adequate warnings of these dangers" (Whiteside, 1970: 58).

There are those observers, on the other hand, who do not view the ban of cigarette advertising on television and radio as such a success for the consumer. Rather, they cite the statistics on consumption in other countries to point up the fact that bans on advertising do not reduce sales.

In Czechoslovakia, for example, no direct advertising of tobacco is permitted; yet consumption increased 14% between 1953 and 1958. Advertising of foreign cigarettes was banned in 1962 in Italy; the following year sales increased 39.4% and in 1964, 11.7%. Sales increased in England after television cigarette advertisements were banned in 1965. Consumption figures for the following three years in Britain reveal increases: 112 billion cigarettes in 1965, 118 billion in 1966; and 119.1 billion in 1967 (Cigarette Advertising, 1970: 113–114).

Robert Miller, an agricultural economist in the Department of Agriculture's Economic Research Service, reports that cigarette consumption is up in every part of the world although advertising was banned in several European countries some years ago. He predicts an eventual decrease in sales during the next five years and perhaps a 12–13% decrease in tobacco consumption (Tobacco Advertising Could End, 1970: 7).

Other observers can see a *gradual* reduction in cigarette consumpton as a result of a prohibition on advertising; some feel a ban on advertising merely makes it difficult to launch a new brand. Others predict that the ban will eliminate the social acceptability of the habit although consumption will not go down.

The "live dangerously novelty" has also been identified as a possible cause for gains in consumption; "such a philosophy might well be prevalent among the young, the very ones that antismoking advocates are most anxious to protect" (Cigarette Advertising, 1970: 112–113).

Another consequence of the ban on cigarette commercials was the FCC ruling that the broadcasters' obligation to air antismoking messages had ended. The stations continue to run them as public service spots; however, the volume was decreased considerably from the former 1 to 3 ratio established by the FCC. The anti-smoking forces are fearful that a decrease in these spots is harmful to their cause and may retard their efforts to reduce cigarette consumption.

On October 20, 1971, a U.S. District Court ruled that the Congressional ban on cigarette advertising is constitutional. The ruling stated that such advertising does not qualify under the First Amendment's guarantee of freedom of speech; a sharp distinction was drawn between guarantees of freedom of speech for individuals and the "limited extent" to which broadcast advertising qualifies for such protection.

The court also ruled that Congress had more than one "rational basis" for excluding cigarette ads from television and not the printed media—one being that broadcasts are the "most persuasive" types of advertising (Cigarette Ad Ban, 1971). Ultimately, the constitutional question will have to be decided by the United States Supreme Court.

CONSUMPTION TRENDS

Cigarette smoking is widespread in America today; 45.9% of the male population 17 years of age and over and 30.5% of females 17 and over are smokers. In 1970, about $10.6 billion of individuals' expenditures was for cigarettes.

Data on cigarette sales and advertising has been obtained by the FTC from domestic cigarette manufacturers; the table below provides cigarette sales for the years 1963 to the present (Federal Trade Commission, 1970: 3):

TOTAL CIGARETTES SOLD

	Billions
1963	516.5
1964	505.0
1965	521.1
1966	529.9
1967	535.8
1968	540.3
1969	527.9
1970	534.2

The reduction in sales in 1964 coincides with the public attention given the Report of the Surgeon General issued on January 11, 1964. Public awareness of the dangers cited in the Report was high. It was soon forgotten, for in 1965 the total number of cigarettes sold was almost 5 billion higher than the year prior to the Surgeon General's Report.

In 1969 there was another significant decline; it has been suggested that this decline is attributable to several high-visibility events and also by sales tax increases. For example, the FCC ruling was upheld in November 1968 giving impetus to the anti-smoking TV campaign; the federal government's anti-smoking campaign was in full swing during 1968–69; the public outcry was being felt by economic interests—magazines, newspapers, personalities and advertising agencies which refused sponsorship for business from tobacco companies.

There were significant state tax increases immediately prior to 1969 which probably contributed to the reduction in sales during that year. During fiscal year 1967, 15 states increased their cigarette tax rates; the average increase was 3.5 cents. The rate increase ranged from New York's, Ohio's, and Illinois' two cents to California's and Florida's seven cents. The next year, seven more states increased their cigarette taxes. The rates ranged from Massachusetts' and Vermont's two cents to Minnesota's, Rhode Island's, and Tennessee's five cents, the average increase approxi-

nately four cents (Council of State Governments, 1968: 196–197).

The ban on cigarette advertising on television and radio began on January 2, 1971, yet several calculations reflect a rise in cigarette sales during the past year. *Business Week* projections of industry sales and brand rankings show that a record 529 billion cigarettes were consumed in 1971, 1.5% more than 1970's sales (Where Cigarette Makers Spend, 1971: 56). Tobacco industry sources estimate that consumption has risen in 1971 by 1.5% to 535 billion cigarettes (Cigarette Sales Up, 1972: 3).

John C. Maxwell, tobacco analyst for Oppenheimer & Company, a brokerage firm, also reported a rise—2.3% in domestic unit sales in 1971. He relates part of the growth in cigarette consumption to the population mix—the increase in the 20–40-year age group, where smoking is heaviest. The Maxwell report suggests that the rest of this growth must be related to "government overkill, wherein many voices in Washington suggest that everything we eat or drink is harmful" (Maxwell, 1971: 1).

An industry specialist with Manufacturers Hanover Trust Company, on the other hand, attributes both the lag in sales in 1969 and the new increase to the "very effective antismoking ads on television. Since the ban, these commercials rarely appear" (Cigarette Sales Up, 1972: 3).

Another industry executive notes, "For years we have believed that the role of cigarette advertising is to attract smokers from competitive brands rather than induce nonsmokers to start smoking. We failed to convince the Federal Communications Commission of this, but it is borne out by our industry's experience since the TV ban. Within a relatively stable market, some companies have continued to gain while others lost. Some brands have increased their share of market while others have declined" (Where Cigarette Makers Spend, 1971: 56). Skeptics continue to argue that tobacco companies have also been trying to recruit new young smokers.

TOBACCO: ECONOMICS AND POLITICS

It is generally accepted that tobacco has been an extremely powerful force in American politics. Approximately 50 million smokers smoked 535 billion cigarettes in the past year. More than 100,000 employees receive $500 million in wages annually from tobacco manufacturing companies; over 4,500 wholesalers handle the distribution of tobacco products and hundreds of thousands of merchants depend on the sale of cigarettes as a source of their income.

Cigarette companies had been spending over $200 million per year on radio and television advertising, and since the ban, almost all of this money has been diverted to other media advertising providing many thousands of jobs in ad agencies and in the various media. Three million people from about 750,000 families receive $1.4 billion annually for the cultivation of tobacco used in cigarettes.

Peripherally affected are those involved in producing the 40 million pounds of moisture-proof cellophane, the 70 million pounds of aluminum foil, the 27 billion printed packs, and the 2.7 billion cartons (Cigarette Advertising, 1970: 110–111; Wagner, 1971: 120; USDA, Tobacco Situation, 1971a: 29–31).

One writer, reporting on the present public policy trend, notes that "attempts to discourage smoking would affect the lives of millions of people and would have profound economic and political consequences" (Wagner, 1971: 121).

Advocates of cigarette smoking today are organized into extremely powerful groups, each having its own specific function and plentiful resources.

The Tobacco Tax Council, established in 1949, compiles data on the taxation of tobacco products by the Federal, state and local governments. The Council's annual booklet, "Cigaret Taxes in the United States" has been superseded by "The Tax Burden on Tobacco" since 1966. This pamphlet "undertakes to trace the history of tobacco taxes from the years of the Civil War down through [the present year]" (Tobacco Tax Council, 1970: iii).

The trade association promoting the welfare of the tobacco industry is the Tobacco Merchants Association of the U.S: It is composed of manufacturers, wholesalers, retailers, importers, exporters, leaf dealers, suppliers, and firms interested in the industry. Its *Bulletins* cover legislation, trends, special reports; its numerous other publications and activities seek to improve industry operations and expand outlets (e.g., international) for potential sales (Tobacco Merchants Association, 1971: 1–4).

The tobacco industry's point of view is nurtured and protected by the Tobacco Institute, a nonprofit corporation founded in 1958. Its membership includes major U.S. manufacturers of cigarettes, smoking and chewing tobacco, and snuff: The Bloch Brothers Tobacco Company, Brown & Williamson Tobacco Corporation, Conwood Corporation, G. A. Georgopulo & Company, Helme Products, Larus & Brother Company, Liggett & Myers, Lorillard, Philip Morris Incorporated, R.

J. Reynolds Industries, Scotten-Dillion Company, and United States Tobacco Company.

The Institute is financed by contributions from the large corporations according to their share of the market. The institute reports on the pro-tobacco side of the medical story, attempting to discredit antismoking publicity, and publishes information on the historical role of tobacco, its place in the national economy, the industry itself, and the public's use of tobacco products.

The Council for Tobacco Research, created in 1953 in response to medical bulletins reporting on the hazards of smoking, processes and administers millions of research grants. "Although research money was to be awarded with no strings attached [The Council] nicely serve[s] the purpose of identifying the industry with the welfare of humanity and spreading good will through the scientific community" (Wagner, 1971: 80).

The scientific data continue to be attacked from both sides. Since 1954 a great quantity of research has been published and, in turn, disputed. For example, "the press played up the Hammond and Auerbach study and the claim that twelve beagles had developed lung cancer" from cigarettes. "The findings have subsequently been downgraded by the author to two microscopic tumors with the further revelation that two dogs in the control group also developed tumors" (Maxwell, 1971: 1).

Another area of contention has developed around the relationship between cigarette smoke itself and lung cancer. A recent paper by Dr. Geoffrey Myddelton given at the Second World Conference on Smoking and Health in London, September 20–24, 1971, compares the incidence of smoking and lung cancer in various countries. He indicates, "Japan smokes 86% as much as Britain but has only 27% of its lung cancer. Canada smokes twice as many cigarettes as the Netherlands but has only 69% as much lung cancer." He goes on to correlate the use of diesel fuel in England to lung cancer (Maxwell, 1971: 2).

From the other side, the United States Public Health Service 1972 report *The Health Consequences of Smoking* maintains that "nonsmokers as well as smokers may be harmed by cigarettes, . . . tobacco smoke in closed cars and poorly ventilated rooms can contaminate the atmosphere for everyone. . . . The chief danger is exposure to low levels of the deadly gas, carbon monoxide. Experiments with animals have shown that various concentrations of the colorless, odorless, and tasteless gas 'adversely affect' the structure and function of the heart and lungs. The implication is that this may also be true in man" (Study Says Cigarette Smoke Also May Harm Nonusers, 1972: 1).

It is estimated that at the present time one and a half to two million adults give up smoking every year. Sensing the hazards of the future, some cigarette companies sought fiscal security in diversification and substitution; tobacco manufacturers are now marketing, for example, safety razors, fertilizers, dog food, ballpoint pens, peanut butter and other non-nicotine products. By 1967, sales on non-tobacco products accounted for approximately one-third of the total sales of cigarette manufacturers.

It remains to be seen whether tobacco power will be whittled away any further in the next few years. Some feel that "the tobacco subsystem has succeeded in keeping the health question a low-priority item on the government's agenda by playing one government agency off against another. . . . This subsystem cuts across institutional lines and includes the paid representatives of tobacco-growers, marketing organizations and manufacturers. . . . Congressmen representing tobacco-growing states [are] leading members of four subcommittees, including two appropriations subcommittees and two committees in each house of Congress handling tobacco legislation. . . . Tobacco power [is] thus firmly entrenched and well supported" (Wagner, 1971: 121).

On the other hand, a strongly worded commentary by an industry spokesman cites Justice John Marshall's statement to illustrate industry's precarious position: "The power to tax involves the power to destroy." He continues with a description of the tobacco industry's present situation:

> The onslaught of state and local taxes on tobacco products . . . represents a most serious threat to all segments of our industry. . . . We are now facing a calculated attempt to destroy, or at least drastically curtail, the sale of smoking products. The political and economic climate is most favorable for this attack. Smoking and health is a prime political issue in the same context as air pollution, crime in the streets, and consumerism. At the same time, local governments are verging on bankruptcy. Revenue of any sort is therefore a must. It is a tough battle, and cigarette industry is currently bearing the largest part of the attack (Regensburg, 1971: 140).

The revenues gained from tobacco tax collections are significant. Over $2.1 billion in Federal taxes and over $2.5 billion in state cigarette taxes were collected in Fiscal Year 1971 (Tobacco Tax Council, 1970: 4–6, 8; USDA, Tobacco Situation, 1971b: 44). Total tobacco taxes were $4.8 billion in 1971 compared with $1.7 billion in 1950.

In 1970 tobacco taxes accounted for 1.1% of total federal tax receipts and represented 13.8 percent of all excise taxes (USDA, Tobacco Situation, 1971b: 40). This places the tobacco tax as the seventh largest source of collection by the Federal government behind the major giants, e.g.,

income and profit taxes (both corporate and individual), employment taxes, manufacturers excise taxes, alcohol taxes, and estate and gift taxes. In terms of individual commodities it ranks behind only alcohol. Thus, federal revenue would be importantly affected if tobacco consumption were to decline.

CONCLUSION

The big question is how the Federal government plans to proceed. Six tobacco bills are now pending in Congress. One of these bills would give the Federal Trade Commission authority to set maximum permissible limits on tar and nicotine. Another would establish a graduated cigarette tax based on tar content.

The FTC is precently carrying on negotiations with the industry to come up with a "clear and conspicuous" health warning for its print advertising. It is expected that the industry, "which has been working closely with the FTC, 'will' take some 'voluntary' labeling action" (Where Cigarette Makers Spend, 1971: 57).

The industry feels the pressure; one member explains: "We are resigned to it. Over-all, . . . the industry mood is much more relaxed—now that we have this first big year behind us" (Where Cigarette Makers Spend, 1971: 57).

The public is clamoring for government action; a 1970 College Poll surveying youths 18 and older on more than 100 campuses reveals that 96% believe that smoking is dangerous to one's health (College Poll, 1971).

Further, a 1969 study on teenage (13- to 18-year-olds) smoking attitudes, motivation and habits indicates "deep teenage dissatisfaction with cigarette smoking, considerable knowledge of its ill effects, but a very exaggerated estimate of the acceptance of smoking by the adult world" (Lieberman Research, 1969: 1–20). And, a 1970 nationwide survey of teenagers revealed: "72% of non-smokers identified physicians as the one group that could persuade them not to start smoking and 42% of those who smoked said their physician's advice would influence them to stop" (Doctors, 1970: 24).

Critics of the industry claim: "The controversy about smoking and health continues largely because of the energy, time and money spent by the tobacco industry in keeping this controversy alive" (College Poll, 1971).

In September, 1935, *Fortune Magazine* published a discussion of the medical implications of smoking. It concluded that:

> This much can be said: That the *possible* benefit to be derived from tobacco is always less than the *possible* harm (Robert, 1940: 256).

Official policy has never accepted this judgment. In recent years, steps have been taken to discourage smoking, although there is little conclusive evidence that consumption patterns are changing. It can be expected that official policy and alterations in individual behavior will both evolve slowly during the coming years. The socio-economic impact of a sudden change in official policy would be great, a circumstance reflecting the *momentum* of several centuries of intense commercial activity.

BOOKS

Reviewed

Problems in the Cost-Benefit Analysis of Marijuana Legislation

Theodore J. Schneyer*

MARIJUANA—THE NEW PROHIBITION. By John Kaplan. New York: World Publishing Co. 1970. xii + 387 pages. $8.50.

To receive and deserve attention, a book on an issue of popular concern should combine ease of comprehension with careful scholarship. Professor John Kaplan's recent book on the marijuana issue fits this prescription. Much of the book is a painstaking and cogent refutation of each major argument that marijuana consumption is dangerous. Armed with an unusually acute understanding of social science methodology, Kaplan attacks virtually all the pharmacological, psychological, psychiatric, and sociological data, collected over many decades, which are said to support the arguments that marijuana use (1) causes aggression and therefore violent crime;[1] (2) causes psychosis or lesser mental disturbance;[2] and (3) encourages the use of patently dangerous drugs such as amphetamines, barbiturates, and especially heroin.[3] The treatment of these issues is unassailable and, on the basis of existing evidence, Kaplan's conclusion seems warranted—marijuana use can be considered no more harmful to users and other members of society than the use of alcohol.[4]

The potential influence of the book is enhanced by the fact that it is not so much an evaluation of marijuana use as it is a cost-benefit analysis of those criminal laws whose manifest purpose is to deter sale and consumption of the drug. This approach allows the author to recommend repeal of the current laws and the establishment of a licensing system for the sale of marijuana on the basis of arguments which possibly would at-

* B.A. 1965, Johns Hopkins University; LL.B. 1968, Harvard University; Dip.C.L. 1969, University of Stockholm; Assistant Professor of Law, University of Nebraska.

2. Ch. V.
3. Chs. VI & VII.
4. Pp. 304–06. How much scientific evidence should be required before a drug is considered harmless is an open question. Popular standards seem to vary with the drug being considered. Some people, who on the basis of scant evidence have satisfied themselves that marijuana is relatively harmless, demand that insecticides and other mundane chemicals be subjected to strict and prolonged examination before they can be legally marketed.

tract the attention of a population disturbingly polarized on the issue of marijuana use itself. Kaplan is not a "pot" lover; he is the protector of a beleaguered legal system.

This review will concern three issues which are raised by an examination of the costs and benefits of the marijuana laws: (1) the effectiveness of the laws in deterring marijuana consumption; (2) the specific legal consequences or by-products of the laws; and (3) the general social consequences or by-products of the laws. This emphasis does Professor Kaplan an injustice for two reasons. First, much of his book is devoted to the effects of marijuana use itself. Second, this emphasis makes for a very theoretical review of an eminently practical book. However, Kaplan's demonstration that marijuana cannot be categorized as a particularly dangerous drug requires little comment. At the same time, his analysis of the deterrence provided by the marijuana laws and the indirect social and legal consequences of those laws, while provocative and rather novel, raises a number of theoretical and methodological problems. Further, Kaplan's arguments in these areas reach far beyond the marijuana issue: they are applicable, for example, to policymaking in the general area of "victimless" crime. Consequently, a critical tour of the side streets of *Marijuana* seems justified.

I. Effectiveness of the Marijuana Laws

Measuring the effectiveness of a law is extremely difficult. In gauging the extent to which the manifest purpose of the marijuana laws—to deter consumption—has been accomplished, the critical question is this: without the laws, how much more marijuana use would occur? The evidence which Kaplan marshalls to show that the laws are ineffective is not strongly probative. For example, he notes that in recent surveys, three-fourths of the nonusers of marijuana who were questioned did not list the laws as a reason for not having tried the drug.[5] As Kaplan admits, these reports are "subject to all the frailties of a person's evaluations of his own motives."[6] Quite possibly, persons who obey a legal norm simply because of its deterrent strength may, when questioned, prefer to cite more "moral" reasons for their conduct. These surveys would be probative only in conjunction with control data on the extent to which nonviolators of other laws cite the existence of laws as a reason for not engaging in the illegal conduct.

Next, Kaplan refers to a study which found that 73 percent of the student body at a California law school had used marijuana.[7] Of course this in itself

5. P. 323.
6. P. 324.
7. *Id.*

is not responsive to the critical question—without the marijuana laws how much more use would occur? But Kaplan argues that this data is probative because law students should be among the most deterrable members of society. At least in the case of the marijuana laws, this assumption is questionable. It is true that arrest and prosecution have uniquely unpleasant consequences for law students. But, as Kaplan himself suggests elsewhere, university students and campuses seem to enjoy an informal immunity from marijuana arrests.[8] Law students are particularly likely to recognize this fact and take advantage of it.

Finally, Kaplan argues that whatever the present effectiveness of the marijuana laws, they have become less effective in recent years, as evidenced by the fact that the incidence of marijuana use has risen more rapidly than arrest rates.[9] This argument rests on the shaky assumption that deterrence is solely a function of arrests as a percentage of total violations. Other factors such as the layman's ignorance or uncertainty about the probability of arrest and the absolute number of arrests, if well-publicized, may be relevant here.

Since marijuana violations are "victimless" crimes, rarely discovered by the police because they do not generate complainants, the marijuana laws are probably ineffective compared with criminal laws proscribing conduct that harms persons or property. Beyond this common sense notion, however, Kaplan has provided no convincing proof that the marijuana laws are ineffective and no explicit basis for comparing the effectiveness of different laws.

II. Legal Costs

One set of consequences of the marijuana laws might be termed "legal costs." These are negative effects which are borne by the legal system. They include actual enforcement costs, selective enforcement costs, negative effects on the police, and diminished respect for law. Kaplan's inclusion of these legal costs seems motivated by more than a desire for completeness or a strategic decision to attack the marijuana laws indirectly. A further motivation is his obvious sympathy with a growing attempt to publicize the systemic needs and limits of our legal machinery and the costliness of law.[10] Presently, to paraphrase the legal-cost literature, legal costs are "ex-

8. P. 40.

9. P. 323.

10. Two seminal contributions to the "legal-cost" literature are H. Packer, The Limits of the Criminal Sanction (1968); Goldstein, *Police Discretion not to Invoke the Criminal Process: Low-Visibility Decisions in the Administration of Justice*, 69 Yale L.J. 543 (1960). For a provocative discussion of the legal costs involved in government decisions to compensate parties for property taken by condemnation, see Michelman, *Property, Utility, and Fairness: Comments on the Ethical Foundations of "Just Compensation" Law*, 80 Harv. L. Rev. 1165 (1967). According to Professor Michelman's schema, once a decision has been made to take property, whether to compensate should be determined

ternalities" of legal policy-making: legislators rarely take them into consideration and are not held accountable for them. Legislators are rarely blamed, for example, for the enormous discretionary power held by the police, even though this power is generated primarily by quantities of penal legislation far exceeding the police's meagre enforcement capacity.[11]

The empirical orientation of his cost-benefit methodology provides Professor Kaplan with an opportunity to make a contribution to the legal-cost literature by developing careful definitions and promising measurement techniques for heretofore elusive legal-cost variables like respect for law. Unfortunately, however, his treatment of legal costs is atypically skeletal and lacks the data-demanding pragmatism so evident elsewhere in the book.

A. *Actual Enforcement Costs*

Given the rudimentary methods used in police budgeting, segregating enforcement expenditures for particular laws is difficult. However, Kaplan cites an estimate that government agencies spent $72 million on marijuana enforcement in California in 1968.[12] Assuming these figures are correct, they say very little about whether the expense of enforcing marijuana laws is undesirably high.[13] The expense of marijuana enforcement is incurred primarily by those who favor the marijuana laws. Debate on those laws is primarily between taxpaying generations which support the laws and the younger, non-taxpaying generation, which does not.[14] In contrast to Pro-

by weighing the "demoralization costs" of not compensating (social unrest) against the "settlement costs" of providing compensation (the time, effort, and resources necessary to reach compensation settlements adequate to avoid demoralization). *Id.* at 1214–15.

11. *See, e.g.*, Goldstein, *supra* note 10, at 586–87.

12. P. 29.

13. In using the cost-benefit method of evaluating legislation, one must perform several operations. Known consequences of the legislation must be isolated and placed on the cost or benefit side, presumably according to some ethical theory. Assuming this results in entries on both sides of the ledger, the analyst must weight each according to its extent and significance. Theoretically, it is not sufficient simply to note that the marijuana laws have actual enforcement costs. There must be some basis for assigning a degree of significance to those costs.

One approach would be to consider enforcement costs in light of the manifest purpose of the marijuana laws and perhaps the degree to which that purpose is effectuated. The problem with this approach is that it involves a kind of bootstrapping. As with the traditional "armchair" method of evaluating legislation, the analyst's ultimate conclusion will tend to reflect only his assessment of the desirability of the purpose of the legislation rather than the aggregate desirability of its real consequences. Alternatively, the analyst could weight each cost or benefit according to its contribution to one or several independent positive or negative ends. For example, the actual enforcement costs of the marijuana laws could be weighted by considering the extent to which they cause taxpayer dissatisfaction, and/or by considering the opportunity costs of marijuana enforcement. With this approach it is necessary to select those independent ends that deserve consideration and to make ethical judgments about their relative significance—*e.g.*, to weight them. Since these ends might themselves constitute means to further ends, the process becomes extremely difficult and encourages "fudging."

Kaplan does not grapple with these problems and the reader gets little feel for the relative significance of the various costs of the marijuana laws which are noted. Since Kaplan finds very little on the benefit side of the marijuana law ledgers, the weighting problem does not seriously undermine his analysis. But these weighting problems will have to be solved before the cost-benefit method can be applied properly to thornier issues.

14. *See, e.g.*, pp. 13–16.

hibition, where debate was on religious and rural-urban lines, a very small percentage of those who call for repeal of the marijuana laws are taxpayers. Certainly it is no defense of a penal law that those whose freedom it constrains need not pay for its enforcement. But neither is it a strong criticism of a law that it is expensive to enforce—when the costs are knowingly borne by those who favor it. Knowingly may be a key word here. If the legal-cost literature correctly notes that legal costs are largely unrecognized, the expense of marijuana enforcement would not be an indicator of the laws' utility to taxpaying supporters.[15] But whether people actually recognize or care about the enforcement expense of the marijuana laws is an empirical question which Kaplan does not consider.

Next, Kaplan argues that enforcement of the marijuana laws involves large opportunity costs.[16] Without the marijuana laws, the considerable resources allocated to their enforcement would be available to our overburdened police, judicial, and correctional agencies for more pressing tasks. This argument rests on several assumptions which should be made explicit. It assumes—probably correctly—that enforcement agency budgets are insensitive to changes in substantive criminal law, so that repeal of the marijuana laws would not generate a corresponding reduction in budgets. Next, the argument assumes that resources used in marijuana enforcement could be used as efficiently for other tasks. Judges, for example, could effectively try more assault cases if they had no marijuana cases. With the police, however, the accuracy of this assumption is less certain. Insofar as police use specialized personnel and equipment for marijuana enforcement, shifting these resources to unrelated tasks might involve significant transfer costs.[17] Finally, for the police at least, the opportunity costs of enforcing the marijuana laws simply may be low. Insofar as police use unspecialized resources for marijuana enforcement, they may forgo very little deterrence and apprehension of non-marijuana criminals. As Kaplan himself notes in another context, a large number of marijuana arrests are mere by-products of investigations of other crimes.[18]

B. *Selective Enforcement Costs*

By Kaplan's accounting, another legal cost of the marijuana laws derives from their inevitably selective enforcement.

> Since there are far too many marijuana violators for the police to arrest or even investigate more than a small fraction, the police are forced to pick and

15. It may well be true that the tax incidence on individual taxpayers of the enforcement costs of any one criminal law are so slight that the taxpayers do not take those costs into consideration in forming an opinion about the law.

16. P. 29.

17. The resources could probably be shifted cheaply to the enforcement of other drug laws. Whether they could be used productively in that capacity is another question.

18. P. 364.

choose among possible violators. The existence on the books of laws turning a large proportion of the citizenry into criminals allows, indeed invites, the police to arrest for marijuana violations those who [*sic*] they feel should be dealt with for entirely different reasons.[19]

Contrary to Kaplan's analysis, it may be inappropriate to attribute the problems of selective enforcement to any particular set of laws. Selective enforcement is best viewed as a consequence of the large gap between full enforcement of all penal laws and our actual enforcement level.[20] So long as there is a substantial gap, selective enforcement is possible and probable. But the *marginal* selective enforcement costs of any particular law may be slight.[21] If Jerry Rubin had not been arrested three times for marijuana violations,[22] he, like many of us, could probably have been arrested for something else. Since Kaplan finds the marijuana situation analogous to Prohibition, it seems worth noting that Al Capone was convicted of tax evasion because the government wanted to halt his Prohibition violations, among other things, not vice versa.

C. *Negative Effects on the Police*

Kaplan argues that the marijuana laws pose a dilemma for enforcement agents. The police are told to enforce a victimless crime generally committed in private[23] and, at the same time, are ordered to respect a series of constitutional guarantees which protect individual privacy and dignity: "Since the police cannot possibly do both, they tend to focus their resentment on the guarantees that interfere with the performance of their duties, rather than upon the duties themselves."[24]

Why enforcing the marijuana laws is a policeman's duty but abiding by constitutional guarantees is not, is left unexplained. Nor is evidence offered that police tend to opt for the enforcement horn of the dilemma. Kaplan simply concludes that the marijuana laws, to a "considerable extent," have caused the erosion of police respect for constitutional principles.[25]

It is doubtful that American police had more than their present degree of respect for constitutional principles before marijuana violations became significant.[26] In addition, search and seizure limitations and other constitu-

22. *See* p. 40.

23. P. 42. Later, however, Kaplan argues that we cannot expect the marijuana laws to lapse quietly into desuetude because many marijuana violations are discovered in public and the police cannot ignore these. Pp. 363–64.

24. P. 42.

25. *Id.*

26. One expert has argued that American law enforcement has always been characterized by tension between the desire for police adherence to the rule of law or constitutional principles, on the

tional principles inimical to marijuana enforcement are of recent origin and could hardly have been internalized as values by the police before marijuana use became prevalent. Kaplan's argument, then, can be reduced to the unsupported assertion that without the marijuana laws these values might have been internalized to a greater degree than they have been.

Interestingly, Kaplan suggests that police resentment of constitutional principles is undesirable even when confined to the realm of opinion.[27] He is concerned, it appears, that police opinions might have negative legal or social consequences. In this context, consideration of the possible impact of marijuana repeal on police morale might have been appropriate.

D. *Diminished Respect for Law*

Kaplan takes the position that the marijuana laws have caused diminished respect for law in our society.

> In part because marijuana-users — unlike cheaters — do not rationalize their use of the drug as an aberrant event unrelated to their total personality [*sic*], it becomes especially unhealthy for their society to declare them serious criminals. It is obvious that when any society criminalizes such a large percentage of its young people, it raises very serious social problems. We do not know whether those who violate such serious criminal laws will thereby become more likely to violate others. It may or may not be true that the second crime becomes easier — though it is perhaps no coincidence that the Prohibition era and the present are two of the most lawless periods of our history. It is hard to see, however, how a realization that one has committed what is officially a very serious crime can fail to engender at least a somewhat more generalized lack of respect for both the law and the society that has so defined his action.[28]

Since Professor Kaplan offers no explicit definition of respect for law and makes no inquiry into the extent and significance of the diminished respect engendered by the marijuana laws, it is impossible to verify his conclusion that diminished respect for law should be counted as a serious cost of those laws. Because respect for law is an elusive concept, it would be unfair to expect a precise estimate of changes in the respect-for-law variable caused by the marijuana laws. Nevertheless, in what purports to be a cost-benefit analysis, some attempt at defining respect for law and suggesting ways of measuring changes in it seems called for.[29] In order to generate

one hand, and the demand for law and order or police efficiency, on the other. But, substantive norms such as the marijuana laws seem to have made only a marginal contribution to police disregard for constitutional limits on their conduct. The major determinants of this disregard are an American work ethic which insists on discretionary power even for lowly bureaucratic workers, a technical, efficiency-oriented rather than value-oriented sense of professionalism, and community demands for law and order at any cost. J. SKOLNICK, JUSTICE WITHOUT TRIAL (1966), esp. ch. 11.

27. P. 43.

28. P. 33.

29. The cost-benefit analysis of legislation presumably evaluates that legislation in terms of its real consequences. Of course the extent and significance of some consequences can be estimated only very roughly. But this limitation should only operate because the cost of gathering particular data is

means for evaluating Kaplan's conclusion on this issue, some analysis of respect for law will be undertaken here.

Presumably, respect for law is a factor—perhaps the major factor—in the effectiveness with which a legal system influences behavior. At present, however, we have little understanding of the sources of effectiveness of legal systems. One cluster of theories suggests that effectiveness is a function of popular reaction to substantive norms and their enforcement. Among these are "behavioral theories" and certain "legitimacy theories" of law.[30] We shall consider how a respect-for-law variable might be defined under both these sets of theories.

1. *The behavioral theory and non-enforcement.*

A behavioral theory of law would suggest that the legal system controls conduct through reward, punishment, conditioning, and coercion.[31] From this perspective, an argument that the marijuana laws have diminished respect for law might be phrased as follows: Insofar as marijuana sellers and users find they can violate the laws with impunity, they become more likely to commit other crimes because they discount the threat of punishment for other violations. Accordingly, the extent to which the marijuana laws cause a reduction in general respect for law might be measured by the extent to which marijuana violations go unpunished or the extent to which the marijuana laws are unenforced.

Even if respect for law is properly understood in these behavioral terms, however, there is little reason to suppose that unpunished violations of one penal law lead inexorably to violations of others. Professor Packer, who admits that "respect for law is a somewhat vague concept at best," discusses it in these terms.[32] He finds it unlikely that perception of the law's inability to control gambling, for example, has much effect on the deterrent efficacy of laws prohibiting, say, robbery. Police inability or reluctance to enforce a particular law would probably be the basis of a perception that another law will be unenforced only when there was a similar explanation for non-enforcement in both cases. Insofar as marijuana violations go un-

too high to make it worthwhile, or because of technological deficiencies in our data-gathering capacity. It is difficult to justify the inclusion in a cost-benefit analysis of effects like diminished respect for law, which are based on variables defined so vaguely that conclusions about them could not be verified under any circumstances. To be sure, there is a thin line between the praiseworthy task of locating previously misunderstood or unnoticed consequences of legal phenomena, even if they cannot be understood clearly as yet, and drawing inferences for legal policy from essentially metaphysical concepts.

30. For a discussion of alternative theories of legitimacy, see Friedman, *On Legal Development*, 24 RUTGERS L. REV. 11, 29–33 (1969). Of necessity, these theories will be discussed superficially and only insofar as they apply to Kaplan's handling of the respect-for-law issue.

31. This approach seems most useful when applied to the more mundane areas of human activity. For the classic application of behavioral theories to legal control of automobile traffic, see Moore & Callahan, *Law and Learning Theory: A Study in Legal Control*, 53 YALE L.J. 1 (1943).

32. H. PACKER, *supra* note 10, at 288–89.

punished because the victimless nature of the crime makes enforcement difficult, marijuana users might be encouraged to commit other victimless crimes. But this is a trivial problem: users and non-users alike can perceive on independent grounds that victimless crimes are difficult to enforce. On the other hand, if users consider marijuana non-enforcement a sign of general police incompetence or shorthandedness, diminished respect costs may be more severe. Some of these costs may be short-term, however, disappearing as marijuana users learn "the hard way" that other laws are better enforced.

2. The legitimacy theory—enforcement, enactment, and repeal.

A second understanding of respect for law arises from a "legitimacy theory" of the effectiveness of legal systems. According to one such theory, the effectiveness of legal controls is a function of the "goodwill" the system enjoys among members of society, and this goodwill, manifested by an attitude of obedience or respect for law, is built on the popular perception that the values embodied in substantive law are acceptable.[33] Under this approach, when a legal norm conflicts with values held by many persons, generalized respect for law among them tends to decrease, and the effectiveness of the legal system is impaired.[34]

That Professor Kaplan adopts this understanding of respect for law seems clear from his approving quotation of the following letter from a psychologist discussing student attitudes toward the marijuana laws:

> More seriously, their attitudes generalize into a general disrespect for law. Their "reasoning," although it is not quite as logical as the statement implies, runs something along the line, "This law is stupid and unjust; probably a lot of other laws are stupid and unjust. I am not going to be too concerned about violating this law—or other laws that seem to interfere with my total freedom." [Thus] a general disrespect for law is engendered.[35]

There are serious problems with Kaplan's inclusion of diminished respect for law, under the legitimacy theory, as a major cost of the marijuana laws. First, conflict between marijuana laws and individual or group values may not be the exclusive cause of the disrespect for law prevalent among

---

33. From this perspective, substantive due process may be viewed as a strategic consideration in the attempt to maintain legal effectiveness. Use of substantive due process to invalidate widely or intensely unpopular legal norms may operate as a guarantor of legal effectiveness. For a recent call for the application of substantive due process to those criminal law norms that create victimless crimes, see Packer, *The Aims of the Criminal Law Revisited: A Plea for a New Look at "Substantive Due Process,"* 44 S. CAL. L. REV. 490 (1971).

34. Those who violate the legal norm and whose values conflict with it have been termed "enemy deviants." Enemy deviants, as contrasted with repentant deviants, sick deviants, and cynical deviants (professional criminals), are said to present a threat to the legitimacy of the normative order. Gusfield, *Moral Passage: The Symbolic Process in Public Designations of Deviance*, 15 SOCIAL PROBS. 175 (1967).

35. P. 34.

young people. Extralegal factors may be important as well. Rapid social change and alienation, the Vietnam war, and hostility to all constraints on individual freedom, for example, may be prime determinants of this disrespect. From this perspective, disenchantment with the marijuana laws may be largely a manifestation of pre-existing disrespect and may contribute to that disrespect marginally or not at all.[36]

Second, because Kaplan is unclear on how an unpopular law might trigger diminished respect, it is difficult to estimate the diminished-respect-for-law costs of particular laws. It is possible that enforcement of unpopular norms is the triggering mechanism.[37] Persons who have values antithetical to those embodied in a legal norm may lose respect for law only insofar as enforcement of the norm constrains them from acting according to their values. It is also plausible, however, that the mere enactment of a law which contravenes the moral values of a subculture generates diminished respect for law among members of that group.[38] Indeed, Professor Kaplan himself suggests that the mere enactment or existence of the marijuana laws causes diminished respect for law among users.[39]

Further, if the mere enactment or existence of a legal norm antithetical to the values of some group can cause diminished respect for law in that group, there is no a priori reason to suppose that repeal of a legal norm which comports with the values of a substantial segment of society would not have similar effects.[40] This has obvious implications for the marijuana case. A large number of Americans clearly consider marijuana use improper and still support the marijuana laws. Professor Kaplan does not consider the effect of the marijuana laws on respect for law among these people. But if respect for law is properly defined according to the legitimacy theory, and if respect-for-law effects flow from enactment—and potentially, therefore, from repeal as well—this effect is a relevant consideration. Since Kaplan's ultimate conclusion is that the marijuana laws should be repealed, his analysis of respect for law should have focused on the rela-

36. While Kaplan clearly recognizes that extralegal factors may be determinants of disrespect for law, he does not consider the possibility that, given such extralegal factors, the negative impact of the marijuana laws on respect for law might be slight.

37. Using this approach, the diminished-respect-for-law costs of different laws could be estimated by multiplying the enforcement rate of each (arrests or convictions/violators) by the number of enemy-deviant violators of it, and, perhaps, by some index of the intensity with which these violators hold values antithetical to those embodied in the law. A more sophisticated estimate would include a measure of the average punishment borne by convicted violators.

38. Mere enactment of Prohibition may have generated such a reaction among Catholic and/or urban "Wets." *See* J. GUSFIELD, SYMBOLIC CRUSADE 67–68 (1963). Insofar as enactment is the triggering mechanism for diminished respect for law, one might estimate the diminished-respect costs of an unpopular legal norm simply by the number of enemy deviants from the norm and the intensity of their hostility to it.

39. In discussing the effects of the marijuana laws on marijuana users generally, rather than simply on those users who have been arrested, Kaplan says, "Each member of this far larger group has been at least partially alienated from our society by the fact that even though he has not been caught, he has nonetheless been made into a criminal." P. 32.

40. *See, e.g.*, J. GUSFIELD, *supra* note 38, at 128.

tive diminished-respect-for-law costs of retaining the laws and repealing them. Such an approach might have led Kaplan to recommend not speedy repeal, but legislative inaction until sufficiently strong norms of tolerance for marijuana use develop, so that subsequent repeal would involve small respect-for-law costs.

Rather than addressing these empirical issues, Kaplan takes a normative tack, arguing that repeal should not be perceived as an official approval of marijuana use because the costliness of the laws constitutes grounds for repeal independent of the propriety of marijuana use.[41] This approach violates the tenets of cost-benefit methodology. If a respect-for-law variable is to have a proper place in the cost-benefit analysis of legal phenomena, it must be given empirical content. The question is how marijuana repeal would be received, not how it should be perceived.

To be sure, there are pragmatic reasons to suppose that diminished-respect-for-law costs generated by speedy marijuana repeal would be slight. One might argue, for example, that those who approve of the marijuana laws tend to be our most law-abiding citizens, and that even if repeal diminished their respect for law, it would do so only to a subliminal degree. Repeal, in other words, would not render problematic the law-abidingness of those who disapprove of marijuana use. A counterargument, of course, is that even minor reductions in respect for law among a majority of Americans might be harmful.

One might also argue that disapproval of marijuana use is a demonstrably indefensible moral position, because, as Kaplan shows, marijuana use is relatively harmless to users and other members of society. Further dissemination of information about the relative harmlessness of marijuana will cause a transformation of values so that, in a short time, few people will be "offended" by marijuana repeal.[42] This position relies on the questionable assumption that most people adopt moral values and attitudes on the basis of rational inquiry and utilitarian ethics. But religious training, peer group and community pressures, and the media may be strong factors in attitude formation. Long before national Prohibition came into being, "reasonable men" understood that moderate consumption of alcohol was relatively harmless. This knowledge did not prevent adoption of the Eighteenth Amendment.

3. *Conclusions about respect for law.*

Respect for law is an enormously complex concept. Since we do not adequately understand the sources of a legal system's effectiveness, we can

41. Pp. 312–13; *cf.* H. PACKER, *supra* note 10, at 304. For criticism of Professor Packer's handling of the repeal problem, see Griffiths, *Book Review*, 79 YALE L.J. 1388, 1462 & n.291 (1970).

42. P. 18.

make no confident choice among conflicting definitions and measurement techniques for a respect-for-law variable. If a behavioral theory of law correctly explains the effectiveness of legal systems, diminished respect for law would be primarily a function of non-enforcement. On the other hand, under the legitimacy theory, diminished respect for law is caused by the enforcement or perhaps the mere existence of unpopular norms. Of course both the behavioral and the legitimacy theory may have merit; an effective legal system may require substantial degrees of both coercive power and goodwill. If this is true, the marijuana laws may indeed cause significantly diminished respect for law, since many marijuana violations go unpunished, but the laws do exist and often are enforced. If the legitimacy theory has merit, however, it is plausible that repeal of the marijuana laws might cause disrespect for law among those who disapprove of marijuana use. It is difficult to say, therefore, whether retention or repeal of the marijuana laws involves larger diminished-respect costs.

The discomforting aspect of a respect-for-law variable is its simultaneous vagueness and wide relevance to social issues. Surely there is no good reason to limit its applicability to criminal law policy.[43] Whether one favors a behavioral or legitimacy theory of law, respect for law seems vitally relevant to such issues as gun control, desegregation, and civil rights—areas in which legal control is difficult and legal intervention likely to be simultaneously hailed and despised. For the present, inclusion of respect-for-law considerations in debate on such issues is likely to spread more confusion than light. In many instances, the behavioral and legitimacy theories will have very different policy implications.[44]

III. Social Costs and Benefits

Professor Kaplan argues that the marijuana laws have certain social costs besides those incurred specifically by the legal system. For example, by discouraging research on the effects of marijuana,[45] by forcing drug educators to be dissimulating in their evaluations of marijuana,[46] and by

43. Professor Michelman's analysis of "demoralization costs" as a product of condemnation of property without compensation is an interesting application of the respect-for-law concept to property law. *See* Michelman, *supra* note 10, at 1214–15.

44. There are laws, for example, which can be effectively enforced but which embody very unpopular norms. Thus in the late 19th century, the Federal government waged a crusade against polygamous relationships among Mormons in Utah. Polygamy laws could be enforced with some effectiveness because the government controlled important incidents of marriage—divorce, legitimacy of children, and inheritance—and because it was often difficult to keep polygamous relationships secret over a period of years. On the other hand, the laws were extremely unpopular. Largely because of the hierarchical structure of the Mormon community, polygamous marriages were eventually curtailed. The point is, however, that the behavioral and legitimacy theories, when applied to this situation, would generate different predictions of the respect-for-law costs of the government crusade. *See generally* Linford, *The Mormons and the Law: The Polygamy Cases* (pts. 1–2), 9 Utah L. Rev. 308, 543 (1964–65).

46. Pp. 37–38.

placing police, of whom young people are often suspicious, in the role of educators,[47] the marijuana laws hamper our drug-education effort. Further, and quite ironically, the laws may encourage use of genuinely dangerous drugs. Since our constrained drug-education effort results in too little explicit distinction between marijuana and other drugs, young people remain naive about the variable hazards of different drugs. Since users know that marijuana is illegal but believe it is harmless, they may tend to consider other sanctioned drugs harmless as well. Also, since the marijuana laws do limit somewhat the supply of the drug, imprudent users may be "forced" by the laws to seek "hard" drugs because marijuana is unavailable.[48]

Although Kaplan's arguments that the marijuana laws hamper drug education and indirectly encourage use of dangerous drugs seem sound, they are supported by little empirical evidence. Therefore, the extent of these social costs is unclear. It may be that we now have upon us a generation of drug cognoscenti, so that these social costs are not great. However, as long as drug exposure continues to trickle down to younger and more naive users, these costs will probably remain significant.

A. *Symbolic Functions*

Interestingly enough, Professor Kaplan detects certain social consequences of the marijuana laws which he does not include in his cost-benefit analysis. These are the so-called "symbolic functions"[49] of the laws.

> To understand how issues other than the costs and benefits of the law intrude into the marijuana question, we must appreciate the symbolic function of the law. Not only does the criminal law exert direct controls on behavior through deterrence and through removal of offenders from the community, but it often has a far broader impact. . . . Even where the law does not inhibit illegal behavior, it stamps as . . . inferior those groups that tolerate the behavior.[50]

On first impression, Kaplan's unexplained exclusion of the symbolic functions of the marijuana laws from his cost-benefit analysis seems inconsequential. Since these symbolic functions ostensibly involve only the arbitrary denomination of some social groups as inferior (which could

47. P. 38. That the marijuana laws hamper our drug education effort may be a minor cost of those laws. The seriousness of the cost presumably depends on the benefits of unhampered drug education. We have very little knowledge of the extent to which drug education programs reduce drug abuse.

48. Pp. 216–19.

49. The terms "symbolic legislation" and "symbolic functions" of law are fraught with ambiguity. Symbolic legislation, for example, is sometimes used to refer to laws that may be directly instrumental in deterring certain conduct, but the conduct deterred is symbolic or expressive in nature. Laws prohibiting flag desecration, draft card burning, and perhaps consumption of alcohol or marijuana fit into this category. Sometimes, however, the term symbolic legislation is applied to laws which ostensibly are intended to curb instrumental behavior, but which actually serve only to symbolize disapproval of that behavior and render quiescent those members of society who disapprove of the behavior. *See* Edelman, *Symbols and Political Quiescence*, 54 AM. POL. SCI. REV. 695, 702 (1960).

50. Pp. 3–4.

hardly be socially beneficial), and since Kaplan's ultimate conclusion is that the marijuana laws result in a net social cost, the exclusion cannot have biased the results.

However, a categorical denial that the symbolic functions of laws can be socially beneficial is unfounded. Kaplan's recognition of the symbolic functions of the marijuana laws derives from a study of Prohibition by Joseph Gusfield, a sociologist.[51] According to Gusfield, Prohibition did not successfully curb consumption of alcohol but served as a denigration of Catholics and other predominantly urban ethnic groups while affirming the life-styles of rural Protestants and "native" Americans. This is the kind of negative or neutral symbolic consequence that Kaplan finds with the marijuana laws—their existence is perceived as denigrating the life-styles of hedonists, radicals, those who question authority, and in large part the younger generation.[52] But Gusfield also hints that some laws which have essentially symbolic rather than instrumental functions may be useful in a highly pluralistic society.

> The evasion of normative patterns occurs when a pattern of behavior regularly expected in the society is performed and is unpunished although the written, publicly stated norms of the society call for punishment and proscribe the behavior . . . .
>
> Williams has interpreted institutional evasion as functional in a society of great cultural inconsistencies. Those groups who adhere to the public norm see it upheld at the public level while those whose cultural norms are offended are able to pursue the behavior they find legitimate. Conflict between the two groups is thus minimized. The existence of divergent and potentially conflicting cultures "does not necessarily constitute any particular problem for the society as a whole so long as the two groups are not in direct interaction and do not directly confront one another's differing orientations."[53]

Thus, certain laws, operating as symbols, may serve to reduce social conflict.[54] It is at least arguable that such conflict reduction would constitute a social benefit. In light of Gusfield's discussion, it is puzzling that Kaplan does not consider the possible conflict-reduction benefits of the marijuana laws. Of course, the older and younger generations whose conflict is symbolized by the marijuana issue may be forced to confront one another's values and behavior so openly and frequently that the laws do not serve to reduce the level of conflict between them.[55] This caveat suggests that

51. J. GUSFIELD, *supra* note 38 *passim*.

52. Pp. 6–16.

53. J. GUSFIELD, *supra* note 41, at 115.

54. The theory that "patterned evasion of norms" is useful in a pluralistic society may be relatively inapplicable to industrialized, mobile societies like ours, in which contending cultures inevitably have broad contact with one another. The theory might best fit conditions in societies where contending cultures are territorially segregated.

55. Contrast the generational conflict symbolized by the marijuana laws, for example, with the predominantly urban-rural split on the Prohibition issue.

the conflict-reduction consequences of marijuana legislation are difficult to measure and weigh, and, perhaps, that they could justifiably be excluded on these practical grounds from the cost-benefit analysis. However, since Kaplan elects to include the diminished-respect-for-law costs of the marijuana laws in his analysis, and since those costs seem as difficult to evaluate as the laws' symbolic functions, we must conclude that the latter are omitted for theoretical rather than practical reasons.

There are two plausible theoretical explanations for Kaplan's handling of the symbolic functions of the marijuana laws. First, he may share with Professor Packer an a priori belief that the criminal process has certain essential purposes and should serve no other "covert" functions. According to Professor Packer:

> The function of the criminal sanction is to help prevent or reduce socially undesirable conduct through the detection, apprehension, prosecution, and punishment of offenders. This is the only function that its rationale permits and this is the only function with which its processes are adequately equipped to deal. However, a number of covert functions have made an appearance, in some cases coming close to monopolizing the resources devoted to enforcing particular criminal proscriptions.[56]

Thus Packer recognizes that invocation of the criminal process sometimes must be understood as serving symbolic or otherwise covert functions. His reasons for considering these functions invariably undesirable remain unclear, however. Certainly the categorical and a priori nature of this approach seems antithetical to the cost-benefit methodology which Kaplan employs, and anyone who happens to disagree with the approach might be justified in considering Kaplan's analysis incomplete.[57]

A second reason for Kaplan's not including symbolic functions of law in his cost-benefit analysis might be the difficulty of placing such symbolic functions of law as the reduction of conflict between generations or subcultures into a utilitarian, cost-benefit framework. Utilitarianism is something more than the assertion that the social costs and benefits of actions can be determined scientifically; it is, in other words, more than a method. Utilitarianism is also the theory that the social good is nothing more than

---

56. H. PACKER, *supra* note 10, at 293. For a more direct attack on the use of law to serve symbolic functions, see L. FULLER, THE MORALITY OF LAW (1964). "If, as sometimes seems to be the case, laws prohibiting the sale of contraceptives are kept on the books as a kind of symbolic act, with the knowledge that they will not and cannot be enforced, legal morality is seriously affected. There is no way to quarantine this contagion against a spread to other parts of the legal system. It is unfortunately a familiar political technique to placate one interest by passing a statute, and to appease an opposing interest by leaving the statute largely unenforced." *Id.* at 153. While it is clear that the use of law to serve symbolic or otherwise covert functions involves legal costs such as selective enforcement, it hardly follows that such use of law is never justified. Ultimately the Packer-Fuller position must rest on its assessment that the ends served by such use of law are never worthwhile when weighed against the legal costs generated.

57. *Cf.* Griffiths, *supra* note 41, at 1462 & n.291.

maximization of the aggregated welfare of the individual members of society.[58] A utilitarian will tend to consider as costs and benefits of penal laws only those consequences which involve harm and the prevention of harm to specific individuals. Because he views society as atomistic, the utilitarian has no theoretical wedge into the problems of cultural conflict and no tools for analyzing the conflict-reduction consequences of particular legal norms.

Some of the recent criticism of laws which create "victimless" crimes has been based on the practical difficulty of enforcing those laws. Much of it, however, flows from a utilitarian ethic. The typical argument is that laws proscribing certain sexual conduct, laws against marijuana use, and sumptuary laws in general have little or no utility because they proscribe conduct which results in harm to no specific individuals. But according to a long line of sociological literature, a utilitarian ethic generates insufficient social order; some ritual and symbolism is necessary to contain social conflict and reinforce social cohesion.[59] Even if this "organic theory" of society is correct, of course, penal law may still be an improper repository for ritual and symbols. But Kaplan neither argues against the organic theory nor defends an exemption for penal law from its application. Conceded, our current knowledge of social control is insufficient for us to say with assurance that the organic theory is correct. But this argues for modesty and caution in formulating criminal law policy, not for ignoring the possible symbolic functions of penal laws.

IV. Conclusion

Professor Kaplan deserves unqualified praise for his rigorous analysis and critique of the prevailing theories that marijuana use is harmful. His book should be applauded as a pioneering effort to evaluate legislation in a new and promising way. Rather than confining himself to a consideration of the desirability, in the abstract, of deterring marijuana use, Kaplan attempts a comprehensive cost-benefit analysis of the actual legal and social consequences of the marijuana laws.[60] As with early television or any other innovation, however, the cost-benefit technology employed here needs re-

58. For criticism of the atomistic aspect of utilitarianism, see T. Parsons, The Structure of Social Action 51–60 (3d ed. 1968).

59. For a discussion of Emile Durkheim's approach to these problems, see T. Parsons, *supra* note 58, at 344–49, 402–03. Professor Griffiths has argued that certain aims of the criminal law other than the prevention of harm to individuals may be reconciled with utilitarian ethics. He considers "reprobation"—the maintenance and reinforcement of the morality of a society—such an aim. At least as a matter of intellectual history this position is questionable. Durkheim's preoccupation with social cohesion and the moral dimension of society was essentially a reaction to utilitarianism. *See* Griffiths, *supra* note 41, at 1420.

60. Although not unprecedented, the cost-benefit approach has rarely been used to generate legal policy recommendations on major social issues. For another example, see G. Calabresi, The Costs of Accidents (1970).

finement. Our present understanding of the interrelationships of social institutions is so limited that many effects of the marijuana laws probably reverberate through society in currently trackless ways.[61] Necessarily, therefore, Kaplan's analysis is incomplete. It should nonetheless be extremely effective in generating more enlightened debate on the marijuana issue than we have had heretofore.

Even within the bounds of currently existing social theory, there are certain problems with Kaplan's cost-benefit method which must be overcome if it is to be generally accepted. In particular, Kaplan's handling of the respect-for-law concept and his unexplained segregation of the symbolic functions of the marijuana laws from his cost-benefit analysis need considerable clarification. For the present, Kaplan's vague assertions that the marijuana laws cause diminished respect for law, rather than sensitizing the public to the costliness and limited capacities of law, leave him sounding rather like a lobbyist for the legal system—one who equates his conception of a healthy legal system with the overall good of society.

61. One could, of course, conjure up a near infinite array of plausible positive and negative consequences of the marijuana laws which have not been given a place in Kaplan's analysis. One might argue, for example, that one benefit of the marijuana laws is that they have created considerable pressure for reform of police practices, criminal court practices, and the practices of correction agencies. This mechanism could be explained by the fact that marijuana violators, in contrast to violators of most criminal laws, are often from middle-class families, and effective pressure for reform of the criminal process requires middle-class support. Kaplan can hardly be criticized for not considering such speculative arguments, but their existence suggests that Kaplan's conclusions must be considered tentative.

THE TIME HAS COME TO LEGALIZE MARIJUANA

by Arthur D. Hellman

THE TIME HAS come to eliminate criminal penalties for the use and distribution of marijuana.

In saying this, I do not mean to advocate the use of marijuana or any other intoxicant. Nor do I deny that marijuana may prove to have some detrimental effects on physical or mental health (though the scanty evidence available today suggests that marijuana is probably less harmful than alcohol). My position, rather, is this: The laws against marijuana must be repealed because they cannot be enforced except at a cost which society cannot afford to pay.

Discussions of marijuana often bog down in disputes over basic facts. A recent law review article has summarized much of what is known about the drug:

> Marijuana comes from the flowering tops of the leaves of the female hemp plant .... In the United States, the dried leaves are smoked in the form of a cigarette ...., occasionally mixed with tobacco. ... The psychic changes induced vary with the individual, his existing mood, and environmental conditions. The usual effects are hilarity and a general breakdown of emotional restraints, although occasionally the individual becomes quarrelsome. Distortion in perception of time and space is common, and auditory perceptions of a rhythmic nature are markedly accentuated, leading to rather extensive use among musicians. ....

Beyond these facts, it would be difficult to secure agreement about what marijuana is or what it does. However, current knowledge does permit certain conclusions about what marijuana is *not*.

Marijuana is not a narcotic.

Though most state laws classify marijuana with narcotics such as heroin and opium, marijuana lacks most of the important characteristics of the true narcotics. It does not produce physical dependence or addiction. Discontinuance of use does not result in withdrawal symptoms. Users do not require ever larger doses in order to obtain a "high;" indeed, very small doses may suffice for the experienced user.

There is no evidence that use of marijuana leads to the use of heroin or other stronger drugs.

It is true that many heroin addicts, perhaps a majority, begin with marijuana and progress to the "harder" drugs. But to conclude from this that someone who uses marijuana will probably take up the use of heroin goes contrary to logic as well as experience. Logically, the argument rests on the fallacy known as the undistributed middle. And the evidence today indicates that millions of individuals have smoked marijuana casually or regularly without ever resorting to the true narcotics.

There is no evidence that the use of marijuana leads to crimes of violence.

Here again marijuana differs from the hard narcotics. The heroin addict requires ever larger doses of an expensive commodity. Often he can supply his need only through crime. But marijuana is not addictive and it is far less expensive than heroin. Virtually every study, starting with the famous LaGuardia Committee Report of 1944, has found the evidence inadequate to substantiate the reputation of marijuana for inciting people to antisocial acts.

Other questions relevant to the issue of legalizing marijuana cannot be answered at this time; some may be impossible to answer.

What are the long-term physiological and psychiatric effects of marijuana?

Because research has been so limited, very little is known even about the short-term effects. The President's Committee on Law Enforcement, after suggesting that marijuana could probably be best classified as a "mild hallucinogen," continued:

> [H]allucinations are only one of many effects the drug can produce. It can impair judgment and memory; it can cause anxiety, confusion, or disorientation; and it can induce temporary psychotic episodes in predisposed people.

In 1968, however, Drs. Andrew Weil and Norman Zinberg conducted what were probably the first scientific experiments to determine the effects of marijuana. They reported:

> Marijuana .... had no effect on pupil size, blood sugar, or respiratory rate. .... [This] makes it unlikely that marijuana has any seriously detrimental physical effects in either short-term or long-term usage. .... All in all, we think it is fair to say that in terms of medical dangers only, marijuana is a relatively harmless intoxicant.

As to psychological effects, the researchers concluded:

> [M]arijuana seems to affect little in the brain besides the highest centers of thought, memory and perception. It has no general stimulating or depressive action on the nervous system .... no influence

---

ARTHUR D. HELLMAN, a native of New York, is a graduate of Harvard College and Yale Law School. He served for 1 year as a clerk to Associate Justice James C. Otis of the Minnesota Supreme Court before joining the faculty of William Mitchell College of Law in 1967. He teaches courses in Constitutional Law, Labor Law and Local Government. He served on the editorial board of the Harvard Crimson, was city editor of a small daily newspaper in upstate New York and has worked for the National Labor Relations Board.

on lower centers like those controlling the mechanical aspects of speech and coordination (hence no slurred words or staggering gait). As a result it seems possible to ignore the effects of marijuana on consciousness, to adapt to them, and to control them to a significant degree.

Weil and Zinberg readily admit that their experiments were exploratory, their conclusions tentative. As to long-range psychiatric effects, they could only urge further research.

However fragmentary they may be, the Weil-Zinberg experiments are thus far the only ones of their kind. At the very least, they cast grave doubt on the position that marijuana is a dangerous drug whose use must be curtailed whatever the cost.

Would legalizing marijuana lead to an increase or a decrease in its use?

The answer might seem self-evident but in fact it is not. True, many nonusers might at least try marijuana if its use were no longer subjected to criminal sanctions. On the other hand, there may be many users today for whom the illegality is as much the incentive as the prospect of a "high." It is relevant, though not conclusive, that per-capita consumption of liquor *increased* during Prohibition. One possible result of legalization would be a sharp increase in use followed by a gradual decline as the novelty wore off—if it has not done so already.

Would (or does) the widespread use of marijuana harm society?

Quite apart from the dearth of information, and the further problem of distinguishing between causes and effects, this question cannot be answered without making an individual judgment about social values. As Professor Michael Rosenthal has pointed out, what is a very serious risk to some observers may appear to others as a desirable effect, for example: "dropping out."

On the basis of today's knowledge, then, the dangers of marijuana are largely hypothetical. The consequences of criminalizing the use of marijuana, on the other hand, are real and devastating.

Under present Minnesota law—amended as recently as 1965—the sale or possession of marijuana is a felony which may be punished by a fine of up to $10,000 and a jail term for not less than 5 nor more than 20 years. Anyone convicted of selling or furnishing marijuana to a minor is to be punished by a fine of up to $20,000 and a jail term of not less than 10 years (the maximum term is 40 years). This statutory scheme is indefensible.

Penalties for the possession or distribution of marijuana are grossly out of proportion to the nature of the offense.

The minimum penalty for the possession of marijuana—5 years—is equivalent to the maximum penalty for criminal negligence in the operation of a vehicle resulting in death. And since the legislature has not prescribed minimum penalties for murder or manslaughter (except first-degree murder), it is quite possible that penalties for marijuana violations will exceed the penalties imposed in murder cases. A grand jury in Houston, Texas, noting that this has actually happened, commented: "Surely this is not justice according to our national ideals, ideals which proclaim human life as of the greatest value."

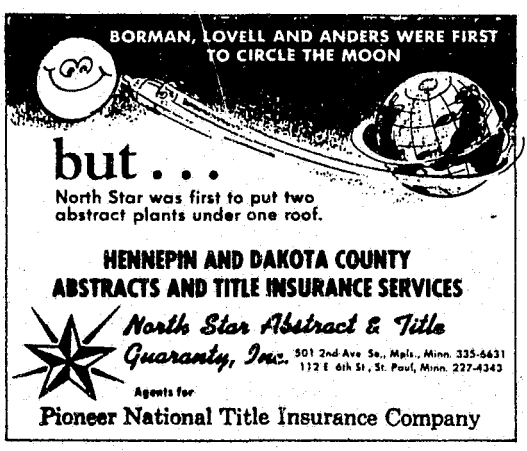
Because the penalties are so disproportionate, few individuals will be convicted of marijuana offenses, despite the widespread use of the drug. The result is disrespect for the law.

It is impossible to estimate the number of people in this state (or elsewhere) who have experimented with marijuana. We do know that the number is large and growing. Yet few are arrested; and of those arrested fewer are prosecuted and fewer still are convicted. The reason, of course, is that judges and law enforcement officials are reluctant to stigmatize an individual, especially a young middle-class person, with a felony conviction. As Herbert Packer puts it, "Given the devastating consequences of a criminal conviction to a middle-class person and the growing ambivalence among law enforcement officers about the severe marijuana laws, every avenue of discretion is used to minimize the impact of the law." Certainly I do not suggest that this humane policy be changed. But the fact that, with rare exceptions, the laws against marijuana may be violated with impunity can hardly instill respect for law generally, especially in the young.

Under the present system, enforcement of the marijuana laws must be sporadic and to a large extent arbitrary.

Marijuana smoking today is widespread; its use is difficult to detect; the courts are reluctant to brand young users as felons. Arrests and convictions, therefore, are relatively rare. But they do happen. And when arrests are made, they are as often as not the result of happenstance or, worse, arbitrariness. As Professor John Kaplan has noted, "The typical marijuana arrest occurs by chance. . . . For the . . . member of the middle class, marijuana possession arrests occur usually because of some freak occurrence."

Professor Kaplan continues, "The arbitrariness in the enforcement of the marijuana laws by no means ends with the arrest. At each further stage of the prosecution there is a decision which may be arbitrary." (He refers to the decision to prosecute, the judge's rulings at the trial, and the sentencing process.) Moreover, enforcement is not even-handed. Though there is widespread evidence that the middle class



and the professions have begun to "turn on," it is the black citizen, the student, or the fellow with a beard who is likely to be arrested.

Laws against marijuana make criminals out of a large section of the population which is otherwise law-abiding.

The effects on those who are convicted, or even arrested without ultimate conviction, are obvious enough. As Professor Rosenthal puts it: "Probably never before in our history has the mere possession of a criminal record been as serious and detrimental as it is today." But the effects of criminalization extend even to those who never come into contact with the law. "Merely labeling users and sellers also as members of a criminal class may make both themselves and others think of them as criminals or 'outsiders' and thus further alienate them from society." Professor Kaplan asks, "[W]ho can compute the social cost of a law which turns approximately 30 percent of the population of the state [California] between the ages of 16 and 25 into serious criminals?"

The laws against marijuana cannot be enforced without the use of undesirable police practices.

Marijuana is used in private. Distribution is accomplished through transactions between willing parties, neither of whom has reason to complain. To enforce the laws against marijuana, therefore, the police must resort to the least savory methods of detection. These include unlawful or borderline searches and seizures; the use of informers and undercover agents; and practices approaching entrapment. Such techniques not only invade the privacy of citizens; they also degrade the police. They are difficult to justify under the most exigent circumstances, and enforcement of the laws against marijuana hardly seems to fall into that category.

Retaining our present laws against marijuana can only result in widespread disrespect for law and alienation from society of large numbers of young people.

Certainly it would be an oversimplification to blame the marijuana laws for the disaffection with the values of "middle America" so prevalent among those under 30. But the harsh injustice of the marijuana laws is so egregious that young people can hardly be blamed for rejecting not only the particular laws but also the entire legal structure which supports them. Professor Kaplan predicts that "when the present generation of young users reaches the age at which they may sit on juries it is not unreasonable to expect the enforcement of the marijuana laws to collapse as completely as did alcohol prohibition." By that time, however, it may be too late to restore the faith in law of the generation now coming to maturity.

Within the last year or two there has developed a broad consensus (shared by many prosecutors) that the laws against marijuana are indeed too harsh. The consensus breaks down, however, over the form that changes should take. Three principal views have been put forward:

(1) Marijuana should be dealt with separately from the true narcotics, rather than lumped together with them as it is now. The offenses of possession and use should be reduced to the status of misdemeanors; special care should be taken to insure that conviction need not result in a permanent criminal record. Penalties for distribution should be retained.

(2) Penalties for use or possession should be eliminated; penalties for sale and distribution should be retained or even strengthened.

(3) All criminal sanctions for use and distribution should be eliminated, though distribution should be controlled and advertising prohibited.

For the reasons which follow, I believe that the last suggestion is the only viable one.

If the legislature is not willing to do away entirely with criminal sanctions for the use and distribution of marijuana, reducing penalties—as several states have already done—might seem to be a desirable compromise. But making possession a misdemeanor rather than a felony would not mitigate most of the problems of the present statutory scheme, and it might exacerbate some of them. Enforcement will continue to be sporadic and arbitrary; detection of offenders will still require the use of unsavory police methods; and the law will continue to criminalize a large section of the population. Indeed, if possession is reduced to the status of a misdemeanor, law enforcement officials might be less reluctant to arrest and prosecute and judges might be less reluctant to convict. As a result, the most disastrous consequences of the present system—the criminalization and alienation of a large proportion of the population under 30—will only be aggravated.

Nor will it solve the problem to legalize use and possession but continue or strengthen prohibitions against sale and distribution. As the *Vanderbilt Law Review* has pointed out, "legalization will serve no purpose unless it gives, with certain limitations, those who desire to use marijuana the opportunity to obtain it." Even Professor Rosenthal, who advocates "significant (though not inordinate) sanctions" for commercial trafficking, admits that "As long as sales are unlawful, use of informants and undercover agents is necessary, and practices approaching the borderline of entrapment are likely to occur." Moreover, legalizing the use of marijuana while prohibiting its sale will intensify the effect of what Professor Packer has called the "crime tariff." The result will not be to make marijuana so expensive that people will stop buying it; rather, the law will "secure a kind of monopoly profit to the entrepreneur

who is willing to break the law."

Prohibition, Professor Packer points out, was a classic example of the operation of the crime tariff. The prohibition laws were also responsible for innumerable instances of police misconduct which we would today find reprehensible; during the era of Prohibition the Fourth Amendment in particular became almost a dead letter. The Volstead Act, it should be remembered, exempted from its penalties the possession of liquor in a private dwelling for personal use. To retain criminal sanctions for the sale or distribution of marijuana would expose the nation to many of the same evils spawned by Prohibition.

Legislation which would avoid these consequences while retaining reasonable controls over the sale of marijuana has been outlined by the *Vanderbilt Law Review*. The elements of the statutory scheme are these:

(1) Criminal sanctions for acquisition, use, and simple possession of marijuana would be eliminated.

(2) Sales of marijuana would be permitted, but only by those holding a license; high standards would be required for the licensees.

(3) Some restrictions would be imposed on sales: most important, sales to minors would be prohibited.

(4) Unlicensed sales of marijuana would subject the seller to heavy penalties.

(5) The production of marijuana would be regulated as to quality. Advertising would be forbidden.

(6) Consumption of marijuana would be taxed much as tobacco and alcohol are taxed today.

These suggestions follow, for the most part, the treatment accorded today to liquor. It might be better if mankind had never discovered the pleasure-inducing qualities of alcohol or marijuana. But alcohol is here to stay, and so is marijuana. The way to deal with it is not through unjust, unenforceable penalties, but through legalization under governmental control. Any other course of action will further trivialize the criminal process, debase the quality of justice and law enforcement, and alienate from society many of its most valuable constituents.

Bibliography

The literature on marijuana is voluminous, but the most useful treatment is a book which devotes only a few pages to the particular problem: Herbert Packer's *The Limits of the Criminal Sanction* (Stanford 1968). Other works quoted are: Comment, *The Legalization of Marijuana: A Realistic Approach, Part I*, 21 Vand. L. Rev. 517 (1968); Rosenthal, *A Plea for Amelioration of the Marijuana Laws*, 47 Texas L. Rev. 1359 (1969); Kaplan, Foreword to *Project—Marijuana Laws: An Empirical Study of Enforcement and Administration in Los Angeles County*, 15 U.C.L.A. L. Rev. 1501 (1968); Blum, *Mind-Altering Drugs and Dangerous Behavior: Dangerous Drugs*, in *Task Force Report: Narcotics and Drug Abuse*, 24 (1967) (paper submitted to President's Commission on Law Enforcement); Zinberg & Weil, *The Effects of Marijuana on Human Beings*, New York Times Magazine, May 11, 1969, p. 28.

The law review articles cited contain references to many other relevant materials. For a polemic against the legalization of marijuana, see Tauro, *Marijuana and Relevant Problems—1969*, 7 Am. Crim. L.Q. 174 (1969).

In Memoriam

It is with deep regret that the Hennepin County Bar Association records the passing of the following Hennepin County attorneys:

Louis C. Dorweiler, Jr.
January 14, 1907—September 17, 1969

Laroy R. Baird, Jr.
October 1, 1969

Thomas E. Wiley
September 14, 1902—October 30, 1969

Edward S. Bade
February 22, 1893—November 18, 1969

Don Morgan
August 9, 1909—December 8, 1969

Ben R. Toensing
April 5, 1895—December 9, 1969

John W. Simpson
August 21, 1907—January 1, 1970

Ralph H. Lee
July 29, 1913—January 9, 1970

James H. O'Keefe
May 5, 1918—January 17, 1970

POT, PRAYER, POLITICS AND PRIVACY: THE RIGHT TO CUT YOUR OWN THROAT IN YOUR OWN WAY*

Jonathan A. Weiss**
and
Stephen B. Wizner***

The constitutional freedoms of religion and expression have been persistently urged as defenses to charges for violation of the drug laws. These efforts to expand the symbolic dimension of first amendment protection have been for the most part unsuccessful. The authors question the failure to recognize the defenses forwarded in these cases. To attempt a resolution of the issue, they consider the principles of liberty and procedural due process as they apply to the police power and individual rights under the Constitution. Focusing principally on the freedom of expression and its underlying rationale, they propose an analysis which logically includes drug use within the scope of the first amendment.

Drugs, narcotics and addictive substances are common topics of discussion. Positions concerning their use, however, are polarized. Devotees of psychedelic drugs, for example, claim to find in their use everything from self-knowledge to the essential roots of a new idealistic society. Opponents of drug use for pleasurable personal experience claim that it accelerates addiction, impels users into crime to maintain their habit and induces eventual self-destruction. This debate rages in the face of inadequate information about the personal effects of various drugs. For one thing, it is frequently difficult to establish whether a drug is in fact addictive or harmful; drug users claim that alcohol itself is harmful, dependence inducing and reality distorting. Secondly, the difference between addiction and habit is ill-defined;[1] many people appear dependent on caffeine, nicotine and aspirin. Finally, the personal effects of drug use vary—different people report different experiences, nor are medical pronouncements much of a guide.

---

* This article was conceived and organized by Jonathan Weiss who also did the majority of the writing and research. The section on privacy and its relation to the police power is primarily Stephen Wizner's product. Both authors have discussed and criticized each other's work and together developed the affirmative thesis we present here.

[1] M. Ostow, Drugs in Psychoanalysis and Psychotherapy (1962); *see* People v. Kimberly, 189 Cal. App. 2d 300, 11 Cal. Rptr. 519 (1961).

The law has nonetheless entered this thicket of emotional discussion and personal commitment with proscriptions and pronouncements. Distinguishing precisely between "medical drugs" and "addictive drugs," it permits the sale of the former while imposing criminal penalties on sale of the latter.[2] Further, in the case of narcotic and psychedelic drugs, the law imposes additional penalties for mere possession, perhaps regardless of a doctor's prescription.[3] The logical and factual basis of such classification is not always apparent.[4] For our purpose, however, this article need not inquire into the rationale of current drug legislation which is often factually very suspicious. It assumes arguendo that some drugs may be addictive, may cause adverse personality changes and may be factors in users' decisions to commit crimes. At the same time, we accept as honestly presented the claim of some that drugs provide progress to a new way of life. Where necessary, we indicate when disputed facts are relevant and to what degree they affect the legal issues raised by current drug laws, but the primary focus is on the roots of the controversy and claims of the contestants.

By drugs we mean any substance not normally considered food which, upon entering the blood stream, effects chemical change. We will not use the word as defined by druggists or lawyers, but instead in the broadest form possible. This article assesses major legal issues generated by drug laws and their enforcement. First, assuming that the current "narcotic" drug laws are constitutionally valid, can defenses to prosecutions for possession and use, as opposed to sale, be framed around the first amendment guarantees of freedom of religion and expression? Second, do current laws punishing possession and use violate the constitutional rights to privacy and to be left alone? Third, to what degree can taking drugs be considered an act defined as criminal?

These issues lead us to consider the relation of the self to society and, derivatively, the stake society has in the self, abnormal behavior, mental illness and self-destruction. Through this approach we attempt to locate neutral constitutional and legal principles which establish a range of rights to drug use. To that task we now turn.

However, the importation of marijuana is strictly controlled by the federal government. *See* NARCOTIC DRUGS IMPORT & EXPORT ACT, 21 U.S.C. § 176(a) (1961); 26 U.S.C. § 4744(a)(2) (1967). *See generally Symposium — Drugs and the Law*, 56 CALIF. L. REV. 1 (1968); *Symposium — Marihuana and the Law*, 3 SUFF. L. REV. 1 (1968).

I. Freedom of Religion

One defense to prosecution for drug use has been that certain drugs, particularly peyote and other psychedelics, are essential to the user's religious life and therefore protected by the first amendment guarantee of free exercise of religion. This defense depends in part on the claim that psychedelic drugs foster mystical religious experiences.

The religious defense has failed in analogous areas. Thus, a law prohibiting polygamy was upheld despite the claim that polygamy was a Morman religious duty.[5] States have particularly proscribed the use of snakes in religious activities.[6] Fortune telling, defended on religious grounds, has nevertheless been prosecuted.[7] People have been prohibited from beating drums in the streets even for religious purposes.[8] A preacher was prohibited from advertising the performance of marriage ceremonies in order to make money.[9] Finally, in 1926, a religious defense to a prosecution for the use of peyote failed.[10] These cases seem to indicate that an act, otherwise unlawful, which endangers or inconveniences the public,[11] may not be exclusively defended against by invoking the label "religion."

---

[5] Reynolds v. United States, 98 U.S. 145 (1878). More sanctions were imposed such as disenfranchisement, Davis v. Beason, 133 U.S. 333 (1890), and exclusion from office, Murphy v. Ramsey, 114 U.S. 15 (1885). One could inquire whether such rules so clearly directed against Mormons are suspect under *Yick Wo v. Hopkins*, 118 U.S. 356 (1886).

[6] *See* Lawson v. Commonwealth, 291 Ky. 437, 164 S.W.2d 972 (1942); State v. Massey, 229 N.C. 734, 51 S.E.2d 179 (1949). *See also* Morman Church v. United States, 136 U.S. 1, 50 (1890). For a saga of snake bites and murder at a religious meeting, see Amburgey v. Commonwealth, 287 Ky. 421, 153 S.W.2d 918 (1941).

[7] *See* State v. Neitzel, 69 Wash. 567, 125 P. 939 (1912). *But see* Dolan v. Hurley, 283 F. 695 (D. Mass. 1922), where the court upheld a defense to a fraud prosecution for selling "lucky" stones on the ground that

> there is nothing immoral in a belief that gems or amulets affect the wearer's fortunes. It is an old and respectable superstition. Indeed, it is by no means sure that the confidence inspired by a belief in such objects may not be of real value. Some room must be left for the play of individual fancy." *Id.* at 693.

[8] City of Wilkes-Barre v. Garabed, 11 Pa. Super. 355 (1899).

[9] Hopkins v. State, 193 Md. 489, 69 A.2d 456 (1949), following State v. Clay, 182 Md. 639, 35 A.2d 821 (1944). One could query the test: Such advertising was "not compatible with the ministerial calling and not practiced by any respectable minister." 193 Md. at 497, 69 A.2d at 459.

[10] State v. Big Sheep, 75 Mont. 219, 243 P. 1067 (1926). One justification for the holding was that the state "may inhibit acts or practices which tend toward the subversion of the civil government." *Id.* at 240, 243 P. 1073.

[11] Although moral judgments and concern for moral corruption by polygamy and fortune-telling are certainly involved, this aspect would seem constitutionally infirm. See text accompanying notes 5-7 *supra*.

Two other groups of related cases illuminate the borderlands of the religious defense: (1) those compelling parents to act against their religious beliefs for the presumed benefit of their children, and (2) those forcing medical treatment on adults contrary to their religious convictions. Typical of the first group are criminal prosecutions for child neglect against parents who refuse to provide medical services for their children.[12]

The most difficult case in the first group is *Prince v. Massachusetts*,[13] which upheld a parent's conviction for violating the Massachusetts child labor laws by participating in her young niece's distribution of *Watchtower* on the streets. The majority of the Supreme Court felt bound by the state's characterization of the act as a "sale" and therefore unlawful under the state's child labor laws. Mrs. Prince defended on the ground that the Massachusetts law violated her child's right to freedom of religion, that is, her right "to preach the gospel . . . by public distribution of 'Watchtower' . . . in conformity with the scripture: 'A little child shall lead them.'"[14] The court, however, reasoned that the state's interest in protecting its children from "the crippling effects of child employment" justified the impingement upon a claimed religious freedom.[15] Justice Murphy dissented on the ground that the first amendment guarantee of religious freedom compelled the Court to reject the state's characterization of the act as a sale.[16] He argued that the Jehovah Witness designation of the act as essentially religious, and therefore protected, must prevail since there was no evidence of a legitimate state interest in proscribing the act. Moreover, since the Constitution commands that religious teaching never be considered harmful, the Jehovah Witness characterization must be accepted. Justice Jackson, also in dissent,[17] reaffirmed his position that, although public activities may be regulated neutrally, acts occasioned by religious principles which do not harm others are protected and may not be prohibited.

One crucial problem in *Prince* is characterizing the child's act. The state must decide whether to characterize it as a simple "sale" in vio-

---

[12] Most of the cases involve a sickness and steadfast refusal to see a doctor. Courts have normally handled the question by treating it as a crime. The leading case is People v. Pierson, 176 N.Y. 201, 68 N.E. 243 (1903). *See also* Regina v. Wagstaff, 10 Cox Crim. Cas. 530 (1868); Owens v. State, 6 Okla. Crim. 110, 116 P. 345 (1911). On the other hand, while acknowledging that religion is no defense to a crime of neglect, a court has reversed on a finding of no gross dereliction. Craig v. Maryland, 220 Md. 590, 155 A.2d 684 (1959).

[13] 321 U.S. 158 (1944).

[16] *Id.* at 171.

[17] *Id.* at 176.

lation of the child labor laws, or to characterize it in light of the act's religious aspects. Murphy maintains that we must accept its religious nature to maximize freedom; Jackson argues that a public act which harms no one can be treated as symbolically protected, but not criminally prohibited. Notwithstanding the arguments of Justices Murphy and Jackson, the majority position seems sounder to the extent that the regulated conduct is public and has tangible public consequences.[18] The state had a legitimate stake in preserving its children from harm and could prohibit child labor as a reasonable regulation toward that end. To consider activity involving money and materials as labor is possible; to characterize it as purely symbolic is mistaken. Of course, if the law were just a cloak for persecution, it would be unconstitutional in any event.[19] But as a characterization of concrete acts whose tangible aspects could be considered harmful, it is proscribable.

The *Prince* case is based on narrow grounds. If Rutledge and colleagues had been convinced that children had the same rights as adults and/or that Massachusetts could not interpret a public act or was using such a definition as a cloak to attack religious principles and perspectives, the statute would have been ruled unconstitutional. At the same time, the Justices were not directly countenancing a religious defense. Rather, they were exploring what type of proscriptions a state may formulate without infringing constitutional freedoms. In short, the leading case and conceptually related decisions indicate a judicial reluctance to proscribe or prescribe the activities of children counter to the parents' religious principles, unless such intervention will prevent a child from being physically harmed by parental acts or omissions. This formulation offers no definite guidelines for a religious defense to prosecution for drug use since the reluctance recognizes on the one hand parental rights and the sanctity of the family, while the enactment of proscriptions and their application derives in part from the special state concern for infants.

The second class of cases involves the use of coercive action against adults, such as compulsory vaccination[20] and mandatory chemical

[18] *See* People v. Ewer, 141 N.Y. 129, 36 N.E. 4 (1894), upholding a law preventing children from theatrical performances even though the parents' rights were affected. Somehow, when aesthetic preferences rather than religious ones are at stake, the decision seems easier, although both are protected by the first amendment. *See also* Busey v. District of Columbia, 129 F.2d 24 (D.C. Cir. 1941).

[19] Yick Wo v. Hopkins, 118 U.S. 356 (1886). *See generally* Weiss, *Privilege Posture, and Protection, "Religion" in the Law*, 73 YALE L.J. 593, 608-09 (1964).

[20] Compare Jacobson v. Massachusetts, 197 U.S. 11 (1905) *with* Kolbeck v. Kramer, 84 N.J. Super. 569, 202 A.2d 889 (1964). *Cf.* Allgeyer v. Louisiana, 165 U.S. 578 (1897). *See also In re* Vremiestor, 179 N.Y. 235, 72 N.E. 97 (1904).

treatment of drinking water.[21] Denying the religious defense in these cases is fairly justified on grounds of protecting the health of others. Hence, the state's right and interest in the isolated individual's integrity is not directly at stake. More perplexing, however, are those cases involving compulsory blood transfusions. The opinions in these cases differ both within and among jurisdictions and tend to avoid the question of whether the state can compel transfusions for a person's own good against his religious convictions. Apparently, the state can compel a pregnant mother to accept a transfusion to save her child,[22] and may assume that absence of consent is not refusal.[23] Further, courts have compelled transfusions where the doctor's conscience and the threat of criminal liability for failure to administer the transfusion were involved.[24] On the other hand, courts have respected patients' refusals of blood transfusions where there is medical disagreement as to their necessity.[25] The spectacle of compulsion leads some courts to accept the patient's refusal of blood and even to acknowledge religious "rights" to refuse.[26] These cases, read together, unfortunately offer no clear guidelines for the use, context or extent of religious defenses in drug use cases.

A. The Religious Defense in Prosecution for Drug Use

Recently the courts have considered the religious defense to prosecutions for drug use. In *People v. Woody*[27] a group of Navajo Indians

[26] *See In re* Brooks, 32 Ill. 2d 361, 205 N.E.2d 435 (1965).

[27] 61 Cal. 2d 716, 394 P. 2d 813, 40 Cal. Rptr. 69 (1964). *Compare* id., *with In re* Grady, 61 Cal. 2d 887, 394 P. 2d 728, 39 Cal. Rptr. 912 (1964) (solitary peyote users), where the court said that the defendant had "not proved . . . an honest and bona fide" belief and remanded for a trial on that issue. Investigation into sincerity clearly is impossible under the Constitution. *See* United States v. Ballard, 322 U.S. 78, 92-95 (1944) (Jackson, J., dissenting); Clancy & Weiss, *The Conscientious Objector Exemption: Problems in Conceptual Clarity and Constitutional Considerations*, 17 MAINE L. REV. 143, 153-54 (1965); Weiss, *supra* note 19 at 599-601.

appealed a conviction for possession of peyote in violation of a California statute. The court held that since the defendants used peyote in a bona fide pursuit of a religious faith, and since the practice does not frustrate a compelling interest of the state, application of the statute improperly defeated the immunity of the first amendment.[29] It rested its analysis on two Supreme Court decisions, *Sherbert v. Verner*[30] and *In re Jennison*.[30] *Sherbert* held that a state unemployment compensation board must pay benefits to a Seventh-Day Adventist who refused to work on Saturday, her Sabbath, even though she was arguably not available for Saturday employment. (What the result would have been had her religion designated every day or week-days as a Sabbath is not clear.) The rationale was that the withholding of compensation benefits penalized petitioner for exercising her religion. The Court in *Jennison* reversed the Minnesota Supreme Court which had denied the invocation of the biblical injunction "judge not lest ye be judged" to excuse petitioner from jury duty.[31] In neither case did the Court find a compelling state interest to justify the substantial infringement on petitioners' first amendment rights.

Woody extracted the principle from these cases that a religious practice or ritual must be first examined to determine whether it presents a danger to the society which the state has a compelling interest in preventing. Utilizing this principle, the court performed a balancing test, weighing the importance of the religious freedom against the state's compelling interest, and concluded:

> Since the use of peyote incorporates the essence of the religious expression, [its] weight is heavy. Yet the use of peyote presents only slight danger to the state and to the enforcement of its laws; [this] weight is relatively light. The scale tips in favor of the constitutional protection.[32]

The opinion in *Woody* makes the Warren report appear in contrast as a model of coherence, reasoning and persuasiveness. If *Sherbert* and *Jennison* present the definite formulation of the law, which they do not, they still do not justify the approach taken in *Woody*. In *Sherbert* and *Jennison* there was no weighing of social harm against religious importance. Firstly, both involved a refusal based on a precept, a refusal that had no physical or public consequences, and both related to duties owed the government. In *Woody* members

[30] 265 Minn. 96, 120 N.W.2d 515 (1963), *rev'd per curiam and remanded*, 375 U.S. 14 (1963).

[31] Id; see Weiss, *supra* note 19 at 620-21.

[32] People v. Woody, 61 Cal. 2d 716, 727, 394 P.2d 813, 821, 40 Cal. Rptr. 69, 77 (1964).

of a group insisted that a ritual involving many people in physical acts with concretely measurable consequences can be done by those who claim it is religious. Second, just as the analogy is not there, neither is the claimed principle of harm versus religious importance. The *Sherbert* Court rests its decision on penalization of the past exercise of a claimed religious freedom,[33] and does not measure the Sabbath's religious importance against labor market needs. Further, in *Woody*, members of a group insisted that they had a religious right to engage in a ritual involving many people in illegal physical acts with concretely measurable consequences, a situation present in neither *Sherbert* nor *Jennison*.

The balancing test formulated in *Woody* cannot be administered by the courts. To do so, a court must independently evaluate both the merits of the religious act and the degree of its perceived danger. Now is not the time to engage in a dissertation about the separation of powers, but decisions about harm, degrees and competing values should be in the legislative realm. The impracticality of a balancing test reflects its factual and social rather than legal nature. Perhaps most important in this context is the point that to examine a religion to determine the importance of a particular ritual is to engage in a dissection and investigation of religion which is forbidden under the Constitution.[34] The dangers of such an inquiry are illustrated by *People v. Mitchell*[35] decided by a lower court in California two years after *Woody*. The court upheld Mitchell's conviction for possessing and using marijuana upon a finding that the courtroom discussion of the Bible and Hindu practices was an expression of "personal philosophy" rather than religious practice.[36] At the minimum, *Mitchell* limits the application of *Woody* to religious groups and rituals, a limitation seemingly contrary to the notion that the first amendment was incorporated not to safeguard institutions, but to protect and increase individual freedom, choice and action.

In particular, assessing the amount of damage which may result to society from an unlawful act is not a proper judicial function.

---

[33] 374 U.S. 398, 404 (1962). *See* Leary v. United States, 383 F.2d 851 (5th Cir. 1967), where the court determined that reliance on *Sherbert* was misplaced since marijuana laws are concerned with "protection of society" while the *Sherbert* Court was concerned with protecting the individual.

[34] United States v. Ballard, 322 U.S. 78 (1944) was cited in Leary v. United States, 383 F.2d 851, 860 (5th Cir. 1967), to prevent inquiry into the "truth or verity of appellant's religious beliefs." For an extended discussion of this point, see Weiss, *supra* note 19 at 604-09. For the implications of this position and the resulting argument that a religious exemption from military service is unworkable, see Clancy & Weiss, *supra* note 27 at 152-58.

[35] 244 Cal. App. 2d 177, 52 Cal. Rptr. 884 (1966).

[36] 244 Cal. App. 2d at 182, 52 Cal. Rptr. at 888.

Courts are not free to say that acts the legislature has determined to be dangerous are not in fact dangerous. The courts are not designed, and do not function, to ascertain and weigh facts of "social" harm, particularly those of degree. Legislative concepts of danger may differ and it is those concepts which predicate enactments.[37] Extracting a nonexistent balancing test from such situations infringes religious freedom and legislative prerogatives.[38]

Woody and *Mitchell* do not provide much authority for a religious defense of drug use. Rather, viewed together, they illustrate the difficulties of implementing a balancing test which requires the judiciary to inquire into the merits of religions to assess individual belief and its importance on a scale balanced against conjectural harm. Different courts have different ideas concerning what is "personal philosophy" and what is "religious activity." One individual's religious practices and convictions may be completely private; another's public posturing may have no individual religious basis.[39] Such formulations tend to favor religious groups over individuals, orthodox beliefs over strange ones and present religions over past ones. Hence, they inhibit the growth of new, minority religions while favoring and encouraging old, established ones. This leads to protection of strongly structured groups rather than strong feeling individuals. Further, the distinction between "private" and "public" religions is not legitimate under the Constitution.

Moreover, if courts accept the religious defense, they must determine both the domain of religion generally and the boundaries of particular religions. Defining the domain of a religion may be intellectually impossible because religions often claim relevance and control in all dimensions of life.[40] To define the boundaries of a particular religion is to act as a theologian and to do what often a believer himself cannot.[41] This point cannot be over-emphasized. *Mitchell* more closely resembles *Sherbert* and *Jennison* in that it involved one person following what he believed to be religious practice. *Woody*, on the other hand, exempts "members" of a sect thereby raising issues of equal protection. Both *Woody* and *Mitchell*, however, define religion and its limits and implications in a confusing context of "harm".

B. Inherent Problems of the Religious Defense

Beyond the difficulties of these cases lie the problems inherent in a generalized "religious defense."[42] First, virtually any action could be defended by utilizing the religious defense, and individuals could create privileges in the courts not uniformly available to the public. Second, even if the Constitution and rational administration of criminal justice could accommodate this defense, courts would have to develop contexts and criteria of application which do not presently exist. In what areas would we countenance a religious defense and why? How would it be applied and by what government agency? As noted above, references to groups, feelings about rituals and current religious practices cannot provide such principles. Finally, as the criticism of the *Woody* decision indicates, balancing tests involve the courts in prohibited judgments about religious beliefs and intrusion into legislative prerogatives.

Given the weak case support for the religious defense, the constitutional and conceptual problems and the current lack of standards, development of a generalized religious defense seems impossible. The remainder of this article attempts to define the areas of free expression and private individual integrity which the state may not infringe in attempting to regulate drug use.

II. Freedom of Expression

Proponents of drug use, particularly LSD, believe they have discovered a new social doctrine. Not only do they often reject normal

---

[42] *See* Weiss, *supra* note 19 at 602-08 for a more complete exposition. But if any individual can claim religious motives as a defense, then an indiscriminant license issues and there is no "law." Leary v. United States, 383 F.2d 851 (5th Cir. 1967). This rule would motivate the wrongful recourse to groups and is part of the proof that the religious defense is unworkable, particularly when inquiry into sincerity is precluded. *See* Reynolds v. United States, 98 U.S. 145, 166 (1878) (human sacrifice); Delk v. Commonwealth, 166 Ky. 39, 178 S.W. 1129 (1915) (swearing by a minister in church). See the failure of the religious defense to a prosecution for not carrying draft cards. United States v. Kime, 188 F.2d 677 (7th Cir. 1951), *cert. denied*, 342 U.S. 823 (1951); *cf.* Hamilton v. Regents of Univ. of Calif., 293 U.S. 245 (1954) (refusal to join ROTC); United States v. Aarons, 310 F.2d 341 (2d Cir. 1962) (free expression defense to violation of Coast Guard regulation); Gara v. United States, 178 F.2d 38 (6th Cir. 1949) *aff'd per curiam* 340 U.S. 857 (1950); People v. Penn, 16 N.Y.2d 581, 208 N.E.2d 789, 260 N.Y.S.2d 847 (1965). See notes 34-38 *supra*. For particular reference to narcotics and grand juries, see People v. Woodruff, 26 App. Div. 2d 236, 272 N.Y.S.2d 786 (1966). social values and goals, but many also assert that they are members of a "love" generation or that they are creating a new way of life.[43] Many wear buttons and picket to legalize various drugs. Some even staged a "smoke-in" in Tompkins Park in New York.[44] The constitutional question which arises is whether, given the social values implicitly expressed by use of drugs, and given the fact that social groups embodying new ideals of social living center around the drugs, drug use can be constitutionally defended as free expression under the first amendment. There are three areas of inquiry: (1) What activities are included in the concept of "expression"? (2) Is drug use included in the concept of expression? (3) If drug use is expression, is it therefore protected under the first amendment?

A. The Concept of Protected Expression

Communication by words alone is clearly expression. However, other means of communication have engendered litigation on the meaning of "expression": "The First Amendment affords protection not merely to the voicing of abstract opinions upon public issues. It also protects *implementing conduct* which is in the nature of advocacy."[45] In 1940 the Court, per Justice Murphy, held in *Carlson v. California*[46] that displaying signs and banners was a form of protected speech. Earlier, the Court in *Stromberg v. California*[47] had assumed that displaying flags was protected speech, striking down a statute prohibiting such actions on grounds of vagueness. Peaceful picketing has also been held a form of speech by a unanimous court.[48] Arguably, sit-ins have been treated as speech.[49] Performance of a "topless" dance, for the entertainment of an audience in a com-

23 OF 33

mercial establishment, has also been considered protected expression within the first amendment.[50] On the other hand, the Supreme Court, while talking of noise control, has imposed absolute bans on sound trucks.[51] Also, lower courts have rejected the claim that flag desecration is protected speech[52] and a local court has upheld a prohibition against hanging materials on clotheslines to protest taxes.[53]

Recently the Supreme Court handed down a very narrow reading of protected "symbolic" speech. In *United States v. O'Brien*,[54] reviewing two conflicting circuit court opinions,[55] it held that draft card burning was neither political speech nor symbolic expression. With great effort, reminiscent of *Fleming v. Nestor*,[56] the Court found many practical reasons why a prohibition of draft card burning efficiently aided the Selective Service System. One could therefore argue that this case was merely a holding on the facts that a regulation justified by actual necessity will not be struck down merely because it affects methods of action by which people choose to express themselves.[57] Historically, it may also be viewed as a result of political pressure. The dangerous dicta, however, includes a thesis on how legislative intent to punish speech is irrelevant.[58] Viewed in any light, the case is hard authority against the expansion of "symbolic expression" and must be distinguished by an advocate and considered aberrational from the real rationale of other symbolic expression cases.

Although no definitive guidelines emerge concerning the protection of speech which is considered symbolic, yet public activity, the decisions have involved several common elements: (1) a clear political issue—statements on labor conditions, party loyalty, segregation and war; (2) actions clearly related to the political issue either

by immediate content—signs—or by dramatizing the specific grievance—draft card burning and sit-ins; and (3) individuals or groups acting in a specific locale or for a limited time. The inquiry, then, is whether these elements are present in the use of drugs, and, if not, whether they are essential to a defense based on free speech.

B. Drug Use as Political Expression

Not all drug use has clear political overtones. A man dependent on morphine after hospital treatment may have been involuntarily addicted. On the other hand, cooperative living and the growth of conventions among users of psychedelic drugs manifest a social vision. Insofar as drug users utilize drugs as an explicit rejection of society or societal modes of living, they are engaging in political action. Recently a three-judge panel enjoined the enforcement of an overvague statute proscribing nudity against a nudist colony.[59] Although this ruling was based on vagueness, Judge Darr reached the merits to hold that the nudists' privacy should be protected and that the statute violated the freedom of association,[60] and the rights to privacy and equal protection of the law.[61] One might argue that the impulse beneath the vagueness ruling and the concern for the freedom of association was a recognition that these people were living according to their social ideals. Similarly, communal use of drugs, because it embodies particular social values, could be viewed as political expression.

[59] Roberts v. Clement, 252 F. Supp. 855 (E.D. Tenn. 1966).

[60] 252 F. Supp. at 848-49 (concurring opinion). *See also* Fenster v. Leary 20 N.Y.2d 309, 229 N.E.2d 426, 282 N.Y.S.2d 739 (1967) discussed *infra* at note 95. One might worry about an extension of the argument in the text to the proposition that anti-social behavior is necessarily protected political speech. What about thieves? Consider the movie *Thief of Paris* (1967) for an example of thievery as expression. *See also* Lynden, *The Last Holdouts*, ATLANTIC MONTHLY, Aug. 1967, at 42-43. This issue is considered implicitly in the text accompanying notes 101-107 *infra*. See Justice Jackson's discussion in *West Virginia State Bd. of Educ. v. Barnette*, 319 U.S. 624, 642 (1943) on the right to differ on things "that touch the heart of the existing order" and make gestures in regard to them. In thievery, particular acts are prohibited that may manifest the thief's rejection of the social order. In nudity and drug sessions the style of life is at stake. Of course, alleged thieves like all others may gather socially. *See* United States v. Bufalino, 285 F.2d 408 (2d Cir. 1960).

[61] 252 F. Supp. at 850. Darr then added a humorous addendum attacking nudists. *Id.* Also, the decision of a California lower court that nudist camps are protected by the first amendment was recently upheld on narrow grounds. People v. Lang, No. 8187 (Los Angeles County Super. Ct., Dec. 4, 1968).

In the case of noncommunal use of drugs,[62] the political aspect is harder to perceive and define. It can be argued, however, that because use of illegal drugs so unequivocally sets one against public morality and defines a different way of life, a clear rejection of society and its values, it could very well be treated as political.[63]

Two famous cases have dealt with individual acts as relevant to the good moral character which aliens must maintain for the five years preceding naturalization. On *Repouille v. United States*,[64] Judge Learned Hand held for the majority of two that an alien who committed an act of euthanasia during this five-year period failed to meet the "good moral character" requirement since most people considered mercy killing to be immoral.[65] In *Schmidt v. United States*,[66] Judge Learned Hand, in dealing with a man who with "unnecessary frankness"[67] admitted occasional acts of fornication, decided that he still possessed the requisite good moral character. Both men, of course, had violated laws. If they had done so to protest or change the laws, their acts would have appeared to be political in nature.[68] In absence of an express motive, however, can we conclude that their actions were political? We can say at least that their acts had political-moral content, so much so that a single act was sufficient in one case, and almost in the other, to lead to a conclusion of 'immorality' by public standards—an act therefore of political content.

People rarely use drugs in public; such use is a seeming end in itself. While pickets and draft card burners intend to convey an idea, drug users rarely intend their acts to convey ideas explicitly. Yet drug users, like members of nudist colonies, have a style of life at stake. Both the "digger" and the solitary junkie embody their concept of life in their acts. Their acts, therefore, if not specifically oriented to communicating, are nontheless expressive of their view

---

[62] Even "solitary users" often use drugs in a social group. Junkies go to shooting galleries; pot is often social; and many users belong to a little society composed of individuals with common problems and a common language.

[63] But note Justice Black's conclusion that "the First Amendment does not protect speech and assembly only to the extent it can be characterized as political." United Mine Workers v. Illinois State Bar Ass'n, 389 U.S. 217, 223 (1967).

[67] 177 F.2d at 450. One could query whether a Judge should suggest that a man lie on a governmental form. *See* 18 U.S.C. §1001 (1966).

[68] The range of criminal actions normally committed by people in protest or desperation that may be morally justifiable and even legally acceptable is discussed at length in Allen, *Civil Disobedience and the Legal Order*, 36 U. CIN. L. REV. 1 (1967).

and function for them, perhaps due to a similar psychological motivation, as would displaying banners and signs.[69] We might say that style of life may be viewed as political expression, just as a monastic life may be viewed as religious devotion.

C. *Drug Use as Protected Expression*

If drug use can be treated as political expression, is it therefore exempt from prosecution? The fact that speech is used in an act does not protect the act: "[I]t has never been deemed an abridgement of freedom of speech or press to make a course of conduct illegal merely because the conduct was in part initiated, evidenced, or carried out by means of language, either spoken, written, or printed."[70] This position is even stronger when the act in question is not so conspicuously purposeful, political expression.[71] Clearly whispers of conspirators are not immune. Radio is regulated for content,[72] and individuals may be prosecuted for fraudulent statements.[73] A proscribed act, once labeled political, does not become less criminal.

But our inquiry does not end here. The above argument rests on the assumption that taking drugs, even if embodying a social idea or politically purposeful, is a proscribable act or proscribed aspect of an area of activity. It may be, however, that drug use is an entirely political and social act, lacking those tangible nonideological elements present in the ends and effects of conspiracy, libel, fraud or, arguably, draft interference. Our inquiry, therefore, is whether taking drugs has proscribable aspects or belongs in a scheme of activity that produces effects which are sanctionable. To do this, we must examine both the act itself and the power of the state.

III. The Right to be Self-Destructive

The keystone to this section can be found in Justice Jackson's account of the activities of infant Jehovah Witnesses: "The freedom

---

[69] *Id. See also* P. Weiss & J. Weiss, Right And Wrong, A Philosophical Dialogue Between Father and son (1967).

[70] Giboney v. Empire Storage, 336 U.S. 490, 502 (1949), quoted with approval in Cox v. Louisiana, 379 U.S. 536, 555 (1965).

[71] *See* note 63 *supra*. Clearly, the claim of political vision is often more literary than actual.

[72] Cox, *The FCC, The Constitution, and Religious Broadcasting*, 34 Geo. Wash. L. Rev. 196 (1965) is an excellent attack on the efficacy and constitutionality of such regulation.

[73] 18 U.S.C. § 1341 (1958). See Weiss, *supra* note 19 at 583–609 on the conceptual problems involved.

asserted by these appellees does not bring them into collision with rights asserted by any other individual. . . . Nor is there any question in this case that their behavior is peaceable and orderly."[74] In that case, much to the consternation of many locals and local officials, Jehovah Witness students were upheld in their refusal to salute a flag while other classmates did so pursuant to a school regulation. Similarly, much to the consternation of others, drug users commit acts which may or may not have effects on their minds. The question is whether the analogy holds—Does taking physical substances because of their effects on personal attitudes and experiences have the same constitutional nature as taking or refusing to take a symbolic position because of its meaning to the individual? The resolution of this question requires an examination of our criminal system and other acts analogous to drug use.

The fundamental document in American democracy is the Constitution. Explicitly based on an accord, it establishes governmental powers and individual rights. Many specific sections deal with crimes. The fifth amendment states that no one is to be denied "liberty" without due process of law. The implication of this command is that all individuals, or at least all adult citizens, have liberty as an inherent characteristic of their citizenship. Their ability to consent implicitly or explicitly reject or affirm, and their part in the continuing pronouncement, "We, the people," rests on the recognition that all individuals have liberty. So we can say that the Constitution envisions a society composed of "free" individuals living together. Yet that freedom can be taken away. The Constitution also envisions arrests, trials and imprisonment, and a criminal process which must be conducted in a manner consistent with guaranteed procedural safeguards.

Thus, there are two elements to be considered in analyzing the imposition of criminal sanctions—liberty and procedural safeguards. Although, in a constitutional context, these elements could be considered separately, many reasons favor reading them together. First, because the Constitution is an attempt to generate fundamental principles by which government and society can function, its provisions are better viewed as related parts in a scheme. Second, the history of constitutional interpretation by the Supreme Court evidences a reading of the document as a unity, and the principles as related.[75]

---

[74] West Virginia State Bd. of Educ. v. Barnette, 319 U.S. 624, 630 (1943). *See* Weiss, *supra* note 19 at 610.

[75] *See* Mapp v. Ohio, 367 U.S. 643, 661 (1961) (Black J., concurring); Adamson v. California, 332 U.S. 46, 68 (1947) (Black, J., dissenting). *See generally* Griswold v. Conecticut, 381 U.S. 479 (1965); Boyd v. United States, 116 U.S. 616 (1886).

Third, liberty and due process are not only conceptually related, but also related in fact by specific procedural guarantees, such as reasonable bail,[76] thereby indicating that due process reasonableness was intended to serve as a protection of liberty. Procedural protections therefore serve the dual functions of guaranteeing optimum continuation of liberty and of preserving liberty during the criminal process.

How can these elements be combined? On any democratic principle one man's freedoms and rights are as valuable as another's. We all start as free individuals, but some may act in such a way as to affect other people's freedoms and rights. If we say that it is only justifiable to interfere with a person's freedom when he interferes with the freedom of others, the elements are neatly combined. What is needed then is a procedure for resolving these conflicts. The state serves this function by determining which acts so adversely affect other people's freedoms that limitations must be imposed on the freedom of the actor.

As further proof of the reasonableness of this constitutional ground of criminal law, consider the implications of a system not based on a recognition of liberty. If the state could proscribe any act and the state countenance, as it must and does, prosecutorial discretion, significant equal protection problems could arise and the whole point of procedural due process would vanish. An ordinance against breathing, selectively applied, could lead to oppression. If any act can be proscribed then we have little need for due process protections since all we need do is proscribe the acts or characteristics[77] of those we do not like. (There is more than one way to skin a cat).

But most important is the fact that the Constitution has created specific categories of exempt acts, those that only affect other people's beliefs not their freedoms. The first amendment establishes freedom to promulgate ideas. Again, in Justice Jackson's words:

> If official power exists to coerce acceptance of any patriotic creed, what it shall contain cannot be decided by courts, but must be largely discretionary with the ordaining authority whose power to prescribe would no doubt include the power to amend. . . . If there is any fixed star in our constitutional constellation, it is that no official, high or petty, can prescribe what shall be orthodox in politics, nationalism, religion, or other matters of opinion or force citizens to confess by word or act their faith therein. If there are any circumstances which permit an exception they do not now occur to us. . . . It would seem that involuntary affirmation

---

[76] U.S. CONST. amend. VIII.

[77] Of course, there are other constitutional guarantees such as those against bills of attainder which, if properly applied, would protect many rights. U. S. CONST. art. I, § 9. *See* United States v. Brown, 381 U.S. 437 (1965); Note, 72 YALE L.J. 330 (1962). Equal protection is also a powerful tool. *See* Hernandez v. Texas, 347 U.S. 475 (1954); Yick Wo v. Hopkins, 118 U.S. 356 (1886).

> could be commanded only on even more immediate and urgent grounds than silence.[78]

In short, compulsion to perform a symbolic act with specific ideological content is forbidden. Persons cannot be compelled to affirm a pledge which has manifestations cognizable only by those who believe or those who are concerned with the beliefs of others.[79] There exists not only the range of freedom of expression but also the specific area of symbolic activity. In this connection, let us note a refusal to participate in a ritual when others do can be as symbolic a gesture as participation itself—an upright person amidst kneeling people; a person sitting down while others stand in tribute.

The principle we may extract is that the Constitution has defined a range of criminal acts. That range encompasses acts whose physical nonideological consequences affect the rights and freedoms of others. Restraint is justified upon proof that the acts of one have physical consequence to the detriment of another's freedom:

> [T]he power of a state to regulate and control the conduct of a private individual is confined by those cases where his conduct injuriously affects others. With his faults or weaknesses which he keeps to himself and which do not operate to the detriment of others, the state as such has no concern.[80]

Such an inchoate principle has been evidenced in analogous situations. One judge has stated that the state cannot prescribe what a man shall eat and wear or drink or think.[81] On the same rationale, peyote and LSD are eaten. Another court has stated that cigarette smoking cannot be made illegal.[82]

In a different context, courts have disputed utilizing the police power to force motorcyclists to wear helmets. The dialogue may be viewed as starting when a New York judge, later reversed,[83] stated

[83] People v. Carmichael, 53 Misc. 2d 584, 279 N.Y.S.2d 272 (Genesee County Ct. Spec. Sess. 1967), rev'd, 56 Misc. 2d 388, 288 N.Y.S.2d 931 (Genesee County Ct., 1968). The rationales were the presumption of constitutionality, legislative fact-finding, harm to others by careening motorcycles and the need for a healthy citizenry. The decision is not persuasive but, as yet, there is no record of an appeal.

that "the police power is understood by this court . . . [to] justif[y] the regulation of the conduct of one person because of the effect of that conduct upon other persons,"[84] arguing that alcohol and narcotics are proscribable because they produce anti-social behavior, but that to force wearing of helmets is unconstitutional. This pronouncement was preceded by another decision that held the prohibition unconstitutional because it was too indefinite to meet criminal legislative standards, thereby indicating that the legislature really had no place in prescribing how people dressed.[85]

Then came the answering cases. Rather than directly deny the validity of *sic utere tuo abenum non loedas*—that there can only be crimes when things are done which are dangerous or destructive to others—courts found justification in the safety danger presented by helmetless motorcyclists.[86] For, they reasoned, if a motorcyclist was hurt for lack of a helmet, he might careen about creating a danger to others.[87] They thereby avoided the issue of the constitutionality of legislating to protect individuals from themselves, although one court intimated that because injured people were a burden on the state, the state could exercise its police power broadly to enact such legislation.[88]

To this argument, the Michigan Court of Appeals, after quoting John Stuart Mill, posed the classic answer. The aim of preventing motorcyclists from going out of control could be served by narrower legislation which did not infringe individual choice.[89] Rejecting "paternalism," the court reasoned that legislation concerning safety devices, such as motorcycle windshields, would be better adapted to the purpose of preventing injured motorcyclists from endangering others.[90]

Alabama, 377 U.S. 288, 307 (1964); NAACP v. Button, 371 U.S. 415 (1963); Shelton v. Tucker, 364 U.S. 479 (1960); Cantwell v. Connecticut, 310 U.S. 296, 307 (1940).

[90] *Id.*

(Query, however, the effect of aesthetic objections by owners to such designs.) If, on that narrow ground of reasonable regulation to effectuate the purpose of safety, the Michigan court appears the most persuasive, it is clear that the principle of constitutional freedom from "paternalism" is not universally accepted and must be argued for, at least in that context. The dialogue though indicates a judicial and judicious hesitation with respect to laws which preclude people from taking personal risks. Such an approach reflects the constitutional considerations previously suggested and traditional "liberal" doctrines on the police power.[91]

Recently an alternate analysis, based upon complementary constitutional doctrines, was advanced by Professor Bork.[92] He suggested taking Justice Goldberg's concern in *Griswold v. Connecticut*[93] with the ninth amendment more seriously, reasoning that the first eight amendments could be conceived of as specific examples of the general set of natural rights protected by those eight and the ninth, and one might argue, the tenth. Dealing mainly with the issue of legal activism, Bork suggested that the Supreme Court should extrapolate on a case by case basis from the first eight amendments to give cognitive content to the concept of rights in the ninth. Unfortunately, he offers no principles, so it is hard to see how such an approach would not be an excuse for judicial legislation. On the other hand, one could argue that the ninth and tenth amendments reflect a doctrine of natural rights, if not natural law, so to invade a person's identity—manifesting and identity-constituting activities, is a suspect invasion of this realm. Bork aptly suggests that the selected invasion must be the least destructive means available: "[A]ll human behavior should be entitled to the same level of constitutional consideration . . . that is currently afforded non-political speech . . . . The new concept of rights becomes, indeed, something roughly describable as a presumption in favor of human autonomy."[94] One

[91] Recently, the United States Supreme Court dodged this issue and entered into a confused debate on public drunkenness and criminal responsibility. Powell v. Texas, 392 U.S. 514 (1968). There is neither a majority opinion in *Powell* nor much inspirational reasoning. Since a condition of public drunkenness, as in this case, could be "dangerous," it arguably falls out of the class of action or expression without tangible harmful aspects. However, because by definition public drunkenness is a crime without an act, there is an implied undermining of the rationale of restraining only dangerous acts. Until the issue is directly confronted, *Powell* should be considered in tandem with *Robinson v. California*, 370 U.S. 660 (1962), and, although troublesome, not dispositive.

[92] Bork, *The Supreme Court Needs a New Philosophy*, FORTUNE, Dec. 1968, at 138.

[94] Bork, *supra* note 92 at 174.

might say, that recognizing the complexity of activity and motive, constitutional protections are relevant not only to discreet activities but also to those who engage in them.

In this regard, it should be noted that courts have increasingly emphasized the right to be the way you are regardless of how repugnant it may be to others. In striking down the New York vagrancy law, the New York Court of Appeals recently stated:

> [A] statute whose effect is to curtail the liberty of individuals to live their lives as they would and whose justification is claimed to lie in . . . police power . . . must bear a reasonable relationship to . . . the alleged public good. . . . It is also obvious that today the . . . only crime [of vagrants], if any, is against themselves, and whose main offense usually consists in leaving the environs of skid row and disturbing by *their presence* the sensibilities of residents of nicer parts of the community. . . .[95]

Reminiscent of the language in *Barnette v. West Virginia State Bd. of Educ.*,[96] the Court concluded that the unconstitutionality consisted of an "overreaching of the proper limitations of police power in that it unreasonably makes criminal . . . conduct of an individual which in no way impinges on the rights or interests of others. . . ."[97] Also recalled is Justice Brandeis' dissent in *Olmstead v. United States*:

> The makers of our constitution undertook to secure conditions favorable to the pursuit of happiness . . . They conferred as against the Government, the right to be let alone—the most comprehensive of rights and the right most valued by civilized men.[98]

The "right to be let alone," a recognition of the inviolability of a person's identity and purely personal evidencing of it, is often characterized and recognized as "privacy" and harks back to the original attempt to create a society in which men were free to "pursue happiness," to conduct their lives as seen fit, and to experience pain, pleasure and individual fulfillment. An underlying impulse and factor in the formulation of "liberty," its most recent expression by the Supreme Court was in *Griswold v. Connecticut*,[99] where the Court refused to let a state proscribe means of contraception and procreation. This decision in turn echoed older pronouncements about "the right of the citizen to be free in the enjoyment of all his faculties."[100]

The "right to be let alone" logically entitles citizens to engage in behavior which the majority might consider distasteful or even com-

pletely immoral, such as nudism or vagrancy. In analogous areas, this conduct is often potentially harmful to the person himself; yet to interfere with this constituting of his identity is to "unreasonably interfere with the right of the citizen to determine for himself such personal matters."[101]

Private personal indulgence in conscious-altering substances for reasons of personal preference concerning the constitution of identity and consciousness is an act whose essential and overriding purpose and effect is not only that of inducing a personal private experience, but also that of defining himself in part by the act. Whether the act is motivated by or described as related to a desire for religious experience or metaphysical insight or merely a wish to "get high," it is not and does not affect others or limit the freedom of others to live their lives as they see fit, except as a result of the way in which people's identities affect others. A man who swears constantly may offend some, an addict others. Both may bore even their friends, but they are not affecting another's freedom by acts or policies, but only by the identical insistence on their own mode of life. Friends or enemies may ignore them. It would appear, therefore, that the use of such drugs falls within the class of constitutionally protected private identity-constituting and identity-reflecting conduct which is placed beyond the reach of the state's police power by the Constitution and its underlying principles.

This argument must be placed at least congruently to the context of political expression. It pays nodding acknowledgement to the idea of unconscious intention and the relation and interpenetration of psychology and politics. It suggests freedom to create and affect identity and reactions may be a necessary condition for future political speculation, formulation and action. On the other hand, it recognizes that appearances and expressions reflect reactions and positions about society that may have political implications. In short, there exists a joinder of rationales—the hesitation to extend police power beyond acts harmful to others, engendered by the common-law fear of power; an interpretation of the Constitution which suggests that there are no criminals, only crimes defined in terms of liberty-deprivation; and a constitutional command of free speech whose effect is to protect its origins and, wherever, possible impure expressions. These rationales suggest a principle of law, often not strictly followed, that the rationale of state sanctioning under the Constitution prevents sanctioning for those self-directed acts which reflect ideas and express, affect and constitute personal identity.

---

[101] Hershberg v. City of Barbourville, 142 Ky. 60, 61, 133 S.W. 986, 987 (1911). See cases cited in note 106 *infra*; Cortland v. Larson, 273 Ill. 602, 113 N.E. 51 (1916).

Cases both ancient and recent suggest that courts do recognize and apply the rationale developed above in analogous areas. There exist only three possible reasons for not applying such reasoning in the area of drug use: (1) use creates crime; (2) use leads to insanity, causing parents to not support their children, who then become burdens on the state; (3) use is tantamount to suicide. Noting that there is considerable factual dispute about the accuracy of these contentions, we will assume them true to discuss their relevance.

An old distinction exists, often ignored, particularly in the early 1950's, between words used in furtherance of a crime, perhaps in its commencement, and words or ideas which are considered dangerous to government and community. Those ideas which may lead to action (*e.g., Das Kapital* and *Mein Kampf*) are protected; those words involved in the action (*e.g.*, "you get the rope to hang him") do not protect the actor.[102] The rationale behind this distinction would seem to rest on a belief in individual responsibility and free will. Ultimately a man's act is his choice and his responsibility. Those things which may encourage crime do not necessarily produce it. A man regardless of temptation is guilty if he breaks the law.[103] Crimes are acts and so punished. Even to maintain that alcohol and drugs encourage or motivate to crime does not argue for proscription—we maximize freedom to receive all influences on the faith that a man chooses and is responsible and we can punish accordingly. In particular, the requirement of *mens rea* suggests it is the decision to do the act that predicates guilt, so that we look to an act of will, as it were. Since an act of will is necessary, temptation, influence and inclination are factors for the will, not direct causes. To punish factors is to change the concept of guilt. Having a law of crime, not criminals, and acknowledging the tremendous range of factors that may lead to the commission of crimes, leads to the conclusion that even if drug use

---

[102] Cases like Dennis v. United States, 341 U.S. 494 (1951) and American Communications Ass'n v. Douds, 339 U.S. 382 (1950) are direct authority, if of dubious vitality, counter to the proposition. While this distinction is a theoretical one supported by some authority, requiring full argumentation perhaps beyond the scope of this article, it is, according to the authors, the only constitutionally valid one and of sufficient force to employ here. Certainly tests such as "clear and present danger" are not relevant. Since the suggested distinction is not ideologically directed toward violence or incitement thereto, its authoritative base and clear relevance justify using it as established law here.

[103] Only at the extreme limits of self-defense do we let duress or temptation excuse a crime. *See* Regina v. Dudley & Stephens, 15 Cox Crim. Cas. 624 (1884); Clancy & Weiss, *supra* note 27 at 148-49; *cf* Wallace v. United States, 162 U.S. 466 (1896).

is associated with substantially higher crime commission, it may not be proscribed on those grounds.[104]

But saying this does not mean that some controls may not be exercised. Courts have repeatedly held that dispensation of drugs and liquors may be done only pursuant to a license and/or a prescription.[105] There is no reason why this principle could not be employed to regulate sale of the drugs in question. Our argument goes to use and possession. Distributing drugs to others could be proscribed; it is not beyond the laws to issue rules about the circulation of dangerous instrumentalities.[106] The law can reasonably prohibit minors from using drugs, liquor and tobacco[107] by controlling distribution, while refraining from broad proscriptions against possession and use by the adult populace. That and that alone is protected as not being an act which directly and nonideologically affects the lives and actions of others.

While it is beyond the scope of this article to propose a regulatory scheme, it may not be entirely inappropriate to suggest the outlines of one. The unauthorized giving or selling of certain drugs could be made illegal. The state could dispense drugs or have authorized sellers, similar to state liquor store arrangements. In this way, price and quality could be regulated. Inflated prices in the illicit drug market would be decreased, making such activities less lucrative and diminishing the likelihood that potential buyers would be compelled to commit crimes to secure the purchase price. Negative propaganda campaigns akin to those presently being conducted against cigarette smoking, could also accompany drug legalization. Other crimes, such

---

[104] To deny this we would have to reverse all criminal law. If junkies necessarily commit crimes, then they lack a *mens rea*. If they act without a specific guilty choice they have no requisite guilty mind. A whole line of cases has grown up in this area. *See* Townsend v. Sain, 372 U.S. 293 (1963); Hansford v. United States, 365 F.2d 920 (D.C. Cir. 1966); People v. O'Neil, 66 Wash. 2d 263, 401 P.2d 928 (1965); Robinson v. California, 370 U.S. 660 (1962). *See generally* Goldstein & Katz, *Abolish the "Insanity Defense"—Why Not?*, 72 YALE L.J. 853 (1963).

[105] Findings establish that marijuana does not cause crime. *See Hearings on Taxation of Marijuana H.R. 6385 Before the House Committee on Ways and Means*, 75th Cong., 1st Sess., (1937); Bromberg & Rodgers, *Marijuana and Aggressive Crime*, 102 AM. J. OF PSYCHIATRY 825-26 (1946). *See generally* Murphy, *The Canabis Habit, a Review of Recent Psychiatric Literature*, 15 BULL. OF NARCOTICS, No. 1 at 15, 19 (1963). On the other hand, the growth of riots following integration and demonstrations are grist for the mill of the racist right.

[106] *See* Gray v. Conecticut, 159 U.S. 74 (1895); Rosenblatt v. California State Bd. of Pharmacy, 69 Cal. App. 2d 69, 158 P.2d 199 (1945); *cf.* American Civil Liberties Union v. Board of Educ. of City of Los Angeles, 59 Cal. 2d 203, 379 P.2d 4, 28 Cal. Rptr. 700 (1963); American Civil Liberties Union v. Board of Educ. of San Diego Unified School Dist., 59 Cal. 2d 224, 379 P.2d 16, 28 Cal. Rptr. 712 (1963).

[107] *Cf.* Prince v. Massachusets, 321 U.S. 158 (1944).

as providing drugs to a minor and aiding a minor in their use could be created. Once dispensation is restricted to authorized sources, regulation, except as to quantity which is an individual choice, may be engrafted as it is for alcohol and off-track betting. In such a system, sanctions are applicable and only private individual use or communal use by adults would be permitted, and only if the drugs were obtained from legal sources.

Many also maintain that use of drugs, particularly LSD and DMT, has serious psychological consequences. But the problem is very difficult. In many cases the state-labeled "insanity" is labeled by others the ideal experience or style of life—"nervous." Claims that drug use results in bizarre behavior and unproductive people are met by claims that such behavior is ideal and that productivity is a false value. Insanity itself raises many of the issues in the range of freedom of expression.[108] Whether drugs create or manifest psychological patterns is in dispute;[109] many materials legally obtainable may contribute to a breakdown in mental functioning or lead to temptations to obtain money illegally. Against this range of considerations we may return to our previous distinction between tendency-creating acts and expressions and the act itself. The use of materials which may create a state of being characterized by some as insanity cannot be prohibited, although illegal acts committed by the user, such as child neglect,[110] may be punished. The only difficult issue is the moral question of these persons becoming a burden on the state and our right therefore to prevent those things that increase that possibility. But this issue appears to have been laid to rest by decisions in the welfare field. People are free to move and to be burdens on the state,[111] and procreate and be burdens with their children on the

---

[108] The authors would like to thank H. Leroy Jackson, Jr., for this suggestion.

[109] *See* text accompanying notes 52-68 *supra;* note 99 *supra.* Note the dicta in *Allgeyer v. Louisiana* that police power must respect and not infringe the right to pursue happiness and use one's faculties in a lawful way. 165 U.S. 578, 589-90 (1897).

[110] What of the argument, if sound, that use of LSD results in chromosome damage? Even Thomas Aquinas thought a child not a murderable human until eight days after conception, so it is hard to believe a conjectural statistical effect on a non existent could be made the subject matter of a crime. We have come some way since Holmes' third-generation-of-idiocy rationale. *Compare* Buck v. Bell, 274 U.S. 200 (1927) *with* Skinner v. Oklahoma *ex rel.* Williamson, 316 U.S. 535 (1942) *and* Griswold v. Connecticut, 381 U.S. 479 (1965). Chromosomes are unlikely victims for crimes; eugenics is not yet jurisprudence. Let us note in passing that cigarette smoking and hunger have been better demonstrated to injure the unborn. Yet prosecutions of the welfare mother for failure to purchase foods constituting a balanced diet would violate the established money-payment principle which allows recipients to spend as wanted.

[111] *See* Edwards v. California, 314 U.S. 160 (1941); Thompson v. Shapiro, 270

state.[112] If the consequence of a protected act means direct state support, that is the unpredictable price a free society has to pay.[113]

Many maintain, although many dispute, that drug use creates a propensity to commit crimes.[114] Assuming that were the case it would make no argument. Could one prosecute for poverty? Could one prosecute for belonging to a reading society whose traditions were violence? or for having a cook-out where members were "likely" to commit crimes?[115]

Again, we must recur to the implicit model of man in criminal law. We punish for acts made after decision. Many factors, rational and psychologcial, may enter a decision and culminate in an act. We may not punish on the basis of factors, although there may be some statistical correlation between factors and acts, since the function of punishment is directed toward the individual, and must attend to his individual acts, and the utilization, manifestation and control of the various factors ingredient in a decision. A sum of factors is neither a decision or an act—it requires the *man* to do something. Moreover, factors interrelate and to prosecute for one factor without knowing what others may be necessary to trigger the result would violate even the rationale of prevention. Recognizing the complexity of decision even without the common-law assumption of free will leads to a rejection of decision-factor prohibition. And, let us note, that the acts worried about are crimes subject to prosecution (and to prosecute for drugs might lead to more irrationality in plea-bargaining) so one could increase sanctions for crimes committed while under the influence of drugs as is done for liquor and gun use.[116]

F. Supp. 331 (D. Conn. 1967). *But see* Harrell v. Board of Comm'rs, 269 F. Supp. 921 (E.D. Pa. 1967).

[112] Such would be the implication of Griswold v. Connecticut, 381 U.S. 479 (1965), particularly in conjunction with Sherbert v. Verner, 374 U.S. 398 (1963). Since travel and procreation are constitutionally protected rights, exclusion from benefits because of the exercise of those rights would be an unconstitutional classification.

[113] We encourage the payment of direct and indirect support for those things enabling choice in the area of constitutional freedom. *See* Everson v. Board of Educ., 330 U.S. 1 (1947); Weiss, *supra* note 19 at 612-17, 621-23. Armies are raised and supported so that people may live freely. The consequent loss of income and burden on the state are the price of supporting freedoms of choice.

[114] *See* TAYLOR, NARCOTICS, NATURE'S DANGEROUS GIFT 19 (1949). Consider the reverse argument that crime and happiness are inversely related to heroin use.

[115] *See* United States v. Bufalino, 285 F.2d 408 (2d Cir. 1960).

[116] Rather than violating the second amendment, proponents of gun control legislation would be better-advised to follow the English method of imposing more severe sanctions for crimes committed with guns.

One might argue for possible prosecution for attempted suicide of those who employ drugs. The analogy fails. In Russian roulette we have a clear individual probability, in drug use statistical. For some individuals, drugs might never decrease life expectancy for others certainly; it may depend on the body type. Until we know the precise mechanism for accurate prediction, we have no proof that a drug user is risking his life and arguably attempting suicide. To the degree that drugs are classified with those items which may tend to diminish life, the distinction between tendency-creating acts and direct acts of destruction still holds.

To approve of proscriptions against suicide is not inconsistent with our thesis. Suicide is a form of murder. Not only an avoidance rather than a solution of life's problems, it also can be considered immoral because it, like all human deaths, wreaks irrevocable havoc on others and destroys unduplicable potentialities. Unlike other acts which manifest or create a propensity toward acts which are destructive, suicide is irreversible and destroys the agency while creating harm. Taking the steps one at a time: (1) Suicide is an act after which there is no more. If a person does something which creates a tendency, the tendency may be resisted or even the tendency-creating acts ceased. An act of suicide is ultimate—nothing can reverse it or stop its consequences. (2) The argument against prohibition of tendency-creating acts rests on the idea that we punish on a model of free-will. Sanctioning after *mens rea* does not apply to suicide for, after its completion, there can be no free-will. The agency is no more. Suicide prevents resisting the tendency. (3) Suicide has consequences on others. On all these grounds, our argument does not prevent sanctioning suicide. If not, then the argument can be extended without ruining the rationale on policy reasons.

IV. Conclusion

There is no impediment to our conclusion. Use of drugs reveals certain perspectives and psychological patterns. When observed, it may communicate sentiments as it arouses reactions. In a society formed of equally free men with no restrictions on the pure communication of positions, with sanctions predicated on acts creating tangible harm to others, drug use is outside the range of sanctions and protected as private expression. Assuming we only punish for acts chosen by free men, those activities, including drug use, which a man does to live with himself and articulate for himself his style of life may not be forbidden.

LEGISLATION

The Legalization of Marihuana: A Realistic Approach, Part I

"Bhang and ganja in the Old World, marihuana in the New, will never be put down by all the propaganda against them, whether true or false. Exhilaration of spirit, the flights of pure imagination, the feeling of ascending as though one floated above reality, the freedom from serious aftereffects, and most of all the lack of permanent damage —it is these that make the extermination of hemp seem quite hopeless, even to those dedicated to that enterprise."[1]

I. Introduction

All present indications point to an increase in marihuana use throughout the United States.[2] Twenty-five years ago, the drug was found almost exclusively among the working class and minority groups,[3] but the present trend has been toward increased use among people in the middle and upper income and social strata of society.[4] As a result of this trend, the "marihuana problem" is gaining widespread prominence. More and more individuals, especially youth, are being subjected to the severe penalties associated with possession and use of marihuana. Not only are people becoming more aware

1. Taylor, *The Pleasant Assassin: The Study of Marihuana*, in The Marihuana Papers 15 (D. Solomon ed. 1966).

2. A Report by the President's Commission on Law Enforcement and Administration of Justice, The Challenge of Crime in a Free Society 213 (1967) (hereinafter cited as President's Report), states: "To the limited extent that police activity is an accurate measure, use appears to be increasing. Bulk seizures of marihuana by Federal enforcement authorities totaled 5,641 kilograms in 1965 as against 1,871 kilograms in 1960. Bureau of Narcotics arrests for marihuana offenses about doubled over the same period of time." Dr. Stanley F. Yolles, director of the National Institute of Mental Health, testified that the United Nations estimated that in 1950 there were 200,000,000 users of marihuana in the world, mainly in India and in North Africa. Estimates in the United States have been as high as 20,000,000, but it is much more likely that of 4,000,000 to 5,000,000 persons have used it at least once. The National Observer Mar. 11, 1968, at 12, col. 3. *See also Lindesmith, Introduction to* The Marihuana Papers, *supra* note 1, at xxiii; New York County Medical Society Report, *The Dangerous Drug Problem*, 22 N.Y. Med. 241, No. 9, May 5, 1966 (hereinafter cited as N.Y. C'ty Med. Soc'y Report); Wall Street Journal, Nov. 20, 1967, at 1, col. 1.

3. LaGuardia Report, The Marihuana Problem in the City of New York 8-11 (1944) (hereinafter cited as Mayor's Report); Solomon, *Editor's Foreword* to The Marihuana Papers, *supra* note 1, at xiv-xv.

4. Blum, *Mind-Altering Drugs and Dangerous Behavior: Dangerous Drugs*, in Task Force Report: Narcotics and Drug Abuse 24 (1967) (hereinafter cited as Blum, *Dangerous Drugs*); President's Report, *supra* note 2, *at* 213; Solomon, *supra* note 3, at xx; Wall Street Journal, Nov. 20, 1967, at 1, col. 1.

of the legal punishments, but existing facts as to the effects of marihuana are being brought to public attention with greater frequency. Nevertheless, there remains a great gap between the known facts and risks and reputed facts and risks.[5] As is the case with other dangerous drugs, existing knowledge concerning such matters as the effects of marihuana on the individual, the types of persons who use it, and the relationship of use to crime is confused and incomplete. There is, however, sufficient information to warrant, if not require, a review of the existing system of control.

Before making such a review, it must be recognized that the programs, laws and recommendations based on existing knowledge may be of little value unless they stem from an objective analysis based upon accepted medical knowledge rather than an emotional reaction stemming from misinformation. The purpose of this note is to present the realities of marihuana generally with the hope of dispelling some unfounded myths which have been created and accepted by the majority of the public; it will examine the current method of prohibiting the use of marihuana and will then present what is believed to be a more realistic approach to the problem.

II. Marihuana

A. *General Aspects*

Marihuana comes from the flowering tops of the leaves of the female hemp plant, Cannabis indica.[6] The plant often is found growing wild, but it can be cultivated in any temperate or semi-tropical climate, including the United States.[7] Producing bizarre psychic and physical effects in man when eaten, drunk, or smoked, cannabis or hashish[8] is used extensively in Middle Asiatic, Eastern and Southern Mediterranean, and North African countries, especially Egypt.[9] In the United States, the dried leaves are smoked in the

5. Blum, *Dangerous Drugs*, *supra* note 4, at 26.

6. Cannabis sativa L., Cannabis indica, and Cannabis americana are agreed to be the same plant, varying somewhat in size and appearance with climate and soil, but always producing an intoxicating principle. It is consumed in many ways and under many names in different parts of the world. Murphy, *The Cannabis Habit: A Review of Recent Psychiatric Literature*, 15 U.N. Bull. on Narcotics No. 1, 15 (Jan.-Mar. 1963). Other names for cannabis or its products include hashish, charas, bhang, ganja, dagga, and marihuana. L. Goodman & A. Gilman, The Pharmacological Basis of Therapeutics 299 (3d ed. 1965). (The terms marihuana and cannabis will be used interchangeably throughout the note.)

7. President's Report, *supra* note 2, at 213.

8. A derivative of the hemp plant which is more potent than marihuana. It is rarely found in the United States. *Id.*

9. In these areas, the common practice is to take it orally as a liquid or solid. Proceedings, White House Conference on Narcotic and Drug Abuse 286 (1962) (hereinafter cited as Proceedings).

form of a cigarette ("reefer"), occasionally mixed with tobacco. The user must employ a technique of slow and deep inhalation of the unpleasant, irritating smoke, followed by complete consumption of the cigarette, in order to achieve maximal vaporization and absorption of the resins.[10] The psychic changes induced vary with the individual, his existing mood, and environmental conditions. The usual effects are hilarity and a general breakdown of emotional restraints, although occasionally the individual becomes quarrelsome. Distortion in perception of time and space is common, and auditory perceptions of a rythmic nature are markedly accentuated, leading to rather extensive use among musicians.[11]

Although there is some medical use for the drug in other parts of the world—especially in folk medicine—it is generally agreed that neither marihuana nor other cannabis preparations currently have any accepted medical use in the United States.[12] Despite the fact that marihuana is no longer classified as an "official drug," there is still some feeling that it might have medical value.[13] The literature of the past decade frequently mentions possible effects other than intoxication.[14] In a recent trial involving possession and sale of marihuana, Dr. Joel Fort, a respected psychiatrist and drug consultant who has worked at the Federal Narcotics Hospital in Lexington, Kentucky, testified that marihuana might be useful for some agitated persons, "'in that the tensions they live under, the depression that they might suffer from, would be relieved or alleviated by a certain pattern of marihuana use.'"[15] A pharmaceutical chemist also stated that marihuana might have therapeutic value in medicine.[16] Although reports of these effects may not now be sufficiently convincing to justify the drug's use in modern medicine, it is clear that more research can and must be done, especially in light of the extremely low cost of marihuana and its potential value to the poor in many countries.[17]

10. *Id.*

11. For a description of the immediate physical and psychological effects of marihuana use see Taylor, *supra* note 1, at 14-15. For a more detailed description of the biological aspects of marihuana and the manner in which it is used see PRESIDENT'S REPORT, *supra* note 2, at 213; PROCEEDINGS, *supra* note 9, at 286; Solomon, *supra* note 3, at xiii; Taylor, *supra* note 1, at 3.

13. The World Health Organization Expert Committee on Addiction-Producing Drugs feels that although marihuana has no medicinal effect which outweighs its disadvantages or which cannot be substituted for, the drug does have medicinal properties other than that of intoxication. Murphy, *supra* note 6, at 20.

14. *Id.*

15. Wall Street Journal, Nov. 20, 1967, at 8, col. 3. It is possible that marihuana might provide a safe and necessary outlet (preferable to alcohol) for persons burdened with the ever-increasing tensions and problems of today's world.

16. *Id.*

17. Murphy, *supra* note 6, at 21.

B. *Is Marihuana a Narcotic?*

Although marihuana is treated as a narcotic under many state laws and in the same manner as "hard narcotics" by federal law, it is not a narcotic.[18] In general, drugs liable to abuse are usually put into either of two classifications—"narcotics" or "dangerous drugs," and the people who abuse them are usually called "addicts" or "users."[19] The terms have been used carelessly and without the precision necessary for objective analysis. The dictionary defines a narcotic as a substance which "allays sensibility, relieves pain, and produces profound sleep."[20] Its legal definition, however, does not refer to one class of drugs, each having similar chemical properties or pharmacological effects.[21] Rather, the term is applied to a number of different classes of drugs which have been grouped together for purpose of legal control.[22]

The most accurate definition of narcotic is limited to opium, its derivatives and synthesized analogs.[23] "Narcotics" as described by law or in popular speech, however, may include a number of drugs which are not opiates and which do not produce severe psychological effects upon withdrawal as do most, but not all, of the opiates.[24] So it is that "narcotics" statutes may also include marihuana, cocaine, hallucinogens, and other drugs pharmacologically dissimilar to opiates.[25] On the other hand, substances such as alcohol which are centrally active (central nervous system affecting) and do produce strong withdrawal effects may not be classified as narcotics.[26]

The Subcommittee on Narcotics Addiction of the New York County Medical Society has called marihuana "a mild hallucinogen."[27] This

23. Blum, *Mind-Altering Drugs and Dangerous Behavior: Narcotics*, in TASK FORCE REPORT: NARCOTICS AND DRUG ABUSE 40 (1967) (hereinafter cited as Blum, *Narcotics*). There is a large class of drugs, often referred to as psychoactive or psychotropic, which includes preparations classified as opiates, stimulants, sedatives, intoxicants, tranquilizers, antidepressants, and hallucinogens. Among these the term "narcotic" is most often applied to opium, its derivatives and synthetic analogs. Among intoxicants may be included alcohol, the volatile intoxicants such as some glues, gasoline, paint thinners, ether, etc., and in another class, cannabis-derived preparations such as marihuana. Blum, *Dangerous Drugs*, *supra* note 4, at 22.

characterization may not be completely accurate, however, in light of evidence that marihuana "seems more likely to produce intoxicating effects similar to alcohol" than hallucinations.[28] Although it is not this note's intention to classify marihuana, it is clear from the evidence presented that it does not fall within the medically accepted definition of narcotic. It is submitted that the drug should not be included within either the federal or state narcotic statutes.

C. *Extent of Use*

Although legalized supply of marihuana is allowed in only a few countries, its production and use is nearly worldwide.[29] In the United States the largest percentage of the marihuana comes from Mexico.[30] The consensus seems to be that its use is increasing[31] and ranges from the young urban poor through disaffected "hippies," to artistic and university communities and young professional persons in metropolitan centers.[32] Use appears to be concentrated in the 18 to 30 age group, but reports of both downward (high school) and upward (over 30) diffusion are appearing.[33] Dr. Richard H. Blum states that the "best estimate is that experimentation is far more common than regular use and that heavy use (as occurs in Africa and Asia) is quite rare."[34]

There are reports of widespread use on campuses, but estimates that 20 to 50 percent or more of certain college populations have used the drug can neither be verified nor refuted.[35] Dr. Stanley F. Yolles, the director of the National Institute of Mental Health, testified that approximately 20 percent of the college students questioned

in recent surveys reported some experience with marihuana. It was estimated that about 2,000,000 high school and college students have had some experience with the drug, but of those students who reported using marihuana, 65 percent had used it less than 10 times, with "once or twice" the commonest response.[36] It would thus appear that the number of steady users of marihuana in our college population is small.[37]

D. *Marihuana Myths*

Although marihuana is becoming a problem of national concern, there still is a great deal of misunderstanding regarding the actual facts and risks of marihuana use. Sufficient knowledge, however, exists to dispell the myths that exist. The major areas of confusion are summarized in the following questions: (1) Do marihuana users become physically addicted, as can users of heroin, morphine and alcohol? (2) Do users develop a psychological dependence on marihuana perhaps even harder to break than physical dependence? (3) Does it cause psychotic episodes or long-range personality changes? (4) Does marihuana cause violent crime and sexual excess? (5) Is marihuana a stepping stone to the more potent, addictive drugs?

III. Effects of Marihuana Use

A. *Addiction*

There appears to be no settled definition of addiction.[38] Most frequently it connotes physical dependence, resulting from excessive

36. The National Observer, Mar. 11, 1968, at 12, col. 2. A careful California study of 121 students showed that 14 (11%) reported marihuana experiences but the majority of these 11 percent had used it on only one or two occasions—and the study selected these students for their avowed interest in the psychedelic experience. N.Y. C'ty Med. Soc'y Report, *supra* note 2, at 241.

37. The important point in these facts is that "in contemporary America the employment of marihuana has ceased to be a subcultural affair limited to the underprivileged and the undereducated. It has become a custom that is rapidly expanding through the byways of the middle and upper classes. Today it is evident that the use of marihuana is rapidly spreading among the privileged and the literate, college student and professor alike, and finding warm and broadening acceptance by creative people of all ages in the arts, sciences, and professions who no longer wish to limit themselves to the psychologically numbing effects of alcoholic beverages." Solomon, *supra* note 3, at xx.

38. President's Report, *supra* note 2, at 211-12. Sociologists speak of "assimilation into a special life style of drug taking." Doctors speak of "physical dependence," and alteration in the central nervous system that result in painful sickness when use of the drug is abruptly terminated; of "psychological or psychic dependence," an emotional desire, craving or compulsion to obtain and experience the drug. They speak of "tolerance," a physical adjustment to the drug that results in successive doses producing

use of certain drugs.[39] However, one can become physically dependent on substances, notably alcohol, that are not considered part of the drug abuse problem.[40] In addition, psychic or emotional dependence can develop to any substance, not only drugs, which affects consciousness and is used for escape, adjustment or simple pleasure.[41]

Despite the existing discrepancies between the medical and the legal definition of addiction,[42] it is agreed that a general definition would include the following characteristics: (1) an overpowering desire or need to continue taking the drug and to obtain it by any means; (2) a tendency to increase the doses; (3) a psychic and generally a physical dependence on the effects of the drug; and (4) a detrimental effect both on the individual and on society.[43] Habituation, on the other hand, may be distinguished by the absence of true compulsion and physical dependence, little tendency to increase the dose, and use of the drug only for the pleasurable sensations it induces, not for relief of feelings of lack.[44] The obvious illustration of a habit-producing drug is alcohol.[45]

Most studies indicate that in terms of the above definitions, cannabis is "habit-forming" rather than "addiction-producing."[46] The LaGuardia Report on *The Marihuana Problem in the City of New*

---

smaller effects and, therefore, a tendency to increase doses. Many statutes speak of habitual use; of loss of the power of self-control respecting the drug and of effects detrimental to the individual or potentially harmful to the public morals, safety, health or welfare. *Id.*

York concluded that true addiction to marihuana does not occur.[47] The evidence available at the time—the absence of any compelling urge to use the drug, the absence of any distressing abstinence symptoms, the statements that no increase in dosage is required to repeat the desired effect in users—justified the conclusion that neither true addiction nor tolerance is found in marihuana users.[48] The continuation and frequency of marihuana use, as in the case of many other habit-forming substances, depends upon controllable desires for its pleasurable effects.[49] The Report by the President's Commission on Law Enforcement and Administration of Justice states that although marihuana is equated in law with the opiates, the abuse characteristics of the two have almost nothing in common.[50] "The opiates produce physical dependence. Marihuana does not. A withdrawal sickness appears when use of the opiates is discontinued. No such symptoms are associated with marihuana. The desired dose of opiates tends to increase over time, but this is not true of marihuana.[51] Both can lead to psychic dependence, but so can almost any substance that alters the state of consciousness."[52] Dr. H. B. M. Murphy found after a review of recent psychiatric literature that the consensus was that cannabis is much closer to alcohol than to the opiates or to cocaine.[53]

B. *Physical Dependence*

Even the strongest opponents of marihuana generally acknowledge that users do not become physically addicted.[54] The President's Report states that although nausea and vomiting may be among the immediate physiological effects, there are no lasting physical effects, and fatalities have not been noted. If tolerance develops at all, it is very slight and physical dependence does not occur.[55] Intrinsically, marihuana is less dangerous and less harmful to the human body than

is alcohol.[56] While the alcoholic commonly substitutes alcohol for food, marihuana stimulates the appetite.[57] Chronic alcoholism is associated with various psychotic conditions and diseases.[58] In comparison, the smoking of marihuana produces relatively trivial physical effects, although it does appear that immoderate use of the more concentrated products of the hemp plant may produce deleterious bodily effects.[59] Such effects, however, are not conspicious among American reefer smokers because of the relatively small quantities of the essential drug which are ingested from the poor-quality marihuana ordinarily consumed in this country.[60]

C. *Psychological Effects*

The psychiatric literature on cannabis smoking over the past 25 years is somewhat confused as regards the effects attributed to the drug. However, it is generally concluded that cannabis is habit-forming like alcohol and not addiction-producing like opium.[61] Dr. Blum recognized that marihuana could lead to psychological dependence, but stated that cannabis dependency has not been described in the United States.[62]

D. *Marihuana Psychosis*

Most investigators warn that it is exceedingly difficult to distinguish a psychosis due to marihuana from other acute or chronic psychoses.[63] The fact that marihuana is frequently used by the mentally unstable,[64] makes it difficult to ascertain whether marihuana was the primary

cause of insanity or whether indulgence in it was only secondary to the existing mental disorder.[65]

Although studies in India[66] and North Africa[67] show that cannabis psychoses may occur in association with heavy use of potent forms of cannabis,[68] many writers suggest that cannabis is a relatively unimportant precipitating agent.[69] In a report by Dr. I. C. Chopra and Col. Sir R. N. Chopra on the use of cannabis in India, the authors concluded that:

> the moderate use of these drugs does not lead to insanity in the majority of the individuals unless some predisposing factor is present. The will power and self-reliance of the addicts may be weakened, as is usually the case with drug habits, but the character and mental faculties of those taking small and moderate doses remain practically normal. The *social disfavor and boycott of the addicts* in certain parts of the country where the use of cannabis is not common makes it difficult for them to lead a normal life. The latter may bring about unfavorable changes in their character and gradual mental and moral deterioration, and *those who might have been otherwise law abiding citizens may break the law.* In this way they become outcasts and idlers.[70]

Other writers generally agree that a characteristic marihuana psychosis does not exist, and the drug will not produce a psychosis *de nova* in a well integrated, stable person. Dr. Murphy concluded that "evidence of chronic mental deterioration is difficult to obtain. In general the studies show no evidence of mental or physical deterioration."[71] According to Dr. Blum cannabis psychosis has not been described in the United States,[72] and in recent testimony, Dr. Joel Fort stated that he knew of no one who had been admitted to mental hospitals in this country " 'solely because of problems associated with marihuana.' "[73]

70. Chopra & Chopra, *Use in India*, *supra* note 46, at 18-19. (Emphasis added). In commenting on the Chopra report, Professor Murphy stated that "although it is well established that cannabis use attracts the mentally unstable, the prevalence of major mental disorders among cannabis users appears to be little, if any, higher than that in the general population. Admittedly such data may contain some fallacies, but the techniques used by the Chopras in studying their habituees differed very little from those used in more modern mental health surveys. Therefore, it would appear that true cannabis psychosis must either be very rare indeed, or that it must be substituting for other forms of psychosis. Also, the data raised the question whether the use of cannabis may not be protecting some individuals from a psychosis." Murphy, *supra* note 6, at 19.

IV. Marihuana and Crime

Marihuana has long held the reputation of inciting individuals to commit sexual offenses and other antisocial acts.[74] The existing evidence, however, does not substantiate this claim.[75] Although proponents of the view that marihuana does not cause crime cannot conclusively prove their case,[76] they point to the prevailing lack of evidence to the contrary. Insofar as the use of marihuana is itself illicit, there can be no use of the drug without criminality. If, however, one considers crimes against person or property as opposed simply to violation of the law occurring because the drug is used, then the best evidence to date suggests that the marihuana-crime relationship depends upon "the kinds of persons who choose to use drugs, the kinds of persons one meets as a drug user, and on the life circumstances both before drug use and those developing afterward by virtue of the individual's own response and society's response to him."[77] In spite of popular beliefs to the contrary, one cannot assume that marihuana use leads inevitably to any particular type of social behavior, including criminality.[78]

One hypothesis explaining the lack of evidence that marihuana is related to crime and violence is that, given the accepted tendency of marihuana to release inhibitions, the specific effect of the drug will depend on the individual and the circumstances.[79] Marihuana use results in an accentuation of all personality traits, both those harmful and those beneficial.[80] It does not impel its user to take spontaneous action, but may make his response to stimuli more emphatic than it normally would be.[81] Thus marihuana does not alter the basic personality, but, by relaxing inhibitions may permit formerly suppressed antisocial tendencies to come to the fore.[82] It does not itself give rise to antisocial behavior,[83] and the drug may, but certainly will not inevitably, lead to aggressive behavior or crime.[84]

84. President's Report, *supra* note 2, at 225.

The person then, not the drug, is "responsible" for criminal acts.[85] When an already delinquent youth takes marihuana and commits yet another delinquent act, it may well be that the timing or expression of the delinquency is shaped by the drug-induced state of mind.[86] Generally, although the scientific evidence is not adequate, one would expect that the well-integrated person under heavy marihuana doses will not do things contrary to his ordinary conduct.[87] Less mature, more neurotic, or otherwise less well–integrated persons would seem to be more vulnerable to the acting-out of impulses, the temporary expressions of conflicts or the inducement by others to misbehave.[88] Thus, a review of crimes reportedly committed under the influence of marihuana must take note of the prior criminal and sociopsychological history of the offender.

The writers, especially within the medical community, agree that although aggressive behavior can occur, it is less common with cannabis than with alcohol. The drug does not per se induce criminal behavior, juvenile delinquency or sexual excitement.[89] Even Mr. Harry Anslinger, the head of the Bureau of Narcotics and the driving force behind the 1937 marihuana laws, drastically changed his earlier views on the relationship of marihuana to crime in the congressional hearings which led to the 1956 Narcotic Control Act. He played down the connection between marihuana use and crime, emphasizing instead that marihuana was dangerous primarily because it sometimes led to heroin addiction. He pointed out that marihuana is not an addicting drug and noted that marihuana users were not being counted in the Bureau's national survey of addiction.[90]

Proponents of the view that marihuana is a major cause of crime and violence rely mainly on the hearings on the 1937 Act.[91] It found that 125 of 450 men convicted of major crimes in 1930 were regular marihuana users. Approximately one-half were murderers and one-

fifth of those tried for larceny, robbery, and assault were regular users. Excerpts from files of law enforcement agencies were used to demonstrate a marihuana-crime casual relation. The validity of such a demonstration involves three assumptions which are questioned by opponents of the present law: (1) The defendant was a marihuana user. Usually this can be determined only by the defendant's own statement or by his possession of the drug at the time of arrest. (2) He was under the influence of marihuana when he committed the criminal act. Again a statement is most often the source of the information. Chemical tests of blood, urine, and the like will not detect marihuana. (3) The influence of the marihuana caused the crime in the sense that it would not have been committed otherwise.[92]

Other writers have concluded from literature surveys and personal contact that the association between the use of marihuana and the commission of various crimes is clearly demonstrable.[93] Dr. James C. Munch bases such conclusions, in part, on a review of cases from law enforcement files where crimes of various types were apparently committed after use, and under influence of marihuana.[94] Commenting on this study, Professor Michael P. Rosenthal states that it is unclear whether in these cases the person charged was under the influence of the drug (and, if so, to what extent) at the time of the criminal act, or whether he was merely a user.[95] In either event it is extremely questionable whether such data throws light on the relationship between marihuana and crime, other than to show that: (a) some marihuana users, or (b) some marihuana users while under the influence of the drug, have committed some crimes. It does not tell us why they did so (*i.e.*, whether these persons would have been as likely to commit crime if they were not under the influence of the drug or were not users) or whether the estimated size of the group of marihuana users under the influence of the drug who do commit crime (other than the acquisition, use, and simple possession or disposition of marihuana itself) is significant or insignificant compared to the estimated size of the marihuana-using population.[96]

With regard to the relationship of marihuana use to traffic accidents, sufficient data is lacking. One study in the United States, using a cannabis-like compound, suggested that motor performance was not

impaired but that the ability to shift attention was reduced.[97] Effects are no doubt related to dosage, but no driving studies based on varied dosages have been done.[98] The New York County Medical Society Report emphasized that marihuana users frequently have impaired judgment in certain areas, particularly in skilled activities such as driving.[99]

V. Marihuana as a Stepping Stone to Addiction Drugs

It is a popular assumption that marihuana is a "stepping stone" to heroin in that it is a causal factor which predisposes a person to progress to heavy drug use.[100] With reference to the belief that marihuana leads to heroin use, three critical questions must be considered: (1) What proportion of marihuana users do not go on to heroin? (2) Is marihuana use an inevitable and necessary precondition of heroin use, that is, can it be shown (a) that all heroin users first took marihuana, (b) that such marihuana use is the only factor common to heroin users, and (c) that the presence of this common factor can be shown experimentally to be a determinant of heroin use?[101] (3) Whether a marihuana user is more likely to go on to heroin than a non-marihuana user?

There is evidence that a majority of the heroin users who come to the attention of public authorities have, in fact, had some prior experience with marihuana.[102] This, however, does not mean that one leads to the other in the sense that marihuana has an intrinsic quality which creates heroin susceptibility.[103] There are too many marihuana users who do not graduate to heroin, and too many heroin addicts with no

102. N.Y. C'ty Med. Soc'y Report, *supra* note 2, at 242; President's Report, *supra* note 2, at 225.

103. President's Report, *supra* note 2, at 225. Blum points out that although case studies "suggest that many identified heroin users have had earlier experience with marihuana," they are also likely to have had even earlier illicit experience with cigarettes and alcohol. Blum, *Dangerous Drugs*, *supra* note 4, at 24. The Mayor's Report concluded that marihuana was neither a significant addiction producer itself, nor a serious channel to other addictions. Mayor's Report, *supra* note 2, at 25. Finally, the New York County Medical Society recognized in its report that it was true that over 50% of heroin users have had prior marihuana experience. However, among the hundreds of thousands of persons who have had one or a few marihuana experiences, "only a small number subsequently become heroin addicts." N.Y. C'ty Med. Soc'y Report, *supra* note 2, at 242.

known prior marihuana use, to support such a theory.[104] Moreover, there is no scientific basis for such a theory. Dr. Louis S. Goodman and Dr. Alfred Gilman state quite explicitly that marihuana habituation does not lead to the use of heroin; the casual relationship between the two has never been substantiated.[105]

Two reasonable hypotheses may explain the alleged relationship between marihuana and heroin. First, people who are predisposed to marihuana are also predisposed to heroin use.[106] Second, it may be that through the use of marihuana a person forms personal associations which later expose him to heroin.[107]

VI. Existing Law

A. *History*

In 1930—the year the Federal Bureau of Narcotics was established[108] —only sixteen states had laws prohibiting the use of marihuana, and those statutes were generally mild and rarely enforced.[109] By 1937, largely as a result of almost eight years of persistent efforts by the Bureau, every state legislature had adopted a standard bill making marihuana illegal.[110] With the passage of the Marihuana Tax Act in 1937, the plant's legal fate was effectively sealed; the Federal Bureau of Narcotics had created a "villainous *bête noir* out of whole cloth, which it then heroically proceeded to slay in a campaign that today seems more noteworthy for its zeal than for its principles."[111]

---

104. President's Report, *supra* note 2, at 225. Blum states that "[m]ost persons who experiment with marihuana do not try heroin, some heroin users even in slum cultures have not first tried marihuana, and among heroin users first trying marihuana a number of other common factors are also likely to be present. Among these may be experimentation with other illicit drugs reflecting a general pattern of drug interest and availability." Blum, *Narcotics, supra* note 23, at 53. *See also* Lindesmith, *The Marihuana Problem, supra* note 46, at 27; Mayor's Report, *supra* note 3, at 13; N.Y. C'ty Med. B. *Federal Laws*

1. *The Marihuana Tax Act.*—The Marihuana Tax Act was modeled after the Harrison Act.[112] It was designed to curb the use of marihuana by the use of federal police power, and, like the Harrison Act, imposed penalties upon both buyers and sellers. As stated, the objectives of the act were: (1) making marihuana dealings visible to public scrutiny; (2) raising revenue; and (3) rendering difficult the acquisition of marihuana for nonmedical purposes and noncommercial use.[113] The Act was the result of a publicity campaign staged by the Federal Bureau of Narcotics under Mr. Harry Anslinger's direction and leadership.[114] The bill was passed with little discussion and after brief hearings, on the ground that marihuana was a highly dangerous drug inciting its users to commit crimes of violence and often leading to insanity.[115]

At the federal level marihuana is controlled in a manner similar to heroin and other "hard narcotics." Federal control is maintained via the taxing power, and a transfer tax and an occupational tax are prescribed by the Marihuana Tax Act.[116] The Act permits the Secretary of the Treasury or his delegate, to require registrants to render information returns, verified by affidavit, setting forth the quantity of marihuana received or harvested during "such period immediately preceding the demand of the Secretary . . . not exceeding 3 months."[117] If the registrant is not solely a producer, he must set forth the persons from whom he received it and the date and quantity of each receipt.[118] Most transfers[119] are taxable and must be made pursuant to official written order.[120] The tax on transfers to registrants is one dollar an ounce;[121] transfers to unregistered persons are taxed in the prohibitive amount of one hundred dollars an ounce.[122]

121. *Id.* § 4741(a)(1).

122. *Id.* § 4741(a)(2). A transferee must obtain an official written order form in

The Marihuana Tax Act prohibits interstate shipment, transportation, and delivery, but exempts from these prohibitions registrants who have paid the occupational tax and other enumerated classes of persons who are engaged in "legitimate" dealings.[123] It also prohibits persons required to register and pay the occupational tax from importing, manufacturing, producing, dealing in, compounding, prescribing, administering, dispersing, selling, or giving away marihuana without having registered and paid the tax.[124] Where a written order is required, the Act forbids transferors to make transfers without one,[125] and prohibits transferees required to pay the transfer tax from acquiring or otherwise obtaining the drug without having paid it.[126] Proof of possession combined with failure to produce a written order after reasonable notice and demand from the Bureau of Narcotics is "presumptive evidence of guilt" of unlawful possession.[127]

2. *The Narcotic Drug Import and Export Act.*—The Narcotic Drug Import and Export Act prohibits knowing unlawful importation with intent to defraud the United States, and the receipt, concealment, purchase, or sale, or unlawful importation.[128] Unexplained possession of marihuana is "sufficient evidence to authorize conviction" under this section, just as it is in the case of the Marihuana Tax Act.[129]

3. *Federal Penalties.*—Penalties under the federal marihuana laws are the same as for violations involving narcotics, and they are harsh.[130] Particularly long sentences are prescribed for sales to juveniles.[131] In 1951, following the post-World War II upsurge in reported addiction, mandatory minimum sentences were introduced for all narcotic and marihuana offenses.[132] In addition—as in the case of

narcotics—probation, suspended sentence,[133] and young adult treatment[134] were unavailable for violations of the illegal importation and written-order provisions. Under a law enacted in November, 1966, violators of the federal marihuana laws were made eligible for parole.[135] Previously, violators of the illegal-importation and written order provisions were ineligible for parole,[136] and violators of other provisions were not eligible for parole for any offense after the first offense.[137]

C. *State Laws*

Marihuana is included as a narcotic under the Uniform Narcotic Drug Act,[138] which is, either in whole or in part, the basis of narcotics regulation in forty-eight states.[139] Simple possession is prohibited in virtually every state, and some states also prohibit use. State penalties for marihuana violations are frequently severe,[140] as the statutes often make no distinction between penalties for marihuana and hard narcotics violations.

traditionally been built around two judgments: (1) that drug abuse was an evil to be suppressed; and (2) that this could most effectively be done by the application of criminal enforcement and penal sanctions. As a result, the one traditional response to an increase in drug abuse has been to increase the penalties for drug offenses. The premise has been that the more certain and severe the punishment, the more it would serve as a deterrent. Typically this response has taken the form of mandatory minimum terms of imprisonment, increasing in severity with repeated offenses, and provisions making the drug offender ineligible for suspension of sentence, probation, and parole. PRESIDENT'S REPORT, *supra* note 2, at 222-23. The mandatory minimum sentences were originally 2 years for the first offense, 5 years for the second, and 10 years for the third and subsequent offenses. In 1956 the mandatory minimum sentences were raised to 5 years for the first and 10 years for the second and subsequent offenses of unlawful sale and importation. They remained at 2, 5 and 10 years for the offense of unlawful possession. *Id.* at 223; 26 U.S.C. § 7237 (1964).

D. *Evaluation*

Despite its objectives, the Marihuana Tax Act raises a small amount of revenue and exposes an insignificant number of marihuana transactions to public view, since only a handful of people are registered under the Act.[141] It has become, in effect, solely a criminal law imposing sanctions upon persons who sell, acquire, or possess marihuana.[142] Even in this respect the law has not been very successful.[143] In spite of legal controls, marihuana is said to be obtainable in most metropolitan centers in the United States.[144] The penalty has clearly not prevented the recent upsurge in use, and to what extent controls have reduced use cannot be said.[145]

The complex pattern of offenses under the federal marihuana laws also has created a special sentencing problem[146] in that a single sale of marihuana may violate several statutory provisions. It may constitute concurrently a violation of the prohibition of the Narcotic Drugs Import and Export Act against trafficking in illegally imported narcotics,[147] a failure to comply with the requirement of the Marihuana Tax Act that a transfer of narcotic drugs be made pursuant to a written order on the prescribed Treasury form,[148] and a failure to comply with the requirement of the Marihuana Tax Act that narcotic drugs shall be sold in or from the original package containing the requisite tax stamps.[149] If there is a verdict of guilt on several counts, separate sentences may be imposed upon each, the result being a cumulative sentence considerably more severe than the total marihuana transaction warrants.

The effect of the introduction of mandatory minimum penalities can be determined to a certain extent. First, in spite of the application of

years and not more than $20,000; subsequent offenses, 10 to 40 years and not more than $20,000); IND. ANN. STAT. § 10-3538 (Supp. 1966) (Sale: first offense, 5 to 20 years and not more than $2,000; subsequent offenses, 20 years to life and not more than $5,000. Possession: first offense, 2 to 10 years and not more than $1,000; subsequent offenses, 5 to 20 years and not more than $2,000); PA. STAT. ANN. tit. 35, § 780-20(c), (d) (1964) (Possession: first offense, 2 to 5 years and not more than $2,000; second offense, 5 to 10 years and not more than $5,000; subsequent offenses, 10 to 30 years and not more than $7,500. Sale: first offense, 5 to 20 years and not more than $5,000; second offense, 10 to 30 years and not more than $15,000; subsequent offenses, maximum of life imprisonment and not more than $30,000). For a complete summary of state penalties for narcotics violations see W. ELDRIDGE, NARCOTICS AND THE LAW, 177-225 (2d ed. 1967).

such sanctions to marihuana, the traffic in that drug appears to be increasing.[150] Second, there has been a substantial increase in the percentage of the federal prison population serving sentences for narcotic and marihuana offenses.[151] Third, these sentencing provisions have deprived the federal courts of almost all discretion in sentencing.[152] Fourth, they have made rehabilitation of the convicted narcotic offender much more difficult.[153] The Bureau of Narcotics maintains that the present severe penalties act as a powerful deterrent.[154] This conclusion appears doubtful in light of the fact that the illicit traffic in marihuana seems to be continuing and even increasing.

VII. RECOMMENDATIONS

A. *Education*

There is convincing evidence that a critical need exists for an extensive and enlightened educational effort on marihuana use and,

150. PRESIDENT'S REPORT, *supra* note 2, at 223. *See also* note 2 *supra* and accompanying text.

151. At the close of fiscal 1965 there were 3,998 drug-law violators confined in all federal institutions. This number represented 17.9% of all persons confined. The average sentence being served by the drug-law violators was 87.6 months, and 75.5% of them were ineligible for parole. These figures compare with the 2,017 drug-law violators confined at the close of fiscal 1950, comprising 11.2% of all persons confined at that time. The 1950 violators were all eligible for parole, and while average sentence data is not available for that year, it would be safe to estimate that sentences averaged much less than one-half of 87.6 months. PRESIDENT'S REPORT, *supra* note 2, at 223.

152. PRESIDENT'S 1963 ADVISORY COMMISSION ON NARCOTIC AND DRUG ABUSE 40. The Senate Subcommittee on Juvenile Delinquency, in a joint project with the Subcommittee on National Penitentiaries, sent a questionnaire to federal district judges, federal chief probation officers, federal prison authorities, and United States Attorneys, inquiring into the effects of the mandatory minimum sentence provisions, and the elimination of probation and parole in the handling of narcotic offenders. The answers to this questionnaire, digested and broken down, are as follows: (1) Of federal prison wardens, 92% were opposed to the mandatory minimum sentence provisions; 97% were opposed to the prohibition of probation or parole. (2) Of the federal district judges responding to the questionnaire, 73% opposed the mandatory minimum sentence provisions and 86% opposed the prohibition of probation or parole. (3) Of the probation officers who responded, 83% opposed the mandatory minimum sentence provisions and 86% opposed the prohibition of probation or parole. (4) Of the United States District Attorneys who responded, a group which understandably is predisposed toward more rigid punitive statutes, 50% opposed the mandatory minimum sentence provisions and 55% opposed the prohibition of probation or parole. The overall figures for the survey showed that approximately 75% of all those who responded, people who deal with the Narcotics Control Act of 1956 from day to day, oppose the two basic provisions of the act and seek their modification. PROCEEDINGS, *supra* note 9, at 230.

153. PRESIDENT'S 1963 ADVISORY COMMISSION ON NARCOTIC AND DRUG ABUSE 40. This situation may have improved in regard to marihuana violators after enactment of the federal law making violators of marihuana laws eligible for parole. *See* notes 134 & 137 *supra* and accompanying text.

154. PRESIDENT'S 1963 ADVISORY COMMISSION ON NARCOTIC AND DRUG ABUSE 40.

more generally, drug abuse. The problem areas are still clouded by misconceptions and misinformation about the perils of marihuana and the viciousness of the pusher.

Educational and legal efforts should reflect a rational policy, and that program should be based on the facts in order to make the public aware of the effects of marihuana. Since physicians, lawyers, social workers, and educators are frequently uninformed, an education program for professional personnel whose activities touch upon some aspect of this problem is likewise in urgent need. Finally, the program should also be directed toward the teenager, who should be made conscious of the full range of effects—physical and psychological—which marihuana, narcotics and other dangerous drugs can produce. It is believed that the best approach on this level would be a candid analysis of the problem by competent individuals in our schools.

To educate successfully, a variety of materials is needed. They should extend from suitable publications in professional journals to those designed for the mass media, ranging from books and articles to tapes and films. The federal and state governments must play an important role in this educational process from the standpoint of supplying facilities and providing financial resources.[155]

B. *Research*

Under the present system of prohibition it is difficult to obtain marihuana for research purposes.[156] While federal funds are available to finance worthwhile research projects,[157] there do not appear to be sufficient researchers or research organizations willing and able to carry them out. The broad policy of a general research program should be to increase research done on the private level and that done by organizations. In the former instance, the increase in the ease of access to drugs would provide added incentive to the individual scientist. In the latter case, an affirmative approach must be taken to encourage programs directed at filling the gaps in our present knowledge. The traditional approach of those administering federal research funds has been to wait for a researcher or research

155. For an extensive discussion of this problem see *id.* at 17-20.

156. Blum, *Narcotics, supra* note 23, at 65.

157. The National Institute of Mental Health granted more than $145,000 in the fiscal year ended June 30, 1967 for private research programs to determine in detail the chemical nature of the drug, its physical and psychological effects and the incidence of its use. In its 1968 budget, the Department of Health, Education and Welfare has asked Congress for $1 million to establish an information and education center on narcotics and dangerous drugs, including marihuana. The center was recommended by President Johnson in his report to Congress on the findings of the national crime commission in February. N.Y. Times, Aug. 13, 1967, § 1, at 46, col. 1.

organization to initiate a project proposal.[158] This process should be reversed, with the federal government becoming more active in encouraging and assisting researchers and research organizations to undertake desired projects. It may also be valuable to assist in the enlargement of existing, and the establishment of new research centers dealing with drug abuse at universities and hospitals. Colleges and universities should bear a portion of the responsibility for further development of our knowledge of drug abuse since their resources encompass all techniques used in research on drug abuse. The research efforts of the government should be meshed where possible with the formal educational program of the nation.[159]

C. *Legal Control*

1. *Legislative Approach.*—A general revision of the criminal law pertaining to marihuana must be undertaken. Further lawmaking in this regard should consider two key issues: (1) A law which is not based on facts and which has an unknown effect as far as control is concerned is not likely to solve real problems associated with marihuana use. (2) The apparent satisfaction produced by passing a criminal law directed at marihuana users must have some social function. It must do more than merely alleviate public anxiety or single out for punishment someone who represents what the public thinks is a social menace.[160]

New legislation cannot be expected to satisfy everyone, nor should it attempt to do so; but it must find its basis in the correction of current inconsistencies, in the anticipation of known effects, and in meeting standards of economy, humanity, and good sense. Similarly, any effort to modify present programs by developing new social policy must expect to follow the traditional American legislative process of: (a) generating pressure for change; (b) participating in the debate over those changes; and (c) compromising the interests of important existing groups affected by the policy.[161] In this light, this note's proposal is not designed with the idea that it would be a political compromise which might be subject to immediate acceptance by the general public; rather, it is an approach which probably finds its support within a minority of the public at the present time.

2. *Legalization of Marihuana.*—It is submitted that neither distribution nor possession with intent to distribute, nor simple possession, use or acquisition of marihuana should be treated criminally. Although

158. *Supra* note 152, at 27.
159. For an extensive discussion of this problem see *id.* at 21-30.
160. Blum, *Dangerous Drugs*, *supra* note 4, at 32.
161. Blum, *Drugs, Dangerous Behavior, and Social Policy*, TASK FORCE REPORT: NARCOTICS AND DRUG ABUSE 69 (1967).

specific statutory recommendations will be suggested in Part II, it is appropriate to mention here a few general factors which must be considered. First, the legalization of marihuana will not be an easy task. The problems and issues involved are very complex and must be examined with care under the guidance of experts from both the medical and legal professions if a viable statute is to be enacted. Second, legalization will serve no purpose unless it gives, with certain limitations, those who desire to use marihuana the opportunity to obtain it. Certainly, complete legalization without restrictions should not be permitted, but by placing a heavy tax on the drug or by severely limiting the age of the consumer and the amount available, the legislatures will only perpetuate, under the guise of legalization, the evils inherent in the present system of regulation. An approach somewhat similar to that taken with alcohol is envisioned with a number of additional restrictions.[162]

3. *Other Recommendations.*—Other writers have already recommended partial legalization, *i.e.*, that simple possession, use and acquisition no longer be punishable, but that the prohibition on the distribution of marihuana or possession with intent to distribute be maintained. Professor Rosenthal[163] has recommended that marihuana be regulated like any other dangerous drug, rather than like narcotics. At the federal level he would include it under the Drug Abuse Control Amendments where "neither simple possession, use, nor acquisition would be punishable."[164] He feels that if the drug is not to be included under the Drug Abuse Control Amendments, "federal law should prohibit possession of the drug with a purpose to sell or otherwise dispose of it, and section 4744(a) . . . should be repealed."[165] Dr. James L. Goddard, Food and Drug Administration Commissioner, appears to have taken a similar position. In a confidential memorandum recently circulated among top Health, Education and Welfare officials over the signature of Dr. Goddard, it was recommended that "legal penalties for possession of marihuana when it is intended for personal use only" should be removed.[166] Finally, Dr. Alfred R. Lindesmith, commenting on the President's Advisory Commission's position that because of the relatively trivial nature of the marihuana

162. Limitations might include restricting the age of the consumer, the process and quality of production and the method of distribution and advertisement. The scope of this note does not permit a more detailed analysis of specific proposals in this area.

165. *Id.* at 1120. Section 4744(a) of the U.S.C. prohibits obtaining or otherwise acquiring the drug without paying the transfer tax. Proof of possession coupled with failure after reasonable demand to produce a written order is "presumptive evidence of guilt."

166. Wall Street Journal, Nov. 20, 1967, at 1, col. 1.

evil all mandatory sentences should be eliminated for crimes involving marihuana, stated:

> These suggestions are excessively timid and not entirely logical for there is no reason why a mere user of marihuana should be subjected to a jail sentence at all. The marihuana user probably ought to be dealt with by the law along the same lines that are used with persons who drink alcohol.[167]

The recommendation that simple possession, use and acquisition not be punished has three objectives: (1) The recommendation would eliminate the unreasonably harsh treatment to which the user is presently subjected. (2) It would permit federal and state control over the use of the drug. (3) It would permit the government to punish the pusher who is probably anxious to encourage users to progress to truly addiction-producing drugs.[168] Partial legalization would, however, tend to increase the use of marihuana but not permit this increased use to be supplied by legitimate distributors. As a result, the user-pusher contacts will be increased, probably leading to increased crime and increased heroin use, as the pusher would not be content to limit his sales to marihuana.[169]

4. *Reasons for Legalization.*—In light of our present knowledge regarding marihuana and the objectives which the above approach is designed to achieve, there is no logical reason why only a half step should be taken by legalizing use and prohibiting distribution. It is no longer believed that the dangers of marihuana support the current narcotic-like system of prohibition. Marihuana is not only less dangerous than the "hard narcotics" but is in many respects less dangerous than those drugs regulated under the Drug Abuse Control Amendments.[170] If the dangers of marihuana do not support the criminal treatment of the user solely for his use, it is submitted that they do not support the punishment of the distributor.

It is agreed that use does not lead to physical dependence, and that marihuana psychosis does not exist in the United States. The latter occurs, if at all, among those who have used large amounts of the highly potent derivatives of cannabis for a long period of time, and there are few such users in the United States.[171] There is

167. Lindesmith, *The Marihuana Problem*, *supra* note 46, at 31.

168. *See* note 169 *infra* and accompanying text.

169. This is true because (1) marihuana is not addiction-producing and (2) tolerance is not a result of marihuana use, as the user can always achieve the same result with the same dosage.

170. Rosenthal, *Recommendations and Comments*, *supra* note 28, at 1118.

171. The legislatures must address themselves not only to the quality and quantity of the drug which should be sold, but also to the derivative of the drug used from the standpoint of potency.

also no reliable evidence that marihuana causes crime. The present evidence tending to support this view is not nearly sufficient to warrant the present prohibitions. Despite the number of heroin addicts who have had marihuana experience, apparently relatively few persons who have used marihuana become heroin addicts. In addition, making marihuana available would increase the amount of research done in this area and might produce beneficial results.

Finally, it is questionable whether the current narcotic-like system of regulation is any more effective in controlling marihuana traffic than the system of regulation embodied in the recommendation that marihuana be legalized and controlled. Legalization would undoubtedly increase use; but in light of existing knowledge and the regulation which could be maintained, it is likely that society would benefit in the long run from such an approach. Government-regulated distribution would probably eliminate a great deal of the user-pusher contact which at present appears to be a major factor in the marihuana-crime, marihuana-heroin relations.[172] It would also eliminate the severe social and legal treatment of the marihuana user which in many cases is a factor which causes persons who might otherwise have been law-abiding citizens to become hardened criminals.[173] This factor becomes more significant when it is noted that young adults make up a major part of the marihuana using population today.

5. *Opposition to Complete Legalization.*—Admittedly, there would be opposition to the permissive position of total legalization. The more conservative reformer can call attention to the fact that, outside of a few Asian and African countries, the use of this substance is everywhere subject to legal restrictions. It is possible that legal sanctions exercise some deterrent effect and that without them the use of this drug might spread even more rapidly and assume more virulent forms. Should the use of marihuana become as widespread as that of alcohol, it might be too late to talk of effective restrictions, since the users would command too many votes. In addition a legal marihuana industry which advertised its product and sought to improve it through research and experimentation could be embarrassing to the nation as a whole, as well as a direct economic threat to the alcoholic beverage industries and possibly to the tobacco industry. A final and decisive argument seems to be that public opinion is not likely in the foreseeable future to accept indulgence in marihuana as an equivalent of, or substitute for, indulgence in alcohol.[174]

It appears that the legalization of marihuana under regulation can meet all the above objections and achieve the desired goals of partial

172. *See* notes 77, 106 & 107 *supra* and accompanying text.
173. *See* note 70 *supra* and accompanying text.
174. Lindesmith, *The Marihuana Problem*, *supra* note 46, at 32.

legalization. First, it is much more realistic to regulate the distribution of marihuana by federal and state control, rather than by prohibiting distribution. Second, and probably most importantly, legalization would eliminate the pusher from the picture, since the user would be able to obtain marihuana from a government distributor or some other licensed seller. Assuming marihuana is not a predisposing principle which causes the user to progress to heroin, the legalization of marihuana would thus reduce the number of heroin users. The government could insure that the licensed distributors would not also be selling addiction-producing drugs, and if marihuana sale were legal, the distributor who was making a profit from his sales would not be tempted to sell other drugs, because such sales would place him under the constant threat of loss of license. Third, the recommendation which advocates the elimination of penalties for simple possession, use, and acquisition has implicit in it the proposition that the use of marihuana is not harmful, in which case there is no valid reason for prohibiting the distribution of marihuana.

As for the other objections to legalization, there appears to be no sufficient basis for rejecting such a move. The fact that almost all of the other countries have disapproved of and subjected marihuana to legal restrictions should not prevent the United States from taking this step. General disapproval of the use of marihuana does not mean that the preventive approach is the correct manner in which to treat the problem, or that the United States should follow the pattern set by other countries. The United States has recently signed a treaty requiring the prohibition of marihuana.[175] Although this action re-

175. The Senate on May 8, 1967, consented to the multilateral Single Convention on Narcotic Drugs, 19 CONG. Q. WEEKLY REP. 782 (May 12, 1967). The treaty was ratified by the President on May 15, 1967. LVI DEP'T STATE BULL. 897 (June 12, 1967). The treaty for the first time brings marihuana under international control: Article 4. *General obligations.* 1. The Parties shall take such legislative and administrative measures as may be necessary: (a) To give effect to and carry out the provisions of this Convention within their own territories . . . . (c) Subject to the provisions of this Convention, to limit exclusively to medical and scientific purposes the production, manufacture, export, import, distribution of, trade in, use and possession of drugs. Article 28. *Control of Cannabis.* . . . 3. The Parties shall adopt such measures as may be necessary to prevent the misuse of, and illicit traffic in, the leaves of the cannabis plant. Article 33. *Possession of drugs.* The Parties shall not permit the possession of drugs except under legal authority. Article 36. *Penal Provisions.* 1. Subject to its constitutional limitations, each Party shall adopt such measures as will ensure that cultivation, production, manufacture, extraction, preparation, possession, offering, offering for sale, distribution, purchase, sale, delivery on any terms whatsoever, brokerage, dispatch, dispatch in transit, transport, importation, and exportation of drugs contrary to the provisions of this Convention, and any other action which in the opinion of such Party may be contrary to the provisions of this Convention, shall be punishable offenses when committed intentionally, and that serious offenses shall be liable to adequate punishment particularly by imprisonment or other penalties of deprivation of liberty. Rosenthal, *Recommendations & Comments, supra* note 28, at 1121 n.424. Rosenthal

quires that any impetus for change emanate from the federal government, it should not be used as an excuse for failing to take an appropriate step toward solving the marihuana problem. It has been demonstrated that the present system has in fact failed to prevent the recent upsurge in the use of marihuana. As mentioned above, the legalization of marihuana might increase the extent of use in this country, but in the long run it probably would have a beneficial effect. The argument that legalization of marihuana might lead to excessive use and distribution as a result of advertising and experimentation by the cigarette companies can easily be met by including restrictions on advertising in marihuana legislation. Since the prohibition of the use and possession of marihuana is not a violation of due process, the goverment would be free to regulate the distribution of the drug in any manner it might see fit. Finally, the existence of adverse public opinion is not a valid argument for failing to enact an appropriate statute. Admittedly, it is unlikely, in light of present public sentiment that such a proposal would be enacted in the near future. This factor, however, is not a valid reason for not examining the facts and proposing a proper solution to the problem.

The one valid argument against the legalization of marihuana is that the extensive use of this drug will cause social problems similar to those associated with alcohol. Dr. Blum recognized that if there is a parallel in kinds of outcomes between marihuana and alcohol, there is "clearly a risk of unknown proportion that increased marihuana availability, as for example with its legalization, might lead to increased dependency and dangerous outcomes of the sort associated with alcohol itself, the latter unquestionably being a 'dangerous' drug in the social rather than legal sense."[176] Assuming that marihuana is a socially undesirable drug, the question which must be answered is whether, in light of the pleasurable results derived from its use and the absence of any serious mental or physical consequences, the use of the drug can be prevented. There is no question that the use of the drug can be prohibited by law, but as with alcohol there is reason for serious doubt that the law actually prevents its use.

The present marihuana laws are not only grossly unfair in light of the inherent risks of marihuana use, but also they have not proved

---

stated that the treaty probably would not prevent the adoption of the recommendation that simple possession, use and acquisition be no longer punishable. *Id.* The Commissioner of the Federal Bureau of Narcotics stated, however, that "it would be a violation of United States international treaty obligations to make possession of marijuana legal in this country . . . . 'The treaty requires imposition of criminal penalties for possession . . . . Failure to continue to provide such penalties for possession would be a violation of our treaty obligation'." N.Y. Times, Nov. 16, 1967, at 38, col. 4.

176. Blum, *Dangerous Drugs, supra* note 4, at 26.

successful in preventing an increase in the use of the drug by all sectors of our society. It is widely believed that the punishments associated with marihuana possession and distribution must be mitigated, but mitigation will only lead to increased use and thus increased contact between the user and the pusher of drugs. In this light, the only realistic and practical approach to the regulation of this drug is through its legalization under governmental control. Marihuana use cannot be eliminated. Any approach to the regulation of this drug which hopes to solve its associated problems must find its basis in this general assumption.

VIII. Conclusion

The present is an ideal time for the revision of our federal and state marihuana laws. The President has just created a Bureau of Narcotics and Dangerous Drugs under the Justice Department, replacing the Bureau of Narcotics under the Treasury Department and the Bureau of Drug Abuse Control under the Department of Health, Education and Welfare.[177] Legalization of marihuana is the proposed solution, but if this step is not taken, it is mandatory that there be a revision of the presently existing laws with the objective being to bring the penalties for marihuana use and sale more in line with the known risks inherent in the use of the drug. Specific approaches to this problem will be examined in Part II of this note, but it is necessary at this time to set forth some general guidelines which will be followed. Legislation legalizing use and sale of marihuana should be adopted along the following lines:

1) Legalize acquisition, use and simple possession of marihuana.
2) Legalize licensed sale of marihuana under restricted circumstances, requiring high standards for the licensees.
3) Provide stiff penalties for unlicensed sale of marihuana.
4) Require licensed production of marihuana with high standards of quality, and prohibit private advertisement.
5) Tax consumption similarly to alcohol and tobacco.

In addition to discussing the legalization of marihuana use and sale, Part II of this note will examine alternative approaches to the problem, such as mitigation of present penalties and the treatment of use and sale as misdemeanors. It will also discuss in detail the recent treaty signed by the United States regulating marihuana.[178] If it is concluded at that time that the treaty precludes legalization, steps which can be taken to relieve the United States of its obligation will also be discussed.

VIRGINIA LAW REVIEW
(Volume 6, 1919)

"LIFE, LIBERTY, AND LIQUOR": A NOTE ON THE POLICE POWER.

"It may be said in a general way that the police power extends to all the great public needs. It may be put forth in aid of what is sanctioned by usage, or held by the prevailing morality or strong and preponderant opinion to be greatly and immediately necessary to the public welfare * * * with regard to the police power, as elsewhere in the law, lines are pricked out by the gradual approach and contact of decisions on the opposing sides." *Mr. Justice Holmes, in Noble State Bank* v. *Haskell*, 219 U. S. 104.

PERHAPS the most striking development of American constitutional jurisprudence during the past quarter of a century has been the greatly increased—and as yet undefined and unlimited—scope which the courts have allowed the "police power." Successive and increasingly radical assaults on personal liberty and property rights have been sustained; *stare decisis* has not been allowed to thwart the legislative will, and while there are, of course, a few conspicuous instances in which the courts have refused to sanction police regulations,[1] it is nevertheless unquestionable that there has been a more and more liberal interpretation of "fundamental principles as they have been understood by the traditions of our people and our law." The judicial reluctance to pervert "the word liberty in the Fourteenth Amendment" by making it "prevent the natural outcome of a dominant opinion" [2] has been strikingly evident in the decisions on State liquor laws. National prohibition under the war powers of Congress and by constitutional amendment is revolutionary and spectacular; but it should not go unnoticed that coincident with these developments the courts have been sustaining, with scant ceremony, exceedingly stringent laws forbidding the possession and use of intoxicants.[3] Twenty, even five years ago, such enactments would have been declared uncon-

stitutional; that they are permitted today is in consonance with the political metamorphosis that resulted in national prohibition and with the extreme war-time restrictions which were placed on liberty and property. The decisions of courts are evidence that constitutional law is sometimes practical politics.[4]

All prohibition laws have been designed, in the last analysis, to check the consumption of intoxicating liquors, and thus to reduce "the misery, pauperism, and crime, which," the Supreme Court of the United States has said, "have their origin in the use and abuse of ardent spirits." [5] With the exception of a few early laws of a particularly stringent character, it may be said, I think, that the trend of prohibition enactments towards the accomplishment of their ultimate purpose—the non-use of intoxicants—has been from indirect methods to direct control. Thus, after moral suasion had proved inadequate to cope with the evils of intemperance, the New England States attempted license laws—notably those which came before the Supreme Court of the United States in 1847. The manufacture and sale of intoxicants were put under a legislative ban in 1850, when the Maine law was adopted. "Gradually the battle for temperance shifted from the drinker to the drink seller and those behind him," and "the appeal for personal abstinence became dangerously subordinated in the temperance campaigns." A number of States followed the example of Maine, but few of them maintained the prohibition principle without temporary abandonment; laws were either repealed or not enforced and three

[4] GRAY, THE NATURE AND SOURCES OF THE LAW, pp. 116, 213. The police power, says Professor Brooks Adams, "could not be determined in advance by abstract reasoning. Hence, as each litigation arose, the judges could follow no rule but the rule of common sense, and the police power, translated into plain English, presently came to signify whatever, at the moment, the judges happened to think reasonable. Consequently, they began guessing at the drift of public opinion, as it percolated to them through the medium of their education and prejudices. Sometimes they guessed right and sometimes wrong, and when they guessed wrong they were cast aside, as appeared dramatically enough in the temperance agitation." THE THEORY OF SOCIAL REVOLUTIONS, p. 94. See also T. R. Powell, "The Logic and Rhetoric of Constitutional Law," 15 JOURNAL OF PHILOSOPHY, PSYCHOLOGY, AND SCIENTIFIC METHODS, 645.

[5] Mugler v. Kansas, 123 U. S. 623.

substitutes were attempted: high license, inaugurated by Nebraska; the dispensary system tried first by South Carolina, and then by other Southern States; and finally, "While local prohibition was applied both in Europe and the United States prior to the state-wide experiment of Maine, the distinction of legally recognizing the principle that the local community has the right to license or veto the drink traffic belongs to this country." [6] These substitutes, however, utterly failed to satisfy the agitators for a "saloonless nation," and soon, particularly after the rise of that group of professional reformers working through the Anti-saloon League—the movement for state-wide prohibition began to be successful until, in 1913, twenty-nine states had forbidden the manufacture and sale of intoxicating liquors.

These enactments were characterized by far greater stringency than the earlier ones. In order to make them completely effective the legislative authority in many cases provided that the possession of more than specified quantities of intoxicants should be *prima facie* evidence of intent to sell, but this proved inadequate and regulations were therefore passed limiting the amount that a man might import or possess, even for personal use. Until recently the right to import existed under the commerce clause of the Federal Constitution, and the States were powerless to interfere before the liquors reached the consignee. The Webb-Kenyon Act,[7] the Reed "bone-dry" amendment to the Post Office Appropriation Bill of 1916,[8] and the decisions sustaining them gave the States well-nigh plenary authority. To the accomplishment of this end a number of very difficult questions were raised as to the respective powers of the States and of Congress over intoxicating liquors in interstate commerce; but while these were important and will doubtless be precedents in the settlement of the conflicts of jurisdiction that will arise under the amendment,[9] they have now become academic by reason of national prohibition.

[6] KOREN, ALCOHOL AND SOCIETY, pp. 69, 70, 73.

[7] Act of March 1, 1913, 37 Stat. L. 699.

[8] 39 Stat. L. 1058, 1069.

[9] Section 2 of the amendment provides: "The Congress and the several States shall have concurrent power to enforce this article by appropriate legislation."

But, as I have said, the amendment to the Federal Constitution was necessary only to have uniform regulations on the subject and to force prohibition on those States which did not desire it. Constitutional provisions had protected life and liberty but not liquor, except in one class of cases: the traffic in intoxicants could be dealt with at the will of the legislature, but until very recent decisions, laws so radical as to forbid possession for individual use, have not been of absolutely indubitable constitutionality, and it may be worth while to consider the chief developments (1) since 1852, when the Maine law was sustained, and 1856 when the New York Court of Appeals held unconstitutional a law which prohibited the sale of intoxicating liquors, and (2) the cases relating to possession. The summary will be a sort of obituary notice of the constitutional protection which the courts have given property and personal rights in intoxicants.

I.

The question of intoxicating liquors in interstate commerce first came before the Supreme Court of the United States in 1847, in three cases arising under the laws of Massachusetts, Rhode Island and New Hampshire, which were passed at that period when the New England States were without any very consistent policy towards the sale of liquors. The court was called upon to determine whether the three laws conflicted with the commerce clause of the Federal Constitution, but the cases are notable on account of the frequently quoted *dicta* of the judges as to the propriety with which the police power of the State might be used to prevent the manufacture and sale of intoxicating liquors. Thus Chief Justice Taney said: "And if any State deems the retail and internal traffic in ardent spirits injurious to its citizens and calculated to produce idleness, vice, or debauchery, I see nothing in the Constitution of the United States to prevent it from regulating and restraining the traffic or from prohibiting it altogether, if it thinks proper." Nevertheless he added: "but broad and comprehensive as is this power [of police], it certainly cannot extend to the individual tastes and habits of the citizen which are confined entirely to himself." [10]

[10] The License Cases, 5 How. 504 (1847).

But the question of property rights as well as the individual habits of the citizen worried the State courts when they were called upon to decide the constitutionality of local regulations. The Maine prohibitory law came before the Supreme Judicial Court in 1852. Looking to the design of the enactment—"The suppression of drinking-houses and tippling-shops"—the court held that it was not the intention of the legislature to provide—and none of the language could receive such a construction—that property should not be acquired in intoxicating liquors. Thus, when an officer of the State seized eight barrels of rum, which was not to be sold in violation of any law of the State, an action of replevin could be brought in spite of the provision of the statute that no action could be "maintained in any court in this State for the recovery or possession of intoxicating or spirituous liquors, or the value thereof." The court said, however, that the legislature could declare articles capable of injuring the public health or morals not to be property; it could come to the conclusion that spirituous liquors for harmful purposes—waste of time, disorder, injury to health, etc.—should not be subjects of property, and "there would be no occasion for complaint that it had violated any provision of the constitution." The Maine law expressly recognized that liquors were property for medicinal or mechanical purposes and for transportation—not for sale—through the State; nor was there any inhibition against personal possession and use. The court, therefore, limited the general language of the prohibitory law and held it to forbid only "the maintenance of any action for the recovery or possession of such liquors or their value, that were liable to seizure and forfeiture, or intended for sale in violation of the provisions of the Act." This interpretation was necessary to make the statute constitutional.[11]

[11] Preston *v.* Drew, 33 Me. 558 (1852). The court said: "It may be said that a court of justice is not authorized to introduce by construction such a limitation; that it savors more of legislation than of construction. It may be so; and if the Court may not introduce any such limitation without encroaching upon the forbidden province of another department of the government, it cannot omit its duty to declare that provision to be in violation of the provisions of the Constitution, and void." (p. 563.) The Constitution provided, "that every person for

In nine other cases,[12] decided from 1852 to 1858, prohibitory laws were held constitutional, in some instances with scant consideration of the argument as to vested interests or property rights. The Illinois Court said that "a government that did not possess the power to protect itself against such and similar evils [the traffic in liquors] would be scarcely worth preserving"; the Massachusetts Court said in a four-line opinion that no principle of the State constitution was violated; the Iowa Court relied largely on the *dicta* of The License Cases. In only two jurisdictions were laws declared unconstitutional. This was very remarkable. In the words of the leading authority on the police power:[13]

> "We thus find only two cases in which prohibition is declared unconstitutional, mainly or exclusively in reliance upon the protection due to vested rights; there is no constitutional recognition of a right of reasonable exercise of civil liberty, except perhaps in Indiana and in a dissenting opinion in Michigan. The general judicial acquiescence in an unprecedented exercise of legislative power is all the more noteworthy, as the legislation in question was for the time almost unenforceable and in most states short-lived."

The two cases in which the power of the legislature was denied were in Indiana and New York. The Indiana Court held that the legislature was powerless to pass a prohibitory law and to destroy property rights in liquors. The State Constitution provided that the inalienable rights of the citizens of Indiana were "life, liberty, and the pursuit of happiness;" to ascertain the meaning of these "natural rights," the court looked to the common law and found that the rights of individuals included "the right of personal security, the right of personal liberty, and the right to acquire and enjoy property."[14] It was therefore

---

an injury done him in his person, reputation, property, or immunities, shall have remedy by due course of law."

[13] FREUND, STANDARDS OF AMERICAN LEGISLATION, p. 199.

[14] 2 KENT'S COM. 1.

held that intoxicating liquors were property; that they could not be taken for public use without compensation; that the legislature could not enlarge its power over certain kinds of property by declaring that they were nuisances and forbidding their enjoyment, and that whether property was a nuisance was a question for judicial determination.[15]

A somewhat narrower view was taken by the New York Court of Appeals which held that the act of 1855, to prevent intemperance, was void so far as, by forbidding sale, it destroyed property in intoxicating liquors possessed at the time the act took effect, although, if the provisions of the statute had been confined to liquors imported or manufactured subsequent to the act, the due process of law clause of the State constitution would not have had the same application.[16]

[15] Beebe *v.* State, 6 Ind. 501, 63 Am. Dec. 391 (1855). Two judges dissented and the ruling was not followed in later cases. The opinion contains some curious statements: "It is easy to see that when the people are smarting under losses from depreciated bank paper, a feeling might be aroused that would, under our plurality system, return a majority to the legislature which would declare all banks a nuisance, confiscate their paper and the buildings from which it is issued. So with railroads, when repeated wholesale murders are perpetrated by some of them. And in Great Britain and France we have examples of the confiscation of the property of the churches even, which here the same constitution that protects the dealer in beer would render safe from invasion by the legislative power." (p. 408.) "Even in Great Britain, esteemed to have the most liberal constitution on the eastern continent, Magna Charta is not of sufficient potency to restrain the action of parliament, as their judiciary does not, as a settled rule, bring laws to the test of its provisions. Laws are there overthrown only occasionally by judicial construction. Such a thing, indeed, as deciding a law or royal decree unconstitutional, in an absolute government is unknown. Hence the oppression of the people." (p. 396.) President Lowell, in commenting on this statement, says: "But ridiculous as this scream of the American eagle certainly is, it may not be very long before we can say with truth: Hence the oppression of the minority." ESSAYS ON GOVERNMENT, p. 83 (1889).

[16] Wynehamer *v.* The People, 13 N. Y. 378 (1856). Of the case, Professor Brooks Adams says: "In that cause Mr. Justice Comstock, who was one of the ablest jurists New York ever produced, gave an opinion which is a model of judicial reasoning. He showed conclusively the absurdity of constitutional restrictions, if due process of law may be held to mean the enactment of the very statute drawn to work confiscation * * * in 1887, after controversies of this category had

The traffic in intoxicating liquors, Justice Comstock said, could be prevented with benefit to the State; nevertheless, if arguments as to the harmful character of liquors "can be allowed to subvert the fundamental idea of property, then there is no private right entirely safe, because there is no limitation upon the absolute discretion of the legislature, and the guarantees of the constitution are a mere waste of words." He declared that the views in The License Cases were "*obiter dicta* merely, and even as such had no reference to the limitation of legislative power contained in state constitutions." [17] But, as has been said, in most jurisdictions, the laws were sustained, and due process clauses in State constitutions were held not to bar the enforcement of prohibitory legislation.

Until the adoption of the Fourteenth Amendment, the Federal Constitution could not be appealed to in order to protect the manufacture and sale of intoxicants; but, after 1868, cases were decided by the Supreme Court of the United States. In Bartemeyer *v.* Iowa,[18] the Supreme Court was called upon to say whether an act of the Iowa legislature was void by abridging the privileges and immunities of citizens of the United States, or depriving the liquor seller of his property without due process of law. As to the first question the Court said that the Iowa statute was in existence before the adoption of the amendment, and unless the amendment conferred privileges and immunities which Bartemeyer did not previously possess the argument failed. In the opinion, the Court said:

"But the most liberal advocates of the rights conferred by

---

begun to come before the Supreme Court of the United States under the Fourteenth Amendment, Mr. Justice Harlan swept Mr. Justice Comstock aside by quietly ignoring an argument which was unanswerable." [Mugler *v.* Kansas, *infra.*] ADAMS, THE THEORY OF SOCIAL REVOLUTIONS, pp. 95-96.

[17] At p. 405. Five concurring opinions were filed and there was one dissent. Judge T. A. Johnson held that the constitutional provision "has no application whatever to a case where the market value of property is incidentally diminished by the operation of a statute passed for an entirely different object, and a purpose in itself legitimate" although he accepted the qualification of not affecting "the title, possession, personal use or enjoyment of the owner." (pp. 466, 467).

[18] 18 Wall. 129 (1873).

> that amendment have contended for nothing more than that the rights of the citizen previously existing, and dependent wholly on State laws for their recognition, are now placed under the protection of the Federal government, and are secured by the Federal Constitution. The weight of authority is overwhelming that no such immunity has heretofore existed as would prevent State legislatures from regulating and even *prohibiting* the traffic in intoxicating drinks, with a solitary exception. That exception is the case of a law operating so rigidly on property in existence at the time of its passage, absolutely prohibiting its sale, as to amount to depriving the owner of his property. A single case, that of Wynehamer *v.* The People, has held that as to such property the statute would be void for that reason. But no case has held that such a law was void as violating the privileges or immunities of citizens of a State or of the United States. If, however, such a proposition is seriously urged, we think that the right to sell intoxicating liquors, so far as such a right exists, is not one of the rights growing out of citizenship of the United States * * *."

If the liquor involved in the case had been owned at the time the sale was forbidden by the State Law, the Court said two grave questions would arise: "whether this would be a statute depriving him of his property without due process of law; and, secondly, whether if it were so, it would be so far a violation of the fourteenth amendment in that regard as would call for judicial action by this court?" [19] These questions "are not to be lightly treated, nor are we authorized to make any advances to meet them until we are required to do so by the duties of our position."

Later, in the case of Beer Company *v.* Massachusetts, the Supreme Court of the United States sustained a State prohibitory law but still adhered to the distinction which it had taken over from the New York Court of Appeals. The Boston Beer Com-

[19] At p. 133. Two concurring opinions were filed in which Mr. Justice Bradley (for himself and Mr. Justice Swayne) and Mr. Justice Field re-argued the reasons for their dissents in the Slaughter House Cases, 16 Wall. 36, and distinguished the Iowa statute from the one involved in these cases. These concurring opinions also suggested that the law might not have been upheld had the liquor been possessed prior to its passage.

pany had been incorporated for the purpose of manufacturing malt liquors, but the legislature had reserved the right to amend or repeal the charter. Under the prohibitory liquor law of 1869, liquors belonging to the company were seized and forfeited. The appeal was made to the Supreme Court of the United States on the ground that the prohibitory law impaired the obligations of contracts. This appeal the Court denied. Mr. Justice Bradley said:[20]

> "If the public safety or the public morals require the discontinuance of any manufacture or traffic, the hand of the legislature cannot be stayed from providing for its discontinuance, by any incidental inconvenience which individuals or corporations may suffer. All rights are held subject to the police power of the State.
>
> "We do not mean to say that property actually in existence, and in which the right of the owner has become vested, may be taken for the public good without due compensation. But we infer that the liquor in this case, as in the case of Bartemeyer *v.* Iowa (18 Wall. 129), was not in existence when the liquor law of Massachusetts was passed."

But this distinction could not be used when the Supreme Court of the United States was called upon to consider the prohibitory legislation of Kansas. One Mugler had engaged in the manufacture of beer for several years prior to the adoption in 1880 of an amendment to the Kansas Constitution, declaring that the manufacture and sale of intoxicating liquors should be forbidden. He continued in his business in defiance of the enforcing statute passed in 1881, and the single sale of which he was found guilty was of beer manufactured before the passage of the prohibitory law. It was shown that the buildings and machinery which Mugler used in manufacturing the liquor had little value for any other purpose, and the question was whether by denying him the privilege of engaging in his business and selling the liquors in his possession the Kansas statute deprived him of his property without due process of law.

The opinion of the court was given by Mr. Justice Harlan and was based largely on the evils attributable to the use of in-

[20] 97 U. S. 25, 32 (1877).

toxicating liquors. The Fourteenth Amendment, he said, did not take from the States any powers of police that were reserved at the time that the original Constitution was adopted; he answered the argument as to compensation for property destroyed or made valueless by disregarding it, and went so far as to hold that, in order to make effective its regulations against sale, the State might forbid manufacture for personal use. He said:[21]

> "There is no justification for holding that the State, under the guise merely of police regulations, is here aiming to deprive the citizen of his constitutional rights; for we cannot shut out of view the fact, within the knowledge of all, that the public health, the public morals, and the public safety, may be endangered by the general use of intoxicating drinks; nor the fact, established by statistics accessible to every one, that the idleness, disorder, pauperism, and crime existing in the country are, in some degree at least, traceable to this evil. If, therefore, a state deems the absolute prohibition of the manufacture and sale, within her limits, of intoxicating liquors for other than medical, scientific, and manufacturing purposes, to be necessary to the peace and security of society, the courts cannot, without usurping legislative functions, override the will of the people as thus expressed by their chosen representatives. They have nothing to do with the mere policy of legislation. Indeed, it is a fundamental principle in our institutions, indispensable to the preservation of public liberty, that one of the separate departments of government shall not usurp powers

[21] Mugler v. Kansas, 123 U. S. 623, 662 (1887). In a separate opinion, Mr. Justice Field agreed that there is nothing in the Constitution or laws of the United States affecting the validity of any State statute prohibiting the sale of intoxicating liquors manufactured in the State. But he expressed doubt as to whether the State could prohibit the manufacture of such liquors for exportation or forbid their sale if imported. As for the first question, the Court answered it in 1888, when it held that the Iowa law forbidding the manufacture of liquors even for transportation outside the State was constitutional. Kidd v. Pearson, 128 U. S. 1 (1888). The second question was answered by Leisy v. Hardin, 135 U. S. 100 (1890), and gave rise to the Wilson Act, the Webb-Kenyon Act and numerous decisions. See my papers, "State Legislation under the Webb-Kenyon Act, 28 HARV. LAW REV. 225, and "Unlawful Possession of Intoxicating Liquors and the Webb-Kenyon Act," 16 COLUMBIA LAW REV. 1.

committed by the Constitution to another department. And so, if, in the judgment of the legislature, the manufacture of intoxicating liquors for the maker's own use, as a beverage, would tend to cripple, if it did not defeat, the effort to guard the community against the evils attending the excessive use of such liquors, it is not for the courts, upon their views as to what is best and safest for the community, to disregard the legislative determination of that question. So far from such a regulation having no relation to the general end sought to be accomplished, the entire scheme of prohibition, as embodied in the constitution and laws of Kansas, might fail, if the right of each citizen to manufacture intoxicating liquors for his own use as a beverage were recognized."

After this case, the question was no longer open; the manufacturer or seller of intoxicating liquors had no constitutional rights whatever which could prevent the operation of the police power of the State, and the only Federal question involved was the extent of protection afforded by the commerce clause of the Federal Constitution to shipments from without a State [22]

II

The Supreme Court of the United States, as has been seen, went so far as to deny the right to manufacture for personal use, but until December, 1917, it was not called upon to decide the truth of Taney's *dictum* that the police power could not extend to the individual tastes and habits of the citizen. There were a number of decisions in the State courts—and some contrary authority also—holding that possession for personal use could not be prevented.[23] The leading case was State *v.* Gil-

[22] In Mr. Chief Justice White's opinion on the scope of the Webb-Kenyon Act, January, 1917, there is this *dictum:* "That government can, consistently with the due process clause, forbid the manufacture and sale of liquor and regulate its traffic, is not open to controversy; and that there goes along with this power full police authority to make it effective, is also not open. Whether the general authority includes the right to forbid individual use, we need not consider, since clearly there would be power, as an incident to the right to forbid manufacture and sale, to restrict the means by which intoxicants for personal use could be obtained, even if such use was permitted." Clark Distilling Co. *v.* Western Md. R. Co., 242 U. S. 311, 320 (1917).

[23] The text writers were unanimous in maintaining that constitutional

man,[24] but that decision was based in large part on the clause of the West Virginia Constitution which authorized the legislature to pass laws "regulating or prohibiting the sale of intoxicating liquors within the limits of this state." [25] The court held that this was "an implied inhibition to the exercise of any authority in regard to that subject which is not embraced in the grant," and declared unconstitutional a law which made it a crime to "solicit or receive orders for, or keep in his possession for another" any intoxicating liquors. The authority of the case, by reason of this constitutional provision, did not extend outside of West Virginia but it was frequently quoted.

A similar conclusion was reached by the Kentucky court. The State constitution empowered the legislature to provide a means whereby the sense of the people of any district might be taken on the question of regulating or prohibiting the "sale" of intoxicating liquors, and it was further provided that "the General Assembly shall prescribe such laws as may be necessary for the restriction or prohibition of the sale or gift of spirituous, vinous, or malt liquors on election days." Assuming that a town council had as much police power as the General Assembly, the court held invalid a local ordinance making it unlawful for any person to bring within the town, even for personal use, more than a quart of intoxicating liquor. While the

provisions protected possession. Thus it is said in WOOLLEN & THORNTON, THE LAW OF INTOXICATING LIQUORS, § 99 (1910): "A legislature has no power to prevent an inhabitant of a state keeping in store intoxicating liquors for others; for such a law is an invasion of the constitutional provision guaranteeing every person the free use and exercise of his property." Another writer maintained that since "liquors may be a legitimate subject of property, the state can not prohibit one from having them in his possession." H. J. JOYCE, THE LAW RELATING TO INTOXICATING LIQUORS, § 85 (1910). To the same effect is BLACK, INTOXICATING LIQUORS, § 38 (1892).

[24] 33 W. Va. 146, 10 S. E. 283, 6 L. R. A. 847 (1889).

[25] Constitution of West Virginia, Art. 6, § 46. However, the court said: "The keeping of liquors in his possession by a person, whether for himself or for another, unless he does so for the illegal sale of it, or for some other improper purpose, can by no possibility injure or affect the health, morals, or safety of the public; and, therefore, the statute prohibiting such keeping in possession is not a legitimate exertion of the police power. It is an abridgment of the privileges and immunities of the citizen without any legal justification, and therefore void."

point decided was simply as to the validity of this municipal ordinance, the opinion rested on the ground that it was not competent for the legislature "to prohibit a citizen from having in his own possession spirituous liquors for his own use." [26] The court said:

> "The right to use liquor for one's own comfort, if the use is without direct injury to the public, is one of the citizen's natural and inalienable rights, guaranteed to him by the Constitution, and cannot be abridged as long as the absolute power of a majority is limited by our present Constitution."

The court quoted a page from Blackstone on the absolute and relative rights of man and two pages from Mill's Essay on Liberty. This was in 1909! The decision, however, really rested on what the court deemed a restricted grant of authority to the legislature,[27] and although the case was followed in subsequent decisions, [28] it had no force outside of Kentucky.

---

[26] Commonwealth *v.* Campbell, 133 Ky. 50; 117 S. W. 383, 24 L. R. A. (N. S.) 172 (1909). "We are confronted, therefore," said the court, "with the proposition as to whether or not, in this state, it is competent under the police power for any legislative body to prohibit the possession or use of liquor by one for his own necessity or comfort. Broadly stated, the question before us is whether or not it is competent for the legislature to prohibit a citizen from having in his own possession spirituous liquor for his own use. It will not require any elucidation to show that, if the citizen may be prohibited from having liquor in his possession, he can be prohibited from drinking it, because of necessity, no one can drink that which he has not in possession. So that if it is competent for the legislative body of any given city or district, or even the legislature of the state, to prohibit the citizen from having liquor in his own possession, then a new and more complete way has been discovered for the establishment of total prohibition. * * *"

[27] The whole of Kentucky was under "local option" (Constitution, § 61) and the local option statute operated uniformly throughout the whole territory in which it was put into effect by a vote of the people. A prosecution could be instituted either under the State law or a local ordinance. The general law provided penalties for violation and had many enforcement provisions. See 1 Kentucky Statutes (Carroll, 1915), ch. 81, § 2554ff.; Burdette *v.* Board of Council, 125 S. W. (Ky.) 275 (1910), and Commonwealth *v.* Barbour, 121 Ky. 463, 89 S. W. 479 (1905).

[28] In Commonwealth *v.* Smith, 163 Ky. 227, 173 S. W. 340 (1915) the court held invalid a statute (Acts 1914, ch. 7, page 25) providing that

In State *v.* Williams,[29] however, the Supreme Court of North Carolina held that when "the legislature makes it an indictable offense to carry more than a certain quantity [of intoxicating liquors] into a specified county, within a specified time, prohibiting its sale and not prohibiting its use but authorizing its use for certain purposes, it is unconstitutional, for that is taking property without due process of law and not within the police power of a state." But, as the Mississippi Supreme Court later declared,[30] the North Carolina majority opinion was accompanied by a strong dissent which propounded a question "hard to answer:"

> "* * * if the manufacture, though exclusively for one's own use and out of one's own apples and peaches, in the county can be forbidden by statute without breaking the Constitution, why cannot the importation of the same article across the county line, in a greater quantity than a half gallon per day, even for one's own use, be prohibited by the same power? The truth is that the Legislature having jurisdiction of the subject, the limitations upon its exercise

---

in any county or district where the sale of intoxicating liquor was prohibited, it should be unlawful "for any person to keep, store or possess any such liquors in any room, building or structure other than the private residence of such person and which is not used as a public resort." This differed from the statute making unlawful the possession of intoxicating liquor in prohibited territory for purposes of sale. When the purpose of the owner was unlawful, the regulation was effective. The court said: "Here it is sought to go one step further, and make the possession for an innocent purpose considered from the standpoint of the police power as much of an offense as if the possession were for an unlawful purpose. Manifestly, if the Legislature has the power to prohibit such possession at places other than one's private residence, then it has the like power to prohibit such possession even at a private residence, and this is exactly what was held in Commonwealth *v.* Campbell, *supra*, could not be done. There must of necessity be limits beyond which the Legislature cannot rightfully go. We think that limit is reached when it prohibits such possession for sale or other unlawful purpose." The cases cited for authority were Gilman *v.* State, *supra*, and Eidge *v.* Bessemer, 164 Ala. 599, 51 South. 246.

[29] 146 N. C. 618, 61 S. E. 61 (1908). Chief Justice Clark, in a dissenting opinion, said that the power of the courts to declare laws unconstitutional was judicial usurpation, and if the power was to be exercised there must be an explicit provision of the constitution which was clearly violated.

[30] State *v.* Phillips, 109 Mass. 22, 87 South. 651 (1915).

rest in the wisdom and sound judgment of the Legislature, subject only to review by the people, not by the courts."

The North Carolina decision is the one of the few which did not rest upon some particular provision of the State constitution regarding the powers of the legislature.[31] But there were, a number of cases which held that municipal corporations had not the right to forbid possession. Apart from *dicta* these furnished little authority against the power of the legislature.

Eidge *v.* Bessemer[32] was the leading case. The court was dealing with a municipal ordinance and the liquors involved were lawfully acquired as property. In the later case of Williams *v.* State[33] the same judge who wrote the opinion in Eidge *v.* Bessemer carefully limited its scope:

"Attention to the question there presented for review will disclose the fact that, as against a municipal ordinance which was construed as prohibiting the keeping of intoxicating liquors for the personal use of the keeper, or rather, perhaps, as based upon a principle which involved that result, we endeavored to state some reservations in favor of the property rights and personal liberty of the individual with which the Legislature of the state had made no attempt to interfere. There was no denial of the right of

[31] The Oklahoma prohibitory law of 1911 forbade the possession of more than one quart of any alcoholic liquor. The opinion of the Oklahoma Criminal Court of Appeals quoted at great length from the Kentucky cases and its own decision [Titsworth *v.* State, 2 Okla. Cr. 268, 101 Pac. 288 (1909)], and declared that research had not "disclosed a single case in conflict with the doctrine of the authorities quoted and cited * * *. The only conclusion that we can legitimately arrive at is that the act in question is not within a reasonable exercise of the police powers of the state—is unconstitutional and void." *Ex parte* Wilson, 6 Okla. Cr. 451, 119 Pac. 596 (1911). The court said, however, that the possession of an unusual quantity of intoxicating liquors might be "a circumstance which, together with other competent proof, is admissible against the defendant in the trial of cases involving violations of the prohibitory statute. But such possession alone is insufficient to sustain a conviction." (p. 606.) See also *Ex parte* Brown, 38 Tex. Cr. App. 295, 42 S. W. 554 (1897).

[32] 164 Ala. 599, 51 South. 246 (1909). This case was definitely overruled by the Alabama Supreme Court when it sustained the possession section of the Anti-Shipping bill. Southern Express Co. *v.* Whittle, 194 Ala. 406, 69 South. 652 (1915).

[33] 179 Ala. 50, 60 South. 903.

municipal corporations to pass ordinances in accord with prohibition laws, and of course there was no denial of the right of the Legislature to enact statutes, to prohibit the traffic in intoxicating liquors, and such ordinances and statutes to prevent evasions as have real and substantial relation to the purpose of prohibition without invading the rights secured by the fundamental law." He further expressed the object of the decision by saying:

"The object of the decision was to develop a statement of the right of persons in this state, under *existing conditions, to keep liquors for their own use* and to affirm the invalidity of municipal ordinances so broadly phrased *as to deny that right.*" [34]

On the other hand, there were a number of cases which held that the right to possess intoxicating liquors was not absolute and was not protected by the Federal or State constitutions. The legislature could forbid the possession of more than a specified amount or could apply the inhibition to certain territory or buildings in the State. California courts decided both ways: [35] An ordinance forbidding possession was first de-

[34] Sullivan *v.* City of Oneida, 61 Ill. 242 (1871), held that the city under its charter was not authorized to make it an offense for any person to have in his possession any intoxicating liquors. The court said that the charter only contemplated a search if the liquors were for sale within the city, while the ordinance authorized a search and seizure "if the liquors were kept in the city, whether the intention was to sell them, or ship them and sell them elsewhere." Hence the ordinance was *ultra vires.* But the court said: "To lessen and prevent the evils of intemperance and the innumerable ills flowing therefrom, it is within the power of the legislature to declare the possession of intoxicating liquors, for the purpose of sale, as *quasi* a nuisance, and provide a well guarded system for the suppression of their use, and to enact that such possession shall be *prima facie* evidence of the unlawful intent." See also Henderson *v.* Heyward, 109 Ga. 373, 34 S. E. 590 (1899).

[35] Selma *v.* Brewer, 9 Cal. App. 70, 98 Pac. 61 (1908). But the court decided differently in *Ex parte* Luera, 28 Cal. App. 185, 152 Pac. 738 (1915). An ordinance of the city of Azusa provided: "Every person having in his possession, within the city of Azusa, any spirituous, vinous, malt or mixed liquors, or any alcoholic or intoxicating drinks, shall be deemed guilty of a misdemeanor." The ordinance did not apply to the keeping of the intoxicating liquors for medical or scientific purposes. The court said there was "abundant authority holding that such attempted legislation is void, as being in violation not only of constitutional rights, but of the inherent right of the individual."

clared constitutional and later, when another case arose, "the inherent right of the individual" to possess liquors was asserted. Laws were declared constitutional, however, in Georgia, Alabama, New Hampshire, South Carolina and Mississippi.[36]

In addition to these cases, which involved prohibitory laws, there were a number of instances in which the possession of certain kinds of property was made a crime; lotteries,[37] opium,[38]

[36] Easley *v.* Pegg, 63 S. C. 98, 41 S. E. 18 (1901); Cohen *v.* State, 7 Ga. App. 5, 65 S. E. 1096 (1909); State *v.* Clark, 28 N. H. 176 (1854); State *v.* Phillips, 109 Miss. 22, 67 South. 651 (1915). By the act of 1783, the City Council of Charleston was vested with authority to make regulations "requisite and necessary for the security, welfare, and convenience of said city, or for preserving peace, order and good government within the same." An ordinance of the city made it unlawful for shop-keepers, other than those licensed, to keep any intoxicating liquors in their shops or in any adjacent room. The ordinance "is no doubt one of the many restraints imposed on the liberty of the citizen, to prevent, if possible, the vending of spirituous liquors to slaves. Such regulations are sometimes apparently tyrannical; but they must be submitted to as necessary police regulations. If they are tyrannical and unnecessary, the popular will can repeal them through the city council, or if redress should fail there, by an appeal to the Legislature." Heissembrittle *v.* City Council, 2 McMul. (S. C.) 233 (1842).

[37] Ford *v.* State, 85 Md. 465, 37 Atl. 172 (1897). In this case it was no defense that the traverser did not know the nature of the tickets in his possession.

[38] Ah Lim *v.* Territory, 1 Wash. 156, 24 Pac. 588 (1890); *Ex parte* Mon Luck, 29 Or. 421, 44 Pac. 693 (1896). In the case of Chino Lee *v.* United States, 231 U. S. 735 (1915), the Supreme Court of the United States held constitutional (without opinion) a statute of the Philippine Islands making it unlawful to possess opium for other than medical purposes. The question was presented to the court on a writ of error to the Supreme Court of the Philippine Islands, brought on behalf of the defendant who had been convicted of having opium in his possession. The following passage from the government's brief in this case gives an idea of the theory on which the constitutionality was argued: "Of course, no one can have a vested right, as against the State, to destroy either his morals or his health even if they are his own. The moral well-being of the public (the aggregate of the individuals) is a sufficient reason; but a plainly decisive one, though a sordid one, is that such processes fill the poorhouses, the asylums, and the jails, and so put expense on the state. If the state does not choose to subject itself to such damage, it surely can protect itself by stopping the causes at their source."

photographs of United States Treasury notes,[39] wild game,[40] seines [41] and shot guns and rifles.[42] The last named case was the most important. It upheld the authority of the State of Pennsylvania to forbid the possession of a shot gun or rifle by an unnaturalized foreign born resident. This prohibition was justified on the ground that the statute forbade the killing of wild game by any such person. "The possession of rifles and shotguns is not necessary for other purposes not within the statute," said Mr. Justice Holmes, and the possession of intoxicating liquors would seem equally unnecessary.

Nevertheless, the weight of authority in the State courts was probably against the constitutionality of laws forbidding possession when the question was reopened in Alabama by the passage of a statute which prevented a citizen from having more than specified quantities of liquor. Largely on the authority of Mugler *v.* Kansas, the Alabama Supreme Court held the provision constitutional. It was one of a number of instances "where ancillary prohibitions of acts and conduct, innocent in themselves, have been sustained and confirmed as an exercise of the police power of the state; and so upon the theory that some valid legislative purpose might be * * * prevented or hindered of accomplishment." [43]

[39] *Ex parte* Holcomb, 2 Dill. 392, 12 Fed. Cas. 328 (1871).

[40] Roth *v.* State, 51 Ohio St. 209, 37 N. E. 259 (1894); Magner *v.* People, 97 Ill. 320 (1881). Silz *v.* Hesterberg, 211 U. S. 31 (1908), sustained a State statute forbidding the possession of wild game, even though brought in from a foreign country. It should be noted, however, that the doctrine of *ferae naturae* played some part in the decision of this case.

[41] State *v.* Lewis, 134 Ind. 250, 33 N. E. 1024 (1893).

[42] Patsone *v.* Pennsylvania, 232 U. S. 138 (1914).

[43] Southern Express Co. *v.* Whittle, 194 Ala. 406, 69 South. 652 (1915). Later the Alabama Court of Appeals was called upon to decide whether it was constitutional to prohibit the possession of intoxicants which had been acquired before the law went into effect. The court held that this distinction could not persuade them to depart from the ruling made in the earlier case. "It could make no difference and would be immaterial when, where, or under what circumstances the prohibited liquors were acquired, for the offense is, by the act held to be valid and not invasive of constitutional rights, declared to consist in having in possesson more than the specified amount, without regard to the time or manner or purpose of acquiring it." O'Rear *v.* State, 15 Ala. App. 17, 72 South. 505 (1916). See 4 VA. LAW REV. 236.

This decision was speedily followed in many other jurisdictions. Georgia, Idaho, Nebraska, Nevada, North Carolina, South Carolina, Tennessee, Utah and Washington all passed laws limiting possession even for personal use.[44]

The Utah case was the most important since it went to the Supreme Court of the United States. The laws of 1915 provided that it should be unlawful to possess any intoxicating liquors in a prohibition district without a permit. The court reviewed but declined to follow the cases headed by State *v.* Gilman and considered above:

> "Probably the author of none of these opinions would hesitate in holding that the sale of intoxicating liquor may be prohibited as a legitimate exercise of the police power, and that such a law would not abridge any of the privileges or immunities of the citizens in such a way as to violate any constitutional provision. Still it must be admitted that, if the possession of such liquor 'can by no possibility injure or affect the health, morals, or safety of the public,' the sale is equally harmless; for it only transfers the possession from one person to another. The fact is that the harm consists neither in the possession nor sale, but in the consumption of it. That is the evil which the people of Idaho, acting through the Legislature, are trying to eradicate, and since 'it will not require any elucidation to show that, if the citizen may be prohibited from having liquor in his possession, he can be prohibited from drinking it, because, of necessity, no one can drink that which he has not in his possession,' and since great difficulty has been encountered in enforcing the prohibitory laws, the statement made by the learned jurist in the case of Mugler *v.* Kansas, *supra,* relative to the manufacture of intoxicating

W. 423 (1918); State *v.* Certain Intoxicating Liquors (Utah), 172 Pac. 1050 (1918); Seattle *v.* Brookins, 98 Wash. 290, 167 Pac. 940 (1917); State *v.* Brown (S. D.), 167 N. W. 400 (1918). These cases are reviewed and summarized in a note in 2 A. L. R. 1085,

liquors for the maker's own use, as a beverage, might well be said with respect to its possession, which would make it read:

'And so if, in the judgment of the Legislature, the manufacture of intoxicating liquors * * * would tend to cripple, if it did not defeat, the effort to guard the community against the evils attending the excessive use of such liquors, it is not for the courts, upon their views as to what is best and safest for the community, to disregard the legislative determination of that question.' "[45]

When the case came before the Supreme Court of the United States a brief opinion by Mr. Justice McReynolds settled the question and declared the law constitutional.[46] Mill's Essay on Liberty and Say's Political Economy, which had figured in the decisions in State courts, were not referred to; nor was any consideration given to the "right to liquor" which some of the State judges said was protected by the due process clauses of the State and Federal constitutions. Mr. Justice McReynolds' brief opinion, however, did offer two theories on which the law might be sustained: (1) The State may forbid possession if this is necessary to make effective its regulations restricting manufacture and sale, and (2) To hold that there is a constitutional right to possess liquor would be inconsistent with the decisions sustaining laws against manufacture, sale or gift, the only ways of procuring intoxicants. In the words of the opinion:

"It must now be regarded as settled that, on account of their well-known noxious qualities and the extraordinary evils shown by experience commonly to be consequent upon their use, a State has power absolutely to prohibit manufacture, gift, purchase, sale, or transportation of intoxicating liquors within its borders without violating the guarantees of the Fourteenth Amendment.

"As the State has the power above indicated to prohibit, it may adopt such measures as are reasonably appropriate or needful to render exercise of that power effective. And,

[45] *Ex parte* Crane, *supra*. Commenting on this decision that possession could be prohibited, a recent writer remarked that "Evidently the citizens of Idaho have no rights which the Supreme Court of that State is bound to respect." Lee J. Vance, "The Roa' to Confiscation," 25 YALE LAW JOURNAL 285, 297 (1916).

[46] Crane v. Campbell, 245 U. S. 304 (1917).

considering the notorious difficulties always attendant upon efforts to suppress traffic in liquors, we are unable to say that the challenged inhibition of their possession was arbitrary and unreasonable or without proper relation to the legitimate legislative purpose.

"We further think it clearly follows from our numerous decisions upholding prohibition legislation that the right to hold intoxicating liquors for personal use is not one of those fundamental privileges of a citizen of the United States which no State may abridge. A contrary view would be incompatible with the undoubted power to prevent manufacture, gift, sale, purchase or transportation of such articles—the only feasible ways of getting them. An assured right of possession would necessarily imply some adequate method to obtain not subject to destruction at the will of the State."

The second ground on which the constitutionality of the statute could be sustained left open the question whether possession could be penalized even though the liquor was acquired before the regulation went into effect. But the Supreme Court has since held that this makes no difference.[47]

III.

The constitutional position of property in the United States has been much stronger than in any European country and it has been our boast that Bills of Rights guarantee American citizens individual liberties greater and more secure than those enjoyed by the nationals of states with flexible constitutions and legally omnipotent legislatures.[48] The summary which I have

[47] Barbour *v.* State, 39 Sup. Ct. 316 (1919), affirming 146 Ga. 667, 92 S. E. 70 (1917). See O'Rear *v.* State, *supra*. In August, 1918, however, the Supreme Court of Florida held unconstitutional a law prohibiting the possession of intoxicating liquors in certain counties of the State. The opinion was based on the provisions of the Florida Constitution which reserved to the people the right, by their direct vote, to prohibit the *sale* of intoxicating liquors. The Court said that the Legislature in inhibiting private ownership exceeded its authority. A concurring opinion said that the law was unconstitutional also under the State constitution because it did not apply uniformly to the whole State. There was, however, a strong dissenting opinion. *Ex parte* Francis, 79 South. 753 (Fla. 1918).

[48] HADLEY, UNDERCURRENTS IN AMERICAN POLITICS, p. 32. Professor Freund points out that the early applications of the idea of due process

given of the decisions in which the courts have sanctioned successive legislative assaults on liquors as property and subjects of individual use and possession would seem to indicate an exception to these two principles of the American constitutional system, and the astounding thing is that there has been little if any discussion of the question of compensation for the value of the property destroyed.

In England state purchase and control has been looked upon, not only as a possible preventive of the evils of intemperance, but also as a measure of justice to those who are deprived of their hitherto legitimate businesses, and it is worthy of note that in a country where there is "oppression of the people,"[49] prohibition is being urged with some regard for property rights.[50] American state legislation and congressional enforcement of the Eighteenth Amendment, on the other hand, have been based on the principle of confiscation and rights of property or of individual liberty will be regarded even less in the future. The

---

turned upon the protection of vested rights. "It was a very different matter," he says, "to insist in the name of the idea of due process upon an immunity of individual action from legislative control. Until the middle of the nineteenth century no such idea was suggested by lawyers, courts, or text-writers. The prohibition legislation of the fifties gave the first opportunity of asserting such a liberty, but the slight attempts made in that direction found practically no judicial response." Later opportunities were given by the Granger and Workmen's Compensation legislation. FREUND, STANDARDS OF AMERICAN LEGISLATION, p. 209.

[49] Beebe *v.* State, *supra*.

[50] "The sale of alcoholic drinks is a lawful trade recognized by the State itself. It affects many other interests than those of the manufacturers who provide, and the publicans who dispense, the drinks. The confiscation of property in distilleries and breweries, in public-houses and beer-houses, would cause widely-spread misery among innocent people. If the choice of reform lies between confiscation and compensation, it is then reasonable that the State, which in 1833 paid the sum of £20,000,000 to the slave-owners when it abolished slavery in the British Colonies, should pay a corresponding sum to the owners of shares in the Liquor Trade if it decides to abolish the Trade." J. E. C. Welldon, "State Purchase as Practical Politics," THE CONTEMPORARY REVIEW, July, 1918. Nor is this a voice crying in the wilderness. See ROWNTREE AND SHERWELL, STATE PURCHASE OF THE LIQUOR TRADE (London, 1919) and CARTER, THE CONTROL OF THE DRINK TRADE (London, 1919).

court in the Indiana case suggested that when the people smarted under losses from depreciated currency or accidents on railroads, they might feel inclined to take radical action against banks and common carriers. It is worthy of consideration whether, in the fight which is to come over the control of the railroads, the precedent of the prohibition legislation is not an ominous one. There are to be sure, a number of different circumstances: the liquor traffic had very harmful effects and attempted to retain its position by an alliance with politicians and a control of the press which, happily, have not been duplicated in the case of railroads. But that, under the State police power acting for the general welfare, and under the amendment to the Federal Constitution, businesses worth millions of dollars should have been made valueless is an indication of what a powerful, well-organized minority can do if it is arguing a moral issue. I am not here maintaining that liquor dealers should have been compensated by the state, but am simply suggesting that the precedent is not one which is in keeping with President Hadley's remarks about the protected position of property under the American constitution and may bode ill for the owners of the railroads or the coal mines.

Litigation under the Eighteenth Amendment will probably be frequent but, I take it, there will be few if any restrictions put upon legislative control. The language of the amendment is:

> "Section 1. After one year from the ratification of this article the manufacture, sale or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof, for beverage purposes is hereby prohibited.
>
> "Section 2. The Congress and the several States shall have concurrent power to enforce this article by appropriate legislation."

The suggestion is made that possession and use are still matters of State regulation and that the jurisdiction of Congress is limited to the manufacture, sale and transportation. But, as has been seen above, the courts have sanctioned restrictions on

possession in order to make effective the laws as to sale, and there is no reason to believe that the Supreme Court of the United States will be any less liberal when it comes to pass upon what is "appropriate legislation" to enforce the amendment. So with the definition of what constitutes an "intoxicating" liquor. The Supreme Court of the United States has held that a State may prohibit the sale of malt liquors which are not intoxicants if this is necessary to enforce the regulations against real intoxicants:

> "It is also well established that, when a State, exerting its recognized authority undertakes to suppress what it is free to regard as a public evil, it may adopt such measures having reasonable relation to that end as it may deem necessary in order to make its action effective. It does not follow that because a transaction separately considered is innocuous it may not be included in a prohibition the scope of which is regarded as essential in the legislative judgment to accomplish a purpose within the admitted power of the government. * * * With the wisdom of the exercise of that judgment the court has no concern; and unless it clearly appears that the enactment has no substantial relation to a proper purpose, it cannot be said that the limit of legislative power has been transcended." [51]

It is not likely that the Supreme Court will deny this right to Congress, and while a legislative fiat cannot make "2.75%" intoxicating, and the Federal prerogative is confined to liquors which are "intoxicating," nevertheless the Court will probably say that a law forbidding the manufacture and sale of "2.75%"

[51] Purity Extract Co. *v.* Lynch, 226 U. S. 192 (1912). In State *v.* George (La.), 67 South. 953 (1915), a statute provided that "it shall be unlawful to sell or offer for sale any other beverage of any nature, kind, or description, whether intoxicating or non-intoxicating, or any article of merchandise under the same roof where near beer is sold as a beverage." The court brought the statute under the police power of the State by considering it primarily a regulation of the sale of near beer, not a regulation of the sale of other merchandise. Jackson *v.* State (Ga.), 96 S. E. 1001 (1918), sustained a State statute which prohibited the sale of malt which, when diluted, could be used as a beverage. The question is argued to some extent in the reports made by the Senate and House Committees on the prohibition enforcement bill. See 66th Congress, 1st Session, House Report No. 91, Parts 1 and 2, and 66th Congress, 1st Session, Senate Report No. 151.

is "appropriate" legislation for the enforcement of national prohibition. Certainly an unbroken line of decisions by the Supreme Court of the United States indicates that this will be the case.

Many such questions will come before the courts for determination. The enforcement of the amendment by concurrent Federal and State legislation will raise a number of interesting points. Federal administration of the enforcement will show more clearly than any other national activity the vanishing authority of the States, and we will soon begin to assess the results of the political metamorphosis caused by the success of a powerful, well-organized minority in forcing the adoption of national prohibition by constitutional amendment. This policy is immutable. A two-thirds majority in both branches of Congress and three-fourths of the State legislatures can in all probability never be secured to take prohibition out of the constitution. The citizen still has a right to life and a right to liberty, but he no longer has any constitutional right to liquor.

Lindsay Rogers.

UNIVERSITY OF VIRGINIA.

Part 5—Litigation Concerning Marihuana

[From Playboy magazine, November 1976]

THE OZARK CONNECTION

For selling about a third of an ounce of marihuana to a state undercover agen Jerry Mitchell, 19, was sentenced to 12 years in the Missouri state penitentiar Had his case n t come to the attention of a legal reform group, he would be i prison already, instead of in college, while his case is appealed. He may end up i prison yet; contrary to the belief of many young people, pot offenses are not ye on a par with underage beer drinking, especially in the rural parts of the countr

West Plains, Missouri, is a pleasant, friendly farming community of abou 10,000 near the Ozark tourist area in the south central part of the state. It's th seat of Howell County and the birthplace of country singer Porter Waggone for whom the main street is named. Compared with most places, it doesn't hav much of a drug problem, but the townspeople are worried that this is changing More and more city people are settling in the area, and over the past two or thre years, the local youngsters have discovered long hair, rock music and marihuan which grows wild from the days when it was cultivated for hemp fiber. Rarel a month goes by without an arrest for either possessing or growing pot. It wa Mitchell's extraordinary bad luck to be the first Howell County youth ever t be caught selling it.

Mitchell has lived in West Plains since he was born. In 1975, he graduate from the local high school with good grades and a good record, and last fal he entered Southwest Missouri State University in Springfield to study politica science and philosophy. These interests and his longish hair make him about th closest thing West Plains has to a "hippie." He was busted in the usual fashion A neighborhood friend, who had become an informant, introduced Mitchell t one of the state's roving undercover agents. Mitchell first was charged wit supplying the agent with a pound of locally picked marihuana, but the charge wa dropped when he agreed to plead guilty to selling one third of an ounce for fiv dollars.

At the time, a guilty plea seemed like the sensible thing. Both of Mitchell' parents are blind and living on a pension and Social Security; their home an property were posted to meet his $15,000 bond; he had borrowed $1500 from hi grandmother to pay his initial legal fees but he could not raise the additional $50 his attorney demanded in advance to represent him at sentencing. He hoped tha his lack of a criminal record, the nonprofit nature of the sale and his otherwis good reputation would earn him less than the maximum sentence, and it did He got 12 years; under Missouri law, he could have gotten life.

If 12 years seems like something less than leniency, it's because Circuit Judg Winston Buford—and he probably represents the community's general attitude— considers drug selling as serious as murder. The local paper quoted him as saying "Most crime are on one, one person robbing, killing or assaulting another. . . A pusher has the means to poison the whole community, particularly the youn people of the community. . . . It is only by the hard work of undercover agent that people such as yourself are brought to our attention." When Mitchell wept promised he would never get into trouble again and asked the court to conside probation for the sake of his parents, who have no other children, the judge sai he should have thought of his parents before getting into drugs.

Judge Buford is no ignorant Ozark hillbilly; he is intelligent, articulate thoughtful and quite aware that scientists have found no evident dangers i marihuana smoking. But he does consider its use symptomatic of a dangerou national trend toward drug abuse, and he apparently believes that harsh crimina penalties deter young people from using drugs—a dubious proposition in ligh of the rest of the country's experience. Yet this attitude seems to prevail i

Howell County and it's quite possible that a jury would have recommended an even longer sentence.

When Mitchell told his story to the National Organization for the Reform of Marihuana Laws, national director Keith Stroup volunteered his services as an attorney and also retained Michael Stepanian, a prominent San Francisco lawyer with experience in drug cases. Both flew to Missouri to represent Mitchell at a hearing for reduction of sentence and to plan an appeal, in which they will be assisted by the Playboy Foundation. The hearing, which "Playboy" attended, followed lengthy negotiations in the judge's chambers and was more like Mitchell's public confession of guilt and contrition than like a legal proceeding. Judge Buford, deciding he could now see a "ray of hope" for the defendant, reduced his sentence accordingly—to 7 years.

Until last year, the Missouri drug law provided five years to death for anyone convicted of even sharing a joint of marihuana with a minor. In its penalties, it still makes no distinction between selling marihuana or heroin, providing five years to life in prison for the sale of any amount of either substance to anyone. The statute's shotgun quality permits NORML to challenge it on at least two constitutional grounds. By simple common sense, any law that provides a minimum of five years and permits a life sentence for a joint of marihuana should be in violation of the Eighth Amendment's ban on cruel and unusual punishment. Unfortunately, common sense plays no great role in matters of law, and courts have traditionally held that no penalty short of mutilation or burning at the stake is cruel if legislators vote it into law. The 14th Amendment provides a second and better ground for argument. Its equal-protection clause has been interpreted to require some rational connection between the seriousness of a crime and the severity of its punishment, and the supreme courts of both Illinois and Michigan have held that it's legally improper to treat marihuana offenses the same as those involving heroin, barbiturates or other drugs known to be addictive or dangerous.

Herein lies the legal significance of the Mitchell case. By making no proper distinction among different drugs, many state laws permit the courts to treat a stash-sharing pot smoker as though he were the French Connection.

The difficulty NORML's appeal faces is that courts, especially state courts, are reluctant to "usurp the authority of the legislature" in matters of statutory law. But where a legislature refuses to reform or repeal a law inspired by unwarranted fear and based on misinformation, the courts are the only recourse.

November 9, 1976

Ms. Mary Jolly
Juvenile Delinquency Subcommittee
U.S. Senate
A-504
Washington, D.C. 20510

Dear Mary:

I am enclosing the documents we discussed over the phone on Friday. These documents are:

1. Brief for Petitioner in NORML v. DEA, No. 75-2025, U.S. Court of Appeals for the D.C. Circuit. This case is the appeal from the DEA's rejectionof NORML's petition to reschedule marijuana from Schedule I of the Controlled Substances Act. The brief contains the history of NORML's petition from the time it was first filed in 1972, and also contains an extensive discussion of U.S. treaty obligations with respect to marijuana, and the potential medical uses for marijuana.

2. Comments of NORML to the U.S. Parole Board on Proposed Rulemaking, 41 Fed. Reg. 19326-40 (May 12, 1976). The Comments suggested that the Parole Board reclassify possession of marijuana and hashish into the least serious category of offenses, so that federal prisoners who had been convicted of these offenses could be released on parole earlier. This change, and some others proposed by NORML, were adopted by the Parole Board in their final guidelines published at 41 Fed. Reg. 37316 (Sept. 3, 1976).

3. Petition for Writ of Certiorari to the U.S. Supreme Court, La. NORML v. Gusti, 44 U.S.L.W. 3205 (Oct. 6, 1975). This case involved a constitutional challenge to the marijuana laws, primarily based upon the Right of Privacy. The petition was denied by the Supreme Court.

If I can be of any further assistance, please give me a call.

Sincerely,

Peter H. Meyers
Chief Counsel

On Petition for Review of an Order of the Drug Enforcement Administration

---

BRIEF FOR PETITIONER

Issues Presented

1. Whether there is any latitude or discretion to reschedule cannabis from Schedule I of the Controlled Substances Act, consistent with treaty obligations.

2. What amount of rescheduling would be consistent with treaty obligations, with respect to:

(A) Cannabis and cannabis resin (as those terms are defined by treaty),

(B) Cannabis leaves (when unaccompanied by the tops),

(C) Cannabis seeds (when unaccompanied by the tops), and

(D) Synthetic cannabis or THC.

3. Since there is discretion to reschedule cannabis materials from Schedule I, should the NORML petition be formally referred to the Secretary of HEW, pursuant to Section 201 of the Act, for scientific and medical findings and recommendations and for the other procedures specified in Section 201(a)-(c).

4. Is the letter from Doctor Cooper, Acting Assistant Secretary for Health, comparable with, or an adequate substitute for, the full procedures specified in Section 201(a)-(c).*

References to Parties and Rulings

This case involves review of an order of the Acting Administrator of the Drug Enforcement Administration, Mr. Henry S. Dogin, which was published in the Federal Register on September 25, 1975, 40 Fed. Reg. 44164-68. This order, which denies NORML's petition to reschedule marijuana "in all respects," 40 Fed. Reg. at 44168, is contained in the Appendix To Brief For Petitioner.

---

*This case was previously before this Court, NORML v. Ingersoll, No. 72-1854, and the order now under review was entered pursuant to the remand of this Court, reported at 162 U.S. App. D.C. 67, 497 F.2d 654 (1974).

This case is also related to a case which is now pending before a three-judge district Court in this Circuit, NORML et al. v. Wilson et al., Civil Action No. 1897-73, U.S. District Court for the District of Columbia. That case involves a Constitutional challenge to the marijuana prohibition contained in the Controlled Substances Act and the D.C. Uniform Narcotic Drug Act, primarily as it relates to the private possession and use of marijuana. The three-judge Court ordered that that case be stayed pending the conclusion of the DEA proceeding below, and after the Acting Administrator entered his final order in the proceeding below, the three-judge Court vacated the stay (order filed Dec. 23, 1975).

The Acting Administrator received a Report containing Proposed Findings and a Recommended Decision from the Administrative Law Judge who presided over the hearing below, Mr. Lewis F. Parker, on May 21, 1975. This Report is contained in the Appendix To Brief For Petitioner.

Review is sought pursuant to Section 507 of the Controlled Substances Act, 21 U.S.C. Sec. 877.

Statutes and Regulations

The Statute involved in this case is the Controlled Substances Act, 21 U.S.C. Sec. 801 et seq. The principle area of controversy in this case involves the interpretation and application of Section 201 of the Act, 21 U.S.C. Sec. 811, which is set out in full in the Addendum to this brief.

The treaty involved in this case is the Single Convention on Narcotic Drugs, 18 U.S.T. 1407 (1967). The official text of the Single Convention was introduced in evidence at the hearing below as Administrative Law Judge Exhibit No. 29, and is contained in the Appendix To Brief For Petitioner.

The pertinent provisions of the Single Convention are discussed in part F of the Statement of the Case.

STATEMENT OF THE CASE

This case involves a petition to reschedule marijuana from Schedule I of the Controlled Substances Act, 21 U.S.C. Sec. 801 et seq., which was originally filed on May 18, 1972, with the Director of the Bureau of Narcotics and Dangerous Drugs (BNDD) by NORML and other parties. See ALJ Ex. No. 1.[1]

In response, the Director of the BNDD published a notice in the Federal Register on September 7, 1972, which stated that the petition was not "accepted for filing" on the ground that rescheduling marijuana to Schedule V or decontrolling marijuana, as requested in the petition, would violate treaty obligations, particularly the Single Convention on Narcotic Drugs. The Director of the BNDD also stated that since marijuana was controlled by treaty obligations, Section 201(d) of the Controlled Substances Act applied and gave him sole authority over the

scheduling of marijuana, without regard to the procedures contained in Section 201(a)-(c) of the Act. See ALJ Ex. No. 2.

A petition for review of this decision was filed in the U.S. Court of Appeals for the District of Columbia Circuit, and on January 15, 1974, the Court issued its decision reversing and remanding the case for further proceedings at the Drug Enforcement Administration. NORML v. Ingersoll, 162 U.S. App. D.C. 67, 497 F.2d 654 (1974).

A. The Court's Decision in NORML v. Ingersoll

The Court's decision indicated that the Court was "uneasy" over the Director's procedure in rejecting the petition even for purpose of filing, 497 F.2d at 659:

> Moreover, we are uneasy that respondent's own unorthodox procedural devices may have contributed to a procedural impasse and a non-responsive discussion on different planes of discourse.
>
> Respondent refused to accept the petition for filing. The outright rejection of the filing of a petition is an executive or administrative action that has only a narrow role....But if this had been handled properly by respondent as a decision on the merits, petitioners could have refined their alternative position in the light of respondent's decision.
>
> Instead they considered respondent's "rejection" of even a filing to signal short shrift for a serious presentation. It was not the kind of agency action that promoted the kind of interchange and refinement of views that is the lifeblood of a sound administrative process.

The Court stated that it could not make a final determination on treaty obligations and the rescheduling of marijuana, 497 F.2d at 661:

> Obviously, this court is in no position to decide this case in its present posture. Having in mind our doubts as to

the propriety of the respondent's action in rejecting even the filing of the petition, we think the optimum course, in the interest of justice, 28 U.S.C. Sec. 2106, and a sound disposition, is to remand the case to respondent for further consideration, to be demoninated a consideration on the merits.

In response to the BNDD Director's interpretation of Section 201(d) of the Controlled Substances Act, the Court did not make any final determination, but did state that "we doubt that this was the intent of Congress," 497 F.2d at 660-61:

> The decision under review rightly refers to Sec. 201(d) of the Act as establishing a basis for control under the Act if required by treaty obligations. But the decision seems to go further and say that if some control is required by treaty then the decision of which Schedule is appropriate is a matter for the exclusive decision of the respondent as the delegee of the Attorney General. This is a matter that gives us pause. The respondent seems to be saying that even though the treaty does not require more control than schedule V provides, he can on his own say-so and without any reason insist on Schedule I. We doubt that this was the intent of Congress. (footnote omitted)

The Court suggested that the proceeding on remand be divided into two phases, 497 F.2d at 661 fn. 17:

> A rule-making proceeding may be established in phases. In the first phase, the Department of Justice could consider whether there is any latitude consistent with treaty obligations, and herein receive expert testimony limited to this treaty issue. The second phase would arise only if some latitude were found, and would consider how the pertinent executive discretion should be exercised.

The Court's decision also contained some specific directions for the remand, the most important of which were as follows, 497 F.2d at 660,661:

> This consideration will embrace the subject of removal or transfer of control of the leaves of the plant.
>
> On the remand, respondent will also supply findings that will sharpen and clarify the issue whether control under Schedules I and II is required as to the flowers.

* * *

> The matter is not one on which the expertise of respondent is exclusive, and it would seem appropriate for the court to have the benefit of the views of sources in the State Department and the international organizations involved.

The Court's opinion concluded, 497 F.2d at 661:

> Our conclusion that such a remand is appropriate is fortified by the reorganization and redelegation of authority within the Department of Justice, under which the pertinent functions of the Attorney General now have been transferred to the [Administrator] of the Drug Enforcement Administration, an official who can provide a new look and a hard look at the questions raised by the petition.[2]

The Court's opinion also described the scheme of the Controlled Substances Act ("CSA") and the procedures for rescheduling substances which are contained in the Act, see 497 F.2d at 656-58, and there is no need to set this out in detail here.[3] It might be helpful, however, to set out a few of the basic features of the CSA's procedure for rescheduling:

The Controlled Substances Act contains five schedules of controlled substances, listed as Schedules I-V. A controlled substance listed in Schedule I has the greatest number

---

2. A reorganization occurred within the Department of Justice while NORML v. Ingersoll was pending in the Court of Appeals. See 497 F.2d at 657 fn. 1. The BNDD was abolished, and the Drug Enforcement Administration was created. The DEA was given the authority to reschedule substances in the Controlled Substances Act which had previously been delegated by the Attorney General to the BNDD.

3. cf. United States v. Moore, ___ U.S. ___, 44 U.S.L.W. 4023 (December 9, 1975), which involved the issue of whether a licensed physician registered under the Controlled Substances Act, could be prosecuted for violation of Section 841 of the Act. The Court's decision did not consider any of the sections of the CSA which are involved in this case.

of restrictions and controls, and a controlled substance listed in Schedule V has the least. Congress set out in the Act the substances which would initially be included in each schedule, and it placed marijuana in Schedule I. See 21 U.S.C. Sec. 812, Schedule I(c)(10).

Congress did not intend, however, that "its initial placement of marijuana in Schedule I should be immutable." Administrative Law Judge's Report, Cert. Ind. No. 19, at p. 10.

In Sections 201(a)-(h) of the Act, which are set out in full in the Addendum hereto, Congress created a procedure by which substances could be rescheduled. Upon petition filed by any "interested person," the Attorney General is authorized to reschedule a substance to a different schedule or to "remove any drug or other substance from the schedules if he finds that the drug or other substance does not meet the requirements for inclusion in any schedule." Section 201(a)(2), 21 U.S.C. Sec. 811(a)(2) (emphasis added).

Section 201(b) of the Act, 21 U.S.C. Sec. 811(b) provides that the Attorney General shall request from the Secretary of Health, Education, and Welfare a scientific and medical evaluation of the substance, and recommendations on control. The factors which the Secretary of HEW considers are set out in Sections 201 (b)-(c), 21 U.S.C. Sec. 811(b)-(c), and include: "The state of current scientific knowledge regarding the drug or other substance"; "What, if any, risk there is to the public health"; "Its psychic or physiological dependence liability."

After receiving the scientific and medical recommendations from the Secretary of HEW, the Attorney General's final decision must be "made on the record after opportunity for a hearing...." Section 201(a), 21 U.S.C. Sec. 811(a). At this hearing, "The recommendations of the Secretary [of HEW] to the Attorney General shall be binding on the Attorney General as to such scientific and medical matters...." Section 201(b), 21 U.S.C. Sec. 811 (b).

B. Proceedings at the DEA on Remand

On June 26, 1974, the DEA Administrator published a Notice of Proposed Hearing in the Federal Register, 39 Fed. Reg. 23072 et seq., ALJ Ex. No. 3, which stated that the DEA had adopted the Court's suggestion for a two-phase proceeding, and would hold a hearing, limited to the treaty issue, if requested by petitioners:

> Therefore, should the petitioners or any of them so request, the Drug Enforcement Administration is prepared to hold a hearing, limited to the petitioners or any of them, for the purpose of receiving factual evidence and expert opinion on the issue and by the method described by the court as "whether there is any latitude (on the scheduling of marihuana under the Cpntrolled Substances Act) consistent with treaty obligations, and herein receive expert testimony limited to this treaty issue". 39 Fed. Reg. at 23075.

This Notice of Proposed Hearing also included a letter from the Assistant Legal Advisor, Department of State, which had been requested by the DEA. The letter refers to two Resolutions adopted by the U.N. Economic and Social Council. Copies of these two Resolutions were subsequently made available to petitioner, and were introduced in evidence as part of ALJ Ex. No. 3.

By letter dated July 19, 1974, NORML and the American Public Health Association responded to this Notice and requested a hearing. ALJ Ex. No. 4. Petitioners agreed that the issue involved at the hearing would be treaty obligations, as framed in the Notice of Proposed Hearing. Petitioners further indicated that in their view this issue contained a number of sub-parts, one of which was: "Whether there is any discretion to remove the leaves and/or the seeds of the marijuana plant from Schedule I." Id., p. 2 (emphasis added).

Pursuant to an order of Administrative Law Judge Lewis F. Parker, counsel for petitioners and for the DEA staff held a prehearing conference in the absence of Judge Parker on September 18, 1974. Prehearing conferences, presided over by Judge Parker, took place on September 23, 1974, and October 23, 1974. See Cert. Ind. Nos. 2 and 3.

On January 16, 1975, a Notice of Hearing was published in the Federal Register by the Acting Deputy Administrator of DEA, which reiterated that the forthcoming hearing would be "limited to this treaty issue," 40 Fed. Reg. 2841, ALJ Ex. No. 25.

A three-day hearing was then held before Judge Parker on January 28-30, 1975. The four-volume transcript of this hearing is listed at Cert. Ind. No. 4. At the hearing, petitioners called two witnesses who were qualified as experts on the treaty issue and gave testimony concerning treaty obligations, Mr. Lawrence Hoover and Dr. Joel Fort. The background of these

witnesses is well summarized in the Administrative Law Judge's Report and Recommended Findings, Cert. Ind. No. 19, at pp. 5-6:

> Mr. Hoover is an attorney who is presently engaged in the private practice of law (TR, p. 23). In 1963, he was employed by the Department of State as a legal advisor in the negotiation and interpretation of treaties (TR, p. 25). Between 1968-1971 he was the U.S. liaison with international drug control bodies located in Geneva, Switzerland which had the responsibility for implementing the Single Convention on Narcotic Drugs (TR, p. 27), and in 1972 was a consultant to the Bureau of Narcotics and Dangerous Drugs (TR, p. 31). He has co-authored an article dealing with the Single Convention and other international drug treaties (TR, pp. 33-34). Dr. Joel Fort is a specialist in social problems involving drug abuse and criminal law (TR, p. 140) and has made several trips to foreign countries in connection with his work on narcotic drugs (TR, pp. 143, 146, 155). As a consultant to the World Health Organization, he was assigned in 1963 to study the use of drugs in 16 Asian countries (TR, p. 143). He has authored or co-authored approximately 30 books and 50 articles, about half of which deal with cannabis from a historical, scientific or international perspective (TR, p. 150). He testified in two prior BNDD-DEA proceedings involving the scheduling of drugs under the Controlled Substances Act (TR, pp. 152-153).

The DEA staff called three witnesses, Mr. Philip B. Porto, Dr. Carlton Turner, and Mr. Donald E. Miller. Only the last witness called -- Mr. Miller -- was qualified as an expert on treaty obligations and testified concerning treaty obligations. The background of these DEA witnesses is also set out in the Administrative Law Judge's Report, Cert. Ind. No. 19, at p. 6:

> Mr. Porto is a chemist and is Director of DEA's Northeastern Regional Laboratory in New York City (TR, p. 250). He is experienced in the laboratory analysis and identification of narcotics, cannabis and other drugs (TR, p. 251). Dr. Carlton Turner is a chemist and is Associate Director of the Research Institute of Pharmaceutical Sciences, School of Pharmacy, University of Mississippi and is Director of the National Institute on Drug Abuse,

Marihuana Project (TR, p. 296). He has published many articles dealing with the cultivation and harvesting of cannabis, and techniques for its identification (TR, p. 297). Mr. Donald Miller is DEA's Chief Counsel and was previously Chief Counsel of BNDD and the Bureau of Narcotics (TR, pp. 407-408). He is a part-time advisor to the Department of State and has been a representative of the United States in conferences on narcotic and psychotropic substances (TR, pp. 408-409) and was involved in discussions at the Bureau of Narcotics on the proposed Single Convention on Narcotic Drugs (TR, pp. 408-409).

A number of documents relating to the Single Convention on Narcotic Drugs were also introduced in evidence at the hearing as Administrative Law Judge exhibits. These documents are discussed below, in part E of the Statement of the Case. Petitioner would mention here three particularly important documents which were introduced at the hearing:

1. Memorandum from the Deputy Assistant Attorney General, Office of Legal Counsel of the Department of Justice, to the Director of the BNDD, dated August 21, 1972, entitled "Petition to Decontrol Marihuana; Interpretation of Section 201 of the Controlled Substances Act of 1970." This Memorandum was supplied to NORML in response to a general request for documents to the DEA staff, and was introduced in evidence at the hearing as ALJ Ex. No. 28. See Tr. 8-10. The Memorandum states that it was prepared in response to a request from the Director of BNDD for the Justice Department's legal opinion on what procedure should be followed with respect to the NORML petition, which had just been filed. The Memorandum, which was not available to the

Court when it first heard this case, is perhaps the single most important document on the procedure the DEA must follow if there is discretion to reschedule cannabis from Schedule I.

2. Document entitled "Registrants for Marihuana as of January 3, 1975," which was prepared by the DEA, supplied to counsel for petitioner upon request, and introduced in evidence at the hearing as ALJ Ex. No. 50. See Tr. 534-35. This document demonstrates that the DEA (and through it, the United States) is not at the present time complying with treaty obligations involving marijuana, as Mr. Donald E. Miller, the DEA's Chief Counsel, acknowledged under cross-examination at the hearing below. See Tr. 535-39.[4]
