DRUG ENFORCEMENT STATISTICAL REPORT

PREFACE

This report, dealing with the statistics of drug law enforcement and the illicit drug problem, is prepared as a reporting vehicle. No attempt is made to project the future trends of any of the reported statistics. Each section of data is described, however, to insure that the reader is not confused by the various categories which are presented. Additionally, short narrative statistical capsules are also included. These are intended to clarify the figures and are not evaluations of either the drug problem or the programs involved.

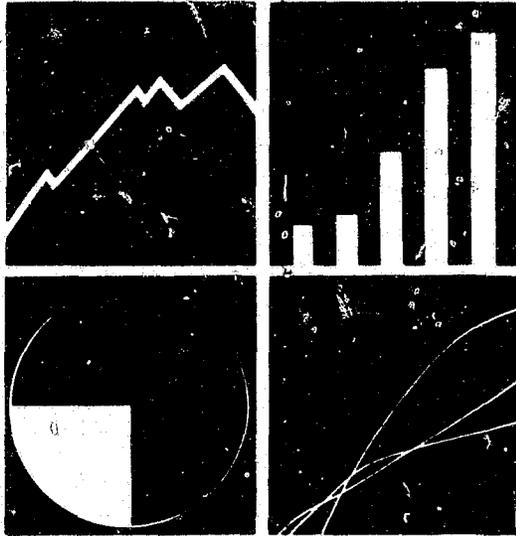

The report is divided into three sections consisting of Enforcement Activity, Drug Abuse Indicators and Organization and Training Data. Each section reflects its data base by both fiscal and calendar year, when available. There are some categories, however, such as Personnel-on-Board, where it was felt that a double presentation would be redundant. When this is the case, the data is presented only by either fiscal or calendar year.

All data presented reflects the most recent compilations available. Therefore, the final column of each chart may reflect cumulative statistics of a partial year. For instance, a column headed 20 FY 79 would contain figures for the first six months of that fiscal year, not just the second quarter.

Aliens Arrested Within the U.S. for a Drug Offense	28

ENFORCEMENT ACTIVITY TOTAL DEA DOMESTIC DRUG REMOVALS

DESCRIPTION OF DATA:

DEA domestic removal statistics represent a total of all drug deliveries and seizures made by DEA or cooperating law enforcement agencies as part of ongoing DEA Federal investigations. The source documents for these statistics are chemist analysis reports which are prepared on each drug exhibit received at DEA laboratories. The utilization of these reports insures correct identification of each exhibit as well as accurate tabulation of the amounts removed.

Removals of heroin, cocaine, marihuana, hashish and opium are reported in net weight (including any diluent present but not the weight of wrappings or packaging). Dangerous drug removals are usually shown in dosage units, however, when they involve powder and the chemist's analysis does not include potency of the exhibit, the net weight is reported with no conversion to dosage units attempted.

ANALYSIS OF DATA:

The heroin removal rate during CY 79 to date has decreased when compared to the previous two years. Heroin's decline can be attributed to its decrease in availability coupled with DEA's concentration on conspiracy cases.

Cocaine's rate of removal to date, though lower than the record set in 1978, is still well above removals of years prior to 1978.

Likewise, 1979 cannabis removals have been greater than all previous years with the exception of the record setting removals made in 1978.

The CY 1979 rate for dangerous drug removals increased slightly when compared to the previous two years. Stimulants seem to again be the drug of choice in 1979 unlike 1978 which found hallucinogen removals at their peak.

ENFORCEMENT ACTIVITY DEA STATE AND LOCAL TASK FORCE DRUG REMOVALS

DESCRIPTION OF DATA:

DEA, in coordination with State and Local law enforcement agencies, participates in a Task Force program designed to effect the mid-level to street-level activities of drug dealers. Toward this end, combined DEA/State/Local teams of agents conduct independent investigations which lead to the removal of illicit drugs. Statistics reported as Task Force Removals are only those removals which are sent to DEA labs for analysis. Exhibits which are turned over to State or Local labs for analysis are not reported.

Removal quantities are the same weights or dosage units as reported on DEA removal charts, which were described previously.

ANALYSIS OF DATA:

DEA Task Force cocaine, stimulant and depressant removals for CY 79 to date are well above figures recorded for the previous two years. This removal rate is a product of the recent popularity of these drugs coupled with increased availability.

Heroin and marihuana, on the other hand, have declined from the figures recorded for the prior two years. This, however, was expected with the de-emphasis of the Task Force program. It should be noted that if the present rate continues marihuana removals for CY 79 will be at the lowest level since the inception of the Task Force program.

ENFORCEMENT ACTIVITY DEA/FOREIGN COOPERATIVE DRUG REMOVALS

DESCRIPTION OF DATA:

DEA/Foreign Cooperative Drug Removals reflect the volume of drugs seized by foreign narcotics enforcement officials with the assistance of DEA. Unlike domestic drug removal statistics, which are verified by laboratory analysis, foreign removals represent the gross weight of each suspected drug.

ANALYSIS OF DATA:

The rate of foreign cooperative heroin removals through the first half of CY 1979 is well below the figures for the two preceding years. Similarly, removals of opium and hashish have declined.

Marihuana seizures, while not matching the record levels of 1978, also have fallen. This is due in part to reduced reporting from the U.S.-Mexico border.

Contrarily, cocaine and depressants have shown substantial gains this year. A single seizure of 990,000 dosage units of depressants in Mexico is responsible for a substantial part of that drug's total. Cocaine removals, likewise, continue to be heavily concentrated in South America.

ENFORCEMENT ACTIVITY PORTS AND BORDERS DRUG REMOVALS

DESCRIPTION OF DATA:

Federal drug removals along the U.S. border and at ports of entry are reported to DEA by the Immigration and Naturalization Service and the U.S. Customs Service. While these agencies are responsible for the bulk of the removals, DEA frequently participates in investigations leading to the seizures. The data is tabulated from seizures analyzed by field tests performed at the time of the seizure. Dangerous drug seizures are not broken out into categories (e.g., stimulants, depressants, hallucinogens) but, rather, are considered as one category labeled "dangerous drugs" and reported in terms of five grain units.

ANALYSIS OF DATA:

With the exception of cocaine, all major categories of drug removals have declined in CY 79 when compared to rates set in CY 78. Though marijuana removals have decreased this year in comparison to 1978, they are still well above the removal rates set prior to CY 1978 which was a unique and record setting year.

*Drugs removed by the United States Coast Guard are, in most cases, turned over to other agencies for disposal after seizure. For this reason, the statistics reported above may also be included in the removal figures of other federal agencies. To avoid duplicate counting, the above figures should not be included in total domestic removal statistics.

ENFORCEMENT ACTIVITY DEA FEDERAL ARRESTS AND DEFENDANT DISPOSITIONS

DESCRIPTION OF DATA:

DEA Federal domestic arrests represent all those individuals detained by DEA within the United States. Arrest forms are submitted to Headquarters for compilation and as file records. These forms contain the drug involved in the violation as well as the charge made at the time of arrest.

DEA reviews all defendant dispositions to determine the final judicial status of each individual arrested. This provides information both for the timing of case termination as well as allowing for the examination of the quality of the cases. Included are both Federal and State court dispositions.

ANALYSIS OF DATA:

With the exception of heroin, all major categories of drug arrests increased during the first half of CY 1979 when compared with the past two calendar years. Most notable has been the 40% increase in the incidence of cocaine arrests and the 29% increase in cannabis arrests.

The decline in heroin arrests is the result of DEA's emphasize on developing high level conspiracy cases coupled with the recent decline in heroin availability.

To date, CY 79 convictions have decreased from CY 77 and 78 figures. Despite this, the conviction to acquittal ratio has remained constant.

ENFORCEMENT ACTIVITY DEA INITIATED TASK FORCE ARRESTS AND DEFENDANT DISPOSITIONS

DESCRIPTION OF DATA:

Records of Task Force arrests are maintained in the same manner as DEA arrests. Monitoring of Task Force defendant dispositions is carried on similarly to DEA defendant dispositions. Both Federal and State court dispositions are included.

ANALYSIS OF DATA:

DEA/Task Force arrests have decreased by more than 50% since CY 1975. This decrease, however, is in keeping with DEA's de-emphasis of the Task Force program and had been anticipated. Despite this, cocaine, stimulant and PCP arrests for CY 79 have not fallen proportionally when compared with total Task Force arrests. This variation is, in part, due to the recent popularity of these drugs coupled with their increased availability.

Likewise, as in preceding years dating back to 1975, Task Force dispositions continued to show a steady decline this year.

ENFORCEMENT ACTIVITY DEA/FOREIGN COOPERATIVE ARRESTS

DESCRIPTION OF DATA:

DEA/Foreign Cooperative Arrests show the number of individuals arrested by foreign narcotic enforcement officers with the direct or indirect assistance of DEA. These arrests are reported and recorded by primary drug of violation.

ANALYSIS OF DATA:

Heroin and cocaine together accounted for 93% of the foreign cooperative arrests during the first half of CY 1979. This preponderance is caused by the sharp decline in marihuana arrests which began in 1976 and has continued through the present.

Nine of every ten cocaine arrests are reported from South America and half of the heroin arrests originate in Southeast Asia, the respective areas of greatest availability for the two drugs.

ENFORCEMENT ACTIVITY OTHER DOMESTIC ARRESTS AND CLANDESTINE LABS SEIZED

DESCRIPTION OF DATA:

DEA/State and Local Cooperative Arrests represent those violators detained as a result of a state or local investigation for a drug law violation in which DEA assistance was requested.

Customs and INS Referral Arrests reflect those individuals arrested by these agencies and subsequently turned over to DEA for processing and prosecution.

The number of clandestine laboratories seized represents those illicit manufacturing plants discovered and seized by DEA in the course of its domestic investigations.

ANALYSIS OF DATA:

Both DEA/State and Local Cooperative Arrests and Custom referral arrests remained stable during the first half of CY 79 when compared to CY 1978 figures. During this same time period, INS referral arrests have decreased by 38%.

The rate of illicit labs seized has increased by 34% since 1978. This is a result of increased methamphetamine and PCP lab seizures.

ENFORCEMENT ACTIVITY COMPLIANCE INVESTIGATIONS AND REGULATORY ACTIONS

DESCRIPTION OF DATA:

DEA has the responsibility, under the Controlled Substances Act, to reduce the quantity of legally manufactured drugs diverted to illicit purposes. To accomplish this, a regulatory program has been established by which the DEA licenses and inspects legitimate handlers of controlled drugs. Inspections are performed on a scheduled or complaint basis and actions are administered according to the violation.

ANALYSIS OF DATA:

The rate of compliance investigations and actions during CY 1979 declined from the preceding year. Notably, there were some substantive shifts in activity by the category of registrant.

Investigations of pharmacies and practitioners fell by 61%, and related actions were down 37%. This is a direct result of the emphasis placed upon inspecting manufacturers, distributors and methadone maintenance programs which make up DEA's primary regulatory responsibility. Investigations of these wholesale level registrants were up 6% and actions increased 18% during the first half of CY 1979 as compared to CY 1978.

ENFORCEMENT ACTIVITY STATE AND LOCAL DRUG LAW ARRESTS

DESCRIPTION OF DATA:

These figures are obtained from State and Local jurisdictions which voluntarily submit arrest data to the Federal Bureau of Investigation. These arrests differ from DEA/State and Local Cooperative arrests in that they represent efforts by the State or Local law enforcement agencies alone and in cooperative activity.

The data has many limitations, the most significant being the inconsistency of drug emphasis between jurisdictions and the variance of the size of its data base from year to year.

ANALYSIS OF DATA:

Both the absolute number of arrests in CY 1977 and the arrest rate per 100,000 population increased in comparison with those of 1976.

By category, dangerous drug arrests decreased slightly in 1977. Marijuana arrests increased by more than 10%. Heroin and cocaine detention decreases noted in CY 1973 through 1976 have reversed and have increased substantially in CY 1977. Specifically, this category increased by approximately 50% from the 1976 figure.

**ENFORCEMENT ACTIVITY

ENFORCEMENT ACTIVITY LABORATORY ANALYSES PERFORMED

DESCRIPTION OF DATA:

The DEA laboratory system is composed of seven regional laboratories located throughout the continental United States and the Special Testing and Research Laboratory located in the Washington, D.C. area. The laboratories conduct qualitative and quantitative chemical analyses on controlled drug evidence. The data presented denotes exhibits of evidence submitted by DEA and DEA/ Task Force agents as well as those from state, local and other federal law enforcement agencies.

ANALYSIS OF DATA:

The decrease in the number of exhibits during 1975 and 1976 has leveled off to approximately 30,000 exhibits per year since 1977. The decrease is attributed to a shift in DEA's emphasis toward higher level drug traffickers and a simultaneous de-emphasis on DEA Task Force cases. During the same period, a number of new state and local laboratories were established which analyze exhibits of evidence previously submitted to the DEA laboratory system.

**ENFORCEMENT ACTIVITY

ENFORCEMENT ACTIVITY ALIENS ARRESTED WITHIN THE U.S. FOR A DRUG OFFENSE

DESCRIPTION OF DATA:

These figures are obtained from the personal history form submitted for every defendant. The aliens represented by these statistics include DEA and Task Force defendants as well as those violators detained by other Federal agencies who were turned over to DEA for processing.

ANALYSIS OF DATA:

The rate of alien arrests during the first six months of CY 1979 increased by 12% from CY 1978. Mexicans, Colombians and Cubans together accounted for more than 75% of the arrests from CY 1975 through CY 1978.

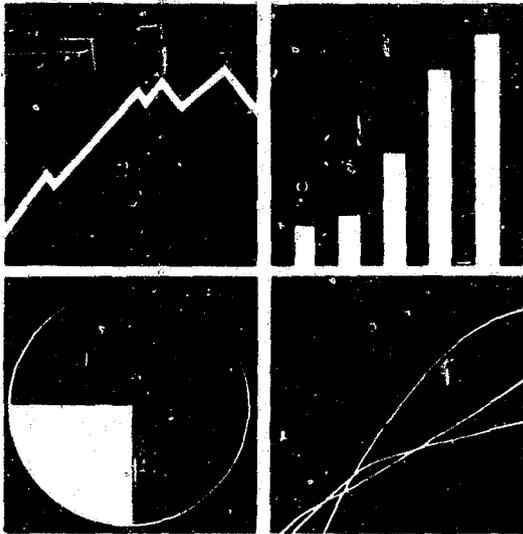

There has been a significant decrease in Mexican arrests this year which was offset by an increase in Colombian and Cuban arrests. Their collective share is now 68%. Separately, Mexico's portion of the total has decreased from 69% in CY 1976 to 25% in 2Q CY 79 while Colombia's has increased from 10% to 32% and Cuba's from 4% to 11%.

DRUG ABUSE INDICATORS

ADJUSTED HEROIN RETAIL PRICE AND PURITY BY GEOGRAPHICAL DISTRIBUTION

DESCRIPTION OF DATA:

Heroin price and purity figures are based upon a systematic examination of the evidence exhibits removed from the illicit market by DEA. They are calculated utilizing an exclusion criterion which selects only those exhibits which fall within a certain range of values representative of the retail level of the illicit market.

The sensitivity of quarterly heroin price and purity statistics to the occurrence of potential data anomalies which could prejudice the sample group requires that a statistical smoothing process be utilized to limit the influence of these occurrences. Additionally, beginning with CY 78, a further system refinement was added whereby the clustering of a large number of transactions in one location is diffused. This is done by weighing regional means according to the intensity of the narcotic problem geographically prior to deriving a national figure.

Care should be taken to use this data only as a general trend indicator since the available data base is not considered large enough to produce information reflective of absolute price or purity.

ANALYSIS OF DATA:

The decrease of the retail purity noted in mid-1977 and 1978 appears to have leveled off during the first two quarters of 1979. Despite this, purity remains at the lowest point ever recorded since the inception of this system in 1971 and, when coupled with the continued increase in price, in most areas, indicates an ongoing shortage of heroin at the "street level".

DRUG ABUSE INDICATORS
ADJUSTED HEROIN RETAIL PRICE AND PURITY BY GEOGRAPHICAL DISTRIBUTION

<u>PRICE</u> - Per Milligram Pure		CY76	CY77	CY78	2Q CY79
National	- Purity Price	6.1% \$1.40	5.1% \$1.59	3.5 \$2.19	3.5% \$2.25

DRUG ABUSE INDICATORS NATIONAL ILLICIT DRUG RETAIL PRICES

DISCRIPTION OF DATA:

Cocaine prices are derived from the cocaine retail price index based upon evidence exhibits purchased by DEA. Dangerous Drug prices are based upon quarterly reports submitted by DEA field offices in twenty-three large metropolitan areas.

ANALYSIS OF DATA:

Cocaine: The price of cocaine fell this quarter and is now slightly below the prices of last year. This confirms suggestions by other sources that the demand for cocaine, while still high, is leveling off.

Dangerous Drugs: The prices reflected in this section represent data compiled by a newly initiated collection effort which reflects transaction data at the retail level. For this reason, past year data is not being included to preclude the possibility of erroneously comparing figures from the new system with those reported previously. As with the past data, care should be taken to use this information only as trend indicators of retail value as the data base is not comprehensive enough to be utilized as an absolute indicator of availability.

**DRUG ABUSE INDICATORS

DRUG ABUSE INDICATORS DRUG THEFTS BY GEOGRAPHIC REGIONS

DESCRIPTION OF DATA:

Registered handlers of controlled substances are required by the Controlled Substances Act to report the theft of all controlled drugs. This report includes the type of handler and the means of theft. The data presented herein summarizes by DEA region the number of thefts and volume of drugs stolen. The figures on the bottom half of the following page represent dosage units stolen in increments of a thousand.

ANALYSIS OF DATA:

The rate of drug thefts in the first half of 1979 was slightly greater than the previous year, reflected by a 9 percent increase in thefts reported from pharmacies. Despite this, there has been a decrease in manufacturer/distributor thefts and a reduction of other registrant thefts. The South Central Region runs counter to these national trends with pharmacy thefts declining and other categories increasing.

The volume of all drugs taken through June of this year, like theft incidents, was at a rate which exceeded the total for 1978. This increase is due, in large part, to a single loss of nearly 3.2 million dosage units of stimulants from a wholesaler. Narcotic thefts, likewise, have increased when compared to the average half year totals of the previous three years.

Although not detailed in these figures, diversion of the pharmaceutical narcotics Dilaudid and Oxycodone has become a serious problem at the pharmacy level within the past eighteen months.

DRUG ABUSE INDICATORS DRUG RELATED DEATHS REPORTED FROM MEDICAL EXAMINERS

DESCRIPTION OF DATA:

In July 1973, DEA instituted a data collection system to capture death statistics related to drug use or abuse. This system involves the gathering of data from medical examiners in 21 major SMSA's throughout the continental United States and is part of the DEA/NIDA DAWN (Drug Abuse Warning Network) contract. Drug related deaths are reported by drug and age for all 21 SMSA's. Both overdoses and cases where drugs were found to be present but could not be affirmed as the cause of death are reported. Since heroin in the bloodstream quickly breaks down to a morphine base, the two drugs have been combined into one category. Statistics are reported according to a drug hierarchy reflected in the tables. When a death involving two or more drugs is reported, the statistic is shown only in the highest drug on the list. For example, if a death is related to heroin and amphetamines, it will be recorded only as a heroin death.

ANALYSIS OF DATA:

DAWN statistics on drug related deaths for the first quarter of CY 1979 are incomplete due to a lag in reporting deaths data. However, it can be noted that there has been a general decline in drug related deaths during the last two years for heroin/morphine, methadone, barbiturates, and stimulants.

Contrarily, deaths from other narcotics, amphetamines, cocaine, and hallucinogens increased in CY 1978 compared with CY 1977. This increase is believed to be a direct result of drug substitution created by the shortage of heroin which paralleled this period.

DRUG ABUSE INDICATORS

DRUG RELATED INJURIES REPORTED FROM HOSPITAL EMERGENCY ROOMS

DESCRIPTION OF DATA:

As with drug related deaths, injuries are reported from 21 major SMSA's. The statistics are compiled from hospital emergency room reports submitted to DAWN. In the case of injuries, however, the reports do not include age, only the drug of abuse.

Like deaths, injuries are reported according to a drug hierarchy and all injuries which involve more than one drug are shown only in the highest drug category.

ANALYSIS OF DATA:

Heroin injuries for the first two quarters of CY 1979 remained essentially equal to the decreased rate reported for CY 1978. Methadone injuries, however, have shown a significant decrease, falling 17% in CY 1979 to injuries reported for CY 1978.

Cocaine injuries for the second quarter of CY 1979 continued the upward trend noted in 1978. If the current rate continues, cocaine injuries for 1979 will be almost 15% higher than those reported for CY 1978.

Hallucinogen injuries are continuing to show increases similar to those reported for CY 1978, having risen almost 30% in the last six months. This increase in injuries can be attributed primarily to PCP abuse.

Amphetamine abuse has also increased slightly thus far in CY 1979. This increase, as well as the increased abuse of hallucinogens, would tend to support the rise in substitution of these drugs for heroin at the user level.

DRUG ABUSE INDICATORS FEDERALLY FUNDED DRUG TREATMENT ADMISSIONS

DESCRIPTION OF DATA:

All treatment facilities throughout the United States which receive all or part of their funding from the Federal Government are required to submit admission data to the National Institute of Drug Abuse as part of the Client Oriented Data Acquisition Process (CODAP). The data presented on the following page represents total national admissions to CODAP programs by drug in both absolute numbers and percentages. The drug categories listed reflect the primary substance being abused at the time of admission and are not necessarily the only drug being used by patients.

Please note that reporting of CODAP data is currently running about three months behind the date reflected on the cover of this report.

ANALYSIS OF DATA:

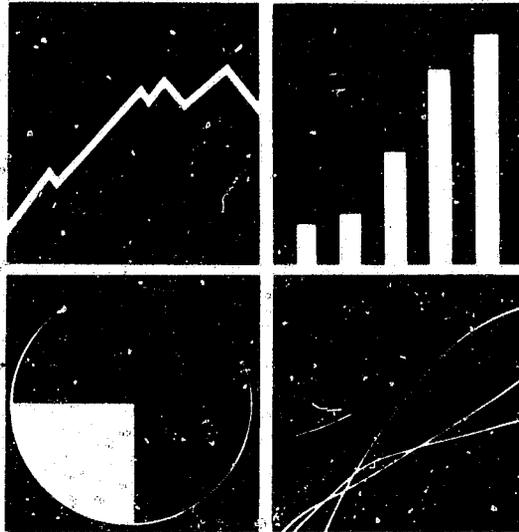

The rate of admission for heroin as the primary drug of abuse has continued to decline. In the first quarter CY 79, heroin abuse admissions represented 38.5% of total admissions as compared to 66.4% in 1976, 54.4% in 1977 and 43.0% in 1978. At the same time, admissions for drugs that are popular heroin substitutes such as dilaudid, oxycodone, ritalin, cocaine and PCP use are increasing. This reflects the continued shortage and poor quality of heroin available on the street.

It is felt that the high rate of primary marihuana admissions is due to young abusers who are now mixing PCP with marihuana. As a result, many admissions attributed to marihuana may, in fact, be resulting from the effects of PCP.

ORGANIZATION AND TRAINING DATA DEA PERSONNEL AND FIELD OFFICES

DESCRIPTION OF DATA:

These statistics reflect all DEA offices and personnel including Special Agents, Compliance Investigators and support personnel.

ANALYSIS OF DATA:

At the beginning of FY 79, DEA went through an internal managerial re-organization. In effect, the 12 domestic regions were consolidated into a more workable number of five. Concurrently, new district offices were established where regional offices previously existed and resident offices established as a new office criteria for specified district offices.

ORGANIZATION AND TRAINING DATA DOMESTIC AND FOREIGN ENFORCEMENT TRAINING

DESCRIPTION OF DATA:

DEA provides basic enforcement training for all of its own Special Agents and Compliance Investigators as well as specialized training for its Intelligence Analysts.

DEA conducts training for municipal, county, state, and foreign enforcement officers, both in the field and at Headquarters. DEA offers a ten week academy program for domestic officials and a five-week program for foreign officials. The agency also conducts two-week law enforcement training schools both in Washington, D.C. and in locations throughout the U.S. and overseas. These schools provide law enforcement officers with the basic knowledge required to conduct narcotics and dangerous drug investigations.

In addition, programs in drug intelligence analysis, drug intelligence collection, conspiracy investigations and other special programs are conducted for state, local, and other federal officers. A number of academy building programs such as joint enforcement, criminal information research, and methods of instruction schools are also being conducted for foreign officials.

ANALYSIS OF DATA:

Basic training requirements for DEA personnel vary in accordance with changes in authorized new positions and attrition rates.

State, local and foreign training programs have, in general, been modified in favor of reducing class sizes in order to upgrade the overall effectiveness of the programs.
