ABSTRACT

This report contains graphs showing the yearly number of reported robbery and burglary offenses occurring in the largest cities, counties, and non-metropolitan regions of Illinois from 1971 through 1977. The original graphs are available in a binder in the library of the Illinois Statistical Analysis Center.

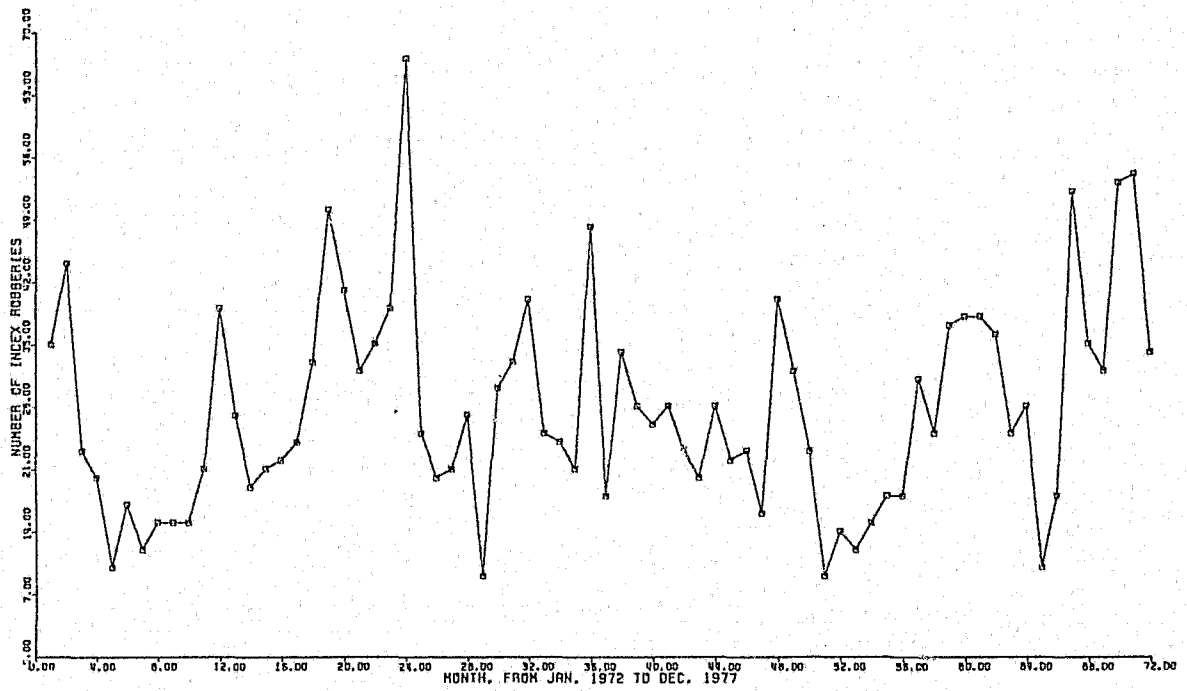

This paper contains the following: (1) a general introduction to the graphs; (2) a table listing the cities, counties, and planning regions included; (3) sample graphs; (4) summary charts of the trends; (5) introductions to each section of graphs; and (6) a bibliography of cited references.

E R R A T A

Data for Sangamon County in the SAC publication Robbery and Burglary, 1971-1977, Trends for Illinois Cities, Counties, and ILEC Planning Regions are incorrect. The correct data are graphed below. Sangamon County Index Robberies replaces the graph found on p. 163. Sangamon County Index Burglaries replaces the graph found on p. 181.

INTRODUCTION TO THE GRAPHS

This report contains graphs showing the yearly number of reported robbery and burglary offenses actually occurring in Illinois from 1971 through 1977.[1] Robbery is defined as "The taking or attempting to take anything of value from the care, custody, or control of a person or persons by force or the threat of force or violence" (Illinois Department of Law Enforcement, 1977:1). Robbery includes, in Illinois, Armed Robbery (any weapon), Strong Arm Robbery (no weapon), and Attempted Armed or Strong Arm Robbery. Burglary is defined as "the unlawful entry of a structure to commit a felony or theft," including attempts (Illinois Department of Law Enforcement, 1977:1). Burglary includes Forcible Entry, Unlawful Entry (no force), and Attempted Forcible Entry.[2]

The source of the 1972 through 1977 data in this report is the Illinois Statistical Analysis Center (SAC) edition of the Illinois Uniform Crime Reports (I-UCR) files originally collected by the Illinois Department of Law Enforcement (DLE). Prior to 1972, I-UCR data were collected by the Federal Bureau of Investigation (FBI) from reports sent directly to it by individual police agencies. The FBI then returned summary data for Illinois to DLE. The 1971 data were added to the graphs by hand from these DLE records. Although the difference in collection methods may affect the 1971 data, both DLE and the FBI assert that the data are comparable.[3]

This document is divided into robbery and burglary sections for the following four categories of Illinois places: (1) Cities with a population of 25,000 or more; (2) Metropolitan counties; (3) Non-metropolitan counties; and (4) Non-metropolitan planning regions of the Illinois Law Enforcement Commission (ILEC). Each section contains an introduction explanining the range of values shown on the graphs and a table summarizing the obvious trends.

---

[1]The number of reported offenses actually occurring is computed by taking the total number of crimes reported to an agency including attempts, and subtracting from it the crimes which were unfounded or referred to another police jurisdiction.

[2]For more information concerning the definition of index offenses, refer to Block (1979). For a more general discussion of crime statistics, including the I-UCR, refer to Perrin (1977).

[3]Conversation with Pat Towner, DLE, July, 1978.

Metropolitan and non-metropolitan counties and planning regions are classifications used by ILEC. Metropolitan counties are those within the Standard Metropolitan Statistical Areas (SMSAs) defined by the U.S. Census Bureau. Non-metropolitan counties are those outside of the SMSAs. Two exceptions are Woodford County and Boone County. These two counties applied for and received re-classification from metropolitan to non-metropolitan counties on the basis of descriptive criteria.[4] Planning regions are comprised of contiguous counties with similar characteristics. They are used by ILEC for assistance in regional planning tasks. A non-metropolitan region is defined as a region containing no metropolitan counties.[5]

The cities, counties, or regions in each of these categories are presented in alphabetical order in Table 1.

---

[4]These descriptive criteria are available from ILEC.

[5]For more information on these classifications, refer to ILEC (1977).

*Although there are separate graphs for Region 10 and for Region 13, a graph of the two regions combined was included in the robbery section to increase the number of offenses available for analysis.

SAMPLE GRAPHS

Two examples of the graphs in this document appear on the following pages. They represent the yearly incidence of robberies in the cities of Evanston and Alton. The horizontal axis represents the year of the measurement. The vertical axis (0 to 500 for both of these graphs) is called the range. The data point for 1971, as noted before, was added by hand. The remaining points were generated by the SCATTERGRAM procedure of the Statistical Package for the Social Sciences (Nie, et. al., 1975:293-300). The connecting lines were drawn by hand to facilitate visual interpretation. The name of the city or jurisdiction is at the center on the top of each page.

The following points should be taken into account when interpreting the graphs. First, the graphs may have different ranges. If two graphs with different ranges are being compared, the interpretation should be adjusted accordingly. Second, these graphs were printed on a line printer; therefore, small fluctuations, relative to the range, will not be reflected by the data points. For example, on the Evanston graph, the data points for 1972 and 1973 were printed on the same line. This does not mean that exactly the same number of crimes occurred in both years, but that both data points fall within the range of values included in that line. The values for these two points are between 175 and 185. Third, a missing data problem was uncovered in studying graphs of the monthly incidence of crimes. Some agencies (police departments and sheriffs' offices), failed to report robbery and burglary statistics for certain months, an error which would not show up on graphs of yearly totals. When such an omission was discovered, the graphs were corrected, and the corrections were noted as on the example graph for Alton. However, not every graph was double-checked, and some errors may remain.

Summary of the Trends

The yearly robbery and burglary trends shown in the 357 graphs in this report (102 counties, 68 cities, and eight regions for each crime, plus regions ten and thirteen combined for robbery) have been fitted into a typology of six categories. The typology was devised as part of a forthcoming study of robbery and burglary trends in Illinois by Carolyn R. Block of the Illinois Statistical Analysis Center (SAC).[6] This typology is not exhaustive of all the permutations of increases and decreases which could occur; however, it is representative of the graphs.

The first category includes the graphs that exhibit a recent decrease. A decreasing graph will look similar to Figure A. It increases or remains constant for two to six years, and then decreases. The second category includes graphs that exhibit a steady decrease from 1971 or 1972. These graphs will generally look like Figure B. The third category includes the graphs which exhibit a temporary decreasing trend sometime after 1972, which is followed by an increase. Figure C is an example of these graphs. The graphs in the fourth category exhibit a steadily increasing trend beginning in 1971 or 1972, or level off following an increase. A steadily increasing graph will generally look like Figure D. The fifth category is a residual category. These graphs exhibited no systematic pattern, an apparently cyclical pattern, or no change at all. Examples of these graphs are Figures E,F, and G. The sixth category includes graphs which had too few yearly cases to analyze.[7]

Tables 4 and 5 summarize the tendency for the robbery and burglary graphs to fall into one of these six categories. It should be noted that this classification scheme is based on visual interpretation and is subjective. The shapes of the actual graphs are not as easily categorized as the forms shown in Figures A through G. For a more complete analysis of robbery and burglary trends, the reader should refer to the forthcoming SAC publication mentioned above.

---

[6]The aim of that study is to discover if a recent decrease has occurred for these crimes in Illinois. The yearly graphs which appear to exhibit a recent decrease are being studied in greater detail.

[7]Graphs were considered to have too few yearly cases if three or more years had less than five reported crimes.

CITIES - - YEARLY INCIDENCE OF ROBBERIES

There are sixty-eight graphs in this section. The range (vertical axis) of each graph is from 0 to 500 offenses with the following exceptions: Chicago (0 to 30,000); East St. Louis (0 to 1500); and Maywood (0 to 200).

The graphs fall into categories as listed in the table below.

METROPOLITAN COUNTIES - - YEARLY INCIDENT OF ROBBERIES

There are seventeen graphs in this section. The range (vertical axis) of each graph is from 0 to 1300 offenses with the following exception: Cook County (0 to 30,000).

The graphs fall into categories as listed in the table below.

TABLE 8[a]

Categories of Yearly Incidence of Robberies for Metropolitan Counties

Graphs exhibiting recent decreases N=6

Cook	McLean	Tazewell
Lake	Peoria	Winnebago

Graphs exhibiting temporary decreases followed by increases N=4

NON-METROPOLITAN COUNTIES - - YEARLY INCIDENCE OF ROBBERIES

There are eighty-five non-metropolitan counties in this section. Forty-two of these have one or more years with no recorded data on the incidence of robbery, including two counties, Edwards and Scott, which have no data at all. Because of Illinois Uniform Crime Reports coding procedures and the small level of incidence in these counties, missing years were assumed to indicate that no crimes occurred.

The graphs fall into categories as listed in the table below. Graphs which had one or more years with no reported data are marked with an asterisk (*).

TABLE 10[a]

Categories of Yearly Incidence of Robberies for Non-Metropolitan Counties

Graphs exhibiting recent decreases N=14

Adams	Grundy	Lee	Whiteside
Alexander	Jefferson	Logan	Woodford
Coles	Kankakee	McDonough	
Franklin	Knox	Saline	

Graphs exhibiting steady decreases N=1

Marion

Graphs exhibiting temporary decreases followed by increases N=6

Bureau	Montgomery	Stephenson
De Kalb	Randolph	Vermillion

Graphs exhibiting steady increases or no changes after increases N=3

Jersey	Livingston	Ogle

Residual graphs N=8

Boone	Fulton	La Salle	Morgan
Effingham	Jackson	Macoupin	Williamson

NON-METROPOLITAN COUNTIES - - YEARLY INCIDENCE OF BURGLARIES

There are eighty-five graphs in this section. Three counties, Edwards, Lawrence, and Pulaski, have one year with no data reported. It was assumed that no burglaries occurred during those years. The range (vertical axis) of each graph is from 0 to 2000 offenses.

The graphs fall into categories as listed in the table below.

TABLE 11[1]

Categories of Yearly Incidence of Burglaries for Non-Metropolitan Counties

Graphs exhibiting recent decreases N=20

Douglas	Johnson	Macoupin	Pike
Edgar	Knox	Mason	Scott
Fulton	La Salle	Monroe	Stephenson
Jasper	Livngston	Montgomery	White
Jersey	McDonough	Piatt	Woodford

Graphs exhibiting steady decreases N=3

Bureau	Clark	Washington

Graphs exhibiting temporary decreases followed by increases N=25

Adams	Greene	Lee	Shelby
Clinton	Grundy	Logan	Union
Coles	Hancock	Massac	Vermillion
Crawford	Iroquois	Morgan	Warren
De Kalb	Jefferson	Perry	
De Witt	Jo Daviess	Richland	
Fayette	Kankakee	Saline	

Graphs exhibiting steady increases or no changes after increases N=10

Carroll	Ford	Mercer	Williamson
Clay	Franklin	Ogle	
Effingham	Kendall	Wabash	

Residual graphs N=10

Alexander	Cumberland	Menard	Whiteside
Boone	Jackson	Randolph	
Christian	Marion	Wayne	

---

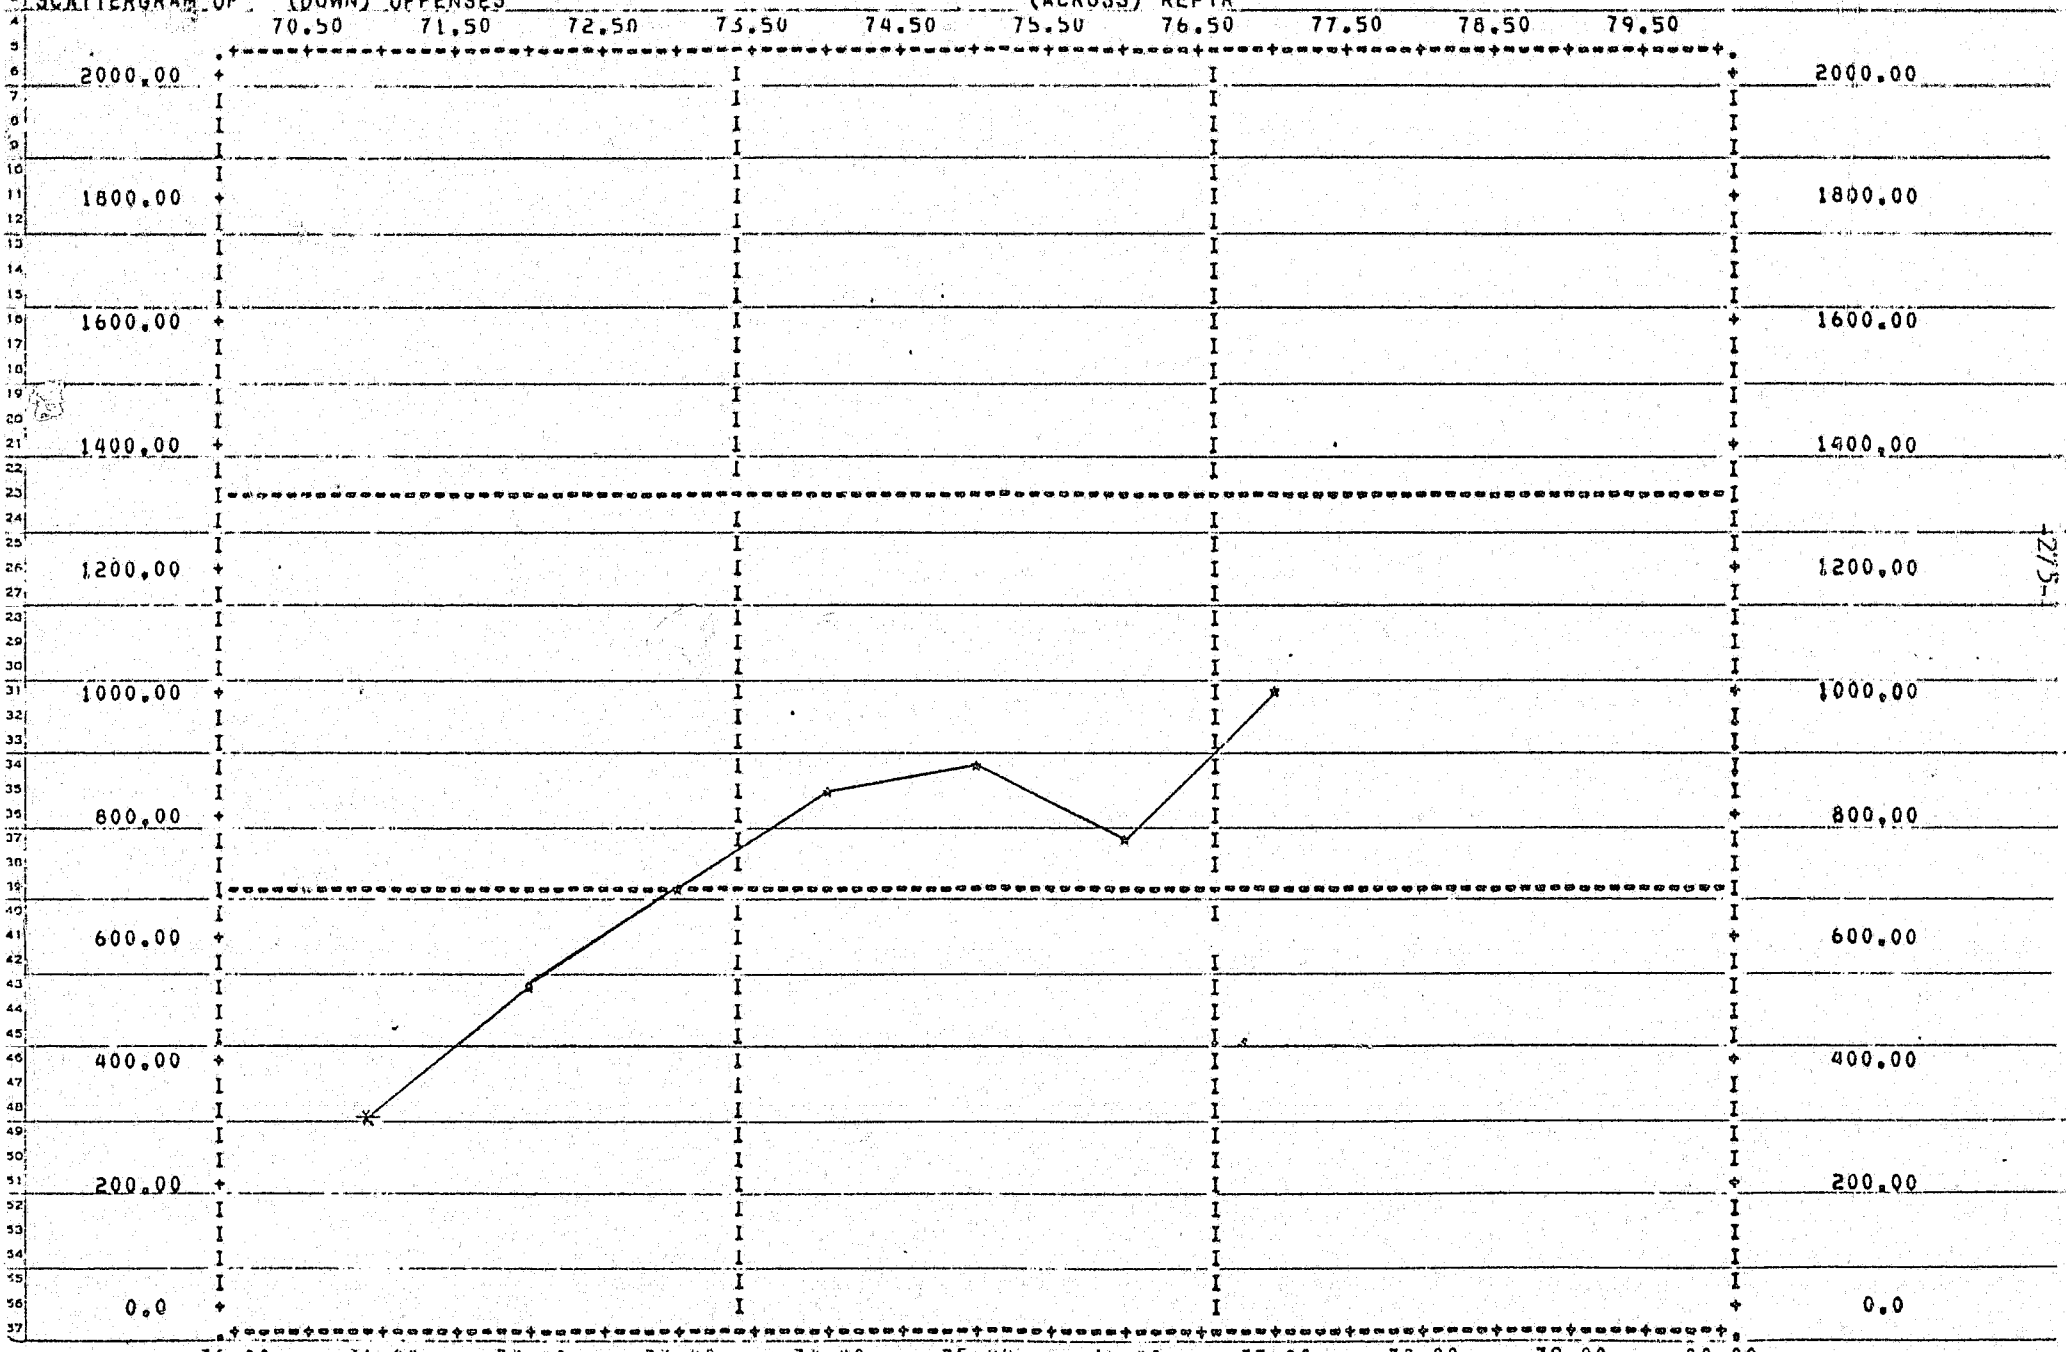

[1]For an explanation of the categories, refer to the section entitled, "Summary of the Trends."

Graphs with too few yearly cases to analyze N=17

Bond	Gallatin	Marshall	Schuyler
Brown	Hamilton	Moultrie	Stark
Calhoun	Hardin	Pope	
Cass	Henderson	Pulaski	
Edwards	Lawrence	Putnam

NON-METROPOLITAN ILEC PLANNING REGIONS - - YEARLY INCIDENCE OF ROBBERIES

There are nine graphs in this section. In addition to the graphs of the eight non-metropolitan regions, a graph of regions ten and thirteen combined is included. These two regions are contiguous and similar to each other, and were combined to increase the number of robberies available for analysis. The range (vertical axis) of each graph is from 0 to 300 offenses.

The graphs fall into categories as listed in the table below.

TABLE 12[a]
