Acknowledgement of Assistance

All manuscripts utilizing data made available through the Consortium should acknowledge that fact as well as identify the original collector of the data. The ICPSR Council urges all users of the ICPSR data facilities to follow some adaptation of this statement with parenthesis indicating items to be filled in appropriately or deleted by the individual user.

The data (and tabulations) utilized in this (publication) were made available (in part) by the Inter-university Consortium for Political and Social Research. The data for Massachusetts Statewide Criminal Justice Guidelines Evaluation, 1979: Sentencing Data were originally collected by Richard F. Sparks. Neither the collector of the original data nor the Consortium bear any responsibility for the analyses or interpretations presented here.

In order to provide funding agencies with essential information about the use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, each user of the ICPSR data facilities is expected to send two copies of each completed manuscript or thesis abstract to the Consortium. Please indicate in the cover letter which data were used.

Data Collection Description

The Evaluation of Statewide Sentencing Guidelines project was established to study the development, implementation and use of statewide sentencing guidelines and to report on the perceptions of criminal justice system personnel and inmates regarding those guidelines. Funded by the National Institute of Law Enforcement and Criminal Justice, the project was carried out by the Rutgers University School of Criminal Justice from October 1978 to June 1981.

Massachusetts Sentencing Data contains information on a random sample of Massachusetts convicted defendants sentenced in the Massachusetts Superior Court between November, 1977 and October 1978. The sample represents approximately one third of the actual number of defendants sentenced in the Massachusetts Superior Court during a one year period. The cases were selected and coded by the Massachusetts Sentencing Guidelines project during 1979.

The 128 variables include information about each defendant's social and economic background, juvenile and adult criminal history, characteristics of the current offense, and the elements of the disposition of the current offense. Data are available in card-image format with three records per case. Class IV

MASSACHUSETTS SENTENCING DATA

Scope of Data

The Massachusetts Sentencing Data Base includes 128 variables containing information on a random sample of Massachusetts convicted defendants sentenced in the Massachusetts Superior Court between November, 1977 and October, 1978. The sample represents approximately one-third of the actual number of defendants sentenced in the Massachusetts Superior Court during a one year period. The cases were chosen and coded by the Massachusetts Sentencing Guidelines project during 1979.

Cases were selected by the Massachusetts Sentencing Guidelines project from the Massachusetts Superior Court Probation Department's Monthly Disposition Reports. These reports list every defendant sentenced in the Massachusetts Superior Court during monthly periods. Ten of the 14 Massachusetts counties were included in the sampling frame; the counties of Barnstable, Dukes, Franklin, and Nantucket were excluded due to too few cases.

Following case selection, each defendant's records and files located in the county's District Attorney office, Clerk of Court office and Superior Court Probation office were assembled and the information contained in these files was coded and code checked by the staff of the Massachusetts Sentencing Guidelines Project staff. The data collection period lasted from February to June of 1979. Approximately twenty percent of the cases originally sampled were dropped from the sample due to missing files, missing information, or lack of updated information. The Massachusetts project replaced dropped cases with additional sampling to preserve the overall sample size.

The data compiled contain information pertaining to each defendant's social and economic background, juvenile and adult criminal history, characteristics of the current offense and the elements of the disposition for the current offense. Many of the data items have been aggregated in the Massachusetts Sentencing Data base provided here to avoid multiple (and uneven) record sizes across defendants and to preserve the confidentiality of the defendants.

MASSACHUSETTS SENTENCING DATA

File Processing Summary

The Massachusetts sentencing data base consists of a single statistical data file stored on magnetic tape. The unit of observation is a convicted and sentenced defendant from the state of Massachusetts whose case was disposed of by the Massachusetts Superior Court between November 1977 and October 1978.

The statistical data base is a rectangular file containing 1440 observations; the record for each of the 1440 defendants is 226 characters in length and contains 128 variables relating defendant socio-economic background information, juvenile and adult criminal record information, and information pertaining to aspects of the conviction offense(s) and sentence disposition(s). All variables have been stored as numeric characters; two variables contain two digit decimals; the remaining items have been coded as whole numbers.

The Massachusetts sentencing data base was prepared using an SAS (Statistical Analysis System) program. The data have been stored as raw data and an SPSS (Statistical Packages for the Social Sciences) program has been written to access and process the data. A copy of the SPSS program is included in this document to assist users in accessing the data base; however, the data can also be read into and processed by many other statistical packages. The necessary information about the format of the data can be found in the Data Dictionary Listing section of this document.

Frequency distributions have been prepared for all categorical and continuous variables in the data base. The frequency listings can be found in the Frequency Distribution section of this document. Individual labels for categorical variable responses have been included with the frequency distributions. Variables which ask for a "number of times" response such as "number of prior incarcerations" have not had each value labeled; the value itself serves as the item label.

All known errors in the data base have been corrected. This data was provided to the Evaluation of Statewide Sentencing Guidelines project for secondary analysis purposes. Several rather high or low values on some variables could not be checked against the original data source as access to data collection sources was not made available to this project.

MASSACHUSETTS SENTENCING DATA

Confidentiality Procedures

The Evaluation of Statewide Sentencing Guidelines project is supplying the Massachusetts Sentencing Data base to the National Institute of Justice in compliance with special condition number 9 of the Evaluation of Statewide Sentencing Guidelines grant award (78-NI-AX-0147).

Prior to receipt of the data herein submitted from the Massachusetts Sentencing Guidelines project, the Evaluation of Statewide Sentencing Guidelines project was required to petition the Massachusetts Criminal History Systems Board for access to the original data collected by the Massachusetts project. As part of that petition the Evaluation of Statewide Sentencing Guidelines grant agreed that:

Information received or collected by the Evaluation of Statewide Sentencing Guidelines Project will be treated as confidential by all staff allowed access to the data. The project will separate identifying offender information from that data to be used in the analyses of sentencing practices; the data will be numerically coded, and offender's names will not be used in data analyses. The numerical code to be used will be an arbitrary code of original and non-duplicating numbers.

Consistent with that special condition and with 28 C.F.R., Part 22, individual identifiers from the original data base have been removed and replaced in the current data base with a unique identifier assigned to each case in numerical sequence. The key to the numerical code is held by Rutgers University and will not be disclosed for public use.

The development and widespread use of various computer programs which enable the tracing and/or linking of criminal justice offender information have led this project to remove several other types of variables from the Massachusetts Sentencing Data base provided here. These variables include:

1. Case docket number
2. Judge at Disposition
3. Day of Disposition
4. All individual charge information
5. All individual prior record information

Other than the removal of individual identifiers and the variables mentioned above, no further modifications (such as encryption, scrambling, or the entry of random values) have been made to the original data base.

There are no restrictions on public access to the Massachusetts Sentencing Data base.
