DATA COLLECTION DESCRIPTION

This criminal justice data collection was created by the Commercial Theft Studies division of the Causes of Crime for Gain as one of a set of three data bases to study patterns of commercial thefts and characteristics of commercial thieves. Created to study methods used to commit thefts involving cargo, these data include incident and missing cargo characteristics, suspect characteristics and punishments, and type and value of stolen property.

Cargo thefts which occurred at John F. Kennedy International Airport, LaGuardia Airport, Newark International Airport, the New York Marine Terminals at Brooklyn, Port Elizabeth and Port Newark were included in the data which were collected from the Crime Analysis Unit files of the Port Authority of New York and New Jersey.

This data collection consists of a printed codebook and one data file. The 864 incidents and 126 variables are available in card-image format with three decks per case. Class IV

ABSTRACT

The Commercial Theft Studies component of the Center for the Study of the Causes of Crime for Gain was funded to study patterns of commercial thefts and characteristics of commercial thieves. To these ends, a number of qualitative and quantitative data bases were collected by project staff. Three quantitative data bases were used to examine the patterns of three distinct forms of commercial theft. The three data bases documented here for data archive purposes are the following:

1. Xenon Commercial Burglary Data 1981
2. SLATS Truck Theft Data 1981
3. Port Authority Cargo Theft Data 1981

The nature and scope of each of the above data bases is documented separately in the sections that are contained in this user's guide.

PROJECT HISTORY

The Rutgers University School of Criminal Justice received a grant from the National Institute of Law Enforcement and Criminal Justice to carry out both a theoretical and an empirical study of serious property crime. The empirical component of the Center, the Commercial Theft Studies project, examined three forms of property crime, interviewed convicted commercial thieves, detectives, and security personnel, and reviewed the criminological and sociological literature in the area. The Director of the Center for the Study of the Causes of Crime for Gain is Richard F. Sparks: John J. Gibbs is the Principal Investigator for the Commercial Theft Studies component of the Center.

The data provided in this document to the National Institute of Justice in compliance with the special conditions stated in the "Center for the Study of the Causes of Crime for Gain" grant award were used in statistical analyses conducted by the Commercial Theft Studies project staff during the first eighteen month funding period (October, 1980 to March, 1982) of the Center. These quantitative data bases were used to examine the techniques associated with the commission of various forms of property theft, the characteristics of perpetrators of these crimes, and the patterns of these crimes in the New York metropolitan region. The findings from the statistical analyses conducted with the data sets described in this document, along with data obtained from interviews with convicted commercial thieves, detectives, and security personnel, were reported in the Final Report of the Commercial Theft Studies Project. This report was submitted to the National Institute of Justice by Dr. John J. Gibbs and Peggy L. Shelly in May, 1982.

The three data quantitative data bases that formed the basis of the Final Report submitted to the National Institute of Justice are described in more detail below:

1. Xenon Commercial Burglary Data 1981. The Xenon Commercial Burglary Data 1981 were collected by project staff for use in examining the methods used to commit commercial burglaries. The community selected as the site

for study was chosen because of the number of warehouses and factories it contains. Data on method used to obtain entry to a structure, such as picking locks or bypassing alarm systems, were collected from the files of the Xenon Police Department. Data were also collected on characteristics of the perpetrators, such as age, race, and sex of offender.

2. SLATS Truck Theft Data 1981. The SLATS Truck Theft Data 1981 were collected by project staff for use in examining the methods used to commit various acts of theft that involve a truck or a portion of a truck -- including its contents -- as the main target of theft. Information on crimes of these types, including incidents involving the hijacking of a truck and its driver, were collected from the files of a specialized detective squad of the New York Police Department. This squad was created specifically by the New York Police Department to deal with these types of thefts.

Data on method used to commit a theft of a truck or a theft from a truck were collected, as was data on where and when these crimes occurred. In addition, data were collected on characteristics of the perpetrators, such as age, race, and sex of offender.

3. Port Authority Cargo Theft Data 1981. The Port Authority Cargo Theft Data 1981 were collected by project staff for use in examining the methods used to commit thefts involving cargo. Data on cargo thefts that occurred at John F. Kennedy International Airport, LaGuardia Airport, Newark International Airport, the New York Marine Terminals at Brooklyn, Port Elizabeth, and Port Newark were collected from the police files of the Port Authority of New York and New Jersey.

Data on method used to commit the theft, type of property stolen, and characteristics of the perpetrators were collected.

PORT AUTHORITY CARGO THEFT DATA 1981

Scope of Data

The Port Authority Cargo Theft Data 1981 consists of 126 variables pertaining to 864 incidents of cargo theft, as reported in the files of the Crime Analysis Unit of the Port Authority of New York and New Jersey.

The Port Authority of New York and New Jersey has jurisdiction as a police body over all criminal incidents that occur at a number of the marine piers, truck depots, and airports in the New York metropolitan area. The details of each such incident that is reported to the Port Authority are recorded in the files of the Crime Analysis Unit. These files are broken down by year of incident and facility where incident occurred. The Crime Analysis Unit assigns a primary crime code to each reported incident, and a secondary crime code in cases with multiple offenses. For cases involving multiple offenses, the primary crime code assigned corresponds to the more serious of the offenses, as ranked by the Uniform Crime Report.

Cases for analysis were preliminarily selected from the files of the Port Authority if they occurred between 1978 and 1980, and occurred at either John F. Kennedy International Airport, LaGuardia Airport, Newark International Airport, Port Elizabeth, Port Newark, or the New York Marine Terminal at Brooklyn. From these cases, incidents were selected for sample inclusion if the primary crime code was any of the eight designated codes that involve the theft, robbery, or burglary of air, truck, or marine cargo.

Data on method used to commit the crime, type of property stolen, and characteristics of the perpetrators were collected, where available, for each case in the Port Authority Cargo Theft Data 1981 base during the months of July to September, 1981.

PORT AUTHORITY CARGO THEFT DATA 1981

File Processing Summary

The Port Authority Cargo Theft Data 1981 consists of a single statistical data file stored on magnetic tape. The unit of observation is an incident of cargo theft, as reported in the files of the Crime Analysis Unit of the Port Authority of New York and New Jersey.

The statistical data base is a rectangular file containing 864 observations; the record for each of the 864 incidents is 208 characters in length and contains 126 variables relating information contained in police files to the code form included on pages 23-36 of this document. All variables have been stored as numeric characters and all of the items have been coded as whole numbers.

The Port Authority Cargo Theft Data 1981 was prepared using an SPSS (Statistical Package for the Social Sciences) program. The data have been stored as raw data and an SPSS program is included in this document to assist users in accessing the data base. The necessary information about the format of the data can be found in the Data Dictionary Listing section of this document.

Frequency distributions have been prepared for all categorical and continuous variables in the data base. The frequency listings can be found in the Frequency Distribution section of this document. Individual labels for categorical variable responses have been included with the frequency distributions. Variables which ask for "number of times" or "date of occurrence" responses have not had each value label labeled; the value itself serves as the label, unless otherwise noted.

All known errors in the data base have been corrected. Occasional discrepancies were noted between the facts of an incident and the criminal label attached by the police to the incident; in such instances, the label designated by the police was the label coded.

PORT AUTHORITY CARGO THEFT DATA 1981

Confidentiality Procedures

The Commercial Theft Studies component of the Center for the Study of the Causes of Crime for Gain is supplying the Port Authority Cargo Theft Data 1981 to the National Institute of Justice in compliance with special condition 4 of the Center for the Study of the Causes of Crime for Gain grant award (80-IJ-CX-0060).

Consistent with 28 C.F.R., Part 22, the data base does not contain any numeric or other codes that can be used to identify particular cases, offenders, or victims. The identification numbers used to identify case records in the data base are random, non-duplicating numbers. Value labels, that would identify individual victims for one variable (carcode) have been substituted with unique, random values; a variable that would identify specifically where each incident occurred, and thereby identify the victim, has been deleted from the data base submitted. The key to these variables and their values is held by Rutgers University and will not be disclosed to the public.

Other than the removal of individual identifiers and the deletion of one variable from the data base, no further modifications (such as encryption, scrambling, or the entry of random values) have been made to the original data base.

There are no restrictions on public access to the Port Authority Cargo Theft Data 1981 base.
