MINNESOTA DEPARTMENT OF CORRECTIONS PROGRAM FOR BATTERED WOMEN

SUMMARY DATA

-- Medical, law enforcement, and human service professionals submitted 21,960 unduplicated reports on incidents of woman battering in Minnesota from 1978 through 1982. Based on research estimating the proportion of battered women reporting to professionals and the proportion of professionals reporting to the Department of Corrections. the Department estimates that about 164,700 incidents of woman battering actually occurred in Minnesota during this five-year period. This is equivalent to an average of about 32,900 incidents

-- Statewide during 1982, approximately 2,480 women and 3,310 children were housed in the 17 Minnesota shelters. About 1,350 (54%) of the women and 1,650 (50%) of the children were housed in the seven

-- Statewide during 1982, about 3.210 requests for shelter were not able to be accommodated, or about 56% of the total number of requests.

-- Women housed in Minnesota shelters during 1982 stayed an average of 11.3 days. Actual lengths of stay ranged from 1 to 138 days; about half of the women stayed six or fewer days and about one-quarter stayed only one or two days.

-- Of the women sheltered, 77% were white, 10% were American Indian, 9% were Afro-American/Black, 2% were Chicana/Hispanic/Latina, 2% were Oriental/Asian and 1% were other women of color.

-- About 42% of the women sheltered in 1982 did not have sufficient skills to obtain a job to support themselves and their children. Only 53% were employed outside of the home during the year prior

-- Approximately 68% of the women sheltered during 1982 were married to and living with their assailants at the time of the assault.

-- Ages of battered women served by professionals and in shelter programs in 1982 ranged from 13 to 93 years. The average age of women sheltered was 28 years.

-- The age of the assailants ranged from 13 to 83 years. The average

-- According to human service professionals, in 1982 only 15% of male assailants were seeking help for their violent behavior.

-- According to human service professionals, needs most frequently mentioned by battered women included support groups, legal assist-

-- Statewide, from 1978 through 1982, 233 unduplicated reports were received on battered men from human service professionals. The greatest need expressed by battered men was for support groups.

PART I: 1982 SUMMARY DATA PRESENTATION ON INFORMATION OBTAINED FROM MEDICAL, LAW ENFORCEMENT, AND HUMAN SERVICE PROFESSIONALS

NUMBER OF REPORTS ON AND ESTIMATED NUMBER OF INCIDENTS OF WOMAN BATTERING IN MINNESOTA

Due to expected underreporting and non-reporting by agencies and individual professionals, it is conservatively estimated that the Department of Corrections, Program for Battered Women receives reports on only two of three incidents of battering with which medical, law enforcement, and human service personnel come into contact. In addition, it is reasonable to assume that not all abused women seek assistance from professionals. Studies have indicated that only about one of five abused women seeks

Since reporting began in 1978 through calendar year 1982, 21,960 unduplicated reports have been received from professionals.** Actual numbers and estimated numbers received by year by professional group are included in Table 1. The number of reports received from law enforcement professionals

TABLE 1

ACTUAL NUMBER OF REPORTS RECEIVED BY THE MINNESOTA DEPARTMENT OF CORRECTIONS . FROM MEDICAL, LAW ENFORCEMENT, AND HUMAN SERVICE PROFESSIONALS AND TOTAL ESTIMATED NUMBER OF WOMAN BATTERING INCIDENTS SEEN BY PROFESSIONALS BY YEAR

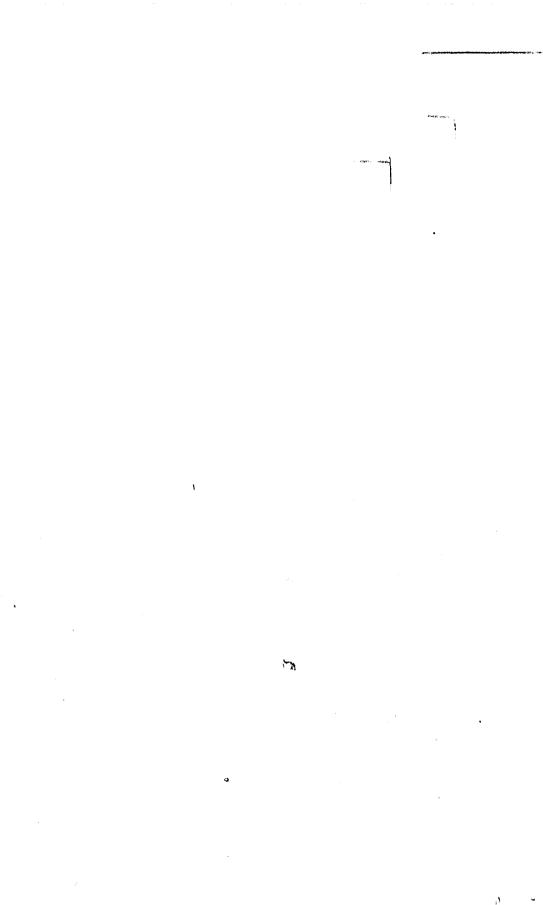

ACTUAL NUMBER OF REPORTS:	1982	<u>1981</u>	1980	<u>1979</u>	1978
Medical Law Enforcement Human Service TOTAL:	1,288 1,050 <u>1,076</u> 3,414	1,955 1,219 <u>1,487</u> 4,661	1,964 1,562 <u>1,298</u> 4,824	1,180 1,780 <u>1,526</u> 4,486	1,455 1,949 <u>1,171</u> 4,575
TOTAL ESTIMATED NUMBER OF INCIDENTS OF BATTERING SEEN BY PROFESSIONALS*	5,121	6,992	7,236	6,729	6,838

*Numbers are based on the Department of Corrections estimate that reports are received on only two of three incidents of battering seen by professionals.

*Hilberman, Elaine and Munson, Kit, "Sixty Battered Women," Victimology, Volume 2, 1977-8.

**Reports between and among medical and law enforcement groups with zip code, race of woman, and date of incident identical to that on another report and with time of incident within one hour in either direction of that on the other report are considered duplicate reports and are removed. Human service reports are considered duplicates and are removed if sex, age, zip code, race, and relationship are identical to that on another human service report.

-1-

.

,

decreased consistently over the five year period. As little or no followup was done concerning reporting obligations, this is as might be expected. However, no trend was apparent for medical and human service professionals. In fact, during one year, the number of reports received from medical professionals increased by 780; in another year, the number received from human service professionals increased by about 350. These increases with little or no follow-up having been done were probably due to the fact that programs focusing primarily on battered women more commonly exist within these two professional groups. It seems reasonable to assume that professionals dealing extensively or, in some instances, nearly exclusively with battered women will be more inclined to report in the absence of follow-up. In some instances, the establishment of a program for battered women in a given area could be linked with an increase in the number of reports

A significant decrease in the number of reports received overall can be seen in 1982. Overall, in 1982, about 1200 fewer reports were received than the average received over the previous four years.

During the period of approximately five years since reporting was instituted through 1982, it is estimated that about 164,580 incidents of battering of women by males with whom they were living or had lived occurred in Minnesota. This is equivalent to an average of about 32,900 incidents a year. Yearly estimates of incidents varied somewhat from this average as shown in Table 2 with the average for 1982 being significantly lower and those for the four preceding years being higher.

TABLE 2

ESTIMATED NUMBER OF INCIDENTS OF WOMAN BATTERING

1982:	25,605
1981:	34,960
1980:	36,180
1979:	33,645
1978:	34,313
TOTAL:	164,703

DEMOGRAPHIC INFORMATION

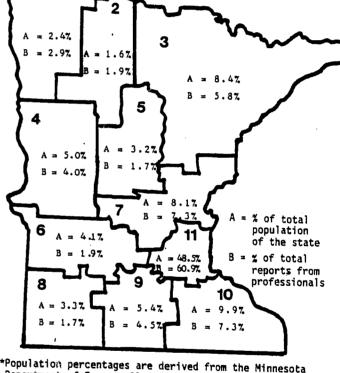

From 1978 through 1982, 17,870 of the 21,960 reports on incidents of battering that were received from professionals were able to be identified as to economic development region of origin. Professionals reported in percentages higher than expected in 3 of the 11 economic development

regions.* The highest percentage of reports, about 61 percent was received from professionals in Region 11, the metropolitan area, which has a population of about 49 percent of that of the state. See Figure 1.

> *Population percentages are derived from the Minnesota Department of Energy, Planning, and Development report: Minnesota Population Estimates, 1981.

*Higher than expected reporting means that the percentage of the number of reports received from the region with respect to the total number of reports received was higher than the percentage of the population of that region with respect to the total population of the state.

CAA.

PERCENTAGES OF REGIONAL POPULATIONS AND ASSAULTS ON WOMEN REPORTED BY PROFESSIONALS, 1978-82 (N = 21,010)*

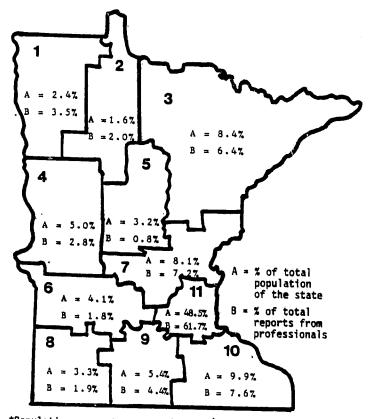

FIGURE 1

-3-

In 1982, reporting among various regions differed somewhat from the five year averages. See Figure 2.

FIGURE 2

PERCENTAGES OF REGIONAL POPULATIONS AND ASSAULTS ON WOMEN REPORTED BY PROFESSIONALS, 1982 (N = 3,277)*

*Population percentages are derived from the Minnesota Department of Energy, Planning, and Development report: Minnesota Population Estimates, 1981.

The number of reports received from professionals from each of the regions as well as counties varied by professional group and over time. In most cases, the numbers were too small for significant trends to have emerged. See Table 3 and Figures 3a, 3b, 4a, 4b, 5a and 5b.

PART II: 1982 DATA PRESENTATION: MINNESOTA SHELTER PROGRAMS

OVERVIEW

Sixteen shelter programs were funded and were operational in Minnesota during the entire year of 1982. One additional shelter opened in June. See Figure 1 for the names and locations of the seventeen shelters.

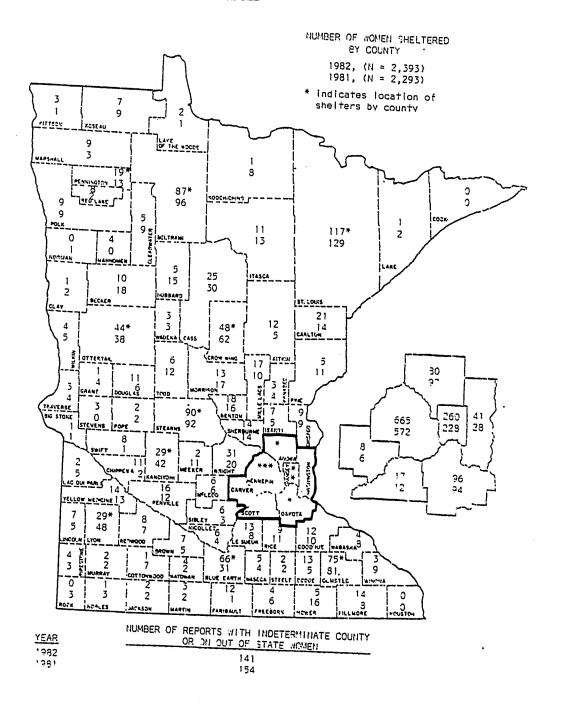

This report cumulatively summarizes information collected from the seventeen shelter programs during calendar year 1982. Information obtained from each individual shelter program during 1982, with comparable information from 1981, is included in Appendices I and II. Summary information on each shelter program by year from date of opening through 1982 is included in

POPULATION DEMOGRAPHICS AND CAPACITIES OF MINNESOTA SHELTER PROGRAMS

During calendar year 1982, the seventeen shelters cumulatively housed approximately 2,500 women and 3,300 children as compared with 2,360 women and 3,160 children in 1981. Women housed came from 83 of the 87 counties in the state. See Figure 2. About 1,350 of the women (54%) and 1,650 of

FIGURE 2

the children (50%) were housed in the seven metropolitan shelters during 1982. The remaining 1,150 women (46%) and 1,650 children (50%) were housed in the ten non-metropolitan shelters.

During the same period, approximately 3,200 requests for shelter statewide were not able to be accommodated.* Of these requests, about 3,175 (99%) were from the metropolitan area. Statewide, about 56 percent of the requests for shelter could not be accommodated as compared with 65 percent in 1981. Approximately 71 percent of the requests from the metropolitan area and 3 percent from non-metropolitan areas could not be accommodated as compared with 78 percent and 5 percent respectively in 1981.

Overall, shelters housed an average of 152 women and 202 children during the year.** Actual numbers of persons housed during the entire year ranged from 152 (57 women and 95 children) for a shelter located in a small rural town to 719 (322 women and 397 children) for a major metropolitan shelter. Shelters housed, on the average, 1.4 children for each woman.

The average number of women housed during the year in metropolitan shelters was 212 and in non-metropolitan shelters 116. Shelters located in outstate cities with populations of 25,000 or more housed an average of 155 women; those in outstate cities with populations less than 25,000 housed an average of 89 women.

The average number of children housed during the year in metropolitan shelters was 261 and the average number of children housed per woman equaled 1.3. And, in non-metropolitan shelters, the average number of children housed was 166 and the average number of children housed per woman equaled 1.5. Shelters located in outstate cities with populations of 25,000 or more housed an average of 212 children and the average number of children housed per woman equaled 1.4. Those located in outstate cities with populations less than 25,000 housed an average of 136 children and the average number of children housed per woman equaled 1.5.

The average licensed capacity of Minnesota shelters is 16 persons with actual capacities ranging from 8 to 35. The average capacity of metropolitan shelters is 19 with actual capacities ranging from 10 to 35. Nonmetropolitan shelters have an average capacity of 13 persons with capacities ranging from 8 to 26. Shelters located in outstate cities with populations of 25,000 or more have an average capacity of 17 persons with actual capacities ranging from 9 to 26. Those located in outstate cities with populations of less than 25,000 have an average capacity of 10 with actual capacities ranging from 8 to 15.

*Requests unable to be accommodated are higher than the actual number of women unable to be sheltered since duplicate requests among, and in some cases, within, shelter programs were not removed. The effect of not removing duplicate requests is primarily evident with respect to metropolitan shelters. This should be kept in mind when interpreting turnaway data.

**Figures from Casa de Esperanza in St. Paul were not included in calculating averages of numbers served since the program did not become fully operational until June of 1982.

-15-

Metropolitan shelters housed on the average 57 more women and 49 more children than shelters in larger non-metropolitan cities, and 123 more women and 125 children than shelters located in small rural towns. The average capacity of metropolitan shelters exceeds that of larger nonmetropolitan city shelters by 2 persons and of smaller rural town shelters by 9 persons. And, shelters located in larger non-metropolitan cities housed on the average 66 more women and 76 more children and have capacities larger by 7 persons as compared to those in small rural towns.

Overall, shelters in the metropolitan area housed an average of 96 more women and 95 more children and have capacities larger by 6 persons than other shelters. And, on the average, the number of children housed per woman was lowest for metropolitan shelters and highest for small rural town shelters. See Table 1.

TABLE 1

	2. Rural town shelters	(N = 6)	10	89	136	1.5

LENGTH OF STAY INFORMATION ON WOMEN SHELTERED

Women housed in Minnesota shelters during 1982 stayed an average of 11.3 days. Average lengths of stay for individual shelter programs ranged from 7.6 to 18.7 days. Approximately 90 percent of the women stayed 30 or fewer days, 75 percent stayed 15 or fewer days, 50 percent stayed 6 or fewer days, and 25 percent stayed only 1 or 2 days. The most frequent length of stay was 2 days. See Figure 3.

The average length of stay for women housed in metropolitan shelters was 13.6 days with actual lengths of stay ranging from 1 to 110 days. For nonmetropolitan shelters, the average length of stay was 9.8 days with actual stays ranging from 1 to 138 days. Shelters located in outstate cities with populations of 25,000 or more had an average length of stay of 9.9 days with actual stays ranging from 1 to 63 days. Those located in outstate cities with populations of less than 25,000 had an average length of stay of 9.7 days with actual stays ranging from 1 to 138 days. Average length

of stay was highest for metropolitan shelters exceeding that of larger nonmetropolitan cities by 3.7 days and that of smaller rural town shelters by 3.9 days. See Table 2.

ш.

* All shelter programs, except CADA House in Mankato, were operational during the entire year of 1981. CADA House opened in August.

 ** CADA House figures were not included in calculating these averages since women and children were sheltered for only five months during 1981. Women's Advocates Increased their licensed capacity to 35 in late 1981.
