Drug Enforcement Statistical Report

Enforcement Activity Drug Abuse Indicators Organization & Training Data

Statistics Compiled Through September 1979

64804

memorandum

64804

DATE: JAN 28 1980
REPLY TO Chief
ATTN OF: Statistical and Data Services Division
SUBJECT: Drug Enforcement Statistical Report

TO: DISTRIBUTION
(Page 2)

This edition of the Drug Enforcement Statistical Report presents a cumulative compilation of all DEA statistics through September, 1979.

To avoid confusion or erroneous reporting, all outdated editions should be withdrawn from general circulation and either disposed of or filed.

DRUG ENFORCEMENT STATISTICAL REPORT

PREFACE

This report, dealing with the statistics of drug law enforcement and the illicit drug problem, is prepared as a reporting vehicle. No attempt is made to project the future trends of any of the reported statistics. Each section of data is described, however, to insure that the reader is not confused by the various categories which are presented. Additionally, short narrative statistical capsules are also included. These are intended to clarify the figures and are not evaluations of either the drug problem or the programs involved.

The report is divided into three sections consisting of Enforcement Activity, Drug Abuse Indicators and Organization and Training Data. Each section reflects its data base by both fiscal and calendar year, when available. There are some categories, however, such as Personnel-on-Board, where it was felt that a double presentation would be redundant. When this is the case, the data is presented only by either fiscal or calendar year.

All data presented reflects the most recent compilations available. Therefore, the final column of each chart may reflect cumulative statistics of a partial year. For instance, a column headed 2Q FY 79 would contain figures for the first six months of that fiscal year, not just the second quarter.

ENFORCEMENT ACTIVITY TOTAL DEA DOMESTIC DRUG REMOVALS

DESCRIPTION OF DATA:

DEA domestic removal statistics represent a total of all drug deliveries and seizures made by DEA or cooperating law enforcement agencies as part of ongoing DEA Federal investigations. The source documents for these statistics are chemist analysis reports which are prepared on each drug exhibit received at DEA laboratories. The utilization of these reports insures correct identification of each exhibit as well as accurate tabulation of the amounts removed.

Removals of heroin, cocaine, marihuana, hashish and opium are reported in net weight (including any diluent present but not the weight of wrappings or packaging). Dangerous drug removals are usually shown in dosage units, however, when they involve powder and the chemist's analysis does not include potency of the exhibit, the net weight is reported with no conversion to dosage units attempted.

ANALYSIS OF DATA:

The heroin removal rate during FY 79 has decreased when compared to the previous two years. Heroin's decline can be attributed to its decrease in availability coupled with DEA's concentration on conspiracy cases.

Cocaine's rate of removal during FY 1979 is well above removal rates of prior years. This is indicative of cocaine's continued popularity.

Likewise, 1979 cannabis removals have been greater than all previous years with the exception of the record setting removals made in 1978.

The FY 1979 rate for dangerous drug removals increased when compared to the previous two years. Stimulants seem to again be the drug of choice in 1979; unlike 1978 which found hallucinogen removals at their peak. In total, dangerous drug removals have increased by 66% during FY 79.

ENFORCEMENT ACTIVITY DEA STATE AND LOCAL TASK FORCE DRUG REMOVALS

DESCRIPTION OF DATA:

DEA, in coordination with State and Local law enforcement agencies, participates in a Task Force program designed to effect the mid-level to street-level activities of drug dealers. Toward this end, combined DEA/State/Local teams of agents conduct independent investigations which lead to the removal of illicit drugs. Statistics reported as Task Force Removals are only those removals which are sent to DEA labs for analysis. Exhibits which are turned over to State or Local labs for analysis are not reported.

Removal quantities are the same weights or dosage units as reported on DEA removal charts, which were described previously.

ANALYSIS OF DATA:

With the exception of hashish, DEA Task Force removals for FY 79 are well above figures recorded for the previous two years. This removal rate is a product of the resurgence in popularity of many of these drugs coupled with increased availability.

It should be noted that the removal rate for stimulants, depressants, and hallucinogens are all time highs for any recorded fiscal year. Within the last two years, the removal rate for dangerous drugs in the task force program alone has increased five-fold.

ENFORCEMENT ACTIVITY DEA/FOREIGN COOPERATIVE DRUG REMOVALS

DESCRIPTION OF DATA:

DEA/Foreign Cooperative Drug Removals reflect the volume of drugs seized by foreign narcotics enforcement officials with the assistance of DEA. Unlike domestic drug removal statistics, which are verified by laboratory analysis, foreign removals represent the gross weight of each suspected drug.

ANALYSIS OF DATA:

Foreign cooperative drug removals for FY 1979, with the exception of cocaine, were well below the figures for the preceding year. Cocaine's increase was created in part by South American removals which occurred at record levels. Cocaine removals were 44% greater than those of FY 1978.

One of the sharpest decreases was that of opium removals, which declined by 95% this fiscal year. However, it should be noted that, since FY 1977, Afghanistan has accounted for almost all of the reported foreign cooperative opium seizures and any fluctuations may be the effect of reporting changes on their part.

Reduced marihuana seizures were, in part, the result of decreased reporting from the U.S.-Mexico border.

ENFORCEMENT ACTIVITY PORTS AND BORDERS DRUG REMOVALS

DESCRIPTION OF DATA:

Federal drug removals along the U.S. border and at ports of entry are reported to DEA by the Immigration and Naturalization Service and the U.S. Customs Service. While these agencies are responsible for the bulk of the removals, DEA frequently participates in investigations leading to the seizures. The data is tabulated from seizures analyzed by field tests performed at the time of the seizure. Dangerous drug seizures are not broken out into categories (e.g., stimulants, depressants, hallucinogens) but, rather, are considered as one category labeled "dangerous drugs" and reported in terms of five grain units.

ANALYSIS OF DATA:

With the exception of cocaine and dangerous drugs, all major categories of drug removals have declined in FY 79 when compared with rates set in FY 78. Though marijuana removals have decreased this year in comparison to 1978, they are still well above the removal rates set prior to FY 1978 which was a unique and record setting year.

*Drugs removed by the United States Coast Guard are, in most cases, turned over to other agencies for disposal after seizure. For this reason, the statistics reported above may also be included in the removal figures of other federal agencies. To avoid duplicate counting, the above figures should not be included in total domestic removal statistics.

ENFORCEMENT ACTIVITY DEA FEDERAL ARRESTS AND DEFENDANT DISPOSITIONS

DESCRIPTION OF DATA:

DEA Federal domestic arrests represent all those individuals detained by DEA within the United States. Arrest forms are submitted to Headquarters for compilation and as file records. These forms contain the drug involved in the violation as well as the charge made at the time of arrest.

DEA reviews all defendant dispositions to determine the final judicial status of each individual arrested. This provides information both for the timing of case termination as well as allowing for the examination of the quality of the cases. Included are both Federal and State court dispositions.

ANALYSIS OF DATA:

With the exception of heroin and hallucinogens, all major categories of drug arrests increased during FY 1979 when compared with the last two fiscal years. Most notable has been the 34% increase in the incidence of cocaine arrests and the 17% increase in the incidence of cannabis arrests.

The decline in heroin arrests is the result of DEA's emphasize on developing high level conspiracy cases coupled with the overall decline in heroin availability.

FY 79 convictions have decreased from FY 77 and 78 figures. Despite this, the conviction to acquittal ratio has remained constant.

ENFORCEMENT ACTIVITY DEA INITIATED TASK FORCE ARRESTS AND DEFENDANT DISPOSITIONS

DESCRIPTION OF DATA:

Records of Task Force arrests are maintained in the same manner as DEA arrests. Monitoring of Task Force defendant dispositions is carried on similarly to DEA defendant dispositions. Both Federal and State court dispositions are included.

ANALYSIS OF DATA:

DEA/Task Force arrests have decreased by approximately 30% since FY 1976. This decrease, however, is in keeping with DEA's de-emphasis of the Task Force program and had been anticipated. However over time, cocaine, stimulant and PCP arrests have not fallen proportionally when compared with the total decline of Task Force arrests. This variation is, in part, due to the recent popularity of these drugs coupled with their increased availability.

Likewise, as in preceeding years dating back to FY 1976, Task Force dispositions continued to show a steady decline this year.

ENFORCEMENT ACTIVITY DEA/FOREIGN COOPERATIVE ARRESTS

DESCRIPTION OF DATA:

DEA/Foreign Cooperative Arrests show the number of individuals arrested by foreign narcotic enforcement officers with the direct or indirect assistance of DEA. These arrests are reported and recorded by primary drug of violation.

ANALYSIS OF DATA:

DEA foreign cooperative arrests declined 6% from FY 1978 to FY 1979. The most significant decreases were for marihuana and hashish, both reaching the lowest level in the last five years. Cocaine arrests, however, were the notable exception to this downward trend, rising 26% during the year.

The traditional concentration of drug arrests by geographic area continued in FY 1979 as 87% of the cocaine arrests were from South America, and the majority of heroin arrests from Asia and the Orient.

Dangerous drug arrests were insignificant, accounting for only 1% of total foreign cooperative arrests.

ENFORCEMENT ACTIVITY OTHER DOMESTIC ARRESTS AND CLANDESTINE LABS SEIZED

DESCRIPTION OF DATA:

DEA/State and Local Cooperative Arrests represent those violators detained as a result of a state or local investigation for a drug law violation in which DEA assistance was requested.

Customs and INS Referral Arrests reflect those individuals arrested by these agencies and subsequently turned over to DEA for processing and prosecution.

The number of clandestine laboratories seized represents those illicit manufacturing plants discovered and seized by DEA in the course of its domestic investigations.

ANALYSIS OF DATA:

DEA/State and Local Cooperative Arrests remained stable during FY 79 when compared to the previous two years' figures. During this same time period, INS referral arrests and Custom referral arrests have decreased by 72% and 28% respectively.

The number of illicit lab seizures increased by 39% between FY 1978 and FY 1979. This was a result primarily of increased methamphetamine lab seizures.

ENFORCEMENT ACTIVITY COMPLIANCE INVESTIGATIONS AND REGULATORY ACTIONS

DESCRIPTION OF DATA:

DEA has the responsibility, under the Controlled Substances Act, to reduce the quantity of legally manufactured drugs diverted to illicit purposes. To accomplish this, a regulatory program has been established by which the DEA licenses and inspects legitimate handlers of controlled drugs. Inspections are performed on a scheduled or complaint basis and actions are administered according to the violation.

ANALYSIS OF DATA:

Compliance investigative activity has undergone a fundamental reorientation over the past three years. A substantial reduction in the total number of investigations has resulted from this as primary emphasis is now placed upon inspecting manufacturers, distributors and narcotic treatment programs. Between FY's 1976 and 1979 inspections of those registrants increased from 39% to 62% of all annual investigations, while the pharmacy and practitioner categories fell from 26% to 10% of investigations.

Actions during these years, while fewer in number, were, like inspections, more heavily concentrated among the wholesale level registrants who constitute DEA's primary regulatory responsibility.

ENFORCEMENT ACTIVITY STATE AND LOCAL DRUG LAW ARRESTS

DESCRIPTION OF DATA:

These figures are obtained from State and Local jurisdictions which voluntarily submit arrest data to the Federal Bureau of Investigation. They differ from DEA/State and Local Cooperative arrests in that they represent efforts by the State or Local law enforcement agencies both alone and in cooperative activity.

The data has many limitations, the most significant being the inconsistency of drug emphasis between jurisdictions and the variance of the size of the data base from year to year.

ANALYSIS OF DATA:

Despite an increase in the absolute number of arrests in 1978, the arrest rate per 100,000 population decreased by 3% when compared to the rate of 1977.

By category, dangerous drug arrests increased slightly in 1977 and marijuana arrests increased by approximately 4%. Heroin and cocaine detention decreases noted through 1976 substantially increased in 1977 and increased again in 1978 by 5%. This category has increased by more than 50% since the 1976 figure.

ENFORCEMENT ACTIVITY LABORATORY ANALYSES PERFORMED

DESCRIPTION OF DATA:

The DEA laboratory system is composed of seven regional laboratories located throughout the continental United States and the Special Testing and Research Laboratory located in the Washington, D.C. area. The laboratories conduct qualitative and quantitative chemical analyses on controlled drug evidence. The data presented denotes exhibits of evidence submitted by DEA and DEA/Task Force agents as well as those from state, local and other federal law enforcement agencies.

ANALYSIS OF DATA:

The decrease in the number of exhibits during FY 76 and FY 77 has leveled off to approximately 30,000 exhibits per year since FY 78. The decrease is attributed to a shift in DEA's emphasis toward higher level drug traffickers and a simultaneous de-emphasis on DEA Task Force cases. During the same period, a number of new state and local laboratories were established which analyze exhibits of evidence previously submitted to the DEA laboratory system.

ENFORCEMENT ACTIVITY ALIENS ARRESTED WITHIN THE U.S. FOR A DRUG OFFENSE

DESCRIPTION OF DATA:

These figures are obtained from the personal history form submitted for every defendant. The aliens represented by these statistics include DEA and Task Force defendants as well as those violators detained by other Federal agencies who were turned over to DEA for processing.

ANALYSIS OF DATA:

The rate of alien arrests during the first nine months of CY 1979 increased slightly over that of CY 1978. Together, Mexicans, Colombians and Cubans have accounted for more than 70% of all arrests since CY 1976.

Mexican arrests continued to decrease this year, a change which was offset by an increase in Colombian and Cuban arrests. Separately, Mexico's portion of the total has decreased from 69% in CY 1976 to 28% in the third quarter of CY 1979 while Colombia's has increased from 10% to 31% and Cuba's from 4% to 12%.

DRUG ABUSE INDICATORS

ADJUSTED HEROIN RETAIL PRICE AND PURITY BY GEOGRAPHICAL DISTRIBUTION

DESCRIPTION OF DATA:

Heroin price and purity figures are based upon a systematic examination of the evidence exhibits removed from the illicit market by DEA. They are calculated utilizing an exclusion criterion which selects only those exhibits which fall within a certain range of values representative of the retail level of the illicit market.

The sensitivity of quarterly heroin price and purity statistics to the occurrence of potential data anomalies which could prejudice the sample group requires that a statistical smoothing process also be utilized to limit the influence of these occurrences. Additionally, beginning with CY 78, a further system refinement was added whereby the clustering of a large number of transactions in one location is diffused. This is done by weighing regional means according to the intensity of the narcotic problem geographically prior to deriving a national figure.

Care should be taken to use this data only as a general trend indicator since the available data base is not considered large enough to produce information reflective of absolute price or purity.

ANALYSIS OF DATA:

The decrease of the retail purity first noted in late 1976 appears to have leveled off during the first half of 1979 as the third quarter heroin retail purity increased by 2/10 of 1%. While this increase could be the first signal of the resurgence of Asian heroin, it may merely be a mathematical asperity which indicates a "bottoming out" of street level purities. Despite this slight increase, the continued low purity, when coupled with continued high prices, indicates an ongoing shortage of heroin at the "street level."

DRUG ABUSE INDICATORS NATIONAL ILLICIT DRUG RETAIL PRICES

DISCRIPTION OF DATA:

Cocaine prices are derived from the cocaine retail price index based upon evidence exhibits purchased by DEA. Dangerous Drug prices are based upon quarterly reports submitted by DEA field offices in twenty-three large metropolitan areas.

ANALYSIS OF DATA:

Cocaine: The price of cocaine fell this quarter and is now slightly below the prices of last year. This confirms suggestions by other sources that the demand for cocaine, while still high, is leveling off.

Dangerous Drugs: The prices reflected in this section represent data compiled by a newly initiated collection effort which reflects transaction data at the retail level. For this reason, past year data is not being included to preclude the possibility of erroneously comparing figures from the new system with those reported previously. As with the past data, care should be taken to use this information only as trend indicators of retail value as the data base is not comprehensive enough to be utilized as an absolute indicator of availability.

DRUG ABUSE INDICATORS DRUG THEFTS BY GEOGRAPHIC REGIONS

DESCRIPTION OF DATA:

Registered handlers of controlled substances are required by the Controlled Substances Act to report the theft of all controlled drugs. This report includes the type of handler and the means of theft. The data presented herein summarizes by DEA region the number of thefts and volume of drugs stolen. The figures on the bottom half of the following page represent dosage units stolen in increments of a thousand.

ANALYSIS OF DATA:

Drug thefts were reported through the first nine months of 1979 at a rate approximately equal to that for 1978. Pharmacy losses rose by 6 percent while thefts from manufacturers, distributors and other registrants declined. Reductions in the North East and West regions were offset by substantial increases in the South East and South Central regions.

When projected to an annual rate, the volume of drugs taken through September of this year equalled the 1978 level. Significant differences among subtotals included an 11 percent rise in stimulant thefts and a 6 percent decrease in depressant diversions.

Although not detailed in these figures, losses of opium and methadone, respectively, were 82 percent and 66 percent above the 1978 levels.

DRUG ABUSE INDICATORS

DRUG RELATED DEATHS REPORTED FROM MEDICAL EXAMINERS

DESCRIPTION OF DATA:

In July 1973, DEA instituted a data collection system to capture death statistics related to drug use or abuse. This system involves the gathering of data from medical examiners in 24 major SMSA's throughout the continental United States and is part of the DEA/NIDA DAWN (Drug Abuse Warning Network) contract. Drug related deaths are reported by drug and age for all 24 SMSA's. Both overdoses and cases where drugs were found to be present but could not be affirmed as the cause of death are reported. Since heroin in the bloodstream quickly breaks down to a morphine base, the two drugs have been combined into one category. Statistics are reported according to a drug hierarchy reflected in the tables. When a death involving two or more drugs is reported, the statistic is shown only in the highest drug on the list. For example, if a death is related to heroin and amphetamines, it will be recorded only as a heroin death.

Beginning 3Q CY 79, the number of SMSA's included in these statistics has increased by 3 to 25.

ANALYSIS OF DATA:

The addition of three SMSA's to the statistics does not change the trends noted during the last two years. The 569 heroin related deaths in 1978 is only 1/3 of that reported in 1976. The heroin shortage noted in mid 1976 has caused a shift in abuser drug use to heroin substitutes such as Dilaudid and oxycodone. Death reports from these synthetic narcotics rose 64% in 1978 over 1976 figures.

Other popular heroin substitutes, such as stimulants, cocaine and PCP have also shown significant increases in abuse based on death reports. Further, it is felt that the sharp increase in cannabis related deaths reflects the extent to which marihuana is being laced with PCP.

There appears to be a small shift in the age of the drug abuser. Heroin historically attracted abusers in their 20's, while synthetic narcotics and other dangerous drugs attracted an older group. Between 1976 and 1978 death reports of abusers in the 20-29 age range has fallen by 5% while reports of abuser deaths in the 50 and over range has increased by 4%.

DRUG ABUSE INDICATORS DRUG RELATED INJURIES REPORTED FROM HOSPITAL EMERGENCY ROOMS

DESCRIPTION OF DATA:

As with drug related deaths, injuries are reported from 24 major SMSA's. The statistics are compiled from hospital emergency room reports submitted to DAWN. In the case of injuries, however, the reports do not include age, only the drug of abuse.

Like deaths, injuries are reported according to a drug hierarchy and all injuries which involve more than one drug are shown only in the highest drug category.

ANALYSIS OF DATA:

The rate of heroin injuries appears to be leveling off as figures through the third quarter CY 79 are proportionate to those reported in CY 1978. These figures are about half the number recorded in 1976.

Hallucinogen related injuries, for three quarters of CY 79, are at a rate slightly higher than that reported in 1978. The CY 1978 increase, about three times the numbers reported in 1976, and the 1979 numbers are due almost entirely to PCP abuse.

Cocaine injuries continue to increase significantly each year. At its current rate, the number of cocaine related injury reports will almost double the numbers reported in 1976.

DRUG ABUSE INDICATORS FEDERALLY FUNDED DRUG TREATMENT ADMISSIONS

DESCRIPTION OF DATA:

All treatment facilities throughout the United States which receive all or part of their funding from the Federal Government are required to submit admission data to the National Institute of Drug Abuse as part of the Client Oriented Data Acquisition Process (CODAP). The data presented on the following page represents total national admissions to CODAP programs by drug in both absolute numbers and percentages. The drug categories listed reflect the primary substance being abused at the time of admission and are not necessarily the only drug being used by patients.

Please note that reporting of CODAP data is currently running about three months behind the date reflected on the cover of this report.

ANALYSIS OF DATA:

The rate of admission for heroin as the primary drug of abuse continued to decline. In the first half CY 79, heroin abuse admissions represented 39.5% of total admissions as compared to 66.4% in 1976, 54.4% in 1977 and 43.0% in 1978. At the same time, admissions for drugs that are popular heroin substitutes such as dilaudid, oxycodone, ritalin, cocaine and PCP use are increasing. This reflects the continued shortage and poor quality of heroin available on the street.

It is felt that the high rate of primary marihuana admissions is due to young abusers who are now mixing PCP with marihuana. As a result, many admissions attributed to marihuana may, in fact, be resulting from the effects of PCP.

ORGANIZATION AND TRAINING DATA DEA PERSONNEL AND FIELD OFFICES

DESCRIPTION OF DATA:

These statistics reflect all DEA offices and personnel including Special Agents, Compliance Investigators and support personnel.

ANALYSIS OF DATA:

At the beginning of FY 79, DEA went through an internal managerial re-organization. In effect, the 12 domestic regions were consolidated into a more workable number of five. Concurrently, new district offices were established where regional offices previously existed and resident offices established as a new office criteria for specified district offices.

ORGANIZATION AND TRAINING DATA DOMESTIC AND FOREIGN ENFORCEMENT TRAINING

DESCRIPTION OF DATA:

DEA provides basic enforcement training for all of its own Special Agents and Compliance Investigators as well as specialized training for its Intelligence Analysts.

DEA conducts training for municipal, county, state, and foreign enforcement officers, both in the field and at Headquarters. DEA offers a ten week academy program for domestic officials and a five-week program for foreign officials. The agency also conducts two-week law enforcement training schools both in Washington, D.C. and in locations throughout the U.S. and overseas. These schools provide law enforcement officers with the basic knowledge required to conduct narcotics and dangerous drug investigations.

In addition, programs in drug intelligence analysis, drug intelligence collection, conspiracy investigations and other special programs are conducted for state, local, and other federal officers. A number of academy building programs such as joint enforcement, criminal information research, and methods of instruction schools are also being conducted for foreign officials.

ANALYSIS OF DATA:

Basic training requirements for DEA personnel vary in accordance with changes in authorized new positions and attrition rates.

State, local and foreign training programs have, in general, been modified in favor of reducing class sizes in order to upgrade the overall effectiveness of the programs.
