Acknowledgment of Assistance

All manuscripts utilizing data made available through the Consortium should acknowledge that fact as well as identify the original collector of the data. The ICPSR Council urges all users of the ICPSR data facilities to follow some adaptation of this statement with the parentheses indicating items to be filled in appropriately or deleted by the individual user.

The data (and tabulations) utilized in this (publication) were made available (in part) by the Inter-university Consortium for Political and Social Research. The data for the NATIONAL JAIL CENSUS, 1978 were originally collected by the Bureau of the Census for the Bureau of Justice Statistics. Neither the collectors of the original data nor the Consortium bear any responsibility for the analyses or interpretations presented here.

In order to provide funding agencies with essential information about the use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, each user of the ICPSR data facilities is expected to send two copies of each completed manuscript or thesis abstract to the Consortium. Please indicate in the cover letter which data were used.

Study Description

The National Jail Census, 1978 was conducted in early 1978 by the United States Bureau of the Census for the Bureau of Justice Statistics under the National Prisoner Statistics program. The Census was conducted to determine the existing and future needs in correctional facilities in the Nation and to assess the adequacy of Federal, State, and local programs in meeting these needs. The Census was conducted for all locally administered county and municipal jails having the authority to hold prisoners for more than 48 hours. For the purposes of this study, a jail consists of a confinement facility administered by a local law enforcement agency which holds persons, usually adults but sometimes also juveniles, detained pending adjudication and/or committed after adjudication for sentences of one year or less. Temporary holding facilities, or lockups, that do not hold persons after being formally charged in court (usually within 48 hours of arraignment) are excluded.

The data were collected by mailed questionnaires, utilizing two different forms. Form CJ4 (short form) was employed for small facilities, i.e., facilities having an average daily inmate population of less than 50 inmates. The longer form, Form CJ3 was used for institutions having an average daily inmate population of 50 or more. Form CJ3 includes all the questions asked on Form CJ4 plus some additional questions regarding facility staffing and type of health care provided to the inmates. The records for all facilities have been coded according to the longer form, Form CJ3, with the appropriate locations padded as missing data for facilities which responded to the short form, Form CJ4.

The variables include: jail population by legal status (reason for being held), age and sex of prisoners, maximum sentence, admissions and releases, availability of services to prisoners, structural characteristics and capacity of the jail, expenditure and employment data for the facility.

Data are presented for 3,493 jails in 45 states. Five states: Connecticut, Delaware, Hawaii, Rhode Island and Vermont were excluded from the study since they had integrated jail-prison systems. One state, Alaska, which had 6 locally operated jails in addition to an integrated jail-prison system, was included.

Comparable data for 1970, 1972 and 1983 are also available from the ICPSR. Data for 1970 are available in the National Jail Census, 1970 (ICPSR 7641), data for 1972 are in the the National Jail Census, 1972 (ICPSR 7638), and data for 1983 are in the National Jail Census, 1983 (ICPSR 8203).

FILE STRUCTURE

The National Jail Census, 1978 is available from the ICPSR in two formats: card-image and OSIRIS. The card-image file contains several decks per case in a format based on 80 column punched cards. The data are sorted by case with all decks for a case together in ascending order.

The OSIRIS dictionary gives the format and other information for each variable in the OSIRIS data file. The dictionary or dictionary-codebook file is used in conjunction with the OSIRIS software package. The OSIRIS data file is constructed with a single logical record for each case. There are 300 variables on 3,493 cases. The data are not weighted.

The OSIRIS data file can be accessed directly through software packages or programs which do not use the OSIRIS dictionary by specifying the tape locations of the desired variables. These tape locations are given in the OSIRIS dictionary-codebook.

CODEBOOK INFORMATION

The example below is a reproduction of information appearing in the machine-readable codebook for a typical variable. The numbers in brackets do not appear but are references to the descriptions which follow this example.

.....
 [1] VAR 0003 [2] GOVT LEVEL NUMBER NO MISSING DATA CODES
 REF 0003 [4] LOC 4 WIDTH 1 [5] DK. COL
 [6] IMP DEC= d

[7] Level of government

[8]

[9] SEE NOTE(S) X

[10] Actual number is coded.

[11] [12]

1. County institution
 2. City insitution
-

[1] Indicates the variable and reference numbers. A variable number and a reference number are assigned to each variable in the data collection. In the present codebook which documents the archived data collection these numbers are identical. Should the data be subsetted or rearranged by an OSIRIS program (e.g., MMP to intersperse data from another source, or TCOT to produce an analysis deck), the variable numbers would change to reflect the order of the new data collection, while the reference number would remain unchanged to reflect the variable number in the codebook describing the archived data collection.

- [2] Indicates the abbreviated variable name (maximum of 24 characters) used in the OSIRIS system to identify the variable for the user. An expanded version of the variable name can be found in the variable description list.
- [3] Indicates the code values of missing data. In this example, there are no missing data values (NO MISSING DATA CODES). Alternative statements for other variables are "MD=0," or "MD GE 9." Some analysis software packages (including the OSIRIS software package) require that certain types of data which the user desires to be excluded from analysis be designated as "MISSING DATA," e.g., inappropriate, unascertained, unascertainable, or ambiguous data categories. Although these codes are defined as missing data categories, this does not mean that the user should not or cannot use them in a substantive role if so desired.
- [4] Indicates the starting location and width of this variable when the data are stored on a magnetic tape in the OSIRIS format. If the variable is of a multiple-response type, the width referenced is that of a single response. In this example the variable named "GOVT LEVEL NUMBER" is 1 column wide and is located in the 4th column within the record.
- [5] Indicates the location by deck and column of this variable when the data are stored on cards or in card-image format (80-column format).
- [6] A variable containing data with implied decimals is denoted by the message "IMP DEC= d," where d is the number of decimal places implied in the variable.
- [7] This is the full text (question) supplied by the investigator to describe the variable. The question text and the numbers and letters that may appear at the beginning reflect the original wording of the questionnaire item.
- [8] Indicates an additional comment or explanation appended to the variable description.
- [9] A variable which has a footnote associated with it is denoted by the message, "SEE NOTE(S) X" where X is the number of the footnote referenced.

- [10] "Actual number is coded" appears in the codebook to indicate that the variable has been declared continuous.
- [11] Indicates the code values occurring in the data for this variable.
- [12] Indicates the textual definitions of the codes. Abbreviations commonly used in the code definitions are "DK" (Do Not Know), "NA" (Not Ascertained), and "INAP" (Inappropriate).

ICPSR PROCESSING INFORMATION

The data collection was processed according to the standard ICPSR processing procedures. The data were checked for illegal or inconsistent code values which, when found, were recoded to OSIRIS missing data values. No consistency checks were performed. Statements bracketed in "[" and "]" signs in the body of the codebook were added by the processors for explanatory purposes.

Variable Description List

ICPSR PROCESSING VARIABLES

- 1. ICPSR Study Number-7737
- 2. ICPSR Edition Number-3
- 3. ICPSR Part Number-1
- 4. ICPSR Sequential Case Identification Number

Form Number

The survey form number which the agency filled out

Two different survey forms were employed:

1. Form CJ3 - which was sent to jails having an average daily population of 50 or more, and
2. Form CJ4 - which was sent to jails having an average daily population of less than 50

Both survey forms are documented in this volume. Form CJ3 includes all of the questions which were asked on Form CJ4 plus some additional questions regarding structural aspects of the facility, facility staffing, and the type of health care provided to the inmates. The records for ALL of the facilities were coded according to the longer form, Form CJ3, with the appropriate locations padded as missing data for those facilities which responded to the short form, Form CJ4. The codebook documents variables which apply only to Form CJ3, as well as any question number or wording differences which exist between the two forms.
