INTRODUCTION

HISTORICAL DEVELOPMENT

In 1973, the National Criminal Justice Information and Statistics Services (the predecessor of BJS) established the Comprehensive Data Systems (CDS) program. The primary goal of this program was to assist states in developing operational statistical information systems in an effort to improve the criminal justice process. A component of the CDS program was the Computerized Criminal Histories/Offender Based Transaction Statistics (CCH/OBTS). It centered on arrested alleged offenders, and was designed to supply information regarding the individual's prior criminal activities as well as the formal criminal justice system response. In addition, OBTS provided information on the criminal justice process and the time necessary to complete various stages within the process.

DATA COLLECTION DESCRIPTION

The Offender Based Transaction Statistics consist of data which allow examination of offender characteristics and patterns of court action and case disposition. Collected by individual states from existing data, the dataset includes all cases which reached disposition during the calendar year 1981. This means that regardless of the date which an individual offender entered the criminal justice system, if he/she was given final disposition of their case during 1981, they are included in this dataset. In essence, this dataset provides a description of the administration of adult criminal justice in terms of the flow of offenders through the system and the time intervals between various events. There are selected facts about arrested offenders, and the actions taken by police, prosecutors, and courts.

Using the individual adult offender as the unit of analysis, selected information is provided about the offender and his or her arrest, prosecution, and court disposition. Examples of variables included are: arrest and level of arrest charge, date of arrest, charge filed by the prosecution, prosecutor or grand jury disposition,

type of counsel, type of trial, court disposition, sentence type, and minimum and maximum sentence length. Dates of disposition of each stage of the process allow for tracking of time spent at each stage. In cases where the offender is charged with multiple offenses, the most serious charge and most serious outcome at each stage of the process (from the offender's point of view) are provided.

The Bureau of Justice Statistics (BJS) compiles and disseminates statistical information concerning the operation of the criminal justice system at the Federal, state, and local levels. The OBTS dataset is one such collection of information. The data are in one file which has 50 variables for 298,847 cases.

METHODOLOGY

The data for OBTS was collected on a state-by-state basis. Individual states conducted their own data compilation from existing data. Data tapes were then transported to the Regional Justice Information Service (REGIS) for condensing and editing. As stated above, the unit of analysis is the individual offender. For this study an offender is defined as any person who is processed by the police, prosecutor, or courts regardless of whether or not there is a final determination of guilt. Adult status is specified by individual state laws. Any juvenile processed as an adult is considered an adult. The data was checked for errors first by the individual states. Then after the data was sent to REGIS, a second check was made. Specific data elements were validated individuals or as a component of conditional checks. Validation checks insure that each data element is in the proper format and range, while conditional checks are for correctness of relationships between data elements.

Definitions used in this study are taken from the Dictionary of Criminal Justice Data Terminology (Second edition, 1981), published by BJS. These definitions appear in the glossary. Due to differences among state statutes regarding criminal offense codes, the National Crime Information Center (NCIC) codes are used here. The codes appear in Appendix A. Also, arresting agency codes referred to in ICPSR variable 13 can be obtained from the Federal Bureau of Investigation in Washington, D.C.

FILE STRUCTURE

The Offender Based Transaction Statistics (OBTS), 1981: California, Pennsylvania, Ohio, and Utah is available from the ICPSR in two formats: card image and OSIRIS. The card image file contains two decks per case in a format based on 80 column punched cards. The data are sorted by case with all decks for a case together in ascending order.

The OSIRIS dictionary gives the format and other information for each variable in the OSIRIS data file. The dictionary or dictionary-codebook file is used in conjunction with the OSIRIS software package. The OSIRIS data file is constructed with a single logical record for each case. As mentioned in the Data Collection Description, there are 50 variables on 298,847 cases.

The OSIRIS data file can be accessed directly through software packages or programs which do not use the OSIRIS dictionary by specifying the tape locations of the desired variables. These tape locations are given in the OSIRIS dictionary-codebook.

CODEBOOK INFORMATION

The example below is a reproduction of information appearing in the machine-readable codebook for a typical variable. The numbers in brackets do not appear but are references to the descriptions which follow this example.

.....
 [1] VAR 0048 [2] SENTENCE MINIMUM [3] MD=99999999
 REF 0048 [4] LOC 118 WIDTH 8 [5] DK 2 COL 54-61

99999999.	Missing or unknown data

.....

- [1] Indicates the variable and reference numbers. A variable number and a reference number are assigned to each variable in the data collection. In the present codebook which documents the archived data collection, these numbers are identical. Should the data be subsetted or rearranged by an OSIRIS program (e.g., MMP to intersperse data from another source, or TCOT to produce an analysis deck), the variable numbers would change to reflect the order of the new data collection, while the reference number would remain unchanged to reflect the variable number in the codebook describing the archived data collection.
- [2] Indicates the abbreviated variable name (maximum of 24 characters) used in the OSIRIS system to identify the variable for the user. An expanded version of the variable name can be found in the variable description list.
- [3] Indicates the code values of missing data. In this example, code values equal to 99999999 are missing data. Alternative statements for other variables are "MD=0," "MD=8 GE 9," or "NO MISSING DATA CODES." Some analysis software packages (including the OSIRIS software package) require that certain types of data which the user desires to be excluded from analysis be designated as "MISSING DATA," e.g., inappropriate unascertained, unascertainable, or ambiguous data categories. Although these codes are defined as missing data categories, this does not mean that the user should not or cannot use them in a substantive role if so desired.
- [4] Indicates the starting location and width of this variable when the data are stored on a magnetic tape in the OSIRIS format. If the variable is of a multiple-response type, the width referenced is that of a single response. In this example the variable named "SENTENCE MINIMUM" is 8 columns wide and is located in the 118th column within the record.
- [5] Indicates the location by deck and column(s) of this variable when the data are stored on cards or in card-image format (80-column format)

- [6] A variable containing data with implied decimals is denoted by the message "IMP DEC=d," where d is the number of decimal places implied in the variable.
- [7] This is the full text (question,) supplied by the investigator to describe the variable. The question text and the numbers and letters that may appear at the beginning reflect the original wording of the questionnaire item.
- [8] A variable which has a footnote associated with it is denoted by the message, "SEE NOTES(S) X" where "X" is the number of the footnote referenced.
- [9] Indicates an additional comment or explanation appended to the variable description.
- [10] "Actual number is coded" would appear in the codebook to indicate that the variable has been declared continuous.
- [11] Indicates the code values occurring in the data for this variable.
- [12] Indicates the textual definitions of the codes. Abbreviations commonly used in the code definitions "DK" (Do Not Know), "NA" (Not Ascertained), and "INAP" (Inappropriate).

ICPSR PROCESSING INFORMATION

The data collection was processed according to the standard ICPSR processing procedures. The data were checked for illegal or inconsistent code values which, when found, were recoded to OSIRIS missing data values. No consistency checks were performed. Statements bracketed in "[" and "]" signs in the body of the codebook were added by the processors for explanatory purposes.

Appendix A
NCIC UNIFORM OFFENSE CLASSIFICATIONS
Uniform Offense Classifications
Offenses of General Applicability

The following offenses of general applicability are to be integrated into the related substantive literal and numerical uniform offense classification by adding the general offense alpha abbreviation, below, or more nearly complete word(s) when space allows, to the substantive literal uniform offense classification when translated and printed. The appropriate alpha General Offense Character (GOC), below, will be used to supplement the substantive numerical uniform offense classification.

General Offense	General Offense Character (GOC)	General offense alpha abbreviation
Accessory after the fact	Z	ACAF
Accessory before the fact	Y	ACBF
Aid/abet	X	ABET
Assault to commit	B	ASLT
Attempt to commit	A	ATPT
Conspiracy to commit	C	CNSP
Facilitation of	F	FACL
Solicitation to commit	S	SOLC
Threat to commit	T	THRT

The offense definitions provided within your jurisdiction will apply for these terms. However, in no case will these terms stand alone as an offense (e.g conspiracy or solicitation will not stand alone), but will in all instances be used with the substantive offense involved.

For example, literal offenses (as indicated at the left below) would be printed by translating the data included in the General Offense Character (GOC) and numeric offense codes (AON or CON) (as indicated at the right below).
