ACKNOWLEDGEMENT OF ASSISTANCE

All manuscripts utilizing data made available through the Consortium should acknowledge that fact as well as identify the original collector of the data. The ICPSR Council urges all users of the ICPSR data facilities to follow some adaptation of this statement with the parentheses indicating items to be filled in appropriately or deleted by the individual user.

The data (and tabulations) utilized in this (publication) were made available (in part) by the Inter-university Consortium for Political and Social Research. The data for the UNIFORM CRIME REPORTS: NATIONAL TIME SERIES COMMUNITY-LEVEL DATABASE, 1967-1980 were originally collected by G. L. Pierce, W. J. Bowers, J. Baird and J. Heck from the Federal Bureau of Investigation, U. S. Department of Justice. Neither the collectors of the original data nor the Consortium bear any responsibility for the analyses or interpretations presented here.

In order to provide funding agencies with essential information about the use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, each user of the ICPSR data facilities is expected to send two copies of each completed manuscript or thesis abstract to the Consortium. Please indicate in the cover letter which data were used.

## INTRODUCTION

The Uniform Crime Reports: National Time Series Community-level Database, 1967-1980 includes detailed criminal offense and clearance information submitted monthly by over 3,000 consistently reporting law enforcement agencies in the United States. These data were processed at the Center for Applied Social Research, Northeastern University, Boston, Massachusetts under National Institute of Justice grants 79-NI-AX-0074 and 82-IJ-CX-0008 in order to produce easily accessible and reliable time series data on officially reported crime. Originally provided by the Federal Bureau of Investigation (FBI), these data exclude Uniform Crime Report (UCR) data from infrequently reporting law enforcement agencies. Only those agencies which submitted ten or more monthly reports in every year from 1967 through 1980 are included in this dataset.

The data include detailed breakdowns of offenses and clearances taken from disaggregated UCR Return A tapes. Of particular interest are weapon-specific robbery and assault variables; types of rape, burglary, larceny, and motor vehicle theft; and clearances by arrest (or other exceptional means) of adults and juveniles for each offense sub-type. Both monthly and annual counts of these are available. Each agency is identified by its FBI "ORI Code" as well as a sequential case number produced and documented by ICPSR in the codebook's appendix. Cases also may be identified by geographic region, state, population size and group, and frequency of reporting.

## DATA COLLECTION DESCRIPTION

The FBI's national UCR program, begun a half century ago, is a system designed to monitor the incidence of crime and the activities of law enforcement agencies at the community level. Participating local law enforcement agencies throughout nation report regularly on the volume of selected crimes and arrests and also on the levels of police personnel and types of police activities.

The UCR program has not remained a static system throughout its history. The program has undergone substantial improvements since its inception--growing from a system with approximately 400 relatively large urban reporting agencies to the current system with over 15,000

participating local agencies with much of the growth observed during the past 15 years. In 1970, for instance, police agencies sent approximately 82,000 Return A reports to the FBI and by 1980 agencies sent over 160,000 reports to the FBI. This fact is particularly important to consider when time series analyses of the data are desired.

In performing time series analysis, variable definitions which are consistent over time are required in order to draw accurate inferences. With three exceptions, variable definitions for these data have not changed during the period under study. The exceptions concern various classifications of robbery, larceny, and manslaughter. Prior to 1974, robbery was categorized as either Armed Robbery or Strong-Arm (unarmed) Robbery. Beginning in 1974, the Armed Robbery classification was further refined into Firearm, Knife or Cutting Instrument, and Other Dangerous Weapon type robberies. In an attempt to produce consistent weapon robbery series over the entire 1967-1980 period, the ICPSR has derived Armed Robbery variables by summing Firearm Robbery, Knife or Cutting Instrument Robbery, and Other Dangerous Weapon Robbery. This was done for the number of armed robberies known to police, the number of armed robberies cleared by arrest (or exceptional means), and the number of armed robbery clearances involving only persons under 18 years of age. With regard to larceny, a discontinuity in its classification occurred in 1974 when Larceny Under \$50.00 (petty larceny) was dropped and thus a consistent 1967-1980 series could not be derived. Data in this variable location for 1974-1980 is coded "inappropriate" (Inap.). The definition for negligent manslaughter remained constant until 1978 when police agencies were directed to exclude traffic deaths from this count. Prior to 1978 some traffic fatalities were included in this definition.

In addition to constant variable definitions, it is generally important in time series work to identify and select those agencies which have consistently reported over the time period under study. This dataset represents the efforts of the principal investigators to devise such a strategy. Specifically, summary variables were constructed which contain indices of when and how completely any given police agency reported to the UCR program (among the universe of agencies that reported to the UCR program at least one time during the years 1967 to 1980). Using these indices, agencies can be identified and selected according to different criteria of consistency. (See appendix for an explanation of the consistency criteria that were used to select the sample of agencies included in this dataset).

Agencies were included if they submitted ten or more monthly reports in each year from 1967 through 1980. The level of reporting consistency is described by the total

number of reports submitted throughout the fourteen-year series. Theoretically, this could range from 140 monthly reports (by an agency that submitted only ten reports each year) to 168 monthly reports (by an agency that completes 12 reports each year). The 3328 agencies in this dataset actually vary between 161 and 168 in terms of total reports submitted over the entire 1967-1980 period. Although these data were originally intended for monthly time series investigations, there is some utility in annual aggregations of each variable type (i.e., for cross-sectional study). To this end, the ICPSR has derived annual counts for each of the various offenses and clearances by summing their respective monthly values. Because even consistently reporting agencies sometimes fail to submit twelve monthly reports in every year, interpretation of these annual variables should be made with reference to the variables indicating "months reported" and "card types." Specific notes and definitions for all variables derived by the ICPSR are included in the section entitled "Variable Descriptions."

#### DATA COLLECTION PROCEDURES

The principal investigators used the FBI's "Card Type" or Return summary variables to distinguish complete data from incomplete or unavailable returns for each agency. Monthly reports were categorized by the FBI as either "normal", "estimated return", "incomplete return", "adjustment", "not updated", or "unavailable", and were determined to be complete if "normal" returns were indicated. It is possible that an agency submitted more than one month of data in a particular return in accord with UCR data collection procedures, however it is impossible to determine what proportion of offenses and/or clearances in such a return could be attributed to the months for which no reports were submitted (unless separate monthly forms were filled out). The implication is that agencies which submitted less than 10 reports in a year that included data for 10, 11 or 12 months of activity would be excluded from this dataset even though their annual counts would be considered complete. Similarly, agencies (particularly very small ones) would have been excluded which actually had no data to report for more than three months in a given year, but diligently submitted returns when crimes did occur. Both monthly and annual counts for these agencies are complete, but the method employed here could not prevent dropping these agencies from the sample. It is not known how many such agencies were affected by this, but they are believed to be very few. Tables which describe the total number of agencies for various levels of reporting can be found in the Appendix.

Details regarding the procedures used by the FBI Uniform Crime Reporting Program itself can be found in the following related publications:

Federal Bureau of Investigation.  
Crime in the United States: Uniform Crime Reports. Washington, D.C.: U.S. Government Printing Office, annually [1968-1981].

Federal Bureau of Investigation.  
Uniform Crime Reporting Handbook. Washington, D.C.: U.S. Government Printing Office, various years [1965, 1966, 1974, 1976, 1978, 1980].

#### FILE STRUCTURE

Uniform Crime Reports: National Time Series Community-level Database, 1967-1980 is available from the ICPSR in two formats: card-image and OSIRIS. The card-image file contains several decks per case in a format based on 80 column punched cards. The data are sorted by case with all decks for a case together in ascending order. The data are stored in fourteen separate files of annually pooled cross-sections where agencies are cases. This is an efficient storage method which lends itself to versatile application.

The OSIRIS dictionary gives the format and other information for each variable in the OSIRIS data file. The dictionary or dictionary-codebook file is used in conjunction with the OSIRIS software package. The OSIRIS data files are constructed with a single logical record for each case. There are 1,210 variables on 3,328 cases for each yearly data file.

The OSIRIS data files can be accessed directly through software packages or programs which do not use the OSIRIS dictionary by specifying the column locations of the desired variables. These column locations are given in the OSIRIS dictionary-codebook.

CODEBOOK INFORMATION

The example below is a reproduction of information appearing in the machine-readable codebook for a typical variable. The numbers in brackets do not appear but are references to the descriptions which follow this example.

.....  
[1] VAR 0005 [2] YEAR [3] NO MISSING DATA CODES  
REF 0005 [4] LOC 12 WIDTH 2 [5] DK COL  
[6] IMP DEC= d

[7] Year

[8] [Last two digits of year are coded.]  
-----

[9] SEE NOTE(S) X

[10] Actual number is coded.

[11] [12] [13]

67. 1967

80. 1980  
.....

[1] Indicates the variable and reference numbers. A variable number and a reference number are assigned to each variable in the data collection. In the present codebook which documents the archived data collection these numbers are identical. Should the data be subsetted or rearranged by an OSIRIS program (e.g., MMP to intersperse data from another source, or TCOT to produce an analysis deck), the variable numbers would change to reflect the order of the new data collection, while the reference number would remain unchanged to reflect the variable number in the codebook describing the archived data collection.

[2] Indicates the abbreviated variable name (maximum of 24 characters) used in the OSIRIS system to identify the variable for the user. An expanded version of the variable name can be found in the variable description list.

[3] Indicates the code values of missing data. In this example, there are no missing data values "NO MISSING DATA CODES". Alternative statements for other variables are "MD=0," "MD GE 9," or "MD=0 OR GE 8." Some analysis software packages (including the OSIRIS software package) require that certain types of data which the user desires to be excluded from analysis be designated as "MISSING DATA," e.g., inappropriate, unascertained, unascertainable, or ambiguous data categories. Although these codes are defined as missing data categories, this does not mean that the user should not or cannot use them in a substantive role if so desired.

[4] Indicates the starting location and width of this variable when the data are stored on a magnetic tape in the OSIRIS format. If the variable is of a multiple-response type, the width referenced is that of a single response. In this example the variable named "YEAR" is 2 column(s) wide is located in the 12th column within the record.

[5] Indicates the location by deck and column(s) of this variable when the data are stored on cards or in card-image format (80-column format)

[6] A variable containing data with implied decimals is denoted by the message "IMP DEC= d," where d is the number of decimal places implied in the variable.

[7] This is the full text (question) supplied by the investigator to describe the variable. The question text and the numbers and letters that may appear at the beginning reflect the original wording of the questionnaire item.

[8] Indicates an additional comment or explanation appended to the variable description.

[9] A variable which has a footnote associated with it denoted by the message, "SEE NOTE(S) X" where X is the number of the footnote referenced.

- [10] "Actual number is coded" appears in the codebook to indicate that the variable has been declared continuous.
- [11] Indicates the code values occurring in the data for this variable.
- [12] Indicates the textual definitions of the codes. Abbreviations commonly used in the code definitions are "DK" (Do Not Know), "NA" (Not Ascertained), and "INAP" (Inappropriate).

## ICPSR PROCESSING INFORMATION

The data collection was processed according to the standard ICPSR processing procedures. The data were checked for illegal or inconsistent code values which, when found, were recoded to OSIRIS missing data values. No consistency checks were performed. Statements bracketed in "[" and "]" signs in the body of the codebook were added by the processors for explanatory purposes.

## VARIABLE DESCRIPTION LIST

## ICPSR PROCESSING VARIABLES

- 1 ICPSR study number-8214
- 2 ICPSR edition number-1
- 3 ICPSR part number
- 4 ICPSR sequential case identification number

## AGENCY IDENTIFICATION VARIABLES

- 5 Year
- 6 Numeric state code
- 7 ORI code
- 8 Group
- 9 Sub-group
- 10 Geographical division
- 11 Juvenile age limit for state
- 12 Core city
- 13 Covered by agency
- 14 Last update
- 15 Months reported - entire series
- 16 Reporting consistency
- 17 Months reported - current year
- 18 Agency count

VAR 0019      POP1      MD=0  
REF 0019      LOC 55 WIDTH 9      DK 1 COL 57-65

POP1: Total city population or population of largest county

The population data is reported in three separate fields: (POP1, POP2, POP3) [REF 19, REF 20, and REF 21]. The three population fields are used because some cities are located in as many as three different counties.

For cities located in only one county, the first of the three fields [REF 19] contains the population of the city, the code for the county in which it is located, and the code of the SMSA in which it is located (if any), with the remaining two fields [REF 20 - REF 21] filled with zeros.

For cities located in more than one county, data will be reported for the component counties by population size from

(CONTINUED)

largest to smallest. The first field [REF 19] contains information for the county with the largest population, the second field [REF 20] contains information for the county with the second largest population, and the third field [REF 21] contains information for the third largest county.

The total population of the city is always equal to the sum of the three population variables [REF 19 + REF 20 + REF 21].

ICPSR Sequential Identification Number

The ICPSR has attached a sequential identification number to  
 every case. This number uniquely identifies each record in  
 the data collection.

SEE NOTE (S) 1

VAR 0275 JAN ARMED ROBBERY NO MISSING DATA CODES  
 REF 0275 LOC 1360 WIDTH 5 DK 22 COL 14-18

Number of actual offenses for January: Armed Robbery

The 1967-1973 data for this variable were collected by the  
 F.B.I. The 1974-1980 data were derived by the ICPSR by  
 summing JAN GUN ROBBERY [REF 287], JAN KNIFE ROBBERY [REF  
 299], and JAN OTHWPN ROBBERY [REF 311].

Actual number is coded.

VAR 0276 FEB ARMED ROBBERY NO MISSING DATA CODES  
REF 0276 LOC 1365 WIDTH 5 DK 22 COL 19-23

Number of actual offenses for February: Armed Robbery

The 1967-1973 data for this variable were collected by the F.B.I. The 1974-1980 data were derived by the ICPSR by summing FEB GUN ROBBERY [REF 288], FEB KNIFE ROBBERY [REF 300], and FEB OTHWPN ROBBERY [REF 312].

Actual number is coded.

VAR 0277 MAR ARMED ROBBERY NO MISSING DATA CODES  
REF 0277 LOC 1370 WIDTH 5 DK 22 COL 24-28

Number of actual offenses for March: Armed Robbery

The 1967-1973 data for this variable were collected by the F.B.I. The 1974-1980 data were derived by the ICPSR by summing MAR GUN ROBBERY [REF 289], MAR KNIFE ROBBERY [REF 301], and MAR OTHWPN ROBBERY [REF 313].

Actual number is coded.

VAR 0278 APR ARMED ROBBERY NO MISSING DATA CODES  
REF 0278 LOC 1375 WIDTH 5 DK 22 COL 29-33

Number of actual offenses for April: Armed Robbery

The 1967-1973 data for this variable were collected by the F.B.I. The 1974-1980 data were derived by the ICPSR by summing APR GUN ROBBERY [REF 290], APR KNIFE ROBBERY [REF 302], and APR OTHWPN ROBBERY [REF 314].

Actual number is coded.

VAR 0279 MAY ARMED ROBBERY NO MISSING DATA CODES  
REF 0279 LOC 1380 WIDTH 5 DK 22 COL 34-38

Number of actual offenses for May: Armed Robbery

The 1967-1973 data for this variable were collected by the F.B.I. The 1974-1980 data were derived by the ICPSR by summing MAY GUN ROBBERY [REF 291], MAY KNIFE ROBBERY [REF 303], and MAY OTHWPN ROBBERY [REF 315].

Actual number is coded.

VAR 0280 JUN ARMED ROBBERY NO MISSING DATA CODES  
REF 0280 LOC 1385 WIDTH 5 DK 22 COL 39-43

Number of actual offenses for June: Armed Robbery

The 1967-1973 data for this variable were collected by the F.B.I. The 1974-1980 data were derived by the ICPSR by summing JUN GUN ROBBERY [REF 292], JUN KNIFE ROBBERY [REF 304], and JUN OTHWPN ROBBERY [REF 316].

Actual number is coded.

VAR 0281 JUL ARMED ROBBERY NO MISSING DATA CODES  
REF 0281 LOC 1390 WIDTH 5 DK 22 COL 44-48

Number of actual offenses for July: Armed Robbery

The 1967-1973 data for this variable were collected by the F.B.I. The 1974-1980 data were derived by the ICPSR by summing JUL GUN ROBBERY [REF 293], JUL KNIFE ROBBERY [REF 305], and JUL OTHWPN ROBBERY [REF 317].

Actual number is coded.

## GLOSSARY

The following is provided by the ICPSR as a general definitional reference to the content of the variables described above. The source for these definitions is the Uniform Crime Reporting Handbook (Federal Bureau of Investigation, 1980). As noted in the section above entitled "DATA COLLECTION DESCRIPTION" (pp. ii-iii), some definitions have changed over the period of this study (1967-1980) and the material that follows should not be construed as a comprehensive definition of each classification for every year in the study. It is therefore recommended that earlier editions of the Uniform Crime Reporting Handbook or other relevant state crime reporting publications be consulted to verify the definitions for the variables and cases of interest.

According to Uniform Crime Reporting procedures, these offense classifications are based solely upon police investigation rather than the determination of a court, medical examiner, coroner, jury, or other judicial body.

**MURDER AND NON-NEGLIGENT MANSLAUGHTER** - The willful killing of one human being by another. Not included in the count for this offense classification are deaths caused by negligence, suicide, or accident; justifiable homicides, which are the killing of felons by law enforcement officers in the line of duty or by private citizens; and attempts to murder or assaults to murder, which are scored as aggravated assaults.

**NEGLIGENT MANSLAUGHTER** - The killing of another person through gross negligence. The definition for this variable has changed slightly over the study period with traffic fatalities included in 1967-1977 and excluded in 1978-1980. Please refer to the UCR Handbook to obtain a precise definition for the particular year(s) of interest.

**FORCIBLE RAPE** - The carnal knowledge of a female forcibly and against her will. Statutory rape (without force) and other sex offenses against females are not included. Assaults or attempts to commit forcible rape are included in a separate count entitled ATTEMPTED FORCIBLE RAPE. Sex attacks on males are classified either as assaults or "other sex offenses" and are not included here.

**ROBBERY** - The taking or attempting to take anything of value from the care, custody, or control of a person or persons by

(CONTINUED)

force or threat of force or violence and/or putting the victim in fear. Separate counts for FIREARM ROBBERY (i.e., any firearm is used as a weapon or employed as a means of force to threaten the victim or put him in fear), KNIFE OR CUTTING INSTRUMENT ROBBERY (i.e., a knife, broken bottle, razor, or other cutting instrument is employed as a weapon or as a means of force to threaten the victim or put him in fear), OTHER DANGEROUS WEAPON ROBBERY (i.e., a club, acid, explosive, brass knuckles, or other dangerous weapon is used) were collected beginning in 1974. Prior to 1974 robbery was distinguished as ARMED ROBBERY (i.e., a weapon of any type was used) and STRONG-ARM ROBBERY (i.e., no weapon is used, but strong-arm tactics limited to the use of personal weapons such as hands, arms, fists, feet, teeth, etc. are employed to deprive the victim of his property). The count of STRONG-ARM ROBBERY was collected over the entire 1967-1980 period. To be consistent with the pre-1974 series, the ICPSR derived ARMED ROBBERY counts by summing FIREARM ROBBERY, KNIFE OR CUTTING INSTRUMENT ROBBERY and OTHER DANGEROUS WEAPON ROBBERY counts in the 1974-1980 data. Thus, ARMED ROBBERY variables for the entire 1967-1980 period are available despite a change in FBI data collection procedures in the middle of the series.

ASSAULT - An unlawful attack by one person upon another. The FBI's category "Aggravated Assault" is composed of four separate types of assault variables in this dataset. FIREARM ASSAULT includes all assaults wherein a firearm of any type (e.g., revolver, automatic pistol, shotgun, zip gun, rifle, etc.) is used or its use is threatened. KNIFE OR CUTTING INSTRUMENT ASSAULT includes assaults or attempted assaults wherein weapons such as knives, razors, hatchets, axes, cleavers, scissors, glass, broken bottles, ice picks, etc., are used as cutting or stabbing objects. OTHER DANGEROUS WEAPON ASSAULT is an assault in which the use of any object as a weapon does or could result in serious injury. The weapons in this category would include but not be limited to clubs, bricks, jack handles, tire irons, bottles, or other blunt instruments used to club or beat victims. Also included here are attacks by explosives, acid, lye, poison, scalding water, burning, etc. HANDS, FISTS, FEET, ETC.-- AGGRAVATED INJURY ASSAULT includes only the attacks by use of personal weapons such as hands, fists, feet, etc., which result in serious or aggravated injury. Seriousness of the injury is the primary factor in distinguishing aggravated assaults. Examples of serious injuries are broken bones, internal injuries, wounds requiring stitches, etc., or any injury requiring more than usual first-aid treatment. The final category of assault in this dataset is OTHER ASSAULTS--SIMPLE, NOT AGGRAVATED.

(CONTINUED)

These include all assaults which do not involve the use of a firearm, knife, cutting instrument, or other dangerous weapon and in which there were no serious or aggravated injuries to the victims.

BURGLARY - The unlawful entry of a structure to commit a felony or a theft. This offense is broken down into three categories: FORCIBLE ENTRY, UNLAWFUL ENTRY--NO FORCE, and ATTEMPTED FORCIBLE ENTRY. A forcible entry or unlawful entry where no theft or felony occurs but where acts of vandalism, malicious mischief, etc., are committed is not scored as a burglary provided investigation clearly establishes that the unlawful entry was for a purpose other than to commit a felony or theft. FORCIBLE ENTRY BURGLARY includes entry by use of tools; breaking windows; forcing windows, doors transoms, or ventilators; cutting screens, walls, or roofs; and where known, the use of master keys, picks, unauthorized keys, celluloid, or other devices which leave no outward mark but are used to force a lock. Burglary by concealment inside a building followed by an exiting of the structure is included in this category. UNLAWFUL ENTRY--NO FORCE is achieved by use of an unlocked door or window and involves no force. Law enforcement experience is the determining factor in deciding whether force was used in gaining entry. The element of trespass to the structure is essential and includes thefts from open garages, open warehouses, open or unlocked dwellings, and open or unlocked common basement areas in apartment houses where entry is committed other than by the tenant who has lawful access. If the area entered was one of open access, thefts from the area would not involve an unlawful trespass and would be scored as larceny. ATTEMPTED FORCIBLE ENTRY counts those situations where a forcible entry burglary is attempted, but entry is not accomplished.

LARCENY-THEFT - The unlawful taking, carrying, leading, or riding away of property from the possession or constructive possession of another. It includes offenses such as shoplifting, pocket-picking, purse-snatching, thefts from motor vehicles, thefts of motor vehicle parts and accessories, bicycle thefts, etc. in which no use of force, violence or fraud occurs. This category does not include embezzlement, "con" games, forgery, and worthless checks. Motor vehicle theft is also excluded from this category. Prior to 1974 larcenies involving property valued less than \$50.00 (LARCENY- THEFT LESS THAN \$50) counted as a distinct offense, however this classification was discontinued and these data were not separately collected as part of UCR Return A.

(CONTINUED)

**MOTOR VEHICLE THEFT** - The theft or attempted theft of a motor vehicle. This definition excludes the taking of a motor vehicle for temporary use by those persons having lawful access. **AUTO THEFT** includes thefts of sedans, station wagons, coupes, convertibles, and other similar motor vehicles which serve the primary purpose of transporting people from one place to another. **TRUCKS AND BUSES THEFT** includes those vehicles specifically designed to transport people on a commercial basis and to transport cargo. It is conceivable that certain vehicles could qualify as automobiles, but based upon their designed use, become trucks or buses. In UCR, the self-propelled motor home is a truck. Some states allow a station wagon to be registered as a truck; however, licensing is not a determining factor and this vehicle for UCR purposes would be classified as an auto. **OTHER VEHICLES THEFT** includes all other vehicles limited by the UCR definition, such as snowmobiles, motorcycles, motor scooters, trailbikes, mopeds, golf carts, etc.

**GRAND TOTALS** - These counts are calculated by the FBI as an accounting device by summing counts for the seven preceding major offense classifications described above.

## APPENDIX

\*\*\* NOTE 1 \*\*\*

The following list, created by the ICPSR for the user's convenience, lists all of the agencies represented in this dataset. They were selected according to the method outlined in the DATA COLLECTIONS PROCEDURES section of the introduction [see pg. iii]. The agencies are arranged in the order as specified by the NUMERIC STATE ID variable [REF 6]. The list provides the ICPSR SEQUENCE ID [REF 4], the F.B.I.'s ORI CODE [REF 7], and the AGENCY NAME [REF 30], each of which can be used to uniquely identify the individual agencies.

## \*\*\* NOTE 2 \*\*\*

In order to perform time series analysis, it is important to identify and select for analysis those agencies which have consistently reported over the time period under study. However, with the Uniform Crime Report [UCR] data this process is not straightforward. As noted, the UCR System has grown significantly over the past 15 years. In 1970, for instance, police agencies sent approximately 82,000 Return A reports to the FBI and by 1980, agencies sent over 160,000 reports to the FBI.

TABLE 1

NUMBER OF POLICE AGENCIES REPORTING TO THE UCR PROGRAM FOR VARIOUS TIME PERIODS AND DIFFERENT LEVELS OF REPORTING CONSISTENCY

## Agencies Reporting Only Complete Reports

Time Period (years)	Level of Reporting Consistency		
	10 months+/ year	11 months+/ year	12 months/ year
1973-1980	6,710	5,949	4,286
1971-1980	5,133	4,666	3,335
1969-1980	3,946	3,592	2,497
1967-1980	3,328	3,099	2,184

To address this problem, a strategy was devised to extract those agencies which had consistently reported to the UCR system for specified periods of time. Specifically, a reference key was constructed containing an index of when and how completely any given police agency had reported to the UCR program (among the universe of agencies that reported to the UCR program at least one time during the years 1967 to 1980). Using this reference key, agencies were identified and selected according to different criteria of consistency. Table 1 shows the number of agencies that would be selected by altering two different standards of

consistency, i.e., (1) the time under study and (2) the number of months for which agencies were defined as consistently reporting (this increases as the time period required for an analysis shortens, [compare the agency figures for the 1967 to 1980 time period versus the figures for the 1973 and 1980 period]). Similarly, as a less stringent standard of agency reports per calendar year is required, the number of consistently reporting agencies increases. [Compare the figures for 12 months per year versus those for 11+ and 10+ months.]

For the present, the data include all agencies that reported for 10 or more months per year during the period 1967 to 1980. Thus, investigators are free to select agencies for time series analysis at three different levels of reporting consistency, i.e., 10 or more months per year, 11 or more months per year, or 12 months per year. Note that the number of agencies available for time series analysis varies according to the level of reporting consistency. There are 2,184 agencies available for time series analyses at the 10+ months level, 3,099 at the 11+ months level, and 3,328 at the 12 months level.

Of course, the degree of reporting consistency is not uniform across states. Some states have had relatively well developed state UCR systems throughout the entire 1967 to 1980 period included in these data. Such states are likely to have many more agencies meet the consistency criteria established, and thus be available for time series analysis. For example, California had 301 agencies report at the 10+ months level, 290 report at the 11+ months level, and 249 agencies report at the 12 month level throughout the 1967 to 1980 period. In contrast, Georgia had only 25 agencies report at the 10+ months level, and a mere 10 agencies report at the 12 months level. Table 2 presents information on the number of agencies reporting at the three different levels of reporting consistency in each of the fifty states. Note that the figures appearing at the top of for the United States as a whole correspond to those appearing in Table 1 for the 1967 to 1980 period. In addition, this table presents the population covered by the reporting agencies. The population figures are circa 1975.
