STATISTICAL NOTES:

1. The majority of the tables presented in this report are based on a total homicide count of 1821 for New York City in 1980. However, in several instances, to insure comparability with Nationwide U.C.R. statistics "INDEX HOMICIDES" as tabulated by the F.B.I. uniform crime reporting system is the statistic chosen for comparison. Since 1978 the F.B.I. has excluded Non-negligent homicides committed by intoxicated drivers from the U.C.R. statistics. N.Y.C. recorded seven (7) of these cases in 1980 giving a U.C.R. homicide count of 1814. These cases are classified as homicides under the N.Y.S. Penal Law. Tables using "Index homicides" therefore present total cases of 1814 while all other tables present N.Y.S. Penal Law homicides, a total of 1821.

2. During 1978 and 1979 publication of the annual Homicide Analysis Report was suspended due to budgetary cutbacks. Comparable detailed homicide statistics are therefore not available for 1978 and 1979. In order to provide the maximum comparative information for the current analysis, 1976 was chosen from the most recent extensive Homicide Analysis Reports. 1976 was deemed more comparable to the 1980 data collection effort in terms of the proportion of unknown characteristics in most of the key variables tabulated. Comparable 1976 tables are therefore, included in this report wherever they were available.

3. While an attempt has been made to present the most comparable years ie 1976-1980, the data collection methods employed in the two years differed:

1976: During 1976 the Detective Bureau routinely sent an statistical survey form on each case to the investigating squad. A form was forwarded within the week following the actual incident or its classification as a Homicide. Forms were routinely completed and returned usually within 3 months. Incomplete or missing forms were followed up administratively until submitted. Data from the forms was included, as it became available in the Detective Bureaus Homicide Log. The Crime Analysis Unit staff employed this data, independant research on some cases using the official department reports on file in central records, victim and suspect criminal histories and on rare occasions direct communication with squad commanders, to develop the 1976 Homicide Analysis Report.

1980: Just as the Crime Analysis Unit cutback the publication of a yearly Homicide Analysis Report, the Detective Bureau also terminated their statistical survey. Preliminary data was collected following the incident or its classification as a Homicide but no statistical survey forms were transmitted to investigators. Homicide incidents and early investigations are often characterized by many unknowns which result in poor preliminary statistical data. The Crime Analysis Unit therefore independently surveyed the precinct squads (via a data collection form) in the Summer of 1981 to gather data for the 1980 Homicide Analysis Report. The results obtained from the initial survey however raised some questions, particularly in specifying Victim-Perpetrator prior relationship. Dispute Homicides involving Friends and Acquaintances dropped from 514 to 336 comparing 1976 to 1980 according to the initial 1980 survey. This was viewed as an unlikely event when the characteristics of historical homicide data are examined; classification groups have, over two decades, changed only in a gradual manner in terms of their proportion of the total Homicides, and 1980, a record year, was unlikely to produce a lower count in any category particularly when compared to a year almost 200 cases lower in volume. As a result, a second paper survey was conducted in November of 1981. The major difference between the two surveys was an increase in the latter survey, in the number of cases classified as 'unknown' (from 346 to 445). The two surveys therefore had produced ambiguous results, and left open the question of whether the Homicide case characteristics had undergone a significant change from 1976 to 1980.

The 1980 data collection effort was finally resolved by direct interviews with the 73 precinct squad commanders or executive officers, requiring each to classify and discuss each case assigned to the squad. Prior to the 1980 effort, the 1976 survey was considered the most complete. However the 1980 data collection effort is now viewed as the most complete and rigorous and comparisons with 1976 data should take this into account.

4. It should be noted that an "unknown" characterization is a mix of investigative unknowns and administrative unknowns. In 1976, at the time of the data collection effort, investigations were continuing and may have produced additional information subsequent to the tabulation of the information in this report. In 1976 data collection was complete by June of 1977. In 1980 given the initial survey problems data collection ended up being more exhaustive and terminating, for some data as late as January 1982.

5. Homicide cases are tabulated by victim rather than by incident (E.G. one incident involving 3 victims results in three separate homicide cases in this analysis) The analysis of perpetrator data may, therefore, involve the same perpetrator several times.

Additionally, statistics comparing perpetrator and other case characteristics involve only the first perpetrator on that case. Tabulations of perpetrators ONLY data, present data on all perpetrators.

6. For 1980, the perpetrator data represents all instances of suspect characteristics known to the police at the time of this analysis. In 1976 perpetrator data represents only those persons arrested at the time of the data collection effort. Comparisons of tables from 1976 and 1980 must therefore be restricted to comparison of proportions in the respective categories.

7. Arrest data is tabulated by location. The precinct of arrest however is not necessarily the precinct of commission. Table 5 presenting arrests per 100 Complaints and Map 5, the geographic presentation of Table 5, therefore contain precincts with more than 100 Arrest per 100 Complaints.

8. Since the number of cases where information is unavailable varies between 1976 and 1980 and between different case characteristics within each year some tables in this report deal with tabulations of only those cases where information is available. Any tables with a total case count less than 1821 have excluded cases with unavailable information.

In Tables where cases have been excluded the appropriate comparison measures is the various proportions of row, column, and grand total displayed.

HOMICIDE ANALYSIS

1980

GENERAL COMMENTS

1. There were 1,821 homicides recorded by the New York City Police Department in 1980, which is 69 (3.9%) more than the 1979 total of 1,752. (Table 1)
2. The rate of homicides per 100,000 residents in 1980 was 25.8, placing New York City 7th, comparing the ten largest cities in the nation. Although New York City also ranked 7th in 1979, the rate per 100,000 residents was slightly lower, 23.1. (Table 44)
3. Brooklyn has now surpassed Manhattan as the borough having the highest number of homicides. Manhattan, however, continues to have the highest rate per 100,000 residents, 38.7. (Table 1)
4. Manhattan and the Bronx were the only two boroughs to experience decreases in homicides comparing 1980 and 1979. (Table 1)
5. The 77 Precinct in Brooklyn has surpassed the 32 Precinct in Manhattan as the precinct with the greatest number of homicides. The 77 Precinct had 86 homicides in 1980. (Table 3)
6. There were 1,167 homicide arrests in 1980, an increase of 7.4% over 1979. 80.6% of all homicide arrests in 1980 were made by Precinct Detective Unit personnel. (Table 7)
7. December emerged as the month recording the largest number of homicides (208). March had the least number (122). (Table 8)
8. Saturday was the day of the week registering the highest number of homicides (232). This was followed by Sunday and Friday. (Table 9)
9. Most homicides no longer occur inside. In 1980 51.0% of the homicides occurred outside, compared to only 43.8% outside in 1976. (Table 12)
10. The percentage of homicides occurring in residence has declined from 39.9% in 1976 to 35.4% in 1980. (Table 12)

HOMICIDE VICTIMS AND PERPETRATORS

11. The percentage of male homicide victims has increased from 81.6% in 1976 to 85.0% in 1980. (Table 14)
12. The percentage of white homicide victims has increased from 20.5% in 1976 to 22.8% in 1980. The black percentage has remained constant, 47.7% and the hispanic percentage 27.8% has declined slightly. (Table 15)
13. More than one third of all homicide victims are between the ages of 21 and 30. The percentage has remained relatively constant from 1976 to 1980. (Table 16)
14. A male black between the ages of 21 and 25 was the most frequent homicide victim. (Table 17)
15. White victims are much older than either the black or hispanic victims. (Table 17)
16. The percentage of male homicide perpetrators has increased from 89.6% in 1976 to 93.4% in 1980. (Table 19)
17. The percentage of black perpetrators has increased from 52.6% in 1976 to 55.5% in 1980. White perpetrators have decreased from 14.7% to 12.1%. (Table 18)
18. The age breakdown of homicide perpetrators has remained relatively constant from 1976 to 1980. The modal category is 16-20 years old (28.6%), which is followed by 21-25 years old (23.1%). (Table 20)
19. A male black between the age of 16 and 20 was the most common homicide perpetrator. (Table 21)
20. The category most frequently obtained for victim/perpetrator age was a 16-20 year old perpetrator and a 16-20 year old victim. (Table 22)
21. Most homicide perpetrators and victims are still of the same race; black most often murder blacks, whites most often murder whites, etc. (Table 23)

HOMICIDE VICTIM/PERPETRATOR RELATIONSHIP

22. There were no dramatic changes in the victim/perpetrator relationships when comparing 1980 vers 1976. There was a slight (less than 1%) increase in the proportion of identifiable homicides in the "Other Intra Family" and "Stranger" categories while all other categories experienced slight decreases (Table 13)

23. Only "Asiatic" victims were most often murdered by "Strangers". All other ethnic groups were most often murdered by "Friends/Acquaintances". Only in the "Stranger" category do "White" and "Hispanic" victims approach the victimization level of "Black" victims (29% each vs 39% for Blacks). "Black" victims dominate all other Victim/Perpetrator categories. (Table 24)

24. Females while dominating the "Spouse", "Common Law", and "Boy-Girl Fiend" categories account for less than 15% of the identifiable homicides and only 12.8% of the "Stranger" homicides. (Table 25)

25. The age category most often victimized by Strangers was the 21 to 30 year old group. Only those over 60 years old were most often murdered by strangers. All other age groups, except those under 7 years of age where family was the modal category, were most often murdered by friend/acquaintances". (Table 26)

26. The "Modal" perpetrator was between 16 and 20 years old and murdered a "friend/acquaintance". Only in the 7 to 15 years perpetrator age group was "stranger" the most common victim/perpetrator relationship. (Table 27)

27. Homicides involving close relationships (Spouse, Common-Law, Boy-Girl Friend and Other Intra-Family) saw cutting instruments as the most common murder weapon. In the "Friend/Acquaintance" and Stranger categories, handgun was the most common weapon category. (Table 28).

CIRCUMSTANCES OF HOMICIDES

28. The most significant change in homicide circumstances was the increase in robbery homicides from 19.7% of the total in 1976 to 26.8% of the total in 1980 (Table 10)

29. In 1980, the circumstance in which most whites were victimized was robbery. Blacks and Hispanics were most often victimized in disputes. This is in contrast to 1976 when all three racial groups were most often victimized in disputes.

30. The only homicide circumstance in which the percentage of cases committed with Handguns/Rifles did not increase, comparing 1980 with 1976, was burglary. (table 34)

HOMICIDE - MEANS EMPLOYED

31. The most significant change in homicide - means employed was the increase in the percentage of handguns. In 1976, 47.1% (765 cases) of the total homicides were committed with handguns. In 1980 55.5% (1,011 cases) were with handguns. (Table 11)

32. Black and hispanic homicide victims were more often killed with handguns than were whites. (Table 37)

33. Male homicide victims were more often killed with handguns than were females, 60.3% of the males compared to 28.5% of the females. (Table 38)

34. Handguns were the means most often used for all victim age categories other than the very young and old. Those over 60 were most often killed by physical force. (Table 39)

35. Handguns are used most often by those perpetrators between the ages of 16 and 25. (Table 40)

HOMICIDE HISTORICAL DATA

36. For over 40 years homicides in New York City fluctuated between 200 and 400 in a given year. In 1961 the 400 plateau was surpassed and there has been almost constant yearly increases since 1961. (Graph 1)

37. The significant increases since 1960 are not however peculiar to New York City, but rather mirror quite closely a trend which is nationwide. (Graph 4)

38. The trend in homicide circumstances for the last 20 years has been a marked increase in both the number of robbery homicides and their percentage of the total homicides. Both dispute and family related homicides have decreased in terms of their percentage of the total homicides in a given year. (Table 41)

39. The most significant trend over the last 20 years in terms of means employed in homicides has been the increase in handguns. This is evident in both the number of handgun homicides and their percentage of the total. (Table 42)

40. Unlike the nationwide homicide trend which New York City closely parallels, the trend for "Percentage of Homicide by Handguns" in N.Y.C. differs markedly from the nationwide trend. While the "Percentage of Homicides by Handgun" for N.Y.C. has risen significantly over the last 10 years, the percentage by handgun has actually declined for the rest of the nation. The combined effect of these trends has produced roughly similar proportions of handgun use from 1977 through 1980. (Graph 5).

CRIME: HOMICIDE		ARRESTS	
PERIOD: MONTH 1 TO 12 YRS. 80 VS. 79			
**** DATA DISPLAYED ****			
CURRENT PERIOD RANK			

The map displays the following data points (Score / Percentage):

- Manhattan:** (34), 25, (30), 30, (26), (32), 38, (28), (25), (24), 13, (CPP), (28), (20), 56, 57, 19, (19), (MTN), 29, 71, (10), 36, 49, (MTS), 73, (6), 50, 49, (9), 26, 61, (5), (7), (1), 18, 41.
- Bronx:** (50), 45, (47), 31, (45), (52), 62, 53, (46), (48), (42), 14, (44), (40), (41), 15, 8.
- Staten Island:** (120), 47, (122), 48, (123), 72.

NOTES

1. Scores, percentages & arrests per 100 complaints rounded to nearest integer.
2. All statistics include activity on all jurisdictions and arrests for all agencies.
3. If scores or %'s involve division by 0 score or % is set to 999.
4. Pct. numbers are in ().

TOTAL-	501 48.2	304 29.2	216 20.8	19 1.8	1040 100.0

1976

VICTIM

PERPETRATOR	BLACK	HISPANIC	WHITE	OTHER	TOTAL
BLACK	373 44.9	41 4.9	37 4.5	1 .1	452 54.4
HISPANIC	32 3.9	188 22.7	32 3.9	1 .1	253 30.6
WHITE	15 1.8	15 1.8	86 10.4	1 .1	117 14.1
OTHER	2 .2			6 .7	8 .9
TOTAL-	563 50.8	244 29.4	155 18.8	9 1.0	830 100.0

1980 Perpetrators include all those whose race was identified, whether arrested or not. 1976 perpetrators are limited to those who were arrested.

Percentages are based on the total of each chart.

The first of multiple perpetrators is the only one tabulated for this comparison.

HOMICIDE
CIRCUMSTANCES

Explanation of Tables

total no. of burg. homicides with male victims

total no. of burg. homicides

% of burg's. with male victims

Table 29

CIRCUMSTANCES BY SEX OF VICTIM

1977

% of all males that were killed during a burglary

Circumstances

Sex

Male

Female

Row Total

% of row subtotal (996) that are burglary homicides

% of males killed during burglary relative to the total no. of cases where circumstances are known (996)

Burglary	41 61.1 1.4 1.1	7 38.9 3.5 .7	48 1.8
Robbery	202 86.7 25.3 20.3	31 13.3 15.7 3.1	233 23.4

Sub Total	798 80.1 62.8 51.3	198 19.9 69.0 12.7	996 100.0
Unknown	472 84.1 37.2 30.3	89 15.9 31.0 5.7	561 56.0
TOTAL	1270 81.6	287 18.4	1557 100.0

total no. of cases where circumstances known

% of total homicides where the circumstances are known

all %s above this line are computed against the subtotal figures

all %s below this line are computed against the total cases (1557)

% of total cases where circumstance is unknown

total no. of homicides during 1977.

1. All percentages above the subtotal cells are computed against the subtotal numbers (unknown cases are factored out).
2. The subtotal and unknown cells are computed against the total numbers.
3. Reading down each cell; the first figure is the number of cases, the second is the row percentage (are totaled across table), the third is the column percentage (are totaled reading down the table), and the last is the percentage relative to all the cases in the matrix.

Source: New York City Police Department Homicide Analysis Report 1958 - 1977,1980; 1978 and 1979 statistic from NYCPD Weapons Report

- NOTES: (1) Blunt Instrument breakdown contained in Other category for 1959.
- (2) Other includes, explosives, arson, poison ,auto, etc. as well as cases undetermined at time statistics were compiled. Statistics for 78 and 79 are higher since data taken from automated weapons report which relies on original complaint report for classification of weapon used. The initial complaint report is prepared before the Medical Examiner's report specifying exact cause of death.If initial circumstances are unclear weapon is unspecified on Complaint Report.
- (3) Percentages may total more or less than 100% due to rounding.

1977	1,557	-	65	-	18,968	+	188	+	1.0
1978*	1,504	-	53	-	19,555	+	587	+	3.1
1979	1,733	+	229	+	21,456	+	1,901	+	9.7
1980	1,814	+	81	+	23,044	+	1,588	+	7.4

* To insure comparability with Nationwide Figures, - N.Y.C. Homicides included in this table are "Index Homicides". Since 1978, as per UCR definition, Non-Negligent Manslaughters caused by Intoxicated Drivers are not included in the number of "Index Homicides". Thus the number of "Index Homicides" will be slightly lower than N.Y.S. Penal Law Homicides.

* N.Y.C. Homicides are excluded from Nationwide Figures.

TABLE 44

HOMICIDE RATE PER 100,000 POPULATION
RANKING OF TEN LARGEST CITIES
1980*

<u>CITY</u>	<u>RANK</u>	<u>RATE</u>	<u>TOTAL HOMICIDES</u>
Detroit	1	46.0	549
Dallas	2	35.3	319
Los Angeles	3	34.2	1011
Chicago	4	29.0	863
Baltimore	5	27.5	216
Philadelphia	6	26.0	437
<u>New York</u>	7	25.8	1814
San Antonio	8	20.9	164
Phoenix	9	13.1	103
San Diego	10	11.8	103

* Rate per 100,000 based on population figures
for each city as per 1980 census.
