## INTRODUCTION

This report as the title suggests is an inventory of the characteristics of the population at the Adult Correctional Institution. The Adult Correctional Institution is composed of six (6) divisions - Maximum Security, Medium Security, Minimum Security, the Work Release Program, the Drug Unit, and the Women's Division. The Maximum Security Building and the Women's Division have both sentenced and awaiting trial inmates. The other four (4) divisions have only sentenced inmates. This report makes numerous comparisons between the April 1, 1980 population and the September 1, 1977 population.

In this report ten (10) variables and their interrelationships are discussed. These variables are:

1. Security classification
2. Age
3. Race
4. Marital Status
5. Type of offense
6. Length of sentence
7. Juvenile experience
8. Prior adult sentences
9. Census tract of residence
10. Education at admission

## SECURITY CLASSIFICATION

In this report Security Classification is defined as the building in which the inmate resided on April 1, 1980. By and large the name of the building adequately describes the inmate's individual security classification. There are two (2) types of exceptions:

1. Sometimes inmates from lesser securities are temporarily transferred to the Maximum Security Hospital for medical treatment.
2. Nine inmates in the Medium Security "Cell Block South", a disciplinary segregation area, were actually Maximum Security Inmates.

Between the last Characteristics report (covering September 1, 1977) and the current report, many changes have occurred in the area of classification. Particularly noteworthy is the growth of inmate population in the lesser securities. The sentenced population at Maximum decreased by 15.1 percent. The Medium Security sentenced population increased by 26.7 percent; the Minimum Security population increased by 37.2 percent; and the Work Release population increased by 100 percent.

During this three year period a Drug Unit was created. The Minimum Security Building, Work Release Unit, and Drug Unit are all open populations. The total open population increased from 107 in 1977, to 176 in 1980. This was an increase of 64.5 percent. In 1977, 18.6 percent of the male sentenced population was in open institutions. On April 1, 1980 the proportion of male sentenced inmates in open institutions was up to 28 percent.

The male awaiting-trial population in 1977 was in two (2) buildings, the Maximum Security Building and the Medium Security Building. Since that time, the male awaiting trial population has been condensed into one unit and separated from the sentenced population. The total population at Maximum Security increased by 0.5 percent due to the transfer of all awaiting trial population to Maximum and a 24.2 percent increase in the total awaiting trial population.

### AGE

Age, as you would expect, is defined as the number of completed years from the inmate's date of birth up to the date of this study.

From the data in Table 3, it is apparent that the ACI is predominantly composed of younger persons, and that the typical awaiting trial inmate is younger than the typical sentenced inmate. On April 1, 1980 the median age of the sentenced population was 25.9 years, and the median age of the awaiting trial population was 24.0. On September 1, 1977 the median age of the sentenced population was 27.1, and the median age of the awaiting-trial population was 22.2. The median age of the total ACI population was 25.6 in 1980 and 26.3 in 1977.

A substantial increase was noticed in the number of inmates aged 18-20. On September 1, 1977 there were 80 inmates aged 18-20 - 46 sentenced and 34 awaiting trial. On April 1, 1980 there were 120 inmates aged 18-20 - 81 sentenced and 39 awaiting trial. The increase in the number of sentenced inmates within this age group was 76.1 percent.

Increases were also noticed in the sentenced population for ages 21-22 (5.1 percent), ages 23-24 (26.2 percent), ages 25-29 (3.8 percent), and ages 40-49 (20.6 percent). Decreases were noted for ages 30-34 (10.3 percent), ages 35-39 (21.1 percent), and ages 50+ (4.2 percent).

### RACE

In this report, race is divided into four (4) categories; white, black, Spanish surname and "other races." Any person with a Spanish surname, whether or not he considers himself white or black was classified under the "Spanish surname" category.

There was very little change in the racial composition of the sentenced inmate population between 1977 and 1980. In 1977, the sentenced population was 73.0 percent white, 24.9 percent black, 1.7 percent Hispanic, and 0.3 percent other races. In 1980, the sentenced population was 72.9 percent white, 24.1 percent black, 2.8 percent Hispanic, and 0.2 percent other races.

The racial composition of the awaiting trial population changed considerably. In 1977, the racial composition was 70.4 percent white, 18.4 percent black, 10.2 percent Hispanic, and 1.0 percent other races. In 1980, the composition of the awaiting trial population was 57.8 percent white, 36.7 percent black, 5.5 percent Hispanic, and zero percent other races.

### MARITAL STATUS

Marital status is divided into six (6) categories: never married, married, common law marriage, separated, divorced, and widowed. Among the sentenced population 61.7 percent had never been married, 18.0 percent were married as of April 1, 1980, 2.2 percent were in a common-law relationship, 4.9 percent were separated, 11.6 percent were divorced, and 1.7 percent were widowed.

Among the awaiting trial population, 60.9 percent had never been married, 20.3 percent were married as of April 1, 1980, 0.8 percent were in common-law relationships, 7.0 percent were separated, 10.2 percent were divorced, and 0.8 percent were widowed. No comparable data exist for the date September 1, 1977.

## TYPE OF OFFENSE

Of the ten variables considered in this report, charge was the one most difficult to define. Therefore, the following rules were adhered to:

1. Only one charge would be tabulated for each inmate. If multiple charges were considered, the tables in this report would be difficult both to write and to interpret.
2. If an inmate was sentenced on several charges and was to serve these sentences concurrently, the charge carrying the longest sentence was tabulated. If more than one charge carried equally long sentences, the most serious charge was tabulated. This, of course, is a subjective decision. The philosophy behind these decisions is to reflect the reason for this man's (woman's) incarceration.
3. If an inmate was serving consecutive sentences as a result of multiple acts committed prior to his committal at the ACI, the charge carrying the longest sentence was tabulated.
4. If a man (woman) returned to the ACI as a violator of parole and was subsequently sentenced on a new charge, the new charge was tabulated. If, on the other hand, the person did not receive a new sentence, his charge was listed under the category Violator of Parole or Suspended or Deferred Sentences.
5. If an inmate was serving consecutive sentences, with the additional time applied to acts committed while an inmate, the most serious charge was tabulated. Usually the charge with the longest sentence was the most serious.
6. If an inmate was both serving a sentence and awaiting trial on other charges, the inmate was tabulated as a sentenced man and the charge for which he received the sentence was the one tabulated.
7. If an inmate was awaiting trial on more than one charge, the charge for which bail was denied (or not made) was the charge tabulated. If it was not possible to determine which charge resulted in his incarceration, the more serious charge was tabulated.
8. Conspiracy to commit any specified offense was tabulated under that category of offense.

The charges were then divided into three broad categories of offense:

- (1) crimes against person (2) crimes against property and (3) other offenses.

### The crimes against person were:

1. Murder
2. Manslaughter
3. Assault with intent to murder
4. Kidnapping
5. Robbery
6. Assault with intent to rob
7. Rape (includes sexual assault - first degree)
8. Sexual assault, except rape (this category includes indecent assault, assault with intent to rape, and second or third degree sexual assault)
9. Other sex offenses (this category includes incest, carnal knowledge, abominable and detestable crime against nature, prostitution, etc.)
10. Assault with a dangerous weapon
11. Assault - not elsewhere classified
12. Weapons offenses
13. Larceny from person

### The crimes against property were:

1. Breaking and entering or burglary (This category also includes entering a dwelling or building with intent larceny and possession of burglary tools)
2. Stolen motor vehicle (includes driving off auto without permission of owner)
3. Larceny, not of motor vehicles
4. Receiving stolen goods (other than motor vehicles)
5. Forging, uttering, or publishing
6. Arson or statutory burning
7. Other property crimes (These included embezzlement, obtaining money under false pretenses, violating the banking laws).

### The other offenses were:

1. Drug offenses (possession, sale, manufacture and delivery of controlled substances, possession of needle and syringe, and frequenting narcotic nuisance)
2. Violation of probation or parole (includes technical violators of parole who did not receive additional sentences and all inmates sentenced specifically for the offense of violation parole or a suspended or deferred sentence)
3. Other offenses (in 1980 these offenses included conspiracy (not further specified), extortion, obstructing a police officer, fugitive from justice, eluding a police officer, driving to endanger death resulting, driving under the influence of alcohol, leaving the scene of an accident, reckless driving, and shell-fishing in polluted water)

## LENGTH OF SENTENCE

Several decisions had to be made with regard to tabulating length of sentence:

1. If an inmate was serving several sentences concurrently the length of the longest sentence was tabulated.
2. If an inmate was serving several sentences consecutively, the total length of these sentences was tabulated.
3. If an inmate returned as a parole violator without incurring a new sentence, the length of the sentence from which he (she) was paroled was tabulated.
4. If an inmate returned as a parole violator and incurred a new sentence, and as of the time of this survey was simultaneously serving time as a parole violator from the previously imposed sentence, the longer of the two sentences was tabulated, even though the more recent offense was tabulated under the variable "charge."
5. In computing the mean and median lengths of sentence, the life and death sentences were treated as being equal to 50 years.

In determining the average length of sentence, the median is a superior measure of central tendency of the mean, because the mean is greatly influenced by extreme values. The chief value in the mean is that it accentuates the fact that some sentences are very long. On April 1, 1980 there were 40 lifers and 43 other persons sentenced to 21 years or more. On September 1, 1977 there were two (2) inmates sentenced to death, 31 lifers, and 32 other persons sentenced to 21 years or more.

## JUVENILE EXPERIENCE

This variable has only two categories:

- (1) Inmates with training school experience and (2) Inmates with no training school experience.

Juvenile incarcerations in other states were included in this definition. On April 1, 1980 - 42.1 percent of the sentenced population and 34.4 percent of the awaiting-trial population had been detained or committed to the training school as a juvenile.

The corresponding statistics for the date September 1, 1977 were similar - 42.2 percent of the sentenced population and 26.7 percent of the awaiting trial population had training school experience.

## PRIOR ADULT SENTENCES

The variable also has only two categories:

- (1) Inmates with prior adult sentences, and (2) Inmates with no prior adult sentences.

Prior adult sentences referred to prison or jail sentences of 90 days or longer. Prior fines, suspended sentences, probation, or prison or jail sentences of less than 90 days were not included in this definition. Inmates who were violators of parole from a previous sentence and returned to prison to complete this sentence were tabulated as inmates with prior adult sentences. An inmate returned from escape or from an out-of-state transfer was not considered to have incurred previous adult sentences unless he (she) was imprisoned prior to the commitment upon which he (she) began serving the sentences that were in effect on the date of this study. Similarly, if an inmate received additional charges after the current imprisonment began, he (she) was not tabulated as having incurred a previous sentence unless he (she) served a sentence prior to the beginning of the current incarceration.

On April 1, 1980, 41.2 percent of the inmate population had served at least one previous sentence of 90 days or longer. Nearly 45 percent of the sentenced population, but only 23.4 percent of the awaiting trial population, had served a prior sentence of 90 days or longer. Although it can be stated that 44.8 percent of the sentenced population were recidivists, it cannot be said that the recidivism rate was 44.8 percent. The latter measure is based on the entire cohort of releases during a given period of time. A follow-up period of three years is required in order to determine this rate.

On April 1, 1977, 46 percent of the inmate population had served at least one previous sentence of 90 days or longer. Over half (51.2 percent) of the sentenced population, but only 15.3 percent of the awaiting trial population, had served a prior sentence of at least 90 days.

CENSUS TRACT OF RESIDENCE

Three rules were followed in assigning the variable "residence" to the population in this study:

1. If an inmate listed more than one residence, the most recent address was tabulated.
2. If an inmate stated that he had no permanent address, but during previous incarcerations he did list an address, the most recent address that he (she) did state was used.
3. The residence was listed as unknown only if the inmate has never listed any permanent address.

Residences were further tabulated by census tract. A census tract is a portion of a city or town used by the Census Bureau to define a neighborhood. The table below gives the approximate neighborhood definition of census tract for the state's larger urban areas:

<u>CITY or TOWN</u>	<u>NEIGHBORHOOD</u>	<u>CENSUS TRACTS</u>

EDUCATION AT ADMISSION

Education is defined in this report as the highest grade in school that the inmate had successfully completed as of his latest admission to the ACI. These data were obtained from the inmate's social history. Because social histories were not done on awaiting trial inmates, education was tabulated for sentenced inmates only.

The median number of completed years of education for the ACI population was 9.9 years. This was considerably below the median education for the population of Rhode Island. (11.5 years according to the 1970 census.) It should be noted that frequently these inmates' academic functioning level was well below the stated grade level. An earlier study by this division (June 30, 1975) showed that although the median number of completed years of schooling was 9.2 years, the median reading level was grade 7.5, and the median mathematics level was grade 6.2

The remaining portion of the text of this report will interpret and analyze the data presented in the tables that pertain to the April 1, 1980 population.

TABLE 1

A complete analysis of these data is presented in the Security Classification section of the text on Page 2.

TABLE 2

This table is a cross-tabulation of Security Classification and race. The women of all classifications are housed in the same facility. Therefore, the analysis of the Security Classification by race is confined to the 629 male sentenced inmates - 282 Maximum Security inmates, 171 Medium Security inmates, 107 Minimum Security inmates, 58 men on the Work Release program and 11 men in the Drug Unit. A summary of these data is as follows:

	<u>Percentage White</u>	<u>Percentage Black</u>	<u>Percentage Hispanic</u>
All Sentenced Males	73.1	24.0	2.7
Maximum	70.2	26.2	3.2
Medium	75.4	21.1	3.5
All Open Units	75.6	23.3	1.1
Minimum	71.0	28.0	0.9
Work Release	81.0	17.2	1.7
Drug Unit	90.9	9.1	0.0

A considerably higher proportion of blacks was found in the awaiting trial population (36.7 percent). Hispanics accounted for 5.5 percent of the awaiting trial population. Whites accounted for 57.8 percent of the inmates awaiting trial.

TABLE 3 AND TABLE 4

Both of these tables deal with security classification and age. Table 3 is a complete cross-tabulation of all the divisions of the ACI by age. Table 3 includes awaiting trial inmates. Table 4 is a percentage distribution of classification for each broad age group in the male sentenced population of both April 1, 1980 and September 1, 1977.

On April 1, 1980, nearly 13 percent of the sentenced population was under 21 years old; 16.1 percent were aged 21-22; and another 16.6 percent were aged 23-24. Thus, 45.4 percent of these inmates were under 25. The median age of the sentenced population was 25.9. The median age of the sentenced women (31.3) was higher than the corresponding figure for men (25.9). The median age was 27.9 for the Work Release Program, 27.5 for the Drug Unit, 26.1 for Maximum Security, 25.6 for Minimum Security, and 24.9 for Medium Security.

The awaiting trial population was even younger than the sentenced population. The median age of the awaiting trial population was only 24.0. Nearly one-third (30.5 percent) were under 20 years old; 13.3 percent were aged 21-22; and 12.5 percent were aged 23-24. Thus, 56.3 percent of the awaiting trial population was under 25 years old.

TABLE 5

Table 5 is a cross-tabulation of security classification and marital status. Well over half of the inmates had never been married. The proportion of inmates who were never married was between 60.7 and 62.1 percent in Maximum Security, Minimum Security and the Drug Unit and was even higher in Medium Security (68.4 percent). Exactly half of the sentenced women were never married. Only 43.1 percent of the Work Release population were never married.

The proportion of married inmates was highest in the Work Release Unit (29.3 percent) and lowest in the Drug Unit (zero percent). The proportion of married inmates was between 17.7 and 20.0 percent in all other units except Minimum Security, where only 13.1 percent were married. Common-law marriages, which are recognized in Rhode Island, accounted for higher proportions of inmates among the Minimum and Work Release populations than was found among the population of other units. Only 2.2 percent of the sentenced population and 0.8 percent of the awaiting trial population were known to be involved in common-law marriages.

Approximately 5 percent of all inmates were separated. This proportion was highest among Drug Unit and Work Release program inmates and lowest among Medium and Maximum Security inmates. Similarly, the proportion of divorcees in the open units and in Maximum Security was much higher than the corresponding proportion in Medium Security. Divorcees accounted for 27.3 percent of the Drug Unit population, 14.0 percent of the Minimum Security population, and 10.3 percent of the Work Release population. In contrast, only 7.6 percent of the Medium Security population was divorced. The proportion of divorcees in Maximum Security was 12.8 percent. Only 12 inmates in the entire ACI were widows or widowers.

TABLE 6 AND TABLE 7

Both of these tables deal with the relationship between charge and security classification. Table 6 is a detailed cross-tabulation of charge and security classification. All inmates, including awaiting trial inmates, are included in this table. Table 7 is a percentage distribution of the male sentenced population of both April 1, 1980 and September 1, 1977 by charge and security status. Three broad classifications of charge were considered: 1) crimes against person; 2) crimes against property; and 3) crimes neither against person nor property. On April 1, 1980, the percentage distribution of these broad types of offender was as follows:

	Maximum	Medium	Minimum	Work Release	Drug Unit
All Offenses	44.8	27.2	17.0	9.2	1.7
Crimes Against Person	43.8	27.8	18.0	9.0	1.5
Crimes Against Property	45.7	26.9	16.0	10.3	1.1
Crimes Against Neither Person Nor Property	50.0	24.1	13.0	7.4	5.6

There were nine categories of offender in which the proportion of inmates classified Maximum was equal to or greater than 50 percent. The percentage distribution by classification of these nine types of offender were as follows.

OFFENSE	MAXIMUM	MEDIUM	MINIMUM	WORK RELEASE	DRUG UNIT
1. Murder	50.6	17.7	19.0	12.7	0.0
2. Assault with Intent to Murder	56.3	25.0	12.5	6.3	0.0
3. Kidnapping	50.0	10.0	30.0	10.0	0.0
4. Assault with Intent to Rob	57.1	28.6	14.3	0.0	0.0
5. Sexual Assault (Except Rape)	50.0	35.7	14.3	0.0	0.0
6. Weapons Offenses	62.5	0.0	25.0	12.5	0.0
7. Stolen Motor Vehicles	57.1	0.0	42.9	0.0	0.0
8. Violation of Probation or Parole	56.3	25.0	12.5	0.0	6.3
9. "Other Offenses"	60.0	20.0	10.0	10.0	0.0

There were seven categories of offender in which the proportion of inmates classified Maximum was between 40.0 and 49.9 percent. The percentage distribution by classification of these seven types of offender was as follows.

OFFENSE	MAXIMUM	MEDIUM	MINIMUM	WORK RELEASE	DRUG UNIT
1. Robbery	42.8	32.2	15.8	5.9	3.3
2. Assault with a Dangerous Weapon	40.0	32.0	8.0	16.0	4.0
3. Assault/not elsewhere classified	40.0	20.0	40.0	0.0	0.0
4. Breaking and Entering, etc.	48.1	26.7	16.0	8.4	0.8
5. Larceny (not motor vehicle)	40.0	60.0	0.0	0.0	0.0
6. Receiving Stolen Goods	40.0	20.0	20.0	10.0	10.0
7. Drug Offenses	42.9	25.0	14.3	10.7	7.1

There were seven categories of offense in which less than 40 percent were classified Maximum. The percentage distribution by classification of these seven types of offender was as follows:

OFFENSE	MAXIMUM	MEDIUM	MINIMUM	WORK RELEASE	DRUG UNIT
1. Manslaughter	35.7	42.9	0.0	21.4	0.0
2. Rape	36.8	36.8	21.1	5.3	0.0
3. Non-assaultive Sex Offenses	33.3	11.1	33.3	22.2	0.0
4. Larceny from Person	21.4	35.7	35.7	7.1	0.0
5. Forging, Uttering, etc.	25.0	50.0	0.0	25.0	0.0
6. Arson/Statutory Burning	38.5	23.1	15.4	23.1	0.0
7. "Other" Property Crimes	20.0	40.0	0.0	40.0	0.0

TABLE 8

Table 8 is a listing of the 12 most common types of offense for the sentenced population on both April 1, 1980 and September 1, 1977. Robbery was the leading type of offense on both dates; burglary was second on both dates; and murder was third on both dates. Rape, which was the fourth most common type of offense for the 1980 population was only the seventh most common offense for the 1977 population. Drug offenses was the fifth ranking offense for the 1980 population and the fourth ranking offense for the 1977 population. Assault with a dangerous weapon ranked sixth in both 1980 and 1977. The top 12 offenses in 1980 were completed by non-assaultive sex offenses (rank 7), violations of probation and parole (rank 8/9), assault with intent to kill (rank 8/9), manslaughter (rank 10/12), sexual assault (other than rape - rank 10/12) and larceny from person (rank 10/12).

TABLES 9, 10 AND 11

Table 9 is a cross-tabulation of security classification and length of sentence for the April 1, 1980 population. Table 9A presents the same data for the September 1, 1977 population. Table 10 is a percentage distribution of security classification and length of sentence for the male population of both years. Table 11 is a comparison of the length of sentence distribution on these two dates (9-1-77 and 4-1-80). The large disparity between the two measures of average length of sentence is due to the presence of 60 inmates that are serving 30 years or more. In calculating the mean length of sentence, inmates serving life terms were treated as being sentenced to 50 years (a reasonable approximation of their average life expectancy at the time of sentence). The median length of sentence is probably a more useful measure because it is less affected by unusually long sentences. Inmates sentenced to long periods of time usually serve a much smaller fraction of their sentence than those whose sentences are shorter. A study of inmates released in 1979 showed that inmates sentenced to long periods of time served a much smaller proportion of their sentence than those whose sentences were shorter. An inmate sentenced to two years served an average (mean) of 17 months (71 percent of his sentence). An inmate sentenced to five years served an average (mean) of 3.1 years (62 percent of his sentence). Inmates sentenced to over 10 years usually served less than half their sentence. These data are presented in Table 31 and analyzed more exhaustively in the section of the text dealing with this table.

Perhaps the most dramatic finding in Tables 9 and 9A is the change in the type of inmate in the lesser securities. On September 1, 1977 the median sentence of the entire population was 4.6 years. At that time the median length of sentence was longer for inmates in the lesser securities than for inmates in higher securities. The median length of sentence was 4.8 years for Minimum Security inmates and 10.4 years for those in the Work Release program. The median sentence for Maximum Security inmates was 4.5 years, while the median sentence of Medium Security was 3.4 years.

In 1980, the median sentence of the male population was 4.8 years. In 1980, the higher securities had longer median lengths of sentence than the lesser securities. These data are summarized in the table below. Note that the Drug Unit did not exist in 1977.

AVERAGE LENGTH OF SENTENCE BY CLASSIFICATION  
1979 and 1980

<u>SECURITY</u>	<u>1977</u>		<u>1980</u>	
	<u>Median Sentence</u>	<u>Mean Sentence</u>	<u>Median Sentence</u>	<u>Mean Sentence</u>
Entire ACI	4.6	9.7	4.8	10.0
Maximum	4.5	10.0	5.1	11.5
Medium	3.4	7.5	4.7	8.9
Minimum	4.8	9.6	3.8	8.8
Work Release	10.4	16.1	3.7	8.5
Drug Unit	—	—	5.0	5.3

The most outstanding finding in Table 10 is the reduction in security classification of those sentenced to relatively short terms. In 1977, 94.4 percent of the inmates sentenced to less than 6 months

were in either Maximum or Medium Security. In 1980, 30.3 percent were in Maximum, 40.9 percent were in Medium and 28.8 percent were in Minimum or Work Release. In 1977, 51.2 percent of the inmates sentenced to 6.0 - 17.9 months were in Maximum. In 1980, 30.3 percent of these inmates were classified Maximum.

Table 11 shows that the average length of sentence has increased slightly between 1977 and 1980. In spite of a 9 percent increase in the population, there was a 36.8 percent decrease in the number of inmates sentenced to under 6 months. The number of inmates sentenced to over 15.5 years increased from 90 to 113 (an increase of 25.5 percent.) There was a 29 percent increase in the number of lifers.

TABLE 12

This table is a cross-tabulation of security classification at the ACI and Training School experience. In 1977, 42.2 percent of the sentenced population at the ACI had been to the Training School for Boys and Girls as a juvenile. Similarly, 42.1 percent of the 1980 population had juvenile correctional institutional experience. The proportion of former training school residents among the inmates awaiting trial was 27.6 percent in 1977 and 34.4 percent in 1980. The proportion of former training school residents was considerably lower for female inmates (26.7 percent in 1977 and 25.0 percent in 1980). In 1980 the male inmates in the higher securities were more likely to have been training school residents than those in the lesser securities. This was not true of Maximum and Medium Security in 1977. The data supporting this statement are presented in the table below:

<u>Security</u>	<u>Percentage Former Training School Residents</u>	
	<u>1977</u>	<u>1980</u>
Maximum	41.0	50.0
Medium	51.9	40.4
Minimum	38.5	36.6
Work Release	31.0	25.9
Drug Unit	Closed	36.4

TABLE 13

This table shows the security classification of the ACI population in 1977 and 1980 according to recidivism status. For the purposes of this report, recidivists referred to inmates who had served a previous adult prison or jail sentence of 90 days or longer. In both 1977 and 1980 the higher securities generally had a higher proportion of recidivists than the lesser securities. The lone exception was the Drug Unit which was composed of 63.6 percent recidivists. In both years, the Awaiting Trial population had a lower percentage of recidivists than the sentenced population. The data are summarized in the table below:

<u>SECURITY</u>	<u>PERCENT RECIDIVISTS 1977</u>	<u>PERCENT RECIDIVISTS 1980</u>
All Sentenced	46.1	40.7
Maximum	55.4	51.4
Medium	52.6	42.1
Minimum	44.9	37.4
Work Release	17.2	31.0
Drug Unit	Closed	63.6
Women	41.7	0.0
Awaiting Trial	15.3	23.4

TABLE 14

This is a cross-tabulation of security classification by city or town of residence. Thirteen of the state's 39 municipalities had ten or more inmates on April 1, 1980. Providence accounted for 45.4 percent of the entire ACI population (45.9 percent of the sentenced population and 43.0 percent of the awaiting trial population). Warwick accounted for 7.7 percent of the population, Pawtucket accounted for 6.6 percent, and Woonsocket accounted for 5.7 percent. Thus residents of only four cities accounted for nearly two-thirds of the inmate population. There were 50 inmates at the ACI who were residents of other states-- 30 from Massachusetts, 5 from other New England States, 6 from New York and 9 from other states.

Just under half (48.6 percent) of the sentenced males from Providence were classified Maximum. The only Rhode Island municipality with a higher percentage of Maximum Security inmates was Central Falls (52.9 percent). In the total ACI population, 44.8 percent of the males were classified Maximum. Out-of-state residents were more likely to be classified Maximum than any other inmates (54.1 percent were classified Maximum). The data for the 13 cities or towns with 10 or more inmates are summarized in the table on the following page. In this table the Open Population refers to Minimum Security, the Drug Unit or Work Release Unit.

City or Town	Total	Sen- tenced	Max.	Med.	Open* Pop.	Sent. Women	All Await. Trial
Bristol	12	9	4	4	1	0	3
Central Falls	22	18	9	6	2	1	4
Coventry	10	9	2	1	6	0	1
Cranston	34	30	11	11	7	1	4
East Providence	20	18	5	5	8	0	2
Johnston	11	8	2	4	2	0	3
Newport	17	12	5	2	4	1	5
North Providence	24	19	9	8	2	0	5
Pawtucket	51	39	19	10	10	0	12
Providence	348	293	141	69	80	3	55
Warwick	59	58	21	19	17	1	1
West Warwick	11	11	7	1	3	0	0
Woonsocket	44	35	12	5	15	3	9

\*Minimum, Work Release or Drug Unit

TABLE 15

This table is a cross-tabulation of education and security classification of the sentenced population. The median number of completed years of school was 10.0 for male inmates and 8.5 for females. The highest median education level was found among the Work Release inmates (11.0 years). Inmates in the Drug Unit had a median education of 10.9 years. The median education was 10.2 years for Medium, 9.8 years for Maximum, and 9.5 years for Minimum.

It should be noted that the 142 inmates who reported an educational level of the 12th grade included 79 who received a GED (High School Equivalency) after dropping out of school. In fact, 38 of these inmates received their GED at the ACI, 10 received their GED at an out-of-state prison, and 31 received their GED outside of prison. The most common sources for earning a GED outside of prison were the Armed Forces and OIC (Opportunities Industrialization Center).

TABLE 16

This table is a cross-tabulation of age and race for the sentenced population, the awaiting trial population, and the combined sentenced and awaiting trial population. In the combined population the median age was 25.6. This median was slightly higher for the White population (26.1) than for the Black population (24.4). The Hispanic population had a median age of 28.5. In the sentenced population the median age was 26.5 for Whites, 24.5 for Blacks, and 27.5 for Hispanics. Among the awaiting trial population, the median age was 24.0 for Whites, 23.5 for Blacks and 30.8 for Hispanics.

TABLE 17

This is a cross tabulation of length of sentence and race. No significant relationship between these two variables was discovered.

The median length of sentence was 4.7 years for both Black inmates and White inmates. The higher median of 7.0 years for Hispanics is mainly due to the fact that five of the eighteen sentenced Hispanics were involved in the same crime and were sentenced to between 7.5 and 9.4 years. If these five inmates were removed from the cohort, the median sentence for Hispanics would be similar to that of the Blacks and Whites.

Among lifers, 72.5 percent were Whites, 20.0 percent were Blacks, and 7.5 percent were Hispanics. Ninety-five (95) percent of inmates sentenced to 30 years or over (except life) were White.

TABLE 18

This table is a cross-tabulation of type of offense and race for both sentenced and awaiting trial inmates. The text table on the following page summarizes the highlights of the table.

Robbery is the most common offense for White inmates, Black inmates, and Hispanics. This fact applies to both the sentenced population and the awaiting trial population. Among sentenced inmates, 22.3 percent of the Whites and 31.8 percent of the Blacks were incarcerated for robbery.

Breaking & Entering or Burglary was the second leading offense for all groups except Hispanics. Burglary accounted for 19.3 percent of the White sentenced population, 26.0 percent of the Black sentenced population, and 21.9 percent of the awaiting trial population.

Murder was the third most common type of offense. Fifteen percent of the White sentenced population, but only 6.5 percent of the Black sentenced population were convicted of murder.

Sex offenses accounted for a significant proportion of the population. The sentenced population included 38 convicted of rape, 14 convicted of sexual assault other than rape, and 18 convicted of other sex offenses. Thirteen sex offenders were found among the inmates awaiting trial.

Crimes against person accounted for 64.2 percent of the sentenced population. These offenses accounted for 63.1 percent of the White sentenced population, 64.3 percent of the Black sentenced population, and 88.9 percent of the Hispanic sentenced population.

Property crimes accounted for 27.9 percent of the White sentenced population, 28.6 percent of the Black sentenced population and 5.6 percent of the Hispanic sentenced population.

TABLE 18 (Continued)

Crimes against neither person nor property accounted for 9.0 percent of the White sentenced population, 7.1 percent of the Black sentenced population, and 5.6 percent of the Hispanic sentenced population.

FIVE LEADING OFFENSES OF WHITE INMATES  
(Sentenced Population Only)

<u>Offense</u>	<u>Number of Cases</u>	<u>Percent of All Inmates</u>
1. Robbery	104	22.3
2. Breaking & Entering/Burglary	90	19.3
3. Murder	70	15.0
4. Rape	26	5.6
5. Drug Offenses	24	5.2

FIVE LEADING OFFENSES OF BLACK INMATES  
(Sentenced Population Only)

<u>Offense</u>	<u>Number of Cases</u>	<u>Percent of All Inmates</u>
1. Robbery	49	31.8
2. Breaking & Entering/Burglary	40	26.0
3. Rape	11	7.1
4. Murder	10	6.5
5/6. Technical Violation of Parole	7	4.5
5/6. Larceny from Person	7	4.5

FIVE LEADING OFFENSES - ALL AWAITING TRIAL INMATES

<u>Offense</u>	<u>Number of Cases</u>	<u>Percent of All Inmates</u>
1. Robbery	30	23.4
2. Breaking & Entering/Burglary	28	21.9
3/4/5 Assault w/Intent to Kill	7	5.5
3/4/5 Non-Assaultive Sex Offenses	7	5.5
3/4/5 Stolen Motor Vehicles	7	5.5

TABLE 19

This table is a cross-tabulation of race, recidivism status and classification. A summary of the data in Table 19 is presented on the following page. Not one of the 20 females incarcerated on April 1, 1980 had incurred a previous sentence of 90 days or more; therefore the analysis of Table 19 is confined to male prisoners.

In the sentenced population at all levels of security, there was a higher percentage of recidivism among the black population than was found among whites or Hispanics. In Maximum Security 63.5 percent of the blacks, 49.5 percent of the whites and 22.2 percent of the Hispanics were serving their second or subsequent sentence (of at least 90 days). In Medium Security the proportion of recidivists was 52.8 percent for blacks, 41.1 percent for whites and 33.3 percent for Hispanics.

In the open securities (Minimum, Work Release and the Drug Unit combined) the blacks were still more likely than whites to have incurred a previous sentence. In the awaiting trial population 29.0 percent of the whites, but only 19.0 percent of the blacks, had incurred a previous sentence.

RECIDIVISM STATUS BY RACE AND CLASSIFICATION

<u>Classification and Race</u>	<u>Percentage with Prior Adult Sentences</u>
All Male Sentenced	45.5
White	43.5
Black	54.3
Hispanic	23.5
Maximum Security	52.1
White	49.5
Black	63.5
Hispanic	22.2
Medium Security	43.3
White	41.1
Black	52.8
Hispanic	33.3
Open Population*	36.9
White	36.8
Black	39.9
Hispanic	0.0
Awaiting Trial (Male)	25.4
White	29.0
Black	19.0
Hispanic	28.6

\*Minimum, Drug Unit and Work Release Combined

TABLE 20

This table is a cross-tabulation of type of offense and recidivism status. The findings of this table are summarized in the text table on the following page.

Because violation of parole necessarily means prior incarceration, it is not surprising that 93.8 percent of the technical violators of probation and parole had served a previous sentence. Three other offender types with 50 percent recidivists or more were: (1) inmates convicted of Assault with a Dangerous Weapon (60 percent), (2) drug offenses (50 percent), and (3) Assault with Intent to Murder (50 percent). Three of the four most common types of offender had approximately 47 percent recidivists: i.e. (1) Rape (47.4 percent), (2) Breaking and Entering or Burglary (47.3 percent), and (3) Robbery (47.1 percent). The remaining eight leading categories of offender had 40 percent recidivists or less.

Previous sentences refer to any prior incarceration under sentences of ninety (90) days or longer for any offense (not necessarily the same type of offense) resulting in the incarceration as of April, 1980.

PROPORTION OF RECIDIVISTS FOR THE  
FIFTEEN MOST COMMON TYPES OF OFFENDER  
(Sentenced Population Only)

	<u>Number of Cases</u>	<u>Percentage with Previous Sentence</u>
1. Robbery	157	47.1
2. Breaking and Entering, Burglary	131	47.3
3. Murder	83	36.1
4. Rape	38	47.4
5. Drug Offenses	28	50.0
6. Assault with Dangerous Weapon	25	60.0
7. Non-Assaultive Sex Offenses	18	27.8
8./9. Violations of Probation or Parole	16	93.8
8./9. Assault with Intent to Murder	16	50.0
./11./12. Sexual Assault (Except Rape)	14	35.7
./11./12. Manslaughter	14	35.7
./11./12. Larceny from Person	14	28.6
13. Arson/Statutory Burning	13	30.8
14./15. Receiving Stolen Goods	10	40.0
14./15. Kidnapping	10	20.0
ALL OFFENSES	639	44.8

TABLE 21

This table is a cross-tabulation of marital status and recidivism status. Among the sentenced inmates, the proportion of recidivists was highest for inmates in common law marriages (71.4 percent) and next highest for divorced inmates (64.9 percent). The proportion of recidivists was 47.8 percent for the married, 41.9 percent for the separated, 40.1 percent for the never married, and 18.3 percent for the widowed.

TABLE 22

This table is a cross-tabulation of education and recidivism status. The table tended to show that inmates with more education were less likely to be recidivists. The median education was 9.6 years for recidivists and 10.2 years for non-recidivists. The pattern of decreasing recidivism with increasing education behaved perfectly for grades six through eleven. The paradoxical jump from 20 percent recidivists for inmates with an eleventh grade education to 54.2 percent for inmates with a twelfth grade education is easily explainable. Of the 77 recidivists with a twelfth grade education, only 20 had graduated from high school with their class. Of the remaining 57 persons, 38 had received a GED (High School Equivalency) in the Rhode Island prison system, 10 had received their GED in out of state prisons and 9 had received a GED from other sources. Among the 65 non-recidivists, only 22 received GED's and 43 had graduated from high school with their class. Therefore, the proportion of recidivists among the inmates

who graduated from high school with their class was only 31.7 percent. Similarly, some of the inmates with 1-3 years college education received some of this education in prison. This leads to the conclusion that the only education that seems to be a valid predictor of recidivism is education as a youth in a regular school program.

TABLE 23

This table is a cross-tabulation of length of sentence and recidivism status. The median length of sentence was slightly longer (5.2 years) for those who had incurred previous adult sentences than the corresponding median for those who had not incurred a previous sentence (4.1 years). The proportion of recidivists was 30.4 percent or lower for four sentence groups - (1) less than six months - 8.3 percent, (2) 18 months - 23.3 percent, (3) 6.0-16.0 months - 28.8 percent, and (4) 21-27 years - 30.4 percent. The proportion of recidivists was between 40 and 50 percent for seven sentence groupings:

- (1) Lifers - 45.0 percent
- (2) 1.6-2.4 years - 45.9 percent
- (3) 2.5-3.4 years - 46.5 percent
- (4) 9.5-10.4 years - 47.4 percent
- (5) 10.5-14.4 years - 47.8 percent
- (6) 4.5-5.4 years - 48.4 percent
- (7) 5.5-7.4 years - 49.1 percent

The proportion of recidivists was above 50 percent for six sentence groupings:

- (1) 7.5-9.4 years - 51.9 percent
- (2) 3.5-4.4 years - 56.3 percent
- (3) 14.5-15.4 years - 57.9 percent
- (4) 19.5-20.4 years - 59.1 percent
- (5) 30 years or over, except life - 60 percent
- (6) 15.5-19.4 years - 62.5 percent

TABLE 24

This table is a cross-tabulation of recidivism status and juvenile incarceration. This table shows a high correlation between juvenile incarceration and adult recidivism status. Among the 269 sentenced inmates who had been to the Training School for Boys and Girls, 58 percent had prior adult sentences. In contrast, the proportion of recidivists was only 35.1 percent for those who had not been to the the Training School. Among the awaiting trial population the proportion of recidivists was 34.1 percent for former Training School residents but only 17.9 percent for inmates who had never been to the Training School.

TABLE 25

This table is a cross-tabulation of age and former incarceration at the Training School for Boys and Girls. This table shows that younger inmates were much more likely to have Training School experience than older inmates. Over half of the inmates aged 17-20 had been to the Training School. Among the sentenced population, the median age was 24.8 for inmates with Training School experience and 26.9 for inmates with no Training School experience. Among the awaiting trial population, the median age was 22.2 for those with Training School experience and 25.2 for those without Training School experience. The text table below summarizes these data.

PROPORTION OF INMATES WITH TRAINING SCHOOL EXPERIENCE BY AGE

Age Group	Sentenced Population	Awaiting Trial Population
17-20	56.8	48.7
21-22	47.6	29.4
23-24	41.5	43.8
25-29	44.4	29.0
30-34	28.2	23.1
35-39	31.1	25.0
40-49	41.5	0.0
50+	21.7	0.0

TABLE 26

This table is a cross-tabulation of race and juvenile incarceration. A much higher proportion of former Training School residents was found among black inmates than was found among either whites or Hispanics. Among the sentenced population, 57.1 percent of the blacks, 38.2 percent of the whites, and 16.7 percent of the Hispanics were former Training School residents. Among the awaiting trial population, 42.6 percent of the blacks, 32.4 percent of the whites, and none of the Hispanics had been to the Training School.

TABLE 27

This table is a cross-tabulation of type of offense and former Training School incarceration. The four categories of offense with very high percentages of former Training School residents were:

- (1) Assault without Dangerous Weapon - 83.3 percent
- (2) Weapons Offenses - 75 percent
- (3) Stolen Motor Vehicles - 71.4 percent
- (4) Violations of Probation or Parole 56.3 percent

The four categories of offender with about 50 percent former Training School residents were:

- (1) Breaking and Entering or Burglary - 51.9 percent
- (2) Robbery - 50.3 percent
- (3) Larceny from Person - 50 percent
- (4) Kidnapping - 50 percent

Two categories of offender had between 40 and 49 percent former Training School residents, they were:

- (1) Assault with Intent to Rob - 42.9 percent
- (2) Receiving Stolen Goods - 40 percent

Five categories had between 30 and 39 percent former Training School residents:

- (1) Assault with a Dangerous Weapon - 36 percent
- (2) Murder - 33.7 percent
- (3) Drug Offenses - 32.1 percent
- (4) Rape - 31.6 percent
- (5) Assault with Intent to Murder - 31.3 percent

The remaining eight categories of offender had fewer than 30 percent who had been to the Training School:

- (1) Manslaughter - 28.6 percent
- (2) Sexual Assault (Except Rape) - 28.6 percent
- (3) Arson or Statutory Burning - 23.1 percent
- (4) Other Offenses (See Table 27) - 20 percent
- (5) Non-Assaultive Sex Offenses - 11.1 percent
- (6) Larceny (Not Motor Vehicle) - 0 percent
- (7) Forging and Uttering - 0 percent
- (8) Other Crimes Against Property (See Table 27) - 0 percent

TABLE 28

This table is a cross-tabulation of age and length of sentence. The median length of sentence increased with

increasing age through the age of 50. The median length of sentence was:

- (1) 2.2 years for ages 17-20
- (2) 3.3 years for ages 21-22
- (3) 3.7 years for ages 23-24
- (4) 5.5 years for ages 25-29
- (5) 7.2 years for ages 30-34
- (6) 10.0 years for ages 35-39
- (7) 19.6 years for ages 40-49

The median age was:

- (1) Near 23 years of age for those sentenced to less than 4.4 years.
- (2) Between 25.1 and 26.8 for those sentenced to between 5 and 14 years.
- (3) Over 30 for those sentenced to 15 years or longer

TABLE 29

This table is a detailed cross-tabulation of offense and length of sentence. Many of the offenses had a wide range of sentences. The longest, shortest and median length of sentence for 22 categories of offense are given in the table on the following page.

TYPE OF OFFENSE*	NUMBER OF CASES	SENTENCE IN YEARS		
		LONGEST SENTENCE	SHORTEST SENTENCE	MEDIAN LENGTH
1. Murder	82**	Life	10.0**	35.0
2. Manslaughter	14	30.0	5.0	13.5
3. Rape	38	Life	4.0	12.0
4. Assault w/Intent to Murder	16	45.0	3.0	12.0
5. Kidnapping	10	Life	4.0	9.0
6. Incest	4	10.0	3.0	6.0
7. Robbery	157	Life	2.0	6.0
8. Assault w/Intent to Rape	6	12.0	1.5	5.0
9. Forging, Uttering or Publishing	4	7.5	1.0	3.5
10. Abominable and Detestable Crime Against Nature	11	10.0	2.0	3.0
11. Assault with a Dangerous Weapon	25	10.1	1.0	3.0
12. Sexual Assault Second Degree (or Indecent Assault)	8	7.0	1.0	2.5
13. Assault with Intent to Rob	7	30.0	1.0	2.5
14. Firearms Violations	8	3.8	8 months	2.0
15. Breaking & Entering or Burglary	131	17.0	30 days	2.0
16. Arson Or Statutory Burning	13	10.0	1.5	2.0
17. Drug Offenses	28	20.2	9 months	2.0
18. Stolen Motor Vehicles	7	5.0	10.5 months	2.0
19. Receiving Stolen Goods	10	3.0	9 months	1.8
20. Larceny from Person	14	10.0	1.0	1.5
21. Assault (not elsewhere classified)	6	3.0	3 months	1.0
22. Larceny (Not Motor Vehicle)	5	5.0	30 days	1.0

\*Excludes violators of parole as a category (see Table 29)

\*\*Excludes one Conspiracy to Murder case.

TABLE 30

This table is a detailed list of the residence of all inmates by city or town and census tract. Providence had by far the most inmates and the highest incarceration rate. The 348 inmates from Providence accounted for 45.5 percent of all the inmates and 48.5 percent of the inmates who were Rhode Island residents. The incarceration rate for the City of Providence was 222.48 inmates per 100,000 population.

The city with the second highest incarceration rate was Central Falls. The 22 inmates from Central Falls resulted in an incarceration rate of 130.17 per 100,000 population.

The five cities with the highest incarceration rates were completed by Woonsocket (95.91), North Providence (78.72), and Pawtucket (71.80). The table below lists the 13 cities and towns with 10 or more inmates and the city or town incarceration rates are also calculated.

CITIES OR TOWNS WITH 10 OR MORE INMATES

		Incarceration Rate Per 100,000 Population
1. Providence	348	222.48
2. Warwick	59	67.77
3. Pawtucket	51	71.80
4. Woonsocket	44	95.91
5. Cranston	34	47.20
6. North Providence	23	78.72
7. Central Falls	22	130.17
8. East Providence	20	39.25
9. Newport	17	58.09
10./11. Johnston	12	48.32
10./11. Bristol	12	59.51
12. West Warwick	11	40.78
13. Coventry	10	37.06

Because Providence had such a high incarceration rate, an analysis by neighborhood in Providence is in order. An approximate neighborhood definition of the census tracts and number of inmates by neighborhood is listed in the table below.

<u>Neighborhood</u>	<u>Census Tracts</u>	<u>Number of Inmates</u>
South Providence	4-7	80
West End	12-15	43
Federal Hill-Olneyville	8-11, 19	38
Annex-Manton	16-18, 20	37
Elmwood	2-3	37
Hope	30-33	27
Smith Hill-Lower Mt. Pleasant	22, 25, 26	26
Eagle Park-Warskuck	27-29	24
Washington Park	1	18
Elmhurst-Upper Mt. Pleasant	21, 23, 24	10
College Hill-Fox Point	36-37	5
East Side	34-35	3

TABLE 31

This is the only table that does not deal with the population of the ACI on any specific date, but deals instead with the inmates discharged from the ACI by either expiration of sentence or parole in 1979. The purpose of this table is to present to the reader the amount of time an inmate actually serves when sentenced to a given amount of time. This table only includes inmates

sentenced to at least 12.2 months. Inmates sentenced to 6 months or less are not eligible for parole and accumulate very little other credits, therefore, a man sentenced to 90 days will serve 90 days. This is not so for inmates sentenced to longer periods of time. The table on the next page gives six different ranges of sentence along with the amount of time a man sentenced to this range of sentences can actually expect to serve.

As can be observed by the table, increasing sentences have a diminishing effect on time actually served as the sentence becomes longer. For example, a man sentenced to two years serves an average of nearly 4½ months longer than a man sentenced to 1½ years, but: (1) A man sentenced to three years serves an average of 7½ months longer than a man doing two years; (2) A man serving five years serves about one year longer than a man doing three years; (3) A man doing six years serves less than half a year more than a man doing five years and; (4) A man doing 10 years serves an average of less than 18 months longer than a man doing six years.

SIX MOST COMMON SENTENCE RANGES  
BY TIME ACTUALLY SERVED

<u>Sentence Range</u>	<u>Mean Time Served</u> (Months)	<u>Parolees</u> (Months)	<u>Those Whose Sentence Expired</u> (Months)
18.0-19.5 months	12.8	9.6	15.3
24-25 months	17.1	14.0	20.3
36-41 months	24.8	19.8	30.5
60-64 months	37.3	32.0	46.2
6 years	42.9	39.4	51.1
10 years	59.6	54.1	68.8

\*No comparable data exist for September 1, 1977.

#Marital Status data on the awaiting trial population and inmates sentenced to less than six months are often unverified and therefore less reliable than data on inmates sentenced to six months or longer.

TABLE 8

TEN LEADING OFFENSES OF SENTENCED INMATES

AT THE ADULT CORRECTIONAL INSTITUTION

SEPTEMBER 1, 1977 - APRIL 1, 1980

<u>APRIL 1, 1980</u>				<u>SEPTEMBER 1, 1977</u>		
<u>1980 RANK</u>	<u>OFFENSE</u>	<u>NUMBER OF CASES</u>	<u>PERCENTAGE</u>	<u>1977 RANK</u>	<u>NUMBER OF CASES</u>	<u>PERCENTAGE</u>
-	All offenses	639	100.0	-	586	100.0
1	Robbery	157	24.6	1	132	22.5
2	Breaking & entering or burglary	131	20.5	2	94	16.0
3	Murder	83	13.0	3	81	13.8
4	Rape	38	5.9	7	24	4.1
5	Drug offenses	28	4.4	4	41	7.0
6	Assault with dangerous weapon	25	3.9	6	28	4.8
7	Non-assaultive sex offenses	18	2.8	-	9	1.5
8/9	Violation of probation or parole	16	2.5	5	35	6.0
8/9	Assault with intent to kill	16	2.5	8	17	2.9
10/12	Manslaughter	14	2.2	10*	15	2.6
10/12	Sexual assault, other than rape	14	2.2	-	6	1.0
10/12	Larceny from person	14	2.2	11/12	13	2.2

\*Stolen motor vehicle ranked ninth in 1977.  
Weapons offenses also ranked 11/12 in 1977.

TABLE 9

SECURITY CLASSIFICATION OF INMATES  
 AT THE ADULT CORRECTIONAL INSTITUTION  
 ACCORDING TO LENGTH OF SENTENCE

APRIL 1, 1980

<u>LENGTH OF SENTENCE</u>	<u>ALL INMATES</u>		<u>MAXIMUM</u>		<u>MEDIUM</u>	
	NUMBER	PERCENT	NUMBER	PERCENT	NUMBER	PERCENT
ALL INMATES	639	100.0	282	100.0	171	100.0
Less than six months	12	1.9	4	1.4	4	2.3
